birds of prey. This custom still prevails among the Tibetans and certain tribes of the N. frontier, where it probably originated from the difficulty of providing wood for cremation, or excavating graves during the severe winter of these regions. At a later period it was re-introduced from Persia by the Parsis. Among the non-Aryan tribes of the Peninsula this method is occasionally employed for those dying in a state of tabu, as is the case with the Pahārias of Bengal, the Nāgas of Assam, and some menial tribes in the northern plains (Dalton, 274; *JAI* xi. 203; Rice, *Essays*, 60; Crooke, *TC* ii. 92, i. 7, iii. 144).

(*d*) *Cairn-burial.*—The idea of protecting the corpse from violation, and the desire to prevent the ghost from 'walking,' account for cairn-interment, which was used by the early tribes of S. India, and is found at the present time among the Bhīls of Bombay (*BG* xii. 87), the Kachins of Upper Burma (*Gazetteer Upper Burma*, I. i. 393, 409), and some of the Assam tribes (Dalton, 9; Risley, *TC* ii. 112). From such cairns the *stūpas* of the Buddhists have been developed.

(*e*) *Cave-burial.*—Cave-burial, common in other regions of E. and S. Asia, does not seem to have prevailed widely in India. But it must be remembered that many caves have been occupied continuously even to the present day, and thus the evidence may have become obliterated, and numbers of them may still remain unexplored. In Malabar, however, sepulchral chambers excavated in the laterite and containing clay vessels and iron implements have been discovered; and in the same class are the *pāṇḍū-kulī*, the name of which is based on the absurd belief that they were the abodes of the Pāṇḍava heroes of the *Mahābhārata* (*JAI* xxv. 371 f.; Thurston, *Notes*, 148). See also the account of cave-burials in 'anterior India,' a region not capable of identification, by Nicolo Conti (*India in the xvth Cent.*, ed. R. H. Major, Hakluyt Soc., 1857).

(*f*) *House-burial.*—Cave-burial naturally leads to house-burial, and the examples of this practice are abundant. More than one reason probably led to the adoption of the custom—the desire to retain the corpse in the house in the hope of its revival; the dread lest the relics might be used for purposes of black magic; or the hope that the soul of the ancestor thus buried might be re-incarnated in the person of some female member of the family. This last belief seems to be most general, and the custom, sometimes with this explanation, has been recorded among the Andamanese (*JAI* xii. 141, 144; Temple, *Census Report*, 1901, p. 65), the Nāgas of Assam (*JAI* xxvi. 200), the Was and allied Burman tribes (Scott, *Burma*, 408), and some Madras and Panjāb tribes (Thurston, *Notes*, 155; *PNQ* i. 123).

(*g*) *Disposal in water.*—The custom of consigning the dead to water is more common. Among orthodox Hindus, the bones and ashes after cremation are deposited in a river or tank at some sacred place. Among the lower tribes, in most parts of the country, the corpse is often flung into the nearest river, sometimes after a perfunctory attempt at cremation by singeing the face and beard. It has been suggested that this method of disposal is in some cases based upon the desire to free the bones rapidly from the products of decomposition, and thus to placate the spirit; but more usually the intention is simply to get rid as quickly as possible of the corpse and the tabu which emanates from it. Hence it is frequently adopted in the case of those dying in a state of special tabu, as, for instance, those perishing from epidemic disease; and the bodies of *sannyāsīs* and other holy men are frequently consigned to running water. Sometimes, again, the rite is in the nature of sympathetic magic, as when in Bengal those dying of leprosy, on the principle of water to water, are flung into the Ganges (*Asiat. Res.* iv. 69; Buchanan, *E. India*, i. 114).

(*h*) *Tree-burial.*—The practice of tree-burial in India seems to depend partly on the desire to placate the spirit by saving the remains from the attacks of wild animals, and partly on the fact that the tree is the haunt of spirits. It is found among the Andamanese, Nāgas, and Māriyā Gonds (*JAI* xii. 144 f., xi. 205, xxvi. 199; Dalton, 43; *Census Report Assam*, 1891, i. 246; Hislop, App. xiii.). Among the Khāsis of Assam the corpse is placed in a hollow tree, and the next development is the use of a tree-trunk as a coffin, as among the Nāgas and Karennis of Burma (Dalton, 56; *Gazetteer Upper Burma*, I. i. 528; *JAI* xxvi. 199).

(*i*) *Platform-burial.*—This rite further develops into the custom of platform-burial, which prevails among the Andamanese and some tribes on the E. frontier (*JAI* xii. 144; *Census Report Andamans*, 1901, 65; Lewin, *Hill Tracts*, 109). Among the E. tribes the custom of smoking the corpse is frequently combined with this.

(*j*) *Jar-burial.*—Jar-burial, in the sense that the corpse is deposited in an earthenware vessel, does not appear to prevail at present among the non-Aryan tribes; but instances of corpses placed in large mortuary jars have been discovered in prehistoric S. Indian interments (*JAI* xxv. 374); and some of these terra-cotta coffins closely resemble those found in Babylonia. At present, among most tribes which practise cremation, the ashes and bones are deposited in an earthen jar before burial or consignment to water.

(*k*) *Contracted burials.*—Besides the ordinary mode of burial in a recumbent posture, there are other methods which deserve special mention. First comes what is known as contracted burial, when the corpse is interred with the knees closely pressed against the breast. The tribal distribution of this practice does not throw much light upon its origin or significance. It is found among some of the more savage tribes, such as the Andamanese and the Pen tribe in Car Nicobar (*JAI* xii. 141, 144; *PNQ* iv. 66); and among the Lushais and Kūkīs of the E. frontier (Lewin, *Hill Tracts*, 109, *Wild Races*, 246). Among such people it has been suggested that it represents an attempt to prevent the ghost from 'walking'; and in some cases, among various races, the thumbs and toes of the dead are bound, apparently with this intention. Another theory is that it symbolizes the prenatal position of the child in its mother's womb. In some instances it may be due to the practical difficulty of digging a grave of the shape and size in which the body may rest in a recumbent posture; in others it may represent the position of a savage sleeping beside a camp fire. It has been adopted by some of the religious orders, like the *sannyāsīs* of N. India and the Sheuvī Brāhmans and Lingāyats of the south. Here it probably represents the posture of the *guru* engaged in meditation, or lecturing to his pupils, because some of these sects place the bodies of their *gurus* in this posture after death, and worship them (*BG* xv. i. 149).

(*l*) *Shelf- or niche-burial.*—Shelf- or niche-burial, in which the corpse is deposited in a chamber or cavity excavated in the side of the perpendicular entrance to the grave, seems to be based on the intention of preventing the incumbent earth from resting upon the corpse and thus incommoding the spirit—a feeling which prevails among some wild tribes, like the Mīrīs of Assam (Dalton, 34). It is found among some of the E. and S. tribes, like the Kaupūīs of Manipur and the Paniyans of Malabar (*JAI* xvi. 355 f.; Thurston, *Notes*, 144); it has been adopted by some religious or semi-religious orders,

like the Jugīs of Bengal, and the Rāvals or Lingāyats (Risley, *TC* i. 359; Crooke, *TC* iii. 19; *BG* XVIII. i. 361); and it is the orthodox method among Muhammadans, who place the corpse in a niche (*lahd*) high enough to allow the spirit to rise when the dread angels, Munkar and Nakīr, come to interrogate it regarding its belief in the Prophet and his religion.

(*m*) *Concealed burial.*—Concealed burial and the obliteration of all marks of the grave appear generally to be due to a desire to get rid of the spirit. It is found among the wilder tribes in Madras and Burma (Oppert, 199; Scott, *Burma*, 408).

5. Disinterment of the remains.—The practice of disinterment of the remains after decomposition has ceased probably rests upon the belief that the soul is immanent in the bones. The Andamanese and the Nicobarese disinter their dead, wash the bones, and, after wrapping them in cloth or leaves, re-bury them, or fling them into the jungle, or sink them in the sea (*JAI* xxxii. 209, 219 f., xii. 143, iv. 465, xi. 295 f.). Among the Khāsis of Assam those who die from infectious disease are buried, the remains being dug up and cremated when danger from infection is over (Gurdon, 137). This custom leads, among some tribes, to the provision of ossnaries in which the dry bones are stored. Such structures are found in E. and S. India (*JAI* v. 40, vii. 21 ff.). The same belief in the continued, though mysterious, oneness of the body with its severed parts leads to the formation of tribal cemeteries, to which, often from long distances, as among the Chinbons of Upper Burma and some tribes in the central hills, the bones of tribesmen are removed (*Gazetteer Upper Burma*, I. i. 467; Dalton, 34, 262).

6. Immediate and deferred burial.—In most cases climatic conditions necessitate the immediate disposal of the remains by cremation or burial. The custom of deferred burial, in which the remains are retained in the house to enable friends from a distance to pay their last tribute of respect to the dead, is less common, and is found chiefly among the E. tribes like the Khāsis, Nāgas, or Lushais (Gurdon, 138; *JAI* xxvi. 195; Lewin, *Hill Tracts*, 109).

7. Embalming the dead.—Customs of this kind naturally develop into the practice of embalming the dead, which is not common in India. In the form of preservation of the remains in honey or by smoking them over a slow fire, it is found only among some of the E. and Burmese tribes (Hooker, *Himalayan Journals*, ed. London, 1891, 486 f.; Shway Yoe [Scott], *The Burman*, ii. 330 f.).

8. Inhumation and cremation.—The methods of disposal of the dead which have been considered hitherto are all more or less abnormal. The modes now generally adopted are either simple burial in a recumbent position or cremation. We may, perhaps, in consideration of the Indian evidence, assume that the most primitive form was exposure of the corpse, followed by inhumation, and then by cremation. It has often been asserted that cremation was specially an Aryan practice; but the evidence from S. India monuments indicates that possibly it was only in the case of persons of rank that cremation prevailed (cf. art. ARYAN RELIGION in vol. ii. p. 16). At the same time, the facts at our disposal do not enable us definitely to decide why cremation displaced inhumation. Among the Aryans, as Ridgeway argues (*Early Age of Greece*, Cambridge, 1901, i. ch. vii.), the idea that fire was the only medium by which sacrifice could reach the gods may have led to the introduction of the process of cremation after the belief in an abode in the sky where the soul joined the *pitri*, or sainted dead, had become finally established; and, if it arose, as he argues (*ib.* i. 539 f.), in a forest country, where the hut was consumed with the corpse to avoid tabu, there seems no reason why it may not have been independently discovered by the non-Aryan tribes.

At present it is only the most primitive non-Aryan tribes and some ascetic orders who still maintain the practice of earth-burial. On the other hand, many tribes in a low state of culture who now cremate their dead may have adopted the practice under Hindu influence. No literary evidence exists by which the historical development of these customs can be traced. The transition, however, between the two forms of disposal is in many instances clearly indicated. For example, among some tribes the ordinary dead are buried, while those under tabu are cremated; or the rich are cremated, while the poor are buried; or the question which mode is to be adopted depends upon the season of the year in which the death occurs. Among some tribes we find more than one method in use. One clan of the Nāgas combines platform-burial with cremation, placing the dead in open coffins raised several feet above ground, whence the remains are subsequently removed and burned close by (*JAI* xi. 213). The Kāmīs of Bengal burn, bury, or fling the corpse into water, as may be convenient at the time (Risley, i. 395). The Hābūras of the United Provinces either cremate or expose their dead in the jungle, as best suits their nomadic habits (Crooke, *TC* ii. 476). The widest variety of practice appears among the Nāgas, who bury, expose on a platform or in a tree, and sometimes cremate the corpse after placing it on a platform (*JAI* xi. 203, 213; Hodson, 146 ff.). After cremation the bones and ashes are usually deposited in a river or tank, the vessel while in process of removal to the sacred place being hung in a tree so that the spirit, when so disposed, may revisit the bones.

9. The death-tabu.—As among all races in the same grade of culture, the infective tabu arising from the corpse is specially dreaded. All who come in contact with the dead are considered to be infected. The corpse-bearers, for instance, as among the tribes of the central hill tract, have their shoulders rubbed with oil, milk, and cow-dung by the women of the mourning family, while they are sprinkled with cow's urine from twigs of the sacred Nīm tree (*Melia azadirachta*). The dread of the death-tabu appears throughout the rites of mourning. Thus, among some tribes a special dress is provided for the chief mourners, the intention possibly being in some cases to disguise the mourner from the ghost. With the same object the Andamanese smear their heads with clay (Temple, *Census Report*, 1901, p. 65). As the tabu infects the house, no cooking can be done there, and the mourners either fast or receive supplies of food from relatives or friends. Persons, again, when exposed to the death-tabu, are not allowed to leave the house or village, lest they may infect the neighbourhood. This form of tabu is specially observed by the E. tribes, like the Nāgas of Assam and the hill races of Arakan (*JAI* xi. 71, xxvi. 191, ii. 240; Hodson, 173 f.). Tabu is also marked by the rule that mourners sleep on the ground: partly because, if beds are used during this period, they too become infected; partly because spirits cannot touch Mother Earth. The continence enforced upon mourners is probably, as in the case of the sacred dairyman of the Todas (Rivers, 100 f.), a precaution against the dissipation of physical energy, all of which is needed during this critical period. By an extension of the principles of tabu, if the death-rites have been, by a misconception, performed for a person who subsequently returns, he is tabu, because the powers of the other world seem to have

rejected him as unworthy. The period of tabu varies among the different tribes, and seems usually to depend on the time during which, before the completion of the funeral rites, the spirit is supposed to haunt the neighbourhood of the place of death or the grave.

10. **Purification from the death-tabu.**—Purification from tabu is effected in various ways. One method is that adopted by the Andamanese and Gonds, who quit the house of death or burn it, along with some or all of the effects of the dead man (*JAI* xii. 142; Hislop, 19). But generally there is a special rite of purification. This usually consists in ablution, by which the clinging spirit or tabu is washed from the body of the mourner. Sometimes special substances, usually the products of the sacred cow, are used for this purpose. With the same object many touch fire on their return from the funeral, or pass their feet, which naturally are supposed to be specially liable to infection, through the smoke of burning oil. In other cases the tabu is removed by transferring it, and, by a later conception, the sins of the dead man, to a scape-animal. In its clearest form the rite appears among the Badagas of Madras (Gover, *Folk-Songs of S. India*, London, 1872, p. 71; Thurston, *Notes*, 195 f.). Traces are also found of the remarkable custom of 'sin-eating,' by which the sins of the dead are transferred to a Brāhman who eats food in the house of death, or even, as used to be the habit at Tanjore, eats the bones of the dead Rāja ground up and mixed with rice (Dubois, *Manners and Customs*[3], 1906, p. 366).

Lastly, the custom of shaving the mourner may be mentioned. The idea seems to be to get rid of the death-infection clinging to the hair, which, possibly with the same intention, is often let loose in mourning, as is the case with other persons under tabu, like the ascetic classes (*Madras Museum Bulletin*, iii. 251 f.). The hair is sometimes dedicated to the dead, as in the Deccan and along the lower Himālaya (*BG* xviii. i. 364, 149; *NINQ* iii. 117), the intention being to strengthen the feeble spirit of the deceased by dedicating that portion of the human organism which, by its growth, furnishes the strongest proof of vitality (Frazer, *GB*, pt. i. [1911], 'The Magic Art and the Evolution of Kings,' i. 31, 102). More usually the hair is shaven after the mourning period begins, or at its close. The shaving is usually confined to the immediate relatives or kinsmen; but in some cases the whole population shave their heads and beards on the death of a Rāja, *e.g.* in Kashmīr and other parts of the Himālaya (*NINQ* iv. 18, 98; Drew, *Jummoo*, 54).

W. CROOKE.

DEATH AND DISPOSAL OF THE DEAD (Jain).

—The Jains agree, on the whole, with the Brāhmans in their notions on death. The soul of every living being—the highest gods included—must be re-born as long as it possesses *karma*, i.e. merit or demerit; but, when the *karma* has been annihilated, then the soul, on death, will enter on its innate state of purity, and will be released for ever from the cycle of births. But on some points the Jains have developed peculiar notions.

1. **Re-incarnation and liberation of the soul.**—According to the Jains, *karma*, the effect produced on the soul by its deeds during life, consists of extremely subtle matter, which pours or infiltrates into the soul when worldly actions make, as it were, an opening into it (*āsrava*). This *karma*-matter, as we may call it, fills the soul as sand fills a bag, and acts on it like a weight. The soul by itself has an upward gravity (*ūrdhvagurutva*), and is kept down, during its worldly state, by the *karma*-matter, which, like all matter, has a downward gravity (*adhogurutva*). Therefore, if cleansed of all *karma*, the soul, on leaving the body, will rise in a straight line to the top of the universe, where the liberated souls reside for ever (see above, p. 160[b], 'Jain cosmography')—just as a pumpkin coated with clay sinks to the bottom of a tank, but rises to the surface of the water when the clay has fallen off. But, if the soul is burdened with *karma*, it will, on leaving the body, move in any direction—upwards, sideways, or downwards. It does not travel in a straight line, but in a broken line, with one, two, or three angles or turns, and thus gets, in two, three, or four movements, to the place where it is to be re-incarnated. There it attracts gross matter, in order to build up a new body according to its *karma*.[1]

2. **Voluntary death or euthanasia.**—It is a well-known fact that religious suicide is occasionally committed by the Hindus: under a vow to some deity they starve themselves to death, eat poison, drown themselves, enter fire, throw themselves down a precipice, etc. The Jains condemn such practices as an 'unwise death' (*bālamaraṇa*), and recommend, instead, a 'wise death' (*paṇḍitamaraṇa*), as provided in their sacred books.

Two cases must be distinguished: religious suicide may be resorted to in case of an emergency, or it forms the end of a regular religious career; both cases apply to laymen as well as to monks.

(1) If a Jain contracts a mortal disease, or is otherwise in danger of certain death, he may have recourse to self-starvation. This practice is frequently mentioned in Jain narratives, and prevails, no doubt, even at the present day. If a monk is unable to follow the rules of his order, or cannot any longer sustain the prescribed austerities, he should rather commit suicide than break the rules. A particular case seems to be the following. When a monk falls sick, and foresees that he will not be able to go through the 'ultimate self-mortification' to be noticed hereafter, he may keep a long fast. If he gets well in the meantime, he is to return to his former life. But, if he should not recover, but die, it is all for the best. This conditional self-starvation is called *itvara*.[2]

(2) A pious layman may go through a regular course of religious life, the phases of which are the eleven 'standards' (*pratimā*); the first is to be observed for one month, the second for two months,

[1] Umāsvāti's *Tattvārthādhigama Sūtra*, ii. 26–36 (tr. *ZDMG* lx. [1906] 304 ff.)

[2] *SBE* xxii. 72, note 3.

and so on.[1] In the last standard, which he must observe for eleven months, he becomes practically a monk. At the end of this period he abstains from all food and devotes himself to 'self-mortification[2] by the last emaceration,' patiently awaiting his death, which will occur within a month.

In the case of a monk, the 'self-mortification' lasts twelve years, instead of twelve months. If a monk believes himself purified to such a degree that he may enter upon this last mortification of the flesh, then he should apply to his *guru*, or spiritual master, who will test him in various ways before he gives him his permission. Then, for a period of twelve years, the monk has to exert himself by every means to overcome all passions, worldly feelings, desires, etc., and to annihilate his *karma* by austerities—trying, however, to ward off a premature death. At the end of this period he should abstain from all food till his soul parts from the body. There are three different methods by which this end is brought about; they are called *bhaktapratyākhyānamaraṇa*, *iṅgitamaraṇa*, and *pādapopagamana*[3]—of which the last two are distinguished by the restriction of the movement of the person, and the motion of his limbs.

The rules for religious suicide form the subject of three canonical books—*Chausaraṇa*, *Āurapachchakkhāṇa*, and *Bhattaparinna*.

LITERATURE.—This has been sufficiently indicated in the article. H. JACOBI.

DEATH AND DISPOSAL OF THE DEAD (Japanese).

—I. *GENERAL.*[4]—The oldest traditions respecting burial speak of a *moya* ('hut'), in which the body of the deceased was kept, often for a very long time (*e.g.* that of Jimmu Tennō is said to have been kept for 19 months in the *moya*); of religious dances and music; of an eulogy or elegy (*shinubi-kotoba*) pronounced by the head of the family; and of a funeral feast or wake. They also tell of the practice of the self-immolation of wives, retainers, and servants at the grave of a husband or master. The advent of Buddhism in the 6th cent. A.D. brought in certain limitations and modifications. Cremation was introduced in A.D. 703; from that date to 1644 all the Emperors were cremated. Funeral regulations concerning, *e.g.*, periods of mourning, etc., have existed since the 10th cent.; the self-immolation of retainers began to lose favour in the 14th cent., and was prohibited by Iyeyasu, though it still continued sporadically for some time. During the whole of the Tokugawa period only members of the Imperial House were buried with Shinto rites, and even the present forms of Shinto funerals date from the same period.

We will suppose the patient to have been given up by his medical attendant. Relatives and friends stand around his bed, watching his last struggles. Some of them moisten his lips with drops of water conveyed on a feather (*matsugo no mizu*, 'water of the last moment'), others gently rub his eyelids and lips with their hands, so that mouth and eyes may keep shut the more readily after death has taken place. In the province of Iyo, in Shikoku (a district in which there are many quaint survivals), efforts are sometimes made to retain the dying soul, especially when there still remains some communication to be made by or to the man at the point of death. Three men climb to the roof of the house, sit astride on the roof-ridge, and cry aloud: 'Come back, So and So, come back once more.' Nobody inside the house is supposed to have heard the cry, but the dying man will revive for a little, and his spirit will linger for an hour or two before taking its final departure.

After death, the corpse, which is washed by all Buddhist sects, but not universally by the Shinto (some sects apparently being contented with rubbing with a wet cloth), is laid out, with its face covered with a piece of white cotton or silk, and placed on a mat in some suitable place, very often in front of the *toko-no-ma* ('alcove'), in the best sitting-room. The corpse lies with its head to the north (as did that of Buddha), either on its back (Buddhist) or facing the west. At its head is placed a mirror, and a sword for protection (the latter especially in the case of a *samurai*). Round the corpse is a screen. Outside the screen is an eight-legged table (Shinto) with offerings of washed rice, fresh water, salt, fish, and a *tamashiro*,[1] etc. In Buddhist houses there is no necessity for the table to have exactly eight legs, but the offerings are so placed that the deceased may be able to see them. On the Buddhist table stands an *ihai*, or tablet, inscribed with the posthumous name of the deceased, offerings of vegetable foods (*kumotsu*), and, in a vase, a single branch of *shikimi* (Chinese anise). The single branch or stem is so specially associated with funerals that on other occasions a Japanese housewife will not use a single branch for room-decoration.

Both in Shinto and in Buddhism a kind of fiction is kept up, during the days intervening between death and burial, that the spirit is still present with the body. Meals are brought at stated intervals, the corpse is sometimes rolled from side to side, under pretence of giving it ease in lying, and conversation is kept up with it as though it were still alive.

The corpse is dressed, in Shinto, in (1) a *tafusagi*, a kind of apron tied round the waist; (2) a *hadagi*, or shirt, reaching down to the knees; (3 and 4) a *shitagi* and an *uwagi*, a lower and an upper garment, corresponding to the *kami-shimo* (lit. 'upper and lower') of ancient Japanese dress; (5) an *obi*, or belt; and (6) *shitagutsu*, or shoes. A corpse is never dressed in ceremonial clothes or uniform. These are placed in the coffin later. In Buddhist houses the garments are very much the same, only that a distinction is made between winter and summer garments, which may be either of white cotton or of silk (a further development of the fiction of the continued presence of the spirit in the body). But the garments are put on inside out, with the seams showing, and they are worn *hidarimæ*, folded to the left, instead of to the right, as in life. At different parts of the garments are stitched the formulæ *Namu Amida Butsu* ('Glory to Amida the Buddha'), or *Namu myō hō rengekyō* ('Glory to the Mystic Scripture of the Lotus of the True Law'), which are said to be

[2] Hoernle, *op. cit.* p. 47.

[3] Prākrit *pāovagamaṇa*, for which the correct Sanskrit is *prāyopagamana* (see *SBE* xxii. 74 ff.).

[4] The present writer is under great obligation to Dr. Ohrt, of the German Embassy in Tokyo, for permission to consult the MS of two lectures delivered before the Deutsche Gesellschaft für Natur- und Völkerkunde Ostasiens in Tokyo, during the winter of 1909–10.

[1] The *tamashiro* is a wooden tablet, just like the Buddhist *ihai*, except that it contains the actual name of the deceased, and not the *kaimyō* ('posthumous name'). When the sick person is about to draw his last breath, the head of the family, or the person whose duty it will be to perform the funeral ceremonies (*moshu*), washes his hands, changes his clothes, places the tablet on a low table by the bedside, and then, taking it up again, carries it to the sickbed, and there respectfully writes on it the sick man's name. Then, addressing the dying man, he announces to him that the *tamashiro* has been prepared as a place of residence for his spirit: 'With all respect I address thee. Suffer thy excellent spirit to remain in this tablet, and accept the worship which will henceforth be perpetually offered before it by thy posterity in future ages.' Then, gently clapping his hands, he bows once and retires. The *tamashiro* is then put in a wooden box, or covered with a cloth, and placed, facing the south, on a low table in another room, where offerings are made before it. The Buddhist *ihai* (which is made in duplicate) cannot be prepared until after the priests have been called in to select a posthumous name for the deceased.

potent protectors of the soul. In addition to the other garments, the Buddhists dress their corpses in straw sandals (*waraji*) and socks (*tabi*), the sandals being put on behind before. The corpse is also provided with a *dzudabukuro*, or bag, containing the *rokumonsen*, or six pieces of money required for the ferry across the Sandzunogawa, or Japanese Styx. Originally these were six pieces of actual money; at a later period six pieces of paper, cut and stamped in imitation of actual coins, were used; the present *rokumonsen* is simply a piece of paper with the representations of six coins stamped on it. The number of coins is not always the same —6, 12, 18, 49, according to circumstances; and the *dzudabukuro*, which is really an ascetic pilgrim's bag, contains all manner of things necessary for the long journey now commencing — the first lock of hair cut from the head of the deceased in infancy, bits of his beard, nail-parings, teeth, a rosary, 'letters of orders' (*kechi-myaku*), a tobacco-pouch, a comb, pins, needles, threads, a single change of garments, and a towel; but there must not be more than one of each of these things. When a husband dies, a wife cuts off her hair and puts it into the bag; when a father dies, the children cut their nails and put the parings into the bag.

In some houses, when a death occurs, a notice—*kichū* ('period of mourning')—is posted at the entrance as a notification to visitors. In one of the busiest thoroughfares of Tokyo the present writer recently observed an expansion of this idea. In addition to the *kichū* notification, there was a little white table standing in the street, with a white cloth over it, a bowl, and a flower-vase containing a single branch of *shikimi*.

One of the first things to be done after a death is the notification to the authorities. This is made, first of all, to the headman or mayor of the village or urban district, while in the case of the Shinto it is also made to the priest of the *ujigami* shrine (*i.e.* the shrine of the tutelary god of the village or family). Should that shrine be at an inconvenient distance from the deceased's residence, some other temple near by is selected. The Shinto clergy do not, however, have much to do with the arrangements for the funeral, although, as a matter of course, they have a voice in the selection of the day for the funeral obsequies.

In Buddhist funerals the priests play a larger part, and in former days their rôle was more important even than it is now. This may be seen in the fact that in some very ancient temples there may still be found a *yukamba* ('bath-room'), in which the ceremony of washing the dead (*yukan*) was carried on under their directions. (The washing ceremony takes place after midnight; a new wash-tub, pail, dipper, and towel are used, and, after the washing is over, all these utensils, together with any hair, nails, etc., taken from the body, are buried in some secluded spot.) The intervention of the priesthood is also necessary for the ceremonial shaving of the corpse, since shaving is the sign of ordination, and it is the theory of all Buddhist sects that the Buddhist layman passes at his death into the Order of Monks. When the shaving ceremony is over, the priests prepare a *kechi-myaku*, (lit. 'letters of orders,' *i.e.* 'certificate of ordination'), which, as we saw above, is placed in the *dzudabukuro* for use during the soul's pilgrimage in the realms of the dead.

The priests are also consulted about the selection of a day suitable for the funeral, and about the posthumous name to be given to the deceased. Government regulations and sanitary requirements interfere somewhat (not much) with the absolute freedom of choice of a propitious day, and attempts are made to get the funeral fixed for some time within 24 hours after death. But these regulations are more frequently honoured in the breach than in the observance, and an interval of many days sometimes occurs. (The difficulty is occasionally got over by postponing the formal announcement of the death until all the necessary arrangements for the funeral have been made.) In addition to the ordinary cycle of the seven days of the week, there is another cycle of six days (generally to be found in the almanacs), according to which the propitious and unpropitious days are selected. The names of these six days are *senshō*, *tomobiki*, *sempu*, *butsumetsu*, *daian*, and *shakkō*;[1] a *tomobiki* day is never selected for a funeral. The posthumous name is always one with a religious meaning, and it is also so formed as to mark the sect to which the deceased belonged. Thus *yo* always appears in the posthumous name of a Jōdo believer, and *nichi* and *zen* in those of Nichiren and Zen believers respectively, but it is not always the case with the latter. Appended to the posthumous name is a designation of the deceased's status: *koji* ('landlord') and *daishi* ('landlady') for a gentleman and lady of high rank; *shinji* ('layman') and *shinnyo* ('laywoman') for ordinary men and women; *dōji* ('lad') for a boy; *dōnyo* ('lass') for a girl. The posthumous name is inscribed on the *ihai*, which is executed in duplicate, one being retained in the house, while the other goes to the funeral and is deposited in the temple. At the end of 100 days after death, lacquered *ihai* take the place of the plain wooden ones first used. In the same way, in Shinto rites, the *tamashiro* is at first placed in a 'temporary soul-receptacle' (*karimitamaya*); at the end of 50 days it is placed in a 'permanent soul-receptacle' (*mitamaya*). In some Buddhist families there is a large family *ihai*, on which the names of all the deceased members are inscribed, 100 days after death. It should be noticed that some Buddhist sects, *e.g.* the Shinshu, speak of two kinds of posthumous names: the *kaimyō*, given by the priests; and the *hōmyō*, given to the soul in Paradise by Amida himself—a kind of 'new name which no man knoweth saving he that receiveth it.'

Notice is now sent, by post-card or otherwise, to friends and relatives, announcing the decease. It is customary to pay visits of condolence, and to send presents to the house of the deceased. The nature and manner of presenting these gifts are fixed by custom, but it is very common at the present day to offer money in lieu of other gifts—a kindly tribute which is always very acceptable in view of the heavy expenses which a Japanese funeral entails.[2]

[1] The cycle of six days (see the talismanic tables in books on magic, *e.g.* Barrett's *Magus*, 1801) depends on the six elements common to Kabbala, Gnosticism, and Shingonism, which are symbolized by the term *Abarakakia*, to which reference is made in this article. It is one of the many links connecting the Mahāyāna with the Judæo-Gnostic thought of the New Testament times.

The days are (i.) *Senshō*, 'first half good.' A *senshō* day is good for pressing and urgent business during the forenoon, but not after midday. By urgent business, lawsuits, petitions, etc., are meant. (ii.) *Tomobiki*, 'drawing friendship.' These days are good in the forenoon or evening, but not in the afternoon. There is no contest about anything. The day brings its own luck, and no amount of human striving will alter it. (iii.) *Sempu*, 'first half bad.' No urgent business should be undertaken on such a day. The afternoon is, however, lucky. (iv.) *Butsumetsu*, 'destruction of Buddha.' A sort of unlucky Friday. Nothing done on such a day will prosper. (v.) *Daian*, 'great peace.' Very lucky for anything, especially removals or journeys; cf. the old seaman's superstition about starting on a journey on Sunday. (vi.) *Sekko*, 'red mouth.' With the exception of the noontide hour, the whole of this day is unlucky. In the cheap Japanese calendars (*koyomi*) each day is marked according to this sixfold cycle.

[2] E. Schiller, 'Japan. Geschenksitten,' in vol. viii. of the *Mitteil. der deutschen Gesellsch. für Natur- und Völkerkunde Ostasiens*; cf. also A. H. Lay, 'Funeral Customs of the Japanese,' in *TASJ*, vol. xix. pt. iii. The subject is a very large one, and beyond the limits of this article.

In due course the body is placed in the coffin. Coffins (*hitsugi* or *kwan*, the former distinctively Shintoist) are of two kinds—*nekwan* ('sleeping coffin') and *zakwan* ('sitting coffin'). In the latter the corpse is placed in a praying posture; in the former, in a recumbent one. At the bottom of the coffin is placed a piece of white cotton cloth, 4 hand-breadths wide, and 8 *shaku* (Jap. feet) in length; over this, a white *futon* and *fusuma* ('quilt' and 'coverlet'), and a pillow. Then the corpse is put in, together with any objects, *e.g.* an inkstand or photographs, prized by the deceased during life; and the whole is filled up with buckwheat husks to keep the body from moving. No metal object may be put into the coffin.[1] The interval between the encoffinment and the funeral is the most important period of the watching by the dead. It was a period of festivity in the old Shinto, but is now generally passed in silence: in the Buddhist *tsūya* ('wake') the silence is broken by the voices of the priests who are summoned on the last night to read Sūtras by the side of the deceased and for his benefit. This is known as *makuragyō*,[2] or 'pillow-Scripture,' and is accompanied by much burning of incense. Entertainments are provided for the guests. The lawfulness of the officiating priests partaking in these festivities is frequently discussed in Buddhist magazines. Very often the priest is provided with his meal apart from the laity, who do not begin until the clergy have finished; and an attempt is sometimes made to save appearances by drinking the *saké* out of tea-cups.

There are several strange old customs with regard to the choice of a location for the grave. Thus, in some of the remote mountain-villages in Tosa, while the corpse is still lying outstretched on the rush-mat, one of the near relatives kicks the pillow from under its head and carries it off to the cemetery. When he has selected the proper place for the grave, he puts down the pillow there, and, taking out four small coins, throws them east, north, west, and south. 'With these coins,' he says, 'I buy seven square feet of ground from the god of the earth.' Another old custom, still surviving in remote districts, is for a person not connected with the deceased by blood, and therefore free from death pollution, to sweep the ground selected for the grave, to spread a rush-mat on it, and on a table placed on the mat to erect a *himorogi* ('temporary tabernacle') for the earth-god. This is done by setting up *sakaki* branches with little paper pendants (*nusa*), etc., and by making offerings of rice, fish, vegetables, seaweed, and fruit. Then he offers the following prayer:

'I address the great god who is the lord of this locality. A new grave is here to be made for N. (name, office, rank). With an offering of wine, boiled rice, and *nusa*, I pray thee to grant that he may lie in this grave for ever, free from affliction and in peace. I speak with all respect and humility.'

Then he clasps his hands and bows twice.

When the preparations for the funeral are all complete, the coffin is carried into a front chamber, and incense, lights, and a single flower are again offered before it. A set of *zen* is also provided. In this case, the *zen* consists of a bowl of unhulled boiled rice (*kurogome no meshi*), soup, raw *miso* ('bean-paste'), unrefined salt, and a pair of chopsticks, one of which is made of wood and the other of bamboo. Everything is now in readiness for the funeral ceremony. From this point sectarian differences become more marked, and it will be well to treat of Japanese funerals in detail according to the various sects.

[1] In certain Buddhist sects a pilgrim's staff and a doll are also put into the coffin (Ohrt).

[2] The Sūtra varies with the sect. In the Zen sect it is *Yuikyō* (Eka-Sūtra); in the Shingon, *Rishukyō* (Buddhi-Sūtra). These Sūtras, which do not exist in Sanskrit or Pāli, are said to have been preached by Sākyamuni shortly before his entry into Nirvāṇa. They are classified under the Nehangyō or Nirvāṇa Sūtras.

II. *SHINTO.*—A purely Shinto funeral is divided into five distinct portions: (*a*) *mitamautsushi*, or introduction of the spirit into the *tamashiro*; (*b*) *shukkwan*, or taking the coffin out of the house; (*c*) *sōsō*, or funeral procession; (*d*) *maisō*, or committal to earth; and (*e*) the subsequent purification. The actual ceremonies are conducted by the *moshu* ('chief mourner'), who is generally the heir, eldest son, or other near relative. Relatives in the ascending line are generally excluded. Recently, when H.I.H. Prince Arisugawa lost his son, the *moshu* was Prince Itō. The *moshu* is dressed in a dress of some dark colour, over which is worn a white *hitatare* ('surplice') and an *eboshi* ('mitre'). In the middle classes, however, the ordinary *haori* ('upper garment') and *hakama* ('nether garment') are frequently worn.

(*a*) The *mitamautsushi* takes place apparently as soon as the *tamashiro* is provided. The *moshu* (sometimes a *kannushi*, 'priest') sits down before the *tamashiro*, bows twice, claps his hands, and announces that the spirit (*tama*) of the deceased has taken up its abode in the *tamashiro*. This is known as the *zokuji*, and the following *norito* ('prayer' [Shinto]) is used (tr. by Ohrt):

'Alas! my (father), thou hast been taken away from us. I, N. N., and the rest of us that remain behind, will still continue to do thee faithful service in our hearts. Thy life has come to its close upon earth. Hear us in thy place of rest, as we celebrate thy obsequies. Deign, exalted spirit, to take up thy abode in this *tamashiro*, and remain at rest for ever in this thy house. I address thee with the deepest reverence.'

This *norito* is frequently repeated, as well as the invitation to the soul to participate in the feast. The *tamashiro* is then placed on the *kamidana*, or 'god-shelf,' used in Shinto houses.

(*b*) *Shukkwan.*—Before the bier is taken out of the house, offerings of boiled rice, *saké*, etc., are again made. Then the celebrant seats himself before the bier, bows, claps his hands, and, presenting a *tamagushi*,[1] addresses the spirit with the following *norito*:

'This day, as the sun sets, we shall reverently celebrate thy obsequies. We pray thee to behold us in peace and without anxiety, as we start on our journey and pursue our way (to the cemetery). I speak with deep reverence and humility.'

Then he bows twice, claps his hands, and retires. All relatives present do the same. After this, four men, dressed in white, carry the coffin into the court-yard, where a fire is burning (on the theory of a midnight funeral), and the procession is formed in the following order: (1) coolies (or outriders); (2) coolies carrying torches or lanterns (still on the theory of the midnight funeral); (3) servant with a broom (relic of the old custom mentioned above); (4) white banner, 15 in. in width by 8 or 9 ft. in length, carried on a pole, and inscribed with the name and title of the deceased; (5) bearers with consecrated branches of the *sakaki* tree; (6) chest with offerings; (7) bearers with torches and lanterns; (8) the coffin (if a *zakwan*, it is carried in a *kago* ['litter']; if a *nekwan*, on a bier of white wood; it is carried on the shoulders of bearers in white surplices); (9) *bohyō*, a post, inscribed with the name, to be set up as a temporary mark for the grave; and (10) the chief and other mourners, on foot, as a general rule. Trestles (*koshidai*), a table for offerings, hangings, and a wooden pail and dipper also form part of the paraphernalia, but are now more generally found at the place of interment.

(*c*) The *sōsō no shiki* is generally celebrated within a curtained enclosure, though in Tokyo and other large places there are mortuary chapels to serve the purpose. The enclosure, or chapel, is invariably arranged in accordance with the annexed plan, the ritual observed in the chapel differing very slightly from that in the enclosure.

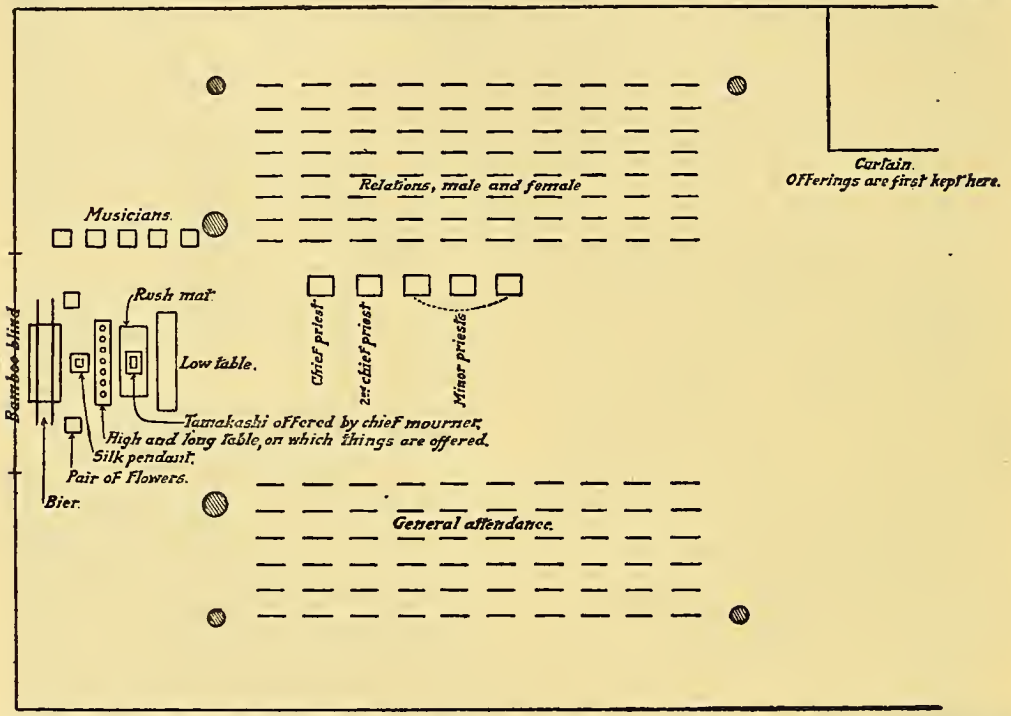
As the funeral procession arrives, the musicians take their seats and begin to play. During this

[1] *i.e.* a consecrated branch adorned with numerous pendants and streamers of paper.

time the bier is placed in its proper place, the flower-standards are arranged, and a high stand is erected, from which a pendant will later be suspended. When every one is seated, the celebrant, with his assistant, advances before the bier and bows. During this ceremony the music has ceased, but it begins again as soon as the priests return to their places.

The assistant now takes his place before the bier, but a little to the right of it. Acolytes bring a banner for the stand, and offerings to be placed on the table—*saké*, boiled rice, fresh fish, vegetables, seaweed, cakes, fruit, etc. Again the music ceases, while the chief celebrant advances once more, and, with his mace on his left hip, commences the repetition of certain prayers, which contain a recital of the dead man's birth, lineage, school-life, and career, official or otherwise, and conclude with words much to this effect:

'Our honoured N. has passed away to our great regret; to our sorrow he has given up the ghost. The prayer of our inmost heart was that he might live to very great age, but it is the way of the fleeting world that he should come to this. Our prayer is that he will regard with tranquil eyes the obsequies we are now performing, and lie down to rest in his grave, leaving his spirit behind him to guard the house. Reverently and with humility I make this prayer.'



This prayer is known as the *maisō-no-kotoba* ('words of committal'). Everybody stands while it is being offered. When the music begins again, the chief mourner, habited in black with a white surplice, and wearing a black *eboshi* ('mitre') and straw sandals, comes forward and offers a branch of *sakaki* as a *tamagushi*. All the relatives and friends follow this example, the attendant priests having a large number in readiness for the needs of the visitors. Funeral orations are delivered, sometimes before and sometimes after the offering of the *tamagushi*.

(*d*) *Maisō*.—The coffin is now carried to the grave, and lowered into it, with few or no ceremonies. A few handfuls of earth are thrown upon it, and a *boshi*, 'plate,' inscribed with the name, age, rank, etc., of the deceased, is put on the coffin-lid. Then the grave is filled up, and on the new-made mound is planted the *bohyō*, a few lanterns, and banners. An open shed resting on four pillars is sometimes built over it, and generally it is surrounded with a *magaki* ('bamboo fence'), and a *shime* ('cordon') of rice-straw string.

The Shinto ritual does not contemplate cremation, but it is sometimes adopted. In that case the *maisō-no-kotoba* and the ritual that follows are used at the time of the interment of the ashes.

(*e*) The purificatory rites are of two kinds—of the house and of the mourners. The house is purified, immediately after the corpse has been taken out, by a Shinto priest, who comes in and waves a *tamagushi* in every direction, though sometimes the purification is accomplished by the priest's rinsing his mouth with water and throwing salt over his head.

The mourners are purified on their return from the funeral. (The return journey is always by a different road from that taken when going to the funeral.) There are apparently three methods of purifying persons, viz. (1 and 2) the methods observed in purifying a house, and (3) a slightly more elaborate one. Offerings are placed before the *tamashiro*, and in front of them a branch of *sakaki*. The priest (or the *moshu*) recites the following *norito*:

'I thus address the spirit of (my father) who has now become a god. I prayed day and night that thou mightest live to be a hundred years old, and now I can but weep and lament that thou hast left this beautiful world, and gone to the dark land beyond. I beseech thee, listen in peace to us thy relatives assembled here, as we celebrate the worship of the dead with all manner of food.'

Then the offerings are removed.

The first fifty days after death are observed according to the Shinto rituals with daily offerings before the *tamashiro*. Special emphasis is laid on the 10th, 20th, 30th, etc. On the fiftieth day, the *tamashiro* is removed from its temporary shrine to the *mitamaya* or *kabyō* ('spirit-house'), and henceforth the worship of the spirit is performed along with that of the other ancestors. On this occasion,

the *saishi-no-kotoba* are used—prayers asking the spirit of the deceased to take up his abode in the *kabyō*, and beseeching the whole body of the ancestors to receive him into their company. Similar prayers are offered on the 100th day after death. On that day the temporary post should be removed from the grave, and a stone monument set up. The first anniversary is observed; after that, the anniversaries of the 3rd, 5th, 10th, 20th, 30th, 40th, 50th, and 100th years. After that, there is a commemoration every 100 years. The reader will understand that it is only in very exalted families that such minutiæ can be attended to, but the Shinto funeral is in any case almost entirely confined to the highest classes.

III. *BUDDHIST.*—Something has already been said about customs observed in Buddhist houses in the care of the dead. The general procession is somewhat as follows (it is more striking to the eye by reason of the greater splendour of vestments, etc.): (1) bearers with natural flowers (*seikwa*); (2) bearers with artificial flowers (*tsukuri-bana*); (3) four (sometimes two) paper dragons on poles (*jatō*), these being evidently connected with the friendly Nāgas of Indian Buddhism; (4) banner (*meiki*), with the personal name of the deceased; (5) the officiant priest (*dōshi*), with his assistant (*mukaisō*); (6) white paper lanterns; (7) one *ihai* (the other is left at home); (8) incense (*kōro*); (9) the coffin on a bier, borne on men's shoulders, and with a few friends of the deceased walking beside it; and (10) the mourners (generally in *jinrikisha*). A bird-cage full of birds to be released at the grave-side, and a *sotoba* or *stūpa*, actually a post, notched near the top, and inscribed with Sanskrit characters, often form portions of the procession.[1]

1. **Ceremonies of the Zen.**[2]—(1) *The service in the house.*—In this sect, the officiating priest is generally called the *indōshi*, because a large part of his duty is supposed to be to guide (*indō suru*) the soul of the deceased on its voyage through the realms of the dead. The *indōshi* begins by laying his *hossu* ('chowry,' a brush made of long white hair) on the lid of the coffin, as a sign of authority. Then he takes up the razor that has been used to shave the deceased. This is followed by the words:

Teijo shuhatsu Tōgwan shujō Yōri bonnō Xugyō jakumetsu: 'The hair and beard have been shaved. I pray that all creatures may forsake evil passions for ever, and reach the goal of annihilation.'

This verse is sung three times, sometimes by the officiant alone, sometimes by the officiant and chorus. Next follows, sung or said in the same manner:

Ruten sangaichū Onnai funōdan Kion nyūmui Shinjitsu hōon sha: 'Whilst transmigrating through the Three Worlds, ties of kindness and affection cannot be cut off. He who has cut off this tie, and entered the realm of the unconditioned, is truly a grateful man.'

Now follows an exhortation to the deceased to confess his sins:

'Young man of good birth' [it will be remembered that the deceased is supposed to have received the tonsure], 'if thou wish to stand fast in the Refuges and to observe the commandments, thou shouldest first confess all thy sins. [There are two formulæ of penitence; there is also the form of confession which has come from the former Buddhas and been handed down by successive patriarchs.] All thy sins will be pardoned. Recite these words after me.'

Then the priest recites the confession, with the sound of clappers (*kaishaku*) once at the end of each line, and twice at the end of the stanza. The spirit of the deceased is supposed to join him in his recitation:

'All the evil *karma*, which I have accumulated in the past, has had its origin in desire, hatred, or ignorance, in a series of previous existences which has had no beginning. It is due to the body, the tongue, and the mind. All this I confess.'

The priest continues:

'Thou hast confessed thy evil deeds of body, tongue, and mind, and hast obtained the perfect purification. Now, therefore, thou must stand fast in the Three Refuges, in Buddha, the Law, and the Order. The Three Treasures have a threefold virtue, the threefold absolute virtue, the threefold virtue as it was in Buddha's time, the threefold virtue as it is in a time when there is no Buddha (*ittai sambō, genzen sambō, jūji sambō*). When thou hast taken refuge in them, thy virtues shall be completed.'

Recitation of the ninefold Creed follows:

Namukie Butsu, 'Glory to Buddha in whom I take refuge.'
Namukie Hō, 'Glory to the Law in which I take refuge.'
Namukie Sō, ' " " Order " " .'
Kie-butsu-mudō-son, 'I take refuge in Buddha, the supereminent.'
Kie-hō-ri-jin-son, 'I take refuge in the Law, the undefiled.'
Kie-sō-wagō-son, ' " " the Order, the harmonious.'
Kie-buk-kyō, 'I have finished taking refuge in Buddha.'
Kie-hō-kyō, ' " " " the Law.'
Kie-sō-kyō, ' " " " the Order.'

[After each sentence the clapper sounds once; at the end it is sounded twice.]

The officiant goes on:

'After this wise have I now conferred on thee the Refuges. Henceforth, the Tathāgata [the Buddha], the Truest, the Perfectly-Enlightened is thy Teacher. Put no faith in the Tempter, nor in any heretical teachers, but have respect to the great Benevolence, Deliverance, and Compassion that have been vouchsafed thee. Now will I recite for thee the ten grave commandments. They are these:

1. *fusesshō*, "thou shalt not destroy life."
2. *fuchūtō*, " " steal."
3. *fujainā*, " " commit fornication or adultery."
4. *fumōgo*, " " lie."
5. *fukoshu*, " " sell intoxicating liquors."
6. *fusekkwa*, " " backbite."
7. *fujisankita*, " " praise self at the expense of others."
8. *fukenhōzai*, " " be grudging of the gifts of the Law."
9. *fushin-i*, " " be angry."
10. *fuhōsambō*, " " speak evil of the Three Treasures."

These ten grave commandments have been formulated by previous Buddhas and handed down by successive Patriarchs. I have now entrusted them to thee. Keep them well in all thy existences until thou attain to the Buddhahood. [This formula may be repeated at the discretion of the celebrant.] Sentient beings that fulfil the Commandments of Buddha are placed in the same rank with Him. He that is in the same rank as the Perfectly Enlightened One is truly a Son of Buddha.'

[Wooden clappers twice, handbell thrice.]

The priests present now chant a stanza known as the *daihishu*. When it is finished, a priest (not the one who led the service before) takes up his word:

'After this wise has been sung the *daihishu*. The merits arising therefrom are to be transferred to N. [here insert the *kainyō*], newly returned to the elements. We pray that when we place his body in the coffin the Sambhoga land may receive him.'

Then all together:

'All the Buddhas in the Ten Directions and in the Three Worlds, all the Honourable Bodhisattvas and Mahāsattvas, and Mahāprajñāpāramitā, the land of the Sambhoga Kāya.'

The same priest continues:

'If we meditate deeply on these things, lo! birth and death succeed each other as heat follows cold. They come like the lightning flashing over the deep sky, their going is like the cessation of waves on the great sea. The newly deceased N. has this day suddenly come to the end of his life, by reason of the exhaustion of all seeds of existence. He understands that all composite objects must be dissolved, and is convinced that the extinction (of the seeds of existence) is bliss. The holy congregation here assembled will respectfully recite the names of the saints. May the blessings resulting from that recitation serve to adorn the road leading to Nirvāṇa.

Vairochana, the Buddha of the Holy Dharmakāya.
Rochana, the Buddha of the Perfect Sambhogakāya.
Śākyamuni, the Buddha, whose Nirmāṇakāya incarnations are hundreds upon hundreds of millions.
Honourable Maitreya Buddha, for whose coming we wait.
All Buddhas in the Ten Quarters and the Three Worlds.
Mahāyāna-Saddharmapuṇḍarika Sūtra (personified).
Mahārya Mañjuśrī Bodhisattva.

[1] The Sanskrit characters are *Kha la ka va a*, representing the five *skandhas* ('forms of mundane consciousness'), and, as an alternative, the five elements which compose the universe. In Shingon, we have the pair of formulæ *A-ba-ra-ka-kia* and *Kha-la-ka-va-a*: in Irenæus, the Gnostic terms *Abraxas* and *Caulacau* (Irenæus says that *Caulacau* = 'mundus' [cf. vol. ii. p. 428, note]). See the present writer's *The Faith of Half Japan*, London, 1911.

[2] We take the Zen first, not as being the oldest of the now existing sects, but as representing most specially the purely Indian side of Japanese Buddhism.

Mahāyāna Samantabhadra Bodhisattva.
Mahākāruṇika Avalokiteśvara Bodhisattva.
Honourable Bodhisattvas and Mahāsattvas.
Mahāprajñāpāramita.'
[Here follows the *shariraimon*, or stanza for worshipping the relics of Buddha.]

One priest alone:

'After this wise the Names of the Holy Ones have been recited, and the Sūtra has been chanted. The merits arising therefrom will be transferred to the newly-deceased N. to adorn the Sambhoga land, with the prayer that the soul may travel beyond the consecrated border (of personified existence), that its *karma* may be exhausted, that a superior lotus flower may open for it, and that the Buddha may give it a prediction for life. Once more the Holy Assemblage is invited to chant.'

All present:

'All the Buddhas in the Ten Quarters and the Three Worlds, all the Bodhisattvas, Mahāsattvas, and Mahāprajñāpāramita.'

Then the *indōshi*:

'We are now about to lift the sacred coffin, and to celebrate imposing obsequies. The assembly is implored to recite the great names of saints, and to assist the soul of the deceased along the road to Nirvāṇa.'

This ends the *makuragyō*, or service in the house. The procession is now formed outside, and, when the coffin has been put on the bier, a start is made for the temple or graveyard.

(2) *The services in the temple.*—Whilst the procession, professedly modelled on the funeral of Suddhodana (the father of the Buddha), is making its way to the temple, certain preparations have been made for its reception. The temple-bell has been set tolling, and goes on until the cortège reaches the front gates. In the court-yard four small *torii* ('gates') of wood have been erected facing E., S., W., and N. On each is suspended a tablet with an inscription: (1) *Hosshimmon*, the gate of religious awakening; (2) *Shugyōmon*, the gate of religious practices; (3) *Bodaimon*, the gate of Bodhi; and (4) *Nehammon*, the gate of Nirvāna. They are symbolical of the various ways that lead to Eternal Life, and the coffin is carried three times round to them all to show that, in the opinion of the Zen, all four are necessary. The ceremony may be held either in the main hall of the temple or in an open court-yard.

While the procession is making its round of the four *torii*, some of the priests slip into the temple or hall, and begin the recital of certain *dhāraṇī* ('secret formulæ'). These are supposed to be very efficacious, even by the Zen sect, which originated in a protest against the magic formulæ that were so rife in the China of the 6th cent. A.D. Gradually the assembly take their seats; when all are seated and the music and chanting have come to an end, the *indōshi* recites the *indō*, or 'guiding words,' for the benefit of the soul of the deceased. Then another priest says:

'This day the newly-deceased N., having exhausted all the causes of life (Skr. *pratyaya*), has entered Nirvāṇa, and is now to be buried according to the Law. His phenomenal body, the body that endures for a hundred years, will be buried; the real Self will be sent to tread the lone path that leads to Nirvāṇa. The holy assembly (of monks) is therefore prayed to assist the soul that is being enlightened, and to recite.'

Here all the priests present take up their cue and recite:

'Vairochana, the Buddha of the Holy Dharmakāya,' etc., as above.

The priest resumes:

'After this wise have the holy Names been praised, and the soul that is being enlightened has been helped. Let us pray that the mirror of Wisdom may shed its brightness on him, that the wind of Truth may waft on him its splendours. In the garden of *Bodhi* ('infinite knowledge') may the flowers of Enlightenment and Wisdom bloom, and on the sea of reality may the waves roll free from every stain. We offer three cups of tea, we offer incense to accompany him along the solitary, clouded path, and we worship the assemblage of the saints.'

Here the congregation recites the *Ryōgonshu*; then the priest alone:

'After this wise have the names of the Holy Ones been chanted and the Sūtra been recited. The merits accruing from this act of worship are to be transferred (*ekō*) to the newly-deceased N., at the time of his interment, to adorn the Sambhoga land.'

Chorus of attendant priests:

'All the Buddhas in the Ten Quarters,' etc., as above.

Small bells, drums, and cymbals are beaten in chorus three times, and the coffin is taken away for cremation or [and] interment.

No special ceremonies are observed in cremation. When the body (or the ashes, as the case may be) comes to the place of interment, it is lowered into its grave by the nearest kinsman. All the banners are placed on the coffin-lid, and the relatives each take a handful or spadeful of earth, which they throw into the grave. The grave is then filled up.

2. Ceremonies of the Shingon.—We now come to a sect whose ceremonies it is most difficult to describe, for the reason that a great deal is done by dumb show, the so-called *mudrā*, 'signs of the hand,' being matters of prime importance in these ceremonies. Great stress also is laid on the recital of mystic formulæ in debased Sanskrit, which it is not always easy to understand. Some of these formulæ are secret, and may not be revealed to the general public. [For all these the student is referred to vol. viii. of the *Annales du Musée Guimet.*] The Shingon sect is in many ways the most interesting of all the Buddhist sects in Japan; for not only has it been the great inspirer of Japanese art, but it has certain most striking resemblances both to Alexandrian Gnosticism and to the Jewish Kabbala. These will be duly pointed out as they occur.

(1) *Ceremonies in the house.*[1]—A temporary place of worship having been arranged, when the service is about to commence, the officiant, also called *indōshi*, goes before the coffin with the long-handled incense-burner in his hand, and makes a bow. Then he takes his seat on the *raiban* ('exalted seat of worship'), rubs his hands with *dzukō* ('liquid incense'), and spends some moments in meditation, the subjects of which are supposed to be the 'three secrets' (*i.e.* the secret *dhāraṇī*, the secret *manual acts*, and the secret *teachings* which have been committed to him); the 'way of purifying the three deeds,' *i.e.* of body, mouth, and heart; the 'three sections,' *i.e.* the world of Buddhas, the world of the Lotus, and the Diamond World; and the 'putting on of spiritual armour.' All these meditations are exhibited by the corresponding formulæ and manual acts. This section is closed by a meditation on the scented water, which is called the *kajikōsui*,[2] 'scented water signifying the acceptance by the believer of the great mercy of the Tathāgata projected over the hearts of his creatures' (so explained in *Sokushinjōbutsugi*). This produces an effectual union of the worshipper's heart with that of the Buddha.

The celebrant now proceeds to the invocation of the Buddhas. Commencing with a manual act ('diamond-joining-hands'), which signifies the raising of the thoughts towards *bodhi*, accompanied by a *dhāraṇī* of the same import, he proceeds by a series of gestures and formulæ, which it is not necessary to give here, to invoke the Universe[3] and the Atoms.[4] From the invocation of

[1] The Shingon house-ceremonies are performed before a small temporary altar, on which stand the images of the thirteen Buddhas and Bodhisattvas, supposed to take charge of the soul of the dead for several years after death. These thirteen Buddhas, who are clearly not particularly connected with primitive Buddhism, appear to correspond with the Æons of the thirteen realms of the dead, through which, *e.g.*, in the book *Pistis Sophia*, the Gnostics supposed the souls of the dead to pass in Hades. The thirteen Buddhas are not peculiar to the Shingon, though this sect lays more stress on them than does any of the others. See note on the subject in the present writer's *Shinran and his Work* (Tokyo, 1910), Appendix iii., and also *The Faith of Half Japan*.

[2] The *kajikōsui* is also used in the *abhiṣeka*, or baptismal rites (Jap. *kwanjō*), of both Shingon and Tendai. It corresponds to the *opobalsamum* mentioned by Irenæus as used in the baptisms of the Marcosian heretics.

[3] The *dhāraṇī* is *Om-sammaya satoban*, a debased Sanskrit which we have not been able to understand. The manual act is called a meditation on Samantabhadra.

[4] Here the *dhāraṇī* refers to the five exterior elements; it is *Om Abiraunken*, 'earth, water, fire, wind, void.' This name

the Universe impersonal he passes to that of the Universe personal, to the Five Buddhas,[1] to Amitābha, the giver of immortality,[2] and to Amitābha with his attendants Avalokiteśvara and Mahāsthāmaprāpta, that they will come to the funeral ceremony and invite the deceased to enter the bliss of Paradise. After each of these invocations, the *kōmyōshingon*,[3] or invocation of the Five Dhyānibuddhas, is chanted three times. Then, coming lower in the scale of dignity, we have the invocation of Kṣitigarbha, the sixfold protecting angel of the dead (*Roku Jizō*), and that of *Fudō-myō-ō* (*Achāravidyārāja*) and the other great *vidyārājas*—Mahātejas, Vajrayakṣa, Kundali, and Tribhavavijaya. The *mantra* of Kṣitigarbha is *Kakakabi samayei abiraunken sowaka*; that of Fudō-myō-ō, which is chanted three times, is *Nōmaku sāmanda bāsarada sendam mākara shātei sowataya untaratā kamman*. (The meaning of these Sanskrit formulæ is now wholly lost.)

We now get three *mudrās*, representing the 'preaching' of Vairochana of the three *kāyas*—the Dharmakāya (*Namu A*), the Sambhogakāya (*Namu Vam*), and the Nirmāṇakāya (*Namu Un*). The three syllables *A-vam-un* (possibly Skr. *oṁ* $= a + u + m$) represent the 'Trinity' of Vairochana. Then the *stūpa* is figuratively opened and shut—an evident allusion to the Saddharmapuṇḍarīka Sūtra; next, a *mudrā* (or manual gesture) figuring the *abhiṣeka* of Fudō-myō-ō (see above), with *Namu baṃ* repeated thrice; next, three representing respectively the Dharmakāya, Sambhogakāya, and Nirmāṇakāya (possibly of Fudō-myō-ō), with *mantras* respectively—*Anbanrankanken*, *Abiraunken*, and *Arahashanō*. But Fudō, like Kṣitigarbha, is sixfold in his operations in the six spheres of sentient existence, and we consequently have a suitable gesture, imparted to Kōbō Daishi by his Chinese tutor Keikwa, for which the *mantra* is *Abiraunken*, together with a secret formula which may not be written down, but which may be attained by means of a proper 'meditation on the Fire.'

Thus, the whole celestial hierarchy of the Shingon having been invoked, it remains only to procure for the deceased, on whose behalf all these celestials have been summoned, a suitable understanding of what it all means. This is effected by means of four more sets of manual acts and *mantras*, signifying respectively the attainment of the perfect knowledge of *rūpadharma* ('objects having form'), of *chittadharma* ('objects conceivable, but without form'), of *rūpadharma* and *chittadharma* together, which are not two, but one; and, finally, a meditation on the *dharmadhātu* ('universe'), for which the *dhāraṇī* is *Om Maitreya Svāhā*. [The Shingon are firm believers in Maitreya, more so than any other of the Buddhist sects. It is their conviction that the body of Kōbō Daishi, which never decays, is awaiting the advent of Maitreya in his tomb at Kōya San, and Shingonists often send the bones of their dead, after cremation, to Kōya San, so as to be near to Kōbō at the resurrection, which will take place when Maitreya makes his appearance.]

The officiant now prostrates himself three times before the assembled deities, offers incense, strikes the bell three times, and recites a sort of creed:

'With deep respect for all the Buddhas here assembled, I take my refuge in Buddha. May all creatures follow my example! I take my refuge in Dharma. May all creatures follow my example! I take my refuge in the Saṅgha. May all creatures follow my example! The excellent physical body of the Tathāgata is without a parallel. The form of the Tathāgata is inexhaustible, and all the *dharmas* (Jap. *issaihō* = 'all matter') are permanent. With deepest reverence I address the great Vairochana, the Tathāgata, the Master of Shingon Buddhism, and all the venerable ones and saints of the two assemblies (*i.e.* the Vajradhātu and Garbhadhātu); and especially Amitābha, the master and teacher of the Land of Bliss, the Merciful Maitreya, for whose coming we wait; the holy Henjō Kongō (*i.e.* Kōbō Daishi), who sits cross-legged in deep meditation; all the great Ācāryas, the transmitters of religious light in the three countries (India, China, Japan), and also in all the lands illuminated by the eye of Buddha, and pitied by the Three Gems.

If we meditate deeply thereon, the moonlight of "Opportunity-which-is-born-when-the-desire-thereof-ariseth" (*Kikwai ki okoreba sunawachi shōzu*) shines in the sky of the tranquil spiritual Nature. The colour of the flower of "The-Cause-that-being-exhausted-presently-disappeareth" blooms in the Garden of unbounded Adornment.

Appearance is as non-appearance.
Disappearance is as non-disappearance.
Both appearance and disappearance are unattainable.
They cannot be named.

The deceased N., his causes of life having been exhausted, has gone to another world. He has left his body in Jambudvīpa,[1] and has entered the intermediate state (Skr. *antarabhava*, Jap. *chū-u*). Therefore now, in accordance with the testament of the Śakyan king, who was endowed with the ten merits (*jūzen*), we will with tears celebrate the ceremonies of funeral-rites and cremation. Having adorned the Sacred Altar upon which the Tathāgata will descend in answer to our prayers, we will pray for the favourable acceptance of his soul by the Venerable Ones, and for its deliverance. We will kindle the pure fire, which passes through all the six elements (*rokudai mu-e*), and so cremate the body which from the beginning has had no true phenomenal appearance (*honrai fushō*). We pray that all the Buddhas may certify for him, that all the Saints may pray for him, and that they may receive him to a lotus-stand of superior dignity. May the living and lawful king of reason and wisdom (Vairochana [?] Amitābha [?]) endow him with the highest Buddhahood! . . . And may all sentient beings in the Dharmadhātu be equally benefited! . . . I speak this with all respect.'

This ends that portion of the service which is known as *hyōhaku*, 'the expression of belief.' Next follows the singing or chanting of the *Jimbun shingyō*, *i.e.* the Mahāprajñāpāramitāhṛdaya Sūtra, for the purpose of giving pleasure to the assembled spirits, in order that they may make their appearance upon the altar. After this a priest says:

'In the yard where funeral services are being conducted (for a deceased person), it is generally the case that his sins all perish, and that his merits rise heavenwards. This is the time of his ascension to the land of Bliss, and we may consequently expect that Yama the lawful king, and the five infernal officers of the other realms of existence, will make their appearance. We pray, therefore, to the thirteen great Buddhas, to the infernal officers, and to all their retainers and followers, that they may aid this man to lay aside his *karma*, and attain Supreme Enlightenment.'

Chorus. 'Hail, Mahāprajñāpāramitā Sūtra!' (one bell).

'That the departed soul may ascend to the secretly adorned sphere of flowers (*mitsugonkezo*), we invoke'—

Ch. 'The Name of the great Buddha Vairochana' (one bell).

'That he may ascend to the world whose inhabitants hunger not, neither thirst (*anyō jōdo*), we invoke'—

Ch. 'The Name of Amitābha (one bell);
The Sacred Name of Avalokiteśvara' (one bell).

'That he may be re-born in the inner palace of Tuṣitaloka, we invoke'—

Ch. 'The Name of the Buddha Maitreya (one bell);
The Names of all the Saints in its inner and outer palaces' (one bell).

'That the Buddha-field may be accessible at all times to all who desire it, we invoke'—

Ch. 'The Three Holy Treasures' (one bell).

'That all sentient Beings in the Dharmadhātu may be benefited equally (with him whose obsequies we celebrate), we invoke'—

Ch. 'The Name of Avalokiteśvara (one bell);
The Name of Vajrapāṇi' (one bell).

[Here the officiant lays down his censer and takes up his *nyo-i*, or mace.]

Namo ('homage').
'Kimyō chōrai Mujōshugwan.
Shōrei indō Ojōgokuraku,

appears often as *Ambamramkakaxu* and as *A-ba-ra-ka-kia*. It is almost certainly the Gnostic *Abraxas*—a conclusion in which we are strengthened by the fact that the Gnostic *Caulacau* also seems to appear in the *mudrā*. See above, p. 489ᵃ, n. 1.

[1] In this place the five Dhyānibuddhas are Amogha, Vairochana, Mahāmudra, Maṇipadma, and Jālapravarta—a very unusual enumeration. The more usual one is given below. We believe these to represent the five Dhyānibuddhas of the *Vajradhātu* ('Diamond World,' *i.e.* world of ideas), the others the corresponding set of the *Garbhadhātu* ('Womb World,' *i.e.* world of birth, death, concrete existence).

[2] The Shingon form of Amitābha is Amṛtābha.

[3] In *Shiva-n and his Work* the present writer has shown that the word *kōmyō* seems always to have Manichæan associations and connexions. It is quite possible that this *mantra* may have them too.

[1] It is a common fiction amongst Japanese Buddhists that Jambudvīpa, which is, of course, Hindustan, comprises China and Japan as well. It is in Japanese pronounced *Nan-embudai*. In Nichiren Sect books it is Ichi-embudai, which comes nearer to the sound of Jambudvīpa.

Hail! Buddhas and Bodhisattvas, whom I worship with bowed head and potent invocations! May this holy soul be led to, and be re-born in, the land of Bliss!

It is by the adornment and honouring of the Altar of the Teaching of Supernatural Power that Supreme Buddhahood may be obtained as in a moment. It is by the proclamation of the teaching that the material body is identical with Buddha,[1] that the Buddhas will themselves develop enlightenment in the doctrine that phenomenon is itself reality.'

Next follows an *ekō* ('prayer of transference'). The officiant lays down his *nyo-i*, and resumes his censer. (One bell.)

'I respectfully pay homage to the Three Eternal Treasures, and extol the teachings of Buddha, the Tathāgata who has realized Nirvāṇa and passed beyond birth and death. If any man will listen to Him with all his heart, that man's soul shall be filled with unbounded joy. All composite things are impermanent; they are possessed of the necessity of growth and decay. They spring into existence; again they perish; their extinction is bliss.'

Then the *Rishukyō* (Buddhi Sūtra) is read, and the ceremonies in the house are closed. On the road from the house to the temple, the priests meditate upon Fudō, and chant his *mantra* (see above).

(2) *Ceremonies in the temple.*—Near the entrance to every Shingon graveyard or temple will be found the six images of Kṣitigarbha (*Roku-Jizō*), the friend and protector of the dead. These must first be worshipped, as also the corresponding set of six Avalokiteśvaras (*Roku-Kwannon*). Then the officiant, entering, walks three times round the sacred fireplace which is found in every Shingon temple, with manual gestures and formulæ representing the five elementary colours, the putting on of spiritual armour, the breaking of hell, the raising of the mind to the contemplation of *bodhi*, and the meditation on Samantabhadra (*Fugen*), the special patron of truth. The last of these *dhāraṇī* is *Om-sammaya satoban*, which we have mentioned above (p. 490[b]).

All this leads up to what appears to be the central portion of this temple-service, the ceremony of *abhiṣeka* (Jap. *kwanjō*, 'besprinkling'), a kind of baptism mystically performed, and transferred by a subsequent *ekō* to the credit of the deceased.[2] The *abhiṣeka* is threefold, and is followed by an *indō*, 'guiding words,' very much the same as that used in the Zen ceremonies. But the Shingon *indō*, which is traditionally attributed to Kōbō Daishi, is not in writing, neither are the *dhāraṇī* used in this, the most sacred part of the service. They are all handed down orally from teacher to disciple, and it is not every Shingon priest that knows them. Next follows a passage from the *Dainichikyō* (Mahāvairochanābhisamboddhi Sūtra), also with a secret accompanying *mantra*:

'Without leaving this physical body, man may attain to the supernatural power of *jinkyōtsū* (Skr. *ṛddhipāda*, 'means of attaining magic power'), and, walking freely about in great space, may comprehend the secret of the body.'

Then come: *abiraunken* (five times); the *mantra* and gesture of the eye of Buddha (not committed to writing); a list of the succession of teachers, with the *kaimyō* of the deceased inserted at the end; separate *mantras* and gestures for all the six elements composing the 'enlarged Abraxas'[3]—earth, water, fire, wind, emptiness, consciousness; the *fujumon*, 'address,' describing the deeds, character, etc., of the deceased; the repetition of several *mantras* and hymns; another formula of *ekō*, transferring all the merit thus accumulated to the credit of the deceased; the dedication (figuratively) of the staff that is to accompany the deceased on his journey through the valley of the shadow of death; a number of prayers never committed to writing; and a similar manual gesture on the 'most secret Nature.' This brings the service to a close.

3. Ceremonies of the Tendai.—The Tendai has always been a sect with strongly developed Erastian tendencies. In the days of its initiation in China, it was the ally of the Sui and Tang Governments in their efforts to control the heterogeneous mass of teaching calling itself Buddhist, which was flooding China in the 6th cent. A.D. Introduced into Japan about A.D. 800, it served the same ends. And, when Iyeyasu had brought peace to Japan in the 16th cent., the Tendai played a considerable part in the spiritual policing of the country which was carried on during the whole of the Tokugawa period. The Tendai rites which we are about to describe were those observed at the obsequies of Viscount Takamatsu (August 1904).

(1) *Ceremonies in the house: the otogi, or 'wake.'*—The ceremonies begin with the adoration of the Three Precious Things. The celebrant (*indōshi*) thus begins:

'I take my refuge in Buddha. May all sentient beings comprehend the great Path, and raise their thoughts towards the Supreme Object!

I take my refuge in the Law. May all sentient beings (follow my example, and), plunging deep into the Treasure House of the Scriptures,[1] acquire knowledge as vast as the sea!

I take my refuge in the Order. May all sentient beings (following my example) attain to positions of rule in the great assembly!'

Then follows what is called the instructive stanza, as taught by the previous Buddhas, the predecessors of Śākyamuni:

'It is our prayer that all sentient beings may refrain from the commission of sin, that they may do good, and purify their own minds. This is the teaching of all the Buddhas. We worship the assemblage of the Saints.'

The Stanza of Evening:

'Hearken to the Stanza of Impermanency under the similitude of evening. When this little day is over, our lives will end and we shall disappear. We are here like fish in a shallow (basin of) water. O ye Bhikṣus, is there anything in the world that is pleasurable? Exert yourselves with diligence, and lose no time in saving yourselves from the fire. Meditate on the impermanency of material objects which are empty as the void, be diligent, be not slothful.'

The Stanza of Impermanency:

'All composite things are impermanent, for they are liable to growth and decay. They spring up into existence, and perish. Their extinction is bliss. The Lord Buddha has realized Nirvāṇa and banished for ever birth and death. He that wills to listen to this teaching with his whole heart shall gain immeasurable happiness.'

The Six 'Fors':

'For all believers[2] in the Ten Quarters, let us meditate on the Tathāgata Śākyamuni. (One bell.)

For His Majesty our Emperor, let us meditate on Yakushi Rurikō Nyorai.[3] (One bell.)

For the four "benefactions"[4] in the Three Worlds, let us meditate on Amitābha Nyorai. (One bell.)

For our Great Teacher, Dengyō Daishi,[5] and all the Venerable

[1] It is an essential feature in Shingon teaching that all material objects—stones, trees, the human body, etc.—partake of the Buddha nature.

[2] If the present writer is right in his conjecture that *Abarakakia* or *Abiraunken* connects Jap. Shingon with Alexandrian Gnosticism, we may also be justified in supposing that the *abhiṣeka* thus administered in the Shingon funeral rites throws much light on the 'baptizing for the dead' mentioned by St. Paul (1 Co 15[29]).

[3] The fivefold scale of elements is represented by *A-ba-ra-kya-kia*. When a sixth element, *ālaya* ('consciousness'), is added, the word becomes *A b a r a k a k i a un*. The addition of this sixth element is sometimes, though without good authority, attributed to a priest named Ryugyō Hōshi, about A.D. 1140. We believe this to rest on a misinterpretation of the *Hōjōki*, 'History of the Hōjō Regents.' See *Romaji* for 20th Nov. 1909.

[1] The Tendai is one of those sects which profess to base their tenets on the whole vast Canon of the Mahāyāna.

[2] The Jap. word is *danna* (Skr. *dānam*, 'generosity'). Giving is the first duty of a layman. The word has come to mean 'householder,' 'layman,' and is commonly used by servants, etc., in addressing their master.

[3] See above, for the connexion of Tendai with the State. Yakushi (Bhaishajyaguru) is the master of medicines, who went about healing sickness and had twelve disciples. He was a very favourite god during the Nara period.

[4] The *shi-on* represent the gratitude we owe for the benefactions we receive from (1) our parents, (2) our rulers and the State, (3) sentient creatures in general, and (4) the Three Precious Things of religion.

[5] Dengyō Daishi, founder of the Japanese Tendai, A.D. 767–822.

Ones, let us meditate on the Saddharmapuṇḍarīka Sūtra. (One bell.)

For all the gods,[1] let us meditate on the Mahāprajñāpāramitā Sūtra. (One bell.)

For all Sentient Beings in the Dharmadhātu, let us meditate on the Bodhisattva Mañjuśri.' (One bell.)

The Four Reverential Invitations :[2]

'There is delight in the scattering of flowers (*bis*).

We reverentially invite all the Tathāgatas in the Ten Quarters to alight on this sacred altar. There is delight, etc.

We reverentially invite Śākyamuni the Tathāgata to alight on the sacred altar. There is, etc.

We reverentially invite Amitābha the Tathāgata, etc. There is, etc.

We reverentially invite Avalokiteśvara, Mahāsthāmaprāpta (Kwannon and Seishi) and all other Bodhisattvas, etc. There is delight in the scattering of flowers.'

Namu Amida Butsu, Amida butsu, Amida butsu.

The reading of the *Sukhāvativyūha* (Amida Kyō).

Namu Amida Butsu, Amida butsu, Amida butsu.

Prayer of Transference (*ekō*) :

'All the benefits arising from the invocations we have just made, we transfer to the Lord Amitābha in the Land of Bliss. May we be graciously accepted in the great sea of His Vow, may our *karma* be destroyed, and may we realize *samādhi* ('supernatural tranquillity')! May the Devas and deities of the sky and the earth experience an increase of their dignities, and may the gods (Shinto) assembled in this place take pleasure in what we do! May the Great Teachers who have passed away accomplish Perfect Enlightenment, and may all souls, noble and mean,[3] attain to Buddhaship! May Jikaku, our great Teacher,[4] experience ever-increasing happiness, and may our benefactors during the last seven generations be re-born in the Land of Bliss! May the venerable soul that has now passed away be re-born in the Land of Bliss and attain to Buddhahood, seated on a lotus-seat of high degree! May the Court of our Wise Emperor be preserved from harm, and may the reign of His Majesty be long drawn out. May the country be peaceful, and may religion prosper! May the laymen in the Ten Quarters be free from evil and sorrow, and may the fraternity of monks who invoke the names of the Buddhas accomplish perfection! When they come to the end of their lives, may they not miss the ascent to the Land of Bliss, and may they meet Amitābha and his attendant hosts face to face! May their desire for *bodhi* ("supreme knowledge") never fail them, and may they be the leaders of all sentient beings in the Three Worlds and in Dharmadhātu! And may they all, partaking, as they do, of the same spiritual nature, alike attain to *bodhi*!'

The post-*ekō* hymn :

'May we, living in this world, be as though we lived in the heavens, like the lotus untarnished by the water! Prostrate on the ground, we worship the Pre-eminent One, with hearts purer than the lotus.'

Adoration of the Three Precious Things.

The Instructive Stanzas preached by the Seven Previous Buddhas.

The Confession of Sins :

'May the three obstacles (passion, *karma*, and the secondary results of *karma*, Jap. *hōshō*) be removed absolutely and universally for the benefit of the four benefactors (note 4 above), and for beings in all spheres of existence and throughout the *dharmadhātu*. For their sakes, we repent of all our sins, from the bottom of our hearts, in the presence of all the Buddhas in the Ten Quarters.'

Gonenmon, or meditation on the Five Gates of praising Amida, by which men enter into the Pure Land. These are all taken from Vasubandhu's treatise on the Pure Land (*Jōdoron*). They are: (1) *Raihaimon* ('the Gate of Worship'); (2) *Santammon* ('the Gate of Praise'); (3) *Sagwanmon* ('the Gate of Prayer'); (4) *Kwansatsumon* ('the Gate of Observance'); and (5) *Ekōmon* ('the Gate of Transference'). The following is an abbreviated form of the *Gonenmon*, as recited at a Tendai funeral :

'With my head touching the ground I adore Amitābha the Sage, the noblest of two-footed beings, whom gods and men delight to honour, who dwells in the choice Paradise of ease and bliss, surrounded by an innumerable host of the Sons of Buddha. The pure golden body of the Buddha is like the king of Mountains, and his footsteps, when he walketh in tranquillity, are like those of the still-treading elephant. His eyes are as pure as the lotus. I, therefore, with my head touching the ground, adore the venerable Amitābha. His face, good, round, and pure, is as that of the moon at her full. His majestic brilliancy is as that of thousands of suns and moons. His voice is as mighty as that of the celestial drum [thunder] and as soft as the voice of the Kariobinga bird. Therefore I, placing my head on the ground, adore the venerable Amitābha. . . .

Thus I worship the Buddha and praise his merits. May the *dharmadhātu* be adorned (with many virtues)! May sentient beings, arriving at the term of their lives, go to the Western Land, and, meeting with Amitābha, may they accomplish Buddhahood! May sentient beings go and be re-born in the Paradise of Bliss! May they go and meet with Amitābha, the Venerable One!'

Next follow the burning of incense and the presentation of oblations (cakes, tea, hot water sweetened with sugar, boiled rice). The chief mourner, the family, and relatives offer incense. Then are read passages from the Saddharmapuṇḍarīka Sūtra, illustrating the various 'gates' of the *Gonenmon*, and thus the *otogi* ceremony (which is supposed to take place on the day of death) is brought to a close.

(2) *Ceremonies in the house : the first part of the actual funeral.*—This is conducted by the *fukudōshi* ('second celebrant'), with a choir of six assistants, the first celebrant (*dōshi*) awaiting the cortège at the temple.

The Four Invitations (as in the *otogi*).

Stanza of Repentance :

'All the evil *karma*,' etc. (see above, 'Ceremonies of the Zen,' p. 489[b]).

The three Refuges :

'Hail be to, and I take refuge in, Buddha.
,, ,, Dharma.
,, ,, Saṅgha.
I take refuge in Śākyamuni, chief of two-footed beings.[1]
,, ,, Dharma, chief of lustless things.
,, ,, Saṅgha, noblest of congregations.
I have finished taking refuge in Buddha.
,, ,, Dharma.
,, ,, Saṅgha.'

The General Vows (*sōgwan*) :

'Sentient beings are numberless. May I make them all traverse the sea of *saṁsāra* ('metempsychosis')!

Evil passions are endless. May I help sentient beings to destroy them!

The gates of the Law (Scriptures) are infinite. May I cause sentient beings to understand them!

Supreme Buddhahood is ineffable. May I make sentient beings attain to it!'

Hyōhaku (see under 'Shingon,' above, p. 491[b]).

Chanting of a Sūtra ; either the Sukhāvativyūha or the Saddharmapuṇḍarīka.

Post-*ekō* hymn (as in the *otogi* above).

Burning of incense and offering of oblations (as above).

Chief mourner, family, and relatives burn incense.

The Invocation of the Buddhas in the Ten Quarters.

'Hail to the Buddhas in the Ten Quarters.
,, Dharma ,, ,, .
,, Saṅgha ,, ,, .
Hail to Śākyamuni Buddhas.
Hail to the Buddha Prabhūtaratna (mentioned in Saddh.).
Hail to Śākyamuni, whose body is divided into the Ten Directions.
Hail to the Saddharmapuṇḍarīka Sūtra.
,, Mañjuśri the Bodhisattva (Monju).
,, Samantabhadra the Bodhisattva (Fugen).'

This ends the ceremonies in the house.

(3) *The ceremonies in the temple.*—On arrival at the temple, the bell is tolled, and the choir of clergy take their seats, followed by the celebrant

[1] *i.e.* the Shinto deities of Japan, adopted into the Buddhist pantheon.

[2] Similar forms will be found in the sects of Jōdo and Shinshu, which, originating in the Tendai, developed the doctrine of Amida. In the Nichiren, which rejects Amida, they are not found. The Zen derived neither doctrines nor ritual from Tendai, nor did the Shingon.

[3] It was from this that Genshin (A.D. 942–1017), the first Japanese Patriarch of the Shinshu, derived his teaching about the twofold Paradise, *Kuedō*, in which the sins of the 'mean' souls are purged, and *Hōdō*, in which noble and mean alike attain to Perfection. This is brought out in Shinran's poem *Shōshinge*.

[4] Jikaku, the second Patriarch of the Tendai (A.D. 794–864).

[1] The Tendai very generally identify Śākyamuni with Amitābha. Hence the application of the same epithet to both. In the *Shinshu*, which derives much of its terminology from Tendai, this identification is known as *ni-son-itchi* ('the identity of the two Blessed Ones').

and his assistant. The choir recite, in debased Sanskrit, the fourfold hymn of Wisdom:

'Om basarasataba shigyaraka.
basaraaratanamadotaran.
basaradarumagyaganai.
basarakarumakaro bava.'[1]

The celebrant now goes up to the High Altar, and there makes a *mudrā* ('manual gesture') known as *kōmyōgu*.[2]

An introit is sung, the 'Hymn of taking the seat.'

Indō, 'guiding words,' spoken by the celebrant.

The praise of the *shakujō*, 'pilgrim's staff':

'I take a staff in my hand (does so). May all sentient beings follow my example!'

The whole choir say with the celebrant:

'I give a feast of charity, and, showing the true Way, make offerings to the Three Precious Things (*bis*). With a pure mind I make offerings to the Three Precious Things (*bis*). Striving to raise a pure mind, I make offerings to the three gems (shakes the *shakujō* twice); may all sentient beings follow my example! May I become the Teacher of Devas and men; may I fill the Heavens with my vows; may I cause suffering beings to traverse the sea of *saṁsāra*, and, guarded by spiritual beings, to make offerings to the Three Precious Things! May they meet with Buddhas and obtain the Buddhahood! (Shakes the *shakujō* twice.) May all sentient beings learn the sacerdotal Truth[3] (*shintai*); may they treat their fellow-beings with respect and sympathy; may they learn worldly truth and treat their fellow-beings with respect and sympathy; may they learn the doctrine of the One Vehicle,[4] and treat their fellow-beings with respect and sympathy; may they respectfully make offerings to the Three Precious Things—to Buddha, to Dharma, to Saṅgha—to each individually, to all three conjointly (*ittai sambō*). [The *shakujō* is shaken twice.] May all sentient beings practise Śīlapāramitā (the perfection of character), . . . Dānapāramitā (the perfection of generosity), . . . Kṣāntipāramitā (the perfection of long-suffering), . . . Vīryapāramitā (the perfection of fortitude), . . . Dhyānapāramitā (the perfection of meditation), . . . Prajñāpāramitā (the perfection of wisdom), . . . and may they treat their fellow-beings with benevolence and sympathy! [The *shakujō* is shaken twice.] Buddhas in the past have taken up the pilgrim's staff and have been enlightened. Buddhas in the present have taken up the staff and have been enlightened. Buddhas in the future will take up the staff and be enlightened. I therefore take up the staff and make offerings to the Three Precious Things (*bis*).'

The celebrant comes down from the High Altar and burns incense.

Offerings of tea and hot water with sugar.

Lifting the coffin off the bier and closing it.

The assistant (*fukudōshi*) reads the Funeral Oration.

Chanting of a Sūtra.

Chief mourner, family, and relatives burn incense.

General congregation follow their example.

When all who wish have burned incense, the celebrant and choir leave the temple.

So end the funeral ceremonies of the Tendai.

4. Ceremonies of the Jōdo.—The Jōdo sect, founded by Hōnen Shōnin in A.D. 1174, is an offshoot of the Tendai, or rather an attempt to call back the Tendai to that sole Faith in Amitābha which the Jōdo sects maintain to be the essential feature of primitive Mahāyānism.

(1) *The service in the house* (*Gongyōshiki*).—Opening verse of the regular service:

'May our minds be purified as the incense-burner! May our minds be bright and clear as the fire of Wisdom!
Burning the incense of morality and tranquillity, thought by thought, make offerings to the Buddhas in the Ten Quarters, in the Three Worlds.'

Sambōrai, or worship of the Three Precious Things:

'With all our hearts we pay supreme honours to the Supreme Buddhas in the Ten Quarters. . . .
With all our hearts we pay supreme honours to the Supreme Dharmas in the Ten Quarters. . . .
With all our hearts we pay supreme honours to the Supreme Saṅghas in the Ten Quarters. . . .'

Shibujō, or fourfold Invitation, as in the ceremonies of the Tendai: (1) all the Buddhas, (2) Śākyamuni, (3) Amitābha, (4) Kwannon, Seishi, and the other Mahābodhisattvas.

Tambutsu no ge, or hymn of praise for all the Buddhas:

'The handsome physical bodies of the Tathāgatas are unparalleled in the Universe. They are incomparable beyond conception. Therefore, behold, I worship them. The physical bodies of the Tathāgatas are inexhaustible and everlasting, and their Wisdom is as their bodies. Dharmas are infinite. Therefore I take refuge in them.'

Ryakusange, or abridged form of confession:

'All the evil *karmas*,' etc., as in the Zen and Tendai.

Sankikai, or the threefold Taking of Refuge:

'I take refuge in Buddha . . . Dharma . . . Saṅgha.'

The ceremony of tonsure. While the head of the corpse is being shaved, the name of Amitābha is being repeated ten times. This is known as *Jūnen*. The number of repetitions shows that the shaving occupies only a short time. It is merely symbolical. In the Shinshu sect there is a ceremony called *Kamisori*, 'head-shaving,' roughly corresponding to Christian confirmation, which implies a formal acceptance of and admission into the sect. It is administered by the head of the sect only, and consists in passing a golden razor lightly over the hair of the candidates as they kneel before him. The ceremonial shaving of the dead is very often nothing more than this.

Kaikyōge, or hymn introductory to the reading of the Scriptures:

'The Law, which is pre-eminent, profound, and sought out,[1] can rarely be met with, scarcely once in a thousand *kalpas* ["ages of the world"]. But we have seen and heard, and do accept it. May we understand the true meaning of the Tathāgata's teaching!'

Reading of a Sūtra—generally a chapter from the Amitāyurdhyāna Sūtra, or the Aparimitāyus Sūtra. Sometimes also the Amitābhatathāgatamuladhāraṇī is read:

'In accordance with the Original Vow of the Buddha we pray that we may hear His Name, and be re-born in the Land of Bliss. On being re-born in that land, may we all obtain the safe position from which there is no falling back! The 84,000 doors,[2] each different from the others, were opened as means of escape from ignorance, *karma*, and the results of *karma*. A sharp sword verily is the name of Amitābha Buddha. He that shall invoke it but once and meditate thereon,—his sins shall be destroyed for ever.'

Hotsugwanmon, or the raising of vows:

'Humbly we pray that our minds, at the hour of death, may be undistracted, unconfused, and in possession of all their faculties. With mind and body free from pain and filled with joy, in the state of contemplation, and in the presence of the Holy Ones (Amitābha and his 25 Bodhisattvas), by the merits of the Buddha's Vow, may we have a favourable re-birth in the Land of Amitābha.
On being re-born in that land, may we obtain the Sixfold Supernatural Power (*roku-jin-dzu*), which shall enable us to assume visible forms at will and to manifest ourselves in the Worlds of the Ten Quarters for the Salvation of mankind. The Sky and the Law are infinite in extent; our vows are co-

[1] This in Sanskrit would be somewhat as follows:
'Oṁ vajra sattva saṅgraha!
vajraratnamanuttaram!
vajradharma gāganaḥ!
vajrakarmakaro bhava!'
'Hail! Store of Diamond-Essence! Diamond-Jewel that hath none higher! Heaven of the Diamond-Law! Be thou working the Diamond-Karma!'

[2] *Kōmyōgu* is very possibly a Manichæan word. It was used in the designation of the Manichæan temples (cf. Lloyd, *Shinran and his Work*, Appendix i. and ii.).

[3] There is a distinction made in Tendai (also in Shinshu) between the 'noble' and the 'mean,' just as Manichæans were divided into 'hearers' and 'perfect.' For the hearers only a very simple creed was required (Jap. *zokutaimon* [cf. Lloyd, *op. cit.* p. 109]). A more elaborate form of faith and life was required from the perfect (*shintaimon*), which included assent to theological truths.

[4] The Jōdo sects maintain that the One Vehicle is the one by Faith in Amida, also that the Tendai, if true to their own doctrinal standards, are committed to this position. It is perhaps worth our while to note as an interesting point that Amida is, to Tendai, Jōdo, and Shinshu, pre-eminently the Buddha, that the character for Buddha was introduced into China A.D. 64, that it signifies 'the man with the arrows and bow' (Emp. Ming-ti's Vision; cf. Rev 6[2]), that in the legend it is connected with a 'white horse,' and that, divided into its constituent elements (man, arrows, bow), it represents the first three letters of the name of Jesus.

[1] Not in the Biblical sense of 'sought out of them that have pleasure therein.' The allusion is to the Vow of Amitābha, which was framed after a careful survey and examination of all the Buddha-fields.

[2] *i.e.* the doctrines of Buddhism.

extensive with them. With these vows we take refuge in Amitābha Buddha with our whole hearts.

Kōmyō henjō
Jippō sekai
Nembutsu shujō
Sesshufusha,

Shining upon all the worlds in the Ten Quarters with the bright rays issuing from his halo, the Buddha accepts the beings who call upon him. He will never abandon them.'

Invocation of Amida's name.

Ekō, 'transference':

(1) Special: 'May the soul of the newly-deceased N. (*kaimyō*) migrate to the pure fields, and may his *karma* give up dust-like trouble! May he see Buddha, hear the Law, and rapidly reach the pre-eminent way!'

(2) General: 'May the merits resulting from this service be transferred to all sentient beings alive! May they all lift up their hearts to Enlightenment, and all be re-born in the land of ease and comfort!'

Shinseigwan, or Four Holy Vows (see Tendai rites).

Sanrai, or Worship of the Three Precious Things: *Namu Amida butsu* is repeated nine times, three times for each.

This concludes the service in the house. The procession is now formed and starts for the temple.

(2) *The service in the temple* is almost a replica of that in the house. It begins with *gongyōshiki*, *sambōrai*, *shibujō*, *ryakusange*, and *tambutsu no ge* (see above). Then follow the beating of cymbals (*nyohachi*), the *indō*, or 'guiding words,' *kaikyōge*, the reading of Scriptures, *kōmyō henjō*, etc., the invocation of Buddha's name, and another *ekō*:

'May the merits arising from this chanting of the Sūtra and the invocation of Buddha's name be transferred to the newly-deceased N. May his soul migrate,' etc.
(The rest as in the *ekō* above.)

Then follow invocations of Amida's name, the Four Holy Vows (as in Tendai), and the adoration of the *honzon*, or image of Amitābha. This brings the service to a close.

5. **Ceremonies of the Shinshu.**—The Shinshu sect, founded by Shinran Shōnin in A.D. 1224, carries still further than the Jōdo the doctrine of salvation by Faith only. The account of the ceremonies described in this section is taken from the *Fūzokugwahō* for Feb. 1894, and gives a summary view of the obsequies of Kōshō, the 21st Abbot of the Eastern Hongwanji, who died at Kyoto on 15th Jan. 1894.

(1) *The worship of the corpse.*—This ceremony is not peculiar to the Shinshu sect, but is observed in the case of all monks and priests [the Shinshu clergy are not monks; they marry and live with their families]; but naturally, in the case of the head of a great organization, such as the Hongwanji, the ceremonies connected with this worship were more carefully carried out than usual.

Three days after death, the corpse was dressed in silk crêpe robes of a grey colour, with a small *kesa* ('stole') over the shoulders, and was placed in a sitting posture on a *kyokuroku* ('camp-chair') in one of the rooms of the Abbot's official residence. The face was covered with a white cloth, so that only the eyes were visible. Screens were set up behind the chair and on either side of it, and in front there was a slight curtain of split bamboo, which could easily be drawn up and down. Six laymen, in *kamishimo* (upper and nether ceremonial garments) of a grey colour, were constantly in attendance, to draw up the curtain whenever a group of worshippers presented themselves. Many thousands of Shinshu believers thus offered their last respects to the deceased prelate, the worship consisting of a silent prostration before the corpse.

On the following day the corpse was put into a coffin and removed to another apartment, where similar worship was offered before it. In this case, however, a scroll-picture of Amitābha was suspended on the wall behind the coffin, to represent the idea that the deceased had now passed definitely under Amitābha's protection. Immense crowds of worshippers from every part of Japan came to worship.

(2) *The farewell to the corpse.*—This took place on the following day. Three short ceremonies were observed, the first in the apartment where the coffin had been lying in state since the previous day. It was then removed to the *daishidō*, or hall set apart for the worship of Shinran Shōnin, the founder of the sect, and from there to the *Amidadō*, or Hall of Amida. In each of these places a service was held, consisting very largely of repetitions of the *Namu Amida butsu*[1] and the burning of incense. Not unnaturally the third service was esteemed the most dignified. Not only blood relations, but proxies representing the princes of the blood, and the heads of other subdivisions of the Shinshu, came forward to burn incense, and, immediately after this last ceremony was over, the procession was formed and the funeral cortège started for Uchino, where the main obsequies were to take place.

(3) *The procession* need not delay us. It was on the same general lines as the procession mentioned at the beginning of this section (above, p. 489[b]). Only, as befitting a personage who, in addition to being the hereditary head of one of the largest of the Buddhist sects in Japan, was a peer of the realm, and a collateral descendant of the great Fujiwara family, it was, of course, a very imposing procession, more than a mile in length.

(4) *The service at Uchino.*—Uchino was in former days the cremation-place connected with the Eastern Hongwanji temple. But the growth of the city has rendered it unsuitable for the purpose. In the case, however, of the funeral of an Abbot, there are historical reasons why a part of the service should still be held there. An open space had therefore been curtained off, large enough to seat the great number of invited guests, and it was here that that part of the service took place which in ordinary cases would be held in the temple. (The farewell to the corpse, thrice repeated, corresponded to the service in the house at ordinary funerals. It followed, then, almost exactly the same order as is observed in Jōdo funerals.) A temporary crematorium had been erected for the symbolic cremation to be held here. The chief mourners were the new Abbot and his wife (the *urakata*). The actual cremation took place later at Kwazan, where the regular crematorium is situated.

The service, which was of the regular type,[2] followed the usual order:

The Four Invitations.

The *Shōshinge*.[3]

Nembutsu wasan,[4] or hymn in praise of Buddha, followed by invocations of Amida's name.

Ekō, as in Jōdo sect, with the following addition:

'*Gwannishi Kudoku,*
Byōdōse issai,
Dōhotsu bodaishin,
Ōjō anrakukoku,

We pray that the merit of this service may be given equally to all sentient beings, that they may lift up their minds to the attainment of enlightenment, and ascend for re-birth in the Land of Ease and Comfort.'

[1] It is to be noted that the common interpretation given to these words is 'Believe in (trust) me; for I will save you.' This meaning, which has been read into, not out of, the Sanskrit words, is interesting.

[2] In the memorial service held by the Shinshu in Tokyo in honour of King Edward VII., the form approximated much more closely to the Tendai ritual. The explanation of this will be found in the Tendai origin of the Shinshu, and also in the fact that it was not a funeral service proper.

[3] This is a poem by Shinran Shōnin giving an account of the transmission of the Amida doctrines. For text and tr. see Lloyd, *Shinran and his Work*, p. 35.

[4] *Wasan* are hymns of praise composed in Japanese. The Shinshu sect, which, to its credit, has always used the vernacular whenever possible, is particularly rich in these hymns, some of which are of very great interest.

Symbolical cremation. The Abbot entered the temporary crematorium and lighted some straw, and, as the smoke issued from the building, it was accepted as an actual cremation. This was, of course, a special feature of this particular funeral.

Shōshinge again.

Burning of incense by mourners, etc.

The coffin was now removed for the actual cremation.

(5) *The cremation.*[1]—This was carried out semi-privately at Kwazan, only the new abbot, near relatives, old body-servants, and the superintendent of the crematorium being admitted into the curtained-off space around the furnace. The pyre was made of pine logs skilfully arranged on a hearthstone, and was attended to by four master-carpenters in white robes, overlooked by two priests in black. The Abbot, as chief mourner, having already, as we have seen, symbolically lighted the fire, it was apparently not necessary for him to do it actually on this occasion; though in ordinary funerals this is a duty which always falls upon the chief mourner. It must be a 'pure' fire (no sulphur or brimstone to be used in the kindling), and, when once kindled, is kept alive not only with additional fuel, but also by constant libations of *natane abura* ('rape-seed oil'). It is desirable that the coffin, as in this case, should be so thick that the body inside may be completely consumed before the sides of the coffin fall in; but this is, of course, merely a counsel of perfection not applicable in all cases.

When the cremation was over, the remains were reverently collected, with a short service (not used in ordinary cases), put into a small box, covered with a white silk cloth, and carried back to the late Abbot's residence, where they were privately disposed of in a suitable manner. A certain amount of secrecy was observed on this occasion. There existed for many centuries a bitter feud between the parent sect of the Tendai and her more prosperous but rebellious daughter, the Shinshu. When Rennyo Shōnin, the greatest of all the successors of Shinran, died in A.D. 1499, the jealous Tendai monks made an assault on the procession that was carrying home the sacred relics, and tried to seize and dishonour them. Since that time it has been customary, at the cremation of a Hongwanji Abbot, to bring the ashes home in secret, by some circuitous route, and under guard.

In collecting the bones, etc., after a cremation, it is customary to pick them up with chop-sticks, one of wood, and one of bamboo. Hence, in ordinary life it is deemed most unlucky to use chop-sticks of different materials, *e.g.* one of wood and one of bone. Shingon believers send the bones to Kōyasan; amongst the Shinshuists in Echigo and Shinshu they are often preserved in the house. In most cases, however, they are interred. Great efficacy is sometimes attributed to these relics (*shari*).

6. Ceremonies of the Nichiren sect.—The Nichiren sect, founded in A.D. 1253, differs from all other sects of Buddhism in that it concentrates the whole of its attention on the Saddharmapuṇḍarīka Sūtra, which it almost personifies. This Sūtra consists of two parts, known as *Shakumon* (chs. i.–xiv.) and *Hommon* (chs. xv.–end); and the peculiar position of the Nichiren School is that for it the latter is the most important portion of the Sūtra, while all other Japanese sects lay special stress on the former. Nichiren himself claimed to be the first of the Four Great Bodhisattvas mentioned in the latter part of that Sūtra as rising out of the earth at the head of a large company of believers. The services are very long; but they admit of condensed statement, because they consist almost entirely of readings from the Saddharmapuṇḍarīka Sūtra.

(1) *The house ceremonies.*—(*a*) *Makuragyō*, entrusted to a minor priest (*shokesō*).

Kwanjōmon, or words of Invitation:

'We humbly invite Juryō,[1] the *honzon* (principal idol) of the True Teaching,[2] to be present.

Glory to the Saddharmapuṇḍarīka Sūtra, in which are contained the Three Mysteries of the True Teaching.[3]

Glory to Śākyamuni-Buddha, who is the great benefactor of sentient beings, who accomplished enlightenment before innumerable ages, and who alone is the Master of the Teachings.[4]

Glory to the Buddha Tahō,[5] who certified to the teachings of the Saddharmapuṇḍarīka Sūtra.

Glory to the Buddhas mentioned in the *Hommon* ('Real Teaching'—see above), as also to those spoken of in the *Shakumon* ('Temporary Teaching'), in this and in other worlds.

Glory to the Great Bodhisattvas in the thousand worlds, who were taught by the Buddhas of the *Hommon*, and who issued forth in troops out of the earth, when the *Kenhōtōhon* was being preached.

Glory to the Three Everlasting Precious Things mentioned in the Saddh. Sūtra, in which the Temporal Buddhas are secreted (swallowed up) and the True Buddha revealed.

Glory to Nichiren,[6] the Great One, the founder of the sect, our mighty leader, who has been entrusted by Śākyamuni with the Secrets of the True Doctrine.

Glory to the successive Patriarchs (of Nichirenism).

May all the Devas and good gods, the protectors of the True Faith, descend upon the altar and watch our worship.'

Reading of *Hōbenhon*, sect. 2 of Saddh. Sūtra.

" *Juryōhon*, sect. 16 " "

Much repetition of the *Daimoku*, or the true standard of faith and worship (*Namumyōhōrengekyō*, 'Glory to the Lotus-Scripture of the Wonderful Law').

Ekō, 'prayer of transference.' The gist of the prayer is that, by the virtue of the Sūtra, sentient beings may attain to Buddha-ship in their bodies.

Bestowal of a *Kaimyō*. This service may be performed before or after death, or may be entirely omitted. It is of great importance to the student, as giving the doctrinal position of the Nichiren body.

(*b*) The wake (*otogi*). This is also entrusted to a minor priest. The whole of the Saddharmapuṇḍarīka is chanted once, or sect. 16 thirty-six times. Sermons are delivered at intervals—for the edification both of the living and of the dead.

The tonsure. A leaf of *shikimi* is cut with a razor over the head of the deceased.

(*c*) The home funeral service, by one or more minor priests. Five banners are prepared and set up, inscribed as follows:

(1) 'Glory to Prabhūtaratna, to the Saddh. Sūtra, to Śākyamuni, to Nichiren, the Great Superior Teacher of the Latter Days.'

(2) 'Glory to Jōgyōbosatsu,' *i.e.* to the Nichiren, first of the Four Great Bodhisattvas.

(3) 'Glory to Muhengyōbosatsu,' second of the Four Great Bodhisattvas.

(4) 'Glory to Jōgyōbosatsu,' third of the Four Great Bodhisattvas.

(5) 'Glory to Anryūgyōbosatsu,' fourth of the Four Great Bodhisattvas.

Four smaller banners are also prepared and set up, and inscribed as follows:

[1] The Japanese word for 'cremation' is *dabi*. It comes from the Pāli *jhāpe* (causal of *jhāya*, 'to burn'), and is one of the few instances of the survival of a Pāli word in Japanese.

[1] *Juryō* is a portion of the Saddh. Sūtra personified (sect. 26), and treated as the embodiment of the Deity.

[2] Nichirenists maintain that there are three stages of Buddhist Teaching—the Smaller Vehicle, the Larger, and the True (*jitsujō*).

[3] The Three Mysteries are: (1) The revelation of the true object of human worship made in the Sūtra, (2) the establishment of the true standard of faith and worship, (3) the true teachings of morality.

[4] Observe that the Śākyamuni of Nichirenism is only incidentally the historical Gautama.

[5] *Tahō* (Skr. *Prabhūtaratna*) is a Buddha, previous to Śākyamuni, who, in the Saddh., is seen descending upon the latter as he teaches, in a *stūpa*; who is dead, then revives, and, after commending the teachings which Śākyamuni is giving in the Sūtra, becomes in some mysterious way identified with him. This account appears in *Kenhōtōhon* ('opening of the stūpa'), the 12th section of the Saddh. Sūtra (Chinese). It is to be noticed that Tahō's Paradise is represented as in the East.

[6] Nichiren is supposed to have had the power of teaching committed to him by virtue of his being a re-incarnation of the first of the Four Great Bodhisattvas.

(1) *Kaibutchiken*, i.e. 'May the deceased attain to the opening of a supernatural insight like that of Buddha!'
(2) *Jibutchiken* . . . 'May he show forth a . . . etc. . . . !'
(3) *Gobutchiken* . . . 'May he understand, more and more . . . etc.!'
(4) *Nyūbutchiken* . . . 'May he enter into . . . etc. . . . !'

Whilst the banners are being set up, the priests read—

Hōbenhon, sect. 2 of the Saddh. Sūtra.
Juryōhon, sect. 16 ,, ,, (or only its gāthās).
Ekō, as before.

(2) *Ceremonies at the temple.*—

Kwanjōmon (see above).
Juryōhon (prose sections only).
Beating of drums and cymbals.

After this a minor priest says in a distinct voice:

'*Nyokyakukenyaku*
Kaidaijōmon,

Lo! the Gate of the Great Castle has been opened, and the bolt has been taken away' (from the *Kenhōtōhon*, sect. 12).

Offerings.
Indō, pronounced by the leader (*dōshi*).
Chanting the gāthā portions of sect. 16 of the Saddh. Sūtra.
Incense.
The *Daimoku*, oft repeated.
Ekō.

The ceremonies come to a close. There seem to be no ceremonies specially connected with cremation or interment.

See, further, art. FESTIVALS (Japanese).

LITERATURE.—The greater part of this article is based on information collected for the writer by his friend Mr. S. Tachibana, a Buddhist priest of the Zen sect. The other authorities have been cited in the text. A. LLOYD.

DEATH AND DISPOSAL OF THE DEAD (Jewish).

1. Conception of death.—Although there is uniformity, in a sense, in the physical phenomena of death, its character and circumstances and the impression which it makes vary in different times and places. In ancient Israel, death, like life, was more a matter of the family than it is now; it was not so much an occasion when an external professional element, represented by priests, lawyers, doctors, nurses, and hospitals, broke in upon or set aside the family. Again, violent deaths were more common; and the last illness of a dying man was not prolonged, as it is now, by the resources of medical science. In all probability the death-rate was much higher than it is with us, so that death was more common and familiar.

The impression made by death depends partly on belief as to its cause and as to the future of the individual after death. The modern mind is occupied with the physical cause of death, the particular disease, and the failure of remedial treatment. The Israelite and the Jew thought of death as an act of God; more especially a death in early years, or in the prime of life, or under exceptionally distressing circumstances, was often regarded as a judgment upon sin.

Death[1] was not the annihilation of the individual—at any rate, according to the ordinary Hebrew view. A feeble ghost of the dead man maintained a dim, shadowy existence in Sheol, the under world or Hades. But probably in early times other beliefs supplemented or replaced this view. There are traces of ancestor-worship and necromancy in ancient Israel, and these imply that the spirits of the dead could manifest themselves to the living, and could exercise some influence upon their fortunes. Samuel, for instance, appeared at the call of the witch of Endor and foretold the death of Saul (1 S 28). Although there is little positive evidence, it is probable that the popular belief in ghosts prevailed in earlier as in later times. In Lk $24^{37ff.}$ the Apostles take the risen Lord for a ghost.

In a sense the Israelite looked forward to reunion after death, so far as this may be implied in such phrases as 'buried with his fathers' (2 K 12^{21}), 'slept with his fathers' (1 K 2^{10}); but there is nothing to suggest that he looked forward to any satisfying fellowship with his deceased brethren in a future life. Thus, for all practical purposes, death was a final parting.

As regards what happened to the individual when he breathed his last, death was thought of as the departure of the *nephesh* (נֶפֶשׁ), or vital principle;[1] though, curiously enough, *nephesh* is sometimes used in the sense of 'corpse' (Lv 19^{28} 21^{1} 22^{4} [all H], Nu 5^{2} 6^{11} 9^{10} [all P], Hag 2^{13}).

Probably various primitive views prevailed in ancient Israel as to death and the individual after death, and these views were connected with general Semitic mythology; but the editors of the OT eliminated accounts of such crude superstitions, in the interests of orthodoxy and edification, so that only a few traces remain. A familiar myth is the death and resurrection of a god. Traces of this are found in the women weeping for Tammuz (Ezk 8^{14}). According to Gressmann,[2] the account of the death and resurrection of the Servant of Jahweh in Is 53 is based on some such myth; of this possibly other traces are found in the references to אָבֵל יָחִיד, 'mourning for an only son.'[3]

The later books of the OT contain hints of a resurrection, which develop in the later literature, especially in the Wisdom of Solomon and the Apocalypses, into an express doctrine, so that for later Judaism and for Christianity—following Judaism—death became the portal to a future life. When Judaism evolved a hierarchy of angels, with proper names and special functions, there appeared among the rest, Sammael, the Angel of Death. See DEMONS AND SPIRITS (Heb.) and (Jewish).

Later Judaism inherited or developed many curious fancies as to the hour of death; as, for instance, that the dying soul has a vision of the Shekinah just before its departure. Ben Kaphra, a Rabbi of the early Christian centuries, is quoted as saying:

'For three days the spirit hovers about the tomb, if perchance it may return to the body. But, when it sees the fashion of the countenance changed, it retires and abandons the body' (*cf. Expos. Gr. Test.* [1897] on Jn 11^{44}).

2. Disposal of the dead.—The regular and legitimate mode of dealing with a corpse in ancient Israel was *burial*, and this has always remained the general custom of the Jews. *Embalming* was not an Israelite practice; when we read that Jacob and Joseph were embalmed (Gn $50^{2.\ 26}$), we must clearly understand that they were treated as Egyptians, amongst whom embalming was the regular custom. In later times we are told that the body of Aristobulus was embalmed in honey (Jos. *Ant.* XIV. vii. 4). Embalming in the strict sense must be distinguished from the Jewish custom referred to in 2 Ch 16^{14} and in NT (Jn $19^{39f.}$ etc.) of anointing the dead body and placing it in or wrapping it up in spices. *Cremation*, amongst the Israelites, was exceptional. According to 1 S 31^{12}, the men of Jabesh-Gilead burned the bodies of Saul and his sons, probably to prevent their falling into the hands of the Philistines. The fact that 1 Ch 10^{12} omits the burning, and that Josephus (VI. xiv. 8) states that the bodies were buried, is probably evidence of the repug-

[1] W. H. Bennett, *Religion of the Post-exilic Prophets*, Edin. 1907, p. 361 ff.

[1] W. H. Bennett, *op. cit.* 228 ff.

[3] Am 8^{10}, Jer 6^{26}, Zec 12^{10}; cf. Cheyne, *The Two Religions of Israel*, London, 1911, p. 211.

nance of the Jews, at any rate in later times, to the cremation of the dead. The EV of Am 6[10] speaks of 'he that burneth' a corpse; but the reference to burning the corpse is due to corruption or misunderstanding of the text. In some cases, however, criminals were burnt alive (Gn 38[24], Lv 20[14] 21[9]), or their corpses were burnt (Jos 7[15. 25]). The picture in Is 66[24] of the corpses of sinners consumed by fire may have been suggested by the actual treatment of dead criminals. According to Kimchi[1] there were perpetual fires in the Valley of Hinnom for consuming dead bodies of criminals and animals. In Am 2[1] the burning of the bones of the king of Edom is an outrage which calls down inexorable doom on Moab.

Exposure without burial was a disgrace and a misfortune. Criminals or their representatives might be so treated (2 S 21[9f.]), but, according to Dt 21[22f.], even *their* corpses were to be buried. Such a misfortune might befall sinners as the judgment of God (1 K 14[11], Jer 7[33], Ezk 29[5], Ps 79[3]). To bury relatives, and even strangers, was a supreme duty; it is specially insisted on in To 1. 2, and is illustrated by the story of Rizpah (2 S 21[10f.]). Job complains that God allows the wicked man to have an honourable burial (Job 21[32f.]). The desecration of a grave was a kind of posthumous punishment (2 K 23[16], Jer 8[1f.]).

There is not much evidence in the OT of graves dug in the earth in the modern fashion, though doubtless such were often used. The labours of the various Palestine Exploration Societies show that rock-hewn tombs were exceedingly common; they usually occur in groups. A space for a single corpse is hewn in the face of a rock and closed with a stone slab; this space was called a *kûk*, כּוּךְ (Jastrow, *Dict. of the Targumim*, 1886–1903, *s.v.*), by the Jews in later times. These are found grouped in one or more chambers in natural or artificial caves. One of the most interesting examples of such a burying-place is the cave of Machpelah, where Sarah, Abraham, Isaac, Rebekah, Leah, and Jacob are said to have been buried (Gn 23[19] 25[9] 49[31] 50[13]). Masonry tombs with groups of *kûkîm* are also found; and sometimes monuments were erected over tombs; for instance, Simon the Maccabee built an elaborate mausoleum at Modin for his father and brother (1 Mac 13[27-29]), no trace of which has yet been discovered.

In ancient times each family, like that of the patriarchs, had its own burying-place. Such burying-places would naturally be on the family estate. We read of Manasseh being buried in the garden of his own house, and Amon in the garden of Uzza (2 K 21[18. 26]). But usually the kings of Judah were buried in a royal burying-place in the city of David: *e.g.* Joash (2 K 12[21]), apparently near the Temple (Ezk 43[7-9]), the Temple being in ancient times an adjunct of the royal palace. Obviously dwellers in towns, who had not extensive gardens, would be required, as in later times, to bury their dead outside the walls. Poorer people would have no family burying-place, and we read of a public cemetery, 'the graves of the *bᵉnê hā'ām*' (2 K 23[6], Jer 26[23]). Apparently a measure of disgrace attached to burial there, 'in a pauper's grave,' so to speak.

The family desired to be together in death as in life, and men were anxious to 'sleep with their fathers,' *i.e.* to be buried in the family tomb. It is part of the punishment of Pashhur that he is to be buried in Chaldæa (Jer 20[6]); and the Chronicler, in contradiction to the Book of Kings, states that certain wicked kings of Judah—Jehoram and Joash—were not buried in the sepulchres of the kings (2 Ch 21[20] 24[25]). In post-Biblical times the Jews have had their own cemeteries. They still retain their anxiety to be buried with their own people. Jews who are lax in many religious matters will keep the Day of Atonement in order that they may be buried in a Jewish cemetery.

A certain sanctity attached to the graves of ancient saints and heroes, and probably, as amongst the Muhammadans, such tombs became shrines; *e.g.* the tomb of Joseph at Shechem (Jos 24[32]), and the tomb of the patriarchs at Machpelah. Necromancy and similar superstitions were often connected with graves (Is 65[4]).

On the other hand, the grave is unclean (Lk 11[44]). In later times, at least, cemeteries were supposed to be special haunts of evil spirits; and the spirits of the dead lingered there, at any rate till the corpse had been assimilated to the soil. This belief, that the spirits of the dead inhabit the tombs, is found in most primitive religions, and was probably prevalent amongst the Israelites in early times.

3. Mourning and other observances.—Numerous passages illustrate the distress caused to the Jews by bereavement: the mourning of Jacob over the supposed death of Joseph (Gn 37[35]); of David over Absalom (2 S 18[33]); Rachel refusing to be comforted (Jer 31[15]). The behaviour of David, who fasted and wept when his child was dying, but arose and ate when it was dead, was a puzzle to his courtiers; his explanation, that lamentation was useless, hardly seems adequate (2 S 12[15ff.]).

The feelings, sentiments, and ideas called forth by death gave rise to various burial and mourning customs. Decease was and is followed by the necessary arrangements for the seemly 'laying out' of the corpse. The eyes and mouth are closed (Gn 46[4], Jn 11[44]), and the body is washed (Ac 9[37]). It has been supposed that the dead were, sometimes at any rate, buried in their usual dress, with their arms and ornaments; Samuel appears to the witch of Endor in his mantle (1 S 28[14]), and the dead go down to Sheol with their weapons and their 'pomp' (הוֹן). The practice certainly prevailed in later times. Thus Herod buried ornaments with the body of Aristobulus (Jos. *Ant.* XV. iii. 4); treasures were said to have been buried with David (XVI. vii. 1); Herod was buried covered with purple, with his diadem, crown, and sceptre (XVII. viii. 3; *BJ* I. xxxiii. 9). We are told that in later times such practices led to great extravagance, so that Rabbi Gamaliel II. ordained that corpses should be buried in a simple white dress. We read of Ananias, that they 'wrapped him round,' apparently in the clothes he was wearing, and carried him out, and buried him (Ac 5[6]).

Later on, the use of a shroud or special grave-clothes or wrappings for the dead became universal; but it is not clear when this custom was first introduced amongst the Jews. In Jn 11[44] Lazarus' hands and feet were bound with linen bandages (κειρίαις), and his face with a napkin (σουδαρίῳ). The body of our Lord was wrapped in strips of linen (ὀθονίοις). We have already referred to the use of spices.

Coffins were not used by the Jews in ancient times, except in the case of Joseph (Gn 50[26]), whose remains were placed in an *'ārôn*, or chest; but this, like his embalming, was an Egyptian custom. The Jews laid their dead on a bier (OT *miṭṭâ*, מִטָּה, 'couch' [2 S 3[31]]; NT σορός [Lk 7[14]]), as is the custom amongst Eastern Jews now. They use this bier to carry the corpse to the grave, and do not bury it.

The exigencies of the climate of Palestine called for burial soon after death, on the same day, or within 24 hours. As often, a natural necessity hardened into a sacred custom, which was long maintained amongst Jews in Western countries, where the same necessity did not exist; but after

[1] Cf. Sir C. Warren, in *HDB* ii. 385.

a while it fell into disuse, and a longer interval is allowed in the West.

The carrying of the corpse to the burying-place was the work of friends of the deceased, and was the occasion of public lamentation, which, at any rate in the early centuries of our era, was partly performed by hired mourners and musicians. There does not seem to have been any formal burial service of a religious character in Biblical times,[1] but then and later funeral orations were sometimes delivered. According to *JE* (*s.v.* 'Funeral Rites,' v. 529), the mourners recited Ps 91 on their way to the cemetery; in the cemetery, other formulæ, concluding with the *Ḳaddish*, or doxology; and on their return, passages from Lamentations. Women attended funerals in ancient times, and still do so amongst the foreign Ashkenazim, but not amongst the Sephardim or the English Ashkenazim.

The funeral of Herod the Great is thus described by Josephus (*Ant.* XVII. viii. 3; cf. *BJ* I. xxxiii. 9):

'The body was carried upon a golden bier, embroidered with very precious stones of great variety, and it was covered over with purple, as was the body itself: he had a diadem upon his head, and above it a crown of gold; he had also a sceptre in his right hand. About the bier were his sons and his numerous relations; next to these were the soldiery, distinguished according to their several countries and denominations; and they were put into the following order: first of all went his guards, then the band of Thracians, after them the Germans, next the band of Galatians, every one in their habiliments of war; and behind these marched the whole army, in the same manner as they used to go out to war, and as they used to be put in array by their muster-masters and centurions; these were followed by five hundred of his domestics, carrying spices.'

We may also quote the following description of modern Samaritan rites, which probably preserves many of the customs of Palestinian Jews in early times:

'Upon death the corpse is carefully and ceremoniously washed; it is not forbidden to the Samaritans, as has been frequently stated, to handle their dead, except in the case of the high-priest. Candles are burnt at the head and foot of the corpse before burial. Coffins are used—an exception in modern Palestinian custom. The mourning ceremonies last until the following Sabbath, the community going each day to the tomb, where they read and pray. On the Sabbath the community again visit the tomb, where they partake of a meal, while further appropriate services are held in the synagogue.'[2]

The duration of mourning has always varied, according to the rank of the deceased and his relation to the mourner. Seven days was a very common period. The men of Jabesh-Gilead fasted seven days for Saul and Jonathan (1 S 31^{13}); Joseph mourned seven days for Jacob (Gn 50^{10}); Judith was mourned seven days (Jth 16^{24}); Sir 22^{12} mentions seven days as the period of mourning. In later Judaism the period of strict mourning, the *Shiḇ'a*, lasts seven days; mourning of a less severe character lasts till the end of thirty days, and in the case of children to the end of the year.[3]

As to mourning-dress, the rending of garments and the wearing of sackcloth are mentioned in Gn 37^{34} etc. We also read of garments of widowhood (Gn 38^{14}, Jth 10^{3}), which apparently were worn by the widow throughout her life, and consisted of, or included, sackcloth. Modern Jews usually wear black as mourning, except in Russia, Poland, and Galicia, where white is worn.[4] Mourners rend their garments at the time of death, and wear the outer garment cut and unbound during the thirty days of mourning.[5]

The presence of numerous guests at a funeral necessitated a special meal, 'funeral baked meats,' which, in spite of the character of the occasion, was apt to become a feast. This meal is perhaps spoken of in the OT as *leḥem 'ônîm*, 'bread of mourners' (Hos 9^{4}), and was provided for the mourners by their friends at the close of the fast which occupied the day of the funeral (2 S 3^{35}, Jer 16^{7})—a custom which seems to have prevailed ever since.[1]

Other acts of mourning were fasting (1 S 31^{13}), beating the breast (Is 32^{12}, cf. Lk 18^{13}), sitting in ashes (Jon 3^{6}), sprinkling ashes on the head (Est 4^{1}). Ezk 24^{17} implies that mourners were wont to cover the lip and to go barefoot and bareheaded. According to Jer 16^{6}, mourners mutilated themselves, and plucked out or shaved off the hair; but such practices are forbidden in Lv 19^{28}, Dt 14^{1}.

Traces remain in the OT of the worship of the dead, of sacrifices offered to or for them, and of furnishing them with food. Probably the later funeral feast was partly a survival of such practices. The worship of the dead was closely connected with necromancy, which was prevalent in Israel (*e.g.* Is 8^{19}). The graves of ancient worthies seem often to have been shrines, as in Islām. Thus there was a *maṣṣeḇā*, or sacred pillar, at the grave of Rachel (Gn 35^{20}), and the important sanctuary at Shechem may have been connected with the grave of Joseph (Jos $24^{26.\ 32}$). The interpretation of Dt 26^{14} is a little doubtful. The EV renders '[I have not given food] for the dead,' but the reference probably is to offering food to the dead or providing food for them. The practice was condemned by official Judaism, but persisted nevertheless. Tobit 4^{17} bids the Jew place food on the tomb of the righteous;[2] and Sir 30^{18} also refers to the custom.[3] In some quarters necromancy and its allied customs survived among the Jews in later periods.

In Rabbinical times and among the stricter modern Jews, during the *Shiḇ'a*, or seven days of strict mourning, the relatives abstain from work and remain at home, sitting on the floor or on a low bench, reading the Book of Job, and receiving visits of condolence. Bereaved children should abstain for a year from music and recreation.

A special feature of Jewish mourning is the repetition of the *Ḳaddish* by a bereaved son. According to the Jewish Prayer-book, this is to be repeated by sons for eleven months after the death of a parent, and also on the *Jahrzeit*, or anniversary of the death. It is a special form of *Ḳaddish* which runs thus:

'May His great Name be magnified and hallowed in the world which He created according to His will! May He establish His kingdom speedily and in the near future in your lifetime and in your days and in the lifetime of all Israel! Say ye Amen.

May His great Name be blessed for ever; may it be blessed for ever and ever!

May the Name of the Holy One (Blessed be He) be blessed and praised and glorified and exalted and set on high and honoured and uplifted and sung above all blessings and hymns and praises and consolations that are repeated in the world!

May the Name of the Lord be blessed from now even for evermore! May there be great peace from heaven and life upon us and upon all Israel, and say ye Amen. My help is from the Lord that made heaven and earth. May He that maketh peace in His high places make peace for us and for all Israel! And say ye Amen.'

This is publicly recited in the synagogue, but according to Oesterley and Box[4] it 'is in no sense in itself a prayer *for* the dead, but the public recitation of it in this fashion by a son is regarded as a proof of the piety of the dead, as represented by a pious survivor.' This no doubt is the view of enlightened Jews; but others believe that the repetition of the *Ḳaddish* by the son shortens the purgatorial period which the father must spend in Gehenna or exalts him to a higher sphere in Paradise.[5] The repetition terminates on the anniversary of the death, because it would be unfilial to suppose that a father's sins would require more than a

year's purgatory. In the Ashkenazic synagogues prayers are said four times a year by the bereaved for the souls of the deceased.[1]

Priests were forbidden to mourn except in the case of the nearest relationships (Lv 21^{1-5}, Ezk 44^{25}).

4. Significance of death and of funeral customs. —Some scholars [2] see in many of the funeral rites, notably cutting of the hair, self-mutilation, etc., which were forbidden by the more advanced Judaism, traces of an animistic stage of the religion of Israel, of the worship of ancestors, and of the allied ideas of the continued life of the dead, of the possibility of communion with them, of the necessity of providing for their needs and protecting them from evil spirits; or, on the other hand, of the need of protecting the living from injury by the spirits of the dead. No doubt the Semitic peoples passed through a stage of religious development when such ideas were current; and these ideas persisted and do persist when they have been outgrown by the purer forms of religion; but they do not belong to Jahwism or to Judaism so far as either was or is dominated by revelation. Nevertheless, the great importance attached to burial in the last centuries of the pre-Christian era suggests that the condition of the spirit of the deceased was supposed to be influenced by the treatment of the corpse. Later on, in some districts the habit prevailed of visiting cemeteries in order to obtain the help or intercession of the dead.

Another quasi-animistic explanation of mourning rites which involve disfigurement, unattractive dress, covering the head, etc., is that they were intended to prevent the spirit of the dead man from recognizing the mourner, and so to protect the latter from any injury the spirit might wish to inflict upon him. Similarly, the mourners' shrieks were intended to drive the spirit away; and satisfactory burial was necessary in order that the dead might find their way to Sheol and stay there. The suggestion that many mourning rites were due to the anxiety of the mourner to humble himself before God [3] hardly seems probable. The most obvious explanation is that mourning arose out of a natural desire to express the emotions caused by bereavement. Such distress gives rise to wailing, frantic gestures, neglect of the dress and person, an aversion to the pleasures of life. Acts which were originally spontaneous would soon harden into a fixed etiquette or ritual. Many customs might easily be thus explained; and it is possible that this may be the true explanation, even in cases where a mourning custom does not seem to us a natural expression of grief. A man distraught by sorrow may seek relief in any unexpected, strange, unusual act; such an act may appeal to the imagination of spectators by its very strangeness, and be imitated till it becomes a custom.

The contagious uncleanness of a corpse (Nu 5^{2}, Lv 21^{11}) might be suggested in many ways: by the fear of the spirit of the dead man mentioned above, by the natural shrinking from an object so changed from the living friend or kinsman, and even by sanitary reasons. The uncleanness of the corpse would naturally be extended to the tomb. In the same way an unburied corpse defiled the land and brought down a curse upon it (Dt 21^{23}). It would be a mistake to try to explain all the mourning customs, even of one people, by the consistent application of a single principle. Bereavement affects men in many ways, so that natural affection, practical considerations, superstition, and religion all contribute to give rise to the ritual connected with death. Moreover, a rite changes its significance and value from time to time, so that the meaning attached to it in later times may be quite different from that which it had originally, and the popular explanation of it may throw no light on its origin.

[1] Oesterley and Box, *loc. cit.*

[2] *E.g.* F. Schwally, *Das Leben nach dem Tode*, Giessen, 1892.

[3] *PRE*[3] xx. 88 f.

According to Gn 3, death was a consequence of the sin of Adam and Eve (cf. Ro 5^{12}); it would be natural to draw the conclusion arrived at in the latter passage, that henceforth each man died because of his own sin (a view perhaps implied by Nu 27^{3}).[1] But the narrative in Genesis stands apart from the general course of OT thought, which regards death as the natural end of life. The righteous man, according to a widely prevalent view, enjoys a long and happy life, and is gathered to his fathers in a good old age. Some passages of the Wisdom Literature, even apart from any belief in a real future life, regard life as a burden and death as a boon (Job $7^{15.\ 16}$, Ec 1^{2} $4^{2.\ 3}$).

In some passages of OT, death is personified (*e.g.* Job 28^{22}, Is 28^{15}, Hab 2^{5}). In others the term is extended to mean spiritual death; it doubtless includes physical death, but only as a part of a wider judgment which also involves separation from God and exclusion from the Kingdom. In such passages, as Schultz said, 'death includes everything which is a result of sin.'[2] This usage of the term is extended and developed in the later literature. Thus Philo: 'The death of the soul is the decay of virtue, the taking up of evil.'[3]

In later Judaism, death is regarded as atoning for the sin of the deceased. According to a popular superstition, the dead man suffers pain while his body is decaying in the grave, and this pain has an atoning value. But, apart from such ideas, we find the doctrine taught by Rabbinical and other authorities. Thus the Sephardic ritual for a dying man includes the following:

'Let my death be an atonement for all my sins, iniquities, and transgressions, wherein I have sinned, offended, and transgressed against Thee, from the day of my first existence; and let my portion be in the Garden of Eden.'[4] Again we read: 'The Day of Atonement and death make atonement when accompanied with sincere repentance.'[5]

W. H. BENNETT.

DEATH AND DISPOSAL OF THE DEAD (Muhammadan).—

According to the Qur'ān, 'every soul must taste of death' (iii. 182); the difficulty as to those who may be alive at the Last Day is got over by the explanation that on the blast of the trumpet all 'shall expire, except those whom God pleases' (xxxix. 68), the exempted being possibly some of the greater angels (Baiḍāwī, etc., *in loc.*). Further, it is laid down that the exact hour of each person's death is foreordained (xvi.

[1] Köberle, *Sünde und Gnade*, 334; but probably the passage regards Zelophehad as involved in the sin of Israel in refusing to enter Canaan from Kadesh.

[2] *OT Theol.*, Eng. tr., ii. 310, 316 f.; cf. Bennett, 283; and see Ezk $20^{11.\ 23}$.

[3] *Legg. Allegor.* i. 33, quoted by Hughes, *Ethics of Jewish Apocryphal Lit.*, Lond. 1909, p. 280.

[5] Mish. *Yoma*, viii. 8, quoted by Bender, *JQR* vi. [1894] 666.

63). In the traditions, men are forbidden by the Prophet to wish for death, though to a believer it will be desirable. Whoso's last words are the *Kalima* (profession of faith, 'There is no god but God') will enter into paradise; and it is directed that this shall be recited in the presence of the dying, and the *Sūra Yā Sīn* (Qur. xxxvi.) should be said over the dead. A fantastic tradition, given on the authority of Abū-Ḥuraira, relates what Muhammad is supposed to have said about the passing of the soul. In the case of a believer, angels of mercy clad in white come and invite the soul to the rest which is with God, and the soul comes out with a delicious smell of musk, which the angels sniff with satisfaction; the soul is handed on from angel to angel, till it reaches the souls of the faithful, who rejoice and question it about those left behind on earth. But angels of wrath come to the dying infidel, and his soul departs with a bad smell, which disgusts them, and they bring it to the souls of the infidels. This idea is elaborated in other traditions, in which the soul of the righteous is said to issue forth like water from a skin, and the angel of death seizes it; but the angels in white snatch it from him and wrap it in a shroud with an odour of musk, and convey it on and on to the seventh heaven, where the believer's name is registered, after which it is returned to its body on the earth, to undergo the questioning of the grave. But the dying infidel is visited by black-faced angels, and the soul is drawn out like a hot spit out of wet wool which sticks to it, and is wrapped in sackcloth, smelling fetidly; and its name is written in hell (*sijjīn*); and it is violently thrown down upon the earth, to be examined by the angels of the grave, as will be described later.

Meanwhile the body is treated with a ceremonial which varies little in different parts of the Muslim world, and is nearly the same for men and women. Precedents for most of the ritual are traced to traditions of the Prophet; but two customs—the wailing of women and the recital of praises of the dead—are observed in direct defiance of his commands. The dying man is turned to face the *qibla*, or direction of Mecca, and, as soon as his eyes are closed in death, the surrounding men ejaculate pious formulæ and the women raise cries of lamentation (*walwala*), the family calling upon the dead in such terms as 'O my master!' 'O my resource!' 'O my camel!' 'O my misfortune!' The clothes of the deceased are instantly changed, his jaw bound, and his legs tied; and he is covered with a sheet. Women friends, and sometimes professional 'keeners' (*naddāba*), with tambourines, join the mourners and cry, 'Alas for him!' If he was one of the *'ulamā* of Cairo or some man of mark, his death would be announced from the minarets in the call known as the *Abrār* (from Qur. lxxvi. 5–9). The lamentations go on all night, if the death occurred in the evening, and a recitation of the Qur'ān by hired *fiqīs* takes place; but, if the death occurred in the morning, the burial follows on the same day, as, in addition to the rapid decomposition in a hot climate, there is often a superstitious dread of keeping a corpse all night in the house. The washing of the dead is done by a professional washer (*mughassil* or *ghassāl*), male or female according to the case, who brings a bench and bier, and does the work, often in a courtyard, with much reverence and decency, and with care in the disposal of the water, which people fear to touch; while the *fiqīs* continue chanting in the next room. After a very elaborate washing, the nostrils and other orifices are stuffed with cotton, and the corpse is sprinkled with camphor, rosewater, and lote leaves (*nabq*), the feet tied together and hands laid on breast, and the grave clothes (*kafan*) put on according to precise rules. Those vary from two or three pieces of cotton (or five for a woman), or a mere sack, in the case of the poor, to a series of layers of muslin, cotton, silk, and a Kashmīr shawl, among the rich; and the fashions vary in different lands. Women usually have a long shift (*yalak*) added, and in India a coif (*damnī*). White and green are the favourite colours for the *kafan*, or any colour but blue, but white alone is allowed in India. A shawl is thrown over the body when placed on the bier (*janāza* or *ṣandūq*). There is no coffin, and, of course, no priest.

The funeral or procession varies in different countries. In India, women do not attend as a rule, but they do in Bukhārā. In Egypt the cortège is often preceded by half a dozen poor men (*yamanīya*), blind by preference, walking in pairs and chanting the *Kalima*. After them come the male friends and relations, and perhaps some darwīshes, especially if the deceased belonged to a darwīsh order. A few schoolboys follow, carrying a Qur'ān on a desk, and chanting lively verses on the Day of Judgment and similar topics. Then comes the bier (which for women and children has a post [*shāhid*] at the head, covered with a shawl, and often adorned with gold ornaments, or, in the case of a boy, surmounted by a turban), carried head foremost at a brisk pace by friends, who relieve each other in turn. It is an act of merit for any passer-by to lend a hand or to follow the bier; and the Prophet made a point of always standing up when a bier was passing, and saying a prayer. The women walk behind the bier, with dishevelled hair, keening and shrieking, and the hired mourners swell the chorus and sound the praises of the dead, contrary to the Prophet's will. Blue headbands and handkerchiefs distinguish the women relations, who slap their faces and sometimes smear them with mud. There are some variations in the procession when the deceased is a woman. Rich people add camels to the procession, and hire *fiqīs* to chant chapters of the Qur'ān on the march, or members of religious orders carrying flags; and also sacrifice (*al-kaffāra*) a buffalo at the tomb for the benefit of the poor; whilst ladies riding the high ass often follow their female relations. If it be a saint (*walī*) who is being buried, the women raise joy-cries (*zaghārīṭ*) instead of *wilwāl*, or keening; and, if these cries cease, the bier stops too; for saints are believed to be wilful and able to stop their bearers, and even to direct them to where they prefer to be buried. It is said to be useless to try to rush a saint's bier in a direction he does not like, but the somewhat bizarre device of turning the bier round rapidly several times has been found successful in confusing the corpse's sense of orientation (Lane, *Mod. Eg.*[5] p. 518).

The ceremony at the mosque consists in laying the bier on the floor, right side towards Mecca, when a service of prayer is recited by an *imām* and his attendant *muballigh*, in the presence of the congregation of mourners and all who choose to attend, ranged in a prescribed order, ending with an appeal to the audience: 'Give your testimony concerning him,' and their reply: 'He was of the righteous.' The *fiqīs* may then recite the *Fātiḥa*, etc., and the funeral goes on to the graveyard.

There a tomb has been prepared, of ample size, with an arched roof, so that the corpse may sit up at ease to answer the interrogatory of the examining angels, Munkar and Nakīr, who will enter the tomb to question him as to his orthodoxy. If the replies are satisfactory, the grave will be enlarged to him, and a man with a beautiful countenance will appear to tell him: 'I am thy good deeds'; otherwise, a hideous face comes to represent

his evil deeds, and painful experiences ensue. The fear of 'the torment of the grave' is very real among Muslims.

The construction of tombs varies in different places, and no one pattern can be indicated. In Egypt, the entrance is at the foot, the side furthest from Mecca, and the tomb is often made to hold several bodies; but, if they are of opposite sexes, a partition is set up. Over the tomb is an oblong stone slab or brick monument (*tarkīya*), with an upright stone (*shāhid*) at head and foot. The inscription is on that at the head, which is often carved with a turban. A small chapel covered with a cupola is frequently built over the tombs of saints and other distinguished people, while the tomb-mosques of sultans and amīrs are often beautiful examples of Saracenic art.

The body is lifted out of the bier and laid in the tomb, on its right side, with the face towards Mecca, propped in that position by bricks. Its bandages are untied, its Kashmīr shawl rent, lest it should tempt grave-robbers, a little earth is sprinkled, ch. cxii. of the Qur'ān, or xx. 57, is recited (but this was forbidden by the Waḥhābīs and others), and the entrance is closed. There is no service at the grave; but, before leaving (unless the funeral be of a Mālikī), a *fiqī*, in the character of *mulaqqin*, or tutor of the dead, sits before the tomb and tells the defunct the five correct answers to be given to the examining angels that night (the 'Night of Desolation,' *Lailat al-waqsha*) when they come and ask him his catechism: he must reply that his God is Allāh, his prophet Muḥammad, his religion Islām, his Bible the Qur'ān, and his *qibla* the Ka'ba. The grave is left in solitude and the mourners depart, saying a *Fātiḥa* for the defunct and another for all the dead in the cemetery. Some *fiqīs* take a repast in the room where the deceased died and recite ch. lxvii. of the Qur'ān, or perform the more elaborate ritual called the *Sabḥa*, 'Rosary,' in which a rosary of a thousand beads is used to count the thousands of repetitions of the *Kalima* and the hundreds of other formulæ repeated. This performance ends with one of the *fiqīs* asking the others: 'Have ye transferred [the merit of] what ye have recited to the deceased?' and their answer: 'We have transferred it.'

Wailing is resumed by the women on the Thursdays of the first three weeks after the burial, and the men receive friends of the deceased in the house and hire *fiqīs* to perform a *ḫatma* of the Qur'ān; and on the Fridays following these three Thursdays the women visit the tomb and go through various rites, including the placing of a broken palm branch on the tomb and giving food to the poor; and the same is done on the Thursday and Friday completing or following the forty days after the funeral. Men do not display mourning in their dress, but women dye their veils and other gear dark blue, and sometimes smear the walls of their rooms, and even stain their hands and arms with the same indigo dye. They also disarrange their hair, and the furniture and carpets are upset in mourning for the head of the house.

LITERATURE.—The most minute account of all the ceremonies and processes used in regard to the disposal of the corpse is to be read in G. A. Herklots and Ja'far Sharif's *Qanoon-e-Islam*, London, 1832, ch. xxxviii.; the ceremonies after the funeral are described in ch. xxxix.; but a good deal of this account consists of details peculiar to the Muslims of Hindūstān. The corresponding ceremonies observed in Egypt are described in Lane's *Modern Egyptians*[5], London, 1860, ch. xxviii., where also is a notice of a curious dance performed on the occasion of a death by the peasants of Upper Egypt. The Egyptian customs are similar to those observed in Syria and Turkey, though local differences of usage are to be noticed, a fairly detailed account of which for Turkey may be read in *The People of Turkey*, ed. S. Lane-Poole, London, 1878, ii. 136–143. See also Hughes' *DI*, London, 1885, *s.v.* 'Burial' and 'Death,' where Herklots is conveniently abridged. The traditions of Muḥammad on the subject are accessible to English readers in *Mishkāt al-Masābīḥ*, tr. Matthews, Calcutta, 1809, vol. i. pp. 355–403.

STANLEY LANE-POOLE.

DEATH AND DISPOSAL OF THE DEAD (Parsi).—1. Before death.—When death approaches, one or two priests are summoned to make the dying person confess his sins. The *Patet*, or confession of sins, is recited for his benefit, and it is a meritorious act if he is able to join the priest in repeating the confession. According to the *Ṣād Dār* (xlv.), the man who 'accomplishes repentance' does not go to hell, but, having received his punishment at the end of the Chinvat bridge, is led to his place in heaven. In a case of urgency the short *Ashem-Vohū* (*Ys.* xxvii. 14) formula may suffice, and the Hātōkht Nask fragment (*Yt.* xxi. 14 f.) attributes a special value to the recital of *Ashem-Vohū* in the last moments of life. The *Ṣād Dār* adds (lxxx. 11) that it brings one who has deserved hell to the *Hamīstakān* (the 'ever stationary' region between heaven and hell); one who has deserved the *Hamīstakā* to heaven; and one who has deserved heaven to the highest paradise. The *tanu-peretha*, after whose death the *upaman*, 'waiting,' 'mourning,' of the relatives must be prolonged beyond the usual period (*Vend.* xii.), is explained by tradition as one who has died without *Patet* and without *Ashem-Vohū*. Sometimes a few drops of the consecrated *haoma* juice mingled with water are poured, if possible, into the mouth of the dying person, *haoma* being believed to produce immortality. Formerly this custom was more common; and it was also usual to drop into the mouth of the dying person a few grains of pomegranate, belonging to the holy ceremonies of the Parsi sacrifice.

2. Death.—According to *Vend.* v. 10, the ancient Zarathushtrians had special chambers or buildings (*kata*) for the dead—one for men, one for women, and one for children—in every house or in every village, and the common mortuary still exists amongst the Zarathushtrians of Persia and in the Mofussil towns of Gujarāt. In Bombay and other parts of India a special place in the house is prepared beforehand and washed clean in order to receive the dead body. The body is bathed all over and covered with a clean, but worn-out, white suit of cotton clothes, which must be destroyed and never used again after having served for this purpose (cf. *Vend.* v. 61, viii. 23–25). A relative girds the sacred cord round the body, reciting the *Ahura Mazda Khudāi*, a short prayer in Pazand. The corpse is placed on the ground on a clean white sheet. Two relatives sit by his side keeping themselves in contact with him—a custom probably derived, like the *paivand* (see below) held by the watchers and the bearers of the corpse, from the idea of forming a bridge or a way for the soul. An *Ashem-Vohū* is recited close to the dead man's ear.

3. Impurity of the corpse.—The corpse is now supposed to be assailed by the corpse-demon, the *Druj Nasu*. According to *Vend.* vii. 1–5, the *druj* of the corpse rushes on the body from the north, in the shape of a fly, immediately after death in a case of natural death. But in a case of violent death (by dogs, or by the wolf, by the sorcerer, by an enemy, or by the hand of man, by falling from a mountain, by strangling oneself, or by treachery) the demon comes only in the *gāh* (one of the five divisions of the day) that follows after death. Only special despised officials, set apart for that purpose, are allowed actually to touch the body, and they must scrupulously observe certain fixed rules. If any one else happens to touch it, the contagion spreads to him, and he must undergo the great purification, *bar*

ashnūm, for nine days (being washed with the urine of the cow, etc. [*Vend.* ix.]). The glance of a dog (see below) or other animal is considered to be particularly effective for driving away the corpse-demon.

In theory the old tabu ideas concerning the dead have been modified in a characteristic manner by the Avestan dualism. Thus, since the death of a Mazdayasnian implies a victory of the Evil Power, his body is unclean, but the corpse of an unbeliever is clean, because his death favours the cause of Ahura Mazda, and a wicked man defiles only during his life, not after his death (*Vend.* v. 36–38).

4. **Isolation of the corpse.**—The place of the two relatives waiting beside the body is next taken by the *nasu-kashas* of the Avesta, now called *khāndhya* ('shoulder-men') by the Parsis of India. Two of those funeral-servants prepare themselves by washing and by putting on clean suits of clothes and the sacred cord, and by reciting the *Srōsh-bāj* (on which see Darmesteter, *Le Zend-Avesta*, ii. 686–688) up to the word *ashahē*. They then enter the room where the dead body is placed, keeping between them a piece of cloth or cotton tape—the *paivand*. They cover the body with cloth except the face—which, however, in some parts of Gujarāt is also covered—with a *padān* (the *paitidāna* of the Avesta, a piece of white cotton stuff which the Parsi priest holds before his nose and mouth in order not to defile the sacred fire and the other pure things). Then the two *khāndhyas* lift the corpse on to slabs of stone placed in a corner of the room, its arms being folded across the chest. The face must not be turned towards the north, whence the demons proceed. In some districts of Gujarāt the old Avestan rule (*Vend.* viii. 8) is still observed of laying the body on a thin layer of sand in a cavity dug in the ground five inches deep, while in Yezd the corpse, after being lifted from the bier in the common mortuary, is placed 'on a raised platform of mud paved with stone, about nine feet long and four feet wide' (Jackson, *Persia*, p. 391). The place in which the body reposes is ritually separated from connexion with the living by three deep circles, *kasha*, drawn with a metallic bar or nail by one of the two *khāndhyas*, who afterwards leave the house, still making *paivand*, and finish their *Srōsh-bāj*.

5. **The sag-dīd.**—If possible, 'a four-eyed' (*cathrucashma*) dog, *i.e.* a dog with two eye-like spots above the eyes, is now brought near the corpse in order to frighten the *druj* by his look, *i.e.* the *sag-dīd* ('dog-gaze') is arranged. According to *Vend.* viii. 16, a white dog with yellow ears has also a particular power against the demons, but any dog may suffice. The *sag-dīd* is repeated at the beginning of every *gāh*, until the body is carried from the house. The prescription of *Vend.* viii. 14–18 seems not to be observed nowadays, namely, that a yellow four-eyed dog or a white dog with yellow ears must be led three times if he walks willingly, six or nine times if he is unwilling, along the road where a corpse of a man or of a dog is carried, in order to scare away the corpse-demon. In Yezd the ordinary street-dog is used, and 'morsels of bread are strewn around the corpse, or, according to the older usage, laid on the bosom of the dead, and the dog eats these' (Jackson, *op. cit.* p. 389). Immediately before entering the *dakhma* ('tower of silence'), the dead body is once more exposed to the *sag-dīd*. The demon-expelling glance is attributed by *Vend.* vii. 3. 29 f., viii. 36, not only to the dog, but to 'the flesh-eating birds' as well as to 'the flesh-eating dogs.'

Those passages evidently refer to the moment when the animals, to which the body is exposed, rush on it to devour it; but the eminent Parsi scholar J. J. Modi, to whom we principally owe our knowledge of the actual funeral ceremonies of the Parsis, interprets *Vend.* vii. 3 in the following way: 'It is enjoined that in case a dog is not procurable, the "Sagdeed" of flesh-devouring birds like the crows and vultures should be allowed, that is to say, it will do if a flesh-eating bird happens to pass and sees the corpse from above or if the flesh-eating birds fly in that direction' (*JASB* ii. 414).

6. **Demon-frightening fire.**—We return to the mortuary room, where, after the first *sag-dīd*, the demon-killing fire (*Vend.* viii. 80) is brought and fed with fragrant sandal-wood and frankincense, and where, until the body is removed, a priest recites the Avesta, keeping himself, as well as every other person, at least three paces from the dead body (*Vend.* viii. 7).

7. **Time of removal.**—The removal of the body must take place in the daytime, in order to expose it to the sun (*Vend.* v. 13). In ancient times the corpse might lie in the special mortuaries as long as one month or even until the next spring (*Vend.* v. 12). Now, in India, the body is removed the next morning, if death takes place early in the night; if a person dies late at night or early in the morning, the body is removed in the evening. In case of death by accident the body may wait longer.

8. **Removal.** — Two 'corpse-bearers' (*nasā-sālārs*), clothed in white, with 'hand-cover' (*dastānā*) on their hands, and making *paivand*, enter the house about one hour before their departure to the *dakhma*, carrying an iron bier (*gāhān*). They must be at least two in number (*Vend.* iii. 14), for a single man is not allowed to carry even the body of a child. Wood being more liable to infection, the bier must be of iron. It is placed beside the body. The corpse-bearers read the *Srōsh-bāj* up to the word *ashahē* (the remaining portion of that prayer is recited only when their operations relating to the corpse are finished), and add in a low voice: 'According to the dictates of Ahura Mazda, the dictates of the Amshaspands, the dictates of the holy Sraosh, the dictates of Aderbād-Mahrespand, the dictates of the Dastur of this time.' Then they sit silent, while two priests, having performed the *kosti* (cf. Darmesteter, *op. cit.* 685 f.) and repeated the special prayers of the *gāh*, enter the chamber, making *paivand*, put on their face-veils, 'take the *Srōsh-bāj*' (*i.e.* repeat it as far as *ashahē*), and commence the Ahunavaiti Gāthā (*Ys.* xxviii.–xxxiv.), keeping themselves near to the door or at least at a distance of three paces from the corpse. At the words of *Yasna* xxxi. 4: 'Seek thou for me, O Vohu Manah, the mighty Kingdom, through whose increase we may overcome the Druj,' they stop; the corpse-bearers lift the dead body on the bier, when the priests turn to the dead and finish the Gāthā, after which a new *sag-dīd* is performed. The moment is now come for relatives and friends, who have gathered in the house (or, in Yezd, in the common mortuary, the *zād-ō-marg*, 'birth and death,' or *pursish-khānah*, 'inquiry house'), to have a last look at the deceased. They bow before the body, *i.e.* make the *sejdo*, before its face is covered up.

9. **Funeral procession.**—Having carried the body outside the house (according to *Vend.* viii. 10, the corpse should be removed through a breach specially made in the wall of the house, and in this connexion it is worthy of note that the Persian *zād-ō-marg* has two doors, the corpse being brought in by the one and carried out by the other), the *nasā-sālārs* entrust the bier to two or more *khāndyas* (who are also sometimes called *nasā-sālārs*) to bear it to the 'tower of silence.' Two priests walk in the front of the procession, at a distance of thirty paces after the bier, accompanied by relatives and friends, two abreast, clothed in white and making *paivand*. In Persia, however, the order

is different. There the procession is led by a man bearing a vase containing fire (and formerly also by a musician playing a doleful air), followed by the relatives and friends, the corpse, the priests, and additional members of the family of the deceased. Here, too, if the *dakhma* is far distant, the body may be conveyed on a cow or donkey (cf. the Pahlavi commentary on *Vend.* iii. 14), and the mourners may ride, though the priests are required to walk.

10. In the tower.—At the gate of the tower the bier is set down, the face is uncovered to let the accompanying procession pay their last respects to the dead from a distance of at least three paces, and once more the *sag-dīd* is performed. Now the two real *nasā-sālārs*, who had arranged the body on the bier in the house, and who alone are allowed to enter the tower (not wearing their usual clothes [*Vend.* viii. 10], but the so-called 'clothes of *dakhma*'), open its gate, which is closed with an iron lock, lift the bier, carry it into the tower, place the body, with the head toward the south (the auspicious quarter), on one of the beds of stone (*kesh*) arranged in concentric circles, rising like an amphitheatre, which are intended for receiving the bodies. These circles are separated by canals (*pavis*, a word which seems also to be used of the sections divided by the canals). They remove the clothes from the corpse, leaving it naked (*Vend.* vi. 51), and cast them into the central well, forming the middle of the tower, and surrounded by the amphitheatre-like circles of stone beds. The naked corpse may be left 'on the earth, on clay, bricks, and stone and mortar.' The vultures, Nature's scavengers, are already waiting, and in one or two hours they devour all that is corruptible of the body. Twice a year the *nasā-sālārs* throw the skeletons into the well, where sun, rain, and air soon reduce the whole to dust. The *Dīnkarṭ* to *Vend.* v. 14 considers the falling of the rain on the corpses in the *dakhmas* and on the impure liquids as a great advantage. Formerly the bones were preserved in an ossuary.

'Whither shall we carry the bones of the dead, Ahura Mazda? Where shall we place them?' Ahura Mazda answered: 'You may make a structure (*uz-dānem*) for them beyond the reach of the dog, of the fox, of the wolf, inaccessible to the rain from above. If the Mazdayasnians are rich, they may construct it of stones, of plaster, or of earth. If they are not rich, they may place the dead on the ground in the light of heaven and looking towards the sun' (*Vend.* 49–51).

If, in Persia, a Zarathushtrian community is too small to support a *dakhma*, the body 'is carried to some remote place in the hills or mountains, is then piled around with stones and covered with a slab, but not interred' (Jackson, *op. cit.* p. 394).

The *Dādistān* (xviii.), in the 9th cent. A.D., recommended collecting the bones and putting them in an *astōdān*, elevated above the ground and covered with a roof to preserve them from rain and from animals. These receptacles to protect the bones from the sun were made of two excavated stones, one forming the coffin, the other the cover. They might also be real monuments, perhaps corresponding to the caves of the Achæmenians at Naksh-i Rustam (Modi, 'An old Persian Coffin,' *JASB*, 1888; cf. Darmesteter, *op. cit.* p. 93, note 34). At the present day the bones of the dead are no longer preserved.

Vend. vi. 45, in directing the dead to be carried 'to the most elevated spots, where flesh-eating dogs and flesh-eating birds may most surely perceive it,' gave sanction to a primitive method of disposing of the dead, still practised, *e.g.*, by the Käfirs, who expose their dead in wooden coffins on the tops of the mountains (Lassen, *Ind. Alterthumskunde*, i.², Leipzig, 1867, p. 520), by some wild tribes of India (Crooke, *JAI* xxviii. [1899] 245 f.), and by the Masai, where a person dying without children is abandoned, some hundred yards outside the kraal, to the hyænas, whose speedy devouring of the corpse is considered a favourable sign (Merker, *Die Masai*, Berlin, 1904, p. 193). The Hawaiians threw their dead to the sharks, etc. (Segerstedt, *Le Monde oriental*, Upsala, 1910, iv. 2, p. 64). According to Strabo (p. 517; cf. Klenker, *Anhang zum Zend-Avesta*, Riga, 1783, II. iii. 71 f.), the Bactrians threw their sick and aged people to dogs, trained to devour them; the Caspians considered it more auspicious if birds devoured their dead exposed in the desert than if they were eaten by dogs or wild animals (cf. Marquart, *Philologus*, Supplem. x. [1907] i. 141).

11. Dakhmas.—Special constructions or towers (*dakhmas*), for exposing the corpses, are well known to the Avesta. They constitute the most awful and impure spots on the earth, and it is one of the greatest merits to demolish them when they have served their purpose, and thus restore the ground to cultivation (*Vend.* iii. 13, vii. 49–58). The construction of the actual 'towers of silence' used by the Parsis of India is accompanied by a series of religious ceremonies, the consecration lasting three days (Menant, *Les Parsis*, Paris, 1898, pp. 206–235, with plans and illustrations).

12. Dispersion of procession.—At every *dakhma* a kind of chapel (*sāgrī*) is built, to which the funeral procession retires while the *nasā-sālārs* do their work with the dead inside the tower. When the *nasā-sālārs* are ready, the assistants, gathered in the *sāgrī* or seated at some distance from the *dakhma*, get up and finish the *Srōsh-bāj*, which they had commenced before starting in the funeral procession. In concluding the *paivand* they recite this prayer: 'We repent of all our sins. Our respects to the souls of the departed! We remember here the fravashis of the pious (departed).' They then take urine of the cow, wash the naked parts of their bodies, make the *kosti*, and repeat the *Patet*, mentioning the name of the departed at the end of the prayer, after which they return home and take a bath.

13. Ceremonies at home.—At home, immediately after the removal of the body, urine of the cow (*nīrang*) is sprinkled over the slabs of stone on which the corpse was placed, and upon the road by which it was carried out of the house. All clothes, utensils, and other articles of furniture must be cleansed, principally by the same means—*gōmēz* (urine of the cow) and water—or rejected altogether, if they have come into any contact with the dead body. After the removal of the body, all the members of the family are required to take a bath.

In an ancient Iranian province, Harōiva (Harāt), the custom recorded from later times (Chardin, *Voyages en Perse*, Amst. 1735, iii. 109), of abandoning the house to the dead, seems to have prevailed according to the *vish-harezana* of *Vend.* i. 9 (cf. N. Söderblom, *RHR* xxxix. [1899] 256 ff.). The *Great Bundahīshn* gives the following explanation of this custom: 'We keep the prescriptions (of removing the fire, the *barashnūm*, the cups, the *haoma*, and the mortar) during nine days (in the winter) or a month (in summer)' (cf. *Vend.* v. 39 ff.). 'They abandon the house and go away during nine days or a month' (Darmesteter, *op. cit.* p. 9, note 20). It may be that *upaman*, 'waiting' (*Vend.* v.) originally meant a temporary abandoning of the house. At present, in Bombay, all the members of the family have to take a bath after the removal of the body, and fragrant fire is burnt on the spot where the corpse was laid. During nine days in winter and one month in summer a lamp is kept burning on the same spot, and no one is allowed to go near it during that period. After its expiry the whole room is washed. The members of the family and also near friends abstain from meat during three days after the death.

We do not deal here with the festivals and gifts intended for the priest and for the poor after the death of a wealthy Parsi, or with the recital of several offices for his soul (see IMMORTALITY [Parsi]). The funeral expenses of an eminent Parsi gentleman who died in 1763 amounted to more than 733 rupees, which would mean more than double this sum at present (Bomanji Byramji Patell, *JASB* iii. 144 ff.).

14. Recent opposition.—In some circles of Parsi society the question of introducing a more hygienic

and less savage manner of disposing of the dead has of late been very eagerly agitated. Both burning and burying being prohibited because of the purity of fire and earth, it has been proposed to consume the corpse by electricity, and the exegetical question has been discussed whether such a method can be considered as burning or not. No change has been officially permitted as yet in the disposal of the dead, which shows the tenacity of custom, and maintains continuity with an immemorial antiquity.

LITERATURE.—J. J. Modi, 'On the Funeral Ceremonies of the Parsees, their Origin and Explanation,' in *JASB* ii. (1892); J. Darmesteter, *Le Zend-Avesta*, ii. 146ff., Paris, 1892; D. Menant, *Les Parsis*, Paris, 1898; D. F. Karaka, *Hist. of the Parsis*, i. 192 ff., London, 1884; A. V. W. Jackson, *Persia Past and Present*, pp. 387–394, London, 1906; Khudayar Sheheryar, 'A Zoroastrian Death in Persia' (in Gujarati), in *Zartoshti*, i. 169–181.

NATHAN SÖDERBLOM.

15. Ancient Persian rites.—In ancient Persia, before the spread of Zoroastrianism, the means of disposal of the dead were quite different from those observed by the adherents of the great Iranian religious leader. Attention has already been called, in § 10, to the Bactrian custom of leaving the sick and the aged to be devoured by dogs—a practice recorded not only by Strabo (p. 517), but by Cicero (*Tusc. Disp.* i. 45) and by Eusebius (*Præp. evang.* I. iv. 7). Both Herodotus (i. 140) and Strabo (p. 735) expressly state that, while the Magi exposed their dead to dogs or birds (as the Avesta enjoins), the Persians interred the dead body after coating it with wax (*κατακηρώσαντες δὴ ὧν τὸν νέκυν Πέρσαι γῇ κρύπτουσι*). It was, therefore, rank blasphemy (*οὐχ ὅσια*) when Cambyses ordered the corpse of Amasis to be cremated (Herodotus, iii. 16); and it is very doubtful whether any credence can be given to Xenophon's account (*Cyropæd.* VIII. vii. 25) of the request of the dying Cyrus—'Put my body, my children, when I die, neither in gold nor in silver nor in anything else, but commit it to the earth as soon as may be (*τῇ γῇ ὡς τάχιστα ἀπόδοτε*). For what is more blessed than this, to be mingled with the earth (*γῇ μιχθῆναι*)?'—since this last phrase would seem to exclude any coating of the body with wax. Equal suspicion seems to attach to Xenophon's story (*ib.* vii. 3) of the death of Abradates, for whom a grave was prepared, and whose dead head was held on her lap by his wife, whose corpse, after her suicide, and his were both covered over by her nurse before burial. Ctesias, however, who is much more reliable than his ancient contemporaries would allow, may be right when he states (*Pers.* 59) that Parysatis buried the head and right hand of Cyrus the Younger, for here the wax coating may perhaps have been employed.

Unfortunately, our sole information on this subject must thus far be gleaned from the meagre statements of the classics. If we may judge from the tombs of the Achæmenians, their bodies were not exposed as Zoroastrianism dictated; but it is by no means impossible that they were coated with wax, or even, as Jackson also suggests (*Persia Past and Present*, p. 285), 'perhaps embalmed after the manner of the Egyptians.' According to Arrian (*Anab.* VI. xxix. 4–11), the body (*σῶμα*) of Cyrus was laid in a coffin of gold (*πύελον χρυσῆν*; cf. Jackson, *loc. cit.* and p. 304 f., for further references).

All this was, of course, changed when Persia definitely became Zoroastrian. In his account of the obsequies of Mermeroes († A.D. 554), Agathias (*Hist.* II. xix. 22) recognizes only the usage of the Avesta (with the addition of the exposure of the sick while still living), and he expressly says that the Persians could not place the dead in a coffin (*θήκη*) or urn (*λάρναξι*), or bury in the earth (*τῇ γῇ καταχωννύναι*); and the 5th cent. Sasanian monarch Kobad demanded, though without success, that the Christian Iberian ruler Gurgenes should adopt the Persian custom of exposing the dead to birds and dogs, instead of burying them (Procopius, *de Bell. Pers.* i. 12).

LOUIS H. GRAY.

DEATH AND DISPOSAL OF THE DEAD

(Roman).—As in other lands and in other times, so also among the ancient Romans the customs attendant upon death and burial varied so considerably according to wealth, rank, occupation, nationality, religion, place, and period that no single succession of circumstances may be taken as typical, and great caution must be exercised in dealing with the scattered and fragmentary evidence on the subject, in order to avoid confusing the particular with the universal, or attributing to one period the customs peculiar to another.

The greater part of our evidence having to do with the upper classes during the late Republic and early Empire, it will be best to re-construct, as a nucleus around which to build up an account of burial customs in general, a typical instance of the death and burial of a Roman grandee of the 1st cent. of the Empire.

As the man breathes his last, the assembled relatives loudly and repeatedly call out his name in the *conclamatio*—a more or less formalized expression of grief which is probably reminiscent of primitive attempts to wake the dead back to life; and perhaps the nearest of kin kisses him, as if to catch and preserve in the family line the last breath. After the formal announcement '*conclamatum est*,' the eyes are closed, and the usual bathing and anointing, perhaps embalming, take place, performed by one of the household, or by the professional *libitinarius* or *pollinctor*. The body is composed, arrayed in the toga—the full dress of antiquity—ornamented with all the insignia won during the dead man's career, and placed in state on the *lectus funebris* in the *atrium*, or main chamber of the house, with the feet towards the street-door. There are also flowers, *coronæ* of honour, and burning censers supported on candelabra. Near by are attendants, among them being sometimes included paid mourners who chant the funeral wail. [These details may be seen in the Lateran Museum on the tomb relief of the Haterii, a family of considerable importance during the latter part of the 1st century.] Possibly a coin is placed in the mouth as passage-money across the Styx—a custom always in vogue to some extent. A wax impression of the face is then taken, afterwards to occupy its niche in the *ala*, a state room off the *atrium*, along with the masks (*imagines*) of the ancestral line, and to be supplied with the appropriate inscription, or *titulus*, recording the name, years, offices, and deeds of the dead. Outside, the fact of death is made known, and the proper safeguard taken against chance religious or social impropriety, by the hanging of a cypress- or pine-branch at the entrance of the house.

In due time, which in ordinary cases is as soon as arrangements can be made, and in funerals of state from three to seven days, the last ceremonies take place. Criers go through the streets announcing its coming occurrence in the ancient formula: '*Ollus Quiris leto datus. Exsequias, quibus est commodum, ire iam tempus est. Ollus ex aedibus effertur*' ('This citizen has been given over to death. His obsequies those who find it convenient may now attend. He is being carried forth from his dwelling'). Under the supervision of the *designator* and his attendant lictors, the stately

funeral-train takes form and moves: musicians, and perhaps paid singers; dancers and pantomimists, who jest freely, sometimes impersonating in humorous wise even the deceased; a succession of cars, at times amounting to hundreds (six hundred at the funeral of Marcellus), on which sit actors dressed to impersonate the long line of the dead man's ancestors, wearing their death-masks, now taken from the niches in the *alæ*, and accompanied by lictors, as in life—symbolically conducting the most recent of the family line to take his place with his forefathers in the lower world; a display of the dead man's memorials—trophies, horses, dogs, insignia, painted representations of his exploits—after the manner of a triumph; more lictors, with down-pointed *fasces*, reminiscent of olden-time burial by night; and then, high on a funeral car, the dead himself, with face exposed to the sky, or enclosed in a casket and represented by a realistic figure clad in his clothes and death-mask; the immediate mourners—sons with veiled heads, daughters bareheaded with flowing hair; and finally the general public, not without demonstration. On both sides, as the procession passes, is the Roman populace, pressing to the line, and climbing up

'To towers and windows, yea, to chimney tops,'

to witness what must have been one of the greatest spectacles of all time.

Arrived at the Forum, the great centre of civic life, the dead is carried to the Rostra, on which, surrounded by his ghostly ancestry, he lies while his nearest relative delivers over him the *laudatio*, a formal and often extravagant glorification of the deceased and his forefathers which is preserved among the family archives, and whose uncritical use will do so much to falsify or distort Roman history. The procession then forms again, resumes its way, and passes through the city-gate to the destined place of cremation or inhumation at one of the great *mausolea*, such as that of Augustus, at the north end of the Campus Martius, or in one of the long lines of lots which border the high road. Here the dead, with ornaments, weapons, and other possessions dear in life, together with many memorials brought by friends and relatives, is placed upon an elaborate pyre, to which, with averted face, the nearest relative or friend, or some civic dignitary, applies the torch. As the flames rise to the summit of the pyre, perhaps they liberate from his lightly fastened cage an eagle, which soars aloft—the symbol of the spirit of the dead setting out for its home among the immortals. The embers are quenched with water or wine, the final farewell (another *conclamatio*) is uttered, and all return to the city except the immediate relatives, who collect the ashes of the departed in a napkin, bury the *os resectum* (see below) to preserve the form of earth-burial, perform a purificatory sacrifice, and partake of the funeral-meal in the family tomb-chapel.

There follow nine days of mourning, on one of which the now dry ashes are enclosed in an urn of marble or metal, and carried by a member of the family, barefooted and ungirdled, to their final resting-place in the tomb-chamber. At the end of this period, the *sacrum novendiale*, a feast to the dead, is celebrated at the tomb, and a funeral-banquet is held at the home. Mourning continues ten months for husbands, wives, parents, adult sons and daughters, eight months for other adult relatives, and in the case of children for as many months as they have years. Memorial festivals, which partake of the nature of a communion, are celebrated on Feb. 13–21, the *Parentalia*, or pagan All-Souls' Day; again on the birth or burial anniversary; and again at the end of March and May, the *Violaria* and *Rosaria*, when violets and roses are profusely distributed, lamps lighted in the tomb-chambers, funeral-banquets held, and offerings made to the gods and to the *manes*, or spirits of the dead.

Such a funeral, though not unfamiliar to the Roman people, was the exception rather than the rule. The imposing nature of the whole—the splendour of its appointments, the dignity of the participants, the impressiveness of the stately train, with its hundreds of impersonated prætorians and consulars, traversing the principal thoroughfares between thronging spectators—may best be compared with the funerals of Italian royalty in modern times, though the latter probably fall far short of the magnificence of the ancient ceremony.

The funerals of middle and lower class people, and of most of the upper class, were less ostentatious, and unaccompanied by the *laudatio*, the display of death-masks, and the paraphernalia of wealth. Children, citizens of the lowest class, and slaves were carried to their last rest without public procession, and with few formalities.

Unlike modern burial-places, the Roman cemeteries were not public communal enclosures set apart by themselves, but were situated along the great highways that led from the city-gates, and took the form of a very long and narrow series of private holdings, whose front, occupied by imposing monuments, bordered immediately on the road. All streets leading from Rome had their tombs, and the location of sepulchres along them in the country also, on landed estates, was frequent. Most prominent among the highway cemeteries at Rome were the Via Flaminia and the Via Salaria on the north, the Tiburtina and the Prænestina on the east, the Latina and the Appia on the south, and the Aurelia on the west. Most magnificent of all was the Appian Way, *Regina Viarum*, which still displays almost unbroken lines of tomb-ruins from its issue at the old Servian Porta Capena to the Alban Mount, fourteen miles away. Among its two hundred or more larger monuments, displaying great variety of architecture and ornamentation, are to be seen most of the types of the Roman tomb: the *mausoleum*, round, and probably once with conical summit, copied and named after the tomb of Mausolus, the king of Icaria, who died about 351 B.C.; the *tumulus*, a conical mound heaped over the body or ashes of the dead, also reminiscent of Asia; the tomb above ground; the tomb excavated in the tufa bed of the Campagna; the combination of both, with tomb below and chamber above; the *columbarium*, for the reception of the cremated dead of burial-associations; the chambers in series called 'catacombs' (*q.v.*). Burial lots were marked by boundary stones, inscribed with measurements: e.g. '*in fronte p. xvi. in agro p. xxii.*' ('frontage, 16 ft., depth, 22 ft.'). Threats and curses were frequently added to safeguard the area and monuments against violation or profanation. The more pretentious areas were great family burial-places, where were laid to rest all the members of a gens, or branch of a gens, including its freedmen and slaves, and sometimes even clients and friends. Such a burial-place might include a generous plot of ground, with an area before the tomb, a garden behind, an *ustrina*, or crematory, *ædiculæ*, or shrines with statues of the dead, banquet-room for anniversary use, pavilion, well, and custodian's quarters. The epitaphs, incised upon slabs let into the front of the monument, or on tombstones at the graves of individuals, or near the remains inside the vault, are characterized by great variety of content and expression. Name, parentage, public offices, and an accurate statement of the length of life are found in most of them, without dates of death and birth. A type may be seen in that of Minucia, the daughter of Fundanus, whose death is the subject of Pliny's *Ep.* v. 16:

'D. M. Minuciae Marcellae Fundani F. Vix. A. XII., M. XI., D. VII.' ('To the Departed Spirit [*Dis Manibus*] of Minucia Marcella, the Daughter of Fundanus, who lived 12 years, 11 months, and 7 days') (*CIL* vi. 16631).

A portrait-bust sometimes accompanied the epitaph, and it was not infrequent for the inscription to be in the form of an address to the passer-by from the mouth of the departed, as the quaint archaistic one of Marcus Cæcilius, which lies by the Appian Way (*CIL* i. 1006):

'Hoc est factum monumentum Maarco Caicilio.
Hospes, gratum est quom apud meas restitistei seedes.
Bene rem geras et valeas; dormias sine qura.'

('This monument is erected to Marcus Cæcilius. Stranger, it gives me pleasure that you have stopped at my resting-place. Good fortune attend you, and fare you well; may you sleep without care.')

Such appeals as this upon stones, the use of portrait-sculpture, and the custom of roadside burial illustrate the Roman yearning for continued participation in the affairs of the living, and an instinctive conviction as to future existence.

Among the lower classes, especially freedmen and the labouring part of the population, a most popular form of tomb was the *columbarium*, so named because of its resemblance to a dove-cot. Long narrow vaults were either built above ground or excavated in the tufa, and in their walls were formed numerous compact rows of niches, each of a size barely large enough to receive an urn containing the ashes of one person, whose identity was made known by a *titulus* upon a slab below the urn, or on the urn itself, sometimes accompanied by a small portrait-bust. One of these *columbaria* on the Via Appia, from which three hundred *tituli* have been preserved, was for the use of the freedmen of Augustus and Livia. Such tombs were sometimes given as benevolences, and sometimes erected by speculators, but it was more usual for them to be constructed, or at least managed, by *collegia funeraticia*, co-operative funeral associations, which sold stock, assessed regular dues, and paid benefits, thus ensuring their members proper disposition after death. They were administered by *curatores*, who divided and assigned the space by lot to the shareholders, who might in turn sell their holdings.

The lot of the ordinary slave and the very poorest class of citizens was less fortunate. Outside the line of the Servian Wall, where it crossed the plateau of the Esquiline, there existed, down to the time of Horace (when it was covered with earth and transformed into the Gardens of Mæcenas), a great burial-ground which might be called 'the potter's field' of Rome. Here, as shown by excavations made from 1872 onwards, was an area of irregular dimensions extending a mile or more along the wall, from near the present railway-station on the north-east to the Lateran on the south-east, which had served as a necropolis from time immemorial, and was the burial-ground to which Horace made reference in *Sat.* I. viii. 8–16:

'Huc prius angustis eiecta cadavera cellis
Conservus vili portanda locabat in arca;
Hoc miserae plebi stabat commune sepulchrum,
Pantolabo scurrae Nomentanoque nepoti.
Mille pedes in fronte, trecentos cippus in agrum
Hic dabat, heredes monumentum ne sequeretur.
Nunc licet Esquiliis habitare salubribus, atque
Aggere in aprico spatiari, quo modo tristes
Albis informem spectabant ossibus agrum'

('Hither, of yore, their fellow-slave contracted to carry in their cheap coffins the dead sent forth from their narrow dwellings; here lay the common sepulchre of the wretched *plebs*, for Pantolabus the knave, and Nomentanus the ne'er-do-weel. A thousand feet front, three hundred feet deep were the limits; the monument not to follow the heirs. To-day you may dwell on a healthful Esquiline, and take walks on the sunny *agger*, where but now your sad gaze rested upon a field ugly with whitening bones').

The reference in the above lines to the cheap coffins, the slave hireling, the contrast between the gloomy bone-strewn Esquiline of former days and the healthful gardens of the present, and the sardonic allusion to the *cippus* as the one monument of a whole city of wretched poor constitute an eloquent comment on the mortuary destiny of the lowest class, though to interpret literally the poet's mention of whitening bones seems unnecessary. Excavation has revealed pit-graves 13 to 16 ft. square and of great depth, in which the bodies of the criminal and otherwise unfortunate were deposited one above the other, unburned, and with little ceremony.

Cremation and inhumation existed side by side throughout the pagan period. The earliest cemeteries—the lowest stratum of that on the Esquiline, and the necropolis recently (1902) excavated on the Sacred Way near the Forum—contain both cinerary urns and sarcophagi, the latter being sometimes made of hollowed tree-trunks. The later strata on the Esquiline also contain both. The Cornelian gens held to earth-burial until Sulla chose cremation as a measure of safety. The tomb-chambers of the Scipios, a branch of the Cornelian gens, on the Appian Way inside the Wall of Aurelian, were filled with sarcophagi containing unburned dead; and in many large tombs the heads of families were laid away in sarcophagi, while the cremated remains of their freedmen and the humbler members of the household were deposited about them in the same chamber. Inhumation, as the cheaper and more natural method, seems to have been the earlier, basic, and popular custom; even in Augustan times, when cremation was as nearly universal as it ever became, it was the custom to perform at least a symbolical burial of the body by the interment of a small part of it, the *os resectum*, usually a joint of the little finger.

The foregoing account of death and burial has to do principally with the 1st cent. A.D. and with the city of Rome. Naturally, there were variations in detail before and after this period: *e.g.* burial by night was the practice of earlier times, and was prescribed again by Julian, on the ground of inconvenience to urban business caused by diurnal rites; the cemeteries of the earliest times were less distant from the heart of the city, by reason of the lesser circumference of the primitive walls, each successive fortification carrying the line of tombs farther out because of the law forbidding burial within the city limit; there was less of both display and poverty before the rise of the Empire; sumptuary laws governing funerals were known from the first centuries of the city; the employment of chambers and galleries excavated in the bed of the Campagna, long known on a small scale, grew much more general and extensive after the rise of Christian Rome, developing into the great communal burying-places called 'catacombs'; cremation died out because of its expensiveness and the influence of belief in the resurrection. As to other cities, practice there was essentially the same as at Rome; and in small towns in the country a great deal of conservatism no doubt obtained, manifest in the retention of customs long after they had gone out in the capital.

All periods of the history of Roman burial, however, are unified by the belief in the continued existence of the dead, and in his ghostly participation in the life of the family and community, and by the consequent scrupulous care about proper burial, and the maintenance of right relations with the spirits of dead ancestors. The quick and the dead of ancient Rome were in a more than usually intimate communion.

GRANT SHOWERMAN.

DEATH AND DISPOSAL OF THE DEAD (Slavic).—The subject of death and the disposal of the dead, so far as the Slavic peoples are concerned, was discussed with considerable fullness in the art. ARYAN RELIGION, vol. ii. p. 11[b] ff. It cannot be doubted that the primitive conditions in this particular phase of human life, though to some extent overlaid with a dressing of Christian thought and practice, have been maintained most faithfully among the peoples in question, and it was therefore quite natural that the writer of that article should begin with Slavic ideas and customs, so that, by comparing these with the corresponding phenomena among the linguistically allied races, viz. the Indian, Iranian, Greek, Roman, Celtic, Teutonic, and Lithuanian, he might carry his investigation back to the so-called Aryan period. There is consequently no need to cover the same ground again, but it may not be out of place to record here such facts as have emerged, or have come to the writer's knowledge, since the appearance of the article referred to. We shall arrange these fresh data under five heads.

1. **Burial and burning of the corpse** (cf. ARYAN RELIGION, vol. ii. p. 16 f.).—In the early historical period, as was shown in the passage cited, both of these methods were in operation—probably simultaneously—among the Slavs, and, as recent archæological investigation shows, they prevailed also in the pre-historic age. With reference to *burial*, there has recently come to light a most remarkable correspondence between Middle Germany and Southern Russia in regard to the practice of constructing the tomb in the form of a hut.

At Leubingen, a station on the railway from Erfurt (Thuringia) to Sangerhausen, and not far from Sömmerda, there is a now celebrated sepulchral mound, which has been excavated by Prof. Klopfleisch, a long misunderstood pioneer in the study of primitive history. Near Helmsdorf, again, a village at no great distance from Leubingen, in the so-called Mannsfeld Seekreis, another mound, similar in many respects to that at Leubingen, was recently opened (cf. P. Höfer, in *Jahresschr. f. d. Vorgesch. d. sächs.-thüring. Länder*, v. [Halle, 1906]; and H. Grössler, *ib.* vi. [1907]). In each case the remains (which in the mound at Leubingen lay upon a flooring of wood, and in that near Helmsdorf in a bed-shaped chest of hewn timber) had been arched over by an actual wooden hut of excellent workmanship, with a steep roofing, the planks of which in the Leubingen example were thatched with reeds. The remains found at Leubingen were those of an elderly man, across whose breast had been laid the body of a girl some ten years old, while the Helmsdorf mound, to all appearance, contained but a single body, in a doubled-up position. The objects found beside the dead in both cases—bronze axes, dagger-rods and daggers, small chisels, a diorite hammer, and also numerous ornaments in gold, such as armlets, pins, spiral rings and bracelets—point to the Bronze Age (*c.* 1500 B.C. ?), and also show that the dead had been persons of rank. In a dense layer of ashes under the chest in the Helmsdorf mound were found the skeletons of two men, who had doubtless been given to the dead as his servants. But the most interesting feature of either barrow is unquestionably the wooden hut, designed unmistakably to provide a house for the dead.

Now, although students of pre-historic times are as yet unaware of the fact, similar, and, indeed, almost identical erections are found in great profusion in the Russian *kurgans*, *i.e.* the sepulchral mounds which lend a picturesque variety to the monotony of the Steppes in the districts to the north of the Black Sea. These erections are met with, moreover, not only in the *kurgans* constructed by the Scythian tribes who once dominated that region, but also in those dating from the earlier epochs, which in so many respects still require investigation. It will be to the purpose, therefore, to give a relatively full description of a single specimen of the South-Russian burial-huts—that, namely, discovered in 1903 by V. A. Gorodzov in a *kurgan* situated in the Government of Ekaterinoslav, and dating, according to its discoverer, from the close of the second millennium B.C. (cf. *Results of the Archæological Excavations in the District of Bachmut in the Government of Ekaterinoslav in 1903* ([Russ.], Moscow, 1907, p. 152 ff.). In the heart of the *kurgan* was a spacious square cavity, on the floor of which rested a framework box of thick oak boards — some kind of coffin. Between the walls of the cavity and the box, on the east side, lay a red-coloured jar and a cow's head, while each of the four corners of the cavity contained a cow's foot. Inside the box was the doubled-up skeleton of a woman, lying on its left side, with the head turned towards the north-east, and the wrists under the face. At the neck of the skeleton were found small fragments of bronze beads or other ornaments of the kind. In front of the face stood an earthen vessel; and before the breast were a number of rattles, which had been cut from the backbone of an animal. The skeleton lay on chalky earth, but the skull had a pillow of rushes. The most striking feature of this burial vault, however, is the hut erected over the chest. This hut was supported by two posts fixed in roundish holes at the head and feet of the skeleton, but outside the box in which it lay. The post supported a beam, which had branches leaning against it on either side, so forming the sloping framework of the roof; the branches, again, were covered with reeds. Upon the roof-beam stood a number of pots upside down, and also a badly-weathered quern of sandstone. Above these was a layer of ashes, containing a cow's head, four cow's legs, a large pot with a dimpled ornamentation at its neck and a perforated bottom, incinerated bones, and a whetstone.

As bearing upon the primitive history of Russia, and even of Europe, however, these discoveries are surpassed in importance by the places for the cremation of corpses—perhaps the oldest in Europe—which have been discovered in the valleys of the Dniester and the Dnieper, to the east of the Carpathians, and at no remote distance from the localities above referred to. These places for cremation date, for the most part, from a late Neolithic civilization, which yields little of importance, but in their pottery they furnish a new factor in the cultural development of Europe, extending, as it does, towards the west, across Southern Russia and Bessarabia, and to the north of the Balkan Peninsula. Among its characteristic products are magnificently painted vessels, with plastic decorations of bulls' heads and the like, and numerous idols, mainly representing women and cattle.

The last-mentioned discoveries are due in the main to the researches of Chvojko, of Kiev (*Papers of the XIth Archæol. Congress at Kiev* [Russ.], i.; also *Antiquités de la region du Dniepre* [*Collection B. Khanenko*, première livraison, Kiev, 1899], and [for Bessarabia] v. Stern ('The "pre-Mycenæan" Civilization in Southern Russia,' in *Papers of the XIIth Archæol. Congress in Ekaterinoslav* [Russ.], i.), and they have been critically examined by E. Meyer, *Gesch. d. Altertums*, i.[2] (Stuttgart, 1909) 741 ff. But we are not yet in a position to identify with certainty the peoples from whom emanated the civilizations thus traced at Tripolje, to the south of Kiev, and at Petreny, in Bessarabia.

2. **The funeral procession** (cf. art. ARYAN

RELIGION, vol. ii. p. 20).—In the passage cited we were able to indicate that the practice of bearing the dead to the grave on sledges, even in summer, once prevailed in certain parts of Russia. In an exhaustive work shortly referred to in that passage (viz. 'Sledge, Boat, and Horse as Accessories of Burial Ritual' [Russ.], vol. xvi. of the Moscow *Drevnosti*), Anučin has conclusively proved that in ancient Russia the dead were often, even in summer, conveyed to the grave on sledges, which, however, might be either *driven* or *carried*. The former method is illustrated by a picture in the Sylvester MS ('Conveyance of the Remains of St. Glebu by Sledge to the new Church'); the latter by a picture in the Sylvester MS of SS. Boris and Glebu ('Conveyance of the Corpse of Prince St. Boris by Sledge'). But, as the use of the sledge in funeral obsequies is also found, according to Anučin, among many Finnish tribes, and as to this day the funeral-sledge often supersedes the waggon—even in the finest season of the year—in the north-east of Europe, it is safe to conjecture that the Russians had adopted the practice from the East European peoples with whom they mingled as they spread towards the north-east. Traces of funeral-sledges are likewise found in Egypt, while Lycian grave-stones sometimes exhibit houses resting upon sledge-runners (cf. R. Meringer [*Indogerm. Forschungen*, xix. [1905] 409).

3. **The gifts to the dead** (cf. art. ARYAN RELIGION, vol. ii. p. 20 ff.).—Just as we read in the *Iliad* (xxiii. 171 f.) that the four-horse team of Patroclus was burned upon his funeral-pyre, in Herodotus (iv. 71 f.) that large numbers of horses were buried with the Scythian kings, and in Tacitus (*Germ.* 27) 'quorundam [the Germans] igni et equus adicitur'; so from the Russian *bylins*, or histories, we learn that men were interred with their horses, and sometimes even upon horseback. The burial of Bogatyrĭ Potok Mikhail Ivanovič, for example, is thus described:

> 'Then they began to dig a grave there;
> They hollowed out a grave deep and large:
> A deep one, some twenty fathoms wide.
> And then was Potok Mikhail Ivanovič,
> *With his steed and harness of war,*
> Lowered into the deep grave.
> And they covered it with a roofing of oak,
> And strewed it with yellow sand.'
>
> (Anučin, *loc. cit.*).

4. **The funeral feast** (cf. art. ARYAN RELIGION, vol. ii. p. 20[b]): **attentions paid to the dead after the funeral rites (Ancestor-worship)** (*ib.* 23 ff.).—The various facts—and especially those referring to the White Russians—set forth in the paragraphs cited have meanwhile been largely supplemented from various quarters of the Slavic world. This fresh information is supplied by Matthias Murko in an art. entitled 'Das Grab als Tisch,' in *Wörter und Sachen: Kulturhist. Ztschr. f. Sprach- u. Sachforschung*, ed. R. Meringer, etc., ii. 1, Heidelberg, 1910, p. 79 ff. The first three chapters of this most instructive essay deal respectively with the following subjects: (1) funeral repasts of the Slavs at the burial-place after the interment; (2) sepulchral meals of the Slavs at the graves of individuals; and (3) sepulchral meals on the all-souls'-days and at the ancestral feasts of the Slavs, and meals for the dead among aliens in Russia. That Murko is in this field of inquiry essentially at one with the present writer appears, *e.g.*, from his remarks on p. 110:

> 'For experts in this study, it will not be necessary that I should emphasize the fact that so many customs and festivals still in vogue recall those of the Greeks and the Romans, and even surpass the latter in remoteness of origin, so that we must look for their parallels among primitive peoples. I shall merely state that the original purport of the practice of eating and drinking at the grave can still be clearly recognized: the deceased still takes part in the meal; the mourners leave a place vacant for him at the grave-table; they expressly invite him; they eat with delight of his favourite dishes; they give him wine and honey to drink; they pour wine and water upon the head of his grave; and beside or upon the grave they set food for the dead,' etc.

5. In the article referred to, however, Murko carries his investigation considerably further, as in subsequent chapters he sketches the process by which the relics of ancient ancestor-worship have in the Eastern Church become intermingled with the primitive worship of the dead among the Slavs ('worship of heroes and its transference to the Christian martyrs'). The details of the process are given in the following chapters: (4) the early Christian Agapæ and the meals connected therewith; (5) the survival in the Slav languages of Gr. τράπεζα and other foreign words connected with the cult of the dead (cf. art. ARYAN RELIGION, vol. ii. p. 27[a], regarding Russ. *kanunŭ* = Gr. κανών); (6) Romano-Greek influence upon the spring festivals for the dead among the Slavs (O. Slav. *rusalija*, Serv. *(d)ruzičalo*, Russ. *radunica*; cf. vol. ii. p. 25[b] and 25[a]); Murko's derivation of Russ. *radunica*, from Gr. ῥοδωνία· ὁ τῶν ῥόδων λειμών of Suidas, is original and convincing, so that its meaning is the same as that of *Rosalia*, the spring festival for the dead); (7) Lat. *silicernium*, *silicern(i)us* (cf. vol. ii. p. 28[a]; Murko thinks that this word denotes the feast held upon the *silices*, *i.e.* the rubble of the grave).

LITERATURE.—This is sufficiently indicated in the art. and in ARYAN RELIGION.

O. SCHRADER.

DEATH AND DISPOSAL OF THE DEAD (Tibetan).

—In Tibet, death is regarded as the work of the death-demon, who has accordingly to be exorcized from the house and locality. The ceremonies at death and the methods of disposal of the body are almost entirely of a pre-Buddhistic or Bon character, although now conducted for the most part by orthodox Buddhist priests.

The Tibetans believe that the soul lives after the death of the body, but the future life desired by the people is not the Buddhistic one of a higher earthly re-birth or the arhat-ship of *Nirvāṇa* or Buddhahood. They desire the new life to be in an everlasting paradise, which is now identified with the Western Paradise of Buddha Amitābha of the later Indian Buddhists. The object of the death-ritual, therefore, is, firstly, to secure the due passage of the soul of the deceased to this paradise, and, secondly, to safeguard the earthly survivors against harm from the death-demon, as well as from the spirit of the deceased in the event of its failing to reach paradise and so becoming a malignant ghost.

Formerly, so late as the 8th cent. A.D., human sacrifices were made on the death of kings and nobles. Five or six chosen friends from amongst their officers were styled 'comrades,' and killed themselves on the death of their master, so as to accompany him to paradise, and their bodies were buried alongside of his. The crests of the hills were crowned by such sepulchral mounds, as in China and amongst the Turkic tribes. Beside the body were buried the clothes and valuables of the deceased, his bow, sword, and other weapons, and his favourite horse; and a tumulus of earth was thrown up over all. Animal-sacrifice seems also to have been practised, as is evidenced by the dough effigies of animals which are offered as part of the sacrificial rite by the hands of Buddhist monks, who now perform the popular death-rites, and by their religion are prohibited from taking life (L. A. Waddell, *Buddhism of Tibet*, p. 518 f.).

1. **Extraction of the soul.**—On the physical death of a person, Tibetans believe that the spirit does not depart forthwith, but continues to linger within the corpse for a varying period, which may extend to four days, after the cessation of the heart and

breath. In order to secure the release of the spirit in that direction in which it has the greatest chance of reaching paradise, the services of an expert priest are necessary.

After a death occurs, no layman is allowed to touch the body. A white cloth is thrown over the face of the corpse, and a priest is sent for to extract the soul in the orthodox manner. This priest is one of the higher monks, and bears the title of 'The Mover or Shifter' (*'p'o-bo*). On his arrival in the death-chamber, all relatives and others are excluded, and the priest, closing the doors and windows, sits near the head of the corpse and chants the directions for the soul to find its way to the Western Paradise. After exhorting the soul to quit the body and give up its attachment to earthly property, the priest seizes with his forefinger and thumb a few hairs on the crown of the corpse, and, jerking these forcibly, is supposed thereby to make way for the soul of the deceased through the pores of the roots of these hairs, as though actual perforation of the skull had been effected. If, in the process, blood oozes from the nostrils, it is an auspicious sign. The soul is then directed to avoid the dangers which beset the road to paradise, and is bidden God-speed. This ceremony lasts about an hour. When, through accident or otherwise, the body is not forthcoming and the fourth day is expiring, this rite is performed *in absentia* by the priest conjuring it up in spirit whilst seated in deep meditation.

2. Handling the corpse.—All persons are tabued from touching a corpse (*ro*) except those who belong to the father's family or those indicated by the astrologer-priest, who casts a horoscope for the purpose. This document also prescribes the most auspicious date for the funeral and the mode and place of disposal of the body, as well as the worship to be performed for the soul of the deceased and for the welfare of the surviving relatives.

The persons who may ordinarily handle a corpse must be children by the same father as deceased (*p'as-spun*), though in Lhasa and large towns with many strangers the professional scavengers may do this work. In rural communities, when a man has no paternal relatives of his own, he procures admission into the family of a friend for such funeral purposes as official mourner by giving a dinner to announce the fact. The persons so authorized then approach the body with ropes, and, doubling it up into a crouching attitude, tie it in this posture, with the face between the knees and the hands under the legs. If *rigor mortis* be present, bones may be broken during the process. The attitude of the body resembles that found in some of the early sepultures, and is probably a survival of the pre-historic period. It ensures portability of the corpse.

When tied up in the proper attitude, the body is covered with some of the clothes of the deceased, put inside a sack made of hide, tent-cloth, or blanket, and removed from the room to the chapel of the house (where there is one) as a mortuary, and placed in a corner there. A sheet or curtain is stretched in front of the sack as a screen, and all laymen retire. Where the body has to be kept a long time for climatic or other reasons, it may be slung up to the rafters.

3. Pre-funeral rites.—Priests remain in relays day and night chanting services near the corpse until it is removed. The head priest sits near the screen, with his back to the corpse; the other priests face him, and all read extracts from the Buddhist scriptures, often from different books at the same time; and they keep alight lamps (from 5 to 108, according to the means of the deceased). The relatives sit in another room, and offer food and drink to the deceased. His bowl is kept filled with tea or beer, and he is offered a share of whatever food is going; and such drink and food as are offered are afterwards thrown away, as it is believed that their essence has been abstracted by the soul of the departed. Feeding the *manes* is also found in the Indian Buddhist practice of *avalambana*, based upon the Brāhmanical rite of *śrāddha*.

Before the funeral the guests, after libations, partake in solemn silence of cake and wine within the house in which the corpse is lying; but, after the latter is removed, no one will eat or drink in that house for a month.

4. Funeral procession.—This occurs on the auspicious day and hour fixed for it by the astrologer. The relatives and guests bow to the corpse, which is then lifted by the official mourners, put on the chief mourner's back, and carried to the door, where it is placed in a square box or coffin (*ro-rg'am*) provided by the monastery which is conducting the funeral, and the box is carried thence by the official mourners to the cemetery or cremation ground. If the chief mourner is a woman, she does not accompany the funeral, but, after walking thrice round the coffin and prostrating herself thrice, is conducted back to the house.

In front of the procession go the priests, chanting Sanskrit spells or *mantras* extracted from the later Indian Buddhist scriptures, and blowing horns, or beating drums, or ringing handbells; then follow the relatives and friends, and last of all comes the coffin. This is led by the chief priest by means of a long scarf, one end of which is attached to the coffin; the other end he holds in his left hand, whilst with his right he beats a skull drum as he walks. This scarf probably represents the 'soul's banner' (*kurin-fan*), which is carried before the coffin by the Chinese.

The spot or cemetery to which the body is carried is usually a solitary rock on a wild hilltop, and is believed to be haunted by evil spirits. In Lhasa the ordinary cemetery (*dur-k'rōd*) is within the city. The corpse must not be set down anywhere *en route*, otherwise the final ceremony would have to be performed at that place.

5. Disposal of the body.—The particular mode in which the body is to be disposed of is prescribed by the astrologer-lama. Of the various modes, one only, namely cremation, presents Buddhistic features. The methods may be said to be five in number:

1. *Consumption of flesh by animals and burial of bones.*—This, the so-called 'terrestrial method,' is the commonest and obviously the most ancient. It was a custom of the ancient Scythians known to Herodotus; and its practice by the Parsis at the present day may also be derived from such a source or from the Turkic tribes. There seems no reason to ascribe it, as has been conjectured, to the influence of those Jātaka tales which relate that Śākyamuni in former births offered his body to feed famished tigers and other animals. Such a practice of disposal of the dead is not recorded in Indian Buddhism, and its present-day practice in Siam and Korea, as well as in Tibet, is obviously a survival of the ancient Scythic and Mongolian custom.

At the cemetery the body is placed face downwards on the rock or slab of stone, divested of its clothes, and tied to a stake. The priest, chanting *mantras*, scores it with a large knife, and the corpse-cutters slice off the flesh and throw it to the vultures and other animals of prey which frequent these cemeteries. In Lhasa dogs and even pigs assist in devouring the corpses. As, however, vultures are esteemed more auspicious, the attendants for a small sum engage to keep off the other less desirable beasts of prey. The rapidity with which the body is devoured is considered of good

omen, and the skull of such a corpse is prized as an auspicious libation-bowl.

The bones of the stripped and dismembered body are then buried, and, if the person be wealthy, a mound or tower is erected over them.

2. *Total consumption of flesh and bones by animals.*—This, the so-called 'celestial method,' is much less common, though not infrequent with the richer classes. The bones, stripped of their flesh as above, are not buried, but pounded and mixed with meal, and given to dogs and vultures to consume.

3. *Throwing into rivers or at waste places.*—This, the most ignoble method, is the fate of the poorest, as burying entails considerable expense. The body is dragged by a rope like a dead beast. In this way are also disposed the bodies of criminals, those killed by accident, lepers, and sometimes barren women. The skulls of enemies slain in battle are deemed auspicious for drinking-goblets.

4. *Cremation.*—This mode of disposal of a quasi-Buddhistic kind is reserved in Tibet for the bodies of the higher lamas, though, in those districts where wood fuel is more available, it is also used for the laity.

The body is placed on the pyre, seated erect in a devotional attitude, cross-legged like Buddha's image. The soles of the feet are turned upwards, the right hand with palm upwards resting on the flexed thigh, and the left hand is raised in front of the shoulder in the 'blessing' attitude. In the case of the laity, the face seems usually to be placed downwards. When the wood is lighted, melted butter is poured over the body, and, when the first limb or bone drops from the body after a few hours, the funeral ends, though some of the relatives remain till the cremation is over. The body is seldom completely reduced to ashes. The ashes and unconsumed relics are removed by the priests to the house of the deceased, and there pounded and mixed with clay to form in a mould miniature votive *chaitya* medallions called *ts'a-ts'a*, the *dharma śarīra* relics of Indian Buddhists. These are placed in the niches of the funereal towers known as *chortens*, or, if the deceased be rich, a special tower may be erected over them (see art. CHORTEN).

5. *Preserving the entire body by embalming.*—This mode seems to be restricted to the sovereign Grand Lamas of Lhāsa and Tāshilhunpo. The body is embalmed by salting, and, clad in the robes of the deceased and surrounded by his personal implements of worship, is placed, in the attitude of a seated Buddha, within a gilded copper sarcophagus in one of the rooms of the palace; it is then worshipped as a divinity. Before it, on an altar, food and water are offered, and lights are kept burning. Eventually it is enclosed in a great gilded *chorten*, surmounted by a gilt dome, and becomes one of the recognized objects of worship to pilgrims.

With the disposal of the body, the relatives and guests disperse, after a feast given in the open air.

6. Post-funeral obsequies.—The funeral does not end the ceremonies. The soul of the deceased is not effectively disposed of until forty-nine days after the death, and the death-demon is also to be expelled from the locality. This latter exorcism is an indigenous Bon rite, and must be performed within two days after the funeral. It is termed the 'Turning away of the face of the Devouring Devil (*Za-'dre*).' The demon is represented as of human form, riding upon a tiger; and, in laying the evil spirits, figures of animals moulded in dough are used in the sacrifice. For the final disposal of the soul of the deceased, further priestly services are required weekly until forty-nine days after death. During this period (*i.e.* 7×7 days) the soul is believed to remain in a purgatory or intermediate stage (*bar-do*) between death and regeneration, and is assisted onwards by the prayers of the priests. For this a lay effigy of the deceased is made in the house, on the day on which the corpse was removed, by dressing up a bench or box with the clothes of the deceased, and for a face a paper mask is inserted bearing a print of a dead Tibetan. On the forty-ninth day this service is completed, the paper mask burned, and the clothes given away. The priests receive as presents some valuable articles from the property of the deceased, and a feast concludes the ceremony.

Mourning is practised chiefly for young people; the old are less lamented. The full term of mourning is about a year, but three or four months is more usual. During this time no coloured clothes are worn, nor is the face washed or the hair combed; men may shave their heads, and women leave off their jewellery and rosaries. For Grand Lamas the general mourning of the people lasts from a week to a month.

All the places where bodies are buried or otherwise disposed of are esteemed sacred.

DEATH OF THE GODS.—See DEICIDE.

DEBAUCHERY (French *debaucher* [*de*, 'from,' and old Fr. *bauche*, 'a course,' 'a row'], 'to lead from the straight course'; hence 'seduction from duty,' 'excessive intemperance,' 'habitual lewdness').—Although individuals who habitually indulge in reckless dissipation are justly regarded as defective in ordinary self-control, and although it might be shown on incontestable evidence that no inconsiderable proportion of such persons are insane or mentally defective, it would still be preferable to approach this subject from the standpoint of normal psychology in order to trace the nature of the impulse which impels men in the direction of excessive intemperance and lewdness. To do this successfully we must take into consideration the habits and proclivities of primitive men. Uncivilized peoples manifest an intense love of excitement, particularly in connexion with their social and religious gatherings. All the writings of travellers referring to the domestic and social life of savages are unanimous as to the fact that every event out of the daily routine which causes people to assemble together is likely to become an occasion for intoxication. Birth alone is perhaps less associated with this form of enjoyment; marriages and deaths are certainly a very common excuse for it, and it is remarkable that we still retain survivals of these customs even in Western Europe. A culmination in intense excitement without the aid of intoxicants is frequent in their social gatherings. Featherman (*Social Hist. of Races of Mankind*, 1881–91, iii. 341) gives many examples, from which the following may be selected:

'They arranged themselves in groups, and at a given signal each group began to sing at first in a low tone of voice, which became louder and terminated in dreadful yells and hideous howls. The jumping was so violent and their efforts were so furious that some of them fell senseless to the ground. Three or four players or sorcerers stood in the centre, shook their tamarak, and blew tobacco smoke from a cane pipe upon the dancers.'

Mrs. French-Sheldon (*JAI* xxi. [1891] 367), speaking of the natives of East Africa, says:

'At some of their festivals this dancing is carried to such an extent that I have seen a young fellow's muscles quiver from head to foot, and his jaws tremble without any apparent ability on his part to control them, until, foaming at the mouth and with his eyes rolling, he falls in a paroxysm upon the ground,

to be carried off by his companions. This method of seeking artificial physical excitement bears a singular resemblance to the dances of other nations outside of Africa.'

Not only are the reunions of savage peoples characterized by intoxication and induced physical and mental excitement, but their religious ceremonies owe attraction largely to the induced mental fervour of the ministrants and audience. Partridge (*AJPs*, Apr. 1900, p. 363) goes so far as to hold that intoxication is one of the most important parts of the religious and social life of primitive man. He says:

'The use of alcoholic beverages arose in connexion with the religious social life in the effort to heighten the religious self-consciousness. Its use for these purposes among primitive people is widespread and almost universal.'

Among some tribes in the Philippine Islands the shaman (usually a woman) works herself up into frenzies of nervous excitement by means of contortions and copious draughts of fermented liquor. Feasting and revelling follow, until ofttimes at her ceremonies all present become intoxicated, and fall into an unconscious state (cf. Tylor, *Prim. Cult.*[3] ii. 134 ff.). Similar practices are universally prevalent at the present day among the Persian dervishes, who produce in themselves states of exaltation and hallucination by means of opium and hashish. A similar condition is induced by the Peruvian priests by means of a drug known as 'tonca' (*ib.* 416 ff.). The reunions of savage and barbarous peoples are characterized not only by intoxication, but also, frequently, by sexual orgies of a revolting character. Bancroft (*Native Races*, i. 551) says (quoting Kendall):

'Once a year the Keres have a great feast, prepared for three successive days, which time is spent in eating, drinking, and dancing. . . . To this cave, after dark, repair grown persons of every age and sex, who pass the night in indulgences of the most gross and sensual description.'

Writing of the Mosquitos, the same author (p. 735) states:

'Occasionally surrounding villagers are invited, and a drinking-bout is held, first in one house and then in another, until the climax is reached in a debauch by both sexes of the most revolting character.'

The ravenous appetite of certain savages justifies the accusation of gluttony which has been ascribed to them by various authors. The enormous development of the jaw muscles, as well as the protuberance of the alimentary system, is a sufficient indication of their propensity for swallowing enormous quantities of food when opportunity offers. A Yakut child, according to Cochrane, devoured at a sitting three candles, several pounds of sour frozen butter, and a large piece of yellow soap, while an adult of the same tribe devoured forty pounds of meat in a day. Wrangle says each of the Yakuts ate in a day six times as many fish as *he* could. The Comanches, according to Schoolcraft, eat voraciously after long abstinence, and without any apparent inconvenience (quoted from Spencer's *Sociology*, i. 45). That debauches are restricted solely through the want of opportunities for prolonging and repeating them is only too apparent from the histories of those savage or barbarous tribes which have been brought into close and constant contact with the more unscrupulous representatives of civilization. So long as alcohol and pleasurable excitement were obtainable, no price was grudged for them until, as a consequence of reckless self-abandonment, the wretched hedonists stood stripped of their possessions, and incapable of resuming their previous methods of life. The unfitness of savages, in the majority of instances, for regular or sustained employment of any kind is one of their most marked characteristics. It might be objected that such a generalization is too sweeping, and, moreover, that war and the chase are the only careers open to primitive man. It may be admitted that many members of the so-called inferior races have shown exceptional aptitude for commerce, agriculture, and industry of various kinds; but the history of the emancipated Negroes and of the native Indians in the Reserve Territories of the United States is conclusive proof of the inadaptability of these races, as a whole, for the rôle of civilization in which sustained and regular labour is the active and most important element. In these races labour is fitful and distasteful, and alternates with long spells of inactivity and unproductiveness.

From the foregoing statements it is evident that among the members of uncivilized communities certain anti-social defects which are hostile to the progress of civilization are extremely prevalent. These defects may be summed up as: (1) a craving for intense mental states, which is most easily gratified by induced excitement, by alcohol or other drugs, by sexual excitement, or by the appetite for food; (2) an inability or, at any rate, a strong disinclination for sustained mental or physical exertion. The representative anti-social elements in a modern civilized community may be regarded as the legitimate survivals of uncivilized ancestors. They all manifest the same strong craving for intenser mental states, which can be fully gratified only by the grosser forms of dissipation, while they also exhibit the natural disinclination for sustained and productive labour. The prostitute, the gambler, the drunkard, the criminal, and the loafer have this in common, that they desire the grosser forms of excitement, that they are prodigal of their means, and unproductive in their methods of supplying their wants.

The view which regards the pronounced anti-social members of a community as the survivals of a period when the race as a whole was comparatively primitive in its social development is the only scientific one, and displaces to a large extent the older views of deliberate sinning and moral responsibility; for a little consideration will enable us to see that a person who is constitutionally *a*-moral cannot be also at the same time *im*-moral. Such a statement must not be taken to imply a disbelief in individual moral responsibility, for it must be recognized that persistent immoral conduct may depend upon opportunity and the absence, for any reason, of public opinion. It follows that a person who is able to control his conduct under the influence of any ordinary deterrent must be, more or less, responsible for his conduct in the absence of these deterrents. In the development of society, as of the individual, there are two factors—environment and evolution. The environment is never constant but is always changing, while the development of a society depends upon the development of its units, subject to the influence of the environment. Physically as well as mentally, the individual must be in harmony with his surroundings or he cannot exist. In every established race of living beings the majority of the individuals present an average mean of certain qualities the possession of which entitles them to be regarded as normal representatives of their race; but there is in every such race a large minority of individuals who vary to a greater or less extent from this mean of any given quality. Some of them possess the quality in excess of the mean, others in defect. The majority of the members of a civilized community subordinate their desires for the grosser pleasures to the duty of sustained effort and the dictates of morality. Through a long process of natural selection this standard has been attained; but, just as a race of men present marked divergencies in stature or mental ability, so do they manifest throughout their composing units the greatest differences in respect to social qualities, varying from the highest manifestations of altruism to an absence of the

sense of responsibility and a reckless craving for gross self-indulgence. 'A community,' says Giddings (*Princ. of Sociol.*, 1898, p. 414), 'that delights in many harmonious pleasures has, on the whole, more chances in life than one which is satisfied with a few intense pleasures.' It is scarcely necessary to insist upon the instability of a community the majority of whose members are constitutionally indolent or immoral. We see, therefore, that the debauchee and the loafer are variations from the mean type of their society; we also see the sense in which they may be described as representatives or survivals of more primitive social states. In relation to their social environment they are anti-social and irretrievably doomed to elimination. The rapidity of this process of elimination is apt to be obscured by the fact that each new generation produces its fresh quota of individuals who are socially abnormal; but it must be borne in mind that the rapidly changing environment advances the moral standard of each generation, and that therefore a relatively higher and more stringent natural selection is gradually being brought to act upon those unfortunate units whose mental or physical organization is out of harmony with its requirements. With the advance in the standard of morals of a community there emerges gradually an expression of the ethical attitude of the public towards disease and infirmity, of which sufficient proof is to be seen in the improved condition of the insane, in the founding of 'homes' for epileptics and inebriates, and in the increased interest in the study of criminology. All these movements exhibit the tendency of modern societies to regard the actions of its anti-social members as irresponsible. It therefore seems highly probable that at no distant date civilization will enable us to dispense with retaliative punishment as a deterrent in certain moral delinquencies, and that the State will take upon itself the regulation of the lives of those who are incapable of living up to the standard of decency and order required by the existing social environment.

DECALOGUE.—*Introductory.*—There is probably no human document which has exercised a greater influence upon religious and moral life than the Decalogue. On account of its brevity, its comprehensiveness, its forcefulness, and its limitations, it has stood out from other teaching, and has been embedded in Christian liturgies and catechisms, so that it is difficult for any one brought up with any degree of Christian culture to escape knowledge of its contents. The exalted idea of its superior value goes back certainly to the Book of Deuteronomy; for we are told repeatedly there that the Ten Words were written upon two tables of stone by God Himself, and even with His finger[1] (4[13] 5[22] 9[10] 10[1-4]; cf. Ex 31[18] 32[18] 34[1. 28]). However freely the statements may be interpreted, however figuratively the author may have written, it was certainly his intention to show that he placed this code above all other legal codes, these words above all other revealed words. In other cases it sufficed to say that Jahweh spoke to Moses, and Moses' memory was depended upon to convey accurately to the people all the vast amount of revelations given in the course of many days. But the Ten Words were so precious that no risk of forgetfulness could be run, and they were at once engraven on the solid stone. And there is more to show their high station. When Moses brought the stones down from the mountain, and saw Israel's apostasy, he dashed the stones to the ground and broke them. The precious record could not be lost, however; nor could Moses, who may be presumed to have known them by heart, be trusted to reproduce them. He was directed to prepare two new tablets of stone, and take them up to the mountain again, that the original text might be restored by the same finger which engraved the first copy. Finally, that there might be no further chance of breakage, Moses by command made an ark of acacia wood for their safe keeping (Dt 9. 10). It is now advisable to see what this document is, and to test the statements accounting for its origin.

1. **The two forms of the Decalogue.**—The Decalogue has come down to us in two versions which differ to a considerable extent, one (in common use) being in Ex 20[2-17], the other (unfortunately almost ignored) in Dt 5[6-21].[1] Some of the variations in the Decalogue may be due to accidents in the transmission of the text, but the most of them are certainly deliberate. Moreover, the process of development did not stop with our present Heb. text, as the LXX shows still further modifications, few if any of which can be fairly attributed to the translators.

In the case of the *Fourth Commandment*, the important differences are indicated in the following parallel renderings, italics showing variations:

Ex 20[8-11].	Dt 5[12-15].
Remember the sabbath day to sanctify it. Six days shalt thou labour, and do all thy work; but[2] the seventh day is a sabbath to Jahweh thy God. Thou shalt not do[3] any work: thou and thy son and thy daughter, thy man-servant and thy maid-servant, and thy cattle,[4] and thy guest who is within thy gates.[5] *For in six days Jahweh made the heavens and the earth, the sea*[6] *and all that is in them, and he rested on the seventh day.* Therefore Jahweh *blessed* the sabbath[8] day *and sanctified it.*	*Guard* the sabbath day to sanctify it, *as Jahweh thy God commanded thee.* Six days shalt thou labour and do all thy work; but the seventh day is a sabbath to Jahweh thy God. Thou shalt not do any work: thou and thy son and thy daughter, *and* thy man-servant and thy maid-servant, *and thy ox and thy ass and all* thy cattle, and thy guest who is within thy gates;[7] *in order that thy man-servant and thy maid-servant may rest as well as thou. And thou shalt remember that thou wast a servant in the land of Egypt and that Jahweh thy God brought thee out from there by a strong hand and by an outstretched arm.* Therefore Jahweh *thy God commanded thee*[9] *to make* the sabbath day.

[1] There are many other instances of duplicates in Holy Scripture: Ps 18 has been incorporated in the history of David (2 S 22), on the supposition that it is an account of an episode in his life; but a more striking parallel for our purpose, because of the importance of the material, is the Lord's Prayer (Mt 6[9-13], Lk 11[2-4]).

[2] LXX has τῇ δὲ ἡμέρᾳ; so in Dt 5[14]=וּבַיּוֹם, 'but on the seventh day there is a sabbath (or rest).'

[3] LXX adds ἐν αὐτῇ; so in Dt 5[14]=בּוֹ, a necessary correction, followed by Lat. and Eng. versions. This reading is found in the Papyrus Nash (see Peters, *op. cit. infra*).

[4] LXX reads: 'thy ox and thy ass and all thy cattle,' in agreement with Dt 5[14]. The translator would scarcely have inserted this phrase for the sake of harmony when he leaves so much else divergent; therefore the early Heb. texts must have differed from each other in the same code.

[5] LXX reads: 'the guest who dwells with thee'; so in Dt 5[14]. In spite of its more primitive appearance (cf. below), this reading can hardly be original, for the Heb. phrase would not have been changed after the Greek version was made. The LXX expression is more comprehensive, and may be a free rendering, though all else is intensely literal.

[6] LXX B lacks 'the sea'; perhaps it is a later addition.

[7] LXX B adds here: 'for in six days the Lord made the heaven and the earth and the sea and all that is in them.' The words are a manifest harmonizing gloss, as is shown by the impossible connexion with the following clause, 'in order that thy man-servant and thy maid-servant may rest as well as thou.' The gloss may have been found in a Heb. text.

[8] LXX has ἑβδόμην, 'seventh'—a better reading, for it was Jahweh's blessing of the seventh day which made it the sabbath.

[9] LXX reads: 'that thou shouldst guard the sabbath day and

[1] Compare our Lord's casting out devils by the 'finger [*i.e.* the power] of God' (Lk 11[20]).

The peculiar phrases in the Deuteronomic edition are characteristic of the author; they are unmistakable, for there is no other OT writer whose style is so readily detected (see Driver's *Deut.*, *in loc.*). It will be noted that we have here a commandment, and the reasons for its observance. The two versions have no important divergence in the commandment, but separate absolutely on the reasons. Beyond question Deut. is the older. The sanction on humane grounds is original with him, for it accords with his spirit through and through. There came a time when grounds of humanity were not strong enough. Another editor, perhaps the one who constructed the Creation story in Gn 1–2[4] for this purpose, put it on a basis which is to him distinctly higher—that man should follow the example of God. That story of the Creation is much later than Deut., and this addition to Ex. is perhaps the latest touch to the Decalogue. It is unfortunate that this version, with its sanction on a ground which nobody believes now, is the one in general Christian use.

In the *Fifth Commandment*, Dt 5[16] has two clauses which do not appear in Ex 20[12]. The former version runs: 'Honour thy father and thy mother, *as Jahweh thy God commanded thee*, that thy days may be long, *and that it may be well with thee*, upon the land which Jahweh thy God is giving thee.' These are common Deuteronomic phrases, and are plainly editorial additions. The first obviously overlooks the fact that Jahweh Himself is supposed to give the words from His own mouth. The second is found in the best Greek texts of Exodus, but preceding the clause about long days. The words may have got into some of the Heb. editions, but not into those which have come down to us. In earlier times, length of days would be a sufficient reward, but later the craving for good days would naturally find expression.

In the *Ninth Commandment*, Dt 5[20] differs from Ex 20[16] by a single word: instead of שֶׁקֶר, 'false,' we find שָׁוְא, the word used in the Third Commandment for 'vain' (cf. below). The Greek text renders freely: 'Thou shalt not falsely testify against thy neighbour false testimony,' and the renderings of Deut. and Ex. agree *verbatim et literatim*, showing a careful comparison, which ignores the difference in our present Heb. text. The proper rendering of the Hebrew is: 'Thou shalt not answer against thy neighbour a false witness.' By a slight change of the text (עֵדוּת for עֵר) we get 'testimony,' as LXX. But the Heb. seems to mean that a man shall not bring a false witness to testify against his neighbour, as Jezebel did against Naboth. This view makes the mandate more ethically refined, laying the stress of the wrong on the procurer of false testimony rather than on the witness.

In the *Tenth Commandment* we have a considerable variation:

Ex 20[17].	Dt 5[21].
Thou shalt not covet the *house*[1] of thy neighbour; thou shalt not *covet* the *wife* of thy neighbour,[3] nor his man-servant nor his maid-servant, *nor* his ox nor his ass,[4] nor anything which is thy neighbour's.	Thou shalt not covet the *wife* of thy neighbour. Thou shalt not *desire*[2] the *house* of thy neighbour, *nor his field*, nor his man-servant nor his maid-servant, his ox nor his ass, nor anything which is thy neighbour's.

The use of 'desire' instead of repeating 'covet' is presumably for rhetorical elegance. The transposition of 'wife' and 'house' is not so easily explained. It may be due to the greater importance of the wife in the time of Deut., taking the wife out of the property class (so *EBi* i. 1049, *s.v.* 'Decalogue'); it may be a copyist's error; it may be an effort to secure a more logical sequence, the wife not belonging so strictly to the category of property as the other objects enumerated; or it may be due to the influence of such facts as David's marriage with Bathsheba. The interpolation of 'field' seems surely to reflect the impression made upon the people by the story of Naboth's vineyard, and of other instances which gave occasion to Is 5[8] 'Woe unto them that join house to house, that lay field to field, till there be no room, and ye be made to dwell alone in the midst of the land.' Cf. Mic 2[2]. There are a few other variations, but they practically consist of the addition of conjunctions in Deut. to connect the clauses for greater rhetorical effect.

A few of the more important readings of the Greek text may be noted beyond those already cited. In Ex 20[1] A reads: 'And the *Lord* spake *to Moses* all these words, saying.' Here we have an explanation of the singular which is used throughout the Decalogue. The words are in the first instance commands to Moses. This introduction is scarcely consistent with the statement of Deut., that they were first inscribed upon stone tablets by the finger of God. Deut. reconciles the two ideas by saying that Jahweh first spoke the words unto all the assembly with a great voice, and then wrote them upon the stone (5[22]). In v.[2], instead of 'house of slaves,' LXX has 'house of bondage' (so in Deut.)—a reading which is followed by our versions. The Heb. is better, for the term 'house of slaves' is used to designate the land of Egypt. In v.[3], LXX renders עַל־פָּנָי, 'except me' (πλὴν ἐμοῦ) in Ex.; but in Dt 5[7] B has 'before my face' (πρὸ προσώπου μου, Lat. *in conspectu meo*). The Eng. versions have 'before me' in the text, but RVm 'beside me.' The latter is a doubtful rendering, like the Prayer-Book form 'but me.' The words literally are 'upon my face,' and would most naturally mean 'in preference to me.' If that is the true sense, then this command represents a more primitive religious conception than the absolute monotheism of the prophetic age. Weiss holds that the words forbid the worship of all other gods (*Das Buch Exodus*, Graz, 1911).

In v.[4 (3)] 'any likeness which is in the heavens' (an exactly literal tr.) gives no sense. LXX has παντὸς ὁμοίωμα (so in Deut.), and this is followed by Eng. versions. Kittel (*Bib. Heb.*, 1905) suggests פְּסִילַת כֹּל, on the basis of LXX (cf. Dt 4[25]). The reason for this prohibition is given at length in Dt 4[16-19].

In v.[5] עַל־שִׁלֵּשִׁים, LXX B has ἕως τρίτης, implying a reading עַד instead of עַל. The Heb. is right. The absence of the conj. (though Deut. has it erroneously) shows that we have a case of apposition, *i.e.* 'upon the sons, upon the third and fourth generations.'

In v.[12] LXX has 'upon the good land' (ἐπὶ τῆς γῆς τῆς ἀγαθῆς). The addition of 'good' sounds like Deut., and yet the reading is found only in Exodus.

In vv.[13-15] LXX A transposes here and in Deut., having the order: adultery, stealing, killing. The change may be accidental, or due to an idea that the Seventh Commandment is more closely related to the Fifth. The relation is not very obvious, and the LXX was not wont to take such liberties. There is much variation in the order of these three commandments. In MT, Jos., Syr., the order is murder, adultery, stealing; in Codex Alex. and Ambros., murder, stealing, adultery; in Codex Vat., adultery, stealing, murder. Peters holds that the original order was adultery, murder, stealing, which he says, 'commends itself on internal grounds' (*op. cit.* p. 33). If conjecture could govern, the present writer would prefer the order—murder, stealing, adultery—after some Gr. texts, on the ground that we have then a true sequence in the development of the moral standard. Murder was recognized as wrong long before adultery.

2. **Real meaning of some of the commandments.**—We turn now to the interpretation of some of the more difficult passages.

In the *Second Commandment* the meaning of the word 'thousands' is not altogether clear. In Dt 7[9] we have apparently a commentary on this commandment: 'the faithful God, keeping the covenant and mercy to those who love him and keep his commands, to a thousand generations.' This interpretation was followed in the Targums, and has been generally accepted. Weiss, the latest writer on Exodus, takes this view. The contrast with 'third' and 'fourth' seems to support it. But the antithesis between the two clauses is not so clear

[1] The LXX order is 'wife,' 'house,' as in Deuteronomy.
[2] LXX uses the same verb in both clauses, as in Exodus.
[3] LXX adds: 'nor his field,' as in Deuteronomy.
[4] LXX adds in both versions: 'nor any cattle of his,' to agree with v.[10]. Codex L has 'nor any vessel of his,' reading כְּלִי as כָּל. The two texts of LXX in that verse, as in the preceding, agree *verbatim et literatim*.

as appears at first sight. In the first part we have 'visiting the sins of the fathers'; in the second, 'showing the mercy of God.' In the one case God brings the consequences of paternal sins upon the sons, in the other He displays His own mercy to thousands. It appears, therefore, that 'thousands' is contrasted with 'sons,' not with 'third and fourth generation.' Further, אֲלָפִים never means 'a thousand generations'; it has two distinct meanings: a 'thousand' as a numeral, and a body of a thousand people, such as a regiment. In the latter connexion the word is used to indicate a subdivision of a tribe, and means a clan (cf. Jg 6^{15}, 1 S 10^{19}). The word here must either be a numeral, 'thousand,' or it must = 'clans.' The extension of mercy is therefore outward not downward. The sin goes down to the sons, the mercy goes outward to the whole family or clan.

'There's a wideness in God's mercy
Like the wideness of the sea.'

The meaning is illustrated in Abraham's plea for Sodom and Gomorrah (Gn $18^{22ff.}$); if there had been ten righteous men in the city, the whole population might have been saved.

The *Third Commandment* is the vaguest of all: 'Thou shalt not take the name of Jahweh thy God in vain.' The moment we reflect upon the words, the vagueness appears. The usual interpretation is that it is an injunction against profanity. Weiss (*in loc.*) says that 'not only false swearing, but every sinful use of the name of Jahweh, in imprecation, blasphemy, charm, divination, and every frivolous use is included.' And yet it is a little difficult to discover that sense in the original. We should expect the Ten Words to deal with vital matters. There is no evidence that profanity was specially common among the Hebrews, or that they regarded it as a serious offence. From the concluding clause, 'Jahweh will not hold innocent' the one who commits this wrong, it is clear that we are dealing with a serious evil; in fact, with the unpardonable sin of the OT. Indeed, we might well render 'Jahweh will not forgive,' etc. It is at least a step in clearing up the matter to note that נָשָׂא means 'speak.' First there was the full expression, 'he lifted up his voice and spake,' then he 'lifted his voice,' finally 'he lifted,' but with the meaning 'spoke.'[1] שָׁוְא means 'in vain,' *i.e.* without result (cf. Jer 2^{30}). We therefore have: 'Thou shalt not speak the name of Jahweh thy God without result,' *i.e.* without doing what was vowed in His name. Thus we can grasp the force of what is otherwise a pure redundancy, 'for Jahweh will not deem innocent him who speaks his name without result.' Now, if there was a principle cherished by the Hebrews above any other, it was the obligation to carry out a vow made in the name of Jahweh. We may note the case of Jephthah, who felt bound by his vow to sacrifice his daughter (Jg 11). Other cases will occur to the reader; and we find the principle strongly urged in Ec 5^{1-6}. It may be remarked that, so far as internal indications go, this command may be early. At all events the obligation was recognized in the primitive ages. It was the misuse of the command as above interpreted that our Lord sought to correct (cf. Mt $5^{33ff.}$ $23^{16ff.}$). The Jews held that only a vow in Jahweh's name was binding; Jesus teaches that a man's personal word should be as strong an obligation as any oath.

3. **Original form of the Decalogue.**—It is apparent from a comparison of the texts that the Decalogue has not come down to us in its original form.[1] Many attempts have been made to determine what that original form was. For the most part it is a matter of pure conjecture. But it has been noted that there is a persistent tradition that there were 'Ten Words,' and that they were inscribed on two tables of stone. It has been assumed that there would be practically an even division—five on each table.[2] The Decalogue divides into two parts, but Commandments 1–4 deal with man's relation to God, and 5–10 with his relations to men—not therefore an even division. In the Heb. text of Exodus, Comm. 1–5 contain 146 words, 6–10 contain 26 words. Taking the division by subject, 1–4 have 131 words, 6–10 have 41 words. Comm. 1–3 contain 76 words, 4–10 contain 96 words. This is the nearest approach to an even spatial division. Hence it is assumed that the commandments must originally have been all short, as 6–9 still are. Com. 2 then would have been simply: 'Thou shalt not make thee a graven image'; Com. 4: 'Remember the sabbath day to sanctify it'; and Com. 10: 'Thou shalt not covet.' This would make commands of sufficiently even length. The growth is easily explained. The images were hard to get rid of, as all religious usages are hard to change. To reinforce the law and to prevent evasions, amplification was necessary and dire consequences of disobedience must be added. Down to the time of Nehemiah the rule for cessation of labour on the sabbath day was disregarded (cf. Neh $13^{15ff.}$). Reasons were appended to the law to secure a stricter conformity.

While all this is very probable, the reason urged on the ground of an even division on the two tables is not convincing; for we have many ancient inscriptions on stone and clay, and there is no evidence of an attempt to conform the contents to the size of the material used for the inscription. The size of the characters and of the tablet is determined by the amount to be written. The commandments must have taken shape originally according to their substance, and could hardly have been framed with reference to two tables of stone. The only reason for using two stones was that there was not room enough on one, just as a correspondent takes up a second sheet when one does not suffice for his letter.

4. **How far Mosaic.**—A still more baffling problem is found in the origin of the Decalogue. In both codes it is attributed to Moses, *i.e.* Moses is the mouthpiece of Jahweh. In Dt 9. 10 there is an unusual wealth of detail about the matter, describing the first writing, the breaking of the stones, the second writing, and the care for the preservation of the final record. The Covenant and the Decalogue are certainly identified in the story, but that is, of course, due to the author of Deut., who lived long after Moses' day. His identification may be correct, but is not necessarily so.

We are obliged to face the question as to the value of this evidence. Now, we know that in the OT all Hebrew law is attributed to Moses, as practically all Hebrew psalmody was ascribed to David, and all wisdom to Solomon. There is, therefore, a presumption against this testimony; for it would be extraordinary if the whole body of a nation's laws were enacted by a single individual.

[1] Morgenstern holds that *nîs ilî* in Bab. is a technical name for an oath, and that speaking the name of the gods was a sin for any but priests. He regards נשׂא שׁם as an equivalent term, and the Third Commandment as having that meaning ('The Doctrine of Sin in the Bab. Religion,' *MVG*, iii. [1905] 35 f.). There is no evidence in the OT to support this view.

[1] The Rabbis were puzzled by the variants, but, as usual, were equal to the occasion, holding that both versions alike were of Divine origin, and were spoken miraculously at the same time. Saadya alleges that the Exodus version was on the first set of tables that were broken, and the Dent. text on the second (cited in *JE* iv. 494, *s.v.* 'Decalogue').

[2] The Rabbis indulged in their usual fanciful guesses about this distribution. Some held that all ten were on each stone; others that all ten were on each side of each stone; while Simai goes further and alleges that all ten were engraved four times on each stone (*JE*, *loc. cit.*). The idea was that the more times the words were inscribed the more important they were.

and that before there was any nation at all. The evidence, therefore, that Moses produced the Decalogue is no greater than that he produced the law governing the fringe on the priest's cloak. The persistent tradition proves, in the opinion of the present writer, that Moses was a truly great lawgiver; but, by ascribing all laws to him, it puts upon us the necessity of determining as best we can his connexion with any particular law. We are compelled, therefore, to consider whether the Decalogue could have come from so early a date as that of Moses.

Some of the prohibitions are of such a general character that they might belong to any period; such is the case with Comm. 3, 5–9. Others seem to have a closer relation to the development of religion, and a place for them ought to be found accordingly. Com. 1 is monotheistic, though perhaps not so sharply so as has generally been assumed: for the meaning may certainly be that no other god is to be set above Jahweh, and this possibility must have full weight (see above). So far as we know, the victory of monotheism was won by the prophets, one of the great battles being fought by Elijah. But it is certainly true that there were monotheists from the earliest days, such as Deborah, Gideon, and even the freebooter Jephthah. This law may have been as early as Moses for anything we know to the contrary.

The law against images does not belong to the same category. Image-worship was certainly practised down to the Exile, and as late as Hezekiah's time (2 K 18[4]), without rebuke. The war against it appears to have had as its mainspring the effort to centralize the worship at the temple in Jerusalem.[1] As a means of destroying the cult at the local shrines, where images abounded, they were forbidden, for there appear to have been no sacred images in Solomon's temple. It is true that disobedience to a law does not prove its non-existence. The teaching of Jesus about the perils of wealth has not made a very profound impression on the world even yet. But there was no strong motive for images, and it is difficult to think that David would have defied so fundamental a law (1 S 19[13]), or that Isaiah would have countenanced images (19[19]). This command, therefore, appears not to have been formulated long before the time of Deuteronomy.

In its present form, Com. 4 cannot be Mosaic. The nomad is never a very hard worker, and a day of rest is not of urgent necessity for him. Moreover, such work as he does is necessary on every day of the week. Further, in the time of Moses there were no guests (*gērîm*, 'protected strangers') within the gates. Sufficient emphasis does not appear to have been laid upon the term 'gates,' disclosing as it does urban life, and therefore belonging at the earliest to the period after the conquest. It is true that so acute a scholar as Weiss holds that שַׁעַר may mean the gate of the camp as well as of the city, and he thinks, therefore, that this term does not presuppose the settlement in Palestine. But the only instance of this meaning that occurs to the present writer is Ex 32[26], where the word is a natural figure for 'entrance,' easily used by a writer familiar with gates. Moreover, the expression 'within thy gates' is a characteristic Deuteronomic expression, occurring some twenty times in Deut., and not found elsewhere in the Pent. save in Ex 20[10]. The solicitude for the stranger or guest is also Deuteronomic.

The silence about the sabbath day in the records of the early days is truly remarkable from any point of view. In Jos 6[4. 14. 15] we read of the army's marching around Jericho on seven successive days, one of which must have been the sabbath. That looks very like 'any kind of work,' and was certainly unnecessary. There are, however, two references to the sabbath which throw welcome light on the situation. In 2 K 4[23] the Shunammite asks his wife why she is going to the prophet Elisha, and gives as the reason for his question 'it is not new moon and it is not sabbath.' It would be easy to draw too large a conclusion from this statement, but one thing is certain, viz. that there is no objection to a journey from Shunem to Carmel (30–40 kilometres, 20–30 miles; see Kittel, *Bücher der Könige*, 1900, *in loc.*) on the sabbath day; further, it is a reasonable inference that the sabbath was a day for religious rites, but that cessation of labour was not a part of its observance. Something like half a century later Amos makes the people say: 'When will the new moon be over that we may sell grain, and the sabbath that we may open up corn' (8[5]). It is clear that we have an advance from Elisha's time, in that trade is not permitted on the sabbath—precisely the conditions which Nehemiah enforced (Neh 13[15ff.]). The new moon is not mentioned in the Decalogue, but it is here, as in Elisha's time, on the same plane as the sabbath. There is hardly evidence, therefore, to support the existence of the Fourth Commandment. The passage may seem to imply that the sabbath had already come to be a mere form (Marti, *Dodekapropheton*, 1903, *in loc.*). But it is more likely that the prevention of trade was a new feature, not approved by the merchants; hence their impatience at the loss of trading days. It appears that under the prophetic influence a movement was making for a stricter regulation of both these festivals. The effort finally centred on the sabbath, and by Josiah's time all labour as well as trade was forbidden. The older idea always persisted, for Nehemiah did not attempt to check sabbath labour in the fields, but restrained trade even by threats of violence. Even to-day Sunday trading is objected to much more than Sunday labour.

Finally, Com. 10 cannot be Mosaic in its present form. In the Exodus version the first object whose coveting is forbidden is the house; in Deut. this is followed by the field. Nomads have neither houses nor fields. It is true that בַּיִת is often interpreted as meaning 'household' in Exodus. This use is very common, especially in the Hexateuch.[1] But it would be strange to say, 'Thou shalt not covet thy neighbour's family,' and then to continue, 'Thou shalt not covet thy neighbour's wife, and servants and cattle.' It is plain that in the time of Deut. בַּיִת was interpreted as meaning 'dwelling,' for it is not difficult to see why 'field' was added. As we have noted above, there was much taking of others' land even by violence. The oppressors might easily reconcile their aggressions and the law by saying they had not taken the house but only the field. The law is, therefore, amended to carry out its original intent. Doubtless the sweeping final clause, 'nor anything which is thy neighbour's,' was added to meet casuistical juggling. If the command was Mosaic, therefore, it could only have been in the form quoted by St. Paul, 'Thou shalt not covet' (Ro 7[7]). But here we meet a new difficulty. It is often urged that this law shows an ethical refinement too great for the period of Moses. Quite true. But it is not so sure that the refinement was too great for Moses, the man of God. The Decalogue does not profess to be a production showing the moral sentiment of the age, but is the work of the most enlightened man

[1] Wellhausen holds that the early Hebrews would object to a פֶּסֶל, 'image' (the word used in the Decalogue), but not to a מַצֵּבָה, 'pillar' (*Reste Arab. Heid.* pp. 101, 141). It is difficult to see sufficient ground for this distinction.

[1] See the Hebrew lexicons.

of the time. Among a rude people it is always possible for one to rise head and shoulders above the rest, not only in stature, like Saul, but in moral insight, as Moses certainly did.

In a word, if we strip the Decalogue of the known later accretions, and the probable additions to meet new conditions, the Commandments may all be Mosaic except possibly the First, and almost certainly the Second. This is confessedly very far from affirming that they did come from the hand of the great lawgiver. Indeed, it is not unlikely that the Decalogue itself may be a growth covering a period of some centuries before the last addition was made. Various men may have tried their hand at putting the great principles of the Law into a terse and comprehensive form. All that we can say positively is that the Decalogue was complete some time before 621 B.C. (the date of Deut.), and that it has not survived in a standard and authoritative form. If it was originally issued on stone tablets, such a version is lost beyond present power of recovery.

There has never been agreement even as to the proper division of the material we have. In Deut. the command against coveting falls into parts, and Com. 1 may be regarded either as a part of the introduction, or less probably as part of the First Commandment, which here deals with images. This arrangement is followed by the Roman Catholic and Lutheran Churches to this day, while most Protestant bodies and the Greek Church adhere to the division in Exodus.[1]

5. Theology and ethics of the Decalogue.—In its theology the first striking feature of the Decalogue is its monotheism. It is true that there is some doubt as to the meaning of the First Commandment, but, whatever its original meaning, it was ultimately interpreted as an uncompromising prohibition of the worship of any deity other than Jahweh. That is a necessary step in the development of any religion. Even some that are formally monotheistic are not really so. A prophet may be exalted to the place of a subordinate deity, as in Muhammadanism; or a saint may be made to stand so close to God that the distinction is unreal to the ordinary worshipper. In the lower forms of religion there is a tendency to divide the supposed Divine functions, and assume a deity to preside over each. In the Decalogue, even in its most primitive form, there is but one God, and all Divine offices are performed by Him. In the Deuteronomic form there is nothing which goes beyond nationalism. Jahweh is the only God in Israel. He brought them out of Egypt, and He ordained laws for them. In the later form, the thought of Jahweh as the God of the whole world is brought out in reference to creation.

The prohibition of image-worship puts the religion on a high plane. Though it was supposed that Jahweh could engrave stones, His image could not be made in stone. Jahweh was truly a spiritual being, too sublime to be represented in an image, and too great to be portrayed in the likeness of animal life. In the present form of Com. 2, idolatry is deemed the worst form of sin. It is this that arouses the jealousy of Jahweh, and calls down enduring punishment upon the offenders, and wide-spreading mercy to the innocent. Hating Jahweh is synonymous with idolatry, and loving Him is equivalent to spiritual devotion. This conception could hardly have come from the pre-prophetic period.

The ethical tone of the Decalogue is very high, especially if we assign it to the early period of national life. We note first the demand for truthfulness. Really this appears in both Comm. 3 and 9. No one was to swear to his neighbour and then disappoint him, no matter what the consequences might be—a command correctly interpreted in Ps 15^4;[1] and no one was permitted to bolster up a bad case against his neighbour by the introduction of false witnesses. Killing and stealing are fairly common vices among undeveloped races, and are far too prevalent even among the most advanced peoples. But the clear terse laws on the two tables, without any qualifications whatever, doubtless saved many a life in Israel, and helped to maintain personal property inviolate. The forbidding of coveting reaches the evangelical note (cf. Mt 5^{28}). It is hardly necessary to assume that coveting is as great a vice as stealing, or that a lustful desire is as degrading as a lustful act. But even in the early ages it must have been apparent that coveting leads to vicious action. Abimelech coveted the throne, and the murder of his seventy brothers resulted (Jg 9). Ahab coveted the land of Naboth, and the murder of Naboth and the confiscation of his land was the consequence (1 K 21). David's passions were aroused by the sight of a beautiful woman, and there followed the criminal death of Uriah and the unholy marriage with his widow (2 S 11).

The ethical standards of the world are still far too low, but it is certain that they would be even lower but for the great influence of the Ten Commandments. It is very desirable that they be stripped of later accretions, and in a simpler and more original form continue to be read to the people in the churches and taught to the children in the Sunday schools.

LITERATURE.—The student will naturally consult the various commentaries on Exodus and Deut., the Bible dictionaries and encyclopædias, and works on Hebrew religion. The following may also be consulted: G. L. Robinson, *The Decalogue and Criticism*, Chicago, 1899; R. Kraetzschmar, *Die Bundesvorstellung im AT*, Marburg, 1896; Meisner, *Der Dekalog* Halle, 1893; B. Baentsch, *Das Bundesbuch*, Halle, 1892; N. Peters, *Die älteste Abschrift der zehn Gebote*, Freiburg i. B. 1905; F. W. Farrar, *The Voice from Sinai*, London 1892; J. Oswald Dykes, *The Law of the Ten Words*, do., 1884; E. Kautzsch, art. 'Religion of Israel,' in *HDB*, vol. v. p. 612.

L. W. BATTEN.

DECISION.—The term 'decision' may be used (1) concretely, of the judgment which is affirmed at the conclusion of a period of deliberation (*q.v.*); or (2) abstractly, of the ability to 'come to a decision,' *i.e.* to bring deliberation to a conclusion.

Decisions are as various in kind as the subjects about which we deliberate. Thus the judge issues his decision—that a charge is proved or not proved; a connoisseur decides that he prefers one wine to another. Decisions which consist in the resolve that a certain kind of action is to be performed by oneself seem to form a class apart. It is in connexion with these that the strife between necessitarians and libertarians has been waged. This, however, is a controversy affecting the determination of content of the judgment which is a decision, *i.e.* the quality of the conduct decided on. Though extreme necessitarians declare that every decision is mechanically determined, no one denies the reality of decision as a psychological crisis. This crisis consists in a concentration of the attention on the idea of one of the possible courses of action before us, with a consequent inhibition of the ideas of the other possibilities. Recent advocates of the doctrine of free will (*q.v.*) base their argument upon the feeling of effort which accompanies a typical class of decisions. See, further, DESIRE, WILL.

LITERATURE.—W. James, *Text-book of Psychology*, London, 1892, pp. 415–460; W. M. Wundt, *Human and Animal Psychology*, Eng. tr., 1901, p. 233.

G. R. T. ROSS.

[1] There are really three uses, the Jews taking the preface as Com. 1. For the details, see art. 'Decalogue,' in *HDB* i. 580.

[1] This is finely brought out in the Prayer-Book version: 'He that sweareth unto his neighbour, and disappointeth him not, though it were to his own hindrance.' This is a conflate reading. The Heb. has: 'He that sweareth to his own hurt'; the Greek: 'He that sweareth to his neighbour.' The liturgical version contains both readings. See Perowne (*Psalms*^{9}, London, 1898) on the passage.

DECOLLATI.—The full expression is *le anime dei corpi decollati*, 'the souls of executed criminals.' These souls are the object of a popular cult in Sicily. It is spread throughout the island; but its most famous shrine is the Church of the Decollati, near the river Oreto at Palermo. It seems to have arisen out of the sympathy naturally felt in an oppressed community for sufferers at the hands of a ruling caste. For many centuries Sicily was subject to rulers who were either foreigners, or at any rate divided by a sharp and impassable line from the mass of the people. The latter were ignorant, and more or less passively hostile to the governing class. They regarded all who were put to death under the forms of law as heroes; nor did they distinguish between moral and merely legal crimes,—between acts directed against the rulers and acts directed against society at large,—if, indeed, these two categories were always distinguishable. The priests were for the most part drawn from the 'folk,' and probably shared to a great extent their ignorance, their superstitions, and their feeling towards the government. The executions were public. The condemned man (called *l'afflitto*, 'the afflicted'), having been reconciled to the Church and having received its consolations, was regarded as a martyr; and his death-scene was a species of triumph. He passed, it was true, into purgatory; but his prayers on behalf of others, even from purgatory, were deemed to have great intercessional value by virtue of his sufferings.

Formerly at Palermo several of the churches witnessed the cult of the Decollati. During recent centuries, however, it became the custom to bury in the graveyard adjoining the little church beside the Oreto such bodies of criminals as were not given to their friends, or reserved to adorn the gallows in chains. Accordingly, the cult has concentrated there. Its particular shrine is a side-chapel filled with votive offerings of wax, testifying to the various benefits for which the intercession of the Decollati is sought. The souls of the Decollati are believed to congregate under a large stone just inside the door of the chapel. Pilgrimages are frequent; and the pilgrim, having performed his devotions at the altar of St. John the Baptist, adjourns to the chapel and prays to the Decollati, listening for an answer to the prayer. The slightest sound is taken for a favourable reply. Invocations, however, may be addressed to them elsewhere by suppliants who cannot undertake the pilgrimage.

The objects for which intercession is sought are primarily protection from violence or accident, and the cure of sufferers from either. For the Decollati, however much they may in their lifetime have been guilty of violence, now having suffered and been reconciled to the Church, hate violence and punish it, or at least protect and heal its victims. By an extension of the idea, they are invoked against diseases, especially hæmoptysis, of which bleeding is the manifestation. Two long cases of rude water-colour drawings on the churchyard walls record with ghastly detail many examples of vows made and benefits received, where violence, accident, or disease of the kinds indicated was concerned. But, in fact, the good offices of the Decollati are not limited to these. They are implored for aid by the poorer classes throughout Sicily on all sorts of occasions, and for all sorts of purposes. They have their prayer-formulæ, which are extensively used; and many stories of miracles performed by them in person are current. The ordinary vehicles of the country are light carts, painted with scenes from the history and traditions of the island. Many of these carts are adorned with paintings of the Decollati.

LITERATURE.—The cult has been described and illustrated with many details by Giuseppe Pitrè, the venerable recorder of the insular traditions and customs. See particularly his *Biblioteca delle tradizioni popolari siciliane*, i. (Palermo, 1871) 77, ii. (1871) 38, xvi. (1889) 4 ff., *La Vita in Palermo*, ii. (Palermo, 1905) ch. xviii., *Mostre etnografica siciliana* (Palermo, 1892), 51, 80. See also a paper by the present writer, with plates from photographs, in *FL* xxi. (London, 1910) 168.

DEDICATION.—See CONSECRATION.

DEGENERATION.—1. Application of the term.—'Mental degeneracy' is a term which is applied to a group of characteristics inferred from the speech, behaviour, or productive activity of individuals, and generally held to be symptomatic of defect in the central nervous system. The nervous defect in question may be either congenital or acquired through accident or disease; in either case, it may be organic or 'functional.' Savill (*Neurasthenia*, 17) defines a functional nervous disease negatively, as one in which 'no anatomical changes can be found after death, either with the naked eye or with the microscope, which can account for the symptoms during life.' It may really be due to some structural change, which available means cannot determine, to the presence of toxic materials in the blood (of endogenous or exogenous origin), to deficient quantity or quality of blood, or to exhaustion of the nerve tissues from excessive use, etc.

The term also implies that the individual falls markedly below the mental level attained by the average or normal member of the race, sex, age, and period of civilization; but, since the number of degrees of defect is potentially infinite, and the defect may be either general or special (in the former case touching all the mental capacities, in the latter such special functions as sensation, memory, emotion, etc.), the actual usage of the term is extremely indefinite. Thus it is employed to denote (1) actual insanity, including amentia, imbecility, dementia, mania, and melancholia; (2) persistent criminality; (3) mental instability, excitability, excessive irritability, or mere eccentricity; and (4) the neuroses of hysteria, psychasthenia, and others: to the last two groups belong those whom Dr. Balfour has named the 'denizens of the borderland' (*Edin. Med. Journ.* 1901). It would seem that strictly the word should apply only to those who have some *congenital* defect in mental capacity, excluding those in whom the defect has been due either to accidental injury, or to lesions of the brain arising from toxic influences, subsequent to the birth of the individual (for example, alcoholic insanity, or insanity sequent upon typhus fever). It is impossible, however, to draw a hard and fast line between the congenital and the acquired, as many cases of insanity would not have occurred had not the individual been already predisposed to the disease by physiological or mental weakness. On the other hand, the term is also frequently applied to an acquired defect, especially when it is of the progressive type.

In popular usage the word 'degenerate' means one whose tastes are lower than those of the society in which he has been educated, *e.g.* a clergyman's son who associates with racing touts or public-house loafers; or one whose intelligence and tastes show a marked deterioration from his own earlier standard, as in alcoholism, etc. It is applied æsthetically to those whose interests, whether as readers or as authors, as artists or as critics, lie in disease, physical or moral; to realists or naturalists in the narrow sense of these words; and also to pessimists. The assumption is that the healthy

mind will avoid these things as topics of thought or imagination, except with the object of removing them or lessening their evil effects; that only the diseased mind will seek to dwell upon disease, or take a pleasure in its contemplation.

To the biologist, the degenerate appears as a reversion to an older type of the race, as one who has been born with a physical nature in which some primitive human or even pre-human stage of cerebral development is reproduced. He is a primitive being set in a civilized environment, unable to adapt himself to it, and hence coming into conflict with its conditions.

The only common feature underlying these diverse applications of the term is a marked 'deviation from type' either in quantity (energy, rate, etc.), or in quality, of thought and action.

2. Physical and mental conditions of degeneracy. —The causes of such mental deviations may be grouped in three classes: (1) an originally defective physical and mental capacity, or defective development; (2) physical accident or injury, disease, privation, etc., by which the central nervous system is weakened locally or generally; and (3) social conditions, such as family life, educational disadvantages, poverty, occupation, etc. (Ferri, *Criminal Sociology*, Eng. tr., London, 1895, ch. 2). Thus, alcoholism may occur in a given individual because he is by nature unstable, excitable, pleasure-loving; because his brain has been weakened by an exhausting disease; through mere imitation of heavy-drinking companions; from lack of employment, unbearable home life, or other social conditions; or from any combination of such factors—the result in each case being a gradual deterioration of the nervous system, by which the original tendency is strengthened, until the control of the will is destroyed.

The relation between mental and physical defect is by no means so clear or so simple as is commonly assumed. It is argued that, with the exception of those relatively few cases in which the disorder can be traced to some definite accident, such as a fall or blow upon the head, or to some virulent fever which has been caught by infection, it invariably arises from a congenitally defective disposition of the nervous system; this defect or weakness predisposes to insanity, so that any physical or mental shock which might leave a healthy individual uninjured overthrows the balance of such subjects and renders them insane. They suffer from what Maudsley (*Body and Mind*, 43) has called 'the worst of all tyrannies, the tyranny of a bad organization.' The result of this organization may be that the normal development cannot be completed, that the subject remains at a lower level, mentally and physically, than his more fortunate brethren; hence either definite idiocy, insanity, or some of the minor forms of defect already referred to. In cases of idiocy there is almost invariably some malformation of the brain, whether in its size, in its shape, or in the complexity of the convolutions (the brains of many idiots remaining as smooth as those of the higher apes); the result is an arrested development, and a disproportionate growth of the different parts of the system, which, under the principle of 'recapitulation,' suggest a reversion to, or a stopping short at, some stage in the animal ancestry of the human individual. Popular superstition has always recognized a close relationship between mental defect and congenital physical deformity; Shakespeare's 'stigmatic' contains both the modern name and the modern idea (the 'stigmata' of the insane, of the criminal, of the hysterical temperament). From Hippocrates onwards many have insisted that in a great number of persons the predisposition to insanity is inherited, and hence that slighter causes are sufficient to produce its onset than in other persons; moreover, that this predisposition may be inherited from parents not necessarily insane, but only nervously diseased; the contrary is also true—mere nervous disease in the child corresponding to and connected with insanity in the parents or near ancestors. In 'degenerate' families there is a tendency for this degeneracy to be progressively worse from generation to generation, until ultimately sterility appears, leading to the extinction of the degenerate race (Talbot, ch. 1). Moreau-de-Tours renewed the old thesis that genius is twin brother to madness, both being in many cases derived from the same parentage, and argued that degenerate types often represent throw-backs or reversions to more primitive types of evolution. The principal application given to this doctrine has been in the theory of criminality, of which Lombroso was the chief exponent, viz. that the criminal is born, not made, that (passion and accident apart) crimes spring from natures in which both the physical and the mental characteristics are those of primitive man, or, it may be, of the ape. The physical stigmata of the 'congenital criminal'—deformity of skull, sloping forehead, prominent cheekbones and projecting jaw, large ears, small deep-set and 'shifty' eyes, irregular dentition, cleft palate, stammering, etc.—are not now so seriously taken, and, according to Lugaro (p. 17), the anthropological theory, whether applied to insanity or to crime, is 'a thing of the past.' It is true that both the criminal and the idiot or imbecile are more liable to diseases, such as phthisis, etc., than the normal individual, and have many other physiological deficiencies; while statistics have been frequently compiled to show the apparent transmission from parent to child of the 'criminal temperament,' and its hereditary relationship with imbecility and insanity. From such data, however, even if we exclude the immeasurable influence of environment, physical and social, it can be argued only that *some* nervous deficiency is transmitted, which disposes, under 'favourable' conditions, to insanity, crime, or mental instability.

Against the physical theory of degeneracy (as an all-sufficient account), there may be pointed out the frequency with which mental causes produce, or at least initiate, a change of intellectual or moral character, *e.g.* emotional shock, disappointment, loss of occupation or of means, death of husband, wife, or child, social degradation, religious emotion, school strain, privation, prolonged worry, etc. It is by no means necessary that a hereditary or congenital *physical* predisposition should exist in all cases; thus, a shock coming closely upon or during an illness or exhaustion, or a period of insomnia, may give all the conditions necessary for the outbreak of insanity. The influence of the mind upon the production of insanity was fully recognized by Pinel in 1801, and by others after him. The evolution theory gave, however, a stronger hold to the *organic* theory of mental disease, and its connexion with heredity, so that this view is now practically universal. It is clear that such disease is always a product of two factors —a predisposition on the one hand, physical or mental; and, on the other, a shock or a stress leading to the actual appearance of the insanity or mental defect. Thus the physiologically critical periods of life are those at which outbreaks of insanity are most frequent—first and second dentition, puberty, adolescence, the climacteric, etc. Of course, if we assume from the first that mind is never an agent of bodily changes, but always their mere concomitant or their effect, then mental degeneracy cannot but be the sign or symptom of physical degeneracy, which is the

reality underlying all the phenomena. On the other hand, it may with equal plausibility be argued that the real factor is the *mental disposition*, the fundamental mode of *feeling* and of *reacting* upon impressions, which has a characteristic form and degree in every individual, but is variously modified by the *temporary disposition* which arises in connexion with bodily states—fatigue, exhaustion, illness, etc. A shock or stress will disturb the mind more or less, according to its fundamental and temporary disposition at the period when the strain comes. Without prejudice to any theory of the relation of body to mind, it may be admitted that actions are the outcome of the dominant feeling or emotion, which in its turn is mainly a product of perceptions and reproductions or memories; hence in human conduct the mental life predominates over the physiological: and this is especially the case after the child has become able to appreciate moral ideas. It is not denied that the physical nature has an immense influence in the causation of insanity.[1] But it is claimed (1) that this physical nature may be largely modified by education and by suggestion; (2) that it may itself be of a mental origin either in the ancestors or in the individual; (3) that the outbreak of insanity is almost invariably caused by mental factors, including, for example, emotional shock or mental contagion (as in imitative insanity); and (4) that the insanity may be cured by suggestion and other mental measures, in addition to physical hygiene (Dubois, in *Archives de psychologie*, x. [1910] 1: 'Psychological Conception of the Origin of Psychopathies').

3. **Symptoms of mental degeneracy.**—The manifold forms in which mental degeneracy expresses itself may be illustrated from the two most important 'functional' diseases—hysteria and psychasthenia.

(i.) *Hysteria* has been defined as a 'morbid mental condition in which ideas control the body and produce morbid changes in its functions' (Dana, *Journ. of Abnormal Psychol.*, Feb. 1907). Its most prominent features are anæsthesia, amnesia, loss of control over the attention, paralysis of certain muscles. (1) The anæsthesia may be the loss of sensibility in the whole of a special sense (*e.g.* blindness) without any injury either to the sense-organ or to the conducting nerve-fibres; or it may be partial (monocular blindness; narrowing of the field of vision in both eyes; colour-blindness), or systematic (loss of power to perceive certain persons or classes of objects, while the sensibility is otherwise intact). A historical illustration is the 'devil's marks' on the skin, by the insensibility of which a woman's guilt in trials for witchcraft was often determined. The insensibility differs from that which is due to nerve-injury, in that it is not permanent, but varies; it is, for example, sometimes removed during sleep, or under the influence of chloroform, or in the hypnotic trance, while emotional excitement of any kind is said to intensify it. Also the insensibility does not correspond to the distribution of a particular nerve or group of nerves; many of the reflexes are preserved in connexion with the sense-organ, while the insensible limb is not liable to accident or to injury, as is the case with insensibility arising from a severed nerve. It has been proved also that, while the subject is unaware of the existence of such anæsthesias, and therefore does not, of course, notice the impressions which are made on the insensitive organs, these are nevertheless recorded, and may be later brought to consciousness, *e.g.* when the patient is hypnotized; these and many similar facts show that the seat of the anæsthesia is not in the sense-organ but in the central organ, the cerebrum. *Physiologically* the impression is made on the nervous system, but it is, under the special conditions, unable to effect consciousness, as in other conditions it would (Janet, *L'État mental des hystériques*, p. 20 ff.).

(2) A further group of symptoms is found in the *amnesias*, which also almost always accompany hysteria. The memory may be defective in one or more of many different ways; it may simply show weakness, the subject being unable to remember events of recent occurrence, or material which has been learned, with the same vividness, accuracy, and completeness as a normal individual; or the defect may be specialized so that particular qualities or classes of experiences can no longer be recalled at all; for example, visual memories, or auditory memories, or the memory of actions; and within any one of these groups there may be specialization: in the visual group the patient may be unable to recall the colours of objects, while remembering their forms and their light and shade; in the auditory group, he may remember spoken words, but not melodies or tones, etc. Or the lapse of memory may be systematized, and this also in two ways: (*a*) with reference to the time-series; a period of life may be wholly forgotten—sometimes a recent period, sometimes a more distant one, while events before and after this period are remembered with distinctness; (*b*) with reference to systems of knowledge, as, for example, when the power of reading lapses, or the memory for a particular language, or a particular science, etc.; still more completely systematized are the cases in which a particular object or person, formerly familiar, is no longer remembered.

(3) The will and power of attention may be affected. There may be excessive concentration on one impression or idea, or there may be incapacity to concentrate the attention upon *any* impression or idea; in the former case we have an approximation to the state of melancholia, in the latter case to the state of mania or the insane flight of ideas. Whether the span of attention is narrow or wide, a subject may be distracted from a task by the slightest stimuli, and hence be unable to learn new material or to complete any task attempted by him; on the other hand, even though the attention be unconcentrated, it may still be excessively persistent, just as in ordinary experience a weak-willed individual may on occasions reveal the utmost obstinacy of character. Education and development are mainly a function of the power to direct the attention, at will, to objects uninteresting in themselves, or for the moment uninteresting to the individual: this power the hysteric patient possesses to a minimum degree. His attention is easily caught by sensory impressions which fall within his field of morbid interest, by ideas which enter the mind through purely casual associations (associations of contiguity, of similarity of sound, or the like), but is not caught or held by ideas of deeper logical value. As the attention decides which of the many ideas that are clamouring on the margin of consciousness shall enter its focus and become determinative of the course of our actions and of the course of our thoughts, so in hysteria the level of thought and action falls. Words suggest thoughts through their sound (punning, rhyming words) rather than through their meaning; actions are decided by

[1] Cf. Lugaro, p. 22: 'The functional insufficiency of a shrunken gland in the neck causes the syndrome of cretinism. Slight but chronic lesions of the kidneys can determine conditions of stupidity, temporary loss of speech, and violent attacks of confusion and agitation. A febrile malady occurring in infancy, though transient, attracting little notice, and passing away almost unobserved, can ruin the brain beyond repair. The effects of this may either manifest themselves as moral and intellectual defects of every degree, or as epileptic convulsions which may appear after many years, and by their repetition progressively destroy the mind.'

sensations or simple associative images rather than by systematized tendencies built upon experience; originality and spontaneity are replaced by banality or by automatism.

(4) On the motor side, there is frequently paralysis, or *paresis*, inability or weakness in the use of the limbs on one side of the body, or of a particular limb or organ, or a particular muscle; and (5) usually also disturbances, of 'nervous' origin, in the circulatory and other functions of the body —asthma, vertigo, palpitation, fainting, congestion, etc. Sometimes a power is exercised over these functions, which to the normal individual appears impossible: *e.g.* control of the heart, or of the digestive processes, ability to hasten or retard them at will. Both the muscular and the organic defects or abnormalities are, like the anæsthesias, of purely central origin; *i.e.* they spring directly from some temporary and local change in the cerebral system—a change which, however, has probably a mental origin.

The different phenomena in a particular case may usually be traced to a single system of ideas, which has obtained an undue control over the personality —for example, the memory, conscious or suppressed, of some emotionally exciting event or experience. Cure is sometimes effected by suggestion, which strengthens the power of the personality over the ideas, sometimes by a shock or accident calling up the dormant energies of the individual: thus in one case (Donaldson, *Growth of Brain*, London, 1895, p. 304, from Taylor, *Journ. of Nerv. and Ment. Dis.*, 1888) a lady recovered from a hysteric paralysis on the sudden death of her husband; in another, a cure resulted from the elopement of a daughter. For the most part, however, almost any stimulus is enough to re-excite the dominant idea, and to determine thought and action according to it. Thus a man who had been lost in the Australian Bush, and in the agony of thirst had frequently plunged into imaginary pools of water, used, long after his rescue, under the slightest dose of alcohol, to go automatically through the actions of diving, regardless of the surroundings or of the position in which he was. There is, for the most part, some such absorption by, or fixation of the mind upon, the compelling thought, with entire failure to correlate it with the immediately given sensations and impressions, or to criticize it by them. Epidemics of hysteria or insanity are common among peoples or races at a low level of development, or who suffer from insufficient nutrition (J. M. Clarke, 'On Hysteria,' *Brain*, xv. [1892] 526).

A well-known case is that of Haute-Savoie, 1857, in which a young girl saw a companion taken out of a stream half-drowned; the girl fell down in unconsciousness, and a few days later a friend who was with her became similarly affected. Other hysterical phenomena followed. Within four years there were 120 persons in the same neighbourhood affected in the same way, and this in spite of the fact that public exorcisms were held by the priest. The epidemic was stopped 'by the Government sending a force of gens d'armes to the district, removing the parish priest, isolating the patients, and sending the worst cases to distant hospitals' (Clarke, *loc. cit.*). Here it is the force of suggestion acting on an unstable nervous organism, and securing an influence over the internal organs of the body such as is not possessed, or is possessed only to a very slight degree, by the normal individual. See also art. HYSTERIA.

(ii.) A different complex of symptoms is presented by what is now called *psychasthenia*, or 'obsessional insanity' (Janet), although at some points it is closely related to hysteria. Whereas in the latter the morbid ideas are specific or particular, in obsessional insanity they are general or governing ideas, entering into relation with every possible action or thought of the subject, for example, the idea that one is a criminal, or has committed some unpardonable sin. The idea is involuntarily, continuously, and painfully present to the mind, if not in the centre, at least on the verge, of consciousness, so that to escape from it is impossible. The general ideas most commonly present are those of (*a*) *crime*, including homicide, suicide, dipsomania, sacrilege, etc., and there are two forms—the obsession of committing the crime, and the obsession of remorse for a crime already committed, the actual crime being in such cases enormously exaggerated in the mind (what was really a mere thought or passing idea being transformed into an actual deed); (*b*) *physical or mental defect*, again in two forms—obsession of being, and obsession of becoming. Thus, a lady who is distressed at her actual stoutness may refuse food, or take insufficient rest in consequence, while a lady at present of moderate dimensions may adopt the same tactics from fear of becoming unduly stout. Other instances are the fear of approaching old age, of approaching madness, of approaching death.

The common qualities, as regards the content of the obsessional ideas, are: (1) they regard acts or states of the subject himself, not primarily of any external object; (2) the acts or states are socially disreputable, wicked, or ridiculous, or in general undesirable; (3) (and in this is the fundamental difference from hysteria) they are endogenous, self-suggested, whereas in hysteria the morbid idea is usually exogenous, or suggested from without. Accordingly, we find that at the early stages there is full consciousness of the absurdity or folly of the obsession; and also that, except in rare cases, the morbid action is not completely realized. Thus, a kleptomaniac used to take a servant with him when he went shopping, to watch and afterwards return the stolen articles; in another case, a youth, after taking poison, telephoned to his mother to inform her of the fact, with the (expected) result of a doctor's arrival. Again, the hallucinations have not the same definiteness or 'body' as those of hysteria; they lack details, and hence the slightest effort of the attention destroys them, as is the case in dreams; they are seldom completely externalized, or definitely located; they are really symbolic or type-ideas, standing for a system of thought rather than for a definite object.

On the volitional side, there are almost invariably automatisms, that is, actions which occur independently of and even in opposition to the will of the subject. These Janet classifies into three groups, in each of which the disturbance is either systematic or diffuse. (1) Mental agitations, including the systematic forms—manias of interrogation, of doubt, of precision, of explanation; and the diffuse form—the mania of rumination or reverie. The essential character of all is a movement of the mind which is incapable of arresting itself upon any one fact or thought, but is compelled to pass beyond it, to add something to it, and then something more, and something more, without end—'ideas either revolving in a circle, or branching out endlessly, but in any case never reaching an end, a definite conclusion' (*Les Obsessions*, i. 150). Familiar cases are those in which a patient deliberates for hours about carrying out some simple, and, normally, habitual action: *e.g.* that of putting on a sock, choosing a necktie, stepping over an object in the roadway. (2) On the motor side, what are called 'tics,' that is, automatic actions, twitchings, movements of the lips, etc., these being in nearly all cases symbols or traces of complete actions as suggested by the ideas—'psychic short-cuts.' (3) On the emotional side there are systematic dreads, or 'phobias,' or a generalized anguish or terror. Among the 'phobias' are the fear of crossing an open space (*agoraphobia*), fear of remaining in a shut or closed place (*claustrophobia*), fear of infectious disease (*nosophobia*), fear of insanity, of snakes, of vermin, etc. The diffuse form has sometimes been called *panophobia*,

a generalized expectation or dread of some untoward event happening.

4. Explanation of the symptoms.—The explanation of these phenomena is found first in a weakening of the mind, by which the control over the finer mechanism, alike of association and of voluntary movement, is relaxed and ultimately destroyed. The contrast with the normal individual is the same as that which occurs, within an individual life, between bodily health and sickness or fatigue—in the former case the greater activity, co-ordinative power, effectiveness of movement, ability to recollect at will, and to direct the thonghts; in the latter state the weakening or failure of these powers. Obsessional insanity is an exaggeration of this relatively healthy state, having its centre or point of support in some actual psychical experience of the snbject. In hysteria, the general symptoms may most simply be referred to a disaggregation of the personality: some group or groups of memories, or of habits, or of other acquired activities, separate off from the controlling consciousness with which the normal individual identifies his self or ego. Thus, in the automatic writing and other expressive movements of hysteric or neurasthenic patients (Binet, Janet, etc.), the subject is entirely unaware of the actions done, although they would normally imply consciousness both to initiate and to carry out. So, the hypnotized subject may carry out many actions which apparently involve deliberate consciousness, and, on awakening, show complete ignorance of them; and there are familiar cases in which a patient leads, for a shorter or longer period of time, a different life from that of his normal condition, during which he is unconscions, or at least has no memory, of his previous state, while afterwards, on recovery, he has forgotten the temporary abnormal state (Ansel Bourne, etc.). Morton Prince gives a remarkable instance of such a case of double or multiple personality in his *Dissociation of a Personality*. Normally all our experiences, or at least those which are important to us, are synthesized, unified in the single dominant consciousness or personality; abnormally, some bundles of experience, more or less large, are detached from this unifying consciousness, and form secondary personalities, which may make use of the general fund of memories, habits, etc., organized in our experience, and represented in the intimate structure and fabric of the brain. It is not necessary here to discuss how far these self-realizing ideas deserve the name of 'separate consciousnesses' or 'separate personalities.' There are all degrees of disaggregation—between the simple hearing and answering of a question by an absorbed reader, without subsequent awareness on his part of the action, and the extreme form found in Ansel Bourne, Janet's 'Léonie,' or Prince's 'Miss Beauchamp.' There is a close parallelism between such cases and insanity—for example, the insanity of fixed ideas, or of delusions, etc. Freud argues that many of these secondary personalities, as is the case in insanity, represent attempted realizations of certain wishes, desires, ambitions, which the snbject has been prevented from successfully carrying out, or which he has voluntarily repressed (*Neurosenlehre*, ed. E. Hitschmann, Leipzig, 1911, p. 54). On the one hand, there is a loss (or a defect), in Janet's view, of tension or *tonus* in the central nervous system, or some part of it, and on the other a 'psychic misery,' a disorganization of the mental life, in which images and ideas tend to realize themselves apart from the control usually exercised hy the self on the basis of past experience and according to the claims of the social environment. (On mental dissociation, see also J. Macpherson, *Mental Affections*, London, 1899.)

Corresponding to this disorganization of the mind is the existence of what may be called a floating mass of emotion, dread, or anxiety, ready to attach itself to any idea that may arise, and leading to actions that may be out of all proportion to the motive-idea, taken by itself. This emotion is really the mass of feeling that springs from the altered hodily constitution, and the altered organic and other sensations which form the hasis of the 'feeling of self.' Since the alterations consist largely in an increase of hodily and especially of painful sensations, the emotion as a whole is of the depressive type. Such an emotion necessarily alters the whole mental character, and especially the *moral* character: the subject becomes timid, secretive, cunning, superstitious, selfish, and cruel. In originally higher types there is a tendency to pessimism: the patient is unable to carry out the ideals, frequently extravagant, which he sets before himself; hence doubt and distrust of himself and others; his life is suffused with pain; slight motives cause him distress and anxiety; this 'psychosis' he projects into others, and believes life to be predominantly painful.

Obsessions and fixed ideas are for the most part the result of a logical attempt to account for the emotion of which—although not of its cause—the subject is conscious. In other cases the system of ideas may be derived first from the environment—consciously or unconsciously—and the dread or anxiety is built npon it or attached to it afterwards (see Williams, in *Journ. Abn. Psychol.* v. [1910] 2).

The same features—disaggregation, depressive emotional-tone, or both—may occur in mental degeneration at all its levels. Thus in the *imbecile*, there is failure to co-ordinate experiences, to take more than the first few steps in the synthesis of personality: the result is impulsiveness of character, inability to concentrate the attention, motivation only by the simplest ideas, and these only in isolation from one another, no coherent or sustained activity either of thought or of action. Where depression is also present, the imbecile may become the criminal, with homicidal or other socially dangerous tendencies. In the *paranoiac*, there is failnre to form, or the lapse of, the highest mental synthesis—the recognition of the 'social self'—on which the possibility of morality and of religion depends: hence the primary self-conscionsness has the field to itself; there is an unrestrained assertion of individual wishes and desires, and a total disregard for the convenience, wishes, or claims of others. The enormous self-esteem easily leads to delnsions of unlimited power, wealth, or high rank (*megalomania*), or, where depression is present, to mania of persecution, etc. The nearest parallel that we have in normal life is to be found in dreams (*q.v.*), the analogy of which with insanity has been freqnently pointed out (Moreau-de-Tours, Maury, Sir Arthur Mitchell, etc.). The higher systems are out of function, for the time being; the will is at rest; each idea, suggested hy present sensory impressions, or hy recent experiences, has the field of consciousness to itself: hence it takes on an illusory objectivity, and appears as a *real* experience or perception, while it tends to call up associate ideas which, however, are bound to it only by the lowest, purely mechanical, bonds (habit-associations, associations of sensory similarity). Thus, Maury (*Le Sommeil et les rêves*[3], Paris, 1865, ch. vi.) describes a dream in which the main incidents were connected together through the words 'Kilomètre,' 'Kilogram,' 'Gilolo,' 'Lobelia,' 'Lopez,' 'Loto.' Simultaneous dissociation of personality is also a common feature of the dream: we appear to be debating with another person, who questions us and answers us: both dis-

putants, however, are ourselves. Maury (*loc. cit.*) mentions that the apparent revelations of dreams may sometimes be traced to forgotten memories of our own, which we recall to ourselves and put in the mouth of another person, in our dream. In general, however, the thoughts of the dream are trivial, absurd, meaningless, as any one may prove for himself by writing down, immediately on waking, the words he has just been uttering in his dream. The same defect, and the same lack of power to criticize what passes through the subject's own mind, we have found to be common in mental degeneracy. The hallucinations of the insane, and the vague emotional depression, dread, or anxiety, have also their analogy in dream-life. All these phenomena of degeneracy appear also in normal life during fatigue, exhaustion, illness, senility, and in the temporary insanity of intoxication by alcohol or other drugs (nicotine, opium, hashish, etc.; see, for example, R. Meunier, *Le Hachich*, Paris, 1909).

5. Progressive mental degeneration.—When degeneration attacks a well-developed mind, the symptoms frequently show a regular sequence, according to Ribot's Law of Regression or Involution (see his *Diseases of the Memory*); the more unstable forms of experience or acquirement are the first to lapse, *i.e.* (1) the most recently acquired, (2) the most complex, (3) the least frequently repeated, the least habitual or automatic powers. Thus, in senile insanity, or in the beginnings of alcoholic insanity, it is the power to meet new situations, to face difficulties, to create, invent, or discover, that fails earliest: habitual situations are met, adequately perhaps, in habitual ways, but the bloom of individuality is gone. There follows the delicate appreciation of moral values—there is an increase of selfishness, and of obstinacy, along with a failure of higher ambitions; then the more complex intellectual acquisitions, professional skill, scientific interests; then the memory for recent events, the recollection of the less familiar complexes of experience. With the narrowing of intellectual interest, the emotional life occupies a larger space; the patient becomes irritable, and irritating, discontented, malicious, neglectful of the ordinary conventions of life; his thoughts and his speech become less coherent, more vulgar and petty, until, finally, dementia leaves no powers in function except the primitive instincts and reflexes, with at the most a few of the more ingrained habits of mind and body. In a general way also, although by no means in detail, these stages have their parallels in the different concrete forms of degeneracy found in different individuals—from the morally deficient 'intellectual' down to the congenital imbecile or idiot.

DEGRADATION.—See DISCIPLINE.

DEHRĀ.—A town, the capital of Dehrā Dūn, a valley projecting from the Plains of Northern India like a triangle towards the source of the Jumnā river and the main range of the Himālaya, lat. 30° 19′ 59″ N.; long. 78° 2′ 57″ E. From a religious point of view, the place is remarkable as the seat of a strong body of Udāsīs, a Sikh order of Hindu ascetics, who are said to owe their establishment to the son of Gurū Nānak, the founder of Sikhism. Their *gurudwārā*, or temple, the work of their leader Rām Rāy, was erected in A.D. 1699. The central block, in which the bed of the *gurū* is preserved, was built on the model of the Emperor Jahāngīr's tomb at Lahore. At the corners are smaller monuments in honour of the *gurū's* four wives. The temple is supported by a large endowment, and the *gurū*, who has the revenues at his disposal, is the richest man in the Dūn valley. Formerly the appointment of each new *gurū*, who was selected from among the disciples of the deceased *gurū*, was in the hands of the Sikh chiefs of the Panjāb, who, at each new installation, made a gift to the British Government and received in return the complimentary present of a pair of shawls. This practice is now discontinued. The special dress of the members of the sect is a cap of red cloth shaped like a sugar loaf, worked over with coloured thread, and adorned with a black silk fringe round the edge. The *mahant*, or *gurū*, enjoys high consideration in the country round; and large numbers of devotees, drawn from all classes of Hindus, attend the shrine. But the most enthusiastic worshippers naturally come from the Cis-Sutlej Sikh States. The annual ceremonies, which last ten days, are performed at the Hindu feast of the Holī in spring.

W. CROOKE.

DEICIDE.—This term, though not new, has been used in the past with such restricted meaning, and so seldom, that there is an imperative need to enlarge its definition before it can be of service in that branch of scientific research in which it is increasingly used. The following definition, taken from Ogilvie's *Imperial Dict. of the Eng. Lang.*, will show this:

'*Deicide*=(1) The act of putting to death Jesus Christ our Saviour. "Earth, profaned, yet blessed with *deicide*" (Prior). (2) One concerned in putting Christ to death (Craig). [Rare in both senses.]'

Another quite recent dictionary defines the word thus: 'The killing of God; especially the crucifixion of Christ.' Though there is here a definition more in accord with modern requirements, the student of religions, acquainted with facts which seem to show that there has been a wide-spread custom of putting to death both men and animals thought to be gods incarnate, must set aside everything that so narrows the word as to make it unfit for his purpose. Doing this, one is left with what is, after all, a mere translation of the Latin term, viz. 'the killing of a god,' or, more briefly, 'god-slaughter.' It is in this largest sense that the word is to be here used. For obvious reasons, there will be few, if any, references to what was at one time looked upon as the sole instance of deicide—the Crucifixion.

None of the phenomena which the scientific study of religions has made known has aroused more interest than those obscure rites and ceremonies, those strange customs, which seem best explained by the theory that deicide, once supposed to find its only example in the Crucifixion, has been, in fact, a wide-spread custom, which has left a deep impress on the religious thought of the race. Before giving the few instances of this custom which space limits allow, it will be well to make some kind of classification, which will enable the student to understand more fully their nature and extent. It is suggested that instances of god-slaughter may be placed in one or other of two

main classes, as being (1) *real*, (2) *mimetic* or *symbolic*. A noticeable variety of the former is, on one theory at least, traceable in certain solemn expiatory sacrifices, and may therefore be termed 'expiatory' or 'piacular.' Again, in many of these instances for which the name 'mimetic' or 'symbolic' has been suggested, the effort 'to keep in remembrance' seems so prominent that they may well be termed 'commemorative.' The following is therefore suggested as a working classification for those instances of god-slaughter which seem to have been enacted.

1. Real (with sub-class 'piacular' or 'expiatory').—Cases of real god-slaughter may be seen in the strange custom, at one time wide-spread though now well-nigh extinct, of putting to death kings and chieftains at set times, or when they showed some sign of approaching decay and death. There is evidence to show that originally these high-placed victims were looked upon as Divine in a very real sense—gods incarnate. Such Divine honours are still ascribed by savage people to their king or ruler. The existence of these Divine beings in full vigour was deemed necessary to the welfare of all their people. It was a proof that their god could still safeguard their interests. The reason for putting these gods incarnate to death is believed to have been the dread lest, through disease or decay of strength, they might be unable any longer to help and keep in safety those who looked to them for these blessings. It was necessary, therefore, that a fresh and more vigorous incarnation should be sought for, to take the place of that which was ready to vanish away.

Africa and India furnish the best attested instances of such deicide, though traces of it are supposed to have been discovered in the accounts of old-world rites handed down by classical writers. Three centuries ago it was the practice to put to death the king of Sofala, an African State, when even a slight bodily blemish became manifest; whilst the king of Eyeo, also in Africa, was expected to commit suicide should his headmen think it demanded by the needs of the State. Again, in one of the kingdoms of Southern India the king was put to death or compelled to self-immolation, after a reign of twelve years. Similar customs seem to have obtained in others of the Indian States. It is not surprising to find that, in course of time, means of evading this disagreeable necessity were discovered; one method, that of providing a substitute, human or animal, having a special interest as being the possible beginning of vicarious sacrifice.

An interesting variety of these customs may be seen in cases where an original totem has developed into a deity worshipped by the members of the totem clan. It has been observed that at certain times, when the deity seems to be estranged from his worshippers, or for some other reason the clan-bond needs renewing or cementing, recourse has been had to sacrifices of special solemnity and efficacy. In these the victim has been an animal of the same species as the original totem. In other words, the very deity constitutes the sacrifice which is to heal the breach between himself and his worshippers. It is not difficult to see in these solemn renewals of covenants the beginning of expiatory or piacular sacrifice. There seems to be a sufficient reason for thinking them to be cases of piacular deicide. On the other hand, the solemn putting to death, by his own priests, of the divine Apis bull of Egypt, after the lapse of a certain number of years, seems rather to be an instance of the endeavour to secure a renewal of the Divine life in an incarnation of unbroken vigour.

2. Mimetic or symbolic (with sub-class 'commemorative').—This has its roots in those myths which constitute so large a part of the *quasi*-theology of the great ancient Nature-religions. In these myths the phenomena of Nature are personified and deified, and her processes become incidents in the lives of the gods thus originated. The myths which most readily furnish illustrations of the matter now in hand are those connected with the changes of the season which are so closely related to the growth of vegetation, the quickening of the seed, and the maturing of the kindly fruits of the earth. Such are the myths of Adonis, the Syrian deity, slain by the hunted boar on Mount Lebanon, so that his blood reddened the waters of the river which carried it down to the sea; of Osiris, slain by the malice of his brother Set or Typhon; of Dionysus, god of the vine, who, according to the Greek myth, was put to death by jealous Juno. Many quaint superstitions and ceremonies still surviving, among the peasantry of Europe as well as among the farmers and cultivators of well-nigh all other lands, find their best explanation in the wide-spread belief in similar stories. In them, and in the rituals based upon them, were set forth the death by violence and, in some cases, the subsequent resurrection of a god—a god of vegetation, and especially of corn.

J. G. Frazer writes thus of the Adonis rite: 'His death was annually lamented with a bitter wailing, chiefly by women; images of him, dressed to resemble corpses, were carried out as to burial and then thrown into the sea or into springs; and in some places his revival was celebrated on the following day' (*GB*[2] ii. 116).

Concerning the Egyptian deity Osiris he says: 'Of the annual rites with which his death and burial were celebrated in the month Athyr we unfortunately know very little. The mourning lasted five days, from the eighth to the twelfth of the month Athyr. The ceremonies began with the "earth-ploughing," that is, with the opening of the field labours, when the waters of the Nile are sinking. The other rites included the search for the mangled body of Osiris, the rejoicings at its discovery, and its solemn burial. The burial took place on the 11th of November, and was accompanied by the recitation of laments from the liturgical books' (*ib.* 140).

Again, of Dionysus he writes: 'The Cretans celebrated a biennial festival at which the sufferings and death of Dionysus were represented in every detail' (*ib.* 163).

Other evidence obtainable warrants the belief that mimetic or symbolic deicide occupied no small place in the ritual of long-vanished religions. Such god-slaughter was not a mere amusement, or even a gratification of the dramatic instinct so deeply implanted in human nature. It had a far more serious purpose. Most probably these annual rites were performed in the firm conviction that they would further and assist those great and all-important natural processes on which the very life of the world depended. No doubt, in course of time, many of these customs, at least before they became mere superstitions, would be retained as a means of keeping in remembrance that which ought not to be forgotten. In other words, they would be more distinctly 'commemorative.' Such seems to have been the case with some very striking ceremonies observed by the ancient Mexicans, in which it was the custom to make paste or dough images of certain of their gods. These images were then 'killed' and broken in pieces to furnish material for a sacrificial meal. It is a curious circumstance that portions of this consecrated food were reserved for the sick, and carried to them 'with great reverence and veneration.'

Concerning such customs as these, many questions arise which it is not easy as yet to answer. Even the conclusions already arrived at are by no means so established as to be accepted without reserve. The evidence, after all, is so scanty and elusive that one is compelled to a resolute distrust of one's own judgment, and to reliance rather on the sagacity of those skilled in such investigations, reserving to oneself the right of giving a casting vote in cases where the evidence for and against a certain view seems evenly balanced. Yet, not-

withstanding all this, no part of the great study of religions is fuller of suggestion than this, more especially in the strange parallels noticeable between pagan and Christian thought and ritual. It is only necessary to name such themes as 'Incarnation,' 'Crucifixion,' 'Sacrifice,' 'Eucharist,' etc., to show this. What influence the recognition of such analogies may have, in the future, on Christian speculation it is impossible to say.

DEIFICATION (Greek and Roman).—1. The Greeks.—The deification of actual men and women among the Greeks is a natural development of that view of the gods which their early literary documents show already prevalent. The Greek was not satisfied to leave the superhuman beings whose presence he divined in the operations of Nature, and whose legends he learnt as a child, in a mystical haze, as vast powers of shadowy and uncertain outlines; his mind loved the light of day; he early wanted to know exactly what these beings looked like, what definite things they had done, in what relations of kinship they stood to each other and himself. Hence it was that the gods of the Greek came to be anthropomorphic in a peculiar sense. He conceived them as really like men; they had actually trodden the hills and fields familiar to himself: the Athenian could look at the very mark which the trident of Poseidon had left upon the rocks of the Acropolis; the Spartan knew from a child the grave of Hyacinthus, whom Apollo had slain with the discus.

'From one origin are begotten gods and mortal men,' says a line attributed to Hesiod (*Works and Days*, 108); and Pindar echoes it in the opening of *Nem.* vi.: 'There is one self-same race of men and gods; and from one single Mother have we both the breath of life; only faculties altogether diverse distinguish us; since man is a thing of nought, and those have brazen heaven for a sure abiding home. And yet we have some likeness, either by greatness of soul or by fashion of body, to the Deathless Ones.'

Yet more, the gods had begotten human children in intercourse with men; the families of the legendary chieftains, and such families of a later day as could make out a descent from the heroes of legend, were literally and physically their issue. The ancient heroes, as Homer tells us by a number of recurring epithets, were very much like gods to look at. And not only could the Divine thus come to earth, but the legends knew of men becoming gods (Eur. *Andr.* 1255, etc.).

Especially is the boundary-line between the worship of the dead and that of the gods hard to draw, for the rites offered generally to the dead implied the belief that the deceased had some power of action in the living world; only the scope of such power was greater in the case of those worshipped as heroes, whilst the distinction, again, between the rites proper to heroes and to gods respectively tended in practice to become blurred (Deneken, col. 2526, note). A difference was, indeed, recognized in common parlance between the ordinary attention to the dead, 'heroic' honours, and divine honours (see Arr. iv. 11. 3); but, when we try to draw a hard-and-fast line, the difference appears rather one of degree.

The mass of the heroes worshipped by the Greeks were mythical figures imagined in a remote past, especially the legendary founders of cities, the eponymous ancestors of clans, or the patrons of particular professions. How some cases occurred in which actual men were assimilated after their death to these heroes of the fabulous past we cannot say, but it seems to have happened early in certain parts of the Greek world (esp. Thrace and Sicily) that the founders of new cities received the same honours which the older cities gave to their legendary heroes (Timesius in the 7th cent. B.C. [Hdt. i. 168]; Miltiades in the 6th cent. [Hdt. vi. 38]; Gelon, Theron, and Hiero in the 5th cent. [Diod. xi. 38, 53, 66]; Hagnon and Brasidas in the same century [Thuc. v. 11]); or that the spirits of those who had been violently slain under circumstances which made some community dread their vengeance were placated with 'heroic' honours (Philip of Croton in the 6th cent. [Hdt. v. 47]; Onesilus, king of Salamis, in the 5th cent. [Hdt. v. 114]).

It was thus natural that, when the emotions of reverence or gratitude entertained with regard to some actual man were raised to a high degree, they should be felt as almost identical with those which had the gods for their object (*ἶσον γάρ σε θεῷ τίσουσιν Ἀχαιοί* [Hom. *Il.* ix. 603]; *θεὸς δ' ὡς τίετο δήμῳ* [*ib.* v. 78, etc.]). In a moment of exaltation it might even seem proper to express such feelings in the same ritual performances as those used for the gods. *Ὦ παῖδες, Ἀργείοισιν εὔχεσθαι χρεών, θύειν τε λείβειν θ' ὡς θεοῖς Ὀλυμπίοις σπονδάς*, exclaims the Danaus of Æschylus (*Supp.* 980 ff.). Such language was, of course, a rhetorical exaggeration; but, when the notion, even as an extravagance, was present to the mind, it was a short step, in days when the old awe of the gods had declined and novel dramatic expression was craved for, to translate it into action. According to Duris, the first instance of the formalities of religious worship being addressed to a living man was when Lysander, at the end of the 5th cent., became the object of a cult in Samos; altars, sacrifices, pæans, and games are specified as its constituents (Plut. *Lys.* 18). The case did not remain isolated. In Thasos, soon after, it was taken for granted that the State might confer divine honours on whom it pleased; but the fact that this new development was reprobated in quarters where old-fashioned piety still existed is shown by the answer of Agesilaus when the Thasians informed him that they were building him temples (Plut. *Apophth. Lac. Ages.* 25). When Dion entered Syracuse in 357, he was received as a god, with sacrifices, libations, and prayers (Plut. *Dion*, 29). Clearchus, the tyrant of Heraclea, adopted the insignia of the Olympian gods, and compelled his subjects to approach him with prostrations (Suid. *s.v.* Κλέαρχος).

To understand the state of mind which led to such practices, we must remember the movement of Greek thought which had taken place since the days of Æschylus. The religious scepticism which was abroad had, no doubt, for many minds emptied the traditional forms of worship of their content of awe and devotion, and in proportion as they had become mere formalities there was less restraint from offering them to men. So far as the old gods remained as figures for the imagination, anthropomorphism had gone a step further, as may be seen in the contrast of Praxiteles with Phidias. Scepticism had in fact brought anthropomorphism to its ultimate conclusion by asserting roundly that the gods were men, as was done by the popular Euhemerism. The gods, according to this theory, were kings and great men of old, who had come to be worshipped after their death in gratitude for the benefits they had conferred (see EUHEMERISM). On this view, there was nothing monstrous in using the same forms to express gratitude to a living benefactor. In so far as the worship of living men arose from these conditions, it was a product, not of superstition, but of rationalism. It shows, not how exalted an idea was held of the object of worship, but how depreciated in meaning the forms of worship had become. If this is so, Frazer (*Early Hist. of Kingship*, 1905, p. 137) errs in confusing it with primitive superstition, of which it is really the antithesis. At the same time, the development of religious feeling, which revolted against the traditional anthropomorphism, was not altogether unfavourable to such cults. The tendency to merge the separate divinities in the conception of One pervading Divine power (Schmidt, *Ethik d. alt. Griechen*, 1882, i. 52) would make it easier to see manifestations of this power in human personalities which asserted themselves

strongly. A special kind of deification was that which we find in connexion with the mystic sects dispersed through the Greek communities and the philosophies which borrowed from them. If deathlessness had been all along the distinguishing characteristic of the gods, those who laid stress upon the deathlessness of the individual soul thereby came near to making it divine. And so we get the idea that the human soul is a divine being imprisoned for some pre-natal offence in the mortal body. The notion, current among the Orphics, passed from them to the Pythagoreans (Rohde, *Psyche*[4], ii. 121 f., 161 f.). So, too, Empedocles declared that, if a divine being sinned, he was incarnate for punishment till he had worked out his salvation in a number of successive lives, and was restored to fellowship with the gods (frag. 146, 147 [Diels]). Empedocles himself was already reaching that consummation, and claimed divine honours: *ἐγὼ δ' ὑμῖν θεὸς ἄμβροτος, οὐκέτι θνητός,* | *πωλεῦμαι μετὰ πᾶσι τετιμένος, ὥσπερ ἔοικα,* | *ταινίαις τε περίστεπτος στέφεσίν τε θαλείοις* (frag. 112 [Diels]; cf. Rohde, *Psyche*[4], ii. 171 f.). So, again, on the funeral tablets discovered at Thurii, the dead man declares to the gods that he is of their kindred, and is saluted as one who has passed from mortality to deity: *Ὄλβιε καὶ μακαριστὲ, θεὸς δ' ἔσῃ ἀντὶ βροτοῖο. Θεὸς ἐγένον ἐξ ἀνθρώπον* (Michel, *Recueil*, 1896–1900, nos. 1330, 1331; Harrison, *Prolegomena to Gr. Relig.*[2], 1908, p. 660 ff.).

If any one had the right to divine honours, Alexander, after feats of conquest to which Greek story knew no parallel except the mythological triumphs of Dionysus and Herakles, obviously had a pre-eminent claim. Already his father, Philip, had in his own kingdom caused his own statue to be carried in procession, together with those of the twelve gods (Diod. xvi. 92. 5). It is absurd to call in the influence of 'the East' to account for what followed so inevitably from the prevalent disposition of the Greek world. As a matter of fact, the Achæmenian kings were apparently not worshipped as gods (Æsch. *Pers.* 157 is cited by Beurlier and others to prove that they were, but the evidence of the native monuments is against it, and the Greek notion represented by Æschylus seems to rest upon a misapprehension of the formality of prostration). In Egypt, indeed, since the New Empire, the reigning king had been so worshipped, and it was natural that Alexander should here be saluted as the son of Amen (Ammon). But we may safely say that, even without this, the Greeks would have worshipped him. The oracle of Didyma had already in 331 (unless Strabo is right in his scepticism) declared Alexander to have been begotten by Zeus (Strabo, xvii. 814). In 323, on Alexander's return from India, embassies arrived at Babylon from Greece, wearing and bringing crowns such as indicated that they were *θεωροί*, approaching a god (Arr. vii. 23. 2). There was still, indeed, in Greece a party of old-fashioned piety who opposed the extravagant flattery as profane. The question provoked stormy debates in the Athenian assembly. The divine honours were defended on the other side with flippant sarcasm as a form too empty to matter. 'By all means,' exclaimed Demosthenes, 'let Alexander, if he wish it, be the son of Zeus and Poseidon both together' (Hyper. [Blass] i. 31. 17; cf. ps.-Plut. *Vit. X. Orat.* vii. 22; Valer. Max. vii. 2, 13; Dinarch. *in Demosth.* i. 94). The expression shows that Alexander was understood himself to demand such honours. According to an account preserved by Arrian, it was the philosopher Anaxarchus who was employed to propose divine honours to Alexander in the circle which surrounded the king's person. The *prostration* which Alexander demanded was regarded by the Greeks as an acknowledgment of deity, and Anaxarchus is represented as defending Alexander's deity on purely rationalistic euhemeristic grounds (Arr. iv. 10). For Hephæstion, at any rate, Alexander demanded worship after his favourite's death. The worship was 'heroic' in kind; Arrian gives under reserve the story that Alexander had wished to make it properly divine, but had been forbidden by the oracle of Ammon (Arr. vii. 14. 7; but cf. Diod. xvii. 115).

If worship offered to the living Alexander had offended the more conservative Greek feeling, worship offered to the dead Alexander as a hero was in accordance with Greek tradition. The forms of worship chosen would show numberless local variations which we cannot now trace. The Ionian Confederacy maintained a cult of Alexander centred in a sanctuary near Teos (Strabo, xiv. 644) till the days of the Roman Empire. Under the Roman Empire itself the cult of Alexander flourished (Lamprid. *Alex. Sev.* 5. 1; Herodian, iv. 8; Dio Cass. lxxvii. 7).

Naturally, the Macedonian chiefs who entered upon Alexander's inheritance saw their interest in publicly recognizing his divinity. In what forms they severally did so is not recorded. Eumenes had a 'tent of Alexander' in his camp, with a throne before which the officers offered a sacrifice as to a present god (Diod. xviii. 60, 61; Plut. *Eum.* 13; Polyæn. iv. 8. 2). The appearance of Alexander's head, with the horns of Ammon, upon the royal coinages is an assertion of his assimilation to the gods.

Antipater was an exception; in him the old feeling which condemned these practices as impious (*ἀσεβές* [Suidas]) still found a representative. The official worship of Alexander at Alexandria as god of the city cannot be traced further back than Ptolemy II., who transferred the conqueror's body from Memphis to the new temple called the *Sēma* in Alexandria. [It is curious that Diod. speaks of the honours offered to Alexander in Alexandria as *ἡρωϊκαί* (xviii. 28. 4). Probably the expression is used loosely, because the honours were offered to a dead man.] Henceforward the annual priest of Alexander, chosen from a limited number of privileged families, was eponym for the year till Roman times. A golden crown and a crimson robe were his insignia. The cult continued in Alexandria till the institution of Christianity (Otto, *Priester und Tempel in hellenist. Aegypten*, i. 138 f., 253).

The Greeks, who had worshipped Alexander in his lifetime, were ready enough to give the same sort of worship to his successors. Craterus, who died in 321, was honoured at Delphi with a pæan (Athen. xv. 696*e*). Scepsis in 310 voted the living Antigonus a *τέμενος*, altar, and image; they had already some time previously instituted sacrifice, games, and *stephanephoria* in his honour (Dittenberger, *Inscr. Orient.* i. 6). In 307 Athens exhausted all forms of adoration in regard to the same two princes. They were addressed as *θεοὶ σωτῆρες*; a regular priesthood was established for them; and changes, ostensibly permanent, were made in the calendar and religious organization of the people. In 290, a hymn, which has been preserved, was composed for the reception of Demetrius. In it Demetrius is hailed as the son of Poseidon and Aphrodite; he and Demeter are the 'greatest and friendliest of the gods,' and so on (Diod. xx. 46; Plut. *Dem.* 10 f.; Athen. vi. 253, xv. 697*a*). It is important to observe that the really religious people still protested against these perversions, and saw in the failure of the vintage a judgment of the true gods (Philippides, *ap.* Plut. *Dem.* 12). The first Greek State to offer divine honours to Ptolemy was apparently the Confederation of the Cyclades (*τετιμηκόσιμ πρώ[τοις τ]ὸν σωτῆρα Πτολεμαῖον ἰσοθέοις τιμαῖς* [Ditt. *Syll.*[2] i. 202]); Rhodes in 304, or soon after, conferred upon him the divine surname of

'Saviour,' and dedicated to him a τέμενος and festival (Diod. xx. 100. 3 f.; Paus. i. 8. 6; cf. Πτολεμαίου τοῦ Σωτῆρος καὶ θεοῦ [Ditt. *Inscr. Orient.* i. 16]); and Lysimachus was worshipped with altar and sacrifice at Priene (*Inscr. of the Brit. Mus.* cccci.) and in Samothrace (Ditt. *Syll.*² i. 190). Seleucus, after his conquest of Asia Minor (281), had an altar built to him by Ilion, and games were instituted to him like those held in honour of Apollo (Hirschfeld in *Archäol. Zeitschr.* xxxii. [1875] 155; Haussoullier in *Rev. de Philol.* xxiv. [1900] 319). Both Seleucus and his son Antiochus were worshipped by the Athenian colonists in Lemnos (Phylarch. *ap.* Athen. vi. 254). Especially where a chief had founded or re-founded a city, he had the founder's prerogative of worship: so Cassander at Cassandrea (Ditt. *Syll.*² i. 178), Demetrius at Sicyon (Diod. xx. 102 f.), and Ptolemy at Ptolemaïs (Otto, *Priester u. Tempel*, i. 160).

It is probable that all through the epoch when the dynasties of Seleucus and Ptolemy ruled in Asia and Egypt respectively, the Greek cities which were subject to them, and some which were merely allied, expressed their loyalty in a cult. Our evidence is, of course, fragmentary.

We find at Ilion a priest of Antiochus I. soon after his accession (Ditt. *Inscr. Orient.* i. 219); and cults of the same king celebrated by Bargylia after his death, and by the Ionian Confederacy during his lifetime (τέμενος, altar, image, sacrifice, games, *stephanephoria* [Michel, 486]). At Erythrae, games called Σελεύκεια are mentioned, and Σωτήρια at Mylasa (Michel, 252, 602). At Didyma, Antiochus I. and his wife Stratonike seem to have been worshipped after their death as θεοὶ σωτῆρες (*CIG* 2862; cf. Haussoullier, *Hist. de Milet*, 1902, p. 61). Smyrna instituted a special worship of Stratonike as Aphrodite Stratonikis, in which her son Antiochus II. was associated with her (Ditt. *Inscr. Orient.* i. 229: Tac. *Ann.* iii. 63). Similarly, in the case of the Ptolemies, we find Πτολεμάεια celebrated at Athens, where Ptolemy I. was chosen as the eponymous hero of a tribe (Paus. i. 5. 6; *CIA* ii. 444. 32, etc.), in Leshos (Ditt. *Inscr. Orient.* i. 360), and by the Confederation of the Cyclades (Delamaire, *Rev. de Philol.* xx. [1896] 103 f.). Halicarnassus dedicated a stoa to Apollo and king Ptolemy (Ditt. *Inscr. Orient.* i. 46). The Antigonid dynasty which inherited Macedonia was honoured by Ἀντιγόνεια, which are found at Delos (*BCH* vi. 143), in Eubœa (*ib.* x. 102 f.), and, after 223, among the Achæans (Plut. *Arat.* 46, etc.; cf. Niese, ii. 338). Attalus of Pergamum became in 200 B.C. the eponym of an Athenian tribe, and his wife Apollonis the eponym of a deme; a special priest was attached to his service (Polyb. xvi. 26; *CIA* ii. 1670, 466, 469). Sicyon in 198–7 instituted a festival in honour of Attalus I. (Polyb. xviii. 16); Cos a πομπή to Eumenes II. (Ditt. *Syll.*² ii. 619). As a matter of course, the cities actually subject to the Attalids maintained some such worship (Cyzicus [temple of Apollonis], *Anth. Pal.*, bk. iii.; Sestos [priest, birthday festival], Ditt. *Inscr. Or.* 339; Elaea [Attalos σύνναος with Asklepios, priest, daily sacrifice], Ditt. *Inscr. Or.* 332; Ilion [tribe Ἀτταλίς], *CIG* 3616; Sardis [Eumeneia], Ditt. *Inscr. Or.* 305; Ionian Confederation, *Arch. Anzeig.*, 1904, p. 9; Nacrasa [βασίλεια], Ditt. *Inscr. Or.* 268; Eumenia [φιλαδέλφεια], coins; Aphrodisias [Ἀττάλεια], coins; Teos [priest of Eumenes and deceased Apollonis, priestess of Stratonike and Apollonis, temple of Apollonis Ἀποβατηρία], Ditt. *Inscr. Or.* 309; Hierapolis [deification of Apollonis], Ditt. *Inscr. Or.* 308; Magnesia-on-Meander [tribe Ἀτταλίς], Ditt. *Syll.*² ii. 563; and Ægina [Ἀττάλεια, Εὐμένεια], Ditt. *Inscr. Or.* 329).

All these cults are instituted by cities, ostensibly by their own act, as separate communities; the cult of one city differs in its forms from that of another. They are to be distinguished therefore from cults instituted by the kings themselves for the realm. The first cult of the latter sort we know of is that instituted for the first Ptolemy, as θεὸς σωτήρ, after his death (282–3), by his son Ptolemy II. (Ditt. *Syll.*² i. 202). With his father Ptolemy II. associated his mother Berenice on her death (soon after 279), the two being worshipped together as θεοὶ σωτῆρες. 'First of all men, dead or living,' says Theocritus, 'this man established temples fragrant with incense to his mother and his sire' (xvii. 121). When the sister-wife of Ptolemy II., Arsinoë Philadelphus, died in 270–1, she too was deified. And now a further step was taken. Ptolemy II. had himself put on a level with his sister; the living king and the dead queen were worshipped together as θεοὶ ἀδελφοί. This cult was combined with that of Alexander, a single priest serving the group of divinities; the cult of the θεοὶ σωτῆρες remained for the time distinct. When Ptolemy II. was succeeded by Ptolemy III. Euergetes, the θεοὶ εὐεργέται (*i.e.* Euergetes and his wife Berenice II.) were added to Alexander and the θεοὶ ἀδελφοί, and so on with the other kings till the end of the Ptolemaic dynasty. Under Ptolemy IV. Philopator (between 220 and 215) the cult of the θεοὶ σωτῆρες ceased to be distinct; their name now appears in the official registers after that of Alexander. The seat of this official cult seems to have been the *Sēma* of Alexander, to which a Πτολεμάειον (a mausoleum of the Ptolemies) was joined (Otto, *Priester und Tempel*, i. 139). Some of the Ptolemaic queens had priestesses of their own—Arsinoë Philadelphus a κανηφόρος, Berenice II. an ἀθλοφόρος, Arsinoë, sister-wife of Ptolemy IV., a λέρεια, and Cleopatra III. (daughter of Ptolemy Philometor, wife of Ptolemy Euergetes II.) a variety of ministers, a στεφανηφόρος, a πυροφόρος, a λέρεια, and a male priest styled ἱερὸς πῶλος (Otto, p. 158, cf. p. 411). The priestesses of the queens may have performed their rites at separate shrines in Alexandria. Distinct, of course, from this system of Greek worship was the worship given by the Egyptians, on the lines of their national tradition, to their foreign kings and queens; though the influence of the Egyptian forms of worship upon the Greek may be seen, *e.g.* in the king himself becoming, on occasion, priest of his own deity in Alexandria (Otto, p. 182, note 6). Cyprus, a Ptolemaïc dependency, had a high priest (ἀρχιερεὺς τῆς νήσου or τῶν κατὰ τὴν νῆσον ἱερῶν) of its own, in whom we may see the president of the provincial cult of the kings (Strack, *Dynastie der Ptolemäer*, no. 76, etc.).

In the Seleucid realm, when Seleucus was murdered in 281, his son Antiochus I. was forward to do as much for his father as Ptolemy II. had just done for his. The tomb of the old king at Seleucia was constituted a temple, a Νικατόρειον, and a cult was officially instituted for him as a god (App. *Syr.* 63). With him each of the following kings was in his turn associated; one priest served the founder and his deified successors, and one the reigning king (Ditt. *Inscr. Orient.* 245). How soon it came about in the Seleucid realm that the living sovereign was the object of worship instituted by the court we do not know. The important inscription which gives us a rescript of Antiochus II. (261–246 B.C.) (Ditt. *Inscr. Orient.* 224) shows us such already existing. It is a worship of the king organized by provinces, each province having a high priest. The rescript is issued in order to associate the queen Laodike in the cult, instituting provincial high priests for her, side by side with those of the king. Incidental mention of provincial high priests in later reigns shows us the system still in continuance (Michel, 1229), and they present an obvious parallel to the high priests of Cyprus in the Ptolemaïc realm.

Although a difference is rightly insisted upon between the cults instituted by the central government and those offered by the Greek communities as independent agents, the dividing line between the two is not easy to draw. This is due to the ambiguous position of the Hellenistic kings, who wished, while retaining Greek cities under their control, to leave them the semblance of autonomy. Cults offered ostensibly by a city spontaneously might be framed at a suggestion from the court which it was impossible to disobey. In what class, for instance, are we to put the cults offered to the Ptolemaïc kings at Ptolemaïs, to the Seleucid kings at Seleucia, to the Attalids at Pergamum? All these cities had the forms of municipal autonomy, but were entirely subject to royal dictation. The nucleus of the cult at

Ptolemaïs is that of the founder Ptolemy I. Soter, and to him the later kings (at any rate after the θεοὶ φιλοπάτορες) become attached. The cult of Seleucia founded under Antiochus I. we have already mentioned. At Pergamum a sheep was sacrificed by the civic authorities to Eumenes I., that is to say, even before the rulers of Pergamum had acquired the title of kings (Ditt. *Inscr. Orient.* 267). An inscription of the time of the last king of Pergamum, Attalus III., shows us sacrifices offered to the founder Attalus II., his brother Philetærus, and the reigning king (*Mitt. Ath.*, 1904, p. 152).

In connexion with the assumption of deity by the kings themselves, we must reckon the appearance of their effigy on coinages struck by royal authority. The official surnames, again, which they bear have been thought to have religious significance. This is difficult to prove, because the king would naturally be addressed in worship by his full titles, and if, therefore, we find the surname used in the cult, it would not necessarily show a religious *origin*. In favour of the hypothesis are: (1) the fact that some of the surnames, *e.g.* σωτήρ, ἐπιφανής, have undoubted religious associations; and (2) the practice of the Greeks of attaching surnames to the names of deities—Athene Promachos, Zeus Meilichios, etc.; cf. also the title of εὐεργέτης conferred on Diogenes (see below).

The title of θεός does not seem usually to have been assumed by kings during their lifetime. For the Greeks of Egypt, as we have seen, their living king was a god from the time when Ptolemy II. associated himself with his dead and deified sister. But, whilst the living king and queen were, after Ptolemy II., regularly worshipped together as θεοὶ εὐεργέται, θεοὶ φιλοπάτορες, etc., the kings do not seem to have had themselves called θεός in the protocol of State documents till the time of Euergetes II. (Strack, *Dynastie der Ptolemäer*, p. 120). In the Seleucid dynasty also it is to be noted that Antiochus IV. Epiphanes is the first king under whom θεός is attached to the royal name upon the coinage, and Antiochus is exactly the king who seems to have put his deity prominently forward (cf. Bevan, *House of Seleucus*, 1902, ii. 154). The usage of the Pergamene kingdom appears also to have confined the title of θεός to deceased sovereigns. A king or queen at death seems to have been officially declared to have joined the number of the gods (Cardinali, 'Regno di Pergamo,' p. 153, note 4). This did not exclude the offering of rites of sacrifice, etc., to the living sovereign. Whether, in the case of acts which were understood to be ceremonial flattery, any attempt was made to reconcile the inconsistency of worshipping some one whose apotheosis was still future we do not know.

It remains to consider the relations to the older gods in which these cults in theory placed the men worshipped. These were of three kinds.

(1) *Descent.*—Those Greek families which professed to trace back their family tree to heroic times had, of course, no difficulty in making out their descent from some god. It can hardly, therefore, have been the peculiar prerogative of the royal dynasties in Hellenistic times to possess this sort of link with divinity. They seem, nevertheless, to have thought it worth while to emphasize the divine origin of their families. So we find that the family of Ptolemy at the Egyptian court was traced back to Herakles and Dionysos, the latter deity after the reign of Philopator being given prominence over the former. Possibly the family of the Seleucids claimed descent in the same way from Apollo. The Attalids, like the Ptolemies, apparently took Herakles and Dionysos for the founders of their race (Cardinali, *op. cit.* 147).

(2) *Immediate sonship.*—Dignity of family was not enough. If possible, the person worshipped had to be himself the offspring of a god. Already, in the times before Alexander, this was asserted at the Syracusan court of Dionysius (Plut. *de Alex. virt.* ii. 5). Alexander claimed that his mother had conceived him of Zeus Ammon. The real father of Seleucus, it was asserted at the Seleucid court, was Apollo (Just. xv. 4). Apollo was ἀρχηγὸς τοῦ γένους (*CIG* 3595).[1] So, too, we saw that the Athenians in 308 hailed Demetrius as the son of Poseidon and Aphrodite.

(3) *Identification.*—For this, again, we have a precedent before Alexander in Clearchus of Heraclea (*FHG* iii. 526). The first instance we can trace after Alexander is that of Seleucus, who was worshipped at Seleucia as *Zeus* Nicator. His son at the same place was Antiochus *Apollo* Soter (Ditt. *Inscr. Or.* i. 245). In Egypt, Arsinoë at her apotheosis was identified with Aphrodite (Strabo, xvii. 800; Athen. vii. 318*d*, xi. 497*d*), and so was Stratonike I. at Smyrna. Antiochus Epiphanes probably identified himself with Zeus (*JHS* xx. [1900] 26 ff.). The surname νέος Διόνυσος was borne by Antiochus VI. (145–143 B.C.) and Antiochus XII. (86–85 B.C.) in Syria; and by Ptolemy Auletes (81–52 B.C.) in Egypt. Cleopatra VII. was styled νέα Ἶσις (Strack), and the last Cleopatra also bore the same title, and appeared in public arrayed as the goddess (Plut. *Ant.* 54).

The Greeks had no idea of any divinity in kingship *per se*. The proffer of divine honours in the 4th cent. B.C. was the recognition simply of a personality mighty to impress and modify the world. The Greeks, as a matter of fact, who approached Alexander with worship did not regard him as *their* king (he was king of the Macedonians and Persians). Naturally the Macedonian chiefs who made themselves kings after Alexander attained thereby a position which gave them pre-eminent power upon the world, and the proffer of divine honours expressed a desire to secure their good-will and protection. We have here further evidence that it is a mistaken track to assimilate the Greek worship of kings with a worship of the king as such, like that which had existed recently in Egypt and, centuries before, in Babylonia. Naturally, too, when the new kingdoms had developed settled institutions, the courts found in the cult of the sovereigns a useful means of imposing upon the popular imagination and securing an expression of loyalty. And, as Kaerst has pointed out, it was not easy to find a formal expression for dominion over a number of Greek States which were, by Greek political theory, independent sovereign communities. Over the authorities of the city had been, in olden days, only the gods, and the assumption of deity gave a sort of legality to the relation of the king with the subject Greek States. Antiochus IV. turned his deity to further account by representing himself as the divine husband of the goddess of a rich temple like that of Hierapolis, and claiming the temple treasure in that capacity (Gran. Licin. 28).

The Greek practice passed to the new dynasties which arose in the East. The Greek kings of Bactria, Agathocles and Antimachus (*c.* 190–160), are styled 'god' upon the coins. The Arsacid kings of Parthia, if, as adherents of some form of Zoroastrianism, they recognized only One Supreme God, found no difficulty in giving the name of 'god' to subordinate powers, and in classing them-

[1] Something of the same sort seems to be implied when the Pergamene king is called Ταύροιο διοτρεφέος φίλον υἱόν (Paus. x. 15. 2; cf. Suidas, *s.v.* Ἄτταλος), *i.e.* son of the divine Bull, Dionysos.

selves among the number. Here, too, on some of the coins the name of the king is accompanied by the epithet θεοῦ or θεοπάτορος (Wroth, *Coins of Parthia*, 1903, p. xxix). So, too, the Sasanian kings (after A.D. 224) continued to bear the title of θεός (Pers. *bag*); but, whilst the Greek was ambiguous, in the native language the distinction between the lower divinity of the human deity and that of the gods proper was made plain by another word (*yazdān*) being reserved for these last (Ditt. *Inscr. Orient.* i. 432, 433). So far, then, from its being the case that the deity of the human ruler was an idea borrowed by the Greeks from the East, the borrowing was the other way; the Orientals took it from the Greeks.

Even the minor dynasties of the East came to bear divine titles. So Antiochus I. of Commagene describes himself as θεός in the same breath with which he professes piety to be the rule of his life, on the monument where his body rests after his soul has gone to the 'heavenly seats of Zeus Oromasdes.' The honours to be paid to himself and the other kings are distinguished, as 'heroic' (lines 48, 118, 125), from the cult of the greater gods. His own image is σύνθρονος with that of Zeus-Oromasdes, Mithra, Artagnes, and Commagene (line 60) (Ditt. *Inscr. Orient.* i. 383). The Jewish Herod Agrippa I. received from heathens the now banal ascription of deity (Ac 12^{22}; Jos. *Ant.* xix. 8. 2).

Even in the age of the Hellenistic kings, deification was not their peculiar prerogative. It was open to other men, in their degree, to become objects of religious worship. Sometimes they might secure this by the authority of the kings themselves. Antiochus II. had his favourite Pythermus worshipped as Herakles (Athen. vii. 289 f.), and Ptolemy II. consecrated his mistress Bilistiche as Aphrodite (Plut. *Amat.* 9). Consecration sometimes took place by the authority of a Greek State.

So Athens conferred *heroic* honours after his death upon Diogenes, who had commanded the Macedonian garrison in the Piræus (title of εὐεργέτης, priest, τέμενος, games [*CIA* ii. 467, 24; 481, 57; 1669]). Aratus after his death was worshipped with *heroic* honours at Sicyon; and, as in the case of the deified kings, it was asserted that his mother had really conceived him of a god (Polyb. viii. 14. 7; Plut. *Arat.* 53; Paus. ii. 8. 2, 9. 4). Philopœmen after his death was worshipped with *divine* honours at Megalopolis (altar, τέμενος, games [Plut. *Philop.* 21; Pans. viii. 51. 2; Diod. xxix. 18; Liv. xxxix. 50; Ditt. *Syll.* 210]).

Probably to this age, and not an earlier, belongs the consecration of the athletes of former generations who had brought glory to their cities, like Theagenes, who was worshipped as a god at Thasos (Paus. vi. 11. 2), Oebotas of Dyme (Paus. vi. 3, vii. 17. 3 and 6), and Diognetus the Cretan (Ptol. Heph. *ap.* Phot. *Bibl.* p. 151*a*, 20). Other consecrations were the act of gilds or associations, who worshipped their founders or distinguished members. So we find a gild of Dionysiastæ (2nd cent. B.C.) in the Piræus 'heroizing' a certain Dionysius (ὅπως ἀφηρωσθεῖ Διονύσιος) (*Mitth. Ath.* ix. [1884] 279 f., 288 f.), and something like a heroic cult of their founder was maintained in the philosophical schools created in the form of religious gilds by Plato and Epicurus. In the case of Plato, the story of a miraculous birth was again circulated; he was the son of Apollo (Diog. Laert. iii. 1. 2; Olympiod. *Vit. Plat.*). So, too, Hippocrates seems to have been worshipped in schools of medicine, not in Cos only, but in the Greek world generally (Luc. *Philops.* 21). Sometimes the consecration took place according to testamentary dispositions, which founded an association for the cult of the testator, as in the case of a family of Thera, whose *herōon* is the subject of the will of Epicteta (*CIG* 2448), and in the case of Epicurus.

When the power began to pass from the hands of kings to that of Rome, the Greeks, in transferring their homage, continued the forms of religious worship. The cult which replaced that of the Hellenistic kings was that of the goddess Rome. Smyrna was the first Greek city to erect a temple to Rome in 195 B.C. (Tac. *Ann.* iv. 56), and the cult later became general. The Roman general Titus Flamininus a few years later was receiving divine honours in Greece (Plut. *Flamininus*, 16). In the last cent. B.C. it seems to have become the usual thing for Roman governors to be worshipped by the provincials under their rule (Cic. *ad Q. frat.* i. 1, 26, cf. *ad Att.* v. 21; Suet. *Aug.* 52); the notorious Verres in Sicily had games (*Verria*) celebrated in honour of his divinity (Cic. *Verr.*, Orat. ii. 2. 21). Of the numerous temples erected to Pompey (τῷ ναιοῖς βριθοντι πόση σπάνις ἔπλετο τύμβου, *Anth. Pal.* ix. 402) no material trace has been recovered; but two inscriptions, one from Ephesus and one from the island of Carthæa, show the sort of worship offered to Julius Cæsar by the Greeks in his day of power. The first (*CIG* 2957) describes him as 'God manifest and universal saviour of humanity'; and the second (*CIG* 2369), as 'God and Emperor and Saviour of the world.' But now the ruling race itself was prepared to follow the Greek fashion.

2. Deification under the Roman Empire.—For the old Romans the gap between gods and men was not bridged as it was for the Greeks. They had indeed, like other primitive peoples, rites for placating the spirits of the dead (*di manes*), but such spirits did not pass into gods proper; there was no intermediate class of heroes. The offering of divine honours to living men would have seemed to them highly shocking. As, however, the Greek element grew in Rome, new ideas found entrance. Scipio Africanus was not worshipped, but there was believed to be something supernatural about him, and stories were told of his divine birth (Liv. xxvi. 19). In the last century of the Republic, rites proper to divine worship were offered to Metellus Pius (Macrob. *Sat.* iii. 13. 7) and Marius Gratidianus (Cic. *Off.* iii. § 80; Seneca, *de Ira*, iii. 18); but in the former case by private friends, members of a Hellenized aristocracy; in the latter, by a semi-Hellenic populace; in neither case, with official authorization.

The note of that Empire which Julius Cæsar conceived was an assimilation in which the old Roman tradition lost its prerogative. Under his rule the Roman people were allowed (Suet.) or encouraged (Dio) to adopt the Greek forms of homage. The image of Cæsar now figured along with those of the gods. A month of the year was called by his name. In 45 B.C. a temple was even founded to Juppiter Julius and his Clementia, in which M. Antony was to serve as flamen (Dio Cass. xliv. 6; Suet. *Cæs.* 76; App. *Bell. Civ.* ii. 106). On Cæsar's murder in 44 the scheme collapsed (Cic. *Phil.* ii. 43); but in the comet which appeared the following year the Roman populace saw Cæsar's spirit raised to heaven (Plin. *HN* ii. 94; Virg. *Ec.* ix. 47; Ov. *Metam.* xv. 843 ff. etc.). When the Cæsarian party triumphed, the worship of the dead Cæsar was put upon a regular footing; public policy was now shaped by the cautious spirit of his nephew. A law passed by senate and people set Divus Julius among the gods, and a temple was erected (42 B.C.) to him on the spot where his mangled body had been displayed to the people (Dio Cass. xlvii. 18; App. ii. 148; *CIL* i. 626, ix. 2628). There is no reason to suppose that *divus* had at this time acquired a meaning different from *deus*; it was the precedent of the Cæsars which limited it to those divinities who had once been men (Mommsen, *Staatsr.* ii.^{3} 756, note 1; Wissowa,

p. 285). In *CIL* x. 3903, we find *dei Caesaris* alongside of *divi Augusti* (cf. *ib.* 1271). So, too, we find Καῖσαρ ὁ θεός as the proper designation of Julius Cæsar in Greek (Strabo, viii. 381, etc.).[1] From Rome the worship soon spread to other places. An altar of Divus Julius is mentioned at Perusia in 41 (Dio Cass. xlviii. 14; cf. *CIL* i. 697, 698). In the Western provinces the cult seems to have been maintained only in the colonies founded by Julius Cæsar. Antony and Sextus Pompeius, who disputed with the adoptive son of the *divus* the empire of the world, each advanced his own claims to divinity. Antony masqueraded in the character of Dionysos, and at Athens followed the precedent of Antiochus Epiphanes by demanding a dowry as the husband of the city-goddess (Plut. *Ant.* 24; Dio Cass. xlviii. 39; Athen. iv. 148; M. Seneca, *Suas.* i. 6; Vell. Paterc. ii. 82; Plin. *HN* viii. 55). Sext. Pompeius claimed to be the son of Neptune (Dio Cass. xlviii. 19; App. v. 100; Plin. *HN* ix. 55). When the young Cæsar stood forth supreme and brought to the vexed world an era of peace, the tide of worship could not be stayed. But the temper and policy of the new ruler inclined him rather to reduce such honours to their minimum, and among the Romans to bring them into connexion with the national tradition rather than with foreign usage. In 27 B.C. he accepted from the Senate the name of *Augustus*, which connoted sanctity without asserting absolute divinity (Dio Cass. liii. 16; Suet. *Aug.* 7; Ovid. *Fasti*, i. 609; Censorinus, *de Die Nat.* 21. 8). He showed the same moderation in the provinces.

But first three sorts of cults offered to the Emperor must be distinguished: (1) the *provincial* cult, maintained by each province as a whole at one of the provincial centres; (2) the *municipal* cults, maintained by the separate cities; (3) the *private* cults, maintained by individuals or voluntary associations. The first were far more completely controlled (if not instituted) by the Imperial Government; and to them alone strictly applies the rule laid down by Augustus, that he was not to be worshipped save in association with the goddess Rome. Asia and Bithynia were the first provinces to be authorized to establish a provincial cult of this sort; and temples to Rome and Augustus were reared at Pergamum and Nicomedia. This permission did not extend to resident Roman citizens; they were to worship, not Augustus, but Rome and Divus Julius in temples of their own at Ephesus and Nicæa (Dio Cass. li. 20; cf. Tac. *Ann.* iv. 37). In the West the first provincial cult seems to have been instituted in 10 B.C., when an altar was consecrated to Rome and Augustus at Lugdunum (Lyons) for the province of the Three Gauls. A few years later a similar altar was consecrated for Germania at Oppidum Ubiorum (Cologne). To the municipal and private cults much greater liberty was allowed. In ordinary practice, however, the cities seem under the early Empire to have combined the name of Augustus with that of Rome. The cult instituted in A.D. 11 by the colony of Narbo is addressed to the *numen* of Augustus alone (*CIL* xii. 4333). Or, again, the municipal and private cults might emphasize the Emperor's deity by giving him the name and attributes of some traditional god. In Egypt and Caria, Augustus is Zeus Eleutherios (Καῖσαρ, παντομέδοντι καὶ ἀπείρων κρατέοντι | Ζανὶ τῷ ἐκ Ζανὸς πατρὸς Ἐλευθερίῳ, *CIG* 4923; cf. 4715; *BCH* xi. [1887] 306; and the expression 'god of god,' *i.e.* son of Divus Julius, in Ditt. *Inscr. Orient.* 655); at Alabanda in Caria, Apollo Eleutherios (*CIG* 2903*f*=Ditt. *Inscr. Orient.* ii. 457). At Athens the temple begun by Pisistratus to Zeus Olympios was consecrated to the *genius* of Augustus (Suet. *Aug.* 60). Not only Augustus himself, but other members of the Imperial family become objects of worship. Athens honours his grandson Gaius as νέος Ἄρης (*CIA* iii. 444); Mitylene, his son-in-law Agrippa as θεὸς σωτήρ (*CIG* 2176); Nyssa has a special priest for his stepson Tiberius (*CIG* 2943). A temple was consecrated to Octavia after her death by Corinth (Paus. ii. 3. 1). The first day of each month in Egypt and Asia was called Σεβαστή (Kaibel, *Inscr. Græc. Sic.* 1890, p. 701). Games, among the Greeks a form of religious festivity, were everywhere instituted in honour of Augustus or members of the Imperial house (Ῥωμαῖα Σεβαστά, Καισάρεια Ἀγριππῆα, Ditt. *Syll.*[2] 677; Suet. *Aug.* 98, etc.). Even king Herod built temples and instituted games to Augustus and Rome (Jos. *BJ* i. 21, §§ 403 f.). In Italy the cult of Augustus seems to have spread largely before his death; temples and priests (*sacerdotes* in some places, *flamines* in others) are found in existence, at any rate, in colonies which Augustus had founded, and in cities of which he was in some way the patron (Beneventum, Cumæ, Fanum, Fortunæ, Pisæ; see Beurlier, *Culte impérial*, p. 17; Hirschfeld, p. 838). It was at Rome that the worship was most severely restrained. The Emperor refused to be saluted by his fellow-citizens as god, or to allow a temple to him to be erected in the capital. But he permitted his name to be inserted in the ancient hymns of the Salii (Mommsen, *Res gestæ divi Aug.*, 1883, p. 44), and the Genius Augusti to be worshipped along with the Lares of the city—*i.e.* so far as the worship of a living man was admitted, it must put off its alien complexion and be screened by the formulæ of the national religion, though here again the restraint could not extend to the action of individuals or the exuberant language of literature.

The poets, inspired as they were by Greek ideals, and using the old mythological conceptions without any belief in their literal truth, let their fancy run free in expressing the Emperor's deity (Virg. *Georg.* i. 24 f.; Hor. *Od.* iii. 3. 11; 5. 1 f., 25. 4 ff., etc.).

In Rome, too, men found pleasure in identifying the Emperor with some particular one of the old gods; sometimes it was Apollo (Suet. *Aug.* 70; Serv. *ad Ecl.* iv. 10); sometimes it was Mercury (Hor. *Odes*, i. 2. 41 f.); cf. Reitzenstein, *Poimandres*, 1904, p. 176 f.); sometimes it was Juppiter (Hor. *Epist.* i. 19. 43; Preller-Jordan, *Röm. Myth.* ii. 445).

When Augustus died (A.D. 14), the Roman people might at last worship him without restraint. After the precedent set in the case of Julius Cæsar, he was declared a *divus* by a decree of the Senate. As the timely appearance of a comet was not to be counted upon, an eagle was liberated at the funeral, to represent visibly the soul of the Emperor flying to heaven; and a senator was found to bear witness to having seen the actual Emperor ascend (Suet. *Aug.* 100). Tiberius followed his predecessor in restraining the divine honours offered to himself. It is only due to his resolution that we do not to-day say 'Tibery' for September or October, as we say 'July' and 'August' in memory of the first two *divi*. The Greeks, indeed, were permitted as before to worship the living Emperor, and to consecrate temples to himself and his mother Livia, while the merely figurative character of the worship was emphasized even more than before by the 'God-Senate' (θεὸς σύγκλητος) taking the place of the goddess Rome in the cults maintained with Imperial sanction by the provincial centres (Tac. *Ann.* iv. 15). Municipal priests of Tiberius are found in one or two Italian towns (Venusia, Surrentum)

[1] That the Daphnis who is deified in Virgil, *Ec.* v., represents Julius Cæsar was suggested by the scholars of antiquity and is commonly repeated to-day. Daphnis has, however, nothing but his deification in common with Cæsar; and, since the deification was a part of the old Sicilian story, it forms a very slender ground for the identification.

(Hirschfeld, p. 842), but in Rome itself no such cult was tolerated, nor would Tiberius entertain the request of the province Bætica to be allowed to build a temple to him and his mother (Tac. *Ann.* iv. 37, 38). The worship of Divus Augustus, on the other hand, Tiberius piously furthered. A temple was begun to him in Rome; and, whereas only altars had hitherto been erected to him in the Western provinces, Tarraco was allowed in A.D. 15 to build him a temple (Tac. *Ann.* i. 78). In the East, Cyzicus was even punished for slackness in this cult (Tac. *Ann.* iv. 36). The severity with which the transgressions of individuals were visited increased as the reign of Tiberius went on. It became punishable even to change one's garments before an image of Augustus, or carry a ring with his effigy engraved upon it into an unclean place (Suet. *Tib.* 58). At the death of Tiberius it was seen that the formality of consecration, if religiously empty, had some political value as a verdict passed upon a deceased ruler by his subjects. The Senate refused to raise Tiberius to divinity. It had, indeed, not improbably been the intention of Tiberius that consecration should by no means become a rule, but should be confined to the founders of the dynasty, Julius and Augustus. But Caligula, who succeeded him (A.D. 37), was so far his opposite that he claimed the honours which Tiberius had repelled. No mummery was too extravagant for this wretched maniac. A temple was built for him on the Palatine; he made himself the equal of Juppiter, and the Roman aristocracy were compelled on pain of death to offer him all the forms of religious homage. On his assassination in 41, the Senate refused him also divinity; his reign was a mad episode; but under Claudius we register further developments of a lasting kind in the worship of the Emperors. Caligula had already caused his sister Drusilla to be consecrated by the Senate as the first *diva*. Claudius had his grandmother Livia associated as *diva* with her husband Divus Augustus (Suet. *Claud.* 11; Dio Cass. lx. 5); and he permitted (between A.D. 50 and 54) a temple (not an altar) to be erected to himself in Britain at Camulodunum (Tac. *Ann.* xiv. 31; Sen. *Apokol.* 8; cf. Kornemann, p. 102, note 2; Toutain, *Cultes païens*, p. 86). Claudius after his death (54) became the third *divus* by decree of the Senate; his elevation provoked the lampoon called *Apokolokynthosis*, which has come down to us among the works of Seneca.

After the precedent set by the elevation of Claudius, consecration became a normal formality at the decease of every Emperor, unless it was desired to affix a stigma to his reign. The outlines of the worship of the Emperors remained very much as they had come to shape themselves under Augustus, Tiberius, and Claudius, *i.e.* in the Greek East various local cults of the reigning Emperor, whilst at the provincial headquarters the cult of Rome and Augustus became, after the apotheosis of Claudius, a cult of the *θεοὶ Σεβαστοί*, among whom the reigning Emperor was included; in the Western provinces, the cult of Rome and (the first) Augustus became a cult of Rome and (the reigning) Augustus or 'Romæ et Augustorum.' Beside the original *altars*, temples would seem to have generally arisen after the precedent of Tarraco; at Lyons, in the latter part of the second century, the altar was consecrated to the cult of the reigning Emperor ('Cæsaris nostri'), the temple to the deceased Augusti (Kornemann, p. 109). It also remained common for other members of the Imperial family to be consecrated on their decease (Poppæa and her daughter under Nero, Domitilla, the wife of Vespasian, the infant son of Domitian, the father of Trajan, etc.), although after Hadrian the privilege seems generally to have been restricted to Empresses[1] (see list of *divi* in Beurlier, p. 325 f.). And, although the worship of the living Emperor was not usually countenanced in Rome, the worship of his *numen* or *genius* was part of the official religious system. The oath generally recognized in the business of the Empire was by the genius of the Emperor (*ὁ Σεβάστιος ὅρκος*, cf. Apul. *Metam.* ix. 41). In the laws of Salpensa and Malaga the formula for swearing inserts, between Juppiter and the *penates*, first the list of consecrated *divi*, and then the genius of the reigning Emperor.

None but the worst Emperors followed Caligula in demanding for themselves divine honours during their lifetime. Nero did so, and a temple to him as *divus* would have been erected in Rome but for its ill omen, 'for the honour of the gods is not conferred upon the ruler before he has ceased to act among mankind' (Tac. *Ann.* xv. 74). Domitian established a worship of himself, and was addressed at court as 'dominus et deus' (Dio Cass. lxvii. 13; Suet. *Dom.* 13; Martial, v. 8). Commodus had himself worshipped as Hercules, and was fond of masquerading with club and lion-skin (Lamprid. *Commod.* 8, 9; Herodian, i. 14. 9, 15. 2–5).[2] Aurelian (A.D. 270–275) was the first Emperor of sound understanding who took to himself the titles of divinity ('dominus et deus'), but he already had conceived the idea of giving the Roman autocracy an expression no less ceremonious than that of Oriental monarchy. What Aurelian conceived Diocletian (A.D. 284–305) carried out. Among his measures was one to introduce the custom of prostration, and to take for himself and his colleague the names of Jovius and Herculius. When Christianity became dominant with Constantine, worship of the earthly sovereign had, of course, to cease. To the forms, however, of the old worship a political or social value had come to attach which made it difficult to abolish them absolutely. The Christian Emperors as late as Valentinian I. (A.D. 364–375) were officially consecrated after their death (Ausonius, *Gratiar. act.* 7), and the use of the term *divus*, in common parlance, of a deceased Emperor continued for centuries (Gregory of Tours, *Hist. Franc.* ii. 8; *Cod. Just.* v. 27. 5, etc.). The provincial temples of the Emperor had become so much a centre for public festivities, etc., that Constantine allowed them to continue, stipulating, however, that no rites of pagan sacrifice should be performed in them (Wilmanns, *Exempla Inscr. Latin.* [1873] 2843, l. 45 f.). Such temples were no longer dedicated to any Emperor personally, but to the Imperial Family (*gens Flavia*) in the abstract. The priests of the Imperial cult and the *sacerdotales* (ex-priests) had come to form an important element in the cities of the Empire, discharging secular as well as religious functions. These, therefore, the Christian Empire allowed to subsist. Since, however, they still bore the insignia of old pagan *coronati* or *sacerdotales*, there was a feeling against them among the religious (Synod of Elvira, Canon 55). Christians did, indeed, accept the office (*CIL* viii. 8348), but Pope Innocent I. (Mansi, iii. 1069) pronounced that all who had done so after baptism were disqualified for the Christian priesthood. The municipal *flamines* continued locally as secular officials with the old name as late as Justinian (*CIL* viii. 10516; cf. Synod of Elvira, canons 2 and 3).

We have seen that the offering of divine honours to men arose among the Greeks as a formality

[1] Such consecration did not, however, imply necessarily the persistence of the cult when the Imperial power had passed to other families.

[2] It was always, of course, possible for private persons to use forms of flattery, and the Imperial portraits which have come down to us often represent them in the conventional guise of some old divinity, the Empresses especially as Demeter; this need not signify more than the fancy of some individual.

whose religious significance was mainly that it showed how empty religion generally had become. Can we say the same of the mass of organized cults we have just surveyed—cults which endured throughout the Græco-Roman world for more than three centuries? It is obvious that to some extent we can. Among the Roman aristocracy, among the better educated people everywhere, the ascription of deity to the living Emperor, if not mere flattery, as in the case of the Augustan poets, was no doubt understood in a metaphorical sense which emptied it of value properly religious. The better Emperors, as we saw, repelled such homage, and Vespasian jested on his death-bed at the court fiction ('Vae, puto, deus fio,' Suet. *Vesp.* 23).

But how, if these practices had so little meaning, could they go on so widely and so long. The answer to this might perhaps be as follows. (1) The practices were not meaningless in so far as they reposed upon a genuine sentiment, if not, strictly speaking, a religious one. Octavianus Cæsar brought the world relief from long anarchy, and for the following centuries order and peace around the Mediterranean were felt to be bound up with the Imperial government. Real feelings of loyalty to the head of the world-State may, therefore, have sought symbolical expression, and the symbol, according to the conditions of the ancient world, could be nothing but a religious formality.[1] The Christians appeared rebels to the civil power when they refused to throw incense upon the altar consecrated to the genius of Augustus. (2) Among the masses of the people, among those to whom the Emperor was a distant and unseen power, some real belief in his deity may have existed. The formalities of worship impressed the mind insensibly, and in the sphere of belief there are notoriously many half-shades that cannot give a clear logical account of themselves. The common oath by the genius of the Emperor must have acted continually to suggest his actual presence. The exclamation Ὦ Καῖσαρ seems to have been the one which naturally sprang to the lips of an over-driven menial (Luc. *Lucius*, 16). Especially where the personality of an Emperor had impressed itself upon the popular mind might it be believed that he had at death actually become an operative supernatural power. Images of Marcus Aurelius were to be seen among the *penates* of Roman houses as late as the time of Diocletian, and he was believed to reveal the future to men in dreams (Capitolinus, *Marcus*, 18. 6 f.). (3) The cults of the Emperor once established served various interests incidentally. The prestige and profit brought to its locality by an illustrious temple, the festivities and holidays connected with a provincial or municipal cult, would tend to perpetuate it apart from religious motives; the motives to-day which maintain the observance of Christmas or Easter are by no means all religious. So, too, the natural instinct of men to form societies of a friendly or convivial kind could be gratified under cover of Cæsar-worship, just as they had been gratified by *quasi*-religious associations under the Ptolemies (cf. the clubs of *Cultores Augusti*, φιλοσεβαστοί, etc., in Beurlier, p. 258 f.). The cosmopolitan gild of dramatic artists thought it politic to set the name of Hadrian as νέος Διόνυσος alongside of the old Dionysos who was their patron deity. So, too, the social ambitions of the freedman class found an opportunity of gratification in the institution of the *Augustales* in the Latin cities of the Empire (Boissier, *Religion romaine*, i. 162 f.).

Deification, we have seen, had not been among the Greeks and Romans a recognition of the divine right of kings *per se*, but of the material or moral power of individuals. And under the Roman Empire, if the Emperors alone were divine for the whole realm by the theory of the State, other men might attain deity for a particular locality or a particular sect. The deification of widest range after that of members of the Imperial family was that of Antinoos, the youth loved by Hadrian. The Emperor on his death (A.D. 130) encouraged the worship of him as a god; temples and innumerable statues were erected to him, and a star was discovered which was clearly his soul in heaven (Dio Cass. lxix. 11; Paus. ix. 7; Spart. *Had.* 14. 7; *CIL* xiv. 2112, etc.). Theophanes of Mitylene, the friend of Pompey, was worshipped as a god by his native city after his death (Tac. *Ann.* vi. 18; coins of Mitylene), and, similarly, Cnidus voted his contemporary Artemidorus τιμαὶ ἰσόθεοι (*Inscr. in Brit. Mus.*, no. 787). The vote recorded in the inscription was passed in his lifetime; but the divine honours were probably not to be offered till after his decease. Apollonius of Tyana, according to Philostratus, though he disclaimed deity, was saluted as a god by large numbers of people (iv. 31; cf. iii. 50); Caracalla built a temple to him (Dio Cass. lxxvii. 18), and he continued for long to be an object of popular worship (Vopisc. *Aurelian*, 24).

The practice of offering *heroic* honours to the dead became much more general in the later times of pagan antiquity. Such honours were sometimes conferred publicly by a city or association as a special distinction, as, *e.g.*, by Tarsus upon the philosopher Athenodorus (pseudo-Lac. *Macrob.* 21; cf. Head, *Hist. Num.*, 1887, p. 488); Athens (*CIA* iii. 889); Cyzicus (*Mitt. Athen.* ix. [1884] 28 f.).[1] But the private consecration of the dead by their relatives and friends became increasingly common in Roman times. Cicero resolved on the 'apotheosis' of his daughter and designed a temple for her (*ad Att.* xii. 36; cf. the temple of Pomptilla, *Inscr. græc. Sic. et It.* 607).[2] The salutation of the dead as 'hero' or 'heroine' becomes an ordinary formula on grave-stones; ἡρῷον becomes an ordinary name for a tomb. That many a bereaved person who had such an epitaph engraved meant to imply that his or her dead had actually passed into a life of higher power or beatitude, is shown by such phrases as 'Thou livest as a hero, Thou art not become a dead thing' (ζῇς ὡς ἥρως, καὶ νέκυς οὐκ ἐγένου, Kaibel, *Epig. græc.*, 1878, p. 433). But the custom of coupling the title 'hero' in common speech with the name of a dead man became so general that it survived in Christian times, 'hero' being now simply an equivalent of μακαρίτης, 'sainted,' just as in the West *divus* survived as the title of deceased Emperors (Deneken, in Roscher, col. 2547 f.; Rohde, *Psyche*[4], 646 f.).

LITERATURE.—Deneken, art. 'Heros,' in Roscher; Rohde, *Psyche*[4], 1907, p. 146 f. etc.; Beurlier, *De divinis honoribus quos acceperunt Alexander et successores eius* (Paris, 1890); Kaerst, 'Die Begründung des Alexander- und Ptolemäer-kultes in Aegypten,' *Rhein. Mus.* vol. lii. (1897) p. 42 f.; H. von Prott, 'Das ἐγκώμιον εἰς Πτολεμαῖον und die Zeitgeschichte,' *ib.* vol. liii. (1898) p. 460 f.; Kornemann, *Zur Geschichte der antiken Herrscherkulte* (Leipzig, 1901); E. R. Bevan, 'Worship of the Kings in the Greek Cities,' in the *English Historical Review*, vol. xvi. (1901); Breccia, 'Il diritto dinastico nelle monarchie dei successori d'Alessandro Magno' (1903), p. 80 f., in Beloch's *Studi di storia antica*; Beloch, *Griech. Gesch.*, vol. iii. Otto, *Priester und Tempel im hellenistischen Aegypten*, vol. i. (1905) p. 138 f. For Pergamum: Cardinali, 'Il regno di Pergamo' (1906), p. 139 f., in Beloch's *Studi di storia antica*. For Roman Empire: Preller, *Röm. Mythologie*

[1] If the Empire was one, some universal religion was needed to extend over its confused variety of national, tribal, and civic gods. Cf. art. CÆSARISM.

[1] There seem even cases where the title 'hero' is applied in public inscriptions to persons still living (Paton, *Inscr. of Cos*, 1891, p. 76; cf. *CIG*, 2583).

[2] Sometimes the dead was represented in the guise of some god, especially Dionysos or Hermes.

E. R. BEVAN.

DEISM.—I. *HISTORICAL.*—The movement of religious thought known as 'Deism' was of comparatively brief duration. Its rapid rise into notoriety, its short-lived prevalence, and its gradual subsidence all fall within the limits of a single century. Roughly speaking, the beginning of the movement was contemporaneous with the Revolution of 1688. Its epitaph was pronounced in 1790, when Burke could speak of the Deistic writers as already forgotten. Nor is the speedy exhaustion of interest difficult to explain. The conditions which combined to direct men's attention to the Deistic problem were transient; and the whole dispute was too frigid and too little in contact with real life to affect the deeper currents of religious thought. Superficially, much excitement was stimulated, until the air was thick with controversial writings. But, with a few exceptions, neither was any conspicuous literary merit displayed by the controversialists, nor did their arguments penetrate far into the secrets of the spiritual life. This serves to explain why the religious debates of the 18th cent. have faded from the common memory more completely than those of earlier periods. On the other hand, to the student Deism presents special points of interest. English religion would never have reached its present condition if it had not passed through the stage with which we are about to deal.

If the movement is to be understood in relation to the general development of theological thought, it will be necessary to seek for an explanation of its origin in a period when the name 'Deism' had not yet come into vogue, and in speculations the true issue of which was not anticipated by their own authors. Halyburton, in his book entitled *Natural Religion Insufficient* (1714), was the first to name **Lord Herbert of Cherbury** as the parent of Deism. The charge was endorsed by Leland, whose *View of the Deistical Writers* (1754) contains much carefully amassed material, very useful to later students. Since then Lord Herbert's responsibility, whether to his credit or discredit, has been commonly recognized, and this in spite of the fact that his famous book *de Veritate* was composed with a purpose quite different from that to which its arguments subsequently contributed. The book deserves an epithet often applied in cases where there is little justification for so strong a term. It was, without exaggeration, 'epoch-making.' It initiated a line of thought and a method of religious speculation pregnant with results, the full measure of which has not even to-day been exhausted. No better introduction to the study of Deism can be provided than a brief analysis of the main theses which Lord Herbert sets out to establish. The title of the book, given in full, clearly indicates the writer's purpose: *de Veritate, prout distinguitur a Revelatione, Verisimili, Probabili, et a Falso* (Paris, 1624). At the basis of the author's theory is his belief in the existence of *notitiæ communes*, or innate principles. These he explains in his chapter 'de Instinctu Naturali,' to be distinguished by six marks, viz. Priority, Independence, Universality, Certainty, Practical Necessity, and Immediate Cogency. Ideas to which these marks belong are imprinted on the mind by the hand of God. They are axioms, neither requiring nor admitting proof. When dealing with the subject of religion, he distinguishes five principles as exhibiting this primary character, and consequently independent of all tradition, whether written or oral. They come direct from a heavenly source and are common to all religions. These five fundamental truths are the following: (1) that God exists, (2) that it is a duty to worship Him, (3) that the practice of virtue is the true mode of doing Him honour, (4) that man is under the obligation to repent of his sins, and (5) that there will be rewards and punishments after death. The axiomatic character claimed on behalf of principles such as these is open to debate, and Lord Herbert's theories were afterwards subjected to damaging criticism by Locke. But, whatever opinion he held as to the validity of Lord Herbert's assumptions, it remains true that in his works we are brought face to face with the principles which lie at the root of Deism. Here we find assertion of the competence of human reason to attain certainty with regard to fundamental religious truths, and insistence upon the indissoluble connexion between religion and the practical duties of life. This is precisely the theme on which the Deistic writers enlarged. The pivot of the whole controversy is the disputed question of the sufficiency of natural reason to establish religion and enforce morality—a sufficiency as vehemently asserted by the Deists as it was denied by their opponents.

Much misunderstanding will be avoided if it be remembered from the outset that the Deistic controversy was in the main philosophical rather than religious. Had it not been so, it would have been incorrect to indicate a metaphysician like Lord Herbert of Cherbury as the forerunner of Deism. Disappointment awaits those who expect to find in the writings of this period any searching analysis of a living spiritual experience. The controversy arose not from the attempt of the soul to explain to itself its joys and fears in the presence of God, but from the desire of the thinker to remove from his theory of the world inconsistencies of which he was continually becoming more uncomfortably conscious. The details of the controversy will show that the chief impulse came from the wish to find a way of reconciliation between the then commonly accepted philosophic view of the Divine nature and the facts of observation. And new facts were the order of the day. It was a period of discovery and of the rapid acquisition of all kinds of knowledge. Information was pouring in with regard to the religious systems of other parts of the earth. It was no longer possible to live in a religious world limited by the horizon of Western Europe. Travellers were bringing home from recently discovered, or re-discovered, countries reports of imposing civilizations, in which the sanctions of civil order were provided by religions of the utmost diversity in origin and character. In this way materials for the study of comparative religion began to be collected, and it became possible to form some conception of the bewildering multiplicity of religious customs, ceremonies, and doctrines throughout the world. No philosophic explanation of man and man's religious faculties could claim to be adequate which left all this mass of new material out of account.

At the same time, other more subtle influences were at work stimulating man's natural desire to unify his knowledge. In the domain of physical science the process of unification was advancing with unparalleled rapidity. The so-called 'natural philosophers,' among whom were numbered the greatest intellects of the day, were engaged in establishing those wide generalizations which have formed the basis of modern science. The visible success thus achieved, deserving and receiving the applause of the world, prompted the philosophic student of religion to search for some wide formula that would cover his facts as satisfactorily as the formula of Newton covered the phenomena of the physical world.

1. **Forerunners of Deism.**—It is far from easy to form any estimate of the phase of intellectual development through which the nation was passing at the time when it was disposed to accept, or at all events to discuss, the novel theory of religion which the Deists proposed. English philosophy has never flowed in a very wide or deep stream. It is a common reproach that as a nation England has been in the past, and remains to the present day, strangely insusceptible to the influence of abstract ideas. It is difficult to deny the truth of the criticism. Even the controversies of the Reformation were in England decided to a great extent upon practical considerations. Little atten-

tion was for the most part paid to the examination of first principles. An exception to the general rule, however, is afforded by **Hobbes** († 1679). Together with other writers of the time, he exhibits a strong prejudice against the scholastic philosophy. In certain respects he represents, with some characteristic English peculiarities, the sceptical tendency of the Renaissance. It was, indeed, chiefly as an exponent of political philosophy that he made his mark and arrested the attention of his contemporaries. With the political theories which he defended, and with the controversies which ensued, we are not concerned. His importance in relation to the course of religious speculation lies rather in the temper which he contributed to produce than in the acceptance of his principles by any body of disciples. His self-sufficiency, his obvious one-sidedness, his disregard of necessary qualifications, and his rigorous insistence on the most paradoxical conclusions from his premisses aroused an angry opposition. Hence it is not surprising to come across the statement that, while he had innumerable opponents, his supporters numbered but one. It was a true instinct which made the men of his time feel that the tendency of the *Leviathan* was in the direction of a thoroughgoing infidelity. The literature of the Restoration bears witness to the existence of a general opinion that danger was to be apprehended from the spread of his influence. Though Hobbes himself was utterly opposed to that kind of natural religion which afterwards formulated itself as Deism, yet he was, in fact, one of the pioneers of the movement. As much as any other single writer he gave the impulse to religious speculation, and, by helping to shake the old confidence in tradition, contributed to the removal of one of the main obstacles to the introduction of Deism.

Another and a very different element at work in the intellectual life of the nation was derived from the influence of the **Cambridge Platonists** (*q.v.*). They were a small body standing much aloof from the general life of the country, who from the vantage ground of academic seclusion surveyed the troubled course of the political struggle and the contentions of the warring sects. For themselves, they desired to establish on rational grounds a Christian philosophy, leaving to others the barren victories in the field of popular controversy. In them the genuine philosophic instinct to pursue the search for ultimate truth was unmistakably present. It was their dominant motive. Influenced by the wide-spread reaction against the Aristotelianism of the Middle Ages, they discovered, in a modified form of Platonism, a theory which afforded satisfaction alike to their religious and to their intellectual requirements. In the forefront of their system they placed the conception of the human reason as receptive of illumination from the Divine source. From the elevation of the standpoint thus attained—so it seemed to them—the questions at issue between the sects were reduced to their true dimensions, and lost the exaggerated importance which had been conventionally attached to them. In the speculations of these students the ethical motive is markedly prominent. They insisted on the immutability of the moral law and on its independence of any positive commands, human or Divine. For the most part they were inclined to abstain from controversy. But some of them found it expedient to meet the theories of Hobbes with an explicit refutation. Against his materialism, and his speciously simple reduction of all human motives to various manifestations of self-love, they opposed their Platonic idealism and their belief in the existence of moral principles to which an inviolable obligation essentially belonged. At first sight it might appear paradoxical to maintain that two systems so consciously and directly opposed to one another as those of Hobbes and the Cambridge Platonists both helped to prepare the ground for the growth of Deism. But it will be remembered that the effect of the writings of Hobbes has been described as in the main negative. He helped to sap the defences of authority, whereas the Cambridge School contributed something more positive, accustoming the minds of men to the hope of finding in their own reason a judge capable of bringing to an end the weary series of doubtful disputations over matters of faith.

In a still more marked degree is it true that the writings of **Locke** († 1704) produced an effect upon the current of religious thought which he neither intended nor approved. Locke was not a Deist, though the reproach was naturally enough cast in the teeth of the man apart from whose influence Deism would never have enjoyed the vogue to which it eventually attained. While his relation to the movement was unquestionably close and intimate, it was at the same time far from simple. For not only did the Deists profess to draw their inferences from his principles, but many, perhaps most, of the opponents of the movement likewise were convinced adherents of his philosophy. Locke may therefore be said to have laid down the lines along which the controversy was destined to move. This he did, above all, by his short but very significant work on the *Reasonableness of Christianity* (1695; see art. LOCKE). In the pages of the writers who followed along the path where he led the way we shall find the same ostensible attempt to simplify the ancient faith, at first with an apologetic purpose, then with a gradually increasing and more overt hostility; the same principle of discrimination between the supposed valuable and worthless elements of the Creed; the same pre-eminence assigned to the ethical teaching of Christianity; the same conception of religion as a moral philosophy and a code of precepts rather than a power enabling the enfeebled will; the same treatment of miracles and prophecy as external evidences of the truth of the claims of Christianity; the same anxiety to discover a reconciliation between belief in the absolute impartiality of the Divine goodness and the position of privilege assigned to revealed religion. It would not, of course, be true to say that all these ideas were novel when they were propounded by Locke. Many of them had already a long history behind them, and had provided the subject-matter of mediæval disputations. But what is worthy of remark is that here, for the first time, we meet them in systematic combination with one another. They are made to converge upon a certain point, and to conduct to a conclusion which involves certainly the modification, and possibly the repudiation, of important elements in the hitherto accepted creed.

2. **Deism in progress.**—Those who wish to be supplied with a chronological list of the Deistic writers may be referred to the work of Leland (see Literature at end). It will be more profitable for our present purpose to select certain writers, not necessarily those of the greatest reputation, but those most typical because representative of some critical moment in the development of the movement. Of these the first to deserve mention is **John Toland**, who in 1696 published his *Christianity not mysterious, showing that there is nothing in the Gospel contrary to Reason nor above it, and that no Christian Doctrine can properly be called a Mystery.* The author claimed to be drawing the natural inferences from the premisses of Locke's philosophy; and the title of the book indicates clearly enough in which direction

he pushed forward the argument. Where Locke had urged the 'reasonableness of Christianity,' Toland would interpret the word 'reasonable' as equivalent to 'not mysterious.' This is not in the least what Locke meant. It is a long step further forward along the road which led to the rejection of Christian belief.

The book was of no particular merit, but, owing to the highly charged condition of the intellectual atmosphere, its publication caused a considerable explosion of indignation. It was condemned by the Irish Parliament and ordered to be burnt. The Lower House of the Convocation of Canterbury took cognizance of it, and would have proceeded further, had not the Bishops decided, on a point of law, to take no action in the matter. Though the ecclesiastical authorities did not move, there was a general feeling that it was an abuse of the recently accorded freedom of the press when a young author put forward such crude and revolutionary views as that 'neither God Himself nor any of His attributes are mysteries to us for want of adequate ideas,' and that so far as any Church allows of mysteries it is anti-Christian (cf. Wilkins, *Concilia*, 1737, iv. 631). Toland desired so to enlarge the jurisdiction of reason as to make it co-extensive with the contents of revelation. In deliberate opposition to the principle of earlier writers,[1] he refused to acknowledge the validity of the distinction between apprehension and comprehension. What man could not comprehend was on that account to be rejected as false. Not content with merely stating this general principle, he attempted to give a historical account of the process by which mystery had intruded itself into a Christianity originally devoid of this baser element. He pointed out, correctly enough, that in the language of the NT the word 'mystery' signified not something incomprehensible, but a secret revealed to the initiated. Hence he inferred that the conception of mystery in the sense of that which is beyond the reach of human understanding was alien from the spirit of original Christianity, and he endeavoured to show that a gradual assimilation of the new faith to the lower type of Jewish and heathen religions, the intrusion of Platonic philosophy, and the ambitious projects of an unscrupulous priesthood were responsible for the deterioration.

Although Toland cannot be credited with any large measure of originality, yet his book marks a critical point in the gradual change of men's views with regard to the comparative authority of reason and revelation. A certain arrogant assertion of superiority on behalf of reason was now substituted for that deference which had hitherto been considered the fitting attitude of the human mind in the presence of knowledge communicated from above. Another and more easily recognizable result of his rash speculations was connected with his theories as to the course of early Church history. The discussion of the views which he set forth stimulated a lively inquiry into the nature and value of the documents on which the historian of that period must depend. In a book entitled *Amyntor*, which was published in 1699, Toland himself, taking part in the discussion, endeavoured —or so it was supposed—to undermine the credit of Scripture by calling attention to the large mass of early Christian literature, and by suggesting covertly that canonical and uncanonical writings alike were the offspring of superstition and credulity.

Another new departure was taken when **Anthony Collins**, in 1713, published the *Discourse of Freethinking occasioned by the Rise and Growth of a Sect called Freethinkers*. Collins reiterated and emphasized the claim of reason to pronounce upon the contents of revelation. He advanced beyond the point where Toland had left the matter, by attempting to provide a theoretic justification of the claim to unlimited freedom of inquiry, in all directions, over the whole field of moral and religious speculation. Toland had himself exercised this freedom, but without prefixing any thorough examination of the positive and negative arguments in favour of extending this privilege to all classes. Collins had the acuteness to perceive that the whole of the Deistic argument, involving, as it did, an appeal to the reason of the ordinary man, rested ultimately upon a decision in favour of unconditional individual liberty to pursue investigation, and upon a conviction of individual capacity to discover the truth. Accordingly he set out systematically to prove that the progress of civilization has been furthered where men have claimed this right for themselves and extended it to others, while, on the other hand, deplorable consequences have ensued wherever the privilege of free thought has been withheld.

[1] *e.g.* Bacon, 'Concludamus theologiam sacram ex verbo et oraculis Dei, non ex lumine naturae aut rationis dictamine hauriri debere' (*de Augm. Scient.* IX. i.).

In some directions his task was easy. History provided an ample supply of examples of the evils which attend a policy of obscurantism, coupled with a blind and unintelligent deference to external authority. But he adopted a much more questionable position when he maintained that the cause of morality would be benefited by its complete dissociation from all mysterious sanctions whatever. He supported his case by the assertion that the great moral teachers of mankind had appealed, not to the fears, but to the reason, of their hearers. It was the method of the Prophets, of the Apostles, of Christ Himself. On the other hand, the endeavour to enforce belief by any other means than the plain straightforward appeal to the individual reason had been the bane of both Church and State, the source of moral corruption, the cause of every kind of discord, disturbance, and disaster. Bitter attacks are made upon all professional ministers of religion. Invective of this kind was a favourite theme with the Deistic writers, and for various reasons, chiefly political, was not distasteful to the public. The supposed machinations of the clergy served as a convenient explanation of certain facts in the history of religion, which did not easily square with the Deists' theory of contented reliance on the natural reason and instinct of man. From their point of view the prevalence of patently false religions and the persistence of superstitions were anomalies that had to be accounted for. So they sought to save the credit of the natural human reason by fixing the responsibility for these evils upon an intriguing, selfish, and idle priesthood.

Another point to be observed is the markedly utilitarian character of the reasoning employed by Collins. In defending the principle of freedom of thought he calls attention primarily to the desirable consequences which will follow upon its adoption. Like many others of his school, he made expediency a criterion of ethical values. The spirit of the age, devoted to the supposed interests of practical common sense, resented the application of any rule except one calculated on the basis of consequent pleasures and pains.

A later work by the same writer is significant of the transition to yet another phase of the controversy. In the *Discourse of the Grounds and Reasons of Christian Religion* (1724), Collins forsakes the question of the relative reasonableness or unreasonableness of the contents of the Christian Revelation, and turns to an inquiry into the credibility of prophecy and miracle. It had been a recognized mode of traditional Christian apology to rest the case for Christianity on two main supports—the correspondence of NT facts with OT prophecies, and the miraculous powers displayed by Christ and the Apostles. So long as the Biblical record remained unquestioned and uncriticized, this position was strong enough to withstand assault. But, now that the spirit of criticism had begun to throw suspicion upon the authenticity and the good faith of the Biblical documents, serious weaknesses in this line of defence revealed themselves, of which the innovators were quick to take logical advantage. If the facts were doubtful, what became of the argument from correspondence with prophecy and from miracle? So began the long debate over the 'external' evidences of Christianity. It was a descent from the comparatively higher level of an inquiry into the fundamental truths of religion to undignified and often vituperative disputes over the veracity of the Apostles and the other NT writers. But, although the tendency to substitute this less important issue showed itself as early as the third decade of the century, it was not till some years later that the change became general.

Christianity as old as the Creation, or the Gospel a Republication of the Religion of Nature, was published in the year 1730. Its author, Matthew Tindal, Fellow of All Souls' College, Oxford, had passed through various changes of religious belief, and did not bring out this, his best-known work, till near the end of a long life. It was at once recognized as a noteworthy contribution to the controversy. It was sober and restrained in tone, and

on the whole was free from the personalities which disfigure so much of the contemporary literature. Tindal collected, arranged, and shaped with considerable skill the arguments on which the Deists relied, and presented their case in a compact intelligible form. His book marks the culmination of Deism, when the movement had reached the height of its development, and was not yet affected by the deterioration which soon afterwards set in. He did his work as well, perhaps, as it could be done. The inconsistencies, mistaken hypotheses, and historical impossibilities which find a place in his book belong to the system as such, and could not be removed without causing the collapse of the whole construction.

Tindal brought to its logical conclusion the process initiated by Toland and Collins. His professed purpose was the same as theirs had been—to lay down such plain and simple rules as should enable men of the meanest capacity to distinguish between religion and superstition. Like his predecessors, he repudiated mystery and mere deference to authority, and insisted on the duty of every man to fashion his own religious belief for himself. And, in order to show that it is actually possible for every man so to do, he maintained the thesis that the ultimate truth of religion is a common constituent in all creeds (apart from the influence of deterioration) and not the exclusive property of revelation. His argument may be very briefly summarized as follows:

The point of departure of Tindal's argument is found in a peculiar conception of the unchangeable nature of God, whence is drawn the inference that He will treat all men at all times alike in this important matter of supplying them with the same sufficient means of recognizing and discharging the duties required of them. Of course, a racial development of the faculty of conscience was an idea which was altogether beyond the reach of the 18th century Deist. It was therefore assumed that, from the first, man was in possession of a ready means of calculating the ultimate consequences of his actions and so securing his future happiness. Only perversity could lead him astray, because God, 'that we may not fail to be as happy as possible for such creatures to be, has made our acting for our present, our only means of obtaining our future, happiness' (*Christianity as old*, etc., p. 15). 'The reason of things or the relation they have to each other teaches us our duty in all cases whatever' (p. 19). Upon this primary revelation in and through the reason is constructed the edifice of natural religion. In making this point Tindal was able to avail himself of the opinions expressed by orthodox writers. Thus he quotes from Dr. Prideaux: 'Let what is written in all the books of the New Testament be tried by that which is the touchstone of all religions, I mean that religion of nature and reason which God has written in the hearts of every one of us from the first creation.' From such a statement it was not unfair to deduce the superiority of the truths of natural religion. Tindal, however, went beyond this and argued that any further revelation must of necessity be mere surplusage, adding nothing of importance to man's knowledge about either faith or morals. In his opinion, all laws, whether the laws of nations or of particular countries, are only the law of nature adapted and accommodated to circumstances: 'nor can religion, even in relation to the worship of God, as it is a reasonable service, be anything but what necessarily flows from the consideration of God and His creatures' (p. 63).

The religion of nature is represented as possessing a perfection so complete that revelation can add nothing to it, nor take anything from it. True religion, whether externally or internally revealed, must always be identically the same in its contents, and this identity will exhibit itself alike in doctrine and in precept. The ethical teaching of revelation cannot, in fact, be superior to that of nature, because no positive command can be considered obligatory unless the reason for it be perceived, in which case it is equally obligatory on the grounds of natural religion (cf. p. 70). Indeed, to suppose anything which is merely positive in the sense of being undemonstrable by reason to be a necessary ingredient of true religion, is inconsistent with the good of man and with the honour of God (p. 141).

The practical conclusion of the argument is presented in the following sentence: 'Nothing can be requisite to discover true Christianity and to preserve it in its native purity free from all superstition, but after a strict scrutiny to admit nothing to belong to it except what our reason tells us is worthy of having God for its author. And if it be evident that we can't discern whether any instituted religion contains everything worthy, and nothing unworthy, of a Divine original, except we can antecedently by our reason discern what is or is not worthy of having God for its author, it necessarily follows that natural and revealed religion can't differ, because what reason shows to be worthy of having God for its author must belong to natural religion, and whatever reason tells us is unworthy of having God for its author can never belong to the true revealed religion' (p. 220). Into this single dilemma is compressed the quintessence of Deism.

At many points in the above argument it would have been possible to intervene, had it been in accordance with the design of this article to find particular answers to particular Deistic contentions. But no good purpose would be served by thus taking part in an obsolete controversy. It will, however, be useful now to point ont some general weaknesses, which are not peculiar to Tindal, bnt are integral parts of the Deistic scheme of religious philosophy.

(*a*) In the first place, it will be noticed that every religious truth is measured against the standard of an imaginary Golden Age. Whatever truth Christianity possesses it retains from an original revelation to human reason, co-eval with the Creation. But in Deistic literature references of this kind to the beginning of the world must be interpreted in a conventional rather than in any literal sense. For, though the Deists professed to look to the far past, their eyes were, as a matter of fact, riveted on the present. It was the reason of their own day to which they appealed. Not until later was any attempt made to discover by historical methods of examination what the earlier intellectual and moral condition of the human race had actually been.

(*b*) Secondly, it is remarkable how, in estimating the value of the Christian religion, and distinguishing between its truths and its errors, the Deist maintains a consistent silence with regard to the Person of its Founder. He has practically nothing to say about the present operation of the influence of Christ in the world. And even stranger than his silence is his apparently complete unconsciousness that the omission of so fundamental a consideration might vitiate his results. So oblivious were the Deists, and many of their orthodox opponents likewise, of the mystical elements in Christianity, that the very conception of a personal union between the believer and Christ would have been forthwith dismissed as 'enthusiastic,' and to the reproach of enthusiasm the temper of the age was morbidly sensitive.

(*c*) Thirdly, a kind of supercilious superiority is assumed whenever the question of miracles arises. The Biblical records are not rejected on *a priori* grounds as in themselves impossible. Abstract metaphysical arguments have strangely little influence upon the course of the Deistic controversy. But, from the point of view of the Deist, miracles were beneath the notice of the man who claimed to be guided by his reason only. At best they might serve to arrest the attention of the vulgar herd. Religion being regarded as essentially the practice of duties, miracles were superfluous. For 'duties neither need, nor can receive, any stronger proof from miracles than what they have already from the evidence of right reason' (p. 374).

(*d*) Lastly, Tindal, like other Deists, exhibits an extraordinary incapacity to estimate fairly the strength of evil tendencies in human nature. It seemed to them as though all would be well if only some artificial obstacles in the way of moral progress could be removed. The adoption of the principle of Latitudinarianism—the universal recognition of sincerity as the one and only thing needful—would not only put an end to all persecution, but would set free an amount of moral energy sufficient to regenerate the world. In Tindal's own words, 'this principle, and this alone, would cause universal love and benevolence among the whole race of mankind; and, did it prevail, must soon produce a new and glorious face of things, or, in Scripture phrase, a new heaven and a new earth'

(p. 413). Verily, this was a flimsy optimism, out of all relation with the stern facts of the world's condition.

The time has now come to pass on to the consideration of the last stage of the controversy, when the pivot of the dispute had become *the question of prophecy and miracle.* It was the beginning of the end, and yet, when the current of controversy first turned into this channel, the public excitement rose to a higher pitch than it had hitherto reached. Nor is it difficult to discover the explanation of this immediate increase of interest. Up to this point the controversy, though not very profound, had yet concerned itself in some measure with the first principles of religious philosophy. In so doing it had moved in a region where the mind of the nation did not follow freely or with comfort. But now, in the place of these recondite and elusive questions concerning the adequacy or insufficiency of human reason, far plainer issues were raised that lay seemingly well within the compass of the ordinary understanding. Was the fulfilment of prophecy a fact or a delusion? Did the Resurrection of Christ really occur, or was it a fable easily explicable upon the supposition of enthusiasm or fraud on the part of the witnesses? Here were plain alternatives on which the book-writers and the pamphleteers could join issue. They hastened to avail themselves of the opportunity.

Notice has already been taken of the fact that Collins' book, *A Discourse of the Grounds and Reasons of the Christian Religion*, had contained criticism with regard to the commonly received views as to prophecy and miracle. Professing (though with doubtful sincerity) to write in the interests of Christianity, he sought to convict earlier apologists of a serious misrepresentation of the true relation between prophecy and fulfilment. The object of his attack was the detailed correspondence between the two; and he endeavoured to prove the impossibility of maintaining the old position, in the light of a sound historical criticism of the prophecies. Historically the predictions did not bear the meaning which the apologists required. If, then, the argument from correspondence were to be preserved, it could only be by giving to the prophecies in question a mystical and allegorical interpretation. Such, Collins argued, had in fact been the method of procedure adopted by the writers of the NT. In accordance with this general attitude towards the OT, he defined Christianity as a mystical Judaism. It was a plausible phrase, but not likely to commend Christianity to an age which regarded mysticism with a mixture of contempt and dislike.

This novel representation of the relation between Judaism and Christianity met with an unfavourable reception. For the most part it was vehemently repudiated by the defenders of orthodoxy. But, weak as Collins' arguments may have been, and easily riddled by the criticisms of better scholars than himself, it must be admitted that his attack on the traditional and mechanical conception of prophecy gave an impetus to a fruitful attempt at an investigation of the historical conditions out of which the writings of the OT took their rise. It was, in fact, an anticipation, however poorly equipped with linguistic and archæological knowledge, of the Biblical criticism which has been rich in results during the last half century.

Naturally enough, the attempt to apply the allegorical method of interpretation was extended from prophecy to miracle. The best known name in connexion with this further development of the controversy is that of Woolston. It is strange that writings which should properly have been disregarded as the ravings of a disordered mind should have received the serious attention which was actually accorded them. If the author could be accounted responsible, then there would be no possible defence for the tone and manner of his *Discourses on the Miracles of our Saviour* (1727–29). He has recourse to suggestions and insinuations which are no less absurd than offensive to reverent ears. Every miracle, including that of the Resurrection, is explained away as the result of a mistake or conscious fraud. An utterly impossible attempt is made to prove by quotations from the early Christian Fathers that they were wholly regardless of positive historical facts, and found in the Gospels nothing but an emblematic representation of the mystical life of Christ in the souls of men. That Woolston was not wholly responsible for what he said, or for his manner of saying it, is the obvious excuse for the breaches of propriety of which he is guilty. In his own day, however, the excuse was not allowed. The law was set in motion against him, and he was sent to prison.

No particular theological merit belongs to the defences of the miraculous element in the Gospels which were called forth by the attacks of Woolston and others. Sherlock's *Tryal of the Witnesses of the Resurrection of Jesus* (1729) is a characteristic specimen of the kind of answer which found favour at the time, and was comfortably accepted as conclusive. An elaborate parody of legal forms is employed in order to give life to the argument. Unquestionably many good points are made, the value of the concurrent testimony of the Apostles is exhibited, and their unimpeachable character as witnesses vigorously upheld. But, while considerable technical skill is displayed, the vital warmth of a genuine spirituality has given place to a frigid cleverness.

At the stage now reached in our review of the history of Deism little vitality remained in the ideas which underlay the movement. A process of disintegration had set in. Deistic writers were no longer inspired by any genuine impetus of conviction, nor was the general public in a mood to give as much interested attention as heretofore. The controversy was perishing of inanition, and had almost collapsed through the operation of these internal causes. The end, however, was hastened by a damaging blow delivered from without by one who was equally out of sympathy with either side. Hume's philosophy, though it made little stir at the time, was in its effects fatal to the continuance of Deism. A movement which had been initiated under the influence of the ideas of Locke could not survive the transformation which Locke's philosophy underwent in the hands of Hume. This is a circumstance which gives confirmation to the view that the inner meaning of Deism is best understood in relation to the development of philosophical, rather than of religious, ideas. It was because Deism had arisen through the application of Locke's philosophy to the subject-matter of religion that its position ceased to be tenable, so soon as that philosophy was found to issue in general scepticism. A little examination of the nature of Hume's criticism of religious belief will show how completely he cut away the foundations on which the Deists had built.

The Deists, as we have seen, had begun by defending the pre-eminence of Christianity on the ground that it and it alone corresponded with the true religion of nature; but, gradually becoming more conscious of their divergence from historic Christianity, they transformed themselves into the champions of natural, as opposed to revealed, religion. And natural religion meant for them that religion which any man at any time from the beginning of the world was capable of discovering for himself through the exercise of his own individual reason. The existence of a religion 'as old as the Creation' was their fundamental assumption. It was precisely this assumption which collapsed as soon as it was criticized in the light of Locke's own principles concerning the gradual acquisition of knowledge. Hume pointed out that the religion of primitive man, so far from consisting of a few pure, elevated, and incontrovertible truths, must have been a medley of crude beliefs and puerile superstitions. 'It seems certain that, according to the natural progress of human thought, the ignorant multitude must first entertain some grovelling and familiar notion of superior powers before they stretch their conception to that perfect being who bestowed order on the whole frame of nature' (*Works*, iv. 421).

Along these lines Hume developed his *Natural History of Religion* (1757). He exhibited the rude beginnings of religious belief in a barbarous type of polytheism, and sought to provide an explanation of the mode in which purely natural influences, as distinct from supernatural revelation, transformed this primitive faith into something less crude and less full of patent absurdities. Such explanations afford convenient cover for the insinuation that the final product possesses no real superiority over the rude beginnings, being equally human in origin, insecure in its foundations, and destitute of all reasonable proof.

Hume's irony serves as a very thin disguise for his real sentiments. The declaration of belief in the existence of God, with which he opens his dissertation, is couched in language that would be appropriate in any Deistic treatise; but its insincerity is obvious. With the manifest purpose of undermining the common belief in God, he attributes its prevalence to the operation of irrational causes. 'The doctrine of one supreme Deity, the author of nature, is very ancient, has spread itself over great and populous nations, and among them has been embraced by all ranks and conditions of men; but whoever thinks that it has owed its success to the prevalent force of those invincible reasons on which it is undoubtedly founded, would show himself little acquainted with the ignorance and stupidity of the people, and their prejudice in favour of their particular superstitions' (iv. 446). At the conclusion of the treatise, discarding even this slight veil of sarcasm, and declaring the whole question to be a riddle, an enigma, an inexplicable mystery, he advocates an escape from the contentions of discordant superstitions into the calm regions of philosophy. In this way Hume makes short work of the pure original religion by which the Deists set such store. Not only had he the best of the argument

in contending for the probability of progress from crude to refined types of religion, but, in the face of the evidence which it was easy for him to produce with regard to the condition of religion in earlier times and among the uncivilized nations of the world, it was impossible for the fiction of a religion as old as the Creation to maintain itself.

In passing it should be noticed that the strength and the weakness of Hume's essay on 'Miracles' can be properly appreciated only when it is remembered that, throughout the Deistic controversy, miracle was treated as the chief evidence of the Divine authorship of a revelation. From this point of view, the more startling the event the greater will be the stupor which it produces, and the higher its value as a credential. Unconscious of the dangers to faith involved in their procedure, the apologists degraded miracle to the level of portent. It was a blunder of which Hume was quick to take advantage. If Deist and apologist alike were willing to treat miracle as a naked sign of arbitrary power, it was not for the common enemy of Deism and Christianity to set them right. He was only taking up the ordinary position of the time when he defined miracle as a violation of nature; and, when it is so regarded, with every adequate cause for its occurrence eliminated from consideration, it is undeniably plausible to contend that no amount of external evidence can outweigh the inherent improbability.

3. Writers with relations to Deism, but not properly Deists.—Some writers, commonly reckoned among the Deists, have been intentionally passed over in silence. It will be well, therefore, to add a few words of explanation why this course has been adopted. During the period under review, while the Deists were the most forward and active antagonists of orthodoxy, it was not unnatural that any writer who maintained unorthodox opinions should be reckoned as belonging to their camp. Yet obviously the classification is likely in some places to be inexact. It was so, for example, in the case of **Lord Shaftesbury**, the author of *Characteristics* (1711). It is no doubt true that there are certain points which he and the Deists have in common, but the superficial resemblances are more than counterbalanced by fundamental differences. He displays the same antipathy to priests, and employs the same kind of invective against the poisonous influence of superstition; but, while he thus directs his attack upon the same objective, the principles on which he bases his criticisms are very far from being those of the Deists. Their characteristic conception of a law of nature imposed upon His creatures by the Creator, and enforced by means of rewards and punishments, is absolutely alien from his system of thought. For him the ethical standard was determined by the dictates of an intuitive moral faculty, forming part of the essential endowment of human nature. Of this moral faculty the effectiveness would indeed be reinforced by theistic belief, but is not dependent on it, whereas in the Deistic system the sense of moral obligation is derived from the recognition by man of his relation to his Maker.

Since the existence of God was of comparatively little moment in Lord Shaftesbury's system, he cannot properly be styled a Deist; and in some ways he exhibited a positive antagonism to their mode of thought. For example, he raised a much needed protest against the undue prominence given to hedonistic considerations by both parties in the controversy. He found an appropriate object for his wit in exposing the shallowness of the conception by which ethics was degraded into an elaborate calculation of pains and pleasures. The pointed weapon of ridicule is effectively used in his hands. Unfortunately, in his references to religion his satire frequently degenerates into a sneer. The defenders of religion winced under his sarcasms, and retaliated by calling him a Deist. But there was little justification for the charge. The word 'Deism' would cease to have any definite connotation if it were made to cover systems so radically divergent as those of Shaftesbury and Tindal.

If there is little justification for ranking Shaftesbury among the Deists, there is even less for assigning a writer like **Mandeville** to their company. The Deist may not have been remarkable for any particular moral excellence, but at least he was eminently respectable. There is no reason to question the sincerity of his desire to further the cause of morality, and to lend his aid in raising a barrier against the encroaching tide of moral laxity. Such was not the purpose of Mandeville. He is cynical enough to set out on the title-page of the *Fable of the Bees* (1714) the thesis that private vices are public benefits, and in his opening inquiry into the nature of moral virtue adopts the conclusion that it is the political offspring which Flattery has begot upon Pride. Intrinsically the book is as worthless as it is paradoxical, but it raised a laugh, and its sophistical arguments in favour of self-indulgence ensured its popularity in circles where every moral restraint was regarded with contemptuous indifference.

Leland, the contemporary historian and critic of Deism, devotes as much as a third of his work on the Deistical writers to a consideration of the works of **Lord Bolingbroke**. It is a clear indication of the high importance which was at the time attached to this attack on the claims of revelation. When Leland wrote, Bolingbroke's collected writings (with Life by D. Mallet), of which the one here most relevant is his *Letters on the Study and Use of History* (written in 1738), were newly published, having been issued posthumously in the year 1754. The effect of the book, however, was almost *nil*, and Dr. Johnson's sentence, in which he contemptuously described it as a blunderbuss which the author had not resolution enough to fire off in his lifetime, is a more accurate appraisement of it than Leland's elaborate criticism. The old sneers at priestcraft, the old arguments in favour of a purely rational religion, re-appear. But there was no new point to make; and Deism was too far gone in decay to be revived even by Lord Bolingbroke's name and his 'five pompous volumes.' In England, Deism was to all intents and purposes defunct, though about this time a kindred movement on the other side of the Channel was exhibiting fresh vitality under new forms.

4. The foreign movement.—Deism such as we have been describing was so native a product of English thought, with a form so markedly determined alike by the strength and the weakness of the English mind, that its transplantation to a foreign soil could not be accomplished without the most profound modification of its character. When the ideas to which the English Deists had first given expression were taken up by French exponents, new elements were introduced which gave to the resultant product a very different quality. Thus, what had been Deism in England became in France another movement, with a character and history of its own, which cannot properly be handled in this article. At the same time the history of Deism is not complete unless account be taken of the fact that it is the parent stock from which sprang the French movement of reaction against traditional belief.

It is significant that both **Voltaire** (†1778) and Rousseau were largely indebted to English sources for their inspiration. During the years which the former passed in England (1726–1729), he gathered impressions which he afterwards systematized and elaborated into a philosophy of religion. As a friend of Lord Bolingbroke he naturally came into close contact with men who, whether secretly or openly, sympathized with the Deists. The ideas which he derived from this intercourse were in keeping with the bent of his mind. Moreover, his peculiar abilities enabled him to give them a keener edge and a wider range than they had possessed in the hands of the English writers. In France the conceptions characteristic of Deism found a soil more favourable to their rapid development than England had ever afforded them. The logical French mind, impatient of compromise and qualification, insisted rigidly on the necessary consequences of abstract principles, where English conclusions had been influenced by numberless practical considerations. And, further, the con-

ditions of social, political, and ecclesiastical life in France were such as to accentuate the criticisms of those who were opposed in spirit to the prevailing order. Resentment against repression manifested itself in a sharper opposition to the unbending attitude of authority. In proportion as an external submission to rule was enforced, so was an internal passion for revolt stimulated, especially in the domain of religious thought. So marked was the opposition between the old and the new points of view, that Deism became almost at once identified with an anti-ecclesiastical movement. Instead of aiming at a transformation of the old theology into another pattern, as had been the object of the earlier English Deists, the French representatives of the movement advocated a general repudiation of theology and the substitution of an undogmatic religion in place of Roman Catholicism. To this end Voltaire applied the weapons of his caustic satire, and the Encyclopædists added the weight of their accumulated knowledge. Indeed, Diderot († 1784) and his school represent a further stage in the downward transition from Deism towards Materialism. With him even that residue of natural religion which Voltaire would have retained became a mere superfluity, resting on no secure foundation of reason, and therefore destined to disappear before the advance of intellectual enlightenment. See art. ENCYCLOPÆDISTS.

This tendency to a bare Materialism was to some extent checked by the influence of Rousseau († 1778), who was at once the product and the champion of a reaction against the stiffness and coldness of a cramped Rationalism. In the fact that he thus represented the protest of common sense against the bare negations of Materialism is to be found the explanation of his wide popularity. But the effect which he produced must not be overestimated. Whatever may have been the result of his political speculations in hastening the crisis of the Revolution, his influence upon religious thought was not more than evanescent. Though his genius galvanized for a time into fresh activity some of those ideas which had been the stock-in-trade of the Deistic writers, he could not restore to them the real vigour of life. Deism had had its day. The intellectual opposition to the supernatural element in Christianity was about to assume another form. A new criticism and a new apologetic were destined to arise, constructed upon lines determined by the new metaphysical theories of Kant.

5. Permanent results.—Controversies upon which the attention of thinking men has been focused can neither pass away without leaving some definite mark on subsequent theology, nor be appraised at their proper value unless the character and extent of their permanent results be taken into account. It will therefore be necessary to ask what lasting contribution was made by Deism to English theological thought. It is almost a matter of surprise to find on examination how comparatively scanty is the residuum which has stood the test of time. But something no doubt has survived. To some extent the Deists were successful in establishing their principle of the appeal to human reason, even while in their own application of it they showed little skill or power of discrimination. It is noteworthy that they called in, as arbiter of the dispute, the common sense of the ordinary man, and, as witness, the trained skill of the expert. Obviously, the critical questions which were raised could not be settled without thorough investigation by men who had devoted years of study to the data of these problems. A new class of Bible students arose who professed to approach their tasks with minds entirely unbiased by any dogmatic considerations. Whether they were as free from prejudice as they themselves supposed, is open to question. At any rate the Deists gave an impulse to Biblical criticism, the benefit of which still makes itself felt. It has not been forgotten that the same methods of scientific inquiry must be applied to sacred as to profane history. What has now become a commonplace of theology was first insisted upon by the Deists. That they should have led the way in this direction is so much to their credit.

Again, the appeal to the common sense of those who make no claim to any professional knowledge of theology has remained markedly characteristic of English religion. The religious public, as it is called, is disinclined to divest itself of responsibility by seeking shelter behind the pronouncements of authority. Conscious of inability itself to undertake in detail the processes of criticism, it insists on seeing the results openly displayed. The debate between the champions of tradition and of innovation is not carried on behind closed doors, but in open court. The public desire to follow the argument and form for themselves an intelligent estimate of the issue. This feature also of our religious life is in great measure the outcome of the Deistic movement.

The Deistic controversy left no more important legacy behind it than the apologetic method of Bp. Butler († 1752). The *Analogy* (1736) may always be read with profit, but its true greatness cannot be rightly appreciated unless the argument be viewed in its proper setting as an answer to the Deistic attack on Christianity. What calls for remark is Butler's careful and guarded exposition of the principles of religious evidence in opposition to the exaggerated insistence by the Deists on certain aspects of the truth and their corresponding neglect of other equally important considerations. It is most interesting to observe how free he is from any undue bias against his opponents' point of view, how far he is ready to go with them, and how sincerely, unhesitatingly, and fearlessly he recognizes the validity of their appeal to reason, while brushing aside their pretentious claim to be the only 'Free-thinkers.' It is just because he is thus frank in his acknowledgment of the ultimate authority of human reason that he is able to insist with effect on the limitations imposed by ignorance, inseparable from our finite condition. He did an inestimable service to religion when he exposed with relentless logic the absurdity of the claim that all things in revelation should be made transparently intelligible to the human mind. It was another service of scarcely less value when he made men realize that revelation consisted *ex hypothesi* of a scheme composed of a large number of interrelated parts, not one of which can be legitimately criticized except in its full context. These were precisely the considerations which the Deists overlooked. If they have now become the truisms of theology, it is because Butler first expounded them as the necessary corrective to the crude speculations of Deism. See, further, art. BUTLER.

An allied but distinguishable reaction against the temper of Deism reveals itself in the idealistic philosophy of Bp. Berkeley († 1753), who, like his contemporary Butler, was moved to indignation at the unintelligent superficiality of the prevalent unbelief. To him it appeared that the decay of faith was in the main due to the general acceptance of a faulty metaphysic, inherited from Locke. The Christian verities were rejected on the plea that they did not approve themselves to the philosophic intellect. But the philosophers were themselves responsible for creating unnecessary intellectual difficulties. It was they who had raised the dust, through which, as they complained, they could not see. Berkeley directed his

criticism against the half-developed Materialism which was the orthodox metaphysic of the day. His rejection of Locke's conception of the real existence of extended matter was accounted paradoxical, and on that account chiefly attracted attention both favourable and unfavourable. But it is sometimes forgotten that this Immaterialism of Berkeley was only part of his system. It was the foundation on which he built. It led on to his conception of the world as the perpetual manifestation of the spiritual presence of God. Thus he delivered a powerful protest against the view that the evidence for the existence of God can be disclosed only through a long and intricate process of inference. In opposition to the commonly accepted cold mechanical outlook on the universe, he preached the doctrine of a continuous communication between the Divine and the human spirit through the medium of sensible experience. To him the material world was the language of God addressed to the spiritual ear, and charged with an infinite significance for those who would address themselves to the task of its interpretation. It was too high a conception to commend itself to the temper of the 18th century. Nevertheless, the impulse towards a religious idealism which Berkeley initiated has not been altogether without effect. His teaching, which originated in opposition to Deism, has remained to this day part of our theological heritage. See, further, art. BERKELEY.

The religious protest against Deism which found expression in the writings of Butler and Berkeley was carried further by **Law** and **Wesley**, but with a characteristic difference. The two bishops had met the Deists on the field of intellectual reasoning. This was not the method which commended itself to the judgment of the mystic and of the revivalist. They appealed from the intellect to the verdict of the religious consciousness. Perhaps the statement should be made with some qualification with respect to Law, since in the treatise which he composed against Tindal his mysticism does not yet appear.

In the *Case of Reason* (1731), Law appealed without scruple to the logic nf intellect; moreover, he possessed the power of marshalling his arguments with skill and clothing them in apt language. Before the inscrutable mystery of the Infinite he prostrated himself in silent submission, and with a feeling of profound reverence yielded a willing obedience to the message of revelatioo. It is strange to find Law at this time referring to miracles as the proof of revelation. A little later he discovered a method of statement more congenial to his natural temperament. In the place of controversial argument he substituted the positive affirmatinns of the mystic's experience. In opposition to Tindal he had taken a low view of the range of human reason, and this position he consistently maintained, but in the writings of the mystics he found it stated that man possessed a faculty of spiritual intuition incomparably more efficacious than reason in the attainment of Divine wisdom. In Christian mysticism, Law discovered a system which afforded satisfaction to his religious instincts; and he strove to influence others in the same direction, by means of writings which are a strange compound nf deep spiritual insight and fanciful imaginations. But in the 18th cent. the message of the mystic was *vox clamantis in deserto*. The seed fell on barren ground, where it had no opportunity of germinating.

Law founded no school of English mysticism. Though there were many who, like himself, recoiled from the irreligiousness of Deism, there were few ready to follow whither he led the way. He was before his time, and has perhaps more disciples at the present day than he had in his own lifetime.

The same recoil from Deism, but under yet another aspect, is illustrated by the life and work of John Wesley († 1791). Profoundly influenced by Law's example and ethical teaching, he differed widely from him in temperament, and was alike ignorant and impatient of the mystical tendencies to which the older man resigned himself. Emphatically a man of action, he gave expression to the protest of the practical religious consciousness against the religious impotence of Rationalism. It mattered little whether the Rationalism was of the type preached by Tillotson or of that preached by Tindal. In either case it had proved miserably ineffective in stemming the tide of infidelity and immorality. Wesley came forward at the precise moment when there was a wide-spread and despairing consciousness of the utter sterility of mere argument about religion. Boldly discarding the discredited appeal to the intellect, he addressed himself to the ineradicable religious instincts of mankind, their sense of sin, their longing for forgiveness, the hopeless unrest of the soul to which no vision of God has come. In pressing home his appeal he touched the hearts of multitudes by means of those very Christian doctrines which the Deists had found too irrational for acceptance, and had made the butt of their shallow satire. The fall of man, the fact and the malignant influence of original sin, the offer of redemption, the mystery of the Atonement—these were the topics handled by the preacher round whom the crowds gathered in their thousands. There could not have been a more complete repudiation of the whole temper of which Deism was the expression. The stale arguments were allowed to drop into oblivion. There was a return to older methods of less intellectual pretensions. The proof of religion was sought no longer in the appeal to natural reason, but in the letter of Scripture and in the experience of daily life.

Thus the rise of Wesleyanism coincided with the extinction of Deism. Not that Deism disappeared because the problems which it had raised had received final and conclusive answers. On the contrary, many of these problems involve mysteries which, it is probable, will always remain inscrutable to the finite mind. It is no discredit to the apologists of the 18th cent. that in such cases they had no solution to offer. They had done all that could be expected of them. They had shown the alternative creed of the Deist to be weighted with difficulties as great as those which he hoped to escape by his rejection of Christianity. They had pointed to a way of reconciliation between the rights of reason and the claims of faith. It was not until this work had been accomplished that the Evangelical Revival could exhibit the undiminished spiritual energy latent in authoritative and traditional religion. Then began another stage of religious history, a period even more distracted with controversy than that which we have been passing in review. But the struggle was over new issues. Deism was forgotten.

II. *PHILOSOPHICAL.*—1. **View of God's relation to the material and the moral world.**—The word 'Deism,' besides serving as the designation of an historical religious movement, has been commonly used to describe a particular view of God's nature and of the dependence of the world upon Him. Between the two uses of the word a connexion exists, of which some notice will presently be taken, but it would be a mistake to suppose that philosophic Deism was necessarily the accepted creed of the Deists of the 18th century. Indeed, some who bore the name would at the present day be called Theists. But the distinction now made between Deism and Theism did not then exist. The two expressions were used indiscriminately. It is only in later times, since the study of the philosophy of religion has been prosecuted with greater attention, that to the word 'Deism' has been attached a more defined and exact connotation. We proceed to ask, What is the meaning conveyed by the word in this later and more abstract sense?

The great question concerning the relation of God to the world has received a vast number of different answers. To classify into distinct groups the various solutions proposed is no easy matter. It is difficult to draw lines of division, when the

gradations are almost imperceptible, though at the two extremities members of the same series may stand in conspicuous opposition to one another. But, since some form of classification is necessary, it has been found convenient to separate views as to the being of God into two divisions, according as they approximate to Pantheism on the one hand or to Deism on the other. With the second only are we here concerned. Let it be borne in mind that our subject of study is not a definite school of thought sharply outlined and admitting historical treatment. It is rather a vague inclination or bent of mind, which in varying degrees is continuously present in human thought, and occasionally, coming prominently to the front, becomes the dominant factor in religious and philosophic systems.

Deism approaches the ultimate problem of the universe with a self-satisfied confidence painfully out of proportion to the difficulty of the task of finding a solution. With little sense of reverence for the mystery that lies behind all outward appearances, it accepts an answer suggested by anthropomorphic analogies, and framed in accordance with uncritical prepossessions. Common sense admits no obstinate questionings as to the independent existence of the external world, nor does it care to inquire too curiously what may be the real character of human freedom. It rests content with the common assumptions of daily life. The Deist, adopting these assumptions as his starting-point, finds comparatively little difficulty in constructing his theory of God and the world, He is ready to acknowledge a Creator. In order to account for the existence of the material world, it is necessary to assume the existence of a First Cause, at whose command creation took effect and the cosmos entered on its life. But the Deist's conception of creation is essentially restricted. The fabric of the universe is supposed to stand to God in the relation which the instrument bears to its maker. The heavens are the work of His hands, just as the watch is the work of the watchmaker. As the craftsman determines the characteristic properties of his machine, the correlation of its parts, their positions and their functions, so is God conceived to have dealt with the world. He brought it into being and ordained its laws. He imparted to it once for all the energy which serves as the driving power of the stupendous mechanism. The Deist recognizes in God the ultimate source of matter and motion, and, consistently with this conception, admits the possibility of occasional interferences on the part of the Deity. But, though the possibility of such interference is granted, the probability is called in question. It seems more in accordance with the principles of Deism that Nature should be left to work itself out in obedience to laws originally given. Any suggestion of a deviation from the established order is resented, as though to admit it were to be wanting in due respect for the inviolable majesty of God's unchangeableness and the original perfection of His work. A perfect machine, it is supposed, would not require from time to time to be adjusted by its maker; nor would the Unchangeable introduce any later corrections into a creation which from the first reflected His omniscience and omnipotence.

Similarly based on anthropomorphic analogies, and subject in consequence to similar defects, is the Deistic conception of the relation of God to the moral world. He is the supreme Governor, the author of moral as of physical law, but as remote in the one region as in the other from the particular cases exhibiting the working of His laws. He is thought of as filling the part of legislator and judge to the universe of moral beings; and these analogies, derived from the organization of human society, are treated as though they were entirely adequate not only to illustrate, but even to explain, His supreme authority. The moral law is assumed to be sufficiently well known by all for the practical purposes of life. Pains and pleasures, present and future, are attached respectively to its infringement and its observance. Men are automatically punished and rewarded, in strict accordance with their deserts. In the moral as in the physical world there is neither need nor room for the special interposition of the supreme Governor.

Whatever shortcomings such a view of the nature of God may have,—and they are both obvious and important,—yet in some respects it tallies with the promptings of the religious instincts of men. It is opposed to Materialism, avoiding the desperate necessity of ascribing to matter an independent eternal existence of its own. Nor is God reduced, as in Pantheism, to a mere abstraction, an impersonal substratum of the universe. He is a real person, standing over against the world and man. Human personality also is preserved. Man retains his freedom, and justice is done to his responsibility. As he sows so shall he reap, according to laws that admit of no exception. Obviously in these ideas there is much that is true, and the truth is of that positive kind to which appeal must be made in practical exhortation and the enforcement of ethical teaching. But with the truth is mingled much error. The consequent weaknesses of Deism are both theoretical and practical.

2. Defects in conceptions of Creation and Finite Existence.—Deism labours under the disadvantage of being a dualistic explanation of the world. Not indeed that it is explicitly so. The charge would be repudiated. But the repudiation means no more than that the Deist is unconscious of the fact, having been content to leave unexamined many of the conceptions with which he deals. Notably is this the case with the idea of Creation. The God of the Deist is, in fact, a demiurge who has shaped into a cosmos a matter essentially alien from Himself. And, though the Deist replies that, according to his teaching, matter is not shaped by God but called into being by His creative word, the answer is unsatisfactory. For this creation of an alien matter out of nothing presents, on examination, insuperable difficulties. There is nothing to bridge the gap between the Creator and His creation. Nor is any attempt made to find in the nature of God any motive towards the act of creation. Recourse is had to the conception of an entirely arbitrary and inexplicable act of power.

Equally lacking in depth is the Deist's view of the problem of finite existence. From his standpoint the words 'in God we live, and move, and have our being' are destitute of any real significance. For to all intents and purposes he conceives of the world as existing independently of the Deity. The essential dualism of the conception is disguised, not removed, by laying stress on the origination of one form of existence from the other. Whatever may have been the relation of the two at the moment of creation, the finite, as it now is, possesses a substantial independence of the Infinite. The apparent simplicity of the view is gained by the abandonment of any attempt to reach the conception of an underlying unity.

A further weakness of Deism is disclosed as soon as the relation of the moral law to the will of God becomes the subject of discussion. For it is precisely here that those analogies with earthly rulers on which the Deist relies break down and fail the inquirer at the most critical point of his investigation. For, if the analogy of legislation be pressed, then it will appear as though the moral law were determined arbitrarily according to the Divine

will and pleasure. Its necessity or inevitableness seemingly disappears. On the other hand, if the judicial function of the Supreme Governor be put in the forefront, and the moral law be regarded as existing in the reason of things, and requiring only to be enforced by the Divine power, then it would seem as though the freedom of God's action were limited by a rule superior to Himself. From this dilemma the principles of Deism offer no way of escape. If the externality of God in relation to the world, physical or moral, be assumed, then in some way or other limitations and restrictions are placed upon the Divine nature. In the one case, God is left confronted by an independent material world; in the other case, by an independent law of right and wrong. And the very essence of Deism lies in its assumption of God's externality.

Theoretic unsoundness is attended with practical deficiencies. Deism has not been without injurious effect on those who have adopted it as their creed. If it be admitted that man's highest spiritual life is attained in proportion as he rises to communion with God, then it must be confessed that Deism can never carry the soul up into this region. The appearances of the world, however intricate in design and prodigal of beauty, convey to the heart no message significant of the indwelling presence of God. The most that the Deist may legitimately do is to follow back a many-linked chain of inference to a point in the far past when God, at the moment of creation, was in contact with His world. In a universe so conceived, man feels himself left to his own resources. A cold tribute of perfunctory worship is all that he is likely to offer to a God whose arm is never stretched out in answer to prayer, whose ear is never open to the supplication of the penitent. Man learns to think that his welfare depends entirely upon the accuracy of his knowledge of those general laws by which the course of the world is determined, and upon his skill in adapting himself to them. There is stimulated in him a spirit of self-sufficiency and self-assertion as towards God, and a certain hardness and lack of sympathy towards his fellow-men.

Deistic premisses do not positively exclude the possibility of revelation, but create a strong prejudice against it. For revelation is a species of miracle, and open to all the objections which, in the mind of the Deist, bear against the miraculous. It is an interference with the regular course of the world. In some forms of Deism the idea of a Divine interposition is accepted without hesitation or sense of incongruity. But further consideration is likely to suggest the thought that the need for interference with the world is due to some original weakness of construction; and the Deist, in his anxiety to uphold the credit of the First Cause, is led to deny first the need for, and then the fact of, revelation.

Deism is a curiously unstable system of belief. It could hardly be otherwise, considering that the premisses from which it sets out are wanting in consistency and in definiteness. Beginning by assuming the unqualified correctness of a few of the truths which appeal to the religious instinct, it reaches at length a position in flagrant contradiction to fundamental religious beliefs. The utility of prayer and the possibility of communication between God and man are ideas which have always found a home in the unsophisticated religious consciousness; yet these are the ideas which Deism finally discovers to be incompatible with its teaching about the Divine nature. And, when these ideas have been repudiated, there follows the gradual encroachment of an irreligious temper, and the elimination from life of the effective power of religion. Though nominally belief in God be retained, it becomes wholly inoperative—the furniture of the mind rather than the inspiration of the heart.

3. **Examples of Deistic systems.**—Deism in the sense which we are now investigating we have defined to be a tendency of thought. It is a tendency which for the most part has been counteracted by stronger forces. But occasional examples in the history of religion and philosophy prove that it is capable of gaining the ascendancy. Apart from the influence of revelation, the drift of ethnic religions has been in the direction of Polytheism and Pantheism rather than towards the opposite extreme of Deism. For men are swayed more easily by their emotions than by their reason, and to the feelings the colder system of Deism is less attractive than these other forms of error. The most conspicuous example of a religion in which Deistic forms of thought are paramount is Confucianism, which exhibits a characteristic combination of qualities and defects. In particular, there is a decorous recognition of heaven as the source from which man derives his nature, although, for the attainment of virtue, little importance is attached to the communication between God and man. Its ideal includes the observance of an exacting moral code, but does not rise above this level. Sin as an offence against God, and virtue as trustful dependence on His help, are conceptions that find no place in a system which is almost pure Deism.

Stoicism is another, but less complete, illustration of the working of the same tendency. The insistence on the law of nature, and on the universal order extending through the world, is a thoroughly 'Deistic' idea. So also, in several respects, are the ethical notions of the Stoics, their emphasis on the power of the will, and their doctrine of man's self-sufficiency. These indeed are points on which they set precedents followed in later times. For the 18th cent. Deists, familiarized through a classical education with the writings of the ancient Stoics, drew much of their inspiration from this source. On the other hand, Stoicism contained ideas irreconcilable with pure Deism. Its Pantheism, though far from being consistently developed to its logical issues, is sufficient to differentiate it from any system in which God is assumed to be personally distinct from the world. In ethics, its rejection of all utilitarian considerations is opposed to the characteristic temper of Deism. Thus, though there is a genetic relationship between Stoicism and English Deism, the offspring differed in some essential features from the parent.

Its marked preference for the Deistic explanation of the universe accounts in large measure alike for the strength and the weakness of Muhammadanism. No one will deny that the effect of the teaching of Islām is to produce in its adherents a very real and deep reverence for God, the all-powerful Creator and Ruler of the world. At the same time the oppressive sense of a great and unbridged gulf between God and man checks and thwarts the natural action of man's religious instincts. Great as is the regularity with which the prescribed forms of devotion are observed, the worshipper adores an infinitely distant God. The specifically Christian conception of freedom of access to the Divine throne is conspicuously absent. When petitions for particular benefits are offered up, they are addressed (at any rate in many parts of the Muhammadan world) to inferior powers rather than to God. This degradation of prayer is remarkable evidence of the obstacle which Deism opposes to the exercise of man's highest spiritual function, communion with his Maker.

After all, the classical example of the Deistic tendency is to be found in the 18th cent. Deists; and herein lies the justification for attaching to the same word an historical and an abstract sense.

In the writings of Toland, Collins, Tindal, and other historical Deists is contained the exposition of precisely those ideas which combine to make up Deism in the abstract. Not, indeed, that in any single one of these writers is Deism logically rounded off and cleared from all inconsistencies. Men seldom press their principles to the uttermost; nor were the Deists, with their lack of philosophical acumen, likely to be exceptions to the rule. Side by side with arguments which in effect exclude God's direct action on the world, they placed statements of belief which the most exacting Theist would find irreproachable. Gradually the logic of events disclosed the true implications of their principles, with the result that Deism was either repudiated in favour of a return to historic Christianity, or exchanged for avowed infidelity. See, further, art. THEISM.

G. C. JOYCE.

DELHĪ.—The name applied specially to the modern city of Shāhjahānābād on the right bank of the Jumnā (lat. 28° 38′ 58″ N.; long. 77° 16′ 30″ E.), and generally to a collection of ruined cities, covering an area of about 45 sq. miles, in the neighbourhood. Classifying these cities from N. to S., we have (1) Fīrozābād of Fīroz Shāh Tughlaq (*c.* A.D. 1360), adjoining modern Delhī on the south; (2) Indrapat or Indraprastha, associated with the earliest legends of the Aryan occupation of the Jumnā valley, the foundation of which by Yudhisthira and his brothers, the five Pāndavas, is recorded in the Mahābhārata; the site was reoccupied by Humāyūn and Sher Shāh (*c.* 1540); (3) Sirī, fortified by Alā-ud-dīn (*c.* 1300); (4) Jahānpanāh, the space between old Delhī and Sirī, which was gradually occupied and ultimately connected with the cities N. and S. of it (*c.* 1330); (5) Old Delhī, or the Fort of Rāē Pithorā, the original Delhī of the Paṭhān invaders in the 12th century; (6) Tughlaqābād, built by Muhammad bin Tughlaq (*c.* 1320). Modern Delhī, or Shāhjahānābād, named after the Emperor Shāhjahān (1628–58), may be said to date from about 1650, the famous palace being first erected (1638–48), and forming the nucleus of the new city. The cities thus enumerated contain a vast variety of architectural remains, some of the greatest interest and beauty. Here it is possible to name only a few of those most closely connected with the religious beliefs of the successive occupants of this historic site.

In the first place, Delhī contains two of the famous inscribed pillars of the Emperor Aśoka (*q.v.*), erected about 250 B.C. The inscriptions contain the code of moral and religious precepts promulgated by this great ruler. These pillars, one of which stands on the historic ridge, the other in the ruined city of Fīrozābād, were removed to Delhī in A.D. 1356 by Fīroz Shāh Tughlaq, the former from Meerut in the United Provinces, the other from Toprā in the Umballā district of the Panjāb. The pillar on the ridge was much injured by an explosion early in the 18th cent.; that at Fīrozābād is in an excellent state of preservation, and is the most interesting of all the Aśoka pillars, inasmuch as it is the only one on which the invaluable Seventh Edict is inscribed. Another interesting Hindu relic is the iron pillar which stands near the Kutab Minār in Old Delhī. It was erected by a certain Rājā Chandra, and may be dated approximately A.D. 400. It is a marvellous example of the skill attained by the Hindu metallurgists of the time. Close by, the mosque of Quṭb-ud-dīn was rebuilt out of the materials of one or more Jain temples. One cloister, with rows of finely carved pillars, remains in good preservation. The innermost court of this mosque, with its corridors and west end, was built in A.D. 1191, and the screen of arches, the glory of the building, was erected six years later. The splendid tower, the Quṭb or Kutab Minār, named after its founder, was completed by Shams-ud-dīn Altamsh (1211–36), who also extended the great mosque. Much controversy has arisen regarding the purpose for which this tower was erected. Fergusson (p. 506) denies that it has any connexion with the great mosque at the south-east corner of which it stands. According to him,

'it was not designed as a place from which the mueddin should call the prayers, though its lower gallery may have been used for that purpose also, but as a tower of victory,—a Jaya Stambha, in fact,—an emblem of conquest, which the Hindus could only too easily understand and appreciate.' This view appears to be mistaken.

Cunningham (*Archæological Reports*, iv. p. ix) shows that it is distinctly called a *mazanah*, or muaẓẓin's tower, by the Syrian geographer Abulfida (A.D. 1273–1345), and he cites several examples of early mosques which have but one *minār* each. The inscriptions also prove that this was the purpose of its erection.

The lovely Alāī Darwāza, or gate of Alā, was built by Alā-ud-dīn Khiljī (1295–1315). Close by is the beautiful tomb of Shams-ud-dīn.

'Though small,' writes Fergusson, 'it is one of the richest examples of Hindu art applied to Mahomedan purposes that Old Delhi affords, and is extremely beautiful, though the builders still display a certain inaptness in fitting the details to their new purposes. . . . In addition to the beauty of its details, it is interesting as being the oldest tomb known to exist in India. He [Shams-ud-dīn] died A.D. 1236.'

Among the other interesting and beautiful mosques, of which Delhī possesses such a large number, the following may be mentioned: the Kālā or Kalān Masjid, built in Fīrozābād about A.D. 1380, is interesting as an example of the early so-called Paṭhān style. The façade of the mosque of Sher Shāh in the Purāna Qila is, says Fanshawe (p. 228), 'quite the most striking bit of coloured decoration at Delhi, and has been satisfactorily restored. . . . The interior is extremely fine, the pattern in the pendentives below the dome being very effective.' 'The Jāmi' Masjid, or cathedral mosque of Shāhjahān, built in 1648–50, is,' says Fergusson (p. 600), 'not unlike, in plan, the Motī Masjid of Agra (*q.v.*), though built on a much larger scale, and adorned with two noble minarets, which are wanting in the Agra example; while, from the somewhat capricious admixture of red sandstone with white marble, it is far from possessing the same elegance and purity of effect. It is, however, one of the few mosques, either in India or elsewhere, that are designed to produce a pleasing effect externally.' This great mosque, built close to the palace, seems to have rendered it unnecessary to erect a private court chapel within its walls. When a Motī Masjid was added by Aurangzīb, the building was small, and, though pretty, quite unworthy of the place, and illustrates the rapid decadence of Muhammadan ecclesiastical architecture after the time of Shāhjahān.

Delhī is equally rich in the number and variety of its sepulchres. Humāyūn, the second Mughal Emperor, lies in a stately tomb. 'In mere beauty,' says Fanshawe (p. 230), 'it cannot, of course, compare with the Tāj at Agra, but there is an effect of strength about it which becomes the last resting-place of a Moghul warrior whose life was marked by many struggles and vicissitudes; and most people will probably prefer its greater simplicity to either the son's [Akbar's] tomb at Sikandra, near Agra, or the grandson's [Jahāngīr's] tomb at Shadara, near Lahore.' The *dargāh*, or shrine, of Shaikh Nizām-ud-dīn Auliya and the other Chishtī shrines at Ajmīr, the Kutab and Pakpattan, are the places most revered in all India by Muhammadans. His story is fully given by Fanshawe (p. 236), who believes that there is no ground for the popular legend which attributes the origin of Thuggee to him. He died at Delhī in A.D. 1324, and the buildings—the gate of which bears the date 1378—are mostly due to the Emperor Fīroz Shāh Tughlaq. Round the resting-place of the saint are many beautiful and interesting monuments. That of Jahānārā Begam, the faithful daughter of the Emperor Shāhjahān, bears the touching epitaph: 'Let green grass only conceal my grave; grass is the best covering of the grave of the meek.' Close by is the tomb of the unfortunate Emperor Muhammad Shāh, who died in 1748, in whose time Delhī was captured and sacked by the ruthless Persian, Nādir Shāh. If not a triumph of design, its beautiful pierced marble screens are admirable. Near these are the earlier tombs of the poet Amīr Khusrū, who died in 1324, and of the historian Khondamīr—the latter not being now identifiable.

W. CROOKE.

DELIBERATION.—Deliberation is a complex mental state, preceding, and issuing in, choice or decision. It is a fundamental characteristic of personal consciousness, due to the fact that a mind furnished with experience is generally confronted with alternative possibilities. There is in the child a long and interesting genetic period before full-blown deliberation is born. This early dawning stage, before self-consciousness has arrived, and while the processes of decision are below the ideational level, has been called 'deliberative suggestion.' While life is still on the organic and impulsive level, co-ordinate sense-stimuli confront one another, and there is a corresponding conflict of motor-reactions.

Baldwin, in his *Mental Development* (p. 127), gives a good example of this primitive type of deliberation. A child of eight months, under his observation, formed the habit of scratching the face of its mother or nurse with its finger-nails, until, as a result, the close proximity of any face was a sufficient suggestion for it to give a violent scratch. To break the habit, the child's father slapped its fingers each time it scratched, and after a few experiences the habitual reaction was checked. When a face approached the child, it would grow solemn and quiet, and gaze at the face, hardly moving a muscle; then, after a trying period of balance, it would either suddenly scratch or turn away to something which its father provided as a counter-attraction.

Out of this organic and neural stage the higher, full-grown type of deliberation evolves. These instinctive and impulsive motor processes, with their corresponding emotional tones, are gradually registered in consciousness and furnish the basic memory-material for *real* deliberation. The alternatives now in conflict are more or less clearly envisaged, and in turn occupy the centre of the mental stage, until one alternative dominates attention and is selected, though throughout life conscious deliberation is only rarely necessary. Organized, *i.e.* habitual, reactions determine a very large part of our choices, and, though we often delay action because of inhibitory tendencies, such delay is not necessarily deliberation. Much of our deliberation, again, does not rise to a clear cognition of alternative ends. Blurred images, fitful feelings, disconnected words, or a system of mental 'labels,' often stand for the act of deliberation, and we oscillate from one alternative to the other without a clear forecast of the grounds at issue, or the ends in view. Moreover, we are often relieved of the necessity to deliberate by the dynamic character of ideas. Many of the acts of a normal person are ideo-motor, that is to say, the idea itself is propulsive enough to sweep directly and unhindered into action. All ideas would thus produce action (1) if they were sufficiently propulsive, and (2) if they did not meet conflicting situations in the mind. It is this complex conflict of ideas, of reasons, of motives, of practical means, that forces deliberation upon us.

The inhibitory situation which blocks impulsive tendencies or ideo-motor action, and which involves indecision and deliberation, may be, and often is, the marginal, or fringe, consciousness that forms the background to the idea in full focus. We cannot *tell* why we do not act upon the idea which points us towards any end. We feel an indescribable restraint that checks our impulses and holds us from action. As W. James puts it:

'No matter how sharp the foreground-reasons may be, or how imminently close to bursting through the dam and carrying the motor consequences their own way, the background, however dimly felt, is always there; and its presence . . . serves as an effective check upon the irrevocable discharge' (*Princ. of Psychology*, ii. 529).

The period of hesitation, balance, or deliberation may be indefinitely prolonged; but usually, by processes which are largely sub-conscious, the 'reasons' for one alternative over the other, or for one possibility over the others, come into clearer focus, stay fixed in attention, and plainly dominate; and the mind settles into a decision.

The moral significance of this inward balance, this weighing of alternatives, is obvious. All higher ethical behaviour has its rise here. The person who *deliberates* is no longer at the mercy of the solicitation of instinct, impulse, or a sudden thought; for all these motor tendencies are now forced to run the gauntlet of well-organized inhibitions. Each idea must dominate, if it is to dominate at all, by finding its place in the complex whole of a formed consciousness by adjusting itself to the ground-swell of a fashioned character.

A genuine moral decision, a self-determined action, is arrived at only when the permanent core of the self has found expression; and that is ordinarily reached through serious reflexion and exhausting inner struggle, which is *deliberation* in its deepest significance.

RUFUS M. JONES.

DELICT.—Considerable difficulty exists in regard to the definition of the term 'delict' in Roman law and in systems of modern law founded on the Roman. The difficulties are not so great, however, as those which attach to the definition of 'tort,' the term which, on the whole, corresponds to it in English law. English lawyers have failed to produce a perfectly satisfactory definition of the latter term, and it is probable that it really represents, as Markby (*Elements of Law*, p. 347) says, a false

classification. Usage, due to historical accident and variety of jurisdiction, has excluded from the English term cases which in principle fall under it. The definition of 'delict' in General Jurisprudence ought to give the essential principle underlying the technicalities of particular legal systems.

Moyle (*Justiniani Institutiones*, lib. iv. pt. 1, note) says: 'A delict is usually defined as a violation of a *jus in rem* which generates an obligation remissible by the private individual who is wronged.' He finds fault with this definition, as admitting cases where the party injured is only entitled to recover damages. According to Moyle (*ib.*), true delicts possess three peculiarities: they give rise to independent obligations; they always involve *dolus* or *culpa*; and the remedies by which they are redressed are penal. Sohm (*Institutes*, Eng. tr.[2], 1901, p. 432), on the other hand, includes such non-penal actions under actions arising from delicts.

The above definition seeks to distinguish 'delict,' as generating an obligation remissible by the private individual, from 'crime.' This is to adopt Austin's distinction between civil and criminal injuries; for he holds that the distinction consists in a mere difference of procedure, viz. whether the offence is pursued at the discretion of the injured party or at that of the State (*Lectures on Jurisprudence*[5], p. 405). Blackstone (iv. 5), followed by Holland (*Elements of Jurisprudence*[10], p. 320), regards the distinction as turning on whether the wrong is one against individuals as individuals, or affects the whole community as a community. Again, some have regarded the very circumstance whether mere redress is given for loss suffered, or whether, on the other hand, a penalty is inflicted for wrong done, as the distinguishing feature between civil and criminal injuries. If the latter line of distinction be adopted, what Moyle considers an essential of all delicts would become the distinguishing characteristic of crimes as contrasted with delicts.

In English law, wrongs to property to which no ethical censure attaches are included among 'torts.' Pollock (*Law of Torts*[8], p. 18), in order to maintain intact the features of *dolus* ('wrongful intention') or *culpa* ('negligence'), and consequent penal culpability, as essential ingredients in those torts that are delicts, regards the torts from which these features are absent as obligations arising, not *ex delicto*, but *quasi ex delicto*. This leads to the distinction between delicts and *quasi*-delicts. By some there is said to be no distinction in principle, delicts being those wrongs which were made actionable by the old civil law of Rome, *quasi*-delicts those which were made actionable by the legislation of the prætor. If, however, we take the instances given in the *Institutes of Justinian*,—a judge who, corruptly or through ignorance of law, has made a suit his own, and an innkeeper who is responsible for the loss of property of his guests,—we see a distinction perfectly analogous to that between contracts and *quasi*-contracts. As in some cases the law establishes a tie or obligation between the parties, the same as would have existed had there been a contract between them, so, in other cases, it establishes an obligation similar to that which would have arisen, had a delict been committed. The point of difference between a contract and a *quasi*-contract is that one is formed voluntarily by the person bound, the other is formed involuntarily. In like manner, in the case of a delict, there is voluntary action—action from which it is possible to abstain; in the case of a *quasi*-delict, the obligation arises from an act or position in regard to which the person bound has had no option. The judge must decide the suit. The innkeeper is bound by the act of the thief. There may or may not be *dolus* or *culpa*. It is true that, in the case of the corruptly decided suit, a volitional element is present. The involuntary element arises from the law which forces on the judge the position of having to decide the suit. Yet this very case shows that *dolus* or *culpa* may be present in *quasi*-delicts. If this is the true point of distinction between delict and *quasi*-delict, it justifies the profound comment of Austin (styled by Pollock [*op. cit.* p. 18] 'perverse and unintelligent criticism'), which implies that there is no essential distinction from the point of view of legal classification between *quasi*-contract and *quasi*-delict (Austin, *op. cit.* p. 914). The only possible distinction must be that stated by Austin: that, in the one, the obligation arises from services rendered; in the other, from wrong done or services omitted.

GEORGE J. STOKES.

DELOS.—See AMPHICTYONY.

DELPHI.—See AMPHICTYONY, ORACLES (Gr.).

DELUGE.—**I. Meaning of the term.**—The word 'Deluge' (Lat. *diluvium*, Fr. *déluge*, 'a great flood') has been very generally used to denote the Bible Flood (Heb. מַבּוּל) recorded in Gn 6–9[17]. It is commonly understood to imply that the Noachian Flood, as the narrative naturally suggests, covered the surface of the whole world, and that all men and all terrestrial animals perished, excepting those providentially saved in the Ark (see esp. $6^{7.\ 13}$ $7^{21\text{-}23}$ 9^{15}).

II. Supposed confirmation of the Bible Deluge.—So considered, the Deluge formed, it was once believed, a very important epoch in the world's history.

1. Attention was called to the marked difference between the extinct species of animals which lived before the Deluge, and whose fossil remains are found in various geological strata, and those in existence at the present day; nor does it seem always to have been realized that this distinction is in itself an argument against the literal truth of the Bible narrative, according to which all species of animals should have survived, or God's purpose must have failed.

2. A more cogent proof of the general truth of the Bible story seemed to lie in the fact that Deluge stories, or stories in which a great Flood forms a more or less prominent part, are remarkably frequent in the folklore of the ancient literature of peoples scattered over the greater part of the world. It has been confidently argued that these all originated in the great universal Deluge, of which they were more or less obscure traditions handed down from their ancestors—Shem, Ham, and Japheth. Moreover, special stress was laid on the extraordinary accuracy with which the memory of certain details had in some cases been preserved (see below, IV. *A.* v.).

III. Reasons for not accepting a universal Deluge.—The belief in a universal Deluge has long been abandoned by well-informed writers.

1. It was found impossible thus to account satisfactorily for the various races of mankind and their distribution. Ethnological research suggested the existence of races altogether independent of the Bible system, who survived the Flood and were themselves descended from a pre-Adamite stock (see ANTEDILUVIANS).

2. But the most fatal objections are those that arise from a study of the natural sciences.

(*a*) Geology, as now understood, gives a very simple and credible account of the history of the world by natural agencies—shrinkage, gradual sinkings and upheavals, deposits by action of animalculæ and otherwise, the action of heat, water, and ice, etc., in which a Deluge finds no place. It is, in fact, absolutely

impossible, unless we may postulate a period in which the surface of the earth was so even that all the water possible at any given time could have covered it as one vast ocean. But even if this ever were so, such a Deluge would find its analogue, not in the Bible Flood, but in the 'deep' (*tĕhôm*) of Gn 1[2].

(*b*) The study of comparative Zoology has abundantly proved that there is no definitely marked division between extinct species of animals and those of the present day which could be accounted for by such a break in the history of the animal world. In fact, the extinct species, as, *e.g.*, the trilobite, ammonite, and ichthyosaurus, had died out countless ages before man appeared on the earth, and by the operation of natural laws which still prevail.

(*c*) The same also is true of plant life and its history. And in this connexion it may be observed that the Bible story, in contradistinction to the Akkadian (see below, IV. *A.* vi. (*m*)), says nothing of the preservation of vegetation, the greater part of which must have perished had the Flood lasted a year.

3. To the unscientific mind, however, the most striking difficulties are those which arise from the obvious improbabilities, or rather impossibilities, of the story of Genesis itself.

Most of us have from childhood, through the influence of pictures and toy-arks, been accustomed to imagine Noah's Ark as a great vessel with a huge raised hold in the middle. But there is nothing in the Hebrew תֵּבָה or in the Bible narrative to suggest anything of the kind. The Ark was rather a huge box with a closed door and dark windows, which had to be opened for its inmates to look out. There were no sails or oars, no sailors to navigate this strange structure or tell Noah what he wished to know. The box, nevertheless, floated safely across what one would naturally have supposed a stormy sea (see Gn 7[11], and cf. Akkadian story [V. *A.* i.]), and that for presumably some hundreds of miles to the mountains of Armenia (Ararat). Large as this box was, it was infinitely too small to contain sevens of all clean animals, and pairs of unclean animals, *as we now know them*. But this is what the story requires, unless we are to suppose—a thing highly improbable in itself, and opposed to geological records—that there has been a very large evolution of species since that, geologically speaking, recent period. These animals, thus huddled up together, are tended and preserved for apparently a whole year with necessarily huge supplies of food of various kinds—animal and vegetable. In a word, four men and four women were able to do, under such conditions, without, it would seem, the slightest difficulty, what taxes the utmost skill and ingenuity of zoologists with such space and under such conditions as are possible in our Zoological Gardens. Imagine, for example, the hippopotamus or the seal a whole year without water, or the polar bear cooped up for a single year in the vitiated atmosphere of a 'room' in the Ark! But even these difficulties are hardly so bewildering to the imagination as those connected with collecting the animals and getting them into the Ark. If we attempt to realize the journeys necessary to the Tropics and the Arctic regions, to islands and continents, to marshes and mountains and seas, the difficulty of capturing all these animals alive, bringing them back and getting them into the Ark, we are forced to the conclusion that it was absolutely impossible, except by a series of miracles, of which the story in the Bible gives no hint. The whole is narrated in a simple childlike way by those who evidently did not see the difficulties, and obviously could not have seen them then as we see them now.

4. A further ground for not accepting as literally true the Bible Deluge story will be found by comparing it with parallel stories of similar origin which will presently be discussed. It will be sufficient to observe here that diverging accounts of any supposed event tend of themselves to cast suspicion on any one of them, unless that is obviously the source of the rest, which certainly cannot be proved of the Bible story.

5. To these difficulties may be added, in conclusion, the general difficulties in accepting as historically and literally true the early chapters of Genesis, of which the Deluge story forms a part. One who on scientific grounds rejects the literal truth of Gn 1, or on mythological grounds that of Gn 2. 3, would very naturally feel some hesitation in accepting the Deluge story, even if it presented no serious difficulties of its own.

IV. **Explanations of Deluge stories discussed.**—But, if such a Deluge as that described in the Bible is impossible, at least without a series of improbable miracles, how else explain the prevalence of that belief among so many and so far-separated peoples? An attempt to answer this question will form the chief subject of this article. It involves a complicated inquiry. The Deluge, or Flood, stories in question vary so greatly that a really adequate discussion would carry us beyond our necessary limits. The reader will grasp the full force of the arguments given only if he studies for himself the stories as given by Andree and in other sources here referred to. The course now proposed is first to give the answers which have already been suggested, with such illustrations and comments as may help the student towards a satisfactory solution, and then to discuss separately some of the more important stories or groups of stories on mainly ethnological or geographical lines.

Speaking generally, then, the following five explanations have been given of the prevalence of Deluge, or Flood, stories among different races of mankind: that they are (*A*) traditions of the Bible Deluge; (*B*) traditions of independent, generally local, floods of greater or less extent; (*C*) pseudo-scientific explanations of natural phenomena or the like; (*D*) parts of cosmological systems; (*E*) Nature myths. In point of fact, comparatively few writers have adopted any one of these theories exclusively. Cheyne, for example, in his article 'Deluge,' in *EBr*[9], made a marked distinction between a Deluge proper—a supposed submersion of the whole world—and partial floods, which may have given rise to Deluge stories. Certainly few, whatever general theory of Deluge stories they may hold, would fail to recognize that the Chinese story, at any rate, is based on the tradition of a local flood.

A. The traditional origin of Deluge stories.—Is the belief that the many and various Deluge stories of different parts of the world had their common origin in the Flood described in the Bible, borne out by the stories themselves *in detail* and by what we may reasonably infer as to their history?

i. Andree lays special stress on the fact that there are many parts of the world where no Deluge story has yet been discovered, such as Egypt and Japan. There are others, such as Africa, where they are very rare. It is therefore, so far as our present knowledge goes, an exaggeration to say, with some writers, that the tradition of a Deluge of some sort is practically universal, or even, as Lenormant maintained (*Orig.* i. 489), among all except black races. On the other hand, it must frankly be recognized that Flood stories are very numerous, and that they are found among nations scattered far and wide over the world.

ii. Exceptions must be made of a large number of stories which have evidently a local origin.

iii. Account must be taken of the influence of missionaries in unconsciously, or even consciously, changing and developing folklore, and of the difficulty which the savage mind has in distinguishing clearly between old and new, and its frequent tendency to paint the old in new colours. It was the avowed policy of many missionaries to make Bible stories more acceptable by combining them with ideas with which their converts were already familiar. Moreover, the missionary, through whom the Deluge stories were in many cases originally communicated, was a prejudiced witness. He had a very natural wish to find confirmation of an event which he believed to be undeniably true, and which it seemed impiety to deny. No wonder if, without the least wish to deceive, he encouraged his heathen convert to give him the kind of information he desired, and, in reporting it, unconsciously assimilated it still more to the familiar Bible story. Andree (p. 111) has given an interesting example of the way in which natives were sometimes asked leading questions.

iv. That many of the Deluge stories current among uncivilized tribes were actually coloured by Christian influence becomes evident on examination of the stories themselves. For it will be found that—

(*a*) Those Biblical details on which so much stress is sometimes laid are often attached to a

story entirely unlike the Bible Deluge narrative, both in character and in purpose.

Thus the sending out of the raven and the dove by the old man who had found refuge from the Deluge in a boat on one of the Rocky Mountains (Déné Indians) is altogether meaningless, and yet, according to Petitot, it is almost exactly similar to the Bible incident, except that a fir-branch is substituted for the there unknown olive-branch. A still more interesting variation is found in a story as told by the South-American Macusi tribe, in which a rat sent out to investigate matters came back with an ear of maize in its month. Here the Biblical motive is combined with the common feature among Indian Deluge stories of sending out animals to *procure* land (see below, IV. *C.* (*a*)).

(*b*) The Deluge stories which thus resemble the Bible narrative in some of its details often betray their Biblical colouring by mixing up other familiar Bible stories, such as the creation of woman and the Tower of Babel.

When we read in the story of the Macnei just referred to that, when the Good Spirit created the first man, the latter fell into a deep sleep, and on waking up found a woman standing by his side, we are not surprised to hear the incident of the rat and the ear of maize. In a story of the Papagos, in Arizona, it is the hero of the Deluge, Montezuma, who, disregarding the warning of the Great Spirit, builds a house that should reach to heaven, which is destroyed before its completion by lightning from heaven. In the story of the Washo, a Californian tribe, the slaves are compelled by their masters to build a temple as a place of refuge from any future Flood. When a great earthquake with a terrible rain of fire occurs, and the temple sinks up to its dome in the Tahoe Lake, the masters clamber in vain on to its top, from whence they are hurled by the angry god. Andree remarks here that the building of the temple is evidently a modern feature alien to the customs of the tribe, and certainly a domed temple is not a very ancient feature. That the purpose of the temple is not worship, but escape from the Flood, would seem to suggest an early adaptation of the Tower of Babel story. It would thus be a parallel to the story of the neighbouring Papagos, and to that of the Mandane (see IV. *A.* vi. (*e*)).

(*c*) Speaking generally, what have the appearance of traits due to Christian influence are found most frequently in those countries where Christian influence has been longest at work, especially on the American continent.

v. The argument from Biblical details in Flood stories is in any case hazardous, as it proves too much. We find details not given in the Bible narrative also repeating themselves in a most remarkable way in the legends of localities far removed from each other.

(1) The boat or raft of safety is frequently described as moored by a rope. A new element is sometimes introduced by some of the ropes not being long enough and the occupants of the boats being drowned (Finns [Lenormant, *Origines*, i. 455]). In one form of a legend of the Pelew Islanders, such was the fate even of the one surviving old woman, until the oldest of the gods in pity revived her. (2) Again, the Greek story of Deukalion and Pyrrha and the stones has an exact analogy in the story of the Maipuri, in which the coco-nuts thrown by the man over his head become men, those thrown by the woman, women. In the legend of other tribes on the Orinoco, as also of the Macusi, stones were thrown by the surviving man. In a Lithuanian story a rainbow was sent to the old couple to comfort them, and to advise them, if they would have offspring, to leap over 'the bones of the earth.' (3) The miraculous growth of the fish, a conspicuous feature of the Indian legend (see V. *D.* i.), has its counterpart in the cuttle-fish of the Thlinkits, which grew so large as to fill the whole house.

It is by no means easy to say how far features of this kind are actually borrowed from other stories, and how far they are the result of imagination and reason acting in similar fashion on different peoples. There is certainly no difficulty in supposing that the tying of the boat was introduced as the most natural thing for the survivors to do. On the other hand, the enigmatical phrase 'bones of the earth' combined with the consolation of the rainbow (Lithuanians), and a similar combination of the stones story with the rat and the maize-ear (Macusi, see above, IV. *A.* iv. (*a*)), suggest that both elements in either case were due originally to the influence of Christian teachers. We can readily understand how well-educated missionaries might, in drawing attention to the prevalence of Deluge stories, have instanced that of Deukalion, and how such a picturesque incident might have found its way into a popular folk-tale.

vi. The extraordinary variety in every detail in the different Deluge stories makes it improbable that all originated from one traditional story, as will best be realized by taking what might be regarded as the normal type and pointing out some of the variations which we find. Thus: (*a*) some god or gods, angry with the Antediluvians (*b*) usually on some specific ground, (*c*) determine to send a Deluge, but (*d*) give warning of it to some one or more beings. (*e*) The latter, usually following Divine directions, construct some kind of boat or box, or adopt some other means of escape. (*f*) In this structure they preserve also the necessaries of life, including domestic animals, more rarely pairs of animals generally. (*g*) Shortly after, (*h*) by rain or other means, (*i*) comes a Deluge. (*j*) When the Deluge subsides, (*k*) they land on some mountain or island, and (*l*) sometimes offer a sacrifice. (*m*) Future descendants of men (and sometimes of animals also) are reproduced, often in a miraculous way. (*n*) The survivors (or the chief of them) are translated to heaven.

This imaginary norm, from which, or from something like it, all the stories might naturally be supposed to have come, is obtained by putting together the features which are most frequently found. No story, in fact, gives them all. Even the Bible story has no translation of Noah (but see ANTEDILUVIANS). The Greek legends have no post-diluvian sacrifice, and the Indian story in its earliest forms gives no reason at all for the Deluge. But, apart from such omissions, we find variations, under each head, of almost every conceivable kind.

(*a*) The Deluge, though almost always the work of some god, is occasionally, among the North American Indians, ascribed to a malignant being, as the Black Serpent (Algonquins), an eagle (Pimas), or a raven (Hare Indians).

(*b*) (1) The Deluge is a punishment for sin, not only in the Bible, but among the Pelew and Fiji and Society Islanders, the Algonquins, and some others. (2) More frequently it results from the resentment of a god for some act of violence or personal injury, such as, rather frequently, the refusal of hospitality (Greek Deukalion story) or the slaying of a favourite. Thus, according to a Greek Flood story preserved by Nonnus, it was sent to put out a conflagration caused by Zeus for the murder of Dionysos by the Titans (Usener, p. 42). In a story of the Fiji Islanders it is the anger of the god for the slaughter of his favourite bird. The Dayaks of Borneo attribute a great Flood to the destruction and cooking of a boa constrictor. With the Hare Indians (N. America) it is the raven who brings about the Deluge to punish the Wise Man for having thrown him into the fire, though, curiously enough, the raven escapes with him on the raft. Even more original is the cause of the Deluge as reported from the Leeward Islands. A fisherman who had been fishing in sacred waters caught the hair of the sea-god as the latter was having a nap (Ellis, *Polynesian Researches*, ii. 58). (3) In the Transylvanian Gipsy story it is the punishment for the disobedience of a woman in eating a forbidden fish —a motive which may have originated from the Bible story of the Fall. In both these last stories the Deluge appears singularly unreasonable. In the latter the woman herself, who is alone responsible for the crime, is slain by the first flash of lightning; in the former, more unfairly still, the fisherman, his wife, and, according to some versions of the story, a few friends, are alone allowed to escape.

(*c*) The warning of the Deluge is generally made by revelation, sometimes directly (Genesis), sometimes by another god than the author of the Deluge (Akkadian), often through the medium of some animal, as the fish, which a later form of the story regards as an incarnation of Visnu (Indian), by a wounded dog (Cherokees), or by llamas to a shepherd (Peru). The last two cases seem to have arisen out of the observed faculty that some domestic animals have of foretelling rain. The motive of the Indian story seems connected with an ancient mythological conception, which attached a peculiar sanctity to the fish. In a story of the

Pimas a warning is given three times in vain by an eagle (himself the cause of the Flood) to a prophet (Bancroft, *NR* iii. 78).

(*d*) Those who are permitted to escape vary very largely. Frequently it is one person only, as the old man in the Gipsy story referred to above, the god's son Szeuka (Pimas, see Bancroft, iii. 78), one woman (Borneo), or frequently a man and his wife (Darjiling, Himālayas), a brother and sister (Kolarians, East India), or two pairs (Andamanese). Less frequently a few friends or relatives are also saved, as in the Bible and in the Leeward Islands stories, where, however, accounts differ. Rarely we find a considerable number, including slaves (Akkadian). In a highly original story of Kabadi, in New Guinea, all the men escape by getting up into the peak of a mountain and waiting till the Deluge has subsided. In other stories they are all destroyed, and the Deluge is followed by a new creation (Kashmīr). Especially was this the case where the purpose of the Deluge was the destruction of monsters (see ANTEDILUVIANS). In some American Indian stories it is an animal only that survives, such as the coyote (Wappo, etc., California); in a legend of the neighbouring Papagos, it is the coyote and the demi-god Montezuma, while the Thlinkits make the raven and his mother the sole survivors.

(*e*) While by far the most usual means of escape is by one or more boats or rafts, there are a few legends outside the Bible story in which a larger or smaller box or ark serves the purpose, as with the Banar of Cambodia and in some forms of the Greek Deukalion legend. Possibly this is the origin of the so-called 'Big Canoe,' a sort of sacred tub, which forms the centre of extremely curious ceremonies among the N. American Mandans, which are certainly connected with some old Deluge story (see G. Catlin, *O-Kee-pa*, London, 1866). Very frequently the refugees escape to a mountain, either by means of a boat or directly, and some very curious and graphic accounts are given of the straits to which the survivors were reduced, as the water came higher and higher.

Thus in a legend of the Ojibwas, Manabozho, when the waters have reached the mountain peak, gets up into the topmost branch of a fir-tree, where the waters gradually rise to his mouth, in which position he has to wait five days before he discovers a means of safety. In another story the survivors escape from the mountain peak in a coco-nut shell thrown down casually by a god as he was feasting (Lithuanians); and in yet another it is by a canoe which the survivor makes out of a piece of the sky (Sac and Fox Indians). In not a few stories the survivors escape by simply climbing up into a fruit-tree (Karens in Burma, Tupi in Brazil, Acawaios in British Guiana), or, more curiously still, by sheltering under a tree (Mundāri of East India). In some Peruvian stories the mountain of refuge itself floats on the Deluge like a boat. Caves are, singularly enough, the place of refuge in a legend of the Mexican Cholula and of the Arawaks of British Guiana, and the hole of a monster land-crab serves the purpose in the story of the Uraus, a tribe of the Kolarian Indians. From a translation of a very remarkable bark pictograph of a tribe of the Algonquins, it would appear that the place of refuge was a turtle's back, which became identified with an island. But quaintest of all is the story of the Crees, in which the one surviving girl saves herself by catching hold of the foot of an eagle, which carries her to the top of a lofty mountain. In the Thlinkit story the raven and his mother escape in the skins of cranes; in that of the Papagos the coyote saves himself in a bamboo sealed with resin.

(*f*) Speaking generally, food for the future is provided in one of two ways, either by the survivors taking it with them, as in the Bible story, or by its being produced in some marvellous way afterwards. The preservation of animals, apart from their use for food and sacrifice, is very rare, not being found even in the Akkadian version, and is probably derived from the Bible story. Food is miraculously brought to the surviving brothers by two primeval parrots in a Peruvian story (cf. Elijah and the ravens); in another the survivors feed on fish, which they warm under their arm-pits (Tolowa in California).

(*g*) The Deluge in many stories comes without warning, as, it would appear, the necessary consequence of crime, *e.g.* the cooking of the fish and the serpent respectively in the Gipsy and Dayak stories already referred to. More frequently it is after a short interval of a day or so, not foretold beforehand. The 7th day of the Bible (Gn $7^{4.\ 10}$), and probably of the Akkadian story also, has its parallel in a late version of the Indian story (see below, V. *D.* i. (3)).

(*h*) The physical causes to which the Delnge is assigned in different legends are numerous. Naturally enough it is generally rain, often with thunder and lightning. In a Sac and Fox Indian story the rain is said to have fallen in drops as large as a wigwam. Less frequently it is the incursion of a wave (Washo, California), or the pouring in of the water of the sea on to the land (Makah Indians of Cape Flattery). Sometimes it is the sudden melting of the winter snow, as when a mouse gnawed through the bag containing the heat and let it out (Chippewas). Sometimes the cause ascribed is very fantastic. A man accidentally lets fall and breaks the jar containing the water of the ocean which he had picked up out of curiosity (Haiti), and it is the same motive, with the same fatal consequences, that tempts the ape to remove the mat which covered the waters in a hollow tree through which they communicated with the ocean (Acawaios).

(*i*) In a Finnish story the Deluge is of hot water. According to a legend of the Quiché Indians, a deluge of resin followed one of water, and in some cases fire may be said to take the place of water, the conflagration story being in many respects analogous to the more usual deluge of water (Yuracarés of Bolivia, Mundāri of East India; cf. artt. AGES OF THE WORLD).

In extent the Deluge varies from an obviously local flood to a universal deluge. Very frequently everything is covered except a few lofty ranges such as the Rocky Mountains (Déné Indians). In one Australian legend the low island of refuge alone remained uncovered, when the lofty mountain on the mainland, on which the people had taken refuge, was submerged, this idea probably arising from a not uncommon notion that islands float.

(*j*) The duration of the Deluge is very seldom given, and, as the two Bible narratives differ both from one another and from the Akkadian (see below, V. *A.* i.), little importance need be attached to the fact that 40 days, in agreement with the Bible (J), is the duration of the Deluge according to some of the legends of the Polynesian Islands (see Max Müller in Preface to Gill's *Myths*). It is hardly likely that in all these centuries a single isolated detail should have been accurately preserved which had become obliterated in what were, *ex hypothesi*, comparatively early recollections of the fact.

(*k*) See under (*e*).

(*l*) This is an uncommon feature almost confined to the Semitic legends and some forms of the Deukalion story. In the most important Indian story the Deluge leads up to a very complicated and scarcely intelligible religious ceremony; but this belongs rather to the next head.

(*m*) The most striking example of this is the story of Deukalion and Pyrrha; but, as already pointed out (IV. *A.* v. (2)), it has its analogies and possibly its derivatives in a Lithuanian and in certain S. American Indian stories. A more remarkable proceeding is that of the surviving coyote, who, according to the Wappo Indians, planted feathers wherever the wigwams used to stand and they grew into men and women. A similar story is told by Bancroft (iii. 87) of some Californian tribes who relate that men were created

by the coyote and a feather which became an eagle. The Dené Indians sometimes asserted that the gods changed animals into men, but it is not explained where the animals came from. In a story of the Pimas Szeuka, the surviving son of a god, having slain the eagle which had caused the Deluge, restored to life those whom it had killed (Bancroft, iii. 78). The Indian post-diluvian rite was a complicated sacrificial ceremony by which Manu was apparently directed to produce both men and animals by an offering of clarified butter. But it is impossible here to distinguish primitive legend from later ritual and mystic accretions.

Where there is a single survivor, or only survivors of one sex, the re-peopling of the earth is frequently effected by union with some god or animal.

We have an example of the former in a story of the Pelew Islanders. In the story of the Crees the surviving maiden forms an alliance with the great eagle, through whom she has effected her escape. In a Peruvian story one of the surviving brothers seizes the parrot who has brought him food and she becomes his wife. In the Akkadian story the preservation of seed is almost a unique feature. The necessity of re-planting the earth, or at any rate of re-stocking it with cereals and vegetables, does not generally seem to have suggested itself.

(*n*) The apotheosis of the chief survivors is an important feature of the Babylonian story. There may possibly be a trace of it also in Gn 6^9 (P; cf. Gn 5^{24}; see ANTEDILUVIANS).

If, then, the argument from the many existing Deluge stories were pressed, the most that it could with any reason be supposed to prove would be a purely colourless tradition of a Deluge or great Flood of some sort; but any such argument would have to be largely discounted, if not altogether neutralized, by facts to be considered under the next head.

B. Local inundations.—That this supposition will account for a very large number of Flood stories is obvious.

i. The Chinese Deluge story is merely an early tradition, though highly coloured, of such an inundation as has frequently taken place in the valley of the Hwang Ho (see V. *E.* ii., iii.).

ii. Such stories are especially frequent in volcanic districts subject to earthquakes and seismic waves, as in the Prince of Wales Peninsula (Bering Strait), Cape Flattery (Washington), or the Tahoe Lake in California. In a legend connected with the last-named place the inundation is expressly ascribed to a monster wave which burst over the land. In the story of Cape Flattery, the prairie which was flooded was certainly once submarine, and has an alluvial deposit of about a foot, as Swan argues, who gave the story in *Smithsonian Contributions to Knowledge*, vol. xvi. (quoted by Eells in *Amer. Antiquarian*, i. 70–72). In northern districts the Deluge is sometimes assigned to the melting of the snow (*e.g.* Chippewas), and very probably originated in a reminiscence of an exceptional inundation from such a cause. The same may be said of the Deluge stories of island peoples. The experience of high tides occasioned by storms would naturally make an impression upon the active imagination of a savage race, and occasion, or at any rate give a certain colour to, stories of this kind. Such tides are the common nightmare of a child living by the sea; and the normal savage is like a clever child only half awake. A more potent cause might be found in the submergence or appearance of islands through volcanic action.

iii. That so many Deluge stories obviously originated in purely local events makes it highly probable that this is the true explanation of many others, where the local cause has been obscured as a tradition, has then become a legend, and has finally passed into a myth, the tendency of the imagination being towards making the story more and more wonderful. Thus, what was originally a local flood may become a universal Deluge, the surviving ancestors being a few single individuals out of the human race. What was quite natural is ascribed to the direct, and often quite miraculous, action of Divine Beings. How far any particular story can be thus explained must be considered on its own merits.

C. Explanations of natural phenomena.—How far did Deluge and Flood stories arise as a hypothetical explanation of observed facts or racial conditions?

(*a*) They often appear as a pseudo-scientific explanation of natural phenomena. The savage mind would naturally ask, How came the sea and land, mountains and valleys, and lakes and islands to be where they are and what they are? Whence differences of colour, language, and character? How came the fossils which are found upon the hills? To these questions they found an answer in the hypothesis of a great Deluge which left the fish turned into stone on the land (Eskimo [see Hall, *Life with the Esquimaux*, London, 1864, ii. 318], Leeward Islanders, Samoan Islanders); or formed a large lake (such as the Tahoe in California, or Dilolo Lake on the southern border of the Congo State); or caused men to seek refuge in distant lands, to divide and learn different languages (Twanas [Washington], Makah Indians of Cape Flattery, Thlinkits, Bella-Coolas); or left the red colouring on the Indians' skin (Crees). Sometimes the Deluge plays quite a subordinate part in a story which itself serves a different purpose.

A Deluge story of the Pelew Islanders is connected with a picturesque account of the origin of the red stripe on the head of the bird called the tariit (*Rallus pectoralis*). A Persian Deluge myth, among other motives, explains the saltness of the sea. In an interesting myth connected with Mangaia (Cook Islands), the general purpose of which is to explain the origin of the coco-nut, the Flood is merely required to bring up the eel, out of whom the coco-nut grew, to the door of the maiden Ina's hut, whose pious duty it was to slay him. In fact, there is another version of the same myth in which there is no Flood at all (Gill, *Myths*, v. 77–81). Gill, who was for 22 years a missionary in the Hervey Group, had specially favourable opportunities of collecting stories uninfluenced by Christian teaching, as he obtained them direct from Tereavai, the last priest of the god Tiaio, who took the double form of a shark and an eel. Incidentally also the Flood story given above accounts for the passage by which the water drains into the sea. In another legend, told by Gill, the chief object of the Flood was to put out the furnace in which Miru, the hag of the nether world, had designed to cook Ngaru. The Flood puts out the furnace and permits Ngaru to effect his escape.

It is very probable that to the same intelligent curiosity we must refer those many stories which seem to lead up to the origin of land, or at least of islands.

There is an old Indian legend according to which Viṣṇu in his *avatāra* as a boar brings up land from the bottom of the ocean (Muir, *Original Sanskrit Texts*, vol. i.^{2} [Lond. 1873], chs. i. and vii.). With this we may compare the legend that Rangi pulled up the island of Mangaia out of the nether world. But there are several apparently analogous stories among the American Indians connected with a Deluge which occurs as an event, not as a primordial condition. In such stories some animal, a duck or beaver or fish, more often a musk-rat, dives down for earth and brings it up between its feet or in its mouth (Sac and Fox Indians, Chippewas, Ojibwas). Some have compared the curious sequel to the sending out of birds by Xisuthros in the later Babylonian story. But there the clay on the feet of the birds is a proof of the re-appearance of ground, on which, though still wet, the birds could walk, and it is a far less poetical variant of the dove and the olive branch. It is very unlikely that, as Andree thinks, the sending out of animals in the American Indian stories has any connexion with that Bible incident. More probably it is an ancient myth accounting for the origin of land among an originally seafaring people, which has become mixed up with later inundation traditions of a more local character.

(*b*) It seems probable that in some cases, among island and coast-land peoples, the Deluge story originated in the tradition of the early migration of the people. In such cases the ocean is itself the Deluge, and the island or coast-land the home to which they escaped. In some such way the Binnas account for their settlement in the Malay Peninsula. How easily traditions of such a kind could

pass into myths may be seen in many of these Deluge stories, in which comparatively recent events have become interwoven with them.

Thus a Deluge myth of Western Australia is connected with a quarrel between 'black' and 'white' races, and can have originated or taken its present shape only after the first English settlements in the country. In a Deluge myth of the Papagos, the Great Spirit, unable otherwise to tame Montezuma's rebellious temper, sent an insect into the unknown land of the East to fetch the Spaniards, who destroyed Montezuma, and people no longer worshipped him as god. Here Montezuma, an Aztec ruler, who was actually killed by the Spaniards in 1520, has become the demi-god hero of an ancient Flood myth.

D. Deluge stories explained as part of a definite cosmological system.—This has been incidentally touched upon under the last head. Some of the Deluge myths might certainly be so explained, *e.g.* that of Viṣṇu in his *avatāra* as a boar bringing up land from the bottom of the ocean. But in such stories the ocean is not so much a Deluge as the primeval Deep (cf. תְּהוֹם, Gn 1^2). As a rule, however, such conceptions are hardly of a kind to account for the general prevalence of Deluge stories. Moreover, the savage mind, at any rate, was essentially local and limited in its range, and comprised within its view very little beyond the horizon of its ordinary experience.

E. Deluge stories explained as Nature myths.—In this view some forms of the Deluge story, especially those of Palestine, Babylon, Greece, and India, are a mythical representation of some ordinary natural phenomenon of constant recurrence. Noah in his Ark is generally regarded by its exponents as a sun myth, but as regards the interpretation of the story there is a wide divergence of opinion.

1. Cheyne, for example (see art. 'Deluge,' in *EBr*^{9}), following Schirren and Gerland, suggests that the Deluge has been transferred from the sky to the earth. So understood, the progress of Noah in the Ark, like that of Zeus in his chariot, is a mythical interpretation of the course of the sun. But this would imply an incredible twist of the primitive imagination.

2. Usener, on the other hand, who has written on the subject at very great length, makes the whole point of the myth lie in the *landing* of the Deluge hero, which represents the *rising* sun. He derives his argument partly from philology, but chiefly from comparative mythology. He explains Deukalion as 'the little Zeus'—a suitable name for the newborn sun, and he compares the many stories, such as those of Perseus and Oedipus, in which a child is thrown into the sea in a chest or otherwise, and whose landing gives rise to some cult, which he connects sometimes, rather curiously, with that of the sun. In fact, almost every legend which has for its theme any one traversing the sea in a marvellous manner, from Arion on his dolphin to the legend of Lucian's corpse, is made to serve his purpose. Usener finds developments of the same idea in fairy tales, Christian legends, and many myths and religious customs, coins, etc., representing the sun-god, be it Dionysus or Saturn, in a ship. Strangest of all are the illustrations drawn from the legend of St. Christopher bearing the Infant Christ, and even an ancient picture of Christ's baptism. He lays great stress on the fact that the season of Baptism was called *Epiphaneia*, an emblem of rising light, and even directs attention to the fact that the water is depicted as stormy, seeing in this the idea that the water was conceived as lifting up the Christ. Similarly the Deluge might be regarded as lifting up the sun-god in the Ark, preparatory to his landing, *i.e.* rising. Such arguments as these hardly need serious discussion.

F. General conclusion.—Speaking generally, the comparative study of Deluge legends tends to make it more and more evident that, while a very large proportion of them certainly arose originally out of local events, these have always been highly coloured, and not infrequently quite transformed, by the imagination, which among more uncivilized races saw all Nature teeming with conscious life in manifold forms. Either in conjunction with such traditions, or sometimes independently of them, Deluge stories arose out of an inquisitive creative imagination, which first sought to explain the natural wonders of the present by even greater wonders in the past, and by a process of repetition changed the guesses of an earlier into the traditions of a later age. Like all folklore, such stories have a living interest to the student of psychology, but are of far less importance in the comparative study of religion. It should be added that, though the common derivation of Deluge stories from the Bible Deluge can no longer be maintained, the Bible story and those related to it have had in various ways a wide and important influence upon a large number of them.

V. Groups of Deluge stories.—*A. Semitic.*—The Semitic Deluge story is found in three forms: (i.) that of the Akkadian tablets, (ii.) the Bible Deluge, and (iii.) the story as narrated by later Babylonian historians, esp. Berossus. It is now generally recognized by scholars of different schools that (i.) represents the most ancient form of the story, of which (iii.) is merely a variant, while (ii.) is a very different version of the old story adapted to an altogether different conception. The grounds on which this opinion is based are: (1) the belief that, though the date of the inscription upon the Akkadian tablets is probably about 660 B.C., it is a copy of a poem dating from at least 2000 B.C., as is confirmed by the mutilated fragment of another Babylonian Deluge story, discovered by Scheil at Abū Habbah (Sippara), the colophon of which points to a date for the inscription of 2250–2150 B.C. (see Ball, p. 43); (2) that the tablets belonged, roughly speaking, to the country from which the Israelitish people migrated; (3) that the story itself, in both its Biblical and Akkadian forms, is connected more nearly with the same region of the world than with Palestine (note the mountains of Nizir [Akkadian], Ararat [Bible]); (4) that the Akkadian story is based on the religious ideas of that country and the worship of the ancient gods of Babylonia, while that of Genesis is conceived in the spirit of the high morality and monotheism of the Jews.

i. The Akkadian Deluge story.—The Akkadian Deluge story, discovered by George Smith in 1872 among some monuments in the British Museum, was inscribed on the eleventh of twelve tablets, each containing one canto of an ancient epic poem. Each tablet is connected with a sign of the zodiac, and, as the eleventh is that corresponding to Aquarius, the Deluge story is particularly suitable.

The epic relates the adventures of a certain Gilgameš, who is frequently identified by scholars with the Nimrod of Genesis. In order to seek a remedy for sickness, he pays a visit to his ancestor Šitnapišti (Nuhnapishtim [Ball]) at the mouth of the river Euphrates, and Šitnapišti gives him an account of the Deluge and of his own translation, of which the following is an abstract:

The gods in Šurippak, even then an old city, determine to send a Deluge. Ea, the lord of wisdom, reveals their purpose to Šitnapišti, and bids him build a ship of certain dimensions, there bring the seed of life, and launch it. Šitnapišti carries out these instructions, building it 120 cubits (?) high, of six storeys, and divided into seven parts, pouring over it several measures of 'pitch' both inside and out, and providing it with oars. Having celebrated a great sacrificial feast with oxen and sheep, beer, wine, oil, and grapes, he brings into the Ark stores of gold and silver, beasts of the field, man-servants and maid-servants, and the sons of his people ('all the craftsmen' [Ball]). Having done so, Šitnapišti is bidden to enter and shut the door, and to await the Deluge that night. He appoints Buzur-sadi-rabi (Smith and Sayce ['Buzur bel,' Haupt and Ball]) his pilot, and waits in dread for the storm, which bursts forth next morning. The description of the storm and the consternation of the gods are thus graphically and forcibly described (87–111):

'When the first light of dawn appeared,
There arose from the fountain of heaven a black cloud;
Rimmon in the heart of it thunders, and
Nebo and Merodach march before;
The Throne-bearers march o'er mountain and plain.
The mighty Dibbarra (or Girra) wrenches away the helm;

Ninib goes on pouring out ruin.
The Anunnaki (earth-spirits) lifted torches;
With their sheen they lighten the world.
Rimmon's violence reacheth to heaven;
Whatever is bright he turneth to darkness.

.

One day the Southern blast . . .
Hard it blew, and . . .

Like a battle-charge upon mankind rush [the waters].
One no longer sees another;
No more are men discerned in (descried from) heaven.
The gods were dismayed at the flood, and
Sought refuge in ascending to highest heaven (*lit.* the heaven of Anu);
The gods cowered like dogs, on the battlements [of heaven] they crouched.
Ishtar screams like a woman in travail,
The loud-voiced Lady of the gods exclaims:
"Yon generation is turned again to clay!
As I in the assembly of the gods foretold the evil.
A tempest for the destruction of my people I foretold.
But I will give birth to my people [again], though
Like fry of fishes they fill the sea."
The gods, because of the Anunnaki wept with her;
The gods were downcast, they sate a-weeping;
Closed were their lips' (Ball, p. 38 f.).

For 6 days and nights the storm rages, and abates on the 7th, when the waters begin to subside. Ṣitnapišti weeps at the sight of the corpses; he opens the window, however, and discovers distant land. Thither the ship steers, and grounds on Mt. Nizir. Here, after another 7 days' interval, Ṣitnapišti sends forth a dove, which finds no resting-place, and returns. He then sends forth a swallow, which finds no resting-place, and returns; then a raven, which, when it sees that the waters have subsided, returns not. He then sends forth the animals to the four winds of heaven, builds an altar, and offers sacrifices with libations of wine, at which the gods collect like flies (?), while the great goddess Ištar lights up the mighty bow (?).[1] The account goes on to describe how, when Bel sees the ship, he is filled with anger, and commands the gods that no one shall come forth alive. Ea expostulates with him for having caused a Deluge, and suggests in future other punishments, such as wild beasts, famine, or plague. He declares that he did not reveal the counsel of the gods, but only sent a dream to Atrahasis. His pleas are so successful that Bel takes Ṣitnapišti's hands, and blesses him *and his wife*, and bids them be as gods, and dwell at the mouth of the rivers.

Unfortunately, there are a large number of *lacunæ*, and in many other passages the language is very obscure; but the above may be taken as fairly representing the general drift.

There can be little doubt that the text as we have it is composite (see Sayce, *Higher Crit. and Mon.* ch. iii.). The Deluge is ascribed first to the gods of Šurippak collectively, then to the sun-god (Šamaš), and, lastly, exclusively to Bel. The hero of the Deluge is twice called Atraḫasis instead of Ṣitnapišti. Moreover, a double version of Ea's warning speech is given, and, lastly, Bel's counsel to stop Ṣitnapišti, etc., from leaving the ship is clearly out of place after the sacrifice just recorded. However precarious it may be, and indeed unnecessary, to attempt an exact analysis of the whole, it is of some importance to realize that the Deluge story was a popular one, and even in Babylon was told in various ways. We have at least evidence of one story in which Ṣitnapišti is presumably the hero, ending in the sacrificial thank-offering, and another in which, after a quarrel among the gods, the hero Atraḫasis is translated. In addition to the Akkadian Epic here given, a few other fragments have been found containing more or less divergent versions of the same story. The most important of these—that discovered by Scheil, already referred to—consists of 37 lines. It represents some god as calling upon Rammân to bring a flood on the earth, and Ea as interposing to save Atraḫasis (see Driver, *Genesis*, *in loco*; Ball, p. 43).

Before passing on to consider the Bible Deluge, we must call attention to a few points in the Akkadian story. (1) The recurrence of periods of seven days' duration. The preparations appear to have taken 7 days (cf. Gn 7^4 [J]), the ship being completed on the 5th, and 2 days more being required for the sacrifice and embarkation. The storm itself lasted 7 days, and there was another interval of 7 days, while the Deluge was abating, before sending out the birds, which were sent out consecutively, apparently on the 7th day, or, at any rate, at no great interval (cf. the story of Berossus, 'after some days').—(2) The dimensions of the ship are uncertain. There are *lacunæ* in the inscription where the directions are first given, but, at any rate, the height and breadth are the same. In describing the actual building of the ship, the height (and, therefore, the breadth also) is 10 *sars* (120 cubits [Sayce, Hommel]), but the length is not given. It was, therefore, enormously larger than the Bible Ark—4 times the height and over twice the breadth (cf. Gn 6^{15} [P]).—(3) Those saved in the ship included Ṣitnapišti, his wife and slaves (male and female), and the pilot and all his people; but the mention of other relatives is at least doubtful.—(4) Most important of all: Atraḫasis and his wife (but no others) are translated.

ii. The Bible Deluge story.—1. *Analysis.*—The Bible Deluge story, like the Akkadian, is certainly composite, parts belonging to the comparatively late Priestly Code (P), and parts, speaking generally, to the ancient Jahwist source (J).

The parts usually assigned to J * are: 6^{5-8} $7^{1-5.\ 7-10}$ (in part [see below]) $^{12.\ 16b.\ 17.}$† $^{22-23}$ $8^{2b-3a.\ 6-12.\ 13b.\ 20-22}$.

The parts usually assigned to P are: 6^{9-22} $7^{6.\ 11.\ 13-16a.\ 18-21.\ 24}$ $8^{1.\ 2a.\ 3b-5.\ 13a.\ 14-19}$ 9^{1-17}.

2. *The J Deluge story.*—(*a*) *Its date.*—Though the composition of J as a whole can hardly be earlier than the 9th cent. B.C., it seems probable that the Deluge story in its Hebrew form, though not necessarily reduced to writing, is far older. It preserves, at any rate, what appears to be a very ancient custom, not otherwise known, by which *all* clean animals were regarded as suitable for sacrifice (Gn 8^{20}), whereas, according to Dt $12^{15.\ 22}$ 15^{22}, there is clearly a distinction intended between certain domestic animals that were sacrificed and wild game (*i.e.* clean animals) which it had been the custom to eat, but which could not be sacrificed—a distinction which is also implied in the story of the deception of Isaac (Gn 27 [JE]).

On the other hand, the Deluge was not a universal tradition among the Israelites, or, at any rate, did not form part of a generally recognized historical system. The tradition concerning Lamech's sons (Gn 4^{19-22}) implies an unbroken history of civilization; and, if the writer of this last section was aware of the Flood tradition, he certainly did not regard it as a universal Deluge. Many critics, therefore, regard the Deluge story as a comparatively late insertion into the original cycle of J traditions (see *Oxf. Hex.*, *in loc.*).

(*b*) A relation of some kind between J and the Akkadian story is evident. The chief points of similarity are the Divine decision to bring about a Flood (Gn 6^{5-7}) in consequence of man's sin (this is implied in Ea's expostulation with Bel in the Akkadian story); the warning by Divine agency that the Flood was coming (7^4); the command to build an Ark, implied in 6^{8} $7^{1ff.}$; the periods of 7 days, though not so connectedly as in the Akkadian story ($7^{4.\ 10}$ $8^{10.\ 12}$); the sending out af birds at intervals; the sacrifice after the Deluge, and the delight shown in it by Jahweh ($8^{20.\ 21}$). On the other hand, it differs in the monotheistic character of the whole story, and the necessary omission of the petty quarrels of the gods; and in its infinitely higher religious and moral tone (the occasion of the Flood, Jahweh's wrath against man's sin, receives an emphasis which we do not find in the Akkadian story); the means of preservation, an ark or chest, instead of a ship;‡ the Flood's duration of 40 days instead of 7; the birds sent out—raven, dove, dove, dove, instead of dove, swallow, raven; the incident of the olive branch (but cf. Berossus); and the omission of the apotheosis of Noah.

[1] 'She lifted up the Great Gems' (Ball, p. 40, who explains: 'The Babylonian myth evidently regards the rainbow as the great jewelled collar of Ishtar, held up arch-wise in heaven' [see also p. 201]).

* For full analysis, see *Oxford Hex.*; Kautsch and Socin (quoted in Usener, pp. 17–22); Driver, *Genesis*, 1904.

† Some assign $v.^{17a}$ (afterwards corrected by redactor) to P.

‡ Ball argues from the dimensions that the Akkadian ship was really a chest; but it had oars and a steersman, and was launched and navigated.

(*c*) At this point two important questions arise. (1) Is the Bible story derived from the Akkadian, *as we find it in the tablets*? Probably not. That there were several versions of the story current in Babylon is clear from the evidence of two stories combined in the Akkadian tablets, and by the evidence of the other mutilated fragments, as well as by the account of Berossus, which differs in some important particulars. The olive branch in the dove's mouth is the kind of picturesque detail which looks very ancient, and may have been original, and is to some extent confirmed by Berossus (see below, V. *A*. iii. 1, *b*, *c*). It has been suggested that the sending out of birds may have originated in the well-attested ancient custom of letting birds loose to ascertain the direction of land; but, while this is not altogether improbable, it must be admitted that such a purpose is not very evident in the Akkadian story, and is quite inadmissible in that of the Bible. On the whole, it would appear that the Bible story is derived from one that did not differ essentially from the Akkadian as we know it.

(2) Is the story of J a deliberate paraphrase of whatever form it was derived from, or was it the result of a gradual process of development? The subject is hardly capable of positive proof, but the probability seems in favour of the latter alternative. (*α*) If the story was, as seems likely, derived from Babylonia at an early date (note its anthropomorphic conception of Jahweh, Gn 7^{16} 8^{21}), it would, in all probability, have been handed on by oral tradition many centuries before it was written down, and, if so, would naturally have become gradually changed in the telling, as religious ideas developed from time to time. (*β*) We can thus best account for one of the most characteristic differences—the chest of the Bible left to drift by chance or at the Divine will, in the place of the purposely navigated boat of the Akkadian story. No doubt Lenormant was right in saying that the latter is a feature suitable to the story as told by a maritime people, such as the inhabitants of the Persian Gulf, whereas the Bible Ark points to a people wholly ignorant of navigation (*Orig*. i. 408, quoted by Andree, p. 8); but it seems unlikely that a writer in comparatively late times would have deliberately altered the ship into an ark, whereas such a change might naturally have come by degrees. Some writers have urged this difference as a proof of the priority of the Bible narrative; and even Cheyne, while very far from admitting such a view, suggested that possibly this particular feature may be more primitive—the conversion of the chest into a ship being due, if this be the case, to a rationalizing tendency (art. 'Deluge,' in *EBr*^{9}). But such an argument cannot be considered as to any extent outweighing the strong grounds for the priority of the Akkadian story; and, after all, that the Bible Deluge should be in this, as it is in other respects, more marvellous than an early form of the story, is what we might naturally expect in a later stage of tradition.

(*d*) *Conclusion*.—We probably have in the J story a very early Israelitish tradition, either brought with the people from Babylonia at their first immigration, or obtained from that country through the frequent intercourse which we know to have existed from early times between the two peoples, but so modified as to have become, in the gradual course of transmission, a suitable vehicle for enforcing those great moral and religious truths which became the distinguishing features of the Israelites.

3. *The P version of the Deluge*.—(*a*) Compared with that of J, P has *in addition* the description and the dimensions of the Ark, the description of the Deluge as due to the breaking up of all the fountains of the great deep, as well as the opening of the windows of heaven (7^{11} 8^{2}), the stranding of the Ark on Mt. Ararat (8^{4}), and the rainbow ($9^{13\text{-}16}$), together with statistical references to Noah's age, etc. P *omits* the sending out of animals and the post-diluvian sacrifice, substitutes one pair of all animals for 7 pairs of clean and one of unclean, makes the Deluge last 365 days instead of 61, and substitutes the elaborate covenant connected with the rainbow ($9^{1\text{-}17}$) and laws of blood for the simple promise of J based on the sacrifice ($8^{20\text{-}22}$).

(*b*) The comparison with J and with the Akkadian Deluge raises a somewhat difficult question. Was P's story derived independently from Babylon during or shortly after the Exile, or was it, on the other hand, merely a revision of J's Deluge story; or, again, was it in some respects an independent version of the ancient story, belonging, like J's account, to ancient religious traditions?

Those who adopt either the first or third of these alternatives lay stress on the fact that so much of what is peculiar to P has its parallels in the Akkadian story, in which we find certain dimensions of the ship, its being tarred with pitch, the Deluge ascribed *apparently* to the sea as well as the rainstorm, and the rainbow (Sayce, Ball). But, on the other hand, it may be observed (*α*) that, as already pointed out, the actual dimensions of the Akkadian ship are enormously greater than those of P's ark, and, moreover, that the insertion of exact dimensions is exactly in accordance with the custom of P, as, *e.g.*, in the dimensions of the Tabernacle and all its furniture; the resemblance, therefore, on this point, such as it is, may be merely accidental; (*β*) that the reference to the rainbow in the Akkadian story is at least doubtful, and is not admitted by several translators (*e.g.* Haupt); (*γ*) that almost all the differences between the accounts of P and J may be explained by the general character of P; *e.g.*, the picturesque story of the birds would have no interest for P, who omits all the most picturesque stories of Genesis. In any case, such an incident would be unsuitable in a Deluge which covered the highest mountains (7^{19}) and lasted 365 days, though not in one of 61, in which the mountains were not necessarily covered at all. Again, the omission of the sacrifice of Noah accords with the omission of all the Patriarchal sacrifices—an omission which certainly suggests the inference either that P disbelieved in or held of no account sacrifices which preceded the law of Sinai. The omission of 7 pairs of every kind of clean animal is very possibly an example of the same spirit, as these animals were, according to J, intended for sacrifice (8^{20}). Lastly, the omission of such an anthropomorphism as 'Jahweh shut him in' in 7^{16b} is quite in character with P's usual practice. (*δ*) As the present combined account of the Deluge is based on P's story, which appears to have been preserved almost intact, whereas some parts of J are obviously omitted (those, for instance, giving the warning of the Deluge and directions for building the Ark), it is quite possible that some general statement of the Ark's dimensions, a description of the pitch, rooms, etc., like the Akkadian story, and the incident of the rainbow, may originally have had a place in J's story. If this be so, P must have retained the latter, not because of its picturesqueness, but as the basis for a favourite theme, a Divine covenant (cf. 6^{18}); on the other hand, the change of 61 to 365 days, the number of days in the solar year, though it does not agree with the three weeks of the Akkadian story, appears to be based upon some astronomical theory, and may be due to Babylonian influence of some kind. It may also be reasonably urged that the reference to 'the fountains of the great deep' really corresponds with P's ideas and nomenclature (cf. Gn 1^{2}), and finds a

parallel in the post-exilic Is 24^{18}. It is not likely, therefore, that it was originally derived from J.

It may, then, be considered not improbable that, in addition to J, P may have had access to some other version of the Akkadian story, but, if so, when and how it was derived is quite uncertain.

iii. THE DELUGE ACCORDING TO LATER BABYLONIAN ACCOUNTS.—1. *The story as given by Berossus.*—Berossus was a priest of Bel in Babylon about 300 B.C., who wrote a history of Babylonia (see art. BEROSUS). He claims to have copied out MSS of several authors which had been carefully preserved in Babylon for 15 myriads of years. Unfortunately, only a few fragments of his work have been preserved, which were copied by later authors. His Deluge story is given or referred to in three sources.

(*a*) It was copied by Alexander Polyhistor (a Milesian writer of the 1st cent. B.C.), whose work is also lost. Thence it was copied by Eusebius in his *Chronicon*; and, though the original of the *Chronicon* is also lost, it still exists in an Armenian tr., and it was also reproduced, probably *verbatim*, by Syncellus in his *Chronographia*.

(*b*) A Latin translation, based partly on the Armenian version, with the various readings of the Greek text of Syncellus, is given in Migne, *Chron. Eus.* I. ch. iii. (see also Müller, *FHG* ii. 501). It runs as follows:

'After the death of Ardates, his son Xisuthros reigned 18 *sars* (18×3600 years). During his reign occurred a great flood, of which the following account has been given. Kronos appeared to him in a dream and revealed to him that on the 15th of the month Daisios men would be destroyed by a flood, and he therefore ordered him to bury all existing MSS, beginning, middle, and end, in the sun-city of Sippara, to build a boat, to embark with his relatives and friends, to lade it with food and drink, to put therein animals, birds, and quadrupeds, and to make all ready for a journey. He then asked whither the boat should go, and was told, "To the gods to pray [*v.l.* having prayed] for good to mankind." He was not disobedient, but built a boat of 5 stadia long and 2 stadia broad, and carried out all that had been commanded him, and embarked with wife, children, and relatives. When the flood came, and very soon had begun to subside, he let go some of his birds; but, when they found neither food nor place to settle, they came back to the ship. Xisuthros, after some days, let the birds go away again, and they returned to the ship with mud upon their feet. When they were let go for the third time, they returned no more to the ship. Then Xisuthros perceived that the land had appeared, and he broke open some of the joints of the ship, and ascertained that the ship had grounded on a certain mountain. He stepped out with his wife and daughter and the pilot, kissed the ground, erected an altar, offered sacrifice to the gods, and vanished together with those who had come out of the ship.' The narrative goes on to relate how a voice from the sky informed the comrades of Xisuthros that he and those with him had gone, on account of his piety, to dwell with the gods, and bade them recover the MSS, and adds in conclusion: 'Of this ship that stranded in Armenia a part still remained in the Kordyaean mountains of Armenia, and some people scraped off the pitch from the ship and used it as amulets. They came to Babylon, dug up the MSS, and took them from Sippara; and they rebuilt Babylon, building many cities and re-founding temples.'

(*c*) This story appears to be an epitome of the Akkadian or one much like it:

(*a*) The name of Xisuthros (=Ḫasis-atra transposed from Atra-ḫasis) agrees with that of one of the versions of the Akkadian story. (*β*) The means of refuge, as in the Akkadian story, is a ship and not an ark. (*γ*) As in the Akkadian, Xisuthros and others are immortalized. It differs, however, in (*α*) the prediction of the exact date of the Deluge, (*β*) the specific mention of relatives and friends as saved (a smaller number seems implied than in the Akkadian story), (*γ*) the mud on the feet of the birds, (*δ*) the stranding of the ship in Armenia, and (*ε*) the apotheosis not only of Xisuthros and his wife, but also of his daughters and even of the pilot. Of these (*γ*) and (*δ*) are of special importance. The latter would seem to prove an ancient Babylonian tradition independent of the Akkadian story, and followed by P, Ararat being the regular name of Armenia in Assyrian monuments. Of the former it may be said at least that the story of the clay on the feet of the birds looks like the earlier analogue of the olive branch.

It should be added that the points of contact with the Bible story are not sufficiently striking to make it likely that the later Babylonian traditions were influenced by it. On the whole, then, the story of Berossus tends to confirm the view of some variety in the Babylonian traditions of the Deluge.

2. *The Deluge story of Abydenus.*—An epitomized version of the same account, derived originally either from Berossus or from the source from which he derived it, comes to us through Abydenus, a later Babylonian historian, whose work, like that of Berossus, has also been copied both in the *Chronicon* of Eusebius (I. vii., also in *Præp. Evang.* ix. 12, p. 414) and in the *Chronographia* of Syncellus (p. 70).

It differs, however, (*α*) in making a double interval of three days before and between the sending of the birds, and (*β*) in the birds being sent only twice. Migne's attempt to get out of the text of Syncellus a third sending is hardly successful. At best it would require that it took place after they had returned with the clay.

3. *Reference to Berossus's Deluge story in Josephus.*—Josephus's account of the Deluge (*Ant.* I. iii. 5, 6) differs slightly from that of the Bible. He mentions that Noah, when the Ark rested on the top of a certain mountain of Armenia, opened it and saw a small piece of land. The dove was sent out 7 days after the raven, and only once returned, covered with mud and bringing an olive-branch. After waiting 7 days more, he sent forth the living creatures. These differences may be partly due to carelessness and to narration from memory, but the reference to the clay, at any rate, is taken from the account of Berossus, which he had seen, and probably other accounts also, for he goes on to say: 'All writers of barbarian histories make mention of this Flood and this Ark, among whom is Berossus the Chaldaean,' and he quotes from him the statement about the remains of the ship on the Kordyæan mountains, and the use made of the pitch, in the same words as those used by Eusebius and Syncellus, who themselves refer to Polyhistor as their authority. This proves beyond a doubt that Polyhistor's story was derived from Berossus. Josephus's statement about the universality of the Deluge story may be taken as showing at least that the Deluge story was a common theme among ancient historians.

iv. ORIGIN OF THE SEMITIC DELUGE STORY.—(*a*) There is nothing to suggest in this case that it formed part of a consistent mythological system. (*b*) Being concerned with rain and water, the subject was clearly suitable for treatment in the Akkadian Epic in connexion with the rainy month; nor need we suppose it, therefore, connected with any special astronomical theories. (*c*) Its more or less mythological form, in which gods and goddesses play their part, finds its analogies in many Deluge and other stories throughout the world, in which natural events form the basis of, or become mixed up with, mythological details (see above, IV. *C.* (*b*)). (*d*) The frequency of Deluge stories arising out of natural inundations gives a *prima facie* probability that such an event was the origin of the tradition in this instance. (*e*) In both the Bible story and the Akkadian the Deluge is ascribed to natural causes: (1) an excessive rainfall; (2) somewhat more indefinitely, the rising of the sea. The first is obvious in both accounts. The second is definitely stated in P in the words 'all the fountains of the great deep were broken up' (Gn 7^{11}). The deep being regarded as being under the earth, such language would very naturally suggest an earthquake breaking up the ground and letting the deep burst forth. It seems implied also in the Akkadian story, which, if it does not, as some scholars maintain, expressly speak of the earth trembling, and the floods breaking out below the earth, at least describes such a terrific storm and tempest and invasion of waters as to imply a cyclonic wave rather than a mere overflooding of rivers. (*f*) The traditional resting-places of the ark, Ararat=Armenia (Bible

and Berossus), and Nizir = Rowandiz in the North-East of Babylonia (Akkadian), point to a definite region of the world. (*g*) Süss has pointed out with great force that the necessary conditions are fulfilled by supposing that the shores of the Persian Gulf were struck by an enormous volcanic wave, accompanied by a tremendous cyclone. The very great distance which such waves travel, and the fearful destruction of life and property which is often involved, have frequently been pointed out.

Thus the wave associated with the Backergunge cyclone in the delta of the Ganges reached a height of 45 ft. and destroyed more than 100,000 persons (*EBr*[9] xvi. 155). A wave caused by the eruption of Krakatoa (26th–28th Aug. 1883) reached 50 *ft.* (*cf.* the 15 cubits of P, Gn 7[20]) and destroyed more than 36,000 lives. One wave reached as far as Cape Horn, 7818 geographical miles distant (*EBr*[9] xxviii. 639).

It can hardly be deemed improbable that a phenomenon of such a kind occurred on the coast of the Persian Gulf, then probably lying much further north than now, and that but few survivors escaped in boats to the more hilly regions, with what effects they could secure. We have, in an event like this, all that is needed for the growth of such stories as are preserved in the Akkadian Epic and the Bible Deluge.

It need hardly be added that the religious value of the Bible story does not lie in its improbabilities, which sometimes amount, as has been shown, to absurdities, but rather in the religious and moral lessons, of which the ancient tradition was made the vehicle, viz. that Jahweh hated and would punish sin, but would save those who were faithful and obedient, while the further thought is suggested in P, at least, that His mercy is a more abiding motive than His wrath.

B. The Greek Deluge stories.—i. *Story of Deukalion and Pyrrha.*—This is by far the most important of the Greek Deluge, or Flood, stories. (*a*) Its most typical form is that given by Apollodorus (140 B.C.) in his *Bibliotheca*, I. vii. 2:

When Zeus determined to destroy the men of the age of copper, Deukalion, at the suggestion of Prometheus his father, constructed a chest (λάρναξ), into which, having placed therein the necessaries of life, he entered with his wife Pyrrha. Zeus sent a great rain, which flooded most parts of Greece, and destroyed all except those who escaped to the neighbouring hill-tops. The pair, after drifting in the chest for 9 days and nights, reached Parnassus, and, the Flood having somewhat abated, disembarked, whereupon Deukalion sacrificed to Zeus his protector. The latter sent Hermes to ask what he wished. He replied 'Children.' At the direction of Zeus they threw stones over their heads, and those which Deukalion threw became men, and those which Pyrrha threw, women. Then follows a derivation of the word λαός ('people') from λάας or λᾶς ('stone').

(*b*) This story evidently originated in a confusion of a myth with what may have been an ancient tradition. If Pandora, as Apollodorus had just asserted, was the first woman, and Prometheus first made men of earth and water, how could Deukalion be, as Apollodorus likewise states, king of Phthia, and who were the men who were nearly all destroyed? How, again, is the survival of any consistent with the story of the stones?

(*c*) (1) There seems to be an allusion to the story of the stones in Hesiod ('Ηοῖαι, fr. 141, ed. Rzach; see Usener, p. 32). (2) The earliest complete reference, however, to Deukalion's Flood is in Pindar, *Ol.* ix. 64–67, where he mentions how Pyrrha and Deukalion descended from Parnassus and founded of stones a race like themselves, and how the mighty waters which had overflooded the earth had been suddenly stopped by Zeus. Pindar evidently refers to it as a well-known story; otherwise, much of what he says would have been quite unintelligible to his readers. (3) The best-known form of the story, however, is that given by Ovid, *Met.* i. 155–415, the most curious feature of which is the fact that no mention is made of Deukalion and Pyrrha having been warned of the Deluge and commanded to build a ship. They appeared on the heights of Parnassus, where they had landed, and invoked the gods of the mountain and Themis. Zeus, seeing this, and satisfied that they were good and pious people, stopped the Deluge. A full description is given of their trouble, and the story about 'the bones of the great mother' is given in detail. It should be noticed that here the means of refuge is a ship, not, as with Apollodorus, a chest. There are also several other more or less different versions of the Deukalion story. (4) According to Nonnus (see Usener, p. 38), a conflagration sent by Zeus (in anger at the Titans for murdering Dionysus Zagreus) was put out by a Deluge. This is very abruptly connected with the story of Deukalion and Pyrrha, who suddenly appear floating about in a chest (λάρναξ); but we are not told how or where they got in, or where they landed. The Deluge ends by Poseidon splitting the rock with his trident, and making an escape for the water through the Vale of Tempe, thus connecting the Deluge with the north of Thessaly, whereas the older legends connect it with Phocis in the south-east. (5) According to Hellanikos, Mt. Othrys was the place of landing. Aristotle, curiously enough, maintained that the waters of the Deluge flowed into Achelous. Others, such as Thrasybulus and Akestodorus, maintained that Deukalion and Pyrrha founded the sanctuary of Zeus at Dodona, and dwelt in the territory of the Molossi. Possibly here we have a local Flood tradition combined with the better known traditional story. Very late legends connect the landing of Deukalion with Mt. Athos, and even with Ætna.

ii. *Other Deluge stories current in Greece.*—1. According to a legend connected with Megaris, Megaros, its founder, was rescued from the Deluge, being guided in swimming through the water by the cry of cranes; hence was derived the name of Gerania.

2. The Oxygian Flood story, found only in quite late writers, such as Julius Africanus, is confined to Bœotia and Attica. Oxygos, its hero, was described as king, sometimes of Athens and sometimes of Thebes.

3. Dardanus was said to have escaped in a Flood from Samothrace or Arcadia (Dionysius of Halicarnassus), in a boat of skins made by himself (Lykophron), or with his sons, and to have founded the kingdom of Ida. This story was often brought into connexion with that of Deukalion.

4. An altogether different Flood story is referred to by Istros (see Usener, p. 46), who connects a great flood with the severing of Asia and Europe by the Hellespont.

iii. *Origin of the Greek stories.*—Speaking generally, the Greek Deluge stories form good illustrations of what appear to be the common causes of such legends (see above, IV. *C*). Several of them grew up as explanations of the founding of a city or temple, ascribed to a waif miraculously guided across the waters, and to this extent Usener is probably right in finding analogies to the Deukalion myth in such stories as those of Perseus and Oedipus. Other Greek Deluge stories are connected with special geographical features, such as the opening of the Vale of Tempe All are local in character, and that one of them, from its antiquity and picturesqueness, should have found a permanent place, though often mixed with others, in Greek mythology is natural enough. And there is no reason why it too may not have originated from a local inundation, the story receiving such accretions of the picturesque and marvellous as are common in similar cases.

The occurrence of the chest instead of a boat is interesting in view of the same variation in the Semitic story, and might suggest the possibility that the Greek legend, as we find it in Apollodorus, was influenced in some indirect way by the Bible narrative. But there is a great difference between a chest,

holding only a couple of persons and such food as they required for 9 days, and the monster Bible 'Ark' with all its arrangements and contents. Moreover, the chest was not an uncommon feature in the waif stories of Greek legend.

iv. *The mixed Deluge story of the pseudo-Lucian.*—We have a real mixture of the Greek and Semitic Deluge stories in the story given in the *de Dea Syria* (Lucian, ed. Jacobitz, Leipzig, 1881, iii. 344 f.). This version was connected with a hole in the ground over which the temple was built and into which the Deluge was said to have subsided.

According to this account, Deukalion, and his wife and children, were saved in a great chest (λάρναξ). As he entered it, there came all kinds of animals, wild and tame, sows, horses, serpents, lions, etc., in pairs. He received them all, and there was great friendship between them, and they all sailed in one chest as long as the water prevailed. When the water had disappeared through the hole, Deukalion built an altar and the temple over it.

Usener certainly goes too far in saying that this is the Babylonian Deluge story with only the name Deukalion inserted from Greek legend. It contains several features from both, and, except that to Deukalion it gives a second name Σκύθεα (which, according to Buttman, is a corruption of Σισύθεα, and is intended for Sisnthros, the Noah of Berossus), it bears a far closer resemblance to the Biblical than to the other forms of the Babylonian Deluge legend. *E.g.*, wild animals are preserved as well as tame; all in pairs; only Deukalion and his family escape; in a chest, not a boat (the last perhaps from the Greek story). That traditions of the Deluge ultimately derived from the Bible should have been current in Syria is likely enough, and there seems also evidence, in another tradition that the people was founded by Semiramis, of early intercourse with Babylon.

C. PERSIAN DELUGE STORIES.—i. A curious legend is contained in two fragments of the Yima songs preserved in *Vendīdād* (*SBE* iv. 10 ff.). It is given in full by Usener, pp. 208–212, from the critical tr. of Geldner.[1]

A council was held by the gods, in which Ahura Mazda decreed that a terribly severe winter would be followed by a great Deluge from the melting of the snow. Yima was directed to build an enormous fort foursquare, and to stock it with men and animals of all kinds. Yima carried out these instructions, but it is not actually said that the Deluge came.

Usener regards the whole story as an ideal picture of the future, the eternal city where men are to live in harmony and righteousness a life free from moral and physical evil, when the world is destroyed by the Deluge; but the passages which seem most ideal are among the prose portions, which Geldner regards as later insertions. It seems more probable that we have here also an example of the tendency to idealize what was originally a natural event.

ii. A second story is found in *Bundahišn*, vii. (tr. by E. W. West in *SBE* v. 25–28). Tištar, in the three forms of a man, a horse, and a bull, sends successive Deluges each of ten days' duration, and destroys all the noxious creatures on the earth. This is part of what is clearly an astrological myth describing the contest between good and evil, and accounting for lightning and thunder, the salt sea, and the origin of lakes and seas.

D. INDIAN DELUGE STORIES.—i. *The Fish Legend.*—(1) The oldest form of this typical Deluge story of India is preserved in the *Śatapatha Brāhmaṇa*, i. 8. 1 (*SBE* xii. 216, tr. by J. Eggeling; for other translations see A. Weber, *Ind. Streif.*, 1868, i. 9, *Ind. Stud.*, 1868, i. 161; Max Müller, *Hist. Skr. Lit.*, 1859, p. 425; J. Muir, *Orig. Skr. Texts*, i.[2] [1873] 181 ff.):

In the morning, Manu, when water was brought to him for washing, found a fish in his hands. The fish foretold the coming Deluge, and promised to save him if he would preserve it, first in a jar, then in a pit, and, when it had outgrown this, would take it to the sea. Manu was to build a ship, and enter it, and look out for his preserver. Manu did as directed, and finally took the fish, which had then grown to an enormous size, to the sea. Then Manu entered the ship, and the Deluge came, which destroyed all living creatures. Meanwhile the fish approached Manu, who fastened the ship to its horn, and was so conveyed *up to* [or '*over*'] *the Northern Mountains*. Manu was directed to tie the ship to a tree, and gradually to descend as the waters abate.

The rest of the story is concerned with a complicated and very unintelligible rite with clarified butter, by which a woman was first produced, and, by her means, offspring of men and cattle.

According to Weber, the final redaction of the *Śatapatha* is only a little before the Christian era; but, as Eggeling shows, it is a compilation of earlier treatises, and this particular story gives the impression, in its main features, of being ancient.

One special interest in the story lies in its curious points of resemblance and contrast to other Deluge stories. The warning of the Deluge by an animal, the fastening of the ship by a rope, the post-diluvian sacrifice, and the miraculous reproduction of men, have all their analogies; but they are not found, as here, in combination, and the towing of the ship by a fish is quite unique. The probability is, therefore, that this legend is of native growth.

Weber and, to a less extent, Muir see in the story a tradition of an original immigration of the race from across the Himālayas. They base their opinion on a rendering of the words given above in italics, '*over* the Northern Mountains.' Eggeling, however, renders 'up to,' and some writers suppose the story to have originated in an exceptional overflowing of the Ganges. The question is primarily one of textual criticism, the choice lying between the reading *abhi-dudrāva* (Eggeling) and *ati-dudrāva* (Weber, etc.). The chief argument against an originally mythical origin of the story is that here also the tendency is to become more and more mythical, and if we reverse this tendency we can easily explain the story as having grown out of a natural inundation.

(2) A second version of the Indian story is that given in the *Mahābhārata* (quoted from tr. by H. Jacobi in Usener, p. 29; see also Muir, *op. cit.* i.[2] 196 ff.). The story has here assumed a more elaborate and marvellous form.

Manu is a prince among monks, renowned for his asceticism 'Standing on one leg with his arms raised on high, and with head bent down and never blinking an eye, he practised terrible austerities,' etc. The fish appeared to him as he was practising austerities by the shore. Of such virtue were they that the fish became many miles long, and yet Manu could carry it quite easily. The storm is very graphically described. In the end the fish reveals himself as Brahmā, and appoints Manu as creator of all things.

In this version there appears to be a confusion, not uncommon in similar myths, in the character of Manu as himself a descendant of former ancestors, and as the founder and creator of men and all things. In the older form of the story he is the first man, and never more than a man.

(3) A third version is found in the *Bhāgavata Purāṇa*, viii. 24. 7 ff. (for Eng. tr. see Hardwick, *Christ and other Masters*, new ed., Lond. 1863, vol. i. pt. ii. ch. iii. pp. 312–315; Muir, *op. cit.* i.[2] 208 ff.). According to Cheyne, this book cannot be earlier than the 12th cent. A.D. The story itself is mainly a development of that of the *Śatapatha Brāhmaṇa*, with a mixture of the mythical and *quasi*-philosophical elements characteristic of the *Purāṇas*.

The Deluge took place during a sleep of Brahmā, when the strong demon Hayagrīva stole the Vedas. Hari took the form of a minute fish, and so finally revealed himself to Satyavrata, a devout king who lived only on water. The gradual growth of the fish is like that in the earlier legends, except that he outdid them by becoming, in his final form, a million of leagues long. The ark in this case was miraculously brought to Satyavrata, who, accompanied by the chiefs of the Brahmans, spent his time therein in singing hymns of praise and receiving Divine revelations. Finally, Hari slew Hayagrīva and recovered the Vedas. Satyavrata, instructed in all Divine and human knowledge, was appointed the 7th Manu. But, after all, the

[1] For a divergent interpretation of this Iranian material, see art. BLEST, ABODE OF THE (Persian).

appearance of the horned fish was *māya*, or delusion, and 'he who shall devoutly hear this important allegorical narrative will be delivered from the bondage of sin.'

It is interesting to note that this version has several points of contact with the Bible story. (1) The Deluge is caused by rain as well as by the sea. (2) Seven days' warning is given of the Deluge. (3) It is sent because of the depravity of man. (4) Animals are preserved in the ark, (5) and these in pairs. Of these (3) is inconsistent with the beginning of the story, and is evidently an interpolation. The most probable explanation of them all is that they were due to Christian influence. Their appearance only in the latest version of the myth makes it impossible to use them as arguments to prove that the story itself is derived from the Bible story, or originated in the event which that story describes.

ii. *The Boar Legend.*—Another Deluge myth is given in Muir, *op. cit.* i.[2] 50 f. It is one of the creation stories of the *Viṣṇu Purāṇa.*

It tells how the Divine Brahmā, awaking from his night slumber, and perceiving that the earth lay within the waters of the universal ocean, assumed the form of a boar, plunged into the ocean, and raised up the earth and placed it on the surface.

This is a creation myth, and has a curious analogy with some of the American Indian stories (see IV. *C* (*a*)).

E. Chinese Flood Story.—Accounts of this are found in the *Shu King* (especially ii. 4. 1; cf. also pref. 5, ii. 1. 17, 2. 1, 14, iii. 1. 1, v. 27. 8), the *Shih King* (iv. 3. 4. 1), and the writings of Meng-tsze (iii. 1. 4. 7, 2. 9. 3 f.).

i. According to the *Canon of Yâo* (*Shu King*, i. 3. 11, tr. Legge, *SBE* iii. 34 f.),

'the Tî said, "Ho! (President of) the Four Mountains, destructive in their overflow are the waters of the inundation. In their vast extent they embrace the hills and overtop the great heights, threatening the heavens with their floods, so that the lower people groan and murmur! Is there a capable man to whom I can assign the correction (of this calamity)?"' Khwăn was appointed, and laboured unsuccessfully for nine years. The Tî afterwards resigned his throne to Yü, who had coped successfully with the inundation.

ii. The *Shu King* (ii. 4. 1) gives the account of Yü's work as follows (in Legge's translation):

'The inundating waters seemed to assail the heavens, and in their vast extent embraced the mountains and overtopped the hills, so that people were bewildered and overwhelmed. I [Yü] mounted my four conveyances [carts, boats, sledges, and spiked shoes] and all along the hills hewed down the woods, at the same time, along with Yi, showing the multitudes how to get flesh to eat. I opened passages for the streams throughout the nine provinces, and conducted them to the sea. I deepened the channels and canals, and conducted them to the streams, at the same time, along with Chi, sowing grain, and showing the multitude how to procure the food of toil in addition to flesh meat. I urged them further to exchange what they had for what they had not, and to dispose of their accumulated stores. In this way all the people got grain to eat, and all the States began to come under good rule.'

Elsewhere in the *Shu King*, Yü is repeatedly described as having determined the relations of land and water, and the *Shih King* declares that, 'when the waters of the Flood had become widespread, Yü caused the various regions of the earth world to appear: the great outlying realms received their limitations.'

According to these accounts, all these works were accomplished during a single journey. In fact, the accounts probably describe work gradually carried out through many ages, though possibly commenced by Yü. They were evidently intended to avert a constantly repeated and wide-spread disaster.

iii. *Origin of the story.*—Legge believed that the occasion of Yü's special work was an actual inundation of an alarming kind of the Hwang-Ho ('the sorrow of China'), which he puts in the 24th cent. B.C., whereas he ascribes this treatise to the 12th.

According to Meng-tsze (b. 372 B.C.), however, the tasks of Yü were carried out under far more difficult conditions.

'In the time of Yâo, when the earth was not yet in ordered state, the masses of water flowed unchecked and flooded the earth. Flora was excessively luxuriant, and birds and other living creatures went about in enormous quantities. Grain could not grow. Animals pressed hard on man. . . . Yâo alone concerned himself about this. He appointed Shün, who developed an ordering activity and gave Yî control of fire. Yî caused devastating conflagrations on the mountains and in the marshes, so that the animals fled and sought shelter. Yü divided the nine rivers. . . . Then it became possible for the folk of the Middle Kingdom to support themselves' (iii. 1. 4. 7). At this same period, moreover, serpents and dragons infested these deluging waters; but Yü, while appointing the rivers their courses, banished these monsters, the animals that had oppressed man vanished, and the plains of China became habitable for the human race (iii. 2. 9. 3 f.).

It is by no means impossible that, as Legge held, these accounts all had their rise in a tradition of an extraordinary inundation by the Hwang-Ho; and in this connexion it is worthy of note that the great flood of 1851–53 is said to have cost some millions of lives, while it took 15 years to repair the damage and to confine the river within embankments. At the same time, it should not be forgotten that Grill, in his 'Zur chinesischen Flutsage' (*Festgruss an Roth*, Stuttgart, 1893, pp. 9–14), maintains that the story is based on a cosmogonic myth, devoid of connexion, even in its basal ideas, with the Bible account, and associated in form with experience of the frequent inundations of the Hwang-Ho; and, like von Gutschmid (*ZDMG* xxxiv. 192 f.), he holds that Yü, to whom he denies any actual existence in history, was essentially a sort of demiurge, who helped to establish civilization on earth. It is open to question, therefore, at least on the basis of Meng-tsze's statements, whether this whole story is not to be regarded as a cosmogonic rather than as a Deluge story.

F. Folklore Deluge Stories.—Under this general heading are included the numerous stories of peoples, mostly in a savage or semi-savage state, not included under previous headings. It is not necessary for the present purpose to make any general classification of them on either geographical or ethnological lines. It will be sufficient to point out a few facts bearing on the subject of this article.

i. One of the essential characters of these stories arises out of the fact that they *are* folklore. In the Deluge stories of Babylon, Greece, and India we have well-defined legends capable of being traced out more or less distinctly in their developments and ramifications. Though a few of the stories now under consideration have come to us in a written form more or less ancient, they are not literature in the same sense, but only stereotyped folk-tales. By far the greater number of these stories, however, are still, or were till recent years, in a fluid and formative condition. The imagination which has produced them is, or was till recently, still at work, and has been continually modifying them. It has already been noticed how both historical events and fancy-striking anecdotes, such as Bible stories, have in many cases become mixed with the early tale, nor is it possible to separate them with scientific accuracy. Not infrequently what is essentially the same story is differently told on different occasions, or at any rate is differently reported (Leeward Islands; see IV. *A.* vi. (*d*)).

ii. There are many difficulties in the way of getting trustworthy evidence. As already pointed out, the missionaries, by whom most of these stories have been reported, were frequently prejudiced witnesses (see IV. *A.* iii.), and, moreover, the stories in several cases were collected some time after the conversion of the people with whom they originated. These missionaries had to depend on their own memory or that of their converts, and it was only in quite exceptional cases that the

opportunity afforded to Gill was offered (see above, IV. *C.* (*a*)), of reporting from the evidence of one whose knowledge of heathen lore was both fresh and complete.

iii. Another striking fact is the irregularity in the distribution of these stories. For example, there are very few independent Deluge stories reported from Africa, a considerable number from the islands of the Pacific, and an extraordinarily large number from the continent of America. This is accounted for negatively by Andree on the ground that Deluge stories do not readily arise where, as in Africa, the inundation of the great rivers is an annual occurrence, which does not therefore impress the imaginatien. It may be noticed in this connexion that one of the most important exceptions is connected with a special local feature—the formation of the Dilolo Lake on the southern border of the Congo State (see Andree, p. 49). Again, the Deluge legend of the Masai in Uganda, to which attention has been lately called by Merker (see *Guardian*, 1906, p. 945), is so obviously parallel with the Bible Deluge that it cannot be regarded as independent. We find here the Ark, pairs of animals, birds sent out (a pigeon and a vulture [cf. the crow of the Lummi Indians and the humming-bird of a Mexican story]), and four (!) rainbows.

iv. It would appear that there must be some positive reason for the frequency of Deluge stories among the American Indians. George Catlin, in his *O-Kee-pa* (p. 2), stated that among 120 tribes there was not one which did not relate some distinct or vague tradition of a Flood, and, in fact, a very considerable number of these stories have been preserved. It certainly must be admitted that the idea of a Deluge impressed itself very readily on the Indian tribes, but how far this was due to their past experience as an island people, and how far to the psychological character of the race, is a question for the ethnologist or anthropologist rather than the student of comparative religion. This much at least can be said, that there is some reason for believing that several of these stories are of comparatively ancient origin.

(1) In the first place, there is abundant evidence to show that Deluge stories were current in Central and Southern America at the time of the Spanish occupation. (2) The common elements in the stories of neighbouring and related tribes in some cases point to an ancient tradition in which a characteristic feature has become rooted in the imagination. (*a*) Several of the tribes about Peru, though their Deluge stories differ widely in other respects, have the common feature of a floating mountain—a combination, it would seem, of the ark and the mountain of refuge. (*b*) In more than one Mexican legend men were turned by the Deluge into fish. (*c*) We have noticed that several tribes about the Orinoco and its neighbourhood have the common features of stones (or coco-nuts) thrown to produce men (see IV. *A.* v. (2)). (*d*) Of still greater interest is the curious feature already mentioned (IV. *C.* (*a*)) that land was produced after the Deluge, not by the water subsiding, but out of scattered grains of sand or earth springing up and growing like seeds. Thus in the story of the Ojibwas, after the loon has dived several times in vain, it is the musk-rat restored to life by the surviving Manabozho (who was standing up to his neck in water on the summit of a high tree) that dives and brings up the grains of sand between its toes. These Manabozho throws into the waters, and they grow into islands, which unite into mainland. In a story of the Sac and Fox Indians, another branch of the Algonquins, the survivor, seeing that the Deluge would soon overwhelm the mountain on which he had sought refuge, built a canoe out of a piece of the blue sky. After sailing about some days, he sent out one of the largest fishes, which returned with its monster mouth full of earth, out of which he formed the dry land. In the story of the Chippewas (Montagnais), a related group, it is the northern diver that eventually returns to the canoe with clay on his webbed feet, after the beaver, otter, and musk-rat have failed. This the old man breathed upon, and it became a great island. (*e*) We find, again, in certain groups of tribes that a particular animal plays a prominent part, as the coyote among the Californians (Wappos, Papagos, etc.), the raven among those on the north-west seaboard of N. America (Thlinkits and Bella Coolas).

v. This prominence of animals is a very characteristic feature of the American Indian stories, and is by some believed to be connected ultimately with totem-worship, whereas in the stories of some other groups, such as those of the South Sea Islanders, a greater prominence is given relatively to what we should call the wonders or powers of Nature. Thus, according to Bancroft (iii. 87), the Californians describe themselves as having originated from the coyote.

Among the Algonquin tribes the black serpent is the enemy of man and of created beings, and sends the Deluge. Manabozho, in more than one story of this group, takes refuge on the turtle's back. In the stories of the Ojibwas his helper is usually the diver or the musk-rat. With the Hare Indians it is the raven who causes the Deluge in vengeance for being thrown into the fire; and it is the white owl who befriends the wise man by letting out the cattle which the raven had imprisoned. With the Cherokees it is a dog which foretells the Deluge; with the Peruvians the llamas reveal it to a shepherd. The Crees have it that an eagle rescued the one surviving maiden, and became by her the father of the new race. In a very original story of the Pimas (California), the god's son Szeuka, being angry with the eagle for having caused the Deluge, climbs up to its eyrie, slays it, and restores to life those whom it had killed (Bancroft, iii. 78).

vi. The general inference from a study of these folklore Deluge stories is that we have not to deal with mythological or cosmological systems, in which a Deluge occupied a part, but rather that these stories were the result of experience, tradition, imagination, and natural curiosity, acting sometimes separately, but more often in combination in different ways and different degrees.

LITERATURE.—The best general book, esp. for Deluge folklore, is R. Andree, *Die Flutsagen*, Brunswick, 1891, which contains a large and interesting collection of Deluge stories. Among the most important books referred to by Andree are H. H. Bancroft, *Native Races of the Pacific States*, 5 vols., London, 1875–76; A. Humboldt, *Sites des Cordillères et monuments des peuples indigènes*, Paris, 1868; W. Ellis, *Polynesian Researches*, 2 vols., London, 1829; W. W. Gill, *Myths and Songs from the S. Pacific*, London, 1876; E. Süss, *Das Antlitz der Erde*, 3 vols., Leipzig, 1883–85; F. Lenormant, *Les Origines de l'histoire d'après la Bible*, Paris, 1880. For a careful tabulation of Deluge stories, see M. Winternitz, 'Die Flutsagen des Altertums und der Naturvölker,' in *Mitteil. der anthrop. Gesellsch. in Wien*, xxxi. [1901] 305–333. Translations and comments upon the Akkadian Deluge story are given in *KIB* vi. 299 ff.; P. Haupt, *Der keilinschriftliche Sintflutbericht*, Leipzig, 1881; A. H. Sayce, *Higher Criticism and the Monuments*, London 1894, ch. iii.; C. J. Ball, *Light from the East*, London, 1899, pp. 34–43. The most important Indian, Chinese, and Persian Deluge legends are given in *SBE*, ed. by Max Müller (see also references in this article). For Greek Deluge stories, apart from theories about them, the best work is H. Usener, *Die Sintflutsagen*, Bonn, 1899.

F. H. WOODS.

DELUSION.—Delusion in the popular sense simply means a mistaken belief. In the technical sense, however, it means a wrong belief which is maintained because of a defect in thinking. And that is the meaning which the word should always have; for there is manifestly an important difference, for example, between a mistaken opinion which may be held because of wrong information supplied or facts withheld, and one which is maintained owing to an error in reasoning. A delusion is a belief falsely believed—that is, believed be-

cause of a faulty mind. To stretch the point, an opinion, even if it is a good opinion, is delusional if it is not supported by facts. And that brings us to a distinction which is of some value—that there are beliefs which are demonstrably untrue and which are delusions; and there are beliefs which we cannot prove to be untrue, which may even be correct, yet are arrived at by a delusional process.

The delusional state of mind—the kind of thinking which is prone to delusion—very often results from some disease, of greater or less degree, acquired in adolescent or adult life, which warps the judgment by tampering with the brain's mechanism, upon which correct thinking depends. In the development of a mind to the level of a mature judgment, an enormous mass of experience contributes, and a very great part of our thinking rests upon obvious opinions which we never take the trouble to test. It is part of the misfortune of a delusional mind that it may begin to question such standard opinions—opinions which ought to be regarded as axioms, and upon which the whole fabric of our thought is based. For example, a man may have a doubt (and it has occurred, and much writing has been wasted in the exposition of it) as to whether two and two really do make four. Scepticism of this sort, when it goes far, is an exhausting mental process, and the mind that indulges in it is apt to suffer further trouble. It is a form of illness which may be called a wasting disease of the mind, as if a man were to consume his own skeleton and have neither backbone nor leg by which to stand erect. On the other hand, a great deal of delusion can be traced to a vice at the opposite extreme—a kind of mental indolence. A large number of people who have wits enough to think if they had energy to use them, believe things which they have no right to believe, and entertain opinions which do not harmonize with those which they have earned a right to entertain. In these cases, again, there is what we may call a sore spot in the mind—a place where friction occurs when the rational process is checked by superstition. It is always a source of mental weakness in a thoughtful man to reserve certain subjects and to neglect or refuse to discuss them. That, however, is not to say that there is no place in good thinking for reverence, or that a good mind will not continue in mystery. On the contrary, the essence of delusion is the being too certain, too quick to seize and hold a definite opinion. This is illustrated by a very constant quality of delusion —that it refuses to be guided by facts or modified by argument. There are some people whose minds are very hard to move; once they have formed an opinion—and such people form opinions about many things—they will not give up or even be shaken in their belief; and the reason is that it is one of their mental characteristics, due in part to brain conditions, to find changes irksome. We must also observe that there are certain beliefs which are essentially pleasure-giving; it is tempting to hold an opinion which seems fitting and good, and it is easy to retain, as convictions, some comfortable beliefs which have never been subjected to criticism; perhaps the majority of the delusions commonly entertained concern things which people like to believe and refuse to disturb, not on grounds of reason, but on grounds of feeling.

In insane delusions—by which we mean delusions which occur in insanity, and which are due to actual brain disease—the quality of unreasonableness is very marked. If an insane person insists that he is made of glass, he will not be disillusioned by a demonstration of the fragile nature of glass and of his own resistance to fracture; he will only retort that the kind of glass of which he is made is not the ordinary breaking kind; hence the common practice with such people on the part of those who have the care of them. And it is the best method for all delusional people, whether sane or insane; there is no use trying to argue with them; therefore change the subject, encourage reasonableness in general, and trust that in time, after a development of other parts of the mind, the 'patient' on coming back to the vexed question again will see it in a new light.

It need hardly be said that the subjects concerning which people are prone to express delusions are often mystifying even to the most expert thinker—electrical phenomena, facts connected with mesmerism or hypnotism, insanity, occult religious facts, and all sorts of novelties and new inventions.

From what has been said concerning the nature of delusion, it becomes clear that the subject is an important one, both in a theory of mind and in practical affairs; and it is instructive to try to determine the extent and the province of delusion in normal thought. To do so exhaustively is impossible; but it is easy to cite a few examples which will suggest, to any one who cares to pursue the subject, a great many more. There is, for instance, a very large group of what we may call natural illusions, which are inevitably and inextricably woven into the fabric of experience, and which, assumed as true, become delusions. In the strict sense, an illusion (*q.v.*) differs from a delusion in that it is an error in *sense-perception* rather than an error in thinking. And it is permissible to hold that delusion includes illusion; that all illusions, when accepted as true, are delusions, though only a few delusions are illusions. By natural illusion, then, is meant all that margin of error—and it is a large one—by which the senses, in their natural and normal activities, convey wrong information to the brain. For it is strictly true that things are not what they seem. It is usual, in this connexion, to enlarge upon visual errors, partly because these are obvious and admit of being proved. It is certain that the picture which the brain receives from the eyes does not correspond to the object looked at. Some of the delusions thereby suggested have been corrected. Every educated man, for example, refuses to accept the testimony of his eyes that the world is flat. Yet a great mass of visual error goes uncorrected; men and women take the picture suggested by the eyes to be true; and, as the error and its acceptance are natural and all but universal, the delusion passes muster in common thought. But, to appreciate the amount of error thus imported, we must not forget that all the other senses are similarly faulty. It is certain, and again capable of scientific proof, that errors of hearing are considerable. Not only do ears differ widely in individuals in their acuteness, but it is certain that no one hears correctly, that the sound-image accepted by the brain never corresponds to the 'pattern' of the sound-waves in the atmosphere. Yet the great majority of people hear enough for practical purposes with approximately the same error in the hearing of it, and, by tacit consent, the error is not regarded. A great fallacy similarly besets the sense of touch and the muscular sense, which gives us information concerning resistances —the hardness and density, weight and strength of things. And, if this is true of senses which supply to the mind data which can be to a large extent scientifically tested, it may be assumed to be equally true of the senses of taste and smell. We may even conjecture that, subtle and complex as these senses are, they are also occasionally illusional.

Before leaving this aspect of delusion, it is well

to advert to hallucination (*q.v.*). A hallucination, like an illusion, is a wrong sense-perception, but differs from it in that there is no outward object for the hallucination. A hallucination is a perception—most commonly of the eye or ear—which is purely and wholly subjective. If the mind accepts this fiction of the senses, there is obviously delusion. Hallucinations do not bulk largely in normal thinking; but they are frequent and important in mental disease.

In conclusion, we may refer briefly to common forms of delusion more in the sphere of thought. Perhaps the best example of all but universal delusion is the common belief in an absolutely free will. It would be entirely out of place here to regard the subject philosophically. Suffice it to say that it is obvious that sometimes one's will is not wholly free in the ordinary sense. Yet people invariably think and speak as if choices were always of their own making. This delusion is clearly necessary and salutary; without it both thinking and doing would come to a standstill. Another delusion, equally inevitable and necessary, is one which besets every thinking man, that is, that he believes he possesses a thinking organ which works correctly. Give two men exactly the same data and let them think out a conclusion: each believes, is bound to believe, that he is thinking correctly; yet in many cases the conclusions will differ; so there must be error somewhere. Finally, we may cite the very prevalent delusion that any thought can reach a final conclusion. Nearly every one feels, and a great many people believe, that a subject can be finished, that thought can reach and hold all there is to be known about it, and usually a statement of the conclusion is forthcoming. And, while it is obvious that no subject can be exhausted and no statement final, this delusion is also inevitable. These examples will suffice to illustrate the subject, and it only remains to add that a wise mind will take note of the inevitable margin of error in its own operations and perhaps discount it, yet not be daunted by it.

DEMOCRACY.—See GOVERNMENT.

DEMOCRITUS.—A Greek philosopher (*c.* 460–*c.* 356 B.C.) whose importance lies in his being the pioneer of Materialism and the mechanical explanation of the universe.

1. Life and writings.—The birthplace of Democritus was Abdera in Thrace, a flourishing colony founded by the Ionian city of Teos. He must have been a fellow-citizen, and, if the received dates are approximately correct, a younger contemporary, of Protagoras. The accounts of his life which have come down to us are open to suspicion on various grounds. They dwell on his insatiable scientific curiosity, which impelled him to spend years in foreign travel. He is said to have visited Egypt in order to learn geometry from the priests, and to have held personal intercourse with Magi and Chaldæans in Persia and Babylonia. What amount of truth there is in these tales it is hard to say. Like Pythagoras, Democritus became to later ages a legendary figure, whose real attainments in mathematics, physics, and astronomy appeared less remarkable than his supposed skill in alchemy and magic. The list of his writings that survives shows him to have been a prolific author. The grammarian Thrasyllus, in the time of Tiberius, arranged the collection in tetralogies, or sets of four—the same arrangement which he had adopted for the *Dialogues* of Plato. The lucidity and simplicity of Democritus' style are praised in antiquity by competent critics like Timon, Cicero, and Dionysius of Halicarnassus. He wrote in the Ionic dialect, hitherto almost exclusively employed by prose writers, although in his own lifetime it was being gradually superseded by Attic. The subjects treated were, to judge by their titles, chiefly Mathematics, Physics, Astronomy, Anthropology, and Ethics. We have fragments definitely stated to come from the Κανών and the Κρατυντήρια, both dealing with the method of science, and from the περὶ Εὐθυμίης, an ethical treatise.

To his mathematical achievements there is unimpeachable testimony. Three of the thirteen tetralogies consisted of treatises on Geometry and kindred subjects, including Optics and Astronomy. From the title of one of them, 'On irrational straight lines and solids' (περὶ ἀλόγων γραμμῶν καὶ νασταῖν), it may be inferred that Democritus preceded Euclid in the investigation of irrationals—a problem which, as we know from Plato's *Theætetus*, was occupying the foremost geometers in the 4th cent. B.C. Similarly, Archimedes in his περὶ τῶν μηχανικῶν θεωρημάτων πρὸς Ἐρατοσθένην ἔφοδος (lately discovered at Constantinople, and published by Heiberg in 1907) assigns to Democritus no small part of the credit for two important theorems, namely, that the cone is one-third part of the cylinder, and the pyramid one-third part of the prism, having the same base and equal height. Democritus made the discoveries by means of mechanical methods; Archimedes afterwards supplied a rigorous geometrical proof. The investigation by means of mechanics involved a partial anticipation of the infinitesimal calculus (see Heath's *The Thirteen Books of Euclid's Elements*, Cambridge, 1908, iii. 366–368, 4, ii. 40).

It is not, however, from the meagre fragments remaining that we derive our best information as to the doctrines Democritus taught, but rather from the criticism of opponents, especially Aristotle and Theophrastus, who gave to his works the attention they deserved. Aristotle in his scientific treatises is evidently much indebted to Democritus, and, though he often dissents from his conclusions, invariably speaks of him with respect and admiration. Plato, it is true, never mentions him by name, yet from various passages in the *Dialogues* it is obvious that not only was he acquainted with the system of the Atomists, but even regarded Democritus as the type and representative of all those tendencies which he himself most actively combated.

2. Leucippus.—Democritus can hardly claim to have originated the system which he taught. There seems no valid ground for doubting the statement that Leucippus preceded him in laying the foundations of Atomism, which they both afterwards developed in common.

The metaphysical basis of Leucippus' doctrine, as stated by Aristotle, presumed the Eleatic paradox that reality or real being is One, not Many, immutable and eternal, not transient and diverse: whence the Eleatics deduced that our world of manifold and fleeting appearances is not that which truly exists. As all the earlier Greeks, from Thales downwards, in their search for a primary substance were unconsciously endeavouring to frame a conception of matter, the permanent substratum of the outer world, the Eleatic paradox is only another way of stating that matter alone is, where by 'matter' is meant the Full, not the Empty, or, in modern parlance, that which has mass. Empty space, then, if it is not matter, is

non-existent; the world is a continuous indivisible *plenum*. Leucippus, if he is to be credited with originating the Atomistic doctrine, altered this conception by opposing extension to mass as the fundamental postulate. The extended as full and the extended as empty, the *plenum* and the *vacuum*, or matter occupying space and space unoccupied by matter, were in his view equally real. The Eleatics were right in asserting the one, but wrong in denying the other. By introducing real space and the geometrical forms of bodies as spatially determined, Leucippus destroyed the Eleatic One and reverted to pluralism. But he had still to meet the subtle arguments from infinite divisibility, by which Zeno of Elea had disproved the possibility of motion and of multiplicity. Since these arguments could not be refuted, nothing remained but to postulate indivisibles (*ἄτομοι, ἄτομα*) as the ultimate constituents of corporeal reality—things in space (Ar. *Phys.* i. 3. 187*a*, 1–3). The sum of existence, then, includes empty space as well as the atoms or indivisible particles of matter in space. Both matter and space are eternal, infinite, and homogeneous throughout. The only differences which single atoms present are differences of shape, from which must follow differences of magnitude. But fresh differences are introduced when single atoms come to be grouped and arranged in what we call individual things. There then arise differences of order and position of the atoms in space; for, to use a familiar illustration, A differs from N in shape; AN is not the same as NA, the order is different; nor is Ξ the same as H, the position is different. Aristotle (*Metaph.* i. 4. 985*b*, 13 ff.) in giving this account admits that he is substituting, for the precise Ionic terms *ῥυσμός* (fashion), *διαθιγή* (inter-contact), *τροπή* (turning), his own equivalents *σχῆμα* (figure, shape), *τάξις* (arrangement, order), *θέσις* (position). It will be obvious, upon reflexion, that these three kinds of difference are merely spatial relations posited and presupposed by the very conception of space as extended in three dimensions.

Here seems the proper place to deal with a controversial question of great difficulty: of the three differences between atoms (shape, order, position), only one (shape) relates to single atoms. That size must go with shape as a property of the single atom seems certain: *e.g.* atoms of fire are described as the smallest as well as the most mobile. But no good authority attributes to Leucippus or Democritus any utterance implying that weight was a fundamental property of the atom, although Epicurus, when he revised the original doctrine of the Atomists, expressly derived weight as well as magnitude from shape, and, as is well known, deduced from their weight the tendency of free atoms to fall. Later authorities not unnaturally confused the Atomic doctrine of Leucippus and the revised version of Epicurus. But the opinion has now gained ground that Leucippus and Democritus put forward no positive views as to weight being a fundamental property of a free or isolated atom, or as to the direction and force of the motion originally inherent in a free atom.

3. Developments of Atomism.—(*a*) *Relativity of sensible qualities.*—We have given in outline the theory which Democritus adopted and developed. When compared with the rival systems of Empedocles and Anaxagoras, it is seen to be decidedly superior in simplicity and logical coherence. These other systems also resolve the universe into matter in motion; but, in the resolution proposed by the Atomists, qualitative changes in things result from quantitative changes in their constituent elements, and all proceeds uniformly by a law of natural necessity. Each of these two position calls for further elucidation. The conception of a permanent substratum, or primary matter, to the early Greek thinkers, involved two attributes. It was, they thought, at once indestructible and immutable; in other words, the sum of matter in the universe remains quantitatively and qualitatively constant amid all the change and variety of Nature. How this result was secured by the Eleatics has already been shown. Empedocles and Anaxagoras took another way, maintaining a plurality of elements qualitatively constant. The four elements of Empedocles—earth, water, air, fire—and the infinity of seeds assumed by Anaxagoras are alike in this, that they possess as fundamental and inalienable the qualities perceptible to sense. But these attempts to shape the conception of matter were attended by insuperable difficulties, so long as the sensible qualities of derivative bodies were ascribed to the original elements (whether four or an infinite number) out of which these bodies were compounded. In fact, on the theory of Anaxagoras, the distinction between original and derivative forms of matter vanishes, for there must be as many primary substances as there are varieties of sensible qualities.

This difficulty the Atomists solved by distinguishing the fundamental properties of matter as such from all other sensible qualities. In principle the distinction is the same as that made by Locke between primary and secondary qualities. The changing qualities of sensible things, such as colour, flavour, odour, temperature, cease then to be attributes of matter as such; and Democritus expressed this by saying: 'By custom there is bitter and sweet, hot and cold, and colour; in reality nothing but atoms and void' (Sext. *adv. Math.* vii. 135; Diels, 55 B, 9 [i.^{2} 388]). It would, however, be misleading to characterize these secondary qualities as subjective: they lose nothing of objective validity because the mode in which they produce their effects has become explicable. To take the first pair of qualities in the citation from Democritus—sweet and bitter. It is an acknowledged fact that wine, which normally tastes sweet, is bitter to the jaundiced patient, and we may infer from Plato's *Theætetus* that Protagoras had called attention to this and similar facts. Now the Atomistic doctrine declares wine, like all other sensible bodies, to be merely a complex of atoms of such and such a shape, size, and position, and containing such and such a proportion of *vacuum*. As such, each body produces a certain effect upon all other similar bodies, including the human organs of taste. That effect, again, must partly depend upon the constitution of those organs, and on their permanent or temporary, common or individual, qualities. But, whereas Protagoras emphasized the divergence of the effects under different conditions, and left out of sight its possible causes, the Atomistic theory took account of both. It allowed a relative value to the divergent perceptions, while at the same time it maintained the objective validity of that which produced them—in other words, the structure of perceptible material bodies and the essential properties of the matter out of which they were constituted. Viewed in this light, an enigmatical utterance attributed to Democritus by the Epicurean Colotes becomes perfectly intelligible. If Democritus said that an object does not possess one kind of quality more than another (*τῶν πραγμάτων ἕκαστον εἰπὼν οὐ μᾶλλον τοῖον ἢ τοῖον εἶναι*—Plut. *adv. Col.* 4, p. 1108 F; Diels, 55 B, 156 [i^2. 413]), we may be sure that he was speaking of the secondary qualities, and not of the properties of matter as such. The atoms have no secondary qualities. Thus colours, flavours, odours, tem-

perature, have no objective existence *per se*; they, at all events when perceived, are relative to the percipient. To one who held this view the task of science was immensely enlarged, at the same time that it became more definite. The problem was to advance from the known to the unknown, to determine precisely how the motion of atoms in the void produced the totality of changes, and the variety of changing qualities perceived by sense. No wonder that, unaided by the apparatus of modern science, the explorer from time to time regretted the futility of results attained, and confessed with a sigh:

'Truth lies in the deep' (Diog. Laert. ix. 72. 6; Diels, 55 B, 117 [i.^{2} 407]). 'We perceive, in fact, nothing certain, but such things only as change with the state of our body, and of that which enters it, and which resists it' (Sext. *adv. Math.* vii. 136; Diels, 55 B, 9 [i.^{2} 388]).

No less important is the part played in the system by the conception of causation. A fragment of Leucippus lays down the axiom that 'nothing comes by accident, but everything from a cause and under stress of necessity' (Aet. i. 25. 4; Diels, 54 B, 2 [i.^{2} 350]). In such unequivocal terms did he state the universal law of causation, and to this principle his successor consistently adhered. For all that happens in Nature a sufficient explanation was furnished by kinematics and mechanics; there was then no need of any supplementary hypothesis, whether of design on the one hand or of arbitrary spontaneity on the other. It was enough to assume motion as an inherent attribute of matter—an ultimate fact for which no derivation was required. The motions of the atoms were as eternal as the atoms themselves, and were necessary; that is, in the unending series of movements each followed upon and was determined by definite antecedents. Granted that atoms moving in space come into collision, the whole history of the universe becomes an application of mechanical laws. Colliding atoms suffer pressure and impact, unite in groups, and break away from such unions; and thus arises all change, the succession of all events: the birth and destruction alike of particular things and of the infinite worlds are but moments in this succession.

(*b*) *Cosmogony.*—The direct outcome of Atomic motion must be the production of our world and of all the individual things in it, for these are given in experience. As to the process by which this goal is reached, our information is sadly defective. Of one thing we are certain—that Leucippus and Democritus had no recourse to external forces, such as the attraction and repulsion which Empedocles personified as Love and Strife, or the νοῦς of Anaxagoras. A late epitomator writes of Leucippus:

'The worlds arise when many atoms are collected together into the mighty void from the surrounding space and rush together. They come into collision, and those which are of similar shape and like form become entangled, and from their entanglement the heavenly bodies arise' (Hippol. *Ref.* i. 12; Diels, 54 A, 10 [i.^{2} 345]). Another account gives fuller details: 'Many atoms of manifold shapes cut off from the infinite are borne into a vast void, and there collecting set up a single vortex movement, in which they collide and are whirled in all directions, so that separation is effected and the like atoms come together. And, as they become too numerous to revolve with equal velocity, those which are light are, so to speak, sifted out, and fly off towards the outer void; and the rest remain together, and, becoming entangled, join their orbits with one another, and form in the first place a spherical mass. This becomes a sort of shell, including in itself atoms of all kinds; and, as these through repulsion from the centre are made to revolve, the enclosing shell becomes thinner and thinner, the adjacent atoms being attracted as soon as the vortex overtakes them. In this way the earth was formed as the portions brought to the centre coalesced. And, again, even the outer shell grows larger by the influx of atoms from outside, and incorporates with itself whatever it touches. And of this some portions are locked together and form a mass which was at first damp and miry, then dried as it revolved with the universal vortex, and afterwards took fire and formed the substance of the stars' (Diog. Laert. ix. 32; Diels, 54 A, 1 [i.^{2} 343]).

In this effort of the scientific imagination several points deserve notice. The doctrine of innumerable worlds or cosmical systems becomes clearer when we consider that matter and space are supposed to be infinite, and any place where atoms meet may become the kernel or nucleus of a world, provided that a vortex motion is thus set up, and in consequence a sufficient aggregation of matter crystallizes, so to speak, around a centre. As, moreover, the atoms are infinitely various in shape, the worlds formed from them will display the greatest diversity; though it may also happen that some of them are absolutely alike. Again, the principle of 'like to like,' common to most of the Greek physicists, receives some sort of explanation from the assumption of a vortex. As, on the beach, pebbles of like size and shape are collected by the tide, as the winnowing-fan sifts and separates grain (Sext. *adv. Math.* vii. 117; Diels, 55 B, 164 [i.^{2} 415]), so the cosmical vortex plays the same mechanical part in bringing together homogeneous particles, that is, atoms approximately alike in size and shape. Thus Democritus is able to bring his notion of our world into tolerable harmony with popular opinion. It floats in the void, surrounded by its revolving shell of tightly compressed atoms—the vault of heaven; the space between this outer envelope at the circumference and the solid earth at the centre is filled with air in which the stars move. The earth presents a flat surface above and below, round horizontally like a quoit or tambourine, and so broad as to support itself on the air.

We may note the influence of Anaximander, with whom probably originated the old Ionian theory of infinite worlds, and of Anaxagoras (*q.v.*), who postulated a rotatory movement to effect separation of unlike and aggregation of like. Democritus can hardly be credited with original contributions to astronomy; but he welcomed the novel doctrines of Anaxagoras which had so startled his contemporaries. He held the sun to be a red-hot mass, but regarded it and also the moon as originally the nucleus of a separate system, which had been entangled in the vortex-motion of our world and subsequently ignited. The oceans were formed when, under the influence of wind and solar heat, the smaller particles were forced out of the earth, and ran together as water into the hollows. In relative size the central earth exceeds the sun, moon, and stars; yet the latter must have been accorded considerable dimensions if Democritus accepted the Anaxagorean assumption of plains, mountains, and ravines upon the moon's face (Aet. ii. 25. 9; Diels, 55 A, 90 [i.^{2} 367]).

This cosmology is vitiated through and through by the undue importance it gives to our planet. The geocentric hypothesis still retained its sway over the philosopher, who tells us:

'There are infinite worlds, differing in size; and in some of them there is no sun and moon, in others the sun and moon are larger than in our world, or there are several suns and moons. The worlds are unequally distributed in space; here there are more, there fewer; some are waxing, some are in their prime, some waning; coming into being in one part of the universe, ceasing in another part. The cause of their perishing is collision with one another. And there are some worlds destitute of moisture and of living creatures. In our world the earth was born before the stars; the moon is nearest to the earth, the sun comes next, fixed stars are furthest off. The planets themselves are at unequal distances from us. A world is in its prime so long as it is able to absorb fresh matter from without' (Hippol. *Ref.* i. 13; Diels, 55 A, 40 [i.^{2} 360]).

In the words of an enthusiastic admirer (Gomperz, *Griechische Denker*, i.^{3} 295), we seem to be listening to a modern astronomer who has seen the moons of Jupiter, has recognized the lack of moisture on the moon, and has even caught a glimpse of nebulæ.

(*c*) *Psychology.*—All particular things, and amongst them the four so-called elements—earth, water, air, fire—are aggregates or atom-complexes;

and their character is determined by the shape, order, and position of their component atoms. Atmospheric air plays its part, but the most important is fire, because the most mobile, being composed of atoms exceedingly fine, smooth, and round. Fire-atoms are the moving principle of organic bodies, the soul being a sort of fire or heat, while mental activity is identical with the motion of these fiery particles. Upon this foundation is constructed a materialistic psychology, which in turn determines the epistemology and ethics of Democritus. Such a doctrine invites comparison with the speculations of Heraclitus and Anaxagoras, the former of whom regarded soul as an exhalation fed by vapours from the warm blood. The *νοῦς* of Anaxagoras, whether by this he meant simply intelligence, or some sort of mind-stuff, was supposed to be diffused throughout the universe; and similarly the theory of Democritus tends to destroy any fixed line of demarcation between organic and inorganic in Nature. For, according to him, fiery soul-atoms are taken in from outside. Owing to their great mobility, they are constantly liable to escape from the animate body, and this tendency is counteracted by the process of respiration, which checks the escape of imprisoned soul-atoms by a current of air, and continually renews them. In sleep or in a swoon there is less resistance: more of the fiery atoms escape, and mental activity is proportionately diminished; while death itself is the result of their entire dispersion in the surrounding air. Since all qualitative change in things is reduced to, and explained by, quantitative changes of atoms and atomic motions, no exception can be made in dealing with psychical activities and the phenomena of mental life. Sensation, thought, and all other functions of the soul are in reality movements of the soul-atoms, produced in accordance with the mechanical laws of pressure and impact. This principle is rigorously carried out, and its consistent application is a characteristic feature of Atomistic psychology. It is most obvious in the theory of sensation, which Democritus in part inherited from Empedocles. Contact between object perceived and percipient is the indispensable condition of all perception, so that all the various senses are in the last resort modes of one—viz. touch (Ar. *de Sensu*, iv. 442*a*, 29).

When, as in the case of sight, hearing, and smell, the perceptible object is at a distance, Democritus, like Empedocles, supposed that particles of external things found their way into the pores of the sensory organs. It is true that, according to Empedocles, the pores or passages through which the particles travelled were never absolutely empty, for, on his view, the universe was a *plenum*; whereas Democritus supposed the particles thrown off to move, like all atoms, through empty space; but this hardly affects the general likeness between the two theories. The introduction of atoms in certain ways, through the organs, to the soul answers to the introduction of effluxes (*ἀπορροαί*) through the pores, which Empedocles maintained. The atom-complexes thus given off resemble the external objects themselves. Democritus called them *δείκελα*—an Ionic term for which Aristotle substituted *εἴδωλα*. What we perceive, then, is in a manner in the soul; but the soul itself must consist of matter capable of being affected mechanically by it, that is, capable of the impact, reaction, movement, *ἀλλοίωσις*, which is the essence of perception.

The sensory organs thus become passages for instreaming atoms. Take vision. The eye is a moist porous organ—seeing results when the image of an object is mirrored in the pupil. So much we are told on excellent authority; but how it comes about that the pupil receives, or, if it is a mirror, reflects, this image, is a point on which neither the criticisms of Aristotle and Theophrastus nor the later accounts of Aetius and Alexander Aphrodisiensis throw much light. In fact, it remains doubtful whether the efficient cause is the emanation from the visible object or the air which has received a certain impression, comparable to that of a seal upon wax, from this emanation. The suggestion that in seeing nearer objects the former, in seeing distant objects the latter, is the proximate agent, although ingenious, lacks all authority. Colour, the proper object of vision, as explained above, is not a primary quality of bodies, but is relative to the percipient. The visible thing is composed of colourless atoms of given shape arranged in a certain order and position, and, when it is said to have colour in virtue of its atomic structure and the movements of its atoms, this really means that it is capable of exciting a particular effect in the sensory organ—the eye. Democritus assumed four primary colours—white, black, red, and green (*χλωρόν*)—and derived all other shades of colour from the mixture of the primary four in definite proportions. From this it follows that the numerous bodies which cannot be classed as having one or other of the primary colours must be of a composite nature; they must, that is, include in their composition other than merely homogeneous atoms. Thus, referring white to smooth and red to round atoms, he must have assumed, in the structure of gold and bronze, the presence both of smooth and of round atoms, since he declared the colour of these metals to be a mixture of white and red. This theory of colour seems to have been carefully elaborated, to judge by the summary and criticisms of Theophrastus (*de Sensu*, 49 ff.). The crudeness of his assumptions is obvious: whiteness is supposed to be due to smooth, blackness to rough atoms, redness is caused by heat, and the atoms of fire are supposed to be spherical.

In the treatment of hearing and its correlative object, sound, of which speech or vocal sound is the leading type, Democritus agreed in the main with his contemporaries. As emanations (*δείκελα*) from visible bodies are the stimulus of vision, so the sounds (*φωναί*) which stimulate the organ of hearing are particles or atom-complexes thrown off by the sonant body, and conveyed by the medium of the air to the ear, and through it to the soul. The stream of atoms given off by a sonant body sets the atoms of the air in motion, and, joining itself with these according to similarity of shapes and sizes, makes its way into the body. The orifice of the ear is the chief, but not the sole, entrance for such a current. In making the current affect not the ear alone, but other organs of the body, Democritus showed decided originality. He may have meant no more than that the whole body is sympathetic to the operation of hearing. Probably the purity of sounds was made to depend on the similarity, the pitch and volume on the magnitude, of their constituent atoms. The process by which the sound-atoms themselves and the air broken up by them are, as it were, sorted so that similar shapes and sizes come together must be understood as purely mechanical.

If a theory of emanations from bodies at a distance be employed to explain seeing and hearing, no difficulty will be encountered in applying it to the sense of smelling. The rapid diffusion of perfume is a familiar fact, and it is easily inferred that a finer matter is given off by odorous bodies in the form of an attenuated stream of atoms, which reaches the nostrils. Theophrastus complains of the omission to connect a distinctive quality of the various odours with the atomic

configuration of their particles; but Democritus probably regarded this connexion as easily deducible from the similar connexion between atomic configuration and distinctive quality in the kindred region of tastes, with which he dealt very fully. Thus, he referred an acid taste to atomic shapes which are angular, winding, small, and thin; the sweet to shapes which are spherical and not too small; the astringent to shapes large and with many angles. The bitter is composed of shapes, small, smooth, and spherical, with hooks attached to the spherical surface; the saline of large shapes, in many cases not spherical, but in some cases also not scalene, and therefore without many flexures; the pungent is small, spherical, and angular, but not scalene.

With this the theory of sensation is complete. All senses have been resolved into modes of touch, which must, therefore, have been for Democritus the primary sense, as it was for Aristotle. But of touch itself as a physiological function he could give no detailed investigation. Pressure, impact, and motion—purely physical conceptions—are employed by the Atomists without misgiving, as if they had not realized the true nature of the physiological process. The relations between realities of every kind were reducible to the purely mechanical form. The interaction involved in sense-perception could not differ from the action of any atomic bodies whatsoever upon one another, for this contact is the necessary and universal condition, and contact between *percipiens* and *percipiendum* only a special case. Sensation itself is the movement set up when spherical soul-atoms have thus been brought into contact with the atoms of an external object, or the atom-complexes (*δείκελα*) emanating from them. On this theory, then, sensory facts have nothing to distinguish them from the larger total of physical facts; nor can there be a fundamental difference between sensation and intellect. Aristotle expressly testifies that Democritus made no such distinction (*ταὐτὸ λέγει ψυχὴν καὶ νοῦν* [*de Anima*, i. 2. 404*a*, 28, 31; cf. 405*a*, 9]). There is no evidence that he put to himself Aristotle's question, What is the faculty by which the data of sense are combined and distinguished, by which we are conscious of our mental acts, by which we imagine and remember? All our information is that, while the soul-atoms were divided or distributed over the entire body, he located certain mental functions in certain parts of the frame; *e.g.* the separate sensations in the sensory organs, and, further, according to some doubtful authorities, intelligence in the brain, anger in the heart, appetite in the liver. Such statements are not in themselves incredible, on the assumption that, in different parts of the body, soul-atoms of distinctive size and mobility are apt to be associated and massed together; but the partial anticipation of Plato's tripartite division of soul is open to suspicion, and on such points Aetius and pseudo-Hippocratean writers of the 2nd cent. are not to be trusted.

What, then, is thought, and how does thinking come about? It must be analogous to sensation in so far as it is a movement of soul-atoms stimulated by an external cause; the latter is not far to seek, when we reflect on the familiar fact of the similarity between a sensation and the corresponding idea. Emanations from external objects (*εἴδωλα ἔξωθεν προσιόντα*) must then be postulated for the latter as for the former. The same causes acting upon soul-atoms in the same mechanical fashion accounted for dreams, visions, and hallucinations. So far from rejecting these mental processes as illusory, Democritus seems to have based upon them some sort of divination or mantic. The emanations which excite these abnormal processes must be supposed to be of a finer texture than those of ordinary sensation or thought.

(*d*) *Epistemology.*—What, then, is the relation between sensation and thought—in other words, what contributions does Democritus make to the theory of knowledge? The *locus classicus* is a passage preserved by Sextus (*adv. Math.* vii. 138; Diels, 55 B, 11 [i.[2] 389]). It was taken from a work entitled 'The Canon,' which presumably discussed the process of inference from the known to the unknown, and laid down rules for induction. The passage runs as follows:

> 'There are two forms of knowledge, the genuine and the obscure. To the obscure belong all these: sight, hearing, taste, smell, touch; the other form, genuine knowledge, is altogether distinct from this. . . .' 'In what follows,' says Sextus, 'Democritus ranks the genuine form above the obscure, and adds [to follow the restoration of the text by Diels]: "When the object becomes too minute for the obscure form of knowledge to see, or hear, or taste, or smell, or touch it, when greater precision is required, then the genuine knowledge comes into play, as the possessor of a more precise organ of discrimination."'

This means that thought can reach that which is inaccessible to sense. The Atomic theory, as it shaped itself in the mind of the philosopher, is a proof, for neither the atom nor space is sensibly perceived. Moreover, the geometrical forms and the whole of geometrical science, to which Democritus gave as loyal a support as Plato himself, being inseparable from space, have the same rational origin. It is true that he made no fruitful application of geometry to physical research, but the same may be said of the Pythagoreans, of Plato, and of all who preceded Galileo. Further, it is easy to see why the Atomists preferred thought to sense, though both have essentially the same object—corporeal things and material processes, atoms and atomic movements. Thought was to them mental intuition, an affection which registers, so to speak, more delicate movements due to complexes of minuter atoms. The senses do not extend far enough; the mental vision descries the atom, but the bodily eye cannot. The senses, being unaffected by the finer atomic movements, desert us at the point where the minutest bodies and the most delicate processes require investigation.

(*e*) *Ethics and religion.*—The scanty fragments which have come down to us under the name of Democritus include a mass of moral reflexions. Much of it is undoubtedly spurious, and the task of sifting the grain from the chaff has not yet been accomplished with success. Though little of scientific value has been preserved, the outlines of a definite view of life stand out clearly. In form these utterances bear the stamp of the scattered moral reflexions attributed to Heraclitus and the Pythagoreans, the single exception known to us being the treatise *περὶ Εὐθυμίης*, which made some advance to a definition of the ethical end. The treatise apparently opened with a description of the miserable condition of the majority of mankind, distracted by inordinate desire and superstitious terror, vainly striving for a multitude of objects without finding in any of them permanent satisfaction. As the goal of moral endeavour, Democritus proposed what he himself called tranquillity or cheerfulness (*εὐθυμίη*) and well-being (*εὐεστώ*). Such composure or peace of mind he compared to an unruffled calm at sea (*γαλήνη*). Other terms for this ethical end occur in the fragments, such as *ἀθαμβία*, *ἀταραξία*, *ἀθαυμασία*, *ἁρμονία*, *ξυμμετρία*; but it is not certain whether they were ever used by Democritus himself. His main tenet, repeatedly enforced in a variety of ways, is that true happiness, this inestimable tranquillity, does not depend on anything external, on wealth or goods of the body, but on uprightness and intelligence. Moderation and contentment, purity of deed and thought, are its distinctive marks; education is the best means to it.

The question arises whether this ethical teaching (of which, after all, we know so little) is intimately connected with the physical doctrines of the Atomists, so as to form part of one system. On this opinions are divided. Some deny all connexion, and are inclined to regard Democritus, not as the systematizer, but as the eager inquirer, who disperses his energy over a multitude of subjects, and lays the foundation of separate unrelated sciences. Again, it has been suggested that the contemplation of an infinite universe impressed Democritus with a just sense of the pettiness of man and the futility of the ends which ordinary men pursue. But this conjecture is just as improbable as the popular conception of him as the 'laughing philosopher,' provoked to merriment by the incongruity of all around him. Others, taking the distinction between genuine and obscure knowledge as their text, draw a parallel between the preference of thought over sensation, and the similar preference of tranquillity over violent and exciting pleasure. As sensations are atomic movements, so also are feelings, whether pleasurable or painful, and desires. Aristippus had called pleasure a smooth, and pain a rough or violent motion. To Democritus the distinction is not so much qualitative as quantitative; it is in minute and delicate movements of the finest matter, which are imperceptible to sense, that thought and the joys of thought consist.

The views of Democritus about religion are very imperfectly known. A fortunate accident has preserved in the pages of Sextus Empiricus (*adv. Math.* ix. 19; Diels, 55 B, 166 [i.² 415]) his curious belief in superhuman beings, and from other sources he is known to have maintained the possibility of divination from dreams and from the inspection of the liver and other organs of the sacrificial victim. There is nothing in these beliefs which is not in harmony with the principles of atomistic physics, although development in this direction is at first sight somewhat startling. To take divination by victims first. According to Cicero (*de Divin.* i. 57 [131]), the changes to be foretold by an inspection of the entrails were such as affected public health or the prospect of the harvest. The limitation to such cases proves that the symptoms examined and reported upon were such as were due, in the belief of Democritus, to natural causes. Dreams, whether of the ordinary or of the prophetic kind, were, on the atomistic hypothesis, due to images or εἴδωλα presented in sleep. Emanations from all possible objects flit about continually; amongst them there may be some which reflect the mental condition or even the opinions and designs of other men. Information then obtained in dreams of this sort is a matter of inference, just as when in waking hours the condition and intentions of others are inferred from their looks. The data, however, are less trustworthy, and hence the interpretation of dreams is often erroneous. Emanations, it will be seen, can thus be satisfactorily employed to explain what is unusual and abnormal.

As to the popular theology, it could not be accepted by any of the early Greek thinkers, least of all by Democritus. The interference of Homer's deities in the course of natural events was utterly at variance with speculations which, if they agreed in nothing else, all tended to establish the reign of law and the inevitable sequence of phenomena. If nothing exists but atoms moving in void, if every event is inexorably determined by natural necessity, Divine agency and design in Nature are alike excluded. Democritus was true to this principle, and incurred the censure of Aristotle because he refused to see in the beauty and order of the universe, and more especially in the adaptation of means to ends in the structure of animals and plants, any evidence of design. It remains, however, for the philosopher to explain how the belief in gods arose. Democritus in part ascribed it to man's terror at the awe-inspiring phenomena of Nature —thunder and lightning, eclipses of the sun and moon, comets, earthquakes, and the like. In the popular belief the gods were certainly regarded as the causes of natural phenomena, and, so far, as personifying natural forces. But this was not all; in part the faith of the multitude rested on actual evidence of sense, observations which there was no reason to doubt, even if they had been misunderstood. To meet this case, Democritus introduced as a *vera causa* beings differently constituted and in some respects superior to man. He may have been prompted by the common Greek notion of dæmons (δαίμονες), found, *e.g.*, in Hesiod, as something intermediate between men and gods; or it might even be said that he degraded the gods to the rank of dæmons. He assumed, at all events, that there are in the surrounding atmosphere beings who are similar to man in form, but surpass him in size, strength, and longevity. Streams of atoms would emanate from them as from all other external objects, and, coming in contact with the sensory organs, might render these beings visible and audible to men. The popular belief in their divinity and immortality was a gratuitous assumption; in truth, they are not indestructible, but merely slower to perish than man. Of these beings and their images there were two species—one kindly and beneficent, the other destructive and harmful. Hence Democritus is said to have prayed that he might meet with such images as were kindly and beneficent.

The atomistic doctrine which, as mentioned above, supposed an entire dispersion of soul-atoms to take place at death, left no ground for inferring the survival of individual existence. The instinctive fear of death is once or twice referred to in the fragments, and generally as something unreasonable. With the interest of a modern man of science, Democritus appears to have investigated cases of resuscitation of persons apparently dead, and to have decided that, however violent the injury received, life during the swoon or trance cannot have been altogether extinct (Procl. *in Remp.* ii. 113, 6 [Kroll]; Diels, 55 B, 1 [i.² 384]). We have no evidence that he or any of his school were active in denouncing and opposing superstition. One of his works bears the title Περὶ τῶν ἐν Ἅιδου, but the sole reference extant to belief in a future life is the passing allusion:

'Some men do not understand that a mortal nature is subject to dissolution, and, being conscious of the evil in life, painfully spend all their days in troubles and fears, inventing lies about the time after death.'

4. Historical importance.—The doctrine here presented in outline was never popular in antiquity, or rather it may be said to have fallen into disrepute. This was due in part to the fact that Democritus avoided dialectical discussions, so dear to the Greeks from the time of the Sophists. Yet Aristotle, his keenest critic, praised him for his empirical method of research, and agreed that it was better to deal with things in the concrete (φυσικῶς ζητεῖν) than to reason from vague abstract premisses to conclusions which did not exactly fit the facts of the case (λογικῶς ζητεῖν). The great prominence given after the time of Socrates to ethics and the practical side of life was another reason why Atomism failed to attract public attention. Few names of adherents have come down to us, hardly enough to be called a school. Epicurus (*q.v.*) absorbed in his own system what he thought fit, leaving one fundamental doctrine—that of natural necessity—to his rivals, the Stoics. Here the genuine doctrine of Democritus vanishes, or re-appears only in those criticisms of Aristotle's which, as Lasswitz has shown, formed, to some of the keener intellects among the schoolmen, a rallying-point from which to question or even ultimately to undermine the authority of the Stagirite. The loss of Democritus' writings was, in Bacon's opinion, the greatest which antiquity had sustained; and, after Galileo's experiments had opened a new era in physical research, this appreciation of empirical methods was triumphantly vindicated.

The chief service which Democritus rendered to

philosophy lay in the rigid consistency with which he worked out his crude Materialism. His merits in this respect are best seen by comparison with the Ionian hylozoists who preceded, and the Stoic pantheists who followed, him. So long as material reality is endowed with sentience or reason, the problem of Materialism is not adequately conceived, nor are its difficulties properly faced. The Atomists saw clearly what they had to do, namely, to show how out of matter, which is neither sentient nor intelligent, but merely obeys mechanical laws, it is possible to derive organic bodies which both feel and think. The difficulty of the task was not removed by this clear conception of its nature. There is a gap in the deduction, which no ingenuity can bridge over. The formation of an image on the pupil and the visual sensation contemporaneous with it remain wholly distinct: the physics of Democritus may explain the first, but not the second. Ever so correct a theory of the mechanism of local movements in the animal still leaves the phenomena of purpose and volition as mysterious as ever, as Aristotle pointed out. The resolution of secondary qualities, as they are called—colour, sound, temperature, odour, etc.—into effects of atomic movements on the percipient was a great step in advance; but Democritus did not realize all its consequences. Modern psychology has shown that the same analysis can be applied to primary qualities, and the seeming solid bodies of the Atomists' external world replaced by groups of tactile sensations; while, further, it asserts that these states of consciousness are our primary data of immediate reality. Thus Materialism, if worked out consistently, is apt to lead out of itself to Phenomenalism or Subjective Idealism, or in some other direction.

DEMONS AND SPIRITS (Introductory; African and Oceanian).—Although a rough distinction may be drawn between demons and spirits by considering the former as malevolent and the latter as benevolent, actual study of the subject soon shows that there is, to the primitive mind, no clear line of demarcation between the two allied classes. Their modes of operation are identical, and the same being may often be either beneficent or maleficent, as circumstances may dictate, though some are normally kindly disposed towards man, while others are almost or quite invariably hostile to him. The very terms 'spirit' and 'demon' are colourless. The former word signifies simply 'breathing,' 'breath' (see artt. BREATH, SPIRIT), while the latter (*δαίμων*) originally denoted either 'apportioner' or, less probably, 'apportionment,' 'destiny,' being connected with Gr. *δαίομαι*, 'divide,' 'apportion,' and Eng. *time* (Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 162; cf. also ARYAN RELIGION, vol. ii. p. 54[a]). The term 'demon' has, moreover, suffered a complete transformation of meaning *in malam partem*, for originally, as will be clear from the 'Greek' section of this art., it had a good connotation, which was changed into an evil one when Christianity condemned the deities and spirits of paganism (see, further, 'Christian' section below)—a change quite analogous to that by which the Avesta *daēva*, 'demon,' is the precise etymological equivalent of the Skr. *deva*, 'god.'

Again, both demons and spirits—to retain for the nonce their somewhat artificial contrast—must be carefully distinguished from souls or ghosts (cf. artt. SOUL, ANCESTOR-WORSHIP, and the 'Egyptian' section below). This comes out very clearly among the Melanesians,[1] with whom

'it is most important to distinguish between spirits who are beings of an order higher than mankind, and the disembodied spirits of men, which have become in the vulgar sense of the word ghosts. . . . They [the Melanesians] themselves make a clear distinction between the existing, conscious, powerful, disembodied spirits of the dead, and other spiritual beings that have never been men at all' (Codrington, *Melanesians*, Oxford, 1891, p. 129 f.).

The *vui*, or spirit, thus contrasted with the *tindalo*, or ghost, was defined as follows to Codrington by a native of the Banks Islands:

'It lives, thinks, has more intelligence than a man; knows things which are secret without seeing; is supernaturally powerful with *mana*; has no form to be seen; has no soul, because itself is like a soul';

and in Omba, Lepers Island, the definition of *vui* is as follows:

'Spirits are immortal; have bodies, but invisible; are like men, but do not eat and drink, and can be seen only by the dead' (Codrington, 123, 170).

That, despite this assignment of a purely spiritual nature to the *vui*, they should often be regarded practically as in human form, and even as sometimes dimly visible (*ib.* 151 f.), is by no means surprising when we remember that it is well-nigh impossible for man at any stage of civilization to escape entirely from anthropomorphism (*q.v.*).

This distinction between spirits and ghosts is, however, much easier to make in theory than in practice, and Taylor's words regarding the New Zealanders (*Te Ika a Maui*[2], London, 1870, p. 108)

[1] A very similar distinction may be found in Greek between *θεοί, δαίμονες*, and *ἥρωες*, the two latter classes corresponding respectively to the Melanesian *vui* and *tindalo* (cf. Usener, *Götternamen*, Bonn, 1896, p. 248 f.).

—'Maori gods are so mixed up with the spirits of ancestors, whose worship entered largely into their religion, that it is difficult to distinguish one from the other'—may be applied to more than one people (cf. also, for Africa, Schneider, *Relig. der afrikan. Naturvölker*, Münster, 1891, p. 113).

But, if demons and spirits must be distinguished from ghosts or souls, an equally clear line must be drawn between them and gods—although it is true that confusion of demons and spirits with gods is frequent, exactly as demons and spirits are often confounded with souls or ghosts. There is, nevertheless, this difference between the two kinds of confusion, that, whereas demons and spirits are, strictly speaking, distinct from souls and ghosts in that the *vui* 'were never men, and have not the bodily nature of a man' (Codrington, 124), the difference between demons and spirits as contrasted with gods appears to be one of degree rather than of kind, so that demons and spirits may be, and very often are, elevated to the rank of gods. On this point Jevons writes as follows (*Introd. to the Hist. of Religion*[3], London, 1904, pp. 173, 175):

'For the savage, supernatural beings are divided into three classes—the gods of his own tribe, those of other tribes, and spirits which, unlike the first two classes, have never obtained a definite circle of worshippers to offer sacrifice to them and in return receive protection from them. This last class, never having been taken into alliance by any clan, have never been elevated into gods. . . . On the one hand, the community originally drew its god from the ranks of the innumerable spiritual beings by which primitive man was surrounded; and, on the other hand, the outlying, unattached spirits, who were not at first taken into alliance, and so raised to the status of gods, may ultimately be domesticated, so to speak, and made regular members of a pantheon.'

The relations of demons and spirits to that phase of primitive religion properly known as Animism (*q.v.*) are peculiarly close, so that Tylor (i.[3] 426) declares:

'It is habitually found that the theory of Animism divides into two great dogmas, forming parts of one consistent doctrine; first, concerning souls of individual creatures, capable of continued existence after the death or destruction of the body; second, concerning other spirits, upward to the rank of powerful deities.'

Whether, however, Animism actually furnishes, as was once fondly supposed, a complete explanation of the origin of religion, or whether it was even the earliest form of religion, seems open to grave doubts (cf. the views of various scholars recorded by Schmidt, 'L'Origine de l'idée de Dieu,' in *Anthropos*, iii. [1908]); and the theory is scarcely supported in Melanesia, where so accurate an observer as Codrington can say (p. 123):

'There does not appear to be anywhere in Melanesia a belief in a spirit which animates any natural object, a tree, waterfall, storm, or rock, so as to be to it what the soul is believed to be to the body of a man. Europeans, it is true, speak of the spirits of the sea or of the storm or of the forest; but the native idea which they represent is that ghosts haunt the sea and the forest, having power to raise storms and to strike a traveller with disease, or that supernatural beings, never men, do the same.'

It must also be borne in mind that, while spirits are very frequently believed to inhabit trees, rivers, rocks, and the like, there are many spirits to which no such specific habitat is assigned. In other cases the abode, even in a tree, river, or rock, may be but temporary—a phenomenon which is especially characteristic of dream-demons, disease-demons, and the like.

There is, furthermore, a close connexion of demons and spirits with the great type of religion known as Fetishism (*q.v.*), which may roughly be defined, with Tylor (ii. 144), as 'the doctrine of spirits embodied in, or attached to, or conveying influence through, certain material objects,' the fetish itself being a material, or even animal (cock, serpent, bear, etc.), or natural (river, tree, etc.), object in which a spirit is believed to take up its abode, either temporarily or permanently. To quote Tylor (ii. 145) again:

'To class an object as a fetish, demands explicit statement that a spirit is considered as embodied in it or acting through it or communicating by it, or at least that the people it belongs to do habitually think this of such objects; or it must be shown that the object is treated as having personal consciousness and power, is talked with, worshipped, prayed to, sacrificed to, petted or ill-treated with reference to its past or future behaviour to its votaries.' Cf., however, the well-founded objection of Jevons, pp. 166–169, to the scientific use of the word 'fetish' at all, since it 'may mean one thing to one person and another to another, because it has no generally accepted scientific definition.'

Nevertheless, however vague the term 'fetish' may be, it is at least clear that the idea of spirit-habitation which it conveys is closely connected, in its development, with the forms of religion associated with amulets (see CHARMS AND AMULETS, vol. iii. p. 398[a]) and idols (see IMAGES AND IDOLS).

Generally speaking, a spirit is regarded, unless properly propitiated, as malevolent and maleficent more often than as benevolent and beneficent; in other words, to revert to the common, though lax, phraseology, demons are more numerous than spirits. At first sight this state of belief is analogous to that which gives more prominence to malignant than to benignant deities, because the benevolent gods are already good and need no propitiation, while every effort must be made to appease and to propitiate the malevolent ones. Such, however, does not seem to be the real psychology in the case of demons and spirits. The true ground for the predominance in number and in importance of malevolent over benevolent spirits appears to be well outlined by Jevons (p. 177), who finds the explanation in the fact, already noted, that the spirit is unattached to any clan or community, whereas a god is connected with one or another clan. The spirit is, therefore, much in the position of an unattached ghost; and, as to the primitive mind, with its intense concept of kinship—whether real or artificial—all that is not akin is hostile, a spirit thus unattached, and consequently unakin, would naturally tend to be regarded as hostile and malevolent. It must be remembered, too, that the qualities ascribed to the spirits reflect in great measure the qualities of their worshippers (cf. Schneider, 106); for instance, the Kioko of Portuguese West Africa hold that each spirit has his own district, which he jealously guards, being deeply angered by the intrusion of any neighbouring spirit (*ib.* 150). Spirits also possess other traits still more human, so that, among the African Bambara, the spirits 'have sex, males and females are found among them, they have children, and some, if not all, even believe them to be clothed' (Henry, in *Anthropos*, iii. 702); while in Loango we find a specific 'mother of spirits' named Bunsi, who has peopled the whole land with spirits, who in their turn have begotten others (Schneider, 132 f.); and the Australian Urabunna and Warramunga believe that the black-snake totem ancestor begot spirit children who now live in water-holes and in gum-trees along the bank of the creek (Spencer-Gillen[b], p. 162, cf. also p. 301).

It is comparatively seldom that the primitive mind makes a clear discrimination between good and evil spirits so far as to distinguish them by special epithets, as do the Africans of Benguela (Schneider, 135); and the very fact that the names applied by the Malays of Passumah Lebar to good spirits (*dewa*) and to evil spirits (*jinn*) are of Skr. and Arab. origin respectively (Waitz-Gerland, *Anthropol. der Naturvölker*, Leipzig, 1860–72, v. i. 166) betrays the late date of this nomenclature (cf. also Tylor, ii. 319).

In the regions under consideration, belief in demons and spirits is especially characteristic of Africa (as is shown at once by the fact that 'fetishism' is *par excellence* the type of African

religion[1]), where it maintains itself side by side with ghost-worship. In Oceania, on the other hand, the two types of religion are mutually exclusive. In Polynesia, Australia, and Micronesia, spirits are practically unworshipped as compared with ghosts, while in the Ellice Islands and the Union Group (Tokelau) the reverse is the case (Waitz-Gerland, v. ii. 139–142, 194–199); and in Melanesia

'religion divides the people into two groups; one, where, with an accompanying belief in spirits, never men, worship is directed to the ghosts of the dead, as in the Solomon Islands; the other, where both ghosts and spirits have an important place, but the spirits have more worship than the ghosts, as is the case in the New Hebrides and in the Banks Islands' (Codrington, 123).

Naturally, the same effect may be ascribed by primitive man to different causes. Thus, among the Orang Kubu of Sumatra and the Mintira of the Malay Peninsula, disease is caused by spirits (Waitz-Gerland, v. i. 181; *Journ. Ind. Archipel.* i. 307), whereas in Africa generally and in Melanesia (Schneider, 116, 125, 152; Codrington, 194) disease is more commonly due to malignant ghosts—although here, too, the vague distinction between ghosts and spirits, already noted, often renders uncertain any precise determination of the cause of disease (cf. Tylor, ii. 125 ff., where further examples will be found; and see art. DISEASE AND MEDICINE). The same statement holds true of possession (or obsession) by spirits and ghosts. Sometimes, as normally in Melanesia, it is the shades of the departed, rather than the *vui*, that cause the phenomena comprised under the category of possession (Codrington, 218–220); while, along the shores of Blanche Bay, New Britain, all this is caused by the *iñal*, a being which is evidently a spirit, not a ghost (Meier, 'Der Glaube an den *iñal* und den *tutana vurakit*,' in *Anthropos*, v. [1910] 95 ff.; see, further, both for ghost- and for spirit-possession, Tylor, i. 98, ii. 123 ff.); and in the vast domain of magic (*q.v.*) it will be found that both ghosts and spirits are among the powers controlled by magicians.

As regards the places of abode of demons and spirits, the words of Brun (in *Anthropos*, ii. [1907] 728) with reference to the African Malinke, a Mandingo stock, may serve as applicable to almost any people among whom this type of religion prevails:

'Dans la pensée des Malinkés, notre planète est peuplée d'une multitude d'esprits. Les uns résident dans des lieux déterminés, fleuves, rivières, montagnes, blocs de rochers; d'autres dans certains arbres. Le grand vent et le tonnerre sont produits par les esprits. Dans presque tous les villages, il y a un grand arbre dans lequel réside l'esprit protecteur du village.' Among the Polynesians, in like manner, Ellis (*Polyn. Researches*[2], London, 1832, i. 327–330) records deities (who may, however, originally have been ghosts) of the sea, air, valleys, mountains, precipices, and ravines.

It is, indeed, this very type of Nature-spirit which has in great part given rise to the theory of Animism (cf. Tylor, ii. 205 ff., and, for Polynesia especially, Waitz-Gerland, vi. 295–298). To give a complete list of such spirits would be to catalogue almost every object both in inanimate and in animate Nature—a task that would be not merely enormous, but, for the present purpose, useless, since the underlying principles are everywhere the same, and the varying details do not materially affect the cardinal doctrine involved. It will be quite sufficient, therefore, to note a few of the more prominent classes of Nature-spirits in Africa and Oceania by way of examples of the whole type.

(*a*) *Animals.*—Along the Slave Coast, Danhgbi, the python spirit, receives divine homage, as do crocodiles and, in Togo, leopards (the latter may, however, be the abodes of ghosts rather than of spirits; see ANIMALS, vol. i. pp. 509 f., 520 f.), and among the Mandingo reverence is paid to serpents as divine (cf. *ib.* vol. i. p. 525 f., and art. SERPENT-WORSHIP). Yet here, too, as just noted, the difficulty of accurate distinction between spirits and ghosts confronts us, and the animal is more usually the home of the latter than of the former (cf. Tylor, ii. 7 f., 229, 378 f.; see also above, vol. i. p. 493 f.): and we must also remember that animals are often held to be god-homes, and that there are still other factors which go to make up the complex system of animal-worship (see artt. ANIMALS, TOTEMISM).

(*b*) *Water-spirits.*—Attention has been called in art. BRIDGE to the wide-spread belief in deities and spirits believed to be resident in rivers, and the same thing is, of course, true of larger bodies of water, such as lakes, as in the Banks Islands (Codrington, 186). To this category belongs the African Fugamu, at once the deity of the Rembo Ngoyai (a tributary of the Ogove) and the teacher of the smith's art, while dreaded demons dwell in the falls of the Congo, and the Kafirs fear the water-demons Ikanti and Uhili (Schneider, 131, 133, 137, 151 f.; Kidd, *Essential Kafir*, London, 1904, p. 10, inclines to regard the Kafir demons as ghosts rather than as spirits); thus, as Tylor sums up the matter for Africa (ii. 211; cf. also i. 108–110, ii. 209 ff.),

'in the East, among the Wanika, every spring has its spirit, to which oblations are made; in the West, in the Akra district, lakes, ponds, and rivers received worship as local deities. In the South, among the Kafirs, streams are venerated as personal beings, or the abodes of personal deities, as when a man crossing a river will ask leave of its spirit, or having crossed will throw in a stone; or when the dwellers by a stream will sacrifice a beast to it in time of drought, or, warned by illness in the tribe that their river is angry, will cast into it a few handfuls of millet or the entrails of a slaughtered ox.'

(*c*) *Forests and trees.*—Forests and trees likewise are the abodes of spirits. The New Britain belief in the *iñal*, which, in the form of an owl, has its usual home in a tree, has already been noted, and a similar belief prevails in Melanesia (Codrington, 186 f.). For a like reason the Wanika reverence the coco-nut palm (Schneider, 159), while the Bambara also are among the many African peoples that believe trees to be tenanted by spirits (Henry, in *Anthropos*, iii. 703; for further examples, where ghosts, totems, etc., are also factors, see Jevons, ch. xvi.; Tylor, i. 475, ii. 215 ff.; and art. TREES).

(*d*) *Mountains.*—The African Malinke believe that the mountain at Kita is the home of malevolent spirits (Brun, *loc. cit.*), and throughout Oceania there was an abundance of mountain- and rock-spirits, some of which must, however, be reckoned as ghosts (see Waitz-Gerland, vi. 295–297, where may be found a general survey of Nature-spirits in the Pacific islands). The extent to which mountain-spirits may be specialized is well illustrated in the list of the dread deities of the volcano Kilauea, in Hawaii, thus recorded by Ellis (iv. 248 f.):

Kamoho-arii ('king Moho,' or 'king vapour'), Ta-poha-i-tahi-ora ('explosion in the place of life'), Te-au-a-te-po ('rain of night'), Tane-hetiri ('husband of thunder'), Te-o-ahi-tama-taua ('fire-thrusting child of war')—all these being brothers; Makore-wawahi-waa ('fiery-eyed canoe-breaker'), Hiata-wawahi-lani ('thunder-rending cloud-holder'), Hiata-noho-lani ('heaven-dwelling cloud-holder'), Hiata-taarava-mata ('quick-glancing-eyed cloud-holder'), Hiata-hoi-te-pori-a-Pele ('cloud-holder embracing [or, kissing] the bosom of Pele'), Hiata-ta-hu-enaena ('red-hot mountain-holding [or lifting] clouds'), Hiata-tareiia ('wreath-encircled cloud-holder'), and Hiata-opio ('young cloud-holder')—all these being sisters of the great goddess Pele.

Prominent among the distinctly good spirits are those whose special function it is to act as guardians. From this class we must, of course, exclude the 'separable soul,' such as the *okra*, or *kra*, of the Tshi and the *luwo* of the Ewe, which is a second soul, created together with the individual whom it is to guard throughout his life (see art. SOUL); and we must also once more essay the far

[1] It must, however, be noted that Nassau regards all the spirits worshipped in W. Africa as originally ghosts ('Spiritual Beings in West Africa,' in *Journ. Amer. Geograph. Soc.* xxxiii. [1901] 389–400, xxxv. [1903] 115–124).

less easy task of distinguishing guardian spirits from guardian ghosts. To the latter class seem to belong such supernatural guardians as the Zulu *ama-tongo*, the Bantu *mizimi* and *ombwiri* (Schneider, 139 ff., 152; Hartland, art. BANTU, vol. ii. p. 360[a]), and the Tahitian *oramatua* (Waitz-Gerland, vi. 316); yet there are also cases where the guardian is believed to be a spirit in the strict sense of the term. Such appears to be the case in the Gold and Slave Coasts (Jevons, 165 f.; see also his whole ch. xiv.), and in Samoa and other Polynesian islands the guardian spirit was expressly declared to be a god (*aitu*), not a ghost (*varua*; see the examples collected by Waitz-Gerland, vi. 317 ff.). For further details, see artt. TOTEMISM, TUTELARY GODS.

Another important class of spirits is formed by those of prophecy, their functions being to a large extent shared, as is perfectly obvious, by ghosts. As examples of this kind of beings we may refer to a spirit dwelling in an enormous stone near Kita (Brun, *loc. cit.*), the Matabele Makalaka (Schneider, 144), and the *iñal* of Blanche Bay (Meier, in *Anthropos*, v. 96 f.; cf. also Tylor, ii. 131 ff.). These spirits may simply be consulted, as at Kita, or they may enter into an individual, producing a state of ecstasy, as at Blanche Bay (see artt. ORACLE, POSSESSION). Again, it is to the agency of spirits that primitive man attributes a large proportion of his dreams (Tylor, ii. 189–191, 411; see also art. DREAMS), especially those of an erotic or nightmare character, while ordinary dreams of persons, animals, and things would normally be ascribed rather to the action of souls, whether of the living or of the dead. That demons and spirits are important factors in causing disease has already been noted (above, p. 567[a]).

The presence of demons and spirits is normally revealed solely by intangible manifestations which the primitive mode of thought can explain only through the agency of such supernatural beings, as in the case of disease, dreams, many natural phenomena, and the like; but a demon or spirit is also often regarded as sufficiently tangible to leave footprints in ashes or similar substances strewn where it may be thought likely that he will come; and animals are frequently believed to be able to perceive spirits which the duller vision of men cannot discern (Tylor, ii. 196–198). Beneficent spirits, when present, are, of course, gladly entertained, and are even constrained to remain; but there is, naturally enough, a determined effort to get rid of maleficent demons. All these operations of invitation or of expulsion are part of magic (*q.v.*), and come to the front especially in case of disease (see art. DISEASE AND MEDICINE), or, from the more ethical and ritual side, in the ceremonies associated, for example, with the scapegoat in ethnic religions (see AZAZEL and SCAPE ANIMALS).

There is one class of beings that may perhaps be regarded as on the border-line between spirits and ghosts, though inclining rather to the latter category. One or two peoples preserve a tradition that they have conquered their present territory by invasion and subjugation of a former tribe of entirely different nature, and are convinced that this vanquished tribe still survives in spirit form. It is generally held that we have here one of the sources of the folk-belief in fairies, brownies, kobolds, dwarfs, giants, and the like (cf. Tylor, i. 385 ff.; *CF*, pp. 21 f., 429). To this class belong the Maori *patu-paerehe*, who lived chiefly on the tops of lofty hills, while the *taniwha* had their homes in river-holes or under cliffs, etc., where they caused such calamities as land-slips and the like (Tylor, pp. 153–157). Similar beings, explicitly called *vui*, or spirits, are believed to dwell in the New Hebrides and Banks Islands, where 'they have been seen of late in human form, smaller than the native people, darker, and with long straight hair' (Codrington, 152 f.).

The cult rendered to demons and spirits may be discussed very briefly, for it differs in no matter of principle from that of the gods themselves. As Jevons (p. 175 f.) says,

> 'The method by which the negro of Western Africa obtains a *suhman* [a tutelary deity of an individual] is an exact copy of the legitimate ritual by which a family obtains a family god. . . . All over the world these private cults are modelled on, derived from, and later than, the established worship of the gods of the community. The difference between the private cult of one of these outlying, unattached spirits and the public worship of the community's gods does not lie in the external acts and rites, for these are the same in both cases, or as nearly the same as the imitator can make them. . . . The difference lies first in the division which this species of private enterprise implies and encourages between the interests of the individual and of the community, at a time when identity of interest is essential to the existence of society, and when the unstable equilibrium of the small community requires the devotion of every member to prevent it from falling.' (For a detailed study of the spirit-cult of a specific African tribe, see Henry, 'Le Culte des esprits chez les Bambara,' in *Anthropos*, iii. 702–717.)

LITERATURE.—There seems to be no special treatise on this subject, so that the material must be gleaned from the writings of missionaries and travellers in Africa and Oceania (in the older works much care is needful in distinguishing, where such distinction is possible, between spirits and ghosts or gods), from works on the regions under consideration (such as those of Waitz-Gerland and Schneider, quoted in the art.), and from general studies on Comparative Religion. Particular interest still attaches to the chapters (xi.–xvii.) on 'Animism' in Tylor, although the animistic theory is subjected to sharp criticism by many scholars of eminence. LOUIS H. GRAY.

DEMONS AND SPIRITS (Assyr.-Bab.).—Among the ancient Assyrians and Babylonians, as among the modern Arabs of Mesopotamia, superstition was rife, and a firm belief in all kinds of demons and *jinn* was current in every class of society. The Semitic element, when it entered Babylon, took over from the Sumerians much of their folk-lore, and it is for this reason that so many of the Assyr. words for ghouls, hobgoblins, and vampires bear their Sumerian origin patently; and out of this amalgamation sprang the elaborately developed system of magic in vogue during the later Assyr. and Bab. empires. This art provides the magician with all possible means for combating hostile devils and spirits.

The unseen enemies of mankind fall naturally into three classes. The simplest form—that of the disembodied spirit or ghost—is probably universal. The second—always supernatural—differs from gods by reason of its low order, and, as Robertson Smith says of the *jinn*,[1] is mentioned by the name of its class and not by a personal name, save in such cases as Namtar and the like, who are properly gods. Lastly, there is the half-human, half-supernatural creature, born of human and ghostly parentage—some awful monstrosity sprung from a *succuba* or *incubus*. These, too, are known by a class-name and have no individual title, whereas the higher order of this element in religion, the demi-god, is always a personality.

1. **Ghosts.**—We may examine, then, first in order the disembodied spirit, the ghost of a man or woman, which for some reason or other returns to this world. The Assyr. word in use is *edimmu*.[2] This *edimmu* was supposed to come back to earth for many reasons; it became hungry and restless, if its descendants ceased to pay it due rites or offer sacrifices on which it might feed; or it obtained no resting-place in the world of shades underground, if its earthly body remained unburied. The Assyr. ideas of Sheol were probably much the same as those of the ancient Hebrews. When a man died, his body was duly buried in the earth, and the spirit then inhabited the under world, 'the House of Darkness, the seat of the

[1] *Rel. of Sem.*[2], 1894, p. 126.
[2] See Hunger, *Becherwahrsagung bei den Babyloniern*. Leipzig, 1903.

god Irkalla . . . the house from which none who enter come forth again.'[1] Here its food was dust and mud, doubtless eked out by the libations and offerings which percolated through the earth from the mourners' sacrifices. The blood of animals slaughtered at the grave-side trickled through to reach the hungry spirit in the under world, and hence the belief in such sacrifices. But, if the attentions of descendants towards an ancestor should cease on earth, and the spirit thus was deprived of its food, it was then driven by stress of hunger to come back to earth to demand its due. How it succeeded in breaking loose from that bourn whence no traveller returns is difficult to understand, unless we suppose that there was a dual conception of ideas arising from a confusion between the grave as the actual habitation of the dead man, and Sheol as the place of shades; probably the primitive beliefs of savages in regard to ghosts were never very definite in details, and ideas of such incorporate and invisible beings must necessarily have been indeterminate. For example, Ishtar, when she descends to the under world, threatens to break down the door of Hades:

'I will smite the door, I will shatter the bolt,
I will smite the threshold and tear down the doors,
I will raise up the dead, that they may devour the living,
And the dead shall outnumber those that live.'[2]

Yet in another Assyr. tablet the return of spirits from the grave is thus described:

'The gods which seize (upon man) have come forth from the grave,
The evil vapours have come forth from the grave,
To demand the payment of rites and the pouring of libations
They have come forth from the grave.'[3]

The word 'vapours' or 'winds' here requires some explanation. The reference is probably to the transparency of the spirits: when the spirit of Ea-bani is raised from Hades at the instance of his friend, the Bab. hero Gilgamesh, his shade rises 'like the wind' through an opening in the earth made by the god Nergal.[4]

Similarly, another incantation, although it confuses ghosts with demons, refers to the return of hostile spirits:

'The evil spirit, the evil demon, the evil ghost, the evil devil, from the earth have come forth; from the pure abode unto the earth they have come forth; in heaven they are unknown, on earth they are not understood.'[5]

In the instance of the *utukku*-wraith of Ea-bani being raised, like Samuel at En-dor, the text continues with a speech of the ghost, describing the under world to Gilgamesh:

'The man whose corpse lieth in the desert (thou and I have often seen such an one), his spirit resteth not in the earth; the man whose spirit hath none to care for it (thou and I have often seen such an one), the dregs of the vessel, the leavings of the feast, and that which is cast out into the street are his food.'

The name of the necromancer in Assyrian—*mušelû edimmu*, 'raiser of the ghost'—is pertinent here, to show that the belief in such wizardry was accepted.[6]

Besides the unfed ghost, however, there was also the spirit of the unburied body to haunt mankind. According to Assyr. ideas, which tally in great measure with those of modern savages, if the bones of the dead were removed from the tomb, the spirit at once became restless, and was compelled to roam about the world. Ashurbanipal, giving full credence to this belief, in his invasion of Elam carries away the bones of the kings of Elam from the tombs, and causes the rites paid to them to cease, that their spirits may have no rest.[7] Furthermore, unless the body was buried, the spirit of the dead man never reached its resting-place in the under world; and there are long catalogues of all possible classes of ghosts to be exorcized, identified by the reason of their return to earth:

'Whether thou art a ghost that hath come from the earth . . . or one that lieth dead in the desert, or one that lieth dead in the desert uncovered with earth . . ., or a ghost unburied, or a ghost that none careth for, or a ghost with none to make offerings (to it), or a ghost with none to pour libations (to it), or a ghost that hath no posterity' (or, 'that hath no name').[1]

Or, if through some accident the man had died an untimely death and had not been given due burial, the same thing would happen:

'He that lieth in a ditch . . ., he that no grave covereth . . ., he that lieth uncovered, whose head is uncovered with dust, the king's son that lieth in the desert or in the ruins (or waste places), the hero whom they have slain with the sword.'[2]

Those who died prematurely became ghosts also, those who perished of hunger or thirst in prison, or had not 'smelt the smell of food,' dying of want, or had fallen into a river and been drowned, or had been overcome by storm in the plains,[3] those who died as virgins or bachelors of marriageable age,[4] and women who died in travail, or while their babes were yet at the breast.[5]

This last ghost, the wraith of the woman dying in childbirth, is universal. Doughty relates that the Arab women explained the hoot of an owl as the cry of a woman seeking her lost child, she having been turned into this bird.[6] Among the Malays a woman who dies thus becomes a *langsuyar*, or flying demon, which the rest of the tribe prevent from wandering by putting glass beads in the mouth of the corpse, a hen's egg under the arm-pits, and needles in the palms of the hands.[7] The original *langsuyar* was supposed to be a kind of night-owl like the Lilith of Rabbinic tradition, and is therefore similar to the ghost of which Doughty speaks.[8]

Now, if any one of these disembodied spirits returned to earth, it was likely to attack any mortal who had been in some way connected with it on earth. To have shared food, water, unguents, or clothes with any one in this world rendered a patron or friend liable to a visitation from the ghost of his dead beneficiary, demanding similar attentions after death; nay, even to have eaten, drunk, anointed oneself, or dressed in company with another was reason enough for such a ghostly obsession. The living man exorcizes, through his priest, all these forms of ghost in the Assyr. incantations, threatening them that no rites shall be paid them until they depart:

'(Whatever spirit thou may be), until thou art removed,
Until thou departest from the man, the son of his god,
Thou shalt have no food to eat,
Thou shalt have no water to drink.'[9]

Many of the medical tablets give elaborate prescriptions of drugs and ceremonies to be employed 'when a ghost seizes on a man.' Others give the ritual for laying a ghost which has appeared; and in this case the magician repeats long formulæ of all possible ghosts, thereby showing, as is necessary in this magic, that he knows the description of the spirit with which he is dealing:

'A brother's ghost, or a twin, or one unnamed, or with none to pay it rites, or one slain by the sword, or one that hath died by fault of god or sin of king.'[10]

The fear of the obsessed man is apparently that the ghost will draw him from this world to the other, for he states in his incantation:

'O ye dead folk, whose cities are heaps of earth, whose . . are sorrowful, why have you appeared unto me?
I will not come to Kutha [the under world]! Ye are a crowd of ghosts: why do ye cast your enchantments upon me?'[11]

Even looking upon a corpse rendered a man liable to attacks from the ghost, and such an act demanded a long ritual to free him.[1]

Were any further evidence required that the ancient Assyrians firmly believed in the possibility of visible ghosts, we have only to turn to an omen-tablet in the British Museum (K. 8693) which gives a list of the events to be expected if a ghost appears in the house of a man. But enough has been said on the disembodied spirits to show that the Assyrians were convinced of their existence, and had even reduced them to exact classes and species.

2. Unhuman spirits.—The second kind of demons, those entirely unhuman, for whose creation mortals are not directly responsible, existed among the Assyrians, as among other Semites, in innumerable hordes. The first of them is the *utukku*. This word is used, once at least, for the wraith of the dead man returning to earth (in the incident of Ea-bani quoted above from the Gilgamesh Epic), but elsewhere it appears to have a far wider meaning than a simple ghost, and we shall probably not be far wrong in considering it for the most part as the equivalent for a devil. It lurked in the desert, the common home of many Semitic devils, lying in wait for man; or it might have its home in the mountains, sea, or graveyard; and evil would befall him on whom it merely cast its eye.[2] Another, less well known, is the *gallû*, apparently sexless,[3] and this is used as a term of abuse in classical Assyrian, Sennacherib calling the hostile Babylonians by such a name.[4] The *rabiṣu* is a lurking demon, which sets the hair of the body on end.[5] The *labartu*, *labaṣu*, and *aḫḫazu* are a triad frequently found together, the first-named having a whole series of incantations written against her. She was a female demon, the daughter of Anu,[6] making her home in the mountains or cane-brakes of the marshes; and children were particularly exposed to her attacks. To guard them from her, the tablets inscribed with incantations against her include an amulet to be written on a stone and hung round their necks, and the inscription runs:

'"Labartu, [daughter] of Anu," is her first name;
The second, "Sister of the [gods] of the streets";
The third, "Sword that splitteth the head";
The fourth, "Wood-kindler";
The fifth, "Goddess of awful mien";
The sixth, "The trusted and accepted of Irnina,"
The seventh, "By the great gods mayst thou be exorcized; with the bird of heaven mayst thou fly away."'[7]

Of the other two of this triad the *aḫḫazu* is apparently combated in the medical texts.[8] Of the *labaṣu* practically nothing is known.

Two others are mentioned in the cuneiform tablets—the *šêdu* and the *lamassu*, the former being the name for either a guardian deity or an evil spirit. As evil, it is found in an exorcism which begins, 'Spirit (*šêdu*) that minisheth heaven and earth, that minisheth the land, spirit that minisheth the land, of giant strength, of giant strength and giant tread.'[9] In this quality of evil the surrounding Semitic nations borrowed the word from Assyria—the Hebrews under the form *shêdîm*, the Aramæans as *shêda*; but it had also its beneficent side, thus approximating to the idea of a guardian angel. With the *lamassu*, which appears always as a kindly spirit, it is appealed to at the end of invocations, both being frequently called upon to be present after the evil spirit has been cast out.[1]

In addition to the Assyrian demons specified by separate class-names, there are the 'Seven Spirits,' now well known from the following incantation:

'Seven are they! Seven are they!
In the Ocean Deep, seven are they!
Battening in heaven, seven are they!
Bred in the depths of the Ocean;
Nor male nor female are they,
But are as the roaming wind-blast,
No wife have they, no son can they beget;
Knowing neither mercy nor pity,
They hearken not to prayer or supplication.
They are as horses reared amid the hills,
The Evil Ones of Ea;
Guzalû to the gods are they,
They stand in the highway to befoul the path.

Evil are they, evil are they!
Seven are they, seven are they,
Twice seven are they!'[2]

'From land to land they roam,
Driving the maid from her chamber,
Sending the man forth from his home,
Expelling the son from the house of his father,
Hunting the pigeons from their cotes,
Driving the bird from its nest,
Making the swallow fly forth from its hole,
Smiting both oxen and sheep.
They are the evil spirits that chase the great storms,
Bringing a blight on the land.'[3]

'They creep like a snake on their bellies,
They make the chamber to stink like mice,
They give tongue like a pack of hounds.'[4]

These seven spirits are undoubtedly the same as those mentioned in Lk $11^{24ff.}$, and in a Syriac charm.[5] They are exorcized under the name of 'seven accursed brothers.' They are described in this charm as saying: 'We go on our hands, so that we may eat flesh, and we crawl along upon our hands, so that we may drink blood.' Their predilection for blood is shown in the Assyrian incantation:

'Knowing no mercy, they rage against mankind,
They spill their blood like rain,
Devouring their flesh (and) sucking their veins.'[8]

To them eclipses were due; just as the modern Semite believes that he must frighten away the evil spirits from the darkening sun or moon,[7] so did the ancient Assyrian ascribe such a phenomenon to spirit influence. These seven spirits are said to have attacked the moon-god; and Bel, hearing what they had done, sent his servant Nuzku to take counsel with Ea against them:

'O my minister, Nuzku!
Bear my message unto the Ocean Deep,
Tell unto Ea in the Ocean Deep
The tidings of my son Sin, the Moon-god,
Who in heaven hath been grievously bedimmed.'[8]

Ea heard the message which Nuzku brought, and bit his lip in grief; he summoned his son Marduk and conveyed to him the tidings of the moon-god. [After this the tablet becomes mutilated.] When an eclipse did occur, it was held that man might be susceptible to its concomitant evils; many, indeed, are the prayers made to avert the baneful influence:

'In the evil of an eclipse of the moon which in such and such a month on such and such a day has taken place, in the evil of the powers, of the portents, evil and not good, which are in my palace and my land.'[9]

3. Semi-human demons.—The third class of spirit—a goblin of semi-human parentage—must be reckoned the most interesting of the three; and the evidence for belief in such a monster is well-

attested among the Semites. We must first discuss the triad called *lilû, lilîtu,* and *ardat lili*. The second is obviously the feminine counterpart of the first, but it is not so easy to discern what is the difference between the two last. These two—the *lilîtu* and *ardat lili*—are both female demons, the femininity of the latter being especially emphasized by the word *ardatu*, which always has reference to the woman of marriageable age. The *ardat lili* seems to have assumed the traditional functions of the Heb. Lilith (obviously the same word as *lilîtu*), who was Adam's second wife during the period of Eve's separation; and ever since that time the class of *succubæ* known by the same name have been reckoned as the ghostly wives of unmarried men. The Assyr. *succuba*, the *ardat lili*, was forced by her desire to roam abroad by night until she found a mate. In a tablet giving a list of demons and spirits we read of the 'ardat lili that hath no husband, the *idlu lili* that hath no wife'[1] (the second being the male equivalent of the first); and in another we find mentioned 'the man whom an *ardat lili* hath looked upon, the man with whom an *ardat lili* hath had union.'[2]

The Arabs believe in the same possibility. Sayce quotes as an instance that 'about fifteen years ago there was a man in Cairo who was unmarried, but had an invisible *ginna* as wife. One day, however, he saw a woman and loved her, and two days later he died.'[3] The present writer met with the same form of belief at Mosul, and, while discussing *jinn* and spirits with some of the Arabs on the mound of Nineveh, was told by one of them that he knew a man who was visited by night by a beautiful woman-spirit, who had already borne him three children.[4] The Rabbis attest the same belief in their stories of Lilith having borne to Adam devils, spirits, and *lilin*;[5] and they held that men might have children through a *mésalliance* with a demon, and, although these might not be visible, yet they would crowd round their father's death-bed, waiting for his demise to hail him as their parent.[6]

Besides these demons, various diseases were personified in the same way. We find exorcisms against sickness beginning thus:

'Fever unto the man, against his head, hath drawn nigh.
Disease (*namtaru*) unto the man, against his life, hath drawn nigh,
An evil spirit against his neck hath drawn nigh.'[7]

Or another:

'The evil Fever hath come like a deluge, and
Girt with dread brilliance; it filleth the broad earth.[8]

The Ninth Tablet of the series 'Hcadache' is similar:

'Headache roameth over the desert, blowing like the wind.'[9]

The Plague-god, Namtar, is best known from the story of the Descent of Ishtar into Hades. He is the 'messenger of Allat, the queen of Hades,' and, when Ishtar reaches the under world, he is sent by his mistress to smite the goddess with disease.[10]

Another spirit of Pestilence is Ura, and with this demon are connected the little amulets of inscribed clay,[11] written to avert evil from the house, just as the modern inhabitant of the Near East affixes Arabic charms to his walls[12] (see also CHARMS AND AMULETS [Assyr.-Bab.]).

DEMONS AND SPIRITS (Buddhist).—Demon-worship enters largely into the daily life of Eastern peoples. In India, where Buddhism arose, the popular religion, both Buddhist and Brahmanical, in common with that of Easterns generally, has concerned itself less with the prospects of happiness in a future life and the 'higher truths' of the religion than with the troubles in the present life supposed to arise from evil spirits, who everywhere infest the atmosphere and dwellings, and are regarded as the cause of all sickness and misfortune. The higher dogmatic religion and the arrangements for the future life are handed over largely to the priests; but the people themselves take an active and anxious part in counteracting the machinations of the evil spirits, of whom they live in perpetual dread.

Buddhism from its very commencement appears to have accepted the Hindu mythology, with its evil and good spirits, as part of its theory of the universe. Śākyamuni himself seems to have taken over from the Brahmanical teachers of his time, amongst other tenets, the current belief in the gods and demons of the Indian pantheon, and he is represented in the more authentic early texts as referring to these beings as objects of fixed belief. He also accepted the current Brahmanical view that, like all other living things, they were impermanent and ultimately subject to death and endless re-birth, many of them having in previous existences been men. Thus, the gods and demons, being incapable of saving themselves from death and the misery of re-birth, could not be expected to save man; and so Buddha declared that their worship was one of the things which are not profitable and therefore unnecessary, and that he himself as 'the Perfectly Enlightened One,' or the Buddha, was superior to all divinities. Nevertheless, as these gods and demons were still believed to be capable of doing harm as well as good to man, though they could not effect his spiritual salvation, they continued more or less to be objects of popular worship even in early Buddhism, as is seen in the most ancient monuments.

Whether Buddha himself seriously believed in these divinities may be doubted. Yet the earliest texts agree in ascribing to him the statement that he descended from 'the heavens of the 33 gods,' in order to save mankind. Moreover, in the early Jātaka tales of his imaginary previous existences, he claimed to have been one or other of the gods in former times, mentioning himself 4 times as Brahmā (the most exalted of all at the epoch of Buddha), 20 times as Śakra or Indra, 43 times as a tree-god, and once as a fairy. In his *sūtras*, or sermons, the god Brahmā is referred to as one of the most frequent of his auditors. And the culminating episode of Śākyamuni's career—the attainment of Buddhahood at Gaya—is universally represented as a personal struggle with Māra, the Satan of the Buddhist world, and his daughters, Desire, Unrest, and Pleasure. This event is regarded by Buddhists generally not as an allegory, but as an actual bodily temptation and a conflict with manifested evil spirits.

The Buddhist pantheon thus had for its nucleus the polytheistic Brahmanical one, which embodied a physiolatry, or worship of the personified forces of Nature. It soon, however, became much more extensive: (1) by the creation of new deities and spirits of a special Buddhist type, personifying abstract conceptions of that religion; and (2) by the wholesale incorporation of much of the contents of the aboriginal pantheons of those peoples outside India over which Buddhism extended its conquests as a 'world-religion.' In this way the Buddhist pantheon has become the largest in the world, especially in its array of demons and spirits.

The distinctively Buddhist demons and spirits of Indian Buddhism, while generally modelled on the type of the Brahmanical, are specifically different from these in their functions, in their appearance as pictured and sculptured, and in their outward symbols. They range from the modes of their prototype Rudra (Śiva) in his destructive mood, through the *asuras*, or Titanic demons, to the *rākṣasas* and *piśāchas*, the most malignant fiends. To these classes may be relegated most of the non-Brahmanical spirits mentioned in the early Buddhist texts or figured in the early sculptures. Some of these supernatural beings, although unknown to Brahmanical texts, may have been local Indian spirits, not necessarily Buddhistic, *e.g.* the famous she-devil Hāritī. Māra, the personified Evil Principle and tempter of man, presents a close analogy to the Satan of the Bible, although he was not a fallen angel in the literal sense; nor was he, like Ahriman of the Persians, an antagonist of equal power. Though unknown by that name to the Brahmans, he is manifestly a form of the Indian god of death, Yama (Skr. *mar*, 'to die'), and in other aspects he resembles the god of sensuous desire (*kama*).

As Buddhism extended its range outside its monastic order and became a religion of the people, it gave greater prominence to these supernatural beings, in which the people implicitly believed, and began to create special divinities of its own. These new divinities and demons it figured in special conventional attitudes, with characteristic symbols, which at once distinguished them from the Brahmanical; and the laity were made familiar with the conventional appearance of the leading ones by means of the frequent sacred plays and masked dances. These various spirits are not classed in any definite systematic order in the Indian Buddhist texts, but they are often enumerated as follows:

(*a*) *Celestial Bodhisattvas*, of a divine or demoniacal Śaivite type, *e.g.* Avalokita, and Vajrapāṇi. (*b*) *Nāgas* and *Mahoragas*, snake-like or dragon beings, resembling clouds, living in the sky or under water, their maidens assuming siren-like shapes, often evil spirits: *e.g.* Muchilinda, who shielded Śākyamuni under the Bodhi tree at Gaya. (*c*) *Yakṣas*, genii often friendly to man: *e.g.* the *yakṣa* Vardhana (='Increase'), who was the guardian of Buddha's family and tribe at Kapilavastu. (*d*) *Asuras* (lit. 'ungodly' spirits), giant demons, headed by Rāhu, the personified eclipse. (*e*) *Rākṣasas*, ogre-fiends capable of assuming siren-like forms; *daityas*, *kumbhāṇḍas*, *piśāchas*, and *pretas*, or starveling ghosts, spectres, vampire-ghouls: *e.g.* Piṅgala. (*f*) Malignant fiends of hell and the soil.

Many of these evil spirits, like the *δαίμονες* of the Greeks, might become friendly and good genii to their human votaries. The exorcizing or coercing of the actively harmful amongst these evil spirits, by means of certain *sūtras* spoken by Buddha or stereotyped sentences culled therefrom, seems to have been practised from very early times, possibly even from Buddha's own day. The right-hand disciple of Buddha, Maudgalyayana, is generally credited in the early scriptures with having exorcized evil spirits in this way; and the recital of such *sūtras*—the so-called *Paritta*, or '*Pirit*' service—is the most favoured and popular way of combating sickness and misfortune at the present day amongst the 'Southern' Buddhists; whilst in 'Northern' Buddhism such procedure is still more widely developed.

In later times the Indian Buddhist pantheon—itself an offshoot of the Brahmanical, and living side by side with it—continued to develop along lines similar to those taken by its parent. Thus, in the extreme pantheistic phase it evolved a supreme primordial Buddha-god existing from everlasting to everlasting, the Adibuddha (*q.v.*). The rise of the devotional spirit, with its craving for personal deities to whom intimate prayer could be addressed — the *Bhakti* phase, resulting in the introduction into Brahmanism of Śiva, Viṣṇu, Kṛṣṇa, Rāma, and others, with their female energies (*śaktis*)—was echoed in Buddhism by the creation of a host of celestial Bodhisattvas, male and female, *e.g.* Mañjuśrī and Tārā. These were able and willing to assist those who invoked them as personal gods (*yidam*); and some of them (*e.g.* Marīchī) were fiendish in type. Similarly, with the innovations of *Yoga* and the degraded Tantra developments, certain sections of the Buddhists kept pace with these by parallel movements which added to the Buddhist pantheon.

The extreme Tantrik phase termed *Kālachakra*, or 'Wheel of Death,' about the 10th cent. A.D., introduced a rampant demonolatry, with exacting priestly rites, into a religion which in its origin was largely a protest against worship and ritual of every kind. The majority of these demons were monstrous 'king-devils' of the most hideous Śaivite type, with their equally repulsive spouses. The chief were Vajra-bhairava, Saṁvara, Hayagrīva, and Guhya-kāla. Their function was to be tutelaries (*yidam*) to guard their human votary against the attack of the swarms of minor demons, whilst they themselves were to be gained over to perform these friendly offices by the coercing power of Buddhist spells. Certain of them were also specially selected as 'defenders of the faith' (*dharmapāla*), and also as guardians of particular monasteries and particular sects.

At the present day, such extravagant demonolatry prevails to a greater or less extent throughout the Mahāyāna (or 'Great Vehicle') form of Buddhism in China, Korea, and Japan; but most of all in Tibet (see 'Tibetan' art. below) and Mongolia. The demonolatry of the 'Southern' Buddhists in Burma, Ceylon, and Siam is of the earlier and less rampant type.

L. A. WADDELL.

DEMONS AND SPIRITS (Celtic).[1]—*Introductory.*—In the case of Celtic countries it is not always easy to draw a clear line of distinction between the beneficent and the maleficent types of those supernatural beings that cannot be counted in the ranks of definite individual gods and goddesses. There are, indeed, imaginary beings in Celtic folk-lore that are predominantly of a maleficent disposition; but the majority of these beings are, like human beings themselves, of mixed character. The term 'demon' in English has acquired a precision of meaning, as applied to maleficent supernatural beings, which makes it a difficult term to employ in describing the conditions reflected in the religion and folk-lore of the Celts. Again, the term 'spirits,' so far as the facts of Celtic folk-lore are concerned, must be used in a somewhat wide sense, and, in some measure, its use is bound to overlap that of 'demon,' since it is difficult, in the folk-lore of Celtic countries, to draw very clear lines of distinction between the different types of beings which the Celtic imagination has created. The clearest and broadest line of demarcation, perhaps, that would meet the case would be that separating the actual living beings, both animal and human, which people the visible tangible world of everyday life on the one hand, and, on the other, those unreal beings which are imagined as living normally a life hidden from view in those localities and recesses of the earth which easily lend themselves to concealment (such as caves or hollows, or some supposed subterranean, sub-lacustrine, or submarine region), or in islands of the sea (actual or

[1] Cf., throughout, artt. CELTS and COMMUNION WITH DEITY (Celtic).

imaginary), or in some wild and inaccessible tract of land, or in the depths of a great forest. Further, the lives and actions of these imaginary beings are pictured as being governed by conditions that may be summarily described as magical—conditions entirely at variance with the facts of human experience, but which have, none the less, occasional points of resemblance to those of ordinary existence. Moreover, the beings which are imagined as living under these abnormal conditions are thought of as endowed with abnormal powers; hence, in the Celtic world, they are viewed as equipped with various forms of magic skill, and are thereby specially associated with those human beings who are thought to have similar endowments. Nor is it always easy to distinguish, among these beings of the Celtic Other-world, (*a*) those which may be regarded as survivals from primitive Animism, such as the animate 'spirits' of inanimate things; (*b*) those which are ancient spirits of vegetation; (*c*) those which are beings imaginatively considered necessary as dwellers in a hypothetical Other-world; and (*d*) those which are exclusively regarded as the souls of departed human beings. In all parts of the Celtic world, as in other countries, there are ghost-stories, wherein the ghost is viewed as that of a particular human being; but very often the relationship of a ghost to an individual man or woman, whose soul it was, sinks into the background of the story, and the ghost is made to act like some other type of imaginary supernatural being. The various types, both in form and character, often merge into one another.

Again, one of the characteristics of the Other-world of the Celts, which may be said to follow as a corollary from its contrast with the normal world, is that the beings supposed to people it do not, like those of the actual world, keep their own forms, but undergo various transformations. Hence it is not always possible to distinguish clearly between those of animal and those of human form, inasmuch as those of one form may pass into a form that is usually characteristic of the other, and, along with the change of form, there may also be a change of character or disposition. Consequently a being which might appear as a demon, in the English sense of the term, at one time, might at another conceivably be represented in some other form as a benign spirit. In some degree, perhaps, the absence of definiteness of character[1] in question may be the reflexion in Celtic folk-lore of certain human types, which are not unknown in Celtic experience, where qualities that are in the highest degree laudable are combined with others that are glaringly out of harmony with them, as, for example, the combination of a highly temperate and devout life with constant unpunctuality or frequent remissness in the keeping of promises and engagements. The inhabitants of Celtic countries have not, as a rule, been sorted out, during a process of severe and relentless moral drilling, into distinct and fixed ethical classes to the same extent as the inhabitants of some Teutonic lands; and the prevalent ethical conditions in Celtic society are naturally in some degree reflected even in Celtic folk-lore.

Another point, again, which deserves consideration is that, in Celtic folk-lore, the beings whose normal home is the Other-world are far from being rigidly confined to that region, but are represented as coming to view in the actual world either by day or by night—in current folk-lore preferably by night. They are regarded as appearing either singly or in groups; and those to whom they appear may see them either as solitary spectators or in company with others. They are also represented as entering into various dealings with normal human beings, and among the relations included in folk-lore narrative is that of inter-marriage. Further, just as the beings of the Other-world may enter this world, the men of this world may enter the Other-world, whether by invitation, accident, or invasion. Many Celtic legends, such as *Tochmarc Étaine* ('The Betrothal of Étain') in Irish, and the story of *Pwyll, Pendefig Dyfed* ('Pwyll, Prince of Dyfed'), in Welsh, are largely based upon belief in inter-relations between the two worlds of the type in question. Christian teaching and the spread of education have done much to assimilate the Celtic consciousness, in the matter of belief in imaginary beings, to that of advanced civilization; yet enough of the ancient psychological attitude of the native Celtic mind still exists to enable one to form a fair estimate of the extraordinary hold which this belief must have had upon the mind in ages further back.

1. Celtic demons and spirits in antiquity.—A large number of the names of Celtic deities that have survived (for the most part on inscriptions) are names which occur but once, and consequently they may be regarded as probably the names of local deities or local tutelary spirits. Sometimes the name is clearly identical with that of some town, river, or mountain (see the present writer's list of 'Ancient Celtic Deities,' in *Trans. Gaelic Soc. of Inverness*, 1906); in other cases, the origin of the name is unknown. About two hundred and sixty names, which occur only once on inscriptions, have come down to us, and there were at one time, doubtless, many more. Along with these individual names there existed others of grouped supernatural beings, such as (*a*) the *Bacucei*, of whom Cassian (*Conlat.* vii. 32. 2) says:

'Alios ita eorum corda quos ceperant inani quodam tumore videmus infecisse, quos etiam Bacucens vulgus appellat, ut semetipsos ultra proceritatem sui corporis erigentes nunc quidem se in quosdam fastus gestusque sustollerent, nunc vero velut adclines ad quendam ss tranquillitatis et adfabilitatis statum communes blandosque submitterent, seseque velut inlustres et circumspectabiles omnibus aestimantes nunc quidem adorare se potestates sublimiores corporis inflexione monstrarent, nunc vero ab aliis se crederent adorari et omnes motus quibus vera officia aut superbe aut humiliter peraguntur explerent.'

(*b*) The *Castæcæ or Castæci* are known to us only from an inscription from Caldas de Vizella (*CIL* ii. 2404: 'Reburrinus lapidarius Castæcis v.l. [s] m.'), and similarly (*c*) the *Icotii* or *Icotiæ* are mentioned on an inscription at Cruviers, Dép. Gard (*CIL* xii. 2902: 'Icotiis'), while (*d*) the *Dusii* are mentioned by three writers, who all appear to view them as maleficent. The word *dusios* in Celtic probably meant an unclean demon or *incubus*, but the root of the word is not improbably cognate with that of the Greek *θεός* (where *θ* stands for an original *dh* which would become in Celtic *d*), and suggests that, at one time, the character of these beings was regarded as beneficent or neutral.

The passages relating to the *Dusii* are the following: Augustine (*de Civ. Dei*, xv. 23): 'Quosdam daemones, quos Dusios Galli nuncupant, adsidue banc inmunditiam et temptare et efficere, plures talesque adseverant, ut hoc negare inpudentiae videatur.' Similarly, Isidore (*Or.* viii. 11, 103): 'Pilosi, qui Graece Panitae, Latine Incubi appellantur. . . . Saepe inprobi existunt, etiam mulieribus, et earum peragunt concubitum, quos daemones Galli Dusios vocant, quia adsidue hanc peragunt inmunditiam'; *ib.* 104: 'Quem autem vulgo Incubonem vocant, hunc Romano Faunum Ficarium dicunt.' Further, Hincmar (*de Divortio Lotharii*, i. 654, ed. Sirm.) says: 'Quaedam etiam feminae a Dusiis in specie virorum, quorum amore ardebant, concubitum pertulisse inventae sunt.'

(*e*) The *Iſles* are a group of male gods, whose name occurs on an inscription at Dormagen, in the region of Düsseldorf (*Corp. Inscr. Rhenanarum* [*CIR*] 292: 'Iflibus Marcus et Atius v.s.l.l.m.'), that were clearly regarded as beneficent. (*f*) The *Nervini* or *Nervinæ* were probably a tribal group

[1] In the case of the Welsh fairies, for example, the elements of beneficence and maleficence, as the folk-lore stories about them show, are curiously blended in their characters. They are represented as being at times helpful to man, at other times as mischievous and vindictive (see Rhŷs, *Celtic Folklore*, vol. i. *passim*).

of beneficent deities or spirits that were connected with the tribe of the Nervii. In one case we have, as the name of a group of deities that were regarded as beneficent, the plural of one of the most widely diffused of Divine names in the Celtic world, namely (*g*) *Lugoves*, the plural of *Lugus*.

This plural form occurs on the following inscriptions: (1) at Osma, in the territory of the Celtiberi (*CIL* ii. 2818): 'Lugovibus sacrum L(ucius) L(icinius?) Urcico collegio sutorum d(onum) d(edit)'; (2) at Avenches, in the territory of the Helvetii (*CIL* xiii. 5078): 'Lugoves'; (3) at Bonn (*CIR* 469): '[Do]mesticis [Lugo]vibus. . . .'

Other beneficent spirits are (*h*) the *Di Casses*, who are mentioned on inscriptions as follows:

(1) At Lorsch (*CIR* 1386): 'Cas[sibus] pro sal[ute] dd(dominorum duorum) nn(ostrorum)'; (2) at Ober-Klingen, in Hesse-Darmstadt (*CIR* 1398): 'Cassibus vota fece(runt) Macelu(s) Faustinu(s) m(erito) p(osuerunt)'; (3) at Landstuhl, Pfalz (*CIR* 1779): 'Diss (*sic*) Cassibus Matuinus v.s.l.m.'; (4) at Neustadt, on the Hardt: 'Dis Cassibus Castus Taluppe v.s.l.l.m.'

Another group of beings that corresponded to the type in question was that of (*i*) the *Di Silvani*, to whom, along with their female counterparts the *Silvanæ*, there is a reference on an inscription at Barcelona (*CIL* ii. 4499: 'D(is) d(eabus) Silvanis M. Antonius Cr[esc]ens v.s.l.m.'). This is the only certain instance of a group of male gods of this name. By far the most common groups of supernatural beings mentioned on inscriptions in connexion with Celtic districts are (*j*) the *Matres* and (*k*) the *Matronæ*, while there are smaller groups of (*l*) *Proximæ* and (*m*) *Junones*. These 'Mothers' and 'Kinswomen' seem to have been regarded as the protecting deities of various localities; and their worship appears to have been prevalent, not only among the Celts, but also in certain Teutonic tribes (see an article by the present writer on 'Celtic Goddesses' in *CeR* for July 1906, and art. CELTS, vol. iii. p. 280). These goddesses probably represent a very early phase of Celtic religion, and are to be regarded as more akin to groups of spirits (possibly corn-spirits) than to the individualized deities of a later stage. There is a remarkable parallel to them in one of the current Welsh names for a type of beneficent fairy, namely, *Y Mamau*, 'the Mothers,' used in some parts of S. Wales as a name for the fairies in the expression *Bendith y Mamau*, 'the blessing of the Mothers,' and also found in the name of a well-known hill of the Clwydian range, *Y Foel Famau*, 'The hill of the Mothers.' Cf. art. DEÆ MATRES. To the foregoing may be added (*n*) the *Niskai* ('water-nymphs') mentioned on the Amélie-les-Bains tablets (COMMUNION WITH DEITY [Celtic], vol. iii. p. 748[a]).

2. Demons and spirits in mediæval times.—From the foregoing account it will be seen that, in the Celtic countries of antiquity, a belief was held, not only in certain individual gods and goddesses, both local and non-local, bearing names of their own, but also in groups of supernatural beings, who, by the very fact that they were nameless, may be regarded as beings in a sense on a lower plane than the named deities, and so may be fitly included, for the most part, in the category of demons and spirits. How far they may have been considered as the indwelling spirits of inanimate things, or as the spirits of vegetation, or as the souls of dead ancestors, animal or human, it is impossible to say. The Celts, like other nations of antiquity, doubtless believed in the existence of spirits of human beings, which were, in some mysterious way, connected with the breath, the name, and the shadow. Like the Greek σκιά and the Latin *umbra*, the Welsh term *ysgawd* ('shadow'), for instance, was used for the soul. The more usual Welsh word, however, for the soul is *enaid*, a derivative of the root *an-*, 'to breathe.' In mediæval Welsh this term is constantly used in the sense of 'life,' but the meaning 'soul' is also frequent. There are traces, too (Rhŷs, *Celt. Folk-lore*, iii. 601–604), of a belief that the soul might take on the bodily form of some animal, such as a lizard. In the Middle Ages, Christianity had introduced, both into Goidelic and into Brythonic speech, certain terms of Greek and Latin origin, such as Ir. *diabul*, Welsh *diafl* (in a later form *diafol*), from *diabolus*; together with such forms as Ir. *demun*, 'demon,' and Welsh *cythraul*, the latter being derived from Lat. *contrārius* through **contrālius* (where *l* has been substituted for *r* by dissimilation). The Ir. *spiorad* (older *spirut*), 'spirit,' and the Welsh *ysbryd* of the same meaning, both come from Lat. *spiritus*. At the same time other terms of native origin for the supernatural beings of folk-lore survived, such as Ir. *síde* and *aes síde*, 'the fairies,' whence the term *ban síde* ('banshee'), which means literally 'woman-fairy.' The oldest Welsh term used in mediæval Welsh for a fairy is *hud*, together with its derivative *hudol*, in the same sense, for a male fairy and *hudoles* for a female fairy. *Hud* also means 'magic,' and this use of the same term for both fairy-land and magic well illustrates the inseparable connexion, for the Celtic mind, of magic with the Other-world.

In Irish legend there are many allusions to the *síde* (as, for instance, in *Serglige Conculaind* ('The Sick-bed of Cúchulainn' [Windisch, *Irische Texte*, Leipzig, 1880–1905, i. 214 f., 227]); and in *Tochmarc Étaine* ('The Betrothal of Étain' [*ib.* pp. 120, 131]). In one passage of the latter a fairy domicile (*síd*) is definitely associated with *Brig Léith*, 'the hill of Liath(mac Celtchair),' the Irish counterpart of the Welsh Llwyd, son of Kilcoed, a famous magician, twice mentioned in the *Mabinogion*, and once by the Welsh 14th cent. poet, Dafydd ab Gwilym. In the *Book of Armagh*, the *síde* are called 'dei terreni,' and they appear to have been regarded as dwelling either in hills or on islands such as Mag Mell. In the latter case, one of the means of journeying to them was in a ship of glass. Some of the fairies were regarded as male (*fer-síde*), but they were more often regarded as female (*ban-síde*). The legendary characters, Mider (*Tochmarc Étaine*, in Windisch, *Ir. Texte*, p. 121 ff.) and Manannán mac Lir (*Serglige Conculaind*, 225), were associated with them, and, in the latter story, two of their kings bear the names Failbe Find and Labraid. When pictured as women, they were represented as being clothed in white raiment. In the story of Condla Caem (given in Windisch, *Ir. Gram.*, Leipzig, 1879, pp. 118–120) they are described as wishing to carry off mortal men into their land of perpetual youth, or to marry mortals; thus Étain, a fairy princess, married Eochaid Airem, and was carried back later on to fairy-land by Mider, a prince of the fairies. The connexion between the *síde* and the Tuatha Dé Danann of Irish legend is very obscure.

In Irish legend there was one native term for a supernatural being which was apparently always of maleficent import, namely, *síabrae* (*Leabhar na hUidhre*, 113[b] 41, 114[a] 12, 115[a] 32). This word is undoubtedly the phonetic equivalent of the Welsh *hwyfar*—a term no longer used except in the Welsh original of Guinevere, namely, Gwenhwyfar, a name which must originally have meant 'the white phantom.' This appellation would suggest that *hwyfar* had not originally in Welsh the connotation of malignity, which *síabrac* seems to have acquired in Irish.

In mediæval Welsh the name *hud* in the sense of 'fairy' is applied in the *Black Book of Carmarthen* (Poem xxxiii. l. 17) to Gwyn, son of Nudd (*Gwyn* = Ir. *Find*; *Nudd* = Ir. *Nuada*); and his mistress is said to be Creurddilad, the daughter of Lludd (the Welsh original of Geoffrey of Monmouth's Cordelia, daughter of King Lear). In the story of *Kulhwch and Olwen*, Gwyn is represented as fighting every first of May until the Day of Judgment with Gwythyr for the hand of Creurddilad. In the poetry of Dafydd ab Gwilym, which reflects the current Welsh folk-lore of the 14th cent., Gwyn is regarded as in some sense the leader of the 'fairies,' since they are called by the poet *Tylwyth Gwyn* ('the family of Gwyn') in two passages. The Welsh picture of fairy-land given by the poet by no means represents it as a 'land of eternal youth,' since among its dwellers are mentioned *gwrachïod* ('hags'), nor can it be said that the picture given of its inhabitants suggests their beneficent character.

The expression *Y Tylwyth Teg* ('the fair family') for the fairies is found in the poems of Dafydd ab Gwilym (middle of 14th cent.), and the term itself would seem to imply that, in the main, their disposition was originally viewed as beneficent and their appearance pleasing, though the poet describes the colour of one of them as brown (*gwineu*). At the same time the allusions to them in Dafydd ab Gwilym well illustrate the statement made at the beginning of the article, that it is difficult to assign a hard and fast type of character to several of the beings of the Celtic Other-world. For example, the

term *pegor*, used for 'a pygmy,' and for the fabulous dwellers in submarine regions (*Bl. Book of Carmarthen*, Poem v. l. 4)—a term found also in Dafydd ab Gwilym (Poem lxv.)—is one of a neutral type; and so is *corr*, 'a dwarf'—a word which occurs several times in the *Mabinogion*. In some cases a *corr* is represented as acting in a brutal and churlish manner (as in the story of *Geraint and Enid*), but in the story of *Peredur* the narrator appears to view the dwarf and his wife sympathetically. The name of the mythical tribe called the *Coraniaid*, in the story of *Lludd and Llevelys*, probably means 'the pygmies,' and they are certainly represented as intellectually acute but morally malicious.

Side by side with these beings of neutral or variable disposition, Welsh folk-lore in the Middle Ages, like that of Ireland, deals with certain types of beings that can only be regarded as 'demons' in the ordinary English sense. The term *ellyll*, for example, appears to be nowhere used in Welsh literature in a good sense.[1] In the Welsh triads (*Oxf. Mab.*, 1887, pp. 305, 306) there are references to *ellyllon* (pl. of *ellyll*), called 'the three forest-demons of the Isle of Britain' and 'the three stag-demons of the Isle of Britain,' but the precise significance of these names is not explained. In some of the instances given, the word *ellyll* is followed by a personal name, as in the phrase *ellyll Gwidawl* ('the demon of Gwidawl'). It is possible that, originally, the term *ellyll*, in expressions such as these, may have denoted a person's 'familiar spirit.' In Dafydd ab Gwilym, *ellyllon* are represented as 'wry-mouthed' (*mingeimion*), as haunting dingles, and as being foul and ill-grown. This picture of them is implied in the description of the owl as *ellylles adar* ('the female demon of birds'). The same writer has another term for a certain kind of goblin or ghost, namely *bwbach*—a term which clearly implied an object of terror. He calls his shadow, for instance, 'a goblin (*bwbach*) in the form of a bald monk,' while, further, he uses the verb *bwbachu* in the sense of 'to frighten as a ghost.' A term used for a kind of female demon by Dafydd ab Gwilym and others is *Y Ddera* (probably meaning originally 'the red one,' *dera* being phonetically equivalent to Ir. *derg*, 'red'). For ghosts, too, the term *gwylliaid* appears to be used by this poet (*e.g.* in Poem clix.), but the more usual mediæval term is *gwyllon*. This term appears to have been used for 'the ghosts of the dead' (*Bl. Book of Carmarthen*, Poem i. l. 35). The departed spirits of warriors seem to have been proverbially associated, even in mediæval Wales, with the Caledonian forest (*ib.* l. 36; also, *ib.* Poem xvii. l. 57). In a Welsh mediæval poet, Llywarch ab Llywelyn (*Myvyrian Archaiology*[2], Denbigh, 1870, p. 212[a]), there is an allusion to *gwyllon Kelyddon* ('the ghost of Caledonia'), as if this were a proverbial expression, and, when Arthur is represented as making an expedition (in the story of *Kulhwch and Olwen*) to the 'wild land of hell,' he is described as going to the North.

The abodes of the supernatural beings here described are, in the main, located in *Annwfn* or *Annwn*—a term most probably derived from *an-*, 'not,' and *dwfn* (cognate with Ir. *domun*), 'the world.' The dominant conception of *Annwfn*, therefore, was as a kind of magical counterpart of this world, and the Welsh mind in the Middle Ages associated with it the idea of illusion and want of substantiality. Dafydd ab Gwilym, speaking of a mirror as fragile and perishable, says of it that it was constructed by fairies (*hudolion*), and other references by him of the same type point in a similar direction. Hence, *Annwfn* appears to have meant 'a world which is no world.' *Annwfn* was usually regarded as being located beneath the earth, but certain poems of the *Book of Taliessin* (14th cent.) appear to regard it as consisting of a cluster of islands, to which Arthur journeys in his ship *Prydwen*. One poem in the same MS calls it 'Annwfn beneath the world' (*is eluyd*), and in keeping with this is the description of it by Dafydd ab Gwilym as 'the deep land of Annwfn,' to which the Summer is said to have gone during the months of Winter. According to the story of *Pwyll, Prince of Dyfed*, *Annwfn* was divided into kingdoms, whose boundaries were sometimes streams, as in the upper world. Inter-relations and inter-marriage were conceived as possible between the beings of the two worlds, and the boons of human civilization, at any rate in the form of swine, were thought to have come into the actual world from *Annwfn*. The relations, however, between the two worlds were not always necessarily amicable, and, just as heroes from the actual world might make expeditions into *Annwfn*, so beings from *Annwfn* might make raids upon this world. Such a raid appears in mediæval Welsh to have been called *gormes* (lit. 'an overflow,' then 'oppression'). Certain raids of this kind are suggested in various parts of the *Mabinogion*; for example, in the carrying away of the infant Pryderi, in the raid upon Teyrnon's foals, in the narrative of Manawyddan and the mice, and in the story of *Lludd and Llevelys*, as well as in the stealing of Mabon, son of Modron, from his mother. In these raids certain fabulous packs of hounds took part, which are sometimes called *Cwn Annwfn* ('the dogs of Annwfn'), and, by Dafydd ab Gwilym, *Cwn gormes* (Poem xliv.). There appear to be no beings of the vampire type among the supernatural beings of Irish and Welsh mediæval legend, but in Breton stories the werwolf (*bisclavaret*) seems to have played a part even in mediæval times.

3. Demons and spirits in Celtic lands to-day.—In the remoter parts of Ireland, Scotland, Wales, and Brittany there is still a considerable survival of the older psychological attitude, especially in the sphere of the emotions, towards the supernatural beings of which Celtic folk-lore treats. The teaching of Christianity, whether by Roman Catholics, Anglicans, Presbyterians, or other religious denominations, for example, as to the lot of the dead, runs entirely counter to the belief in ghosts that are free to wander at random among the living; nevertheless, the fear of ghosts is a very real terror to many people, after nightfall, in Celtic as in other countries. So far as the period of daylight is concerned, the older frame of mind may, with the exception, perhaps, of the inhabitants of the least progressive Celtic regions, be said to have been completely modified through education and experience. With the advent of darkness, however, this older frame of mind tends to assert itself in consciousness—not, perhaps, so as to produce beliefs which their holder would regard as justifiable, but to a sufficient extent to perturb the emotions, especially in the presence of some uncanny or weird-looking object. In Ireland and the more secluded parts of the Highlands and Islands, there has been, on the whole, less of a breach of continuity with mediæval times than in Wales; and the same may be said of Brittany. Hence the beliefs of the Middle Ages form substantially the ground-work of the present-day attitude towards demons and spirits as it prevails in those regions. The Isle of Man, too, may be regarded as belonging, in the main, to the same psychological zone as Ireland. In the latter it is the 'Fairies' still, as in the Middle Ages, that are the chief supernatural beings of the type here considered; but, side by side with them, there subsists, in Ireland as elsewhere, the belief in the re-appearance of the ghosts of the departed, and also in the appearance of fabulous creatures, such as the *Puca*, the *Leprachaun*, the Water-bull, the Water-horse, and the like (see T. Crofton Croker, *Fairy Legends*). As to Gaelic Scotland, there is abundant material for the student of the modern Celtic mind in Campbell's *Tales of the W. Highlands*.

[1] In the current folk-lore of some Welsh districts it appears that even an *ellyll* can be conciliated and made to bestow prosperity, if the candle is left burning on going to bed (Wirt Sikes, *British Goblins*, p. 15).

These tales describe such beings as the *glashan* (the Manx *glashtyn*), which was a hirsute sprite that rebelled against clothing, and, in this respect, resembled the *gruagach*, a similar sprite from Skipness. One of the tales (no. 100) describes an underground world of giants, and an earlier tale (no. 98) similarly points to a belief in gigantic beings. Another tale (no. 38) speaks of a monstrous being called *Eitidh MacCallain*, 'who had one hand growing out of his chest, one leg out of his haunch, and one eye out of the front of his face.' Other tales describe fairies, sleeping giants, flying ladies, mermaids, brownies, and the like, while not a few of the stories speak of such beings as the Water-horse or Water-kelpie (sometimes transformed into a man), the Water-bull, the Water-bird called the *Boobrie* (said to inhabit the fresh-water and sea lochs of Argyllshire), dragons (thought to haunt Highland lochs), and the Water-spirit called the *Tougha*. The Water-bull is generally

represented as the fos of the Water-horse and the friend of man. There are also stories of demons appearing as goats and dogs. It will readily be seen how this mass of Gaelic folk-lore has been coloured by the geographical conditions of the Western Highlands, and what is here true of the folk-lore of the Highlands is true of the folk-lore of all Celtic countries. In the Isle of Man the same essential beliefs are found as in the Western Highlands. The island had her fairies and her giants, her mermen, her brownies, her Water-bulls, and her Water-kelpies or Water-colts. The Water-bull (*tarroo ushtey*) haunts pools and swamps, and is the parent of strangely formed beasts and monsters. The Water-kelpie has the form of a grey colt, and wanders over the banks of the streams at night. The Manx name for a giant is *foawr* (from the same root as the Ir. *fomhor*). For a brownie the Manx name is *fenodyree*, and this being appears to resemble the Welsh *ellyll* in being a hairy and clumsy creature. There are also in Manx folk-lore beings called *glaistig* and *glaisrig* respectively, the former being a she-goblin, which takes the form of a goat, while the latter is described as a female fairy or a goblin, half-human, half-beast. The nearest approach to a vampire in Celtic folk-lore is the Water-colt, which is thoroughly vicious, and sucks the blood of maidens. Possibly to the Water-colt should be added certain Welsh fairies said to eat infants (Rhŷs, *Celtic Folklore*, ii. 673).

In Wales, the firm stand made against all forms of superstition by the strong Protestantism of the country, especially since Nonconformity has penetrated into every corner of the Principality, has, to a very great extent, shattered to pieces the mental attitude towards the Other-world which we find so clearly represented in the *Mabinogion* and in Dafydd ab Gwilym; but in remote districts, such as the Lleyn district of Carnarvonshire and the Welsh parts of Pembrokeshire, as well as in the more secluded portions of other counties, the old spirit still prevails among the unlettered, and not a few people retain a kind of working belief in the beings that may be roughly classified as demons and spirits. The spirits of the dead (called *bwganod* and *ysbrydion*) are still feared in such districts,[1] and tales concerning them abound. Every uncanny-looking portion of a lane has its ghost, and from caves they are rarely absent. Fairies are still known in most regions of Wales as *Y tylwyth teg*, but the term *Annwn* has gone out of use, except in the expression *Cwn Annwn*, 'the dogs of Annwn.' In Pembrokeshire, fairies were even in the 19th cent. supposed to attend the markets at Milford Haven and Laugharne. For ghosts the term used in some districts is *bwgan*, while in others the terms in use are *bwci* and *bwbach*. It is not improbable that one old term was *buga*, which is found in the Welsh name of the town of Usk in Monmouthshire—*Brynbuga*; while, in Glamorganshire, the name seems to take the form *bica*, found in the farm name *Ty Fica* ('the house of Bica'). The Welsh word *coblyn*, used especially of the sprites that are thought to haunt mines, is merely a modification of the English 'goblin'; while *pwca* is simply the English *Puck*—a name found as that of the glen of *Cwm Pwca*, a part of the vale of the Clydach in Breconshire. *Ellyllon* are still thought to haunt groves and valleys, and *bwyd ellyllon* ('demons' food') is the Welsh name for the poisonous toad-stool, just as *menyg ellyllon* ('demons' gloves') is a name for the foxglove. The term *ellylldan* ('demons' fire') is also used for 'the will-o'-the-wisp.' In the Lleyn district of Carnarvonshire a certain fiery apparition is said to take the form of 'a wheel within a wheel of fire.' The relation of fairies, sprites, and goblins with human beings are described in various folk-lore tales, for which the reader may consult the works of Sir John Rhŷs and Wirt Sikes (see Literature at end of art.).

Among the names used for certain of the supernatural beings here under consideration are *Bendith y Mamau*, 'the mothers' blessing'; *Gwragedd Annwn*, 'elfin dames'; *Plant Annwn*, 'elfin children'; *Plant Rhys Ddwfn*, 'the children of deep Rhys'; *Gwrach y Rhibyn*, a kind of Welsh banshee: *Cyhyraeth*, a kind of dreadful and doleful moan in the night, proceeding from an invisible source; *Tolaeth*, the imitation of some earthly sound, such as sawing, singing, or the tramping of feet; *Cwn y Wybr* (also known as *Cwn Annwn*), dogs that haunt the air; *Aderyn y Corph*, a bird which appears as a foreteller of death; *Toelu*, a phantom funeral; *Y Fad Felen*, the yellow plague; and *Mallt y nos*, a night-fiend.[1] Among the forms which the Welsh imagination has assigned to spectres have been a fiery ball, a black calf, an ass, a dog, a round ball, a roaring flame, a bull, a goose, a mastiff, a gosling. One type of female demon is described as being 'a hideous creature with dishevelled hair, long black teeth, long, lank, withered arms, leathern wings, and a cadaverous appearance.' The appearance of this being was always regarded as an omen of death. In Welsh folk-lore, as in that of the Gaelic world, there are stories of water-monsters, more especially of the *afanc*, which is usually regarded in Wales as a kind of crocodile, but which was originally, in the opinion of Sir John Rhŷs, a kind of monster in human form, as is suggested by the Irish cognate *abhac*.

In Wales, as elsewhere where a belief in demons and spirits is found, certain effective barriers could, it was thought, be placed to their malevolence and capacity for mischief. One check to them was piety, others were the possession of a black-handled knife (iron being a source of great terror to fairies), the turning of one's coat inside out, the pronunciation of the Divine name, the crowing of a cock, change in one's place of residence, and—last but not least—a barrier of furze, through which, on account of its prickly nature, it was thought that fairies and similar beings could not penetrate. In Brittany substantially the same conceptions of demons and spirits prevailed as in Wales; but, while Welshmen have to a great extent abandoned the attitude of intellectual assent to the legends in question, the more conservative Breton, with his closer attachment to mediæval conditions, is still often haunted by them, and probably will be for a long time to come. In Wales, it is not impossible that, before very long, these ancient relics of primitive belief will be things of the past; but in the remoter parts of Ireland and Scotland they will probably linger on for many generations.

DEMONS AND SPIRITS (Chinese).—The two words *kuei shen* (variously translated 'demons and spirits,' or 'demons and gods'—the variation indicating a vexed question in the tr. of Chinese religious terms) together make up a binomial phrase such as does duty in Chinese for a general term, and may be taken as denoting all the inhabitants of the spiritual world, the various objects of religious worship and superstitious fear.

The spiritual world lies very near to the average Chinaman. Signs of his belief in its influence on his daily life are frequent; and it gives one at times a shock of surprise to find, as may happen in a casual conversation, that one's interlocutor—a well-read scholar or shrewd merchant—holds firmly by conceptions of it which are to oneself grotesque. Its nomenclature is fairly extensive, but not precise. Nor is it easy to describe the spiritual world in any very orderly or consistent fashion. Allowance must be made not only for differences in local superstitions, but also for the intermingling of diverse strains of thought in the more generally

[1] There is no trace in the Welsh literature or folk-lore of any belief that the dead bodies themselves rise from their graves and haunt the living.

[1] In Carnarvonshire one particularly malevolent type of demon is called *Y Bodach Glas*, 'the blue goblin.'

diffused religious conceptions. While it is possible that Chinese religion started from a pure monotheism, we have no record of any such time. In the most ancient books the worship of Shang-ti is accompanied by the worship of natural objects, of the spirits of ancestors, and of the worthies of former times. All these elements have been continued and developed.

In the popular religion of to-day, the worship of spirits immanent in, or in some vaguely conceived way connected with, natural objects, takes a much larger place than can possibly be taken by the worship of Shang-ti, confined as this is to the Emperor. The number of such spirits is, strictly speaking, indefinite. In virtue of the spiritual efficacy connected with it, anything—rock, tree, living creature—may become an object of worship. No extraordinary feature in the object is necessary to call forth this religious observance—a whole town has been known to go after a common viper found in a bundle of firewood. Among the commonest signs of the recognition of such spiritual powers bound up with natural objects are the votive tablets frequently seen suspended from the branches of trees, and the small pillars which are erected alongside graves and inscribed to the spirit of the soil, in acknowledgment of his property in the site of the grave. Some such acknowledgment is due to the local genius, on any interference with what is supposed to be under his control. It is a moot question whether the spirit of the soil is one only, identified with Hou-t'u, one of the ministers of Huang Ti (2698 B.C.), or whether there are not, rather, at least in the popular mind, many local genii.

Alongside of such spirits, and at the lower end of the scale of spirits hardly to be distinguished from them, are the supernatural beings called *hsien, yao, kuei, ching* ('fairies,' 'elves,' 'goblins,' 'sprites'), of various kinds, harmless, or, more usually, mischievous and malevolent. Every locality has its own traditions with regard to such beings. In Swatow the morning watch is not sounded because of a 'kelpie' (*yao-ching*) in the harbour, which on hearing the watch-drum was wont to carry off any early-stirring inhabitant. Of living creatures it is said that in the south of China the serpent, and in the north the fox, are those round which belief in supernatural powers has mostly gathered. In general it is said that birds and animals when they grow old become sprites (*ching*). The fox, for instance, increases in supernatural qualities with increase of years, and possesses different powers at fifty years of age or a hundred or a thousand. Even of trees it is said that by long absorption of the subtle essences of heaven and earth they become possessed of supernatural qualities.

Besides these supernatural beings, and wholly impersonal, are the maleficent influences called *sha*. They move, like physical forces, in straight lines, and can be warded off in various ways, as by earthenware figures of lions set on the roof of a house or in other positions of vantage, or by a stone or tile placed at a road-end and inscribed with the 'Eight Diagrams' (see COSMOGONY, etc. [Chin.]), or with words intimating that, as a stone from the Thai mountain, it will resist the evil influences.

According to Chinese etymology, the word *kuei*, 'demons,' is connected with a word of similar sound meaning 'to return,' and a *kuei* is accordingly defined as the spirit of a man which has returned from this visible world to the world invisible. 'Alive a man, dead a *kuei*' is a proverbial saying. In such use of the word *kuei* we must remember that nothing derogatory is implied, and that 'departed spirit' rather than 'demon' is the proper translation. There seems to be no possibility of making consistent with themselves the various popular Chinese views of the spiritual nature of man and his state after death: to determine, *e.g.*, the relation of the *kuei* to the three souls which each man possesses, according to Taoist teaching, or, according to another theory, to the twofold soul which dissolves at death into its component parts. In any case, existence in some fashion after death is assumed. Whether such existence is necessarily or in all cases immortal, it is not easy to determine. Taoism may teach an eternity of punishment; but, on the other hand, there is a word *chi*, which means the death of a *kuei*.

Kuei (*manes*) are to be honoured in the appropriate way; and, as otherwise evil may be expected from them, fear has a large place in present-day ancestral worship. Each family worships the *manes* of its own ancestors. *Manes* otherwise unprovided for are placated by public rites, particularly by 'the feast of desolate ghosts,' the '*kuei* feast,' on the 15th of the 7th moon. All *kuei* are more or less objects of dread; but in particular the *kuei* of a wronged person may be expected to seek revenge ('the wronged ghost impedes the murderer's steps'), and the *kuei* of evil men are evil *kuei*. According to one popular representation, the other world is for the Chinaman at least a replica of the Chinese Empire with similar social gradations, however, allotted otherwise than in this upper world; and mourning relatives may be comforted by a soothsayer's assurance that the meritorious deceased has been appointed by Yü Ti a mandarin of such and such a grade in the shadowy double of this or that Chinese city. Moreover, however difficult to work in consistently with other views, the doctrine of transmigration holds a large place in a Chinaman's theory of the relation between the unseen world and this.

While a *kuei* is, strictly speaking, a departed spirit, it is hardly to be supposed that all the innumerable *kuei* imagined to be active in this world or as retributive executioners in the infernal regions are of this origin. Perhaps what we might distinguish as ghosts and demons are alike called *kuei*. The Chinese generally are obsessed by the fear of *kuei*. These are supposed to abound everywhere, and to be specially active at night. Any untoward happening or uncanny sound—particularly any sound that is thin and shrill—is ascribed to them. Many houses are reported to be haunted by *kuei* because of misfortunes befalling their inmates. There are appropriate ceremonies for the placating of offended *kuei*, who in such cases are addressed euphemistically (*e.g. Shêng jên*, 'Sagely person'); and they can also be controlled by charms of Taoist origin.

The spiritual world is peopled from the human race not only by 'departed spirits' but by inhabitants of another grade called *hsien*. This name is applied not only to the fairy-like beings mentioned above, but also to those of mankind who 'by a process of physical or mental refinement' have raised themselves to the rank of immortals.

Finally, as in ancient times sages and worthies were worshipped as tutelary spirits (*e.g.* Hou-t'u), so has it been in later times. 'The gods (*shen*) of to-day are the men of ancient times' is a common proverb. Thus the Chinese pantheon has been filled with canonized worthies (such as Kuan Yü [A.D. 219], canonized as Knan Ti, god of war; and the magician Chang, canonized as Yü Ti, who is practically the chief god of the Taoist religion); and not only with such, but also with an ever-increasing number of gods of all kinds and grades. 'The pope does not canonize on so large a scale as the Emperor of China' (Legge, *Rel. of China*, p. 184). These are the idols of China whose temples and images are everywhere to be seen.

While the multiplication of deities and the pervasive dread of demons are mainly connected with

the Taoist strain in Chinese religion, the influence of Buddhism has been potent in its development. 'The religion of Taoism was begotten by Buddhism out of the old Chinese superstitions' (Legge, *op. cit.* p. 201). Directly Buddhist elements are also of course present. *Shen*, *kuei*, *hsien*, *fo* ('gods,' 'demons,' 'genii,' 'Buddhas') are the four orders of beings superior to man; and, to instance from both the upper and the nether regions, Kuan Yin, the Goddess of Mercy, and Yen Wang, the King of Hades, are both of Buddhist extraction.

One extraordinary feature of the Chinese view of the spiritual world is the power believed to be exercised over its inhabitants by the Taoist priesthood, and specially by the Taoist pope, the spiritual successor (by the soul's transmigration) of Chang Tao-ling (A.D. 34). Demons and spirits unsubmissive to ordinary Taoist spells are subject to him; and from him protection against them may be purchased. In a case reported to the present writer, a merchant in Chao-Chow-foo, whose house was haunted by a spectre, went several days' journey to see the pope, and for $200 purchased relief from the spectre's presence; for $300 he might have had it recalled altogether from the world of men.

Mention should be made of demon possession, where the subject is possessed by a demon causing disease or madness, and of spirit-mediums inspired by an idol-spirit and who utter oracles in his name.

As an illustration of the incoherence of the whole spiritual system of the Chinese, it may be noted that, while the Emperor is the source of canonization, the exposition of the seventh maxim of the Sacred Edict not only brands Buddhism and Taoism as heretical, but pours scorn on their pretensions and superstitions, and casts doubt on the existence of Yü Ti himself.

DEMONS AND SPIRITS (Christian).—I. *IN THE EARLY CHURCH TO COUNCIL OF CHALCEDON* (A.D. 451).—It is stated by Origen (*de Princip., proœm.*) that the Primitive Church did not lay down any definite doctrine with regard to the nature of the angels. The Church, however, he tells us, asserts their existence and defines the nature of their service as ministers of God for the purpose of promoting the salvation of men (*ib.*). Other early writers are not equally reticent. Some information concerning good and evil spirits may be gained even from the earliest Christian writers.

1. Apostolic Fathers.—(*a*) *Clement of Rome*, exhorting those to whom he writes to zeal and well-doing, points his readers to the example of the whole host of God's angels who stand by, ministering to His will (*Ep.* i. *ad Cor.* xxxiv. 5).—(*b*) In *Ignatius* we find the statement that the heavenly beings (*ἐπουράνια*), including the *δόξα τῶν ἀγγέλων*, will receive judgment if they believe not in Christ (*Smyrn.* 6). There is a further reference in *Trall.* 5, where Ignatius claims to be able to understand the heavenly things, and the dispositions of the angels.[1]—(*c*) In the *Letter of the Smyrnœans on the Martyrdom of Polycarp*, it is stated that the martyrs 'gazed with the eyes of their heart on the good things reserved for those that endure, but already shown to them by the Lord; for they were no longer men, but already angels' (*Mart. Polyc.* ii.). It is also said in the same chapter that they were condemned to their torture that the devil might, if possible, bring them to a denial, for he had tried many wiles against them (cf. also the Prayer of Polycarp, *ib.* xiv.).—(*d*) Passing to *Hermas*, we find that, in answer to his inquiry as to the nature of the six young men who are building, he is informed that they are the holy angels of God who were created first, and to whom the Lord delivered all His creation, to increase and to build it and to be masters of all creation (*Vis.* iii. 4). The doctrine of guardian angels is also taught by Hermas. Each man has two angels, one of righteousness and one of wickedness. He deals with this question at some length, and states that good works are inspired by the angel of righteousness, evil works by the angel of wickedness (*Mand.* vi. 2).—(*e*) In a quotation from *Papias*, preserved by Andreas Cæsariensis (*c.* A.D. 520), we find an obscure reference to the work of the angels:

'To some of them (*δηλαδὴ τῶν πάλαι θείων ἀγγέλων*) He gave also to rule over the ordering of the earth, and He charged them (*παρηγγύησεν*) to rule well.' The words in the first brackets are, in Routh's opinion, the insertion of Andreas (cf. *Relig. Sacr.*, 1814–18, i. 14, and the notes, where a further passage is quoted from Cramer).

2. The Apologists.—We find a number of passages in the writings of Justin, Tatian, Athenagoras, and Irenæus bearing on the subject.

(*a*) *Justin.*—The most important of these is the well-known passage in 1 *Apol.* § 6, where, in refuting the charge of atheism, Justin says:

'But both Him (*sc.* the Father) and the Son who came forth from Him and taught us these things, and the host of the other good angels, who follow and are made like unto Him, and the prophetic Spirit we worship and adore.'

The insertion of the angels among the Persons of the Trinity is unique, and is possibly to be explained by the fact that we frequently find 'angel' as a title of the Son (Tixeront, *Hist. des dogmes*, i. 243). With this passage should be compared the *Dial. c. Tryph.* § 128, in which the existence of angels is asserted and their relation to the Logos discussed. In 2 *Apol.* § 5, Justin defines the functions of the angels, stating that 'God committed the care of men and all things under heaven to angels whom He set over these' (*ἔταξεν*). He then accounts for the existence of evil in the world as the result of the transgression of angels, who had 'transgressed the Divine appointment (*τάξιν*), and by sinful intercourse with women produced offspring who are demons.' These demons 'subdued the human race to themselves' and 'sowed among men all manner of wickedness.' He proceeds to identify the demons who were the offspring of the fallen angels with the heathen gods. Justin is the earliest authority for the cultus of angels (cf. the first passage quoted above, *σεβόμεθα καὶ προσκυνοῦμεν*). To the passages already quoted may be added *Dial. c. Tryph.* § 88, in which the free will of the angels is asserted, and § 57, where it is said that, of the three men who appeared to Abraham, one was the Logos and the other two angels.

(*b*) *Tatian* denies the material nature of demons, asserting that their constitution (*σύμπηξις*) is spiritual, as that of fire or air. He also states that their nature is incapable of repentance (*Orat.* 15, cf. 12, 20). The ministry of angels in the government of the universe is also alluded to by the writer of the *Ep. to Diognetus*, vii.

(*c*) *Athenagoras* defines the office of the angels as being that of exercising the providence of God over things ordered and created by Him. God has the general providence of the whole; particular parts are assigned to angels (*Apol.* 24). In the same chapter he writes at some length of the fall of certain of the angels, and identifies the giants mentioned by the Greek poets with their illicit offspring. He speaks of one angel in particular (Satan) who is hostile to God, and discusses the difficulty of this belief. He states that Satan is

[1] It should be noted that in the longer recension the latter passage is amplified in a manner consistent with the more developed doctrine of pseudo-Ignatius (cf. *Ap. Const.* viii. 12), while the former passage is omitted as possibly inconsistent with his doctrine.

a created being like other angels, and is opposed to the good that is in God. In another passage he asserts that it is the demons who incite men to worship images, being eager for the blood of sacrifice, these images having no particular relation to the persons they represent (*ib.* 26; see further reference to the work of the angels at the end of ch. 10).

(*d*) The writings of *Irenæus* contain a large number of passages dealing with the angelology of the Gnostics, which he refutes. He is himself of opinion that the angels are incorporeal beings (*adv. Hær.* iii. 22), and, in opposition to the Gnostics, states that the Christian does (*facit*) nothing by their invocation (ii. 49. 3). He alludes to the fall of the angels, and refers to the domination of Satan and the deliverance of man from his power (iii. 8. 2; cf. also v. 21, § 3, and 24, §§ 3, 4).

3. Greek Fathers.—The doctrine of good and evil spirits was greatly developed by the Alexandrian writers *Clement* and *Origen*. In the writings of the latter, especially his commentaries on Scripture, numerous references are to be found to the functions of angels and demons. The notion of the guardian angel, already noted in Hermas, is here especially developed. He assigns to each nation its guardian spirit, basing this view upon his exegesis of Dt $32^{8f.}$, where he follows the text of the LXX (*ἔστησεν ὅρια ἐθνῶν κατὰ ἀριθμὸν ἀγγέλων θεοῦ*). But God reserved Israel to Himself for His own inheritance, appointing the angels as guardians of the nations. The power of these angels was broken by Christ at His coming, and hence they were moved to anger, and in turn stirred up persecution against the preachers of the gospel (Orig. *in Joh.* xiii. 49). Origen understands literally the 'angels of the churches' of the Apocalypse; he boldly (*audacter*) refers to the angels of churches as their invisible bishops ('per singulas ecclesias bini sunt episcopi, alius visibilis, alius invisibilis; ille visui carnis, hic sensui patens' [hom. xiii. *in Luc.*, ed. Lommatzsch, v. 131]). Each individual has also his guardian angel, to whom is entrusted the soul of the believer when received into the Church by baptism. By him it is protected from the power of the devil; but, if it falls, it loses the protection of its guardian and comes under the power of an evil angel. The angels present the prayers of the faithful to God, rejoice at their progress, correct their failings, and intercede for them before the throne of God. He states, however, that they should not be worshipped or invoked (*c. Cels.* v. 5). Clement appears to have some doubt as to whether individuals possess guardian angels in the same sense as nations and cities possess them (*Strom.* vi. 17). But in other passages he lays stress on their work of intercession for men (cf. *Strom.* v. 14, vii. 12, and iv. 18, vii. 13). Under the influence of Neo-Platonic ideas, the Alexandrian Fathers assert that there is a double activity—a higher dealing with spiritual things, a lower with the material order; and that in both of these the angels of God are employed. Origen clearly expresses the view that the world has need of angels, who are placed over animals, plants, and elements (hom. xiv. 2 *in Num.*).

The following passages in Origen may also be consulted: *de Princip.* i. 5, 8, ii. 8, *c. Cels.* iv. 29, v. 4, 5, 43, 58, viii. 31, 32, 34, *de Orat.* 6, 28, 31, *in Levit.* hom. ix. 8, *in Num.* hom. xi. 4, xx. 3, *in Ezek.* hom. xiii. 1, *in Ps.* xxxvii. hom. i. 1, *in Luc.* hom. xii. xxiii.

4. Later Greek writers.—There are a number of references in the Cappadocian Fathers to the nature and functions of angels. Concerning their nature there appears to have been some difference of opinion. (*a*) *Basil* held that their substance (*οὐσία*) was ethereal spirit or immaterial fire (*de Spir. Sanct.* § 38).—(*b*) *Gregory Nazianzen* is doubtful (*Orat.* xxxiv. 16).—(*c*) *Gregory of Nyssa* declares them to be entirely spiritual (*in Orat. Dem.* hom. iv.).—(*d*) Many references are contained in the writings of *Chrysostom*. He asserts that their nature is superior to ours, but cannot be accurately comprehended by us (*de incomprehensibili Dei Natura*, v. 3). They are possessed of an incorporeal nature (*ἀσώματος φύσις*), and he rejects on this account the earlier interpretation of Gn 6^2 (*in Gen.* hom. xxii. 2). According to Basil, the sanctity of the angels is due to the activity of the Holy Spirit (*op. cit.* § 38). They are less liable to sin than we are (*δυσκίνητοι*), but not incapable of it (*ἀκίνητοι*). This is proved by the fall of Lucifer, whose sin was envy and pride. These Fathers assign guardian angels to individuals, churches, and nations. Basil is, however, of opinion that the guardian angel is driven away by sin 'as smoke drives away bees and a bad odour doves' (hom. *in Ps.* xxxiii. 5). Gregory of Nyssa is the only Greek Father who follows Hermas in the view that every man has both a good and a bad angel as his constant companion (*de Vita Moysis*). Angels are described as overseers (*ἔφοροι*) of churches. Gregory Nazianzen addresses a special farewell to these *ἔφοροι* on his departure (*Orat.* 32, *sub fin.*; cf. Basil, *Ep.* ii. 238). They are the guides (*παιδαγωγοί*) of the just, and lead them to eternal blessedness (Bas. *de Spir. Sanct.* xiii.; Chrys. *in Ep. ad Coloss.* hom. i. 3, 4). It would appear that Cyril of Jerusalem was of opinion that certain of the fallen angels had obtained their pardon (*Cat.* ii. 10; cf. also Basil, *in Ps.* xxxii. 4; Gregor. Nyss. *contra Eunom.* hom. x.; Greg. Naz. *Orat.* xxxiv. 81; Joh. Chrys. *in ascens. Dom.* 1, *de laud. S. Paul. Ap.* hom. ii. sermo 43, *in Gen.* hom. iv.).

5. Latin Fathers.—(*a*) We find in *Tertullian* a number of references to spirits, good and evil. Like Origen, he connects the ministry of angels with the sacrament of baptism. According to this writer, the baptismal water receives its healing properties from an angel (*de Bapt.* 4). Furthermore, the actual purification effected in baptism is due to a spirit who is described as 'angelus baptismi arbiter,' who prepares the way for the Holy Spirit ('non quod in aquis spiritum sanctum consequamur, sed in aqua emundati sub angelo, spiritui sancto praeparamur' (*ib.* 5, 6). Marriage which has received the blessing of the Church is announced by the angels and ratified by the Father (*ad Uxor.* ii. 9). The angels, looking down from heaven, record the sins of Christians; for example, when they are present in the theatre, where the devil is working against the Church (*de Spectac.* 27). A more detailed account of the work of the angels and demons will be found in *Apol.* 22, where they are stated to be spiritual substances. Tertullian alludes to the fall of the angels, corrupted of their own free will, from whom sprang the race of the demons. Of the former, Satan is the chief. They are the source of diseases and all disasters. They delude men into idolatry in order to obtain for themselves their proper food of fumes and blood. Both angels and demons are ubiquitous; both are also winged. These spiritual agencies are invisible and not to be perceived by the senses. On the question of the bodily forms of the angels, see *de carne Christi*, 6.—(*b*) The concern of the angels in human affairs is referred to by *Firmilian* in a letter to Cyprian (*Ep. lxxv. inter Cyprian.* 1; cf. Euseb. *HE* v. 28).—(*c*) The doctrine of *Lactantius* is peculiar. Before the creation of the world, God produced a spirit like to Himself (the Logos); then He made another being in whom the disposition of the Divine origin did not remain. This being, of his own will, was infected with evil, and acquired for himself another name. 'He is called by the Greeks *διάβολος*, but we call him *criminator*, because he reports to God the faults to which he

entices us' (cf. the Jewish appellation, *Satan*, שָׂטָן, 'the accuser'; Lactant. *Divin. Institut.* ii. 9).

At this point some MSS of Lactantius insert a passage which is regarded by the best authorities as spurious, and in which the origin of the devil and the ministry of angels are treated in a Manichæan fashion. Here it is stated that, before the creation of the world, God made two spirits, themselves the sources of creation—the one, as it were, the right hand of God, the other, as it were, His left hand, and eternally opposed to each other. These two spirits are the *Logos* and *Satan*. The fall of the angels and the origin of the demons, who are divided into two classes, are described in ii. 15, and in the same passage the latter are identified with pagan deities (cf. also *Epitome*, 28; *Instit.* iv. 8; and, on the devil, iii. 29, vii. 24–26).

(*d*) Later Latin Fathers, such as *Ambrose* and *Jerome*, were of opinion that the angels were created before the material world (cf. Ambrose, *de Incarnat. Dom. Sacr.* 16; Jerome, *in Ep. ad Tit.* 1^2). Some difference of opinion exists among them about the interpretation of Gn 6^2, Jerome appearing to regard the spirits as possessed of bodies (cf. *in Ezech.* 28^{16}); Ambrose, on the other hand, agrees with Hilary in the statement that they are 'spirituales et incorporales' (cf. Ambros. *in Luc.* vii. 126; Hilar. *in Ps.* cxxxvii.). The sin of Satan, according to Jerome and Ambrose, was pride (cf. Ambros. *de Virgin.* i. 53, *in Ps.* 118, serm. 4. 8, 7. 8, 16. 15). The views of the Latin Fathers with regard to guardian angels are similar to those which we have already encountered in the writings of the Greek Fathers. Numerous references to this subject will be found in their commentaries and homilies, where it is stated of nations, churches, and communities that each possesses its guardian angel.

See esp. Jerome in his com. on Ec. 5^5, where he says that 'the things which are said pass not into the wind, but are straightway carried to the Lord, *a praesenti angelo qui unicuique adhaeret comes.*' Other references will be found in Jerome, *in Dan.* 7^3, *Mic.* $6^{1.2}$, the last-named passage being of special interest. See also Ambros. *in Ps.* 118, serm. 3. 6, and Hilary, *in Ps.* lxv. 13, cxxxii. 6, cxxxiv. 17.

Jerome is among the earliest of Latin writers to call attention to the diversity in the orders of spirits, comparing the angelic hierarchy with the organization of the officials of the Empire (cf. esp. *adv. Iovin.* ii. 28, *adv. Ruf.* i. 23). Ambrose has a passage which bears upon the cultus of the angels, whom he appears to place on a level with the martyrs, and whose invocation he warmly recommends (*de Viduis*, ix. § 55).—(*e*) Already in *Eusebius* a distinction is found between the worship (σέβοντες) due to God alone and the honour (τιμῶντες) paid to the angels (*Præp. Ev.* vii. 15; cf. also *Dem. Ev.* iii. 3, *Præp. Ev.* xiii. 13).—(*f*) Finally, for this period the writings of *Augustine* may be consulted, especially the *de Civ. Dei*, in which the angels play no small part. They form the heavenly City of God, and this part of the Holy City assists that other part here below: 'hanc [*sc.* Civitatem Dei] angeli sancti annuntiaverunt qui nos ad eius societatem invitaverunt civesque suos in illa esse voluerunt' (x. 25). The angels minister alike to Christ, the Divine Head of the mystical Body, who is in heaven, and to the members of the Body who are on earth. Thus it is in the Church that the angels ascend and descend according to the words of Scripture.

'This is what happens in the Church: the angels of God ascend and descend upon the Son of Man, because the Son of Man to whom they ascend in heart is above, namely the Head, and below is the Son of Man, namely the Body. His members are here; the Head is above. They ascend to the Head, they descend to the members' (*Enarr. in Ps.* xliv. 20).

Augustine states that the angels are spirits of an incorporeal substance, 'invisibilis, sensibilis, rationalis, intellectualis, immortalis' (cf. ps.-August. *de Cognit. veræ vitæ*, 6). The designation 'angel' refers to the office, not to the nature, of these spirits (*Enarr. in Ps.* ciii. serm. 1. § 15). Angels received at their creation, from the Holy Spirit, the gift of grace, and it is possible that, in the case of those who did not fall, they received also the assurance of perseverance (*de Civ. Dei*, xii. 9. 2, xi. 13). Augustine refuses to identify the 'sons of God' (Gn 6) with the angels (*ib.* xv. 23). The sin of the fallen angels was pride. The fall of Satan occurred at the very beginning of his existence, and the good angels have enjoyed the vision of the Word from the first moment of their creation (*de Gen. ad Lit.* ii. 17, xi. 21, 26, 30). The office of the evil angels is to deceive men and to bring them to perdition (*in Ioan.* tract. cx. 7). They occupy themselves with the practice of divination and magic (*c. Academ.* i. 19, 20). But the power of these evil spirits is limited; God employs them for the chastisement of the wicked, for the punishment of the good for their faults, or even for the purpose of testing men (*de Trin.* iii. 21, *de Civ. Dei*, xi. 23. 2). Augustine asserts that the good angels announce to us the will of God, offer to Him our prayers, watch over us, love us, and help us (*de Civ. Dei*, vii. 30, x. 25; *Ep.* cxl. 69). They are even entrusted with the care of unbelieving nations (*Enarr. in Ps.* lxxxviii., serm. i. 3). He also, like Origen, affirms that to them is committed the charge of the material world, 'iubente illo cui subiecta sunt omnia' (*de Gen. ad Lit.* viii. 45 ff.). It should, however, be noted that Augustine does not assign a guardian angel to each individual.

It has been suggested that this is due 'to his doctrine of predestination, which precludes the constant ministration of a particular guardian angel, though it leaves room for the ministry of angels as mediators between God and the faithful' (Turmel, quoted by Kirsch, *Communion of Saints in the Ancient Church*, Eng. tr., p. 246 f.). It may be mentioned in support of this view, that Cassian, the great opponent of the doctrine of predestination, following Hermas, attributes the choice between the good and evil angelic counsellors to man's free will (Cassian, *Collat.* viii. 17; cf. also viii. 12, 18).

Augustine does not favour any cultus of the angels: 'honoramus eos caritate non servitute' (*de Vera Relig.* lv. [110]). They do not desire our worship, but rather that with them we should worship their God and ours (*de Civ. Dei*, x. 25). With regard to the order of the angelic hierarchy and the signification of the titles attributed to the angels, Augustine declares himself to be entirely ignorant, and appears to discourage speculation on this subject (*Enchir.* 15; *ad Orosium*, 14). (See Tixeront, *Hist. des dogmes*, ii. 372–376; Kirsch, *op. cit.* pt. iii. ch. 5.)

Conclusion.—The evidence of the passages cited above may be summarized as follows. The earliest Fathers of the Church, acquainted with the angelology and demonology of Scripture and of Jewish apocalyptic literature, all affirm or imply the existence of spirits good and evil. At a very early period, as we can see from the writings of Hermas, the doctrine of good and evil angels appointed to watch over individuals and institutions had already been adopted, and we may trace a steady development of this doctrine in the writings of both the Greek and the Latin Fathers, while it is probable that later speculations on this subject were greatly influenced by the writings of Origen. Opposition to Gnostic speculation led earlier writers to insist on the fact that angels and demons were created beings, while some writers refuse to allow to the former any part in the work of creation. Difference of opinion seems to have existed as to the nature and constitution of angels and demons, though the majority of writers appear to have regarded them as incorporeal spirits. A further difference is seen in the exegesis of Gn $6^{1.2}$. The earlier writers more usually identify the 'sons of God' with angels; later writers frequently reject this interpretation. The legend of the fall of the angels, and the person of Satan especially, led later writers to indulge in speculation as to the problem of evil and the relation of evil spirits to God. It would appear that the majority at least of later writers held the view that angels were capable of sinning, being possessed, like men, of free will. There are some traces of the beginnings

of a cultus of the angels which, according to some authorities, may be traced back as far as Justin Martyr, and which appears to be clearly taught in the writings of Ambrose. It is probable, as may be gathered from Irenæus, that the dangers of the cultus became apparent during the Church's struggles with Gnosticism. During this period we find very little about orders or numbers of angels. This subject, as well as the dedication of a church by Constantine to the archangel Michael, will be best discussed in the next section.

II. *FROM THE COUNCIL OF CHALCEDON TO A.D. 800.*—During this period we have especially to observe two points: (1) the development of the cultus and invocation of the angels, and (2) the elaborated and systematic doctrine regarding the orders of spirits.

1. Cultus of angels.—We have already noted a passage in the writings of Justin Martyr which possibly implies a cultus of the angels, and another in Ambrose where their invocation is directly recommended. On the other hand, Irenæus appears definitely to oppose both invocation and worship, and a writer so late as Augustine explicitly teaches that they should find no part in Christian worship. The statements of Origen have led some authorities to regard him as favourable, though there are passages in his writings where the cultus is explicitly condemned. To the authorities cited we may add canon 35 of the 4th cent. Council of Laodicea, in which Christians are forbidden 'to forsake the Church of God, and go away and name (ὀνομάζειν) angels, and to form assemblies, which is unlawful' (Hefele, *Hist. Counc.*, Eng. tr. ii. 317). But the passage is of doubtful meaning, and it should be observed that Dionysius Exiguus renders ἀγγέλους by *angulos*. The canon goes on: εἴ τις οὖν εὑρεθῇ ταύτῃ τῇ κεκρυμμένῃ εἰδωλολατρείᾳ σχολάζων, ἔστω ἀνάθεμα. This canon was known to Theodoret, who refers to it twice (*Ep. ad Col.* 2^{16} 3^{17}). In the former of these passages he states that this disease (πάθος) is still to be found in Phrygia and Pisidia.

This view is supported by certain inscriptions discovered in that neighbourhood, among which may be included the following: Ἀρχάγγελε Μιχαὴλ ἐλέησον τὴν πόλι σου κ[α]ὶ ῥύσῃ αὐτὴν ἀπὸ τοῦ πονη(ροῦ) †: 'Archangel Michael, have mercy on thy city and deliver it from evil' (for these inscriptions, see Dom Leclercq's art. in *DACL*, s.v. 'Anges,' col. 2085).

In the latter passage, Theodoret again quotes the canon of Laodicea, as forbidding prayer (εὔχεσθαι) to angels. One other passage in this writer may be referred to, viz. *Græc. Affect. Cur.* 3, where, in answer to the pagan objection that Christians also worship other spiritual beings besides God, he answers that Christians do indeed believe in invisible powers, but do not render to them worship (σέβας, προσκύνησις). He states that these beings are incorporeal and, unlike the pagan deities, sexless, and that they are employed in worshipping God and furthering the salvation of man. The evidence of Theodoret with regard to the cultus of angels and churches dedicated to them is supported by Didymus (*de Trin.* ii. 7–8), who says that churches are to be found in both towns and villages, under the patronage of angels, and that men are willing to make long pilgrimages to gain their intercessions. The earliest historic reference to the dedication of a church to an angel is to be found in Sozomen (*HE* ii. 3), where it is stated that Constantine erected a church, called the Μιχαήλιον, not far from Constantinople. The reason of the dedication was that the archangel Michael was believed to have appeared there. In the West we find instances of the dedication of churches to the archangel Michael at least as early as the 5th cent. (see *DACL*, vol. i. col. 2147). St. Michael is the only angel of whom we find a commemoration in the calendar before the 9th century. Various festivals of this angel are to be found in different calendars, but they appear in all cases to be the anniversaries of dedications of churches. This was the case with the festival of the 29th of September, still observed in the West, which commemorated a church, long since destroyed, in the suburbs of Rome on the Via Salaria (Duchesne, *Christian Worship*, 276). Five masses for this festival (then kept on the 30th, not the 29th) are found in the earliest Roman service-book, the Leonine Sacramentary (ed. Feltoe, pp. 106–108). In the prayers contained herein are found clear references to the invocation and cult (*veneratio*) of angels.

In the Second Council of Nicæa (A.D. 787), which dealt with the iconoclastic controversy, the question of the nature of the angels was discussed. At this Council a book, written by John, bishop of Thessalonica, was read, in which the opinion was advanced that angels were not altogether incorporeal and invisible, but endowed with a thin and ethereal or fiery body. In support of this view John quotes Basil, Athanasius, and other Greek Fathers. He expresses the same view with regard to demons, and states that Christians both depict and venerate angels. These views appear to have met, on the whole, with the approval of the Council, which sanctioned the custom of depicting angels and venerating their images (Conc. Nic. ii. act. v.). By the action of this Council it would appear that the cultus of the angels, which had originated before the beginning of the period under consideration as a private devotion, and had met with considerable opposition from various ecclesiastical writers, formally received the sanction of the Church, and may henceforward be regarded as part of the *doctrina publica*.

2. Orders of spirits.—We must now turn to the consideration of the angelic hierarchy. We have seen, in the earlier period, that occasional references were made to this subject by some Fathers, but that a writer so late as Augustine had not only declared his ignorance of the subject, but had apparently discouraged speculation thereon.—(*a*) The first writer who definitely elaborated the subject was *pseudo-Dionysius* (*c.* A.D. 500), and his detailed classification and description of the spiritual hierarchy may probably be regarded as the basis of all subsequent speculation both in the East and in the West. The outline of his scheme is as follows. He divides the celestial hierarchy into three orders (τάγματα), and further subdivides each of these into three. Thus the first order comprises: (1) θρόνοι, (2) χερουβίμ, (3) σεραφίμ; the second: (4) κυριότητες, (5) ἐξουσίαι, (6) δυνάμεις; and the third: (7) ἀρχαί, (8) ἀρχάγγελοι, (9) ἄγγελοι. It is impossible here to enter into any detailed description of the theory of the Areopagite concerning the functions of the angelic hierarchy. It may suffice to state that it is a hierarchy of illumination, the highest rank being nearest to God, the lowest nearest to man. Cf. esp. *de Cœlest. Hier.* 10, § 2: 'Now all angels are interpreters of those above them . . . the most reverend, indeed, of God who moves them, and the rest in due degree of those who are moved by God.' It would appear that the members of each triad are on an equality with each other, being distributed into a first, middle, and last power. In this manner Is 6^3 is interpreted, where it is stated that the seraphim cry one to another, 'indicating distinctly, as I think, by this, that the first impart their knowledge of divine things to the second' (*ib.*).

(*b*) In the West the classification of the Areopagite is closely followed by *Gregory the Great*, who affirms the existence of nine orders of angels, viz. Angeli, Archangeli, Virtutes, Potestates, Principatus, Dominationes, Throni, Cherubim, Seraphim (*in Evang.* lib. ii. hom. xxxiv.). In the same work a number of other passages occur dealing with the ministry of angels, the explanation of

the names and the offices of the different orders of angels, and the manner in which we may profit by the imitation of the angels, together with certain other points of lesser interest. References to evil spirits will be found in the same author (cf. *Moral.* iii. *passim*).

(*c*) Finally, *John of Damascus*, who in his writings so frequently shows traces of the teaching of the Areopagite, follows the latter in his classification of the celestial hierarchy (*de Fid. Orth.* ii. 3). In the same passage he gives a description of the angels, in which he defines a number of points which, as we have seen, had been matters of controversy, both before and during the period under discussion. The definition is as follows:

'An angel, then, is an intellectual substance, always mobile, endowed with free will, incorporeal, serving God, having received, according to grace, immortality in its nature, the form and character of whose substance God alone, who created it, knows.'

It may be said that at the close of this period something like a general agreement had been reached about the nature and functions of spirits, good and evil, and it remains only to discuss some further elaborations which we encounter in the mediæval period.

III. *FROM A.D. 800 TO THE REFORMATION.*—During the mediæval period, speculations concerning the nature of good and evil spirits are constantly to be found in the writings of the schoolmen. These, for the most part, consisted in the application of mediæval dialectic to the statements of Scripture, the opinions of Augustine, and the schematization of the Areopagite, whose works had been translated by John Scotus Erigena, and obtained great popularity throughout the West (Bardenhewer, *Patrology*, Eng. tr. 1908, p. 538). It is impossible here to enter into details about the nature of these speculations, and it seems most convenient to illustrate their general trend from the writings of certain representative theologians. In spite of the diversity of opinion, it should be observed that the first canon of the Fourth Lateran Council (A.D. 1215) made certain clear and definite statements with regard to spiritual beings, and their relation to God, without apparently, however, terminating the disputes of later theologians on this matter. It is stated that

'God is the Creator of all things, visible and invisible, spiritual and corporeal, who of His own omnipotent power *simul ab initio temporis utramque de nihilo condidit creaturam, spiritualem et corporalem, angelicam videlicet et mundanam, ac deinde humanam quasi communem ex spiritu et corpore constitutam.* The devil and other demons were created, indeed, good by God, and became bad of their own accord (*per se*). Man sinned by suggestion of the devil.'

As we have said, this decree appears to have failed to produce unanimity of opinion among the schoolmen, and the subject remained, as Harnack remarks, 'the fencing and wrestling ground of the theologians, who had here more freedom than elsewhere' (*Hist. of Dogma*, Eng. tr., vi. 186). But on many points we discern a general agreement. Thus, with regard to guardian angels, all held that each man from his birth possessed a guardian spirit, and that this applied also to sinners, while some asserted this even of Antichrist himself. Evil spirits, on the other hand, tempt and incite men to sin, though it should be observed that even the power of the devil was held to be subject to the limitation that he cannot affect the free will or spiritual knowledge of man, but can approach him only through his lower nature (so Albertus Magnus, *Summæ Theol.* pt. ii. tract. 6; see also Bonaventura, in *Sent.* 2, dist. 11, quæst. 1, and Alb. Mag. *ib.* tract. 9). But the question of the substance, essence, endowments of grace, peccability, modes of cognition, and individuation of the angels, as well as certain other problems, still remained in dispute.

(*a*) *Peter Lombard* († 1164), the first systematic theologian of the West, devotes ten sections of the second book of the *Sententiæ* (dist. ii.–xi.) to the subject of good and evil spirits. In his teaching he follows the Areopagite, and deals, among other things, with the questions of the nature, creation, free will, fall, and peccability of angels, and the relation of demons to magical arts; he also discusses the question whether Michael, Raphael, and Gabriel are the names of orders or of individual spirits, and whether each man has a good and bad angel assigned to him; and concludes with a discussion as to the possibility of progress of the angels in virtue.

(*b*) In the numerous references to good and evil spirits contained in the writings of *Bernard*, two passages are especially worthy of notice. The first is contained in the *de Consideratione* (v. 4), where the angels are described as

'cives [Ierusalem matris nostræ] . . . distinctos in personas, dispositos in dignitates, ab initio stantes in ordine suo, perfectos in genere suo, corpore aetherios, immortalitate perpetuos, impassibiles, non creatos sed factos, id est gratia non natura, mente puros, affectu benignos religione pios, castimonia integros unanimitate individuos, pace securos, a Deo conditos, divinis laudibus et obsequiis deditos, haec omnia legendo comperimus, fide tenemus.'

In the long passage which follows we find a disquisition on the angelic hierarchy, which closely follows that of the Areopagite. In the second passage (serm. v. *in Cant.* § 7), Bernard enumerates some points which he feels unable to resolve:

'The Fathers appear to have held various opinions on such matters, nor is it clear to me on what ground I should teach either opinion, and I admit my ignorance; neither do I consider a knowledge of these things to conduce to your progress.'

The points in dispute refer to the nature of the bodies of the angels: it is asked whether their bodies are part of themselves, as is the case with men, or assumed for purposes of revelation. On guardian angels, see *in Ps.* 'qui habitat,' serm. xii. 2; serm. vii. *in Cant.* § 4; on the devil and evil angels, see *in Ps.* 'qui habitat,' serm. xiii.; *de Gratia et Libero Arbitrio*, cap. vi. § 18.

(*c*) *Anselm*, who may justly be regarded as the pioneer of speculative theology in the Middle Ages, is probably the first Western writer to apply with any fullness the processes of the Aristotelian dialectic to the traditional teaching of the Church about good and evil spirits. These play a somewhat important part in his remarkable system, especially in the elaborate arguments of the *Cur Deus Homo*, where it is suggested that man was created for the purpose of completing the number of the angels, which had been diminished by the fall of the devil and his companions. This opinion Anselm rejects, saying that the human race is made for itself and not merely to replace individuals of another nature (*Cur Deus Homo*, i. 18). In the long discussion which follows concerning the number of the angels, and whether the number of the elect will exactly correspond with the number of those that fell, Anselm admits a diversity of opinion, and concludes that it is permissible to hold any view that is not disproved by Scripture. Cf. also *de Casu Diaboli*, cap. 4, where the cause and manner of the Fall are discussed. On the angels, cf. *de Fide Trin.* 3.

(*d*) In order to present a clearer view of the Scholastic doctrine of good and evil spirits, it will be best to give here a brief summary of the teaching of *Thomas Aquinas* on this subject, where we probably find it in its most developed form. This is contained in the 'Tractatus de Angelis' which is comprised in Quæstiones l. to lxiv. of Pars prima of the *Summa*:—

Angels are altogether incorporeal, not composed of matter and form; exceed corporeal beings in number just as they exceed them in perfection; differ in species since they differ in rank; and are incorruptible because they are immaterial. Angels can assume an aerial body but do not exercise

the functions of life. Thus they do not eat *proprie*, as Christ did after His resurrection. Angels can be localized, but cannot be in more than one place at the same time. The substance of angels is not pure thought, because, in a created being, activity and substance are never identical. Similarly the *esse* of angels is not pure thought. They have no sensory cognition. Their cognition is objective—not, however, through determinations in the object, but through innate categories. The cognition of the higher angels is effected by simpler and fewer categories than is that of the lower. Angels by their natural powers have knowledge of God far greater than men can have, but imperfect in itself. They have a limited knowledge of future events. The angels are possessed of will, which differs from the intellect in that, while they have knowledge of good and evil, their will is only in the direction of the good. Their will is free, and they are devoid of passion. The angels are not co-eternal with God, but were created by Him *ex nihilo* at a point in time (this is strictly *de fide*); their creation was not prior to that of the material world (the contrary opinion is here permitted). The angels were created in a state of natural, not supernatural, beatitude. Although they could love God as their Creator, they were incapable of the beatific vision except by Divine grace. They are capable of acquiring merit, whereby perfect beatitude is attained; subsequently to its attainment they are incapable of sin. Their beatitude being perfected, they are incapable of progress.

Concerning evil spirits, Aquinas' teaching is briefly as follows. Their sin is only pride and envy. The devil desired to be as God. No demons are naturally evil, but all fell by the exercise of their free will. The fall of the devil was not simultaneous with his creation, otherwise God would be the cause of evil. Hence there was some kind of interval between the creation and the fall of the demons. The devil was originally the greatest of all the angels; his sin was the cause of that of the other fallen angels, by incitement but not by compulsion. The number of the fallen angels is smaller than that of those who have persevered. The minds of demons are obscured by the deprivation of the knowledge of ultimate truth; they possess, however, natural knowledge. Just as the good angels, after their beatification, are determined in their goodness, so the will of the evil angels is fixed in the direction of evil. The demons suffer pain, which, however, is not of a sensory character. They have a double abode—hell, where they torture the damned, and the air, where they incite men to evil.

(*e*) The foregoing will give some idea of the teaching of the scholastics on the nature of spirits in its developed form. Many other questions were raised which it is impossible to discuss here; but one further instance may be given, viz. the speculation as to the manner in which angels hold communication with each other. This matter is treated by *Albertus Magnus* and *Alexander of Hales*. This communication is effected immediately, and the speech of the angels is described by Albertus Magnus as 'innuitio,' by Alexander of Hales as 'nutus' (cf. Alb. Magn. *Sum. Theol.* 2, tr. 9, quæst. 35, m. 2; Alex. Hal. *Summa*, pt. ii. quæst. 27, m. 6).

(*f*) Finally, we may quote one 14th century authority, namely, *Tauler* († 1361), who, though, like his contemporaries, he follows the Dionysian classification of spirits, yet expresses himself with much reserve about the nature and character of angels. The following passage is contained in his sermon on Michaelmas Day:

'With what words we may and ought to speak of these pure spirits I do not know, for they have neither hands nor feet, neither shape nor form nor matter; and what shall we say of a being which has none of these things, and which cannot be apprehended by our senses? *What* they are is unknown to us, nor should this surprise us, for we do not know ourselves, viz. our spirit, by which we are made men, and from which we receive all the good we possess. How then could we know this exceeding great spirit, whose dignity far surpasses all the dignity which the world can possess? *Therefore we speak of the works which they perform towards us, but not of their nature.*'

With regard to the development of the cultus of the angels during this period, the following observations may suffice. Dedication of churches to angels and especially to St. Michael became far more common, both in the East and in the West. With regard to festivals of angels we find special offices in the mediæval breviaries by which the unofficial cultus of the angels obtained formal recognition. The names of individual angels are encountered in many litanies, and, finally, the cultus of the guardian angels received official sanction when a feast in their honour was instituted (October 2nd) after the Reformation. No doubt the introduction into the formal liturgy of the Church lingered behind the practice of popular devotion, in this as in other matters.

In conclusion, we may remark that, at the Reformation, Protestant theologians retained their belief in good and evil spirits; even maintaining that the former intercede for mankind, but forbidding any invocation. This belief, based on Scripture, underwent considerable modification in the 18th cent., which witnessed many and various attempts at rationalization in different directions. The beginning of the 19th cent. was marked by a revival among Protestants of the belief in angels expressed 'in a philosophic and idealizing sense' (Hagenbach, *Hist. of Doctrines*, iii. 193, 334 f.). It may be said that among modern writers of this school the whole subject has ceased to excite any interest either speculative or practical. In the Roman Church we cannot detect any change in belief or practice concerning the existence of good and evil spirits, though we may point to certain indications of a tendency to discount the subtleties of mediæval speculation on the subject (Liebermann, *Instit. Theol.* lib. iii. cap. 2, art. 1, in vol. iii. p. 280). In the Anglican Church the belief in angels has the fullest liturgical recognition, though the subject is hardly dealt with in her formularies. The invocation of angels was defended by some of the Caroline divines: the practice of dedicating churches to angels has remained unbroken. In the Book of Common Prayer the 29th of Sept., still known in the Roman calendar as the 'Dedicatio Sancti Michaelis Archangeli,' has become the feast of St. Michael and All Angels.

The comparative lack of interest felt in the whole question of the existence and nature of good and evil spirits may be explained by reference to the fact that, while belief in the existence of such spirits is generally accepted by Catholic theologians, there is still to be found a strong reaction from the excessive speculation of scholasticism.

DEMONS AND SPIRITS (Coptic).—The beliefs of the Coptic Christians on the subject of demons and spirits were derived from those of their pagan predecessors in the Græco-Roman period (see 'Egyptian' art. below), and show interesting traces of Gnostic influence. In spells to ward off the attacks of devils the designations of the æons are given, and the mysterious magical names of the spirits are recited, confused in true Gnostic fashion with the Hebrew appellations of the Deity. Here is a typical invocation:

'Pantokrator Iaô Sabaôth Môneous Sooeoue Arkôeous (?) Adonai Iaô Elôi, who is in the Seventh Heaven and judgeth the evil and the good: I conjure thee to-day, thou that providest for me the twenty thousand demons which stand at the river Euphrates, beseeching the Father twelve times, hour by hour, that He give rest unto all the dead.'

Here we have the Gnostic spirit Iaô confused (naturally enough) with the Deity (Jahweh), but he is not the Deity who is appealed to later on as 'the Father.' However, Iaô Sabaôth in Coptic spells is hardly to be distinguished from the Deity. Good spirits are invoked as

'ye who are upon the northern and eastern sides of Antioch. There is a myrtle-tree, whose name is the Achelousian (*sic*) lake which floweth from beneath the throne of Iaô Sabaôth.'

This is a very curious confusion of classical Hades-allusions with the Gnostic-Christian throne of Iaô-Jahweh. For the rest, it is the usual gibberish of the medicine-man. The names of the Deity and those of the angels are often confused: Emmanouel appears as the name of an angel, with Tremonel and Abraxiel; the last has a very Gnostic sound.

Chief among the good spirits were, of course, the archangels—sometimes four, sometimes seven: 'those who are within the veil' (*καταπέτασμα*). Each man had a guardian angel, who specially protected him against evil. With the angels are invoked also the cherubim and seraphim, and the four-and-twenty elders, and even the four beasts that uphold the throne of the Father. These were all conceived as objective spiritual beings, to be invoked in prayer against evil. The names or descriptions of the spirits had to be known, or they could not be invoked: some appear named after the letters of the alphabet, others are merely 'those who come up with the great stars that light the earth.' This is a very old Egyptian touch, and reminds us of the ancient dead who were thought to walk among the stars, the *akhemu-sek*.

Among the evil spirits we find, of course, Satan, whose name in one case is Zêt—an interesting survival of the name of the old Egyptian Typhonic god Set. Fate (Μοῖρα) seems to occur as an evil demon. Disease was thought to be largely due to the attacks of devils, and especially so in the case of epilepsy. It has been conjectured, with probability, by Crum (*Catalogue of the Coptic MSS in the British Museum*, 1905, p. 253, n. 9) that the name *ἐπιλημψία* has been corrupted into the name of a female demon, Aberselia, Berselia, or Berzelia, who appears in an Ethiopic transcription as Werzelyâ. Berselia was apparently regarded as a flying vampire, and classed in Coptic vocabularies as a kind of bird. A demon of the mid-day heat appears in the Ethiopic versions of the 'Prayer of S. Sisinnius,' with the 'Werzelyâ' mentioned above (references in Crum, *loc. cit.*).

Magical charms (*φυλακτήρια*) against the attack of demons were common enough. They were usually written on slips of parchment and enclosed in a little leather box, generally tied to the arm or, no doubt, hung about the body just as the modern charm of the Egyptian *fellâḥ* is worn. The contents are usually vague invocations, as has been seen. One of the finest is the MS Or. 5987 of the British Museum (published by Crum, *op. cit.* 1008), from which excerpts have been given above. Cf. art. CHARMS AND AMULETS (Abyssinian).

The usual Coptic word for a demon or spirit, good or evil, is *iḫ*, which is the Old Egyp. for a good spirit. The term *hik*, for an evil spirit, which is the same as Old Egyp. *ḥekau*, 'magic' or 'enchantment,' occurs occasionally. The appellation *refšaar*, 'sunderer,' 'divider,' is a tr. of the Gr. *διάβολος*, which is itself often used in Coptic. For 'angel' the Gr. *ἄγγελος* is used.

LITERATURE.—In addition to that cited in the text, see list of authorities appended to art. CHARMS AND AMULETS (Abyssinian).

DEMONS AND SPIRITS (Egyptian).—**1. Scope of the article.**—The delimitation of an investigation on the subject of demons and spirits presents no little difficulty in religions which are of so distinctly animistic a character as those of Egypt. In the first place, we cannot divide the subject and study angelology and demonology separately, because spirits are never good or bad by constitution or in their origin; this aspect is of relatively secondary formation or date (see DUALISM [Egyp.]). In the second place, the various kinds of demons or spirits of the dead, although in very many cases their characteristics, powers, attributes, and dwelling-places are identical with those of the other spirits, really belong to a different category from the latter (see below, § 9; and cf. art. STATE OF THE DEAD [Egyp.]). Lastly, with such a vast array of demons, properly so-called, as we have in Egypt, a short account like the present can give only the general characteristics, while, as to particular personifications, it can mention only the principal ones whose active and definite rôle is witnessed to by texts or representations. In a world in which all beings and objects possess a 'demon' or 'demons,' we must confine our attention to those which are of special importance in the life of the gods or of men.

2. Pre-historic demons and spirits.—Our information on the earliest period is preserved in the earliest texts (numerous chapters of the Book of the Dead), some of them going back even to pre-historic times (as the funerary chapters of the proto-Theban coffins, certain parts of the celebrated ritual of 'the opening of the mouth,' and especially the Pyramid Texts). The chief demons and spirits in these are called sometimes *biu*, sometimes *khuu* (see below). The meaning of the special terms by which they are designated is very difficult to state accurately. Of the significance of such terms as *afau*, *utennu*, and *ashmu*, we must admit that as yet we have no precise knowledge. The passing allusions in a very few texts seem to indicate that they were conceived under the form of 'devouring spirits,' troops of monkeys, lizards, and hawks. These are, in any case, survivals of the most ancient periods. The same is true of the jackal-demons (Pyramid of Pepy II., line 849). The higher and lower 'Beings of Sit' lead us to suppose a classification of spirits into heavenly and earthly. The *rokhitu* are, according to the texts, both spirits full of wisdom and personifications of the powers opposed to (and vanquished by) Egypt or the gods of Egypt. There is much discussion as to the best translation of this word. The present writer thinks that the French word *malin*, 'mischievous,' might be taken as an exact equivalent of the Egyptian term with its double meaning. The *urshu* play a somewhat more definite part of 'watchers.' They are bands of demons who watch, lie in wait for, keep their eyes upon. This function has followed naturally from the ordinary evolution of meaning: from having simply designated an individual characteristic, neither good nor bad,

it has become a protective function of a specially determined group of men or a locality, heavenly or earthly. The *hunmamit* are often mentioned; they even figure in a number of representations that have not yet been noticed—if, as the present writer suggests, it is indeed figures of these spirits that are carved on several parts of the sacred furniture (tabernacles, shrines of the sacred barque, supports for vases or utensils of worship), represented in a number of temple bas-reliefs and in frescoes of Theban tombs. They have hardly ever been studied, except by Budge (*Gods of the Egyptians*, i. 159), who quotes, without approving, the view that they are the great flock of souls of future generations. This view does not seem sufficiently borne out by the texts. The *hunmamit* of the primitive cults seem rather to have been swarms of spirits of a beneficent character, in the sense that they watched over the safety of the sun, at the time when the religious world consisted of innumerable bodies of spirits and an impersonal sky-god with no precise attributes, and when the various heavenly bodies (even the most important ones, like the sun) were entrusted to the care of spirits, who directed their movements, defended them, repulsed their enemies, etc. In the historical period, the power and individuality of the gods proper were detached from the mass of spirits, and left a more and more vague rôle to all the demons of this category. The *hunmamit* are also often confused, in the Theban texts, with the sun's energy, and are, it would appear, its effluences or rays. Some also become angel-choirs, traditional accessaries, and practically a simple *motif* of ornamental symbolism attached to certain objects of ritual and worship. They may be compared, *from this point of view*, with various angels and spirits of Oriental angelology, such as, *e.g.*, the cherubim (*q.v.*).

An important class of demons is made up of the 'spirits' (*biu*) (1) of Pu and Dapu, (2) of the East and the West, (3) of Khimunu, (4) of Nekhen, and (5) of Heliopolis. The polytheism of the historic period reduced these spirits also to the rôle of simple attendants, who hailed the sun when it rose (or the king on his coronation, etc.), carried the litters of the Divine *bāri*, and performed other humble or vague functions (see below). Theology has made several attempts to assimilate them to secondary gods of the pantheon with proper names (*e.g.* Book of the Dead, 'Chapters on knowing the *biu* of . . .'). These explanations at least enable us to reconstruct several of the phases of their original function, of which the geographical symmetries (earthly or heavenly) are a survival. These demons were once the guardian genii of the geometrical divisions (two or four) of the universe; they supported the mass of the firmament at its extremities, and welcomed or destroyed the souls of the dead as they arrived at the borders of the earth. Their stellar rôle also seems to have been considerable; they inhabit certain constellations, or the sanctuaries on earth that are the magical counterparts of those regions of the heavenly sphere. Sometimes they inhabit a special region of the firmament (*e.g.* the *biu* who inhabit, in the territory of Heliopolis, the 'Abode of the Combatant,' the magical representation of this celestial abode); sometimes they escort certain heavenly bodies (stars or planets), whose guardians they are, across the vault of heaven. Polytheism makes these bodies divine persons, and reduces them to the position of devotees of the sun. Finally, theology confuses them more and more with the various 'souls' of the gods, employing the evolution in meaning of the word *biu* itself. A great number of these spirits are classed together under the vague title of 'followers of Hor,' whence the priesthood deduced more and more lofty funerary meanings in relation to the lot of the dead.

The historic period, however, preserves a fugitive rôle for them on certain occasions of immemorial tradition, just as the material part of the cult continues to reproduce their images. The 'spirits' of the North and South become a sort of heraldic representation of the forces of the world considered as composed of two halves, or they are transformed into genii guarding the frontiers of Egypt, the sum of the whole earth. They play a part also in several incidents in the coronation of the king. Other spirits, as the 'demons' of one of the Anubis, regarded as a constellation of the Northern world (cf. Brugsch, *Rel. und Myth.*, Leipzig, 1884–1888, p. 671), perhaps the Great Bear (cf. the jackal-demons mentioned above), or as the genii of other parts of the astral world, reappear as figures in the mysterious ceremonies of the royal coronation or the jubilee (see Naville, *Festival Hall*, London, 1892, pl. ix.–xi., for specimens of these figures, whose mystical value has been very much exaggerated by modern writers). As a general rule, however, their rôle is a purely traditional one, and their exact nature does not seem to have been early understood.

Besides the innumerable representations of *biu* and *rokhitu* in statues, statuettes, bas-reliefs, frescoes, etc., several other spirits have left material traces of their former rôle in parts of sacred furniture, on which they are seen as traditional figures, symbolic or even purely ornamental. The most characteristic are certain animal figures on sacred vessels and on some of the statuettes traditionally placed on board the sacred barques used in processions to convey the Egyptian gods, in representations of their journeys in the other world. Thus the 'griffin,' which is found on the bow of all the barques of solar gods, seems to have been one of these spirits before it became confused with the 'warlike soul' of the god; and the same may be said of the birds that are placed in rows on the bow of the boat of Rā (cf. the boats of el-Bersheh), or those on the strange boat of Sokharis (a good example in the temple of Deir el-Medineh). The interpretations of these figures as the 'followers' or as the 'souls' of the god are of later date, and represent two attempts to adapt them to developed beliefs. They seem really to be a survival of the time when these groups of 'demons' had an active share in the general direction of elementary forces. The predominance of 'functional epithets' serving as collective names for the majority of these demons is perhaps one of the most significant facts in this connexion.

The whole question of these groups of spirits calls for an exhaustive study, which would yield the most ancient form of Egyptian religious thought that could be attained, and would also explain the development of forms of this kind (similar to those of certain religions of modern savage Africa) into polytheisms proper. Such a study should be joined logically with an account of primitive Egyptian religion, comprising both the animistic manifestations of all kinds of 'spirits' and the existence of a sky-god similar to the god postulated in so many parts of the continent of Africa. This vague, primordial god—who, however, has no demiurgical functions whatsoever—is found in Egypt in two parallel forms, proceeding from two great local systems of mythology: (1) the sky-god Hor, and (2) the sky-goddess Nuit (subdivided even earlier into the day-sky, Nuit, and the night-sky, Naut). A foundation might be found in the data supplied for one part in the very remarkable work of Budge in his *Gods of the Egyptians* (see Lit.).

3. Historic period: number, aspects, forms.—The Egyptian terrestrial and ultra-terrestrial worlds are naturally peopled with an infinite number of demons and spirits. But, if we look closely, we find that this body of spirits is not so great as that of many other religions. It shows neither the abundance of the Chaldæo-Assyrian religions or of Mycenæan demonology (see Pottier, *BCH*, 1907, p. 259), nor even the crowd of devils and spirits of Vedic religion. The number of 4,601,200 demons, given in ch. lxiv. of the Book of the Dead, is a ἅπαξ λεγόμενον which does not correspond with any teaching or fact of any importance. As a matter of fact, ancient Egypt has not, *to our present knowledge*, left any of those terrible lists of demons and spirits which we find in so many other countries.

These legions of beings, generally invisible, but always provided with material bodies, are per-

ceptible to men at certain times, or to those who can fortify themselves with the necessary charms and formulæ. Their size does not seem ever to have been a question of interest to the Egyptians. No text mentions giants, though one passage in the Book of the Dead speaks of demons 'twelve feet high' (ch. xliv.), this modest figure being evidently the *summum*. None of the numerous paintings of demons of the under world makes them any larger than the men or beasts of the terrestrial world, except in the case of a certain number of serpents (where, however, as a rule, we are dealing with allegorical or symbolical serpents). Nor do any of the ancient texts make allusion to extraordinary dimensions. The difference between Egyptian and Oriental religions in this respect is noteworthy.[1] Another difference also is the absence in Egypt generally of the monstrous or hideous forms which are very characteristic of the majority of demonologies known to us. Most of the demons of the 'hours of hell' are wild beasts, reptiles, lizards, human forms with black bodies (*shades*[?]; these forms are more especially the 'enemies of Rā'), or somewhat colourless combinations of animal and human forms. The demons who frequent the way to the other world in the Book of the Dead are especially serpents, crocodiles, and monkeys. (The gigantic insect *abshāit* [cockroach?] is chiefly an artifice of the artist to show up the traits of this enemy of the dead.) There is only one monster—with a lion's tail, the body of a monkey(?), and the face of a bearded man—which has some claim to a terrifying appearance (Book of the Dead, ch. xxiii.). The demons of the 'seven-headed serpent' type of the Pyramids are a very unimportant exception. Finally, the fantastic animals of the desert—winged lions with hawks' heads, wild beasts with serpents' heads, with winged heads placed on their backs, etc.—are not, as we have said, *afrit*, or demons. It was actually believed that such beings existed in distant parts, as well as the lion with human head, the prototype of the Sphinx. The spirits, good and bad, attached to the celestial world, have usually the form of birds. The *rokhitu* are represented as a kind of hoopoe still existing in Upper Egypt; the *biu* have hawks' or jackals' heads—a relic of the time when they moved under the complete forms of these very animals; other *biu* are entirely birds; the *hunmamit* are either birds or men with birds' heads; and the evil demons proper, the enemies of Rā (see below) are simply serpents, antelopes, gazelles, crocodiles, or anthropoids.

4. **Classes, localities, and attributes.**—In the absence of demonologies composed by the Egyptians themselves, we may form a material estimate of the principal kinds of 'spirits' and their functions in *historical* Egypt from the following very condensed account, adopting the somewhat rough, but clear, classification of spirits according to the region they inhabit—the sky, the earth, the other world. This classification has the further merit of being that used in the earliest epochs by the incantation formulæ of the magicians, and there is, therefore, a possibility that it corresponds, to a certain extent, with the divisions imagined by the Egyptians themselves.

(*a*) *The celestial world.*—Several of the prehistoric groups already mentioned persist, but with a much less important position, and more and more confused with souls or manifestations of the gods. A certain number of spirits not mentioned above appear in the representations, but are absorbed in a subordinate or momentary function, *e.g.* the bands of dog-headed monkeys who attend the sun at its rising and setting—a theme popularized in thousands of papyrus-vignettes, in temple bas-reliefs, and in the magnificent obelisk statues of Luxor, the temple of Maut, and the great temple of Ipsambul of the Theban period; the rowers of Rā's barque in the 9th hour of his voyage round the world; and the jackals that draw this barque at the 11th hour. In the rôle of all these anonymous troops of demons we have a clear survival of the time when they played a prominent part in the direction and protection of the heavenly bodies, each controlling a definite part of the firmament, and to this point also a study of primitive Egyptian religion ought to devote special attention.

[1] The Giant Monkey, Gigantic Crocodile, and Great Hippopotamus of the Theban texts (cf. Maspero, *Études égyptiennes*, 'Manuel de Hiérarchie,' Paris, 1883) are terms designating at this time constellations, and not stellar spirits, as, indeed, is shown by their representations in the astronomical ceilings. The material fact that these spirits and others of the same type were carried to the under worlds in the sun's journey is a simple artifice of Theban theology, and Maspero (*Myth. archéol.* ii. 34 ff.) has shown that these different under worlds, compiled in actual geographical order, are a product of local mythologies which really describe the world of night and the celestial world.

The groups of very feeble demons and spirits which are devoured by the stronger ones (Pyramid Texts) are not mentioned in the texts or drawings of the historic period. No doubt the whole conception was thought barbarous (see below).

(*b*) *The earth.*—As in all the religions, classical and unclassical, of the ancient world, the universe of Egyptian religion is full of all kinds of demons, closely resembling those found in the religions mentioned above or among the savages of to-day. But in Egypt there is no proper classification of spirits belonging to water, to rocks, woods, marshes, etc. Furthermore, their multiple rôles in dreams, or in illnesses of man or beast, seem to belong rather to the popular domain than to official beliefs. It would appear, from a study of the texts of both kinds, that historic Egypt had already, to a great extent, got rid of that *naïveté* which is the characteristic of polydæmonism in primitive Animism, and which persists so strikingly in Chaldæo-Assyria in the organized cults. The distinction between official and popular religion, however, is still a delicate question of the appreciation of facts, and especially of the period. It is, nevertheless, certain that phenomena such as storms, floods, and epidemics are attributed to the gods in historic Egypt, and not to the demons, as in Chaldæo-Assyrian belief. On the other hand, the inscriptions from the temple of Abydos prove that the priesthood frankly admitted that demons were continually prowling about in the air, ready to do harm, and that it was necessary to purify the king's retinue with charms, as it proceeded to the temple. The fumigations and incantations that took place at funerals bear witness to the same practice, while the famous inscription of the Princess possessed of Bakhtan proves the official belief in demoniacal possession. The literature shows us that the demons, as in all other countries, inhabited by preference desert places, the borders of marshes, and cemeteries (where they become confused with ghosts properly so called); and it is a certain fact that their power was greatest at night. They were also most powerful on certain days of ill omen, on which the influence of the good gods was diminished, as is proved by the horoscopic papyri of Leyden and London. The light of the sun put them to flight. They were combated, according to varying circumstances, by means of talismans, amulets, incantations, etc., and in all these innumerable details Egyptian differs from other religions in a material way only, and not in doctrine. It is also very difficult to see a specially Egyptian characteristic in the almost complete confusion that exists, in all these attributes of the earthly demons, between demons proper and the ghosts of the dead; and, as the latter have the same name of *khuu* in a number of cases, it is sometimes almost impossible

to distinguish whether such and such a case of illness, dreams, possession, torment, etc., is the work of a demon or of the dead. Sometimes the Egyptian text is quite clear, *e.g.* in the formulæ relating to 'the imprisoning of the shades of the dead that can do harm' (Book of the Dead, ch. xcii. line 10); and we can proceed gradually to certain classifications by variants.

When well considered, Egyptian ordinary life does not seem to have been so much overshadowed and tormented by the constant fear of demons as in the case of many other religions of civilized and non-civilized peoples. While the official cult admits the hidden presence of numerous demons, we do not find it going the length of constantly trying to dispel them, *e.g.* during the performance of duties, at the opening of the tabernacle, or, again, at the time of sacrificing. (Porphyry, however, says that the priests beat the air with whips to put the demons to flight [*de Philos. ex oraculis haurienda*, ed. Wolff, 1856, p. 148].) The Egyptians do not, like the Indians, trace trenches round their offering. (Notice, however, in the foundation-rites of a temple, the purification of the ground by means of a mock chase of evil spirits, performed by the king and figures dressed as gods.) Nor does any Egyptian text ever say that demons are specially dangerous at the time of death, as is taught, *e.g.*, in the Avesta. The dead, it is true, are protected against demons during the preparations for the funeral; they are surrounded, on their way to the grave, by every kind of magical precaution; at the grave itself, talismans and phylacteries of every description protect the coffin and mummy (note that these precautions are meant both to ward off the demons of this earth as they prowl around the grave, and to accompany the dead, by magic, on his journey to the other world); mystic eyes are painted on the proto-Theban sarcophagus, and other precautions of the same kind are the finishing touches. But all these precautions do not amount to so much as we find, in this connexion, in civilized religions of the highest organization; and we may say that the dying Egyptian was not tormented by terrors of the demoniacal order so much as most races with systems of organized beliefs. We must not be misled by the constant presence and importance of demons in the literature. No one would think of maintaining that the thought of Satan and his demons was a continual weight on the ordinary life of a man of our European Middle Ages; and yet the popular tales, processes of justice, legends, and even theology itself, gave the demons of this time a power, a multiplicity, and a constant aggressiveness which are greatly in excess of anything that we learn of ancient Egypt in this respect.

(*c*) *The other world* (this term including the various classes of regions separating Egypt from the abodes of the dead, under whatever form they may be conceived, and these abodes themselves: paradise, Elysian fields, caverns, 'passages,' *rositiu*, etc.).—An account of all the demons of the other world cannot be attempted here. A good idea of them may be obtained from the indexes in the various editions of Budge's *Book of the Dead*, or from Maspero's *Études de mythologie et d'archéologie égyptienne*, ii. 1–180 (for the royal tombs). These demoniacal spirits are as numerous as the devils of the under world in all other religions. They are the inhabitants of night. It is worthy of remark that none of them has any symbolical value; the majority are simple repetitions of beings like the mischievous or terrifying beings of the earth. In the group of books of the Book of the Dead type we have tree-spirits, monkeys, crocodiles, a considerable variety of serpents, lions, etc., and the vignettes of the Theban epoch employ all the precision that could be desired on the subject. In the series of the type 'Book of Hours,' 'Book of Hell,' 'Book of the Gates,' etc., we have a more sombre view of the demons, yet still of the same specific character: the serpents vomit flames; a great number of these demons, in the shape of men, of animals, or of mixed form, are armed with weapons of various kinds, but are not fantastic. Their names are far oftener functional epithets than true proper names, and this fact is of importance for the historian of religions. The onomastic list, however, is quite short, and shows the poverty of Egyptian thought on this point: 'the Archer,' 'the Pikeman,' 'the Lancer,' 'the Cutter,' 'the Ripper,' 'the Bounder,' etc. The female demons have the same names, or are called 'the Lady of Terror,' 'the Lady of the Sword-thrusts,' 'the Brave,' 'the Violent.' The serpent demons are called 'Life of the Earth,' 'He who lives on gods' (= cater of gods [?]). The guardian serpents Akaba, Jetba, and Tokahiru, and the viper Naga are deities by this time rather than demons (see below).

Generally speaking (without distinguishing the various classes of under-world literature), the original Animism of Egypt is reflected in the number of demons that are simply the 'spirits' of material objects: a thread and its different parts (ch. cliii.); a boat, each part of which has its genius (ch. xcviii.); posts, doors, parts of a building, boxes, etc. This process is all the more logical from the fact that Egyptian beliefs naturally admitted that every object, natural or manufactured, on this earth possessed a spirit or a demon—rocks and trees as well as houses, pillars, sceptres, clubs, etc.; and iconography sometimes shows these spirits with their heads appearing out of the objects they inhabit. The evolution of belief consisted mainly, here as elsewhere, in gradually 'detaching' the 'spirits' from their objects; and the demons of our present discussion were transformed step by step into *guardians*, and, in the case of some of them, into *masters*, of these objects. The latter privileged members have contributed to the number of the gods.

5. Nature.—By means of a large number of accurate texts, we can form an estimate of the constitutional character of the demons and spirits of Egypt, and by the aid of the ancient texts we can get back to the very beginning of their formation. All our information is in absolute conformity with the general animistic character of the primitive religions of the Nile Valley. The universality of 'spirits' in Egypt is well known, and we have just seen that there is not a single being or object, natural or manufactured, but has its demon or demons. Their different names of *biu* and *khuu* did not imply any difference of nature originally, and the ancient texts show, by variants, that the two terms are frequently interchanged. They merely signify the different degrees of carnal materiality of these souls or spirits—which are always material (see BODY [Egyp.]). The word *biu* seems later to have tended to belong to demons and spirits of a beneficent character, while the name *khuu* was given by preference to maleficent spirits; but this indefinite classification has arisen purely from later dualistic thought (see DUALISM [Egyp.]).

Now, these texts clearly prove that the demons are absolutely the same in the essentials of their nature and attributes as the most ancient Egyptian gods. The formulæ confuse them constantly. Demons and gods have the same 'determinative' in hieroglyphic script (the three signs of the 'axe' [really a mast with two pennants], or the archaic sign of three hawks perched on a sort of gibbet). At first, the strongest devoured the weakest impartially; and later, the dead, assimilated by magic to these strongest members (cf. Pyramid of Unas, line 506 ff.), are shown devouring the *notiru* (gods) as well as the *khuu* (demons).

A single characteristic will serve to distinguish them, and to indicate the process by which the *gods* gradually emerged from the dense crowd of *demons*. The demons, or genii, or spirits, are *anonymous* groups, with only a collective name, and confined to a special activity or settled function. As they did not all have the same activity or the same importance, certain groups of them rose by a slow process of elaboration to higher dignity. The others remained for ever a few millions of obscure spirits, whose mode of life was of no importance; or else they formed the troops of spirits of which examples are given in § 2. In the groups with important functions, the characteristics led to fusion with a more individual being provided with a proper name. Difficult as it is to

draw the line of demarcation between a god and a demon in such a conception, a careful examination of the texts leads to the conclusion that the mark of a god is possession of a name. A demon possessing a name is already a god, a *notir*. The case is incontestable for well-established gods like Sorku (the crocodile) and Ririt (the hippopotamus); it is equally incontestable for demons like Apōpi and the twenty-three great serpents of the Pyramid formulæ, or the other reptiles named in the rest of the sacred literature; it can be demonstrated for demons like the cat of the sacred tree *ashdu* in the famous ch. xvii. of the Book of the Dead, and for all the principal demons in the descriptions of the other world. Each one is in every way a true god from the time that it has a name, both for its life and for its aspect. Power, the amount of reverence inspired, and the importance of functions are only questions of degree, insufficient to separate, in this religion, a number of humble gods from demons. Even specialization in a unique or momentary action is not a criterion. Naprit, demon of harvests, Ranninit, Maskhonit, the 'Seven Hathors,' and many others of this type are deities rather than demons, from the very fact that they have names; and, if the cult they receive is humbler than that of other gods, it is identical in conception and form. (Here there is a noteworthy difference from what is said of Semitic spirits by Lagrange, *Rel. sém.*[2], Paris, 1905, p. 16.)

We may now class the innumerable personalities mentioned in the Egyptian texts not among the demons and spirits, but, more rationally, as gods. The following are the chief: the spirits of the seasons, months, days, hours, *decani* (see CALENDAR [Egyp.]), the winds, planets, stars, etc. The astrological nature of nearly all these entities will be noticed by all, and confirms what we have seen of the stellar character of numbers of these groups of spirits before polytheism. The texts show, further, that a number of those spirits, escaping the secondary character of the mass, were treated exactly as true gods by the Egyptians, with a tendency to be assimilated to the principal great gods. It will be observed also that the demons remaining in anonymous groups still retain some worship on certain occasions in the historic epoch. Under the Memphites, for example, there are priests of the 'spirits' of Heliopolis, Buto, and Nekhen (=el-Kab).

The fact that demons become gods by a process of 'emergence' goes a long way to explain why there are not in Egyptian religion, as in other religions, lists and hierarchies of demons and angels. Not only is there nothing resembling the sort of fixed castes of angelologies or demonologies of other races, but there are not even chiefs of groups or protagonists, like, *e.g.*, the Chaldæan demon of the south-west wind. The fact is that, as soon as a primitive group attained to importance in the gradual comprehension of the world-forces, it detached a god from itself, who absorbed his group entirely or became a chief; so that the demons, good and bad, always arise directly from a god, and naturally share his character and attributes.

6. Rôle and character.—Just as the demons have at first no hierarchy, so they have no general characteristic rôle, no functions of general cosmogony, directed for or against the harmony of the *κόσμος*. The distribution of their activities into functions that are always very limited and highly specialized is a strong proof of the antiquity of their formation. Their power does not go the length of raising a scourge like a tempest (see above), or, like the Indian demons, of preventing rain. This paucity of attributes, in a character otherwise always material, and this distribution of groups of spirits without classification, make it quite comprehensible how their final rôle, and their good or bad aspect depended, in the era of polytheistic formations, upon the relative character of the gods round whom they were grouped, since such a god was simply the synthesis of the activities of which the demons were the analysis. The god himself was at first of vague significance as regards his general rôle in the progress of the world; it was only when he had acquired a more precise energy that he brought along with him his troop of demons—good or bad for man. It would thus be precarious to attempt much precision regarding Egyptian religions. The necessarily *un-moral* character of the spirits does not allow of any classification which would arrange them by 'angelology' and 'demonology'—these terms being used with a moral signification. Even in the historic period their original character remained ineffaceable: the demons were, first of all, the inhabitants of a place or an object, the guardians of a locality, of a door, a passage; they ended, more or less, by having a god as sovereign; while they modelled themselves on his nature and tendencies. But one point is clear, that they are subject to their god, and consequently favourable and subject to his relatives and friends, and hostile to others. They are, then, good spirits for the living or dead man who is assimilated by worship or magic to the congregation of their master, bad spirits to all others; and the whole Book of the Dead, which has not the least moral character (even the famous ch. cxxv. of Confession), is essentially neither more nor less than a series of proofs that magic alone is capable of winning over the demons of the other world, and making them defenders of the dead, or at least submissive spirits. Nothing shows the persistence of these conceptions so well as certain passages, preserved down to the historic period, in which, *e.g.*, the demon, 'the serpent who devours souls,' is considered dangerous to the sun itself, which has to take great care when passing over its back (Tomb of Seti I., third hour of hell; theology has invented symbolic explanations, but the primitive fact is clear).

7. Final organization.—The organization of all these incoherent spirits, united by chance facts (and by nothing but facts) around multiple gods of early polytheism, was the result of great labour. It must have taken local theologians a long tale of centuries; nevertheless it always presented great gaps. It can be partly reconstructed by the help of the texts of the Memphite and proto-Theban coffins. The unifying of provincial eschatologies under the form of the Theban 'Book of the Dead' or of the various 'Books of the Under World' ('Hours,' 'Doors,' etc., of the royal hypogees, etc.) has been one of the greatest aids to this work of harmonization, which adjusted the demons more or less successfully to the gradual conception of the *κόσμος*.

This formation of armies of good and evil, being the final characteristic of unified Egyptian religion, is too important to be studied in connexion with demons alone. It will be treated in the art. DUALISM (Egyp.). For the understanding of the present article we may note here only the following facts: the grouping around the sun and his companions of former adjutant demons of the Stars, or vassals of Thoth, Horus, Hathor, etc.; the inverse grouping, around the Great Serpent Apōpi and his officers, of the chief demons opposed to the sun. Finally, a god of order and light, Osiris-Rā, is opposed, with all his allies, to a Sit-Apōpi, the prince of evil and darkness, and the enemy of order. The struggle continues without truce and with its fixed dates (see CALENDAR [Egyp.]), until, in the last period, Sit-Apōpi becomes confused in Coptic religion with Satan. This dualism, already developed in the Theban era, throws light upon the representations of the under world of this period, in which armies of demons, under command of Rā, tear, stab, decapitate, slaughter, and burn legions of the damned.

The damned are not sinners in the moral sense, but adversaries of Rā, conquered enemies. This task was reserved for the last centuries—to transform hostility to the sun, Rā, into hostility to the moral law of Rā-Osiris; but the task was accomplished (see DUALISM [Egyp.]). Even the forty-two judges of the Negative Confession are only silent demons with no moral rôle, and quite artificial; and Shait, the demon who devours the souls rejected by Osiris, is only an entity with no moral character.

The absence of a part in the good or evil of the moral world appears still more clearly in the conception of the rôle of demons in connexion with the living. There is no single Egyptian text in which they have any part in the sins of men, or in suggesting evil thoughts, or even, as in Assyria, in sowing seeds of envy, misunderstanding, and family quarrels. They are restricted exclusively to physiological evil.

Petrie's remarkable book, *Personal Religion in Egypt before Christianity* (London, 1910), shows, however, a class of demons in the hermetic literature who play a perverse part (see pp. 42, 49, 54, 86, 115, 166). But, in spite of the author's efforts to assign the first compositions to a very ancient period, the earliest date he can reach (5th cent.) merely succeeds in showing the coincidence of these new ideas with the Persian dominion; this emphasizes the resemblance between these non-Egyptian characters and the teaching of the Persian religion. We may add that at no time in Egyptian religion is the army of demons ever seen increasing its ranks by the soul of a single sinner.

8. Popular demonography.—The phase of demons which has attracted the keenest attention of Egyptologists is their rôle in popular life and literature and in current magic. The causes of this are the abundance of information furnished by papyrology, the picturesqueness and precision which such documents give to the knowledge of Egyptian life, and the data they supply for the study of magic. From a comparative point of view, however, such a study does not exhibit many of the characteristic traits. An account—even highly condensed—of the activity of demons in Egyptian life or superstition would require considerable space (see CHARMS AND AMULETS [Egyp.], MAGIC [Egyp.]). As everywhere, here the demons are at the command of the magician, to bring about dreams and illnesses, human or animal; or else they themselves cause these phenomena, just as they cause madness and epilepsy (see DISEASE AND MEDICINE [Egyp.]).

The horoscopic or simply superstitious influence of days, the force of the voice, the sensitiveness of demons to song, to the *carmen*, the chant, are facts that apply to all popular religions. The purely Egyptian traits are not many: the demons have sex (see Hierarchic Papyrus); there are none of the sexless demons of Assyria. The popular literature (see the Story of Satui-Khamois) seems to indicate the possibility of belief in *incubi* or *succubæ*, but the passages, which are very numerous, require to be discussed carefully. The threatening aspect of demons in connexion with infants (see CHILDREN [Egyp.]; also Berlin Papyrus, 3027) is also the same as appears elsewhere. On the other hand, we must remember the restrictions made above—the abundance of demons in the magic and literary papyri is not to be taken as a faithful picture of the actual life of the Egyptians. It will be noticed, further, that the Egyptians never mention demons who are wantonly cruel, or thirsting for blood, death, and carnage, as in Chaldæo-Assyria, or demons who dare to *attack* the gods (the combats between Rā and the demons of Apōpi are *antagonism*, which is a different thing). The purely animistic character of these demons, struggling to live on their own account, but never doing evil for evil's sake, is worth noting. Finally, the sum of all the innumerable details supplied from Egyptian evidences shows us a state of affairs (1) differing only by attenuation from that of the ancient civilizations of the classic East or the societies of the savages of modern Africa, and (2) somewhat similar to the classical Mediterranean civilizations of the Europe of the Middle Ages or of the Renaissance.

As in all religions during decline, we observe at later epochs the growth of demoniacal beliefs in connexion with black magic, and in opposition to the official cults. The combination of Egyptian with other Asiatic or Mediterranean demonologies shows itself in the demotic papyri, and particularly in the *tabellae devotionis* (see MAGIC [Egyp.] and, provisionally, Budge, *Egyptian Magic*, or Erman, *Die ägypt. Rel.*, ch. vii.).

9. Ghosts.—The complexity of the Egyptian notion of personality is an initial difficulty in the way of classifying the phenomena relating to ghosts. The eight or nine elements which, in the historic period, constitute a person (see BODY [Egyp.]) have each their fate, form, and habitation in the second existence. The only one of these that concerns our present purpose is the *khu*.

The etymology of the word *khu* is still very doubtful, and we cannot deduce any indication whatever of the primitive rôle from the radical meaning of the word. The sense of 'luminous,' 'brilliant,' has suggested to several authorities the explanation based on the phosphorescence of putrefying flesh, or on the will-o'-the-wisps playing in certain parts of Egypt on the skirts of the desert, supposed to be the favourite haunts of ghosts. A loftier interpretation has been proposed, taking the word *khu* as a brilliant spark, a part of the solar substance. But this seems to involve the theological speculations which played upon the amphibological meaning of the word when solar theories held the first rank in eschatological doctrine. The signification '*honoris* or *timoris causa*,' which would attach a complimentary meaning of 'resplendent' or 'glorious' to the epithet *khu* given to the ghosts of the dead, seems more probable, but has never yet been definitely proposed by the Egyptological School. The present writer would suggest, finally, a connexion between this name of 'luminous,' which is the intrinsic meaning of *khu*, and the special soul 'which shines in the eyes,' and to which a great many peoples accord a particular personality. The observation of the difference between the lustre of the living eye and the dullness of the dead eye suggested, in Egypt as among those peoples, the idea of a special 'soul-force' having magic virtues of its own (which would justify, besides, all the magic relating to the power of the look), and continuing to live after death with the various attributes which we accord to ghosts. There is, however, no formal proof by texts of this explanation.

The *khu* is generally a wretched being. It has never been credited with a lofty rôle. It is *a priori* a wandering, unhappy, hungry being, a sort of outcast from the great crowd of the dead and other 'spirits'—such as a dead man, *e.g.*, whose grave has been destroyed, and whose soul, double, etc., have perished by privation or by the attacks of monsters. Accordingly, we never find the *khu* of a king or a nobleman appearing in the texts in the rôle of 'ghost,' as this rôle is always a humble and maleficent one. The attributes of the Egyptian ghost, then, reduce themselves finally to those of harmful demons, and agree very largely with what is believed on the subject in all religions. Ghosts afflict people with 'demonic possession' in all its varieties; they torment in dreams (*q.v.*); they find their way into the interior of the body of living people, and cause innumerable ills (see DISEASE AND MEDICINE [Egyp.]); they appear suddenly to terrify the living, especially at certain hours of the night, and preferably in the neighbourhood of cemeteries, or in places reputed to be their favourite haunts (cf. Maspero, *Contes populaires*, *passim*); they attempt to violate any woman they can take by surprise in a lonely place (*e.g.* one of the chapters of the Book of the Two Ways, in which a magic power is accorded the *khu* 'of taking by force any woman he wants'); or, in order to devour living substance, they throw themselves into the body of beasts, excite them to frenzy, and cause them to die; the *khuu* of women dying in child-birth aim especially at causing infants to die (cf. the curious formulæ of the papyrus *Zaubersprüche für Mutter und Kind*, published by Erman, 1901; see also Erman, *Religion*, p. 158, etc., for other good examples of the part played by ghosts; this belief is analogous to numerous beliefs throughout all Africa). The *khuu* of suicides, executed criminals, unburied dead, and shipwrecked sailors are particularly tormented and miserable. It was to them that the magician of the later centuries applied by preference—conjuring, invoking, and putting them at his service for his thousand and one evil purposes:

tormenting in sleep, causing death by enchantment or by fever, assisting lovers to exact vengeance, or helping those who wished to attract or recall an unfaithful mistress (cf. the series of *tabellae devotionis*, the dominating Egyptian element in which is nevertheless tinged with magic of Asiatic or North African origin). The baleful activity of all these ghosts is naturally specially excited at certain unfavourable times in the calendar (see CALENDAR [Egyp.]), and they come in their hordes at these times to join the troops of evil 'spirits' struggling against order (see DUALISM [Egyp.]), just like a band of plunderers accompanying the real combatants. Very seldom do we find mention of a *khu* playing the simple inoffensive part of a ghost (Budge cites one example, in *Egyp. Magic*, Lond. 1899, p. 219, of a *khu* which points out to a mortal a suitable place for building a tomb), this form of activity being reserved especially for the 'doubles' and the 'souls' (see STATE OF THE DEAD [Egyp.]).

10. **Conclusions.**—The original complete confusion of troops of demons (or spirits) with the earliest gods has been affirmed repeatedly in this article. On the other hand, it has been said that the spirits of the dead were confused with the demons as to habitat, needs, functions, character, and powers. This double assertion would require a more detailed demonstration than is here possible. Presented thus in a condensed form, it seems to lead, by syllogism, to an equating of the spirits of the dead with the first gods, in whole or in part. But, as a matter of fact, no theory of Egyptian religion could be more contrary to truth or more capable of vitiating all knowledge of that religion. Never at any time or under any form did the Egyptian dead become gods. The case of the sons or heirs of gods (chiefs and kings) belongs to an entirely different category, and the confusion of the dead with Osiris, or some other of the gods of the dead, by magic or by religious process is either an euonymous assimilation or an absorption of the dead man's personality by an already existing god. It is, therefore, absolutely necessary to insist on the fact that the demons and spirits, the original forms of the Egyptian gods, have nothing to do with the spirits of the dead in their essential nature, but merely resemble them in the aspects of their activity (see STATE OF THE DEAD [Egyp.]). Between the nature of 'spirits' and 'demons'—all those myriads of beings, this 'dust of gods' from which the gods sprang—and the nature of the spirits of the dead there is an impassable limit set which Lang has called 'the abyss of death.' The spirits, or *khuu*, of the Egyptian dead come from beings who did not exist before their birth on earth, who have known physical death, and are liable to suffer the 'second death,' or final destruction. None of these three characteristics can be applied to the demons or genii any more than to the first of the actual gods, who became detached from their various innumerable troops of spirits. Later theologies credited the gods of the historic period with having been born, and even attributed to Osiris or his mythological 'doublets' a physical death. They never touched on the third characteristic. And, on the other hand, Egypt never knew of an ordinary mortal who became a god, or for whom there was such a possibility even under the humble form of a demon.

LITERATURE.—The provisional state of the sources and evidence regarding demonology has been noted in the course of the article. The whole theory of spirits has never been gathered together in one work; views on the spirits, however, are scattered through all the works that discuss Egyptian religion. We may only mention, among those in which the information is more specially grouped, the following: E. Amélineau, *Prolegomènes*, Paris, 1908 (where an exactly opposite euhemeristic theory is supported at length); E. A. W. Budge, *Egyptian Magic*, London, 1901, *Gods of the Egyptians*, do. 1904, *Liturgy of Funerary Offerings*, do. 1909, *Opening of the Mouth*, do. 1909, and *Book of the Dead*, do. 1902; A. Erman, *Die ägypt. Relig.*, Berlin, 1905; G. Maspero, *Études de mythol. et d'archéol*, vol. ii., Paris, 1893, and *Contes populaires*[4], do. 1908; W. M. F. Petrie, *Religion and Conscience in Ancient Egypt*, London, 1898. A certain number of details are given in the manuals of Egyp. religion of Ermoni (Paris, 1910), Petrie (London, 1906), Virey (Paris, 1910), and A. Wiedemann (Münster, 1890). The documentation proper naturally fills the whole series of Egyptological monumental bibliography. See especially, besides the works already mentioned, E. Lefébure, *Hypogées royaux de Thèbes*, Paris, 1883; and P. Lacau, *Sarcophages antérieurs au Nouvel Empire*, Indexes, Cairo, 1903–1906.

GEORGE FOUCART.

DEMONS AND SPIRITS (Greek).—Students of Greek literature cannot fail to be impressed by the complex system of the Olympian theocracy, and by the richness of legendary fable which envelops it. In variety of detail and precision of outline it seems to be separated by long periods of development from the vague beliefs and rude ceremonies which characterize the religions of primitive man. But, while it is certain that the Greek gods, as they appear in literature, are the product of a long course of evolution, beliefs in the existence of various supernatural beings, which belong to an earlier stratum of religious thought, and can be paralleled from the records now available of savage superstitions, continued to maintain themselves during historical times. Of these intermediate beings the most important are those known as demons.

1. **In early times.**—In early religion the most powerful forces are those which are comprehensively attributed to Animism. To these belong the notions that all natural objects are informed with a living principle akin to the human soul, and that the souls of the dead continue to visit the haunts with which they were familiar in life. To the operation of these spiritual powers are ascribed such of the vicissitudes of life as cannot be explained by visible agencies. Similarly, it is inferred that the soul of a living man may be temporarily detached from its normal habitation in the body, as in sleep or trance; and that the bodies of the living may be possessed by alien spirits, as in epilepsy, lunacy, or hysteria. There is plenty of evidence that beliefs of this kind flourished in ancient Greece as vigorously as they have survived in mediæval and modern times; and the general name of 'demons,' which the Greeks gave to certain of these invisible but potent spirits, has been adopted by modern writers, who employ the term 'demonology' to describe the science relating to supernatural beings with a nature intermediate between that of gods and men.

But, in the exposition of these beliefs, we are met with difficulties arising from the nature of the evidence. We cannot reach the crude fancies of the vulgar in their original form, but are obliged to view them through the transfiguring medium of literature. The rationalizing genius of the race stands in our way. The notices relating to demons are drawn, for the most part, either from the writings of philosophers, who endeavoured to harmonize current superstitions with their own interpretation of the universe; or from poetry, where the creative imagination insensibly tones the simple outlines of the popular conception.

The earliest text requiring notice is the passage of Hesiod (*Op.* 122 ff., 251 ff.) in which he identifies the demons with the souls of those who lived in the Golden Age. They are described as continuing in the upper world, kindly guardians of men, distributors of prosperity and wealth, but wrapped in darkness so as to be invisible while they wander over every region of the earth. Here we meet the statement that the demons are the souls of the dead, overlaid with the legend of the Four Ages and the deterioration of mankind. For the popular belief on which it rests we must refer to passages

where the Greek δαίμονες is employed, like the Latin *manes*, to denote the spirits of the departed (Lucian, *de Luctu*, 24; for the evidence of inscriptions, where θεοῖς δαίμοσιν = *dis manibus*, see Roscher, i. 929; Frazer, *Pausan.*, 1900, iv. 24). The literary evidence is hardly less conclusive, when we find Darius and Alcestis described as demons in reference to their condition after death (Æsch. *Pers.* 623; Eur. *Alc.* 1003), and when the Muse prophesies that Rhesus, though dead, shall rest hidden in a Thracian cave as a man-demon (ἀνθρωποδαίμων, Eur. *Rhes.* 971). See, further, Usener, *Götternamen*, p. 248 ff.; a somewhat different view is taken by Rohde, *Psyche*[4], i. 95, 153. As the shades of ancestors, so long as they are treated with due respect, are expected to show favour, a reference to the 'good demon' sometimes implies nothing more than this (Waser, in Pauly-Wissowa, iv. 2012). But the good demon also appears in circumstances which cannot be associated with ancestor-worship. In Bœotia a sacrifice to the good demon was made the occasion for first tasting the new must (Plut. *Qu. Conv.* iii. 7. 1, p. 655 E); and at Athens it was the custom after dinner to pour out a small libation of unmixed wine in his honour (Aristoph. *Eq.* 85, etc.). At other times he is the personification of good fortune, as the protecting spirit of a community, a family, or an individual; in this sense, Nero arrogated to himself the title of 'good demon of the world' (*CIG* iii. 4699). See Rohde, i. 254 f.

With the various manifestations of the good demon we may contrast cases where the influence of the spirit was pernicious. An evil spirit was often conceived as a ghost.

A good illustration is afforded by the story of Euthymus the boxer, who fought with a 'hero' enshrined at Temesa in S. Italy. This was the ghost of one of Odysseus' crew, Polites or Alybas, who had been stoned to death by the people of Temesa for ravishing a girl. Every year the ghost required the dedication to him of the fairest maiden in Temesa as his wife, which was yielded by the townsfolk in order to save themselves from his wrath. The practice was of immemorial antiquity at the time when Euthymus chanced to come to Temesa, and, having entered the temple, saw the maiden, and fell in love with her. So Euthymus put on his armour, and, when the ghost appeared, withstood his assault and vanquished him; and the hero, driven from the land, plunged into the sea, and was never seen again. Pausanias, who tells the story (vi. 6. 7–11), as well as other authorities (Strabo, p. 255; Suid. *s.v.* Εὔθυμος), had seen a picture illustrating the event which he records, and, in the course of describing it, he quaintly remarks: 'The ghost was of a horrid black colour, and his whole appearance was most dreadful, and he wore a wolfskin.' The ghost-idea is less prominent in the story of the demon of Anagyrus, one of the Athenian demes, who destroyed the family of a neighbouring peasant for a trespass committed on his sanctuary (Suid. *s.v.* Ἀναγυράσιος δαίμων).

Hesiod (*Op.* 159, 172) distinguished between 'heroes' and 'demons,' and later philosophical speculation treated demons as belonging to a higher grade of dignity (Plut. *de Def. Or.* 10, p. 415 B). But in stories like the above the two terms are used without distinction; and heroes as ghostly beings were considered so dangerous that persons passing by their shrines were warned to keep silence, lest they should suffer injury (Hesych. *s.v.* κρείττονας). The belief that a hero is incapable of conferring blessings, and is only powerful to work ill, is enforced by Babrius, *Fab.* 63.

Other evil demons are represented as specially attached to an individual. Thus, the dread and strange vision of monstrous and fearful shape which appeared to M. Brutus in his last campaign announced itself to him as his evil demon (Plut. *Brut.* 36). Or an avenging demon may be the instrument appointed to punish the crimes of a particular family, as when, in the *Agamemnon* of Æschylus (1477), after the murder of her husband, Clytemnestra boasts that she herself is the incarnate demon of the Pelopids, 'so gross with o'ergrown flesh.' In such capacity the evil demon often bore the special title of 'Alastor'; and in the *Persæ* (357) the slave Sicinnus, who entrapped Xerxes into a fatal manœuvre, so that he lost the battle of Salamis, is described by the Persian messenger to Atossa as having been inspired by an *alastor*. Sophocles, in referring to an action impossible for any one but a madman, does not hesitate to say: 'Who would choose this, unless maddened by *avenging fiends*?' (ὅστις μὴ 'ξ ἀλαστόρων νοσοῖ [*Trach.* 1235]). It would be easy to multiply instances where demonic agencies are made responsible for good or evil fortune; and it is not surprising that the prevalence of such opinions opened the door to chicanery and imposture. Among the crowds of oracle-mongers, diviners, and interpreters of dreams, who swarmed at Athens during the latter part of the 5th cent. B.C., were some who professed to foretell the future by the agency of familiar spirits obedient to their summons. A notorious instance was Eurycles the ventriloquist (ἐγγαστρίμυθος, στερνόμαντις), who, by giving utterance to his oracles in a feigned voice, persuaded his hearers that they were the pronouncements of a demon lodged within his own breast (Aristoph. *Vesp.* 1019; Plat. *Soph.* 252 C and the scholl.). This proceeding corresponds exactly with the methods of savage magicians, as reported by E. B. Tylor in his article on 'Demonology' (*EBr*[9] vii. 63).

The notion of a guardian spirit, which watches over a man from his birth, directs his actions, and may be either friendly or hostile, was widely entertained among the Greeks. It is best expressed in the famous fragment of Menander (550 K.): 'By every man at birth a good demon takes his stand, to initiate him in the mysteries of life.' This is not a literary fancy, but a popular opinion: 'There are many who have a craven soul, but a good demon,' says Theognis (161). Or we may appeal to Pindar, a witness of a very different type (*Pyth.* v. 122): 'The mighty purpose of Zeus directs the demon of those whom he loves' (see W. Headlam, in *JPh* xxx. [1906] 304; Rohde, ii. 316; Usener, 296). But, in regard to the force of particular passages, there is room for disagreement. The word δαίμων is used in such a way that it is often difficult to seize its exact significance in a particular context. Thus, besides bearing the special meaning with which we are now concerned, it may be employed either (1) as a synonym of θεός, distinguishable, if at all, as expressing the Divine power manifested in action rather than the Divine personality as an object of worship; or (2) in the abstract sense of *destiny*. Yet, although we may sometimes hesitate (as, *e.g.*, in Eur. *Ion*, 1374, *Supp.* 592) between the abstract and the concrete meaning, with a view to the selection of an English equivalent, it is unlikely that to a Greek the word ever became so colourless as the tr. 'fate' or 'destiny' suggests. That this was the original sense, as has been suggested in recent times (Gruppe, *Gr. Mythol.* 991, n. 4; see, however, Usener, 292), is hardly credible.

We have seen that the belief in the separate existence of the soul after death leads to the assumptions that the souls of the dead are powerful over the living, and that other potencies of a similar character, spirit-like but not souls, exist independently and visit the earth. A further step is taken when these demons are regarded as capable of entering into and possessing human bodies (Gomperz, *Greek Thinkers* [Eng. tr. 1901], ch. i. §§ 5, 6). This may be illustrated by the various instances in which the human representative is permanently or temporarily identified with the Divine being whose power he assumes. Hermes became incarnate in the ministrants at the oracle of Trophonius at Lebadea (Pausan. ix. 39. 7), Bacchus in the *mystæ* (schol.

on Aristoph. *Eq.* 408). Similar is the inspiration drawn from the chewing or eating of magic substances, such as the laurel leaves sacred to Apollo (Soph. frag. 811, etc.), or the honey which inspired the Thriæ on Parnassus (Hom. *h. Herm.* 560). These are special applications of the general belief in demonic possession, which is implicit in the use of the adjectives *εὐδαίμων*, *κακοδαίμων*, etc., and is expressed by that of the verbs *κακοδαιμονᾶν*, *δαιμονίζεσθαι* (Soph. frag. 173), and *δαιμονᾶν* (Eur. *Phœn.* 888, with the present writer's note). The demon which took possession of a man's body was sometimes conceived as a fiery spirit, which raised the blood to a condition of fever. Hence the fiery emblems of love (Gruppe, 849, n. 7), which permeates the frames of its victims with a feverish ecstasy. Hippocrates found it necessary to combat the superstition that epilepsy is due to some god—Poseidon, Apollo, Ares, or Hecate—having taken possession of the sick man (*Morb. sacr.* 592 K). Phædra's wasting sickness is attributed by the chorus in the *Hippolytus* of Euripides to possession by Pan, Hecate, the Corybantes, Cybele, or Dictynna (141-147); and the sudden illness of Glauce, described in the *Medea*, was thought by those present to have been caused by the anger of Pan (1172). See also Usener, 294.

2. In the classical age.—The Olympian religion, if we may call by this name the impression which we receive from Greek literature about the ordinary beliefs of the classical age, is a composite structure, largely built up by the transference from past generations of elements on which time has worked an essential change. The demons passed into gods; the shadowy gods became definitely conceived personalities. A good illustration of this process may be taken from the development which can be traced in the notions entertained of the Nymphs (Gomperz, i. 26). The Oreads, Dryads, and Naiads owe their origin to the fetishism which believes that every natural object is endowed with a living spirit. In course of time the spirit is separated from its environment: the Dryad, for example, inhabits the oak, but the oak itself is no longer animate. But the indwelling spirit has not yet become immortal; the Dryad cannot outlive the oak (Hom. *h. Aphrod.* 257; Apoll. Rhod. ii. 481). A later stage has been reached when Homer describes how the Rivers and Nymphs were summoned by Zeus to join the conclave of the immortals (*Il.* xx. 7 ff.). We need not pause to illustrate the process by which a tribal deity has been elevated to national dignity, or a god with limited powers has merged his identity in the attributes of an Olympian. Other demons have taken subaltern rank in the celestial hierarchy, as when the Corybantes are classed as the attendants (*πρόπολοι*) of Rhea (Strabo, 472), and the Satyri attach themselves to Dionysus. *Eurynomus*, a grisly demon who ate the flesh of corpses, was painted by Polygnotus among the inhabitants of the lower world; he was blue-black in colour like a carrion-fly, his teeth were bared, and he was sitting on the skin of a vulture (Pausan. x. 28. 7). Dionysus was sometimes attended by *Akratos*, the potent spirit of the unmixed wine (Pausan. i. 2. 5); and Aphrodite by *Tychon*, perhaps the spirit of good luck, not unlike our Puck or Robin Goodfellow (Gruppe, 853, n. 2). Even the hell-hounds of Hecate are recognized as evil demons (Euseb. *Præp. Evang.* iv. 23. 7, 8).

It has recently been contended (Farnell, *CGS* v. [1909] 444) that the personification of abstract ideas as Divine beings claiming our veneration and worship is to be explained as due to the demonic power which was attributed by a primitive habit of mind to any outbreak of excessive emotion. Typical cases are quoted from the ceremonial observances paid in various parts of Greece to Shame, Pity, Laughter, Fear (Pausan. i. 17. 1; Plut. *Cleomen.* 9). If the suggestion is correct, it throws a remarkable light upon the development of Greek psychology. It is easier to recognize primitive ideas in the deification of Madness (Pausan. viii. 34. 1) and Hunger (Plut. *Qu. Conv.* vi. 8. 1, p. 694 A). The Maniæ are supposed by Pausanias to be the Erinyes under another title, as producing frenzy in their victims. But Hunger is hardly to be explained as the concrete embodiment given to the sufferings of starvation. Rather we should infer that the failure of the crops through drought, and the wasting of the flocks and herds through disease, were taken as irrefragable testimony to the operation of a malignant and supernatural power. In order to avert such a calamity, an annual expulsion of a disease-laden scapegoat in the character of a slave, who was beaten with rods of willow to the words of the refrain, 'Out of doors with famine, and in-doors with plenty and health!' took place at the town of Chæronea in Bœotia. Plutarch, in the passage quoted above, tells us that he had himself performed the ceremony when holding the office of chief magistrate. For its significance, see Frazer, *GB*², 1900, iii. 124ff.

Again, as the crude fancies of primitive superstition ceased to correspond with advancing enlightenment, they tended to gather round them the details of legendary adventures, and to become associated, in the record of a mythical past, with particular localities or heroic names. The Sphinx, a ravening monster, compact of indigenous stories of a destructive dragon fused with Oriental or Egyptian elements, was localized in Bœotia and connected with the story of Œdipus. The Harpies or 'Snatchers' (Hom. *Od.* xiv. 371), another composite notion in the evolution of which wind-demons and death-angels had taken part, survived ultimately for their share in the punishment of Phineus, which was related as an incident in the voyage of the Argonauts. They are nearly related to the Erinyes and the Sirens—both chthonic agencies; but, whereas the belief in an avenging spirit punishing homicide survived longer, and has preserved the Erinyes in literature as a potent spiritual force, the Sirens soon passed into the region of fairy-land, and were remembered chiefly from Homer's description of them in the *Odyssey*. The Gorgons—also under-world powers and storm-spirits—are hardly known to tradition except through the adventures of Perseus.

Besides these, there was a whole host of sprites, bogeys, and hobgoblins which remained nearer to their primitive associations. Their names are generic rather than personal, and they were rarely dignified by a connexion with some heroic tale. Such was *Empusa*, a demonic apparition that appeared sometimes at mid-day and sometimes by night. She had the power of continually changing her shape, but could be detected, it would seem, by the donkey's leg which was her constant attribute (see Dem. xviii. 130; Aristoph. *Ran.* 289 ff.). *Gello*—a name which has been compared with the Arabic *ghoul*—was a spectre which kidnapped children. Almost unknown to literature, the name lasted through the Middle Ages, and survives in some localities down to the present day (Maas, in Pauly-Wissowa, vii. 1005). Somewhat more familiar to us is *Mormo*, a bogey of the nursery, invoked to frighten children (Theocr. xv. 40; Xen. *Hell.* iv. 4. 17)—perhaps a hypocoristic form of Mormolyke—a werwolf (*μορμολύκεια*, Plat. *Phædo*, 77 E, etc.). Another bogey-name is that of *Lamia*, who was said to have the remarkable power of taking out her eyes and putting them back at pleasure. She also was a kidnapper and murderess of children, and is sometimes identified with Mormo and Gello, as if these were different names of the same monster. But in Lamia there are more traces of a definite personality; and she has almost become a mythical heroine, as a Libyan queen beloved by Zeus, whose children were killed by Hera, and who in consequence revenged herself by killing other children (see Didymus *ap.* schol. Aristoph. *Pax*, 758). To the same class belonged *Acco* and *Alphito*—words of doubtful meaning which perhaps signify 'booby' and 'grey-head' (Chrysipp. *ap.* Plut. *de Stoic. rep.* 15, p. 1040 B). *Ephialtes* was the name given to the spectre in-

vented by the ignorant to account for the nightmare which results from indigestion; and he is not always distinguished from *Epiales*, the cold shivering-fit which preceded an attack of fever (Aristoph. *Vesp.* 1037). Ephialtes was sometimes figured as the long-eared owl (ὦτος). Owls (στρίγγες) were regarded as birds of evil omen (*Poetæ Lyrici Græci*[4], ed. Bergk, Leipzig, 1878–82, iii. 664), and as embodiments of the spirits of the dead which appear by night to suck the blood of the living—a superstition which survives in modern Greece.

For the conception denoted by *Keres*, which is closely allied to, and largely co-extensive with, the present subject, see the article under that title.

3. In the hands of the philosophers.—We have now to examine how the popular belief in demons was treated by the philosophical schools. Thales is credibly reported to have said (Arist. *de Anima*, i. 5. 411*a* 8) that all things are full of gods, and it is hardly to be doubted that in so maintaining he sought to explain Animistic beliefs by the application of rational principles. By the Pythagoreans a belief in demons was always fostered, especially in their character as representing the souls of the dead. They entertained no doubt that such demons were visible as if in actual bodily presence, and were surprised that any one should deny that he had ever seen a demon (Arist. frag. 193 [Rose]). All the air, they said, is full of souls, and these are called demons and heroes. It is they who send dreams and signs of disease and good health not only to men, but also to sheep and cattle. With them relations are established by purification and expiation, by divination and by omens (Diog. Laert. viii. 22). Hence Aristoxenus (Stob. *Flor.* 79. 45) is following Pythagoras when he recommends the worship of gods and demons, and the Golden Poem places the heroes and subterranean demons, *i.e.* the souls of the dead, after the gods, but as worthy of honour corresponding to their degree. Later doxographers (Aët. *Plac.* i. 8. 2) join Pythagoras with Thales, Plato, and the Stoics in holding that demons and heroes are spiritual substances, or souls separated from bodies, and that there are good and bad demons corresponding to the same varieties of soul. There is also attributed to Pythagoras the fantastic notion that the sound emitted from a brass gong when struck is the voice of a demon shut up within the metal (Porphyr. *Vit. Pyth.* 41). The popular idea of an indwelling demon, by which a man is possessed or controlled, was refined and interpreted by several philosophers. To Heraclitus (frag. 119 [Diels]) is ascribed the pregnant saying that 'character is each man's demon,' his inner self is his true divinity, and his fate is moulded by his own individuality. The same thought is expressed by Epicharmus in a simpler form: 'His disposition is to each man a good or bad demon' (frag. 258 [Kaibel]). Similar but less striking is the saying of Democritus that 'blessedness dwells not in herds or gold, but the soul is the dwelling-place of the blessed being' (frag. 171 [Diels]). Democritus (Sext. *adv. Math.* ix. 19) explained the belief in gods by degrading them to the level of demons, which he held to be material images perceptible to our senses, long-lived but not immortal. Empedocles speaks of the wanderings of wicked demons, which have been cast out of the abodes of the blest but return there after a banishment of 30,000 years, during which they pass through various stages of incarnation (frag. 115, 2). These δαίμονες, as Hippolytus explains, are human souls; but they are not necessarily separable entities, since the figurative language of the poem requires to be controlled by the materialism of the philosophical system which it expounds (see Burnet, *Early Greek Philosophy*, 1892, p. 271; Rohde, ii. 178 ff.).

Socrates was in the habit of asserting that he was frequently impeded by a Divine sign from taking a particular course of action. This customary sign was imparted through the medium of a warning voice, and was manifested on trifling as well as on important occasions (Plat. *Apol.* 31 D, 40 A). The deduction that Socrates intended to imply that he was guided throughout his life by a familiar spirit, though at one time generally held, has in recent years fallen into disfavour (see Zeller, *Socrates* [Eng. tr. 1868], p. 82 ff.; H. Jackson, in *JPh* v. [1873] 232 ff.). But, whatever may have been the real intention of Socrates, it can hardly be denied that, in a society where the belief in the existence of demons was widely prevalent, to many of his hearers the Divine sign must have suggested such an agency.

Plato, in this sphere as elsewhere, has gathered up the threads of previous speculations and woven them into new combinations by the play of his philosophic fancy. In accordance with popular tradition, he says that the demons are the bastard sons of gods by nymphs or some other mothers (*Apol.* 27 D). The demons are of an airy substance, inferior to the heavenly ether, and serve as interpreters between gods and men (*Epinom.* 984 E). Love is a great demon; like all spirits, he is intermediate between the Divine and the mortal; he conveys to the gods the prayers and sacrifices of men, and to men the commands and replies of the gods (*Symp.* 202 E). This recalls the Pythagorean doctrine previously quoted, and Proclus says it is also Orphic; modern critics have seen in it a mode of reconciliation between the old theology and the new conception of an inaccessible god (Gruppe, 1054). Plato accepts the popular view of demons, as identical with the souls of the dead: when a good man dies, he is honoured by being enrolled as a demon, which is only another form of δαήμων, 'the wise one' (*Cratyl.* 398 B). Every man has a distinct demon which attends him during life and after death (*Phædo*, 107 D, *Rep.* 617 D). Each demon has his own allotted sphere of operation, and watches over his appointed charge like a shepherd over his flock (*Polit.* 271 D, 272 E). The last-quoted passages are drawn from the narratives of the myths with which Plato diversified his more formal arguments, and his true mind is to be sought rather in a passage of the *Timæus* (90 A) in which, with a reminiscence of Heraclitus, he declares that God has given to each man, as a guiding genius, the supreme form of soul within us, the rational faculty which dwells in the summit of our body and lifts us towards our celestial kindred.

Aristotle is reported to have assented to the belief that all men have demons which accompany them during the whole period of their mortal existence (frag. 193 [Rose]); but it is impossible to say whether he attached to it any philosophical importance. Xenocrates agreed with the statement in the *Timæus*, that the soul of man is his guardian spirit (Arist. *Top.* ii. 6. 112*a*, 37); and he also maintained the existence of a number of good and bad demons (Zeller, *Plato*, etc. [Eng. tr. 1876], p. 593). But the school which did most to establish a belief in demons as a part of the mental equipment of its students was unquestionably the Stoic. The Stoics sought with unwearied industry to bring every conception of popular religion into connexion with their own theology; and their doctrine of pantheism enabled them without difficulty to find a place for the demons within their system. They were firmly convinced of the existence of demons, which, having like passions with men, and responding to their desires and fears,

their pains and pleasures, superintended and directed their fortunes (Diog. Laert. vii. 151). These demons are composed of soul-substance, which is not scattered and lost, as Epicurus maintained (frags. 336, 337 [Usener]), at the dissolution of the body, but, having in itself the principle of permanence, is located in the region beneath the moon, and sustained, like the other stars, by the exhalations rising from the earth (Sext. *adv. Math.* ix. 71). Posidonius, who gave particular attention to the matter, explained that human souls after death are not sufficiently pure to reach the upper ether, and are restricted to the lower level, where they congregate among the demons. Hence it is that, with the strictest accuracy, the soul dwelling within the body may be described as the 'demon born with us' (Schmekel, *Philos. d. mittl. Stoa*, Berlin, 1892, p. 256). On the other hand, the Epicureans controverted these fairy-tales: there are no such beings as demons; and, even if there were, it is inconceivable that they would assume human shape, or that it would be possible for them to communicate with us by speech or otherwise (Plut. *Brut.* 37; see, further, Epicur. frags. 393, 394 [Usener]).

In writers of a later period, such as Maximus Tyrius, Apuleius, and Philostratus, the maxims of demonology have come to be commonplaces, partly owing to the influence of the sources which we have enumerated, and partly by the contact with Oriental civilizations, which had become continually more intimate since the beginning of the Hellenistic epoch (Rohde, ii. 364; Gruppe, 1468). Since the demons were regarded as unceasingly active in the service of the gods, they were assigned a definite place in the celestial hierarchy of the Neo-Platonists, as subordinate to angels and archangels (Porphyr. *Ep. ad Arnob.* 10; demons were first associated with ἄγγελοι by Philo, according to Dieterich, *Nekyia*, 61). Hence, as part of the machinery by which the apologists of paganism sought to shore up their tottering edifice against the assaults of the Christians, they appear with considerable frequency in the controversial writings of the early Fathers of the Church.

It is not within the scope of this article to examine the various methods employed by Greek magic for the purpose of averting, deceiving, or conciliating evil spirits. The details will be found elsewhere under the titles CHARMS AND AMULETS, MAGIC, etc. It is only within recent years that the comparative study of anthropology has shown the way by which the future investigation of Greek religion must travel. But the evidence of ritual drawn from literary sources is difficult to appraise; partly because the development of theology tended to obscure the primitive elements, and partly because the ritual facts, even when separated from later accretions, are capable of various interpretations. It is well established that the beating of drums and cymbals, and particularly of various kinds of bronze vessels (schol. *ad* Theocr. ii. 36), was intended to frighten away any demons which might be at hand on important or ceremonial occasions; similarly, the use of iron was effective against demonic influence (Riess, in Pauly-Wissowa, i. 50). When, however, the desire to be on good terms with evil demons is held to be the leading motive in such various rites as sword-dances, the ploughing with magic animals, the smearing of the face with chalk or meal, or the dressing of a boy in girl's clothes (cf. *CR* vii. [1893] 243), it must be remembered that such hypotheses are far removed from certainty. The debatable evidence will be found collected in Gruppe, 894 ff.

For demons in relation to the Orphic cults, see ORPHISM.

LITERATURE.—The main facts are summarized in the articles, *s.v.* 'Daimon,' by von Sybel, in Roscher, i. 938, and by Waser, in Pauly-Wissowa, iv. 2010, where references are given to the less accessible of the special treatises. See also R. Heinze, *Xenocrates*, Leipzig, 1892, pp. 78–123; J. Tambornino, *de Antiquorum Dæmonismo*, Giessen, 1909. Much useful information will be found in O. Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906; J. E. Harrison, *Proleg. to the Study of Gr. Religion*[2], Cambridge, 1909; A. Dieterich, *Nekyia*, Leipzig, 1893, esp. pp. 46–62; H. Usener, *Götternamen*, Bonn, 1896, esp. p. 292 ff.; E. Rohde, *Psyche*[4], Tübingen, 1907.

A. C. PEARSON.

DEMONS AND SPIRITS (Hebrew).—It will be most convenient to divide the material into three periods: pre-exilic, exilic and post-exilic, and Apocryphal.

I. *THE PRE-EXILIC PERIOD.*—1. In the early Heb. poems there is but one allusion to an angel, and none to spirits or demons. The 'holy ones' in Dt 33[2], later supposed to be angels (cf. Ac 7[53], Gal 3[19], He 2[2]), were probably not a part of the original text (cf. Driver, *Deuteronomy*, Edinburgh, 1895, p. 392 ff.). In Jg 5[23] we read: 'Curse ye Meroz, saith the angel of Jahweh.' Probably the angel was a manifestation of Jahweh, as in the J document.

2. Our next earliest evidence is in the *J document*. In Gn 3[24] cherubim are said to have been the guardians of Eden's entrance. There is reason to believe that these beings were personified winds. They find a counterpart in the winged figures of the Assyr. sculptures, which are often pictured in the act of fertilizing the sacred palm tree; hence Tylor suggested that they were winds—a view now accepted by many others.[1] The association of such figures with the tree of life would lead to the view that they were denizens of Paradise, and hence guardians of the tree of life. Apart from the cherubim, no other spirits appear in the early chapters of Genesis, but Jahweh Himself deals directly with men. This is the case in the Eden narrative (Gn 3), the Flood story (chs. 6–9), the confusion of tongues (ch. 11), and the story of Abraham (ch. 15). In the last-mentioned passage Jahweh appears as a flame of fire.

In Gn 16[7] we first come upon the 'angel of Jahweh,' who found Hagar in the wilderness and aided her, but whom, as v.[13] shows, Hagar regarded as Jahweh Himself. The word here and elsewhere in the OT translated 'angel,' *mal'ak*, is from a root which appears in Arabic as *lâka*, and in Ethiopic as *la'aka*, 'to go' or 'send as a messenger.' In this case *mal'ak Jahweh* means a special mission or coming of Jahweh to accomplish a special purpose. The 'angel' is not, accordingly, an angel in the later acceptation of the term.[2] The same is true of the following instances, which all appear in J, or in literature closely akin to it.

In Gn 18 the word 'angel' is not used, but Jahweh is said to have visited Abraham. The 'two angels' of ch. 19 are a later addition to the narrative, and, in the language of a later epoch, describe Jahweh's companions. In Gn 32[24ff.] a 'man' comes and wrestles with Jacob; he is in reality Jahweh, though not formally declared by the text to be so. This 'man' represents a 'mission' or 'coming' of Jahweh, as did the 'angel of Jahweh' in ch. 16. It is probably this 'man' who is referred to in Gn 48[16] as 'the angel which hath redeemed me [Jacob].' In Ex 3[2] the 'angel of Jahweh' appeared to Moses in the burning bush, but it was Jahweh Himself who saw that Moses turned aside to see the bush (v.[4]), and Jahweh who spoke to Moses (v.7). Similarly, the 'angel of Jahweh' appeared in the way to stop Balaam (Nu 22[22-35]). In Jos 5[13-15] a 'man' appeared to Joshua as the captain of the host of Jahweh; he was the same manifestation elsewhere called the 'angel of Jahweh.' In Jg 2[1] the 'angel' or 'manifestation' of Jahweh moved up from Gilgal to Bethel. The 'angel of Jahweh' appeared to Gideon (Jg 6[11]), and it is clear from vv.[21-23] that He was Jahweh Himself. The same is true of the 'angel of Jahweh' who appeared to the wife of Manoah in Jg 13[2ff.]. In 2 S 24[14] David falls into the hand of Jahweh, who turns out (v.[16]) to be His angel.

In all these passages the 'angel of Jahweh' is

[1] Cf. Barton, *Sem. Or.*, London, 1902, p. 91, and the references there given; also Skinner, *Genesis*, Edinburgh, 1910, p. 89 ff.; for a divergent view, see art. CHERUB, vol. iii. p. 508 ff.

[2] Cf. W. E. Addis, *Documents of the Hexateuch*, London, 1892, i. 24, n. 1.

Jahweh Himself, who has come upon some special mission. Perhaps it was regarded as a kind of partial manifestation of Jahweh, but at all events there was no clear line of distinction between Jahweh and His angel. These manifestations of Jahweh were regarded as blessed or beautiful things, so that, when it was desired especially to praise a man, one said to him: 'Thou art good in my sight as an angel of God' (cf. 1 S 29^9, 2 S $14^{17.\ 20}$ 19^{27}). At the same time, the term *mal'ak* was often used to designate the messenger of a king (see 1 S 11^3 16^{19} $19^{11.\ 14.\ 20}$, and cf. 1 K 20^2, Jer 27^3).

In the J document other beings of the Divine order besides Jahweh are represented as real. These are called 'sons of God' (*bᵉnê hā-'elôhîm*) in Gn $6^{2.\ 4}$, where they are said to have taken human wives and to have begotten the heroes who lived in olden days. These beings are not called angels, and do not appear again in pre-exilic literature.

3. In the *E document* the same conditions of thought prevail, though here angels appear at times in numbers.

In Gn 22^{11} an angel called to Abraham out of heaven to prevent the sacrifice of Isaac. The present text calls him the 'angel of Jahweh,' but it is thought that in the original form of the text he was called the 'angel of God.' In Gn 28^{12} Jacob saw the angels of God ascending and descending upon the ladder of his dream, but they were so closely associated with God that he said: 'This is oone other than the house of God.' In Gn 31^{11} the 'angel of God' appeared to Jacob in Aram, but v.^{13} tells us that he said: 'I am the God of Bethel.' The angel was, then, only a manifestation of God. In Gn $32^{1ff.}$ 'the angels of God' met Jacob, and he said: 'This is God's host.' Here apparently the angels were a manifestation of God and of His attendant company of spirits. In Ex 3^{4b} it was God Himself who called to Moses out of the burning bush. In Ex 14^{19} the 'angel of God' who had gone before the camp of Israel removed and went behind. This angel performed the same function as the pillar of cloud in the J document (cf. Nu 20^{16}). That the 'angel of God' was practically identical with God is shown in Ex $23^{20ff.}$, where God declared that His 'name' was in the angel that should go before Israel.

There is, then, no radical difference of conception between J and E. In both of them the angel of the Deity is usually a manifestation of Deity Himself, though in one instance (Gn $32^{1ff.}$) the angels are apparently the spirits who accompany God. In Jg 9^{23} (a passage which G. F. Moore [*SBOT*, New York, 1898] attributes to E), God is said to have sent an evil spirit between Abimelech and the men of Shechem; and similarly in 1 S $16^{14-16.\ 23}$ 18^{10} (a passage which Budde attributes to J) an evil spirit from God is said to have come upon Saul.

4. This last conception is similar to that in 1 K 22^{19-23}, where Jahweh is thought of as surrounded by a host of spirits. These spirits were as yet undifferentiated. They had no moral character; they were neither angels nor demons, but took on their character from the nature of the tasks which they were given to perform. Jahweh Himself was responsible for whatever was done; He lured Ahab to his death; it was at His bidding that one of the spirits became a lying spirit in the mouths of Ahab's prophets to accomplish this end. The spirits of Jahweh's court were not the only spirits in which the Hebrews of the period believed. In 2 K 2^{12} and 6^{17} reference is made to a kind of horsemen of the air, who seem to have been regarded as spirit defenders of Israel, for one passage relates that, when the chariot of fire took Elijah away, Elisha exclaimed: 'The chariots of Israel and the horsemen thereof!' and the other represents these horsemen as the defenders of Elisha from a foreign army.

5. There are few other references to angels or spirits before the Exile. An early Ephraimite narrative (1 K 19^5) tells us that an angel touched Elijah and awakened him. One late prophetic narrative tells us twice that an angel of Jahweh spoke to Elijah (2 K $1^{3.\ 15}$), while another, also late (1 K 13^{18}), tells that an angel spoke to another prophet. In 2 K 19^{35} = Is 37^{36} we are told that an angel of Jahweh smote the Assyrians of Sennacherib's army. Pre-exilic prophets make almost no reference to angels, although Hosea (12^4) declares that Jacob 'had power over the angel.' This is a reference to the 'man' of Gn $32^{24ff.}$, and is the only occurrence of 'angel' in a pre-exilic prophet. The Deuteronomist makes no mention of angels. One Dent. editor refers to the 'angel of Jahweh' (Ex 33^2), but he was influenced by E.

6. One other class of supernatural beings of the time before the Exile remains to be considered, viz. the seraphim. Our knowledge of them is gained from one passage only, Is 6^{1-7}. In his vision, Isaiah saw Jahweh, above whom the seraphim were standing. Each one had six wings, and they constantly uttered the trisagion. At the sound of their voices 'the foundations of the threshold were moved.' Finally, it was one of these who took from the altar a live coal and touched the prophet's lips. It is clear that, like the cherubim, the seraphim were not angels (*i.e.* messengers), but were attendants of Jahweh. Like the cherubim, they are composite figures, and later Jewish thought placed them with the cherubim in Paradise (cf. En. 61^{10} 71^7, Slav. En. 20^1 21^1).

Various explanations of the name and nature of the seraphim have been offered. (1) An old explanation, now generally abandoned, derived *śārāph* from the Arab. *śarufa*, 'to be eminent in glory,' and held the seraphim to be a kind of archangels. (2) Delitzsch and Hommel have connected it with the Assyr. *śarrāpu*, the 'burner,' an epithet applied to the Bab. god Nergal, a sun-deity; but, although an old syllabary says that this was the epithet of Nergal in the 'Westland,' no such deity has appeared in any real Canaanite source, and is consequently improbable. (3) Cheyne (*EBi*, art. 'Demons') has, under the influence of the previous suggestion, attempted to connect the name of the god *Rešef*, whose name occurs in a Phœn. inscription (*CIS* i. 38). This he equates with *śārāph*, supposing that a transposition of letters occurred—a solution which seems even more improbable. (4) Less satisfactory still was Hitzig's suggestion that *śārāph* is to be connected with the Egyptian Serapis. (5) More recently Marti and others have connected the seraphim with the Egyptian griffins found, for example, in a XIIth dynasty tomb at Beni Hassan. These griffins were winged, were guardians of the grave, and in demotic were called *seref* (cf. R. Pietschmann, *Gesch. der Phönizier*, Berlin, 1889, p. 177 ff.). (6) Probably the true explanation connects the seraphim with the fiery (*śᵉrāphîm*) serpents of Nu 21^6, and supposes that the seraphim were primarily serpents. This view is supported by the fact that Heb. tradition gave the serpent a prominent rôle in Paradise (cf. Gn 3), that they worshipped a serpent-god down to the time of Hezekiah (2 K $18^{4ff.}$), that there was at Jerusalem a well called the 'Dragon's fountain' (Neh 2^{13}; probably the modern Bir Eyyub), that a brazen serpent was found at Gezer in the pre-exilic Hebrew stratum (R. A. S. Macalister, *Bible Side-Lights from the Mound of Gezer*, London, 1906, p. 76), and that in En. 20^7 serpents (Gr. *δράκοντες*) are associated with the cherubim in Paradise, as in the Enoch passages cited above seraphim are associated with the cherubim. In course of time these serpents of Paradise were regarded as the attendants or guards of Jahweh, and were given wings, etc. to make them composite.

In pre-exilic Hebrew thought, then, Jahweh had three classes of attendants—cherubim, spirits, and seraphim. The cherubim and seraphim were guardians of Paradise and attendants of Jahweh. The spirits were His courtiers, and might be sent on missions by Him. They played, however, a very small part. Jahweh Himself was thought to appear in special manifestations to accomplish His purposes. Such manifestations were called the 'angel of Jahweh,' or the 'angel of God.'

7. Of demons in this period there are but slight traces. In the old poem which now forms Dt 33 it is said in v.^{13} that the 'deep' (*tᵉhôm*) 'coucheth' (*rôbeṣeth*) beneath. Driver has noted (*Deut.* p. 406) that *rôbeṣeth* is ordinarily used of an animal; and, when one recalls that under the kindred name *Tiamāt* the deep was personified in Babylonia as a dragon, and that this dragon appears in post-exilic Heb. literature as Rahab and Leviathan (see below), it becomes probable that Dt 33^{13} personified the subterranean abyss as a great dragon or demon. In Dt 32^{17} Hebrews are said to have sacrificed to *shēdîm*, not to *'Elôah* (God). *Shēdîm* was understood by the translators of the Septuagint as

demons, but, as it is made parallel with 'foreign gods' (cf. v.[16]), and is the equivalent of the Assyr. *šêdu*, or bull-deity, it is probable that it is used here as the name of a foreign deity. The fact that the root *shēd* became in later Judaism the general term for 'demon' (cf. Jastrow, *Dict. of the Targ., Talmud, and Mid.*, New York, 1903, p. 1558*a*) does not prove this inference wrong. If this view is correct, it makes no difference to our subject whether we date Dt 32, with Ewald and Dillmann, in the reign of Jeroboam II.; with Kuenen and Driver, about 630 B.C.; or, with Steuernagel, in the Exile.

There are no clear references in pre-exilic literature to other demons, but it is probable that the Hebrews of the period believed that demons inhabited waste places, and that they endeavoured to propitiate them. The sacrifice to the wilderness demon Azazel (*q.v.*) (Lv 16) is clearly a survival from pre-exilic days, and it is probable that Lilith (Is 34[14]) was an old wilderness demon.

II. *EXILIC AND POST-EXILIC CANONICAL MATERIAL.*—1. In *Ezekiel* the term 'angel' does not occur, though in 9[2ff. 5ff.] and in 40[3ff.] a supernatural man appears who performs the functions of an angel. In the former passage he directs the marking of idolaters for destruction; in the latter he measures off the dimensions of the new sanctuary. The older belief in spirits survives to some extent in Ezekiel. In 2[2] 3[12. 14] 8[1ff.] a 'spirit' is said to have come upon Ezekiel and filled him with ecstatic inspiration. This spirit was one of the members of Jahweh's court, of which 1 K 22 gives such a vivid description (cf. Toy, *SBOT*, New York, 1899). This usage of 'spirit' is found only in the earlier chapters of Ezekiel, and in 8[1ff.] is made synonymous with 'the hand of Jahweh.' In 11[5ff.] the term 'spirit' occurs, but it here approaches more nearly the spirit of Jahweh, and does not seem to denote a separate entity of a lower order. It inspires the prophet to reflexion rather than ecstasy. In other parts of Ezekiel 'spirits' do not occur.

2. In *Deutero-Isaiah* angels are not mentioned, and in *Trito-Isaiah* only one reference to an angel or spirit is found, viz. 'the angel of his [Jahweh's] presence' [Heb. 'face'], Is 63[9]. The expression occurs in a poetic reference to the angel mentioned in Ex 23[21], of whom it was said, 'My name is in him.' The term 'presence' or 'face' seems to be borrowed from Ex 33[12ff.], where Jahweh says to Moses: 'My presence shall go with thee.' The reference in Isaiah really betokens a post-exilic literary survival of a pre-exilic idea.

3. In *Zechariah* the 'angel' in the function of messenger appears as a fixed idea. The angel talked with the prophet, and in this way Zechariah received all his prophetic messages (cf. Zec 1[9. 11. 12. 13. 14. 19] 5[5. 10] 6[4. 5]). The angel is here clearly an intermediary between God and man. Zechariah never is said to have seen God. In Zechariah, too, we meet for the first time with the division of angels into ranks. In 2[3. 4] one angel is clearly the commander of another, and sends him on a mission. The 'angel of Jahweh' appears here also as a kind of guardian of Israel, since he protects the priest, the representative of the nation. In 1[11ff.] and 4[1ff.] the angel of Jahweh appears as a kind of Grand Vizier among the other angels. Possibly this early differentiation of angels into ranks was due to Persian influence, though this seems improbable, for, when this prophecy was written, only twenty years had elapsed since Cyrus's conquest of Babylonia and Palestine.

4. In the Book of *Job* we have different strata. The prologue is older than the poem, and may have been composed before the Exile. In it Jahweh is represented as surrounded by a court of supernatural beings. These are called *bᵉnê hā-'elôhîm*, or beings of the Divine order—the old name employed in Gn 6[2-4]. These beings are pictured as free to walk through the earth wherever they will, but upon appointed days they gather to pay their court to Jahweh. Satan is still a member of this group, though he has become offended and has lost his faith in the existence of disinterested virtue. He is permitted to go forth upon a mission of experimentation—a mission which proves most painful to his victim. The whole conception is quite akin to that of 1 K 22. In the poem, which is later than the prologue, little is said of angels, though that little is of interest. In 5[1] the possibility of angelic intercessors is referred to. The angelic beings are here called 'holy ones.' In 4[18] and 15[15] these 'holy ones' are said to be less pure than God, but much holier than men. The 'angel' of 33[23] (RV) is better rendered, with the margin, 'messenger,' since Elihu is referring to himself and not to a heavenly messenger (cf. Barton, *Com. on Job*, N.Y., 1911). In 38[7] the 'sons of God' of the prologue are referred to, and are identified with the morning stars.

5. In the *Psalter*, angels are messengers of either good or evil. Ps 34[7] declares: 'The angel of Jahweh encampeth round about them that fear him,' *i.e.* he is their protection. Ps 35[5. 6] declares that God lets His angel chase and persecute the wicked. Similarly, Ps 78[49] declares that God cast upon the Egyptians 'the fierceness of his anger, wrath, indignation, and trouble, a band of evil angels.' Here the angels are personifications of the wrath and indignation of Jahweh. Ps 104[4] reverses in a way the process, declaring: 'He makes his angels winds.' The angels as guardians are again referred to in Ps 91[11f.]: 'He shall give his angels charge over thee, to keep thee. They shall bear thee up in their hands.' Ps 103[20] and 148[2] call upon angels as well as men to praise God. Ps 89[6. 7] implies that God is surrounded in heaven by a council of angels. This is also implied in Ps 103[20. 21] and 148[2], where the angels are spoken of as the 'ministers who do God's pleasure,' and as 'his host.' In Ps 8[5], where the present text, in speaking of man, reads: 'Thou hast made him little less than God' (*'elôhîm*), the reference is probably to angels, and the original text was, perhaps, 'sons of God' (*bᵉnê hā-'elôhîm*).

6. The *Priestly document* contains no reference to angels. It conceives of God as far away, but also as so powerful that He can simply speak and His word is obeyed. It represents Him in Leviticus as speaking to Moses, but how He spoke it never tells. It gives no hint that it was through angels.

7. The same is true of the Books of *Chronicles*, which are closely dependent upon P for their point of view. The Chronicler mentions angels in two passages only, 1 Ch 21 and 2 Ch 32[21]. The former passage is dependent on 2 S 24, and has taken over the angel who inflicted the punishment for David's census (see vv.[9. 11. 12. 13. 14. 19]); the latter is dependent upon 2 K 19[35], and has taken over the story of the angel who destroyed Sennacherib's army.

8. Angels do not really appear in the Book of *Ecclesiastes*. The word 'angel' is found, it is true, in 5[6] (Heb. 5[5]), but it is probably a reverent way of referring to God Himself (cf. Barton, *Ecclesiastes*, in *ICC*, 1908). The Chronicler had set the example for this procedure by making the angel who afflicted Israel stand for God (cf. 1 Ch 21[16. 20]).

9. In the Book of *Daniel* the belief in angels re-appears, and they are thought to be exalted far above man (see 8[16-18] 10[16]). In 3[25] an angel comes in human form to deliver the three children from the fiery furnace (cf. v.[28]), and in 6[22] God's angel

is said to have stopped the mouths of the lions. The conception of the division of angels into ranks, which was found in Zechariah, re-appears in an accentuated form in Daniel. Each nation apparently has a 'prince' or archangel detailed to look after its interests, so that there is a 'prince of the kingdom of Persia' (10[12-20]), a 'prince of Greece' (10[20]), and a 'prince of Israel' (10[21]). The last mentioned is Michael, who was 'one of the chief princes' (10[13] 12[1]). Possibly this conception is also found in Is 33[21ff.], which dates from about 335–333 B.C. In Daniel, too, we come upon a new feature found in no other canonical book of the period: the angels, or at least the archangels, begin to have names. In addition to Michael, already mentioned, 'the man Gabriel' (Gabriel means 'hero *or* man of God') appeared to impart wisdom to Daniel (8[16ff.] 9[21ff.]). The giving of definite proper names to angels—a feature very common in some of the apocryphal books—marks another step forward in the evolution of the conception.

10. Taking the post-exilic time as a whole, some interesting general facts with reference to angels may be gathered. They are called by a variety of names: 'sons of God,' *i.e.* of *'elôhîm* (Job 1[6] 2[1], Dn 3[25]); *'elôhîm*, i.e. 'gods' (Ps 8[5] and perhaps 97[9]), 'sons of the mighty,' *i.e.* of *'êlîm*, lit. 'gods' (Ps 29[1] 89[6]); *'êlîm*, or 'gods' (Ex 15[11]); *qibbôrîm*, or 'heroes' (Jl 3 [4] [11]); *shōmᵉrîm*, or 'keepers' (Is 62[6]); 'host of the height' (Is 24[21]); 'morning stars' (Job 38[7]); *'îrîm*, i.e. 'watchers' (Dn 4[17 (14)]); 'holy ones' Zec 14[5], Ps 89[7]), and 'princes' (Dn 10[13. 20. 21]). Although angels are once identified with stars (Job 38[7]), there is no attempt in the canonical books, such as appears in some of the apocryphal books, to define the nature of angels or to tell the substance of which they are composed. The term 'host of the height' applied to them in Is 24[21] is, no doubt, a modification of the pre-exilic phrase 'host of heaven,' which was applied to the stars. During the last years of the Judæan monarchy those had been worshipped (see Jer 8[2], Zeph 1[5], Dt 4[19]); they were then considered as gods, and the prophets opposed their worship. As the close of the Exile drew near, Jahweh was declared to be supreme over them (Is 45[12]; cf. 40[26]), and in Neh 9[6] they are said to worship Jahweh. Apparently it was believed that this host was not subdued to the position of subordinates and worshippers without a struggle (see Job 25[2], Is 24[21] 27[1] 34[5]), and the reference in 27[1] to Leviathan, which, as shown below, is a name for the Bab. dragon Tiamāt, suggests that the idea of a struggle was borrowed from the Babylonian Creation Epic.

It has been held by some that the division of angels into ranks and the belief in archangels point to the fact that the angels originated in the subjugation of other gods to Jahweh. The argument in favour of this view is strong. It would seem improbable that the development of archangels was due in the first place to Persian influence, for they appear already in Zechariah, when Persian influence was too new. The fact that in Daniel the different archangels are each the prince or guardian of a special nation is in favour of the origin suggested, for it assigns to them just the rôle that the national gods of the heathen world had performed.

The functions of angels were various. They acted as Jahweh's court (Job 1. 2) and as His council (Ps 89[7]); they might be intercessors for men (Job 5[1]), or guardians of the righteous (Ps. 34[7]), whom they bear up in their hands (Ps 91[11f.], Nu 20[16] [P]); they are the guides and channels of Divine revelation to prophets (Zec 1[9. 11. 12. 13. 14. 19] etc., Dn 8[16ff.] 10[9-11ff.]); they inflict punishment on the wicked (Ps 78[49]); some of them guard the nations (Dn 10[20. 21]); and in general they do whatever Jahweh wishes to have done.

Angels during this period were for the most part without names. There are only three exceptions to this: the 'angel of his presence' (Is 63[9]), which, as pointed out above, is a poetic way of referring to a pre-exilic idea; and the individual angels Michael and Gabriel. These last appear in Daniel only, the latest book of the canon to contain any reference to angels. They are canonical examples of a tendency which is abundantly illustrated in the apocryphal literature to individualize angels and to attribute permanent characteristics to them. The name *Michael*, meaning 'Who is like God?', was a natural one to apply to an angel, though it had previously been borne by a number of men (see Nu 13[13], 1 Ch 5[13. 14] 6[40] 7[3] 8[16] 12[20] 27[18], 2 Ch 21[2], and Ezr 8[8]). *Gabriel*, as already noted, signifies 'man of God,' and was also a natural name to give an angel.

11. The Hebrew belief in demons belongs especially to the time after the Exile. There were several causes which led to this belief. In pre-exilic times, it had been thought that Jahweh did everything, both good and bad. Amos says (3[6]). 'Shall evil befall a city and Jahweh hath not done it?' This evil might be accomplished through the agency of non-ethical spirits, as in 1 K 22[19-23], but Jahweh was in reality responsible for it. As in the case of the spirit that visited Saul, it might be called an 'evil spirit' (1 S 16[14ff.]); but this only signified that its effects were undesirable, not that the spirit was morally bad. The spirit in this case came from Jahweh, and He was really responsible. This view was entertained by one writer until near the close of the Exile, for Deutero-Isaiah represents Jahweh as saying: 'I make peace, and create evil' (Is 45[7]). In the time after the Exile, men began to feel that to attribute evil to God was to think unworthily of Him; hence the occurrence of evil was ascribed to the agency of demons. This was, however, only one of the forces at work. With the triumph of monotheism the belief in the reality of the heathen deities did not altogether disappear, and those gods whose worshippers had been hostile to Israel, or had opposed the prophets so as to be denounced in the sacred books, were reduced to the rank of demons. From time immemorial, too, the belief had existed that dark and deserted localities were inhabited by unfriendly spirits. From the earliest times, pains had been taken to propitiate some of these by sacrifices, and such unfriendly spirits now became demons in the commonly accepted view. Then, too, the old mythology had preserved the memory of a heavenly court of spirits, or *bᵉnê hā-'elôhîm*. It kept alive the memory of how some of these spirits had been commissioned in the olden time to bring men to destruction, and from this circle of ideas there was born a belief in an arch-enemy of good—Satan—who has since held a large place in the world's thought. Some of these demons were believed to inhabit the deserts and to roam about at night (cf. Is 13[21] 34[14]). Like the *jinn* of the Arabs, they were supposed to take on the forms of wild animals. Some of them still maintained the quasi-Divine character which they had possessed before the Exile, and sacrifices were still offered to them. Once it is implied that the home of the arch-demon is in Sheol (cf. Job 18[14]).

Of individual demons, the one that played the largest part in later thought is **Satan**, though he appears in but three passages of the OT. (*a*) The earliest of these is the prologue of Job, which may be pre-exilic. Here Satan is one of the 'sons of God,' or 'spirits,' who compose the court of Jahweh. Much of the character of the un-ethical spirit which was sent on a mission of evil to men still attaches to him, but he has developed beyond this, for he has become permanently sceptical of disinterested virtue. He can do nothing without

Jahweh's permission, but his state of mind is thought to be a cause of regret to Jahweh. In consequence of Jahweh's concern for Satan and His desire to win him once more to a proper attitude, He permits him to make investigations in disinterested virtue by bringing evil upon Job. In this narrative Jahweh is represented as ultimately responsible for the evil, but it is permitted for a good end—the scattering of the doubts which had invaded the angelic circle and embittered one of the courtiers of heaven.

(*b*) In Zec 3^1 Satan appears to oppose the high priest Joshua before the 'angel of Jahweh.' The 'Adversary' (for such is the meaning of the name *Satan*) stands in the court of Jahweh as a public prosecutor, and, as Joshua is the representative of the nation, so Satan is the adversary or prosecutor of the nation. The fact that the angel of Jahweh rebukes him shows that Satan has undertaken his evil opposition to the people of God on his own initiative and not by Divine permission, as was the case in the Book of Job. His malignity is accordingly somewhat more developed, and in the circle of ideas represented by this passage Satan really relieves Jahweh of the responsibility for evil.

(*c*) The only other OT passage where Satan is mentioned is 1 Ch 21^1, which is a further witness to the fact that Satan was now held to be responsible for the existence of evil. The chapter gives an account of David's census and of the punishment for it, and is dependent on 2 S 24; but, whereas it is said in Samuel that Jahweh said to David, 'Go, number Israel,' because He was angry with the people, it is said in Chronicles that Satan 'moved David to number Israel.' Satan is clearly a development out of the group of spirits which were in earlier days thought to form Jahweh's court, members of which were sent upon errands of disaster to men.

Another demon who appears in one post-exilic canonical passage (Lv 16) is **Azazel** (*q.v.*). In the ritual of the Day of Atonement it is prescribed that a goat shall be chosen 'for Azazel,' that the sins of the people shall be confessed over him, and that then he shall be sent into the wilderness by a special messenger and turned loose (cf. Lv $16^{8.\ 10.\ 28}$). The goat is in reality a sacrifice to Azazel. The ritual of this chapter is clearly a survival from pre-exilic days. It is also clear that Azazel was a wilderness demon, and probably the sacrifice was originally offered to him to propitiate him. It is, accordingly, a survival from a kind of worship of fear. The name *'Azā'zēl* signifies 'entire removal.'

Another class of demons were **sᵉ'îrîm**, lit. 'hairy ones' (RV 'satyrs'; marg. 'he-goats'), who, like Azazel, were thought to inhabit wastes and ruins. Is 34^{14}, in a picture of the future desolation of Edom, says that 'satyr shall call to his fellow there'; and Is 13^{21}, an exilic passage, in portraying the desolation of Babylon, declares that 'satyrs shall dance there.' Just as the Arabs degraded the gods of the heathen to *jinn* and attributed to them some of the hairy characteristics of animals, so these satyrs appear to have been originally heathen deities (cf. W. R. Smith, *Rel. Sem.*^{2} 120 ff.). It is for this reason that Lv 17^7 prohibits, for the future, sacrifice to satyrs, implying in the statement that they had been the recipients of sacrifices in the past. Similarly 2 Ch 11^{15}, in reproducing 1 K 12^{31}—the statement concerning Jeroboam's arrangements of priests for the high places—amplifies it by saying that he appointed 'priests for the satyrs and calves which he had made.'

The **shēdîm** which are mentioned in Dt 32^{17} are once referred to in a post-exilic canonical writing, Ps 106^{37}, where *shēdîm* is a synonym for demons. The word really, as the parallelism shows, refers to the heathen deities of the Canaanites, whom some of the post-exilic writers made satyrs, as just noted. That it was the intention of the Psalmist to call them demons here is confirmed by the fact that in the Mishna and Talmud *shēd* is the root used to designate demons in general (cf. Jastrow, *Dict.* p. 1558*a*).

Is 34^{14} mentions **Lilith** (RV 'night-monster') in connexion with satyrs. It is probable that the name is connected with the Heb. root for 'night,' and that Lilith was a night-monster or demon which was thought to lurk in desolate places.

The 'horse-leech' (*'alûqā*) of Pr 30^{15} was perhaps a demon. While there was a large leech to which the name was applied, it was also regarded by the Jews of later time as the name of a demon. This seems to be the case in the Targ. to Ps 12^9, which says: 'The wicked go round in circles like *'alûqā*, who suck the blood of men.'

In Ca 2^7 3^5 the Shunammite adjures the daughters of Jerusalem 'by the roes and hinds of the field.' These are here probably not simple animals, but faun-like spirits by whom, as by other supernatural beings, adjurations could be made.

In four passages (all exilic or post-exilic) a great demon or dragon called **Rahab** appears. She was surrounded by a host of helpers, but after a severe struggle she and her helpers were overcome by Jahweh. The passages are: Is 51^9 'Art not thou he who hewed Rahab in pieces, who pierced through the dragon?'; Job 9^{13} 'The helpers of Rahab do stoop under him; how much less shall I answer him?'; Job $26^{12.\ 13}$ 'He quelleth the sea with his power, by his understanding he smiteth through Rahab; by his breath the heavens are bright,' etc.; Ps 89^{10} 'Thou hast broken Rahab in pieces as one that is slain; thou hast scattered thine enemies with the arm of thy strength.' It has long been recognized (see the writer's art. 'Tiamat' in *JAOS* xv. [1890]) that Rahab in those passages is simply another name for the Bab. primeval sea-monster Tiamāt. She is, accordingly, here not a native Heb. demon. For the original picture of her and her helpers, see L. W. King, *Seven Tablets of Creation*, London, 1902, Tablets ii. and iv. Although Rahab is not native to Heb. soil, she plays a considerable part in post-exilic thought. Jahweh was naturally substituted for Marduk in the story circulated among the Hebrews, and His worshippers magnified His power as they thought of the might of this terrible dragon of a demon.

In at least two passages this primitive Bab. monster was known among the Hebrews as **Leviathan**. In Job 3^8 Leviathan is evidently a mythical dragon capable of darkening the day, while in Ps 74^{14} we read, 'Thou brakest the heads of Leviathan in pieces,' and vv.$^{18.\ 17}$ go on to speak of the creation of the sun, the fixing of earth's bounds, and the making of summer and winter. In the psalm, therefore, we clearly have a reference to the Bab. Creation Epic, and it is probable that the passage from Job refers to the same monster. In Job 41 the crocodile is described under the name Leviathan, but in vv.$^{19\text{-}21}$ the description of the natural animal is mingled with elements drawn from a mythical fire-breathing dragon. It is probable, therefore, that Leviathan, like Rahab, was the Bab. Tiamāt under another name.

III. *IN APOCRYPHAL LITERATURE.*—While but few individual demons can be traced in the canonical literature, the apocryphal writings bear witness to the fact that the popular thought abounded with them. In the Apocalyptic writings of the Jews, composed prior to A.D. 100, all the main features of belief in spirits, angels, and

demons which appear in the canonical literature were continued and heightened. There is, however, a great difference between them in this respect. Some of them, like Sirach and Maccabees, make almost no reference to angels. Sirach mentions only the angel that destroyed the Assyrian army (48[21]), the writer of 1 Mac mentions angels only in referring to this event (7[41]), while the author of 2 Mac refers to them only in saying that the Jews of the Maccabæan time prayed that an angel might be sent to smite the Greeks, as one was sent to smite the Assyrians (cf. 11[6] 15[22f.]). Similarly, the Wisdom of Solomon makes no reference to angels except that in describing the Exodus it declares that the word of God was an active angel of vengeance (cf. Wis 18[15]). In some of the Enoch apocalypses, on the other hand, belief in angelic and demoniacal agency is carried to great length. This is especially true of the oldest Enoch apocalypse (Eth. En. 1–36), of the Parables (Eth. En. 37–71), and of the Slavonic Enoch. Other works make a more moderate use of this belief, although it clearly underlies all their thinking. This is true of Tobit, the Testaments of the Twelve Patriarchs, the Apocalypse of Baruch, the Greek additions to Daniel, 2 Esdras, and the Book of Jubilees. The beliefs continued and were in some respects intensified, but, in proportion as the writers came under the sway of Greek rationalistic thought, they ceased to feel the need for such supernatural agencies. The author of Jubilees, in re-telling the story of Genesis, employs angels only where they appear in that book.

1. In certain writers the old tendency to attribute a spirit to everything still manifests itself. The author of the Enoch Parables speaks of a spirit of the sea, of hoar-frost, of hail, of snow, of fog, of dew, and of rain (Eth. En. 60[17-21]), while his favourite title for God is 'Lord of spirits' (38[2, 4] 39[12] and *passim*). The author of Jubilees speaks of the spirits of fire, wind, darkness, hail, snow, frost, thunder, cold and heat, winter and summer (Jub 2[1]), but he calls them angels at the same time, and he also terms the 'watchers' (an older name for angels) the 'fathers of spirits' (10[5]). These two agree in making spirits of the phenomena of Nature. In a different vein from those, the Testaments of the Twelve Patriarchs make spirits of man's immoral tendencies. Those spirits are in reality demons, and are under the direction of Beliar, the prince of demons (see art. BELIAL). Thus, we are told that there are seven spirits of deceit (Reuben 2[1]). These seven are said to be the spirit of fornication, of insatiableness (resident in the belly), of fighting (resident in the liver and gall), of obsequiousness and chicanery, of pride, of lying and fraud, and of injustice with which are thefts and acts of rapacity (cf. Reuben 3[3-6], Simeon 6[7], Judah 20[1], Dan 5[4], Gad 4[7]). Later additions make the senses and sleep spirits of wickedness (Reuben 2[3] 3[1]). The function of these spirits was to lead men into various sins, and, after having done so, to take vengeance on them (Levi 3[2]). The evil spirit which a man had served was said to await his soul as it left his body at death in order to torment it (Asher 6[5]). In most of the Apocryphal books the spirits have passed over either into angels or into demons.

2. Through literary influence there is a slight survival of the Cherubim and Seraphim of an earlier time. They, together with the Ophanim (serpent-beings developed out of the original Seraphim), are said to be holy angels who praise God (Eth. En. 61[10] 71[7], Slav. En. 20[1] 21[1]); but these beings play no important part in the thought of the period.

3. It is far otherwise with the angels, who are declared to be innumerable (Apoc. Bar. 59[11]). This clearly represents the view of several of these writers. Thus the author of the Enoch Parables declares that the Most High is accompanied by 1000 × 1000 and 10000 × 10000 angels (Eth. En. 60[1] 71[13]). Angels were thought to be the agency by which everything was performed. Thus, it is said that myriads of angels accompany the sun on his course (Slav. En. 11[4, 24]), and that 400 take the sun's crown to God at sunset, and return it to the sun in the morning (14[2, 3]). How vast must have been, then, the number of all the angels!

These numerous angelic hosts were believed to be divided into ranks. Distinguished from the common mass, the archangels commanded and directed others. This division appears most clearly in the evil angels or demons, a long list of whose leaders is given in the earliest Enoch apocalypse and in the Enoch parables (cf. Eth. En. 6[7] and 69[2]). This list will be further considered in discussing demons below. The good angels had similar chieftains, of whom Gabriel was one (Slav. En. 21[3]). But, apart from the archangels, the angelic hosts were thought to be divided into several ranks. It is said in Slav. En. 20[3] that, as the Lord sat on His throne, the heavenly hosts stood on the ten steps of it according to their rank. This implies that there were numerous gradations of rank. Four angels were called 'angels of the throne.' They were Michael, Gabriel, Uriel, and Raphael (Eth. En. 9[1] 40[2] and *Sib. Or.* ii. 215), though two passages (40[9] 71[9]) substitute Phanuel (*i.e.* Penuel) for Uriel. Just as human hosts had human commanders, so the archangels were the commanders of the others. Thus in the Testament of Levi 3[5ff.] the angel of the Presence is counted an archangel, to whom angels below make an announcement of what is transpiring. This development of the angelic hosts into ranks was to some extent reflected in the canonical literature, and its later development may have been influenced by contact with Persian thought.

As to the nature of angels, the conception was not uniform. At first they were considered a kind of supernatural men: thus, in all the books that speak of them, they are frequently called 'men' (see, *e.g.*, Slav. En. 1–7). They are, like men, said to possess bodies and spirits (Eth. En. 67[8]). They intermarried at one time with human women (Eth. En. 7[1], Slav. En. 18[4]). Enoch after translation became an angel (Slav. En. 22), showing that they were considered in many ways kindred to men. This view is a survival of the old conception reflected in Gn 6[2-4]. Gradually another view developed, according to which the constitution of angels was quite different from that of men. They are, accordingly, said to have a nature like that of fire (Slav. En. 29[1, 3]), and to have been made at the beginning of flame and fire (Apoc. Bar. 21[6]); their splendour is said to be equal to that of the stars (51[9]). This view was, in some cases where tradition perpetuated the crasser view, blended with the other. Thus Enoch was thought to have been put through a process of purification and glorification before he became an angel (Slav. En. 22); and later, when he was permitted to return to the earth for thirty days, an angel chilled his face, apparently to dim the lustre of its angelic glory, before he descended to mingle with men (cf. Slav. En. 36[2] 37[1] 38[1]). The forces of Nature were at times regarded as angels. Thus frost, hail, and fog are so designated in Eth. En. 60[17-19], and the author of Jubilees calls these and similar forces of Nature indifferently 'spirits' and 'angels' (Jub. 2[1]). At the same time angels were thought to have definite limitations. They were not able to hinder the work of God (Eth. En. 41[9]); they were ignorant of their own origin (Slav. En. 24[3]); fallen angels could not see the glory of God

(Eth. En. 14^{21}, Slav. En. 24^{3}), and Enoch, a man, interceded for them (Eth. En. 15^{2}).

The whole course of Nature was thought to be carried on by angelic agency. Myriads of angels attend the sun (Slav. En. 14), they regulate the courses of the stars (ch. 19), they guard the habitations of snow (ch. 5), and keep the treasuries of oil (ch. 6). Spirits or angels control the lightning, causing a pause before the thunder comes (Eth. En. 60^{13-15}). They control the workings of frost, hail, mist, dew, and rain; they preside over the treasuries of these (vv.$^{16-22}$). Activities of many other kinds were attributed to angels. They kept the garden of Eden (Slav. En. 8); fiery angels now surround Paradise (30^{1}); and angels built the ark (Eth. En. 67^{2}).

One of the important functions of angels was to guide and instruct the great apocalyptic seers. The angel of peace went with Enoch (Eth. En. 40^{8} 43^{3}), and conducted him to the first heaven (Slav. En. 3), while Gabriel later took Enoch to God (20^{2}). An angel talked to Ezra (2 Es $2^{44, 46, 48}$ 5^{15} 7^{1}); and Uriel was sent to Ezra ($4^{1, 36}$ $5^{15, 20}$ 7^{1} $10^{28, 29}$). An angel revealed to Jacob Reuben's sin with Bilhah (Test. of Reuben 3^{15}); an angel invited Levi to heaven, and showed him the secret of heaven to prepare him for the priesthood (Test. of Levi 2^{8} 5^{1}); an angel informed the patriarch Judah that he should be king of Jacob (Test. of Judah 21^{5}), and announced to Jacob the birth of Rachel's children (Test. of Issachar 2^{1}). The angel of peace guides the soul of a good man at death (Test. of Benj. 6^{1}). Angels, called 'watchers,' came to earth in the days of Jared to teach men (Jub. 4^{15}); an angel, spoken of as a 'holy one,' called to Hagar (17^{14}); angels went up and down the ladder of Jacob's dream (27^{21}); angels smote the flames of fire for the three children (v.^{25}). An angel told Habakkuk to carry his dinner to Daniel who was in the lion's den at Babylon, and took Habakkuk by the hair and transported him from Judæa to Babylon for this purpose and back again (Bel vv.$^{34-39}$). The angel Raphael came to heal Tobit's blindness (To 3^{17}), accompanied the young Tobias ($5^{4-8, 21}$), instructed him how to drive an evil spirit away (6. $8^{2ff.}$), was sent by Tobias to Media after money ($9^{1ff.}$), opened Tobit's eyes ($11^{2ff.}$ $7ff.$), and was offered half the money (12^{5}). Angels are portrayed as pitiful; they were in anguish when Zion was delivered to destruction (Apoc. Bar. 67^{2}); and they are also represented as intercessors (Test. of Levi 3^{5} 5^{7}, Test. of Dan 6^{2}). It thus appears that all possible helpful agencies were attributed to them.

As angels were God's agents for blessing, so they were His instruments of chastisement. In the time of the Maccabees, prayer was offered that an angel might destroy the Greeks, as an angel destroyed the Assyrians (2 Mac 11^{5} 15^{22}). Enoch in the place of punishment saw angels administering torture (Slav. En. $10^{2ff.}$). It was believed that on the Day of Judgment an angel would be appointed avenger (Assump. Mos. 10^{2}). An angel of God is said to have received orders to cut a sinner in twain (Sus vv.$^{55, 59}$). The word of God was said to have been an active angel of vengeance on the night of the Exodus (Wis 18^{15}), and two angels were believed to have once descended from heaven to bind a hostile king (3 Mac 6^{18}). When Jerusalem was destroyed, four angels stood at its four corners with lamps and accomplished its ruin (Apoc. Bar 7^{1} 8^{1}). There was also an angel whose chief function was to bring death (21^{23}). Whatever, therefore, needed to be accomplished, whether good or bad, there was an angel to do it.

The tendency observable in a slight degree in the canonical literature to give the angels individual names appears in a greatly heightened form in the Apocryphal literature.

4. The conceptions of demons which appear in the Apocryphal literature are of four distinct types. Two of these regard the arch-demons as fallen angels, but in one type this angelic genesis of demons is much more prominent than in the other. (*a*) In the canonical literature discussed above, Satan was regarded as once of the number of the Divine beings who formed Jahweh's court (Job 1. 2). The steps by which in the canonical literature he became the great opposer of good have already been sketched. In one type of Apocryphal thought he became the arch-demon, who tempted man and led him astray (see Wis 2^{24} and Slav. En. 3^{31}). These writers simply took Satan over from the canonical literature, and his semi-Divine or angelic origin apparently was forgotten. The author of Wisdom moved in an atmosphere of philosophic thought in which neither angels nor demons played any considerable part. The author of Slavonic Enoch, though he makes much of angels, has almost nothing to say of demons. He probably believed in them, but the interest of his narrative led him to place the emphasis elsewhere. These writers call Satan by the Gr. tr. of his name, *diabolos*, or 'devil.' They identify him with the serpent of Eden, and account for the origin of sin by his agency in leading man astray.

(*b*) The authors of Eth. En. 1–36 and of the Enoch Parables (En. 37–71) represent a different type, being much more keenly interested in tracing the origin of demons and of evil. Instead of taking one arch-demon from the canonical literature, they go back to the narrative of Gn 6^{2-4}, and account for the origin of demons and of sin by elaborating the hint there given. Persian dualism had sufficiently influenced their thought, so that matter was to them corrupt. That angels should come to earth and have connexion with human wives implied, they thought, a previous rebellion and sin on the part of the angels. The hint which supplied the point of departure for this view was probably given by the story of Satan in the prologue of the Book of Job. Those angelic hosts who sinned were numerous, but they were led by certain archangels, whose names are given somewhat differently by the two writers. These with their followers landed on Mount Hermon, and, after satisfying themselves with human wives, taught men various sins, some teaching one and some another. One taught enchantments, another astrology, another the making of swords, another the art of abortion, and another that of writing. The one who taught the use of coats of mail and of swords also seduced Eve (cf. Eth. En. 6–9 and 69). These writers, like the author of the J document of the Hexateuch, regarded the arts of civilization as having had a common origin with sin. Among the names of these arch-demons the canonical names of Satan and Azazel are found, but they play a comparatively small part. The rôle of Azazel is more prominent than that of Satan. The larger number of these angels (and to them are attributed the most hurtful influences) are called by names not found in the canonical literature. It appears from these names that many of them were called by names appropriate to angels. The degradation of the names to demons was in accord with the theory that they were fallen angels. In one passage (Eth. En. 21^{6}) they are identified with the stars. Having introduced sin into the world, those fallen angels were regarded as the presiding geniuses of various forms of transgression and corruption. They were themselves, however, thought to be already undergoing punishment. They were bound and were being tormented by a great fire (Eth. En. 21^{5-10} 54^{1-5}).

(*c*) The Book of Tobit represents a third type of thought. In it but one demon appears,—Asmodæus,—and he is clearly, as his name implies, of Persian

origin (but see Ginzberg, *JE* ii. 217–219). The author of this book had so come under Persian influence, probably by living in the East, that its demonology or demonological vocabulary influenced him more than did that of the canonical, or even the apocryphal, writings of his people.

(*d*) A fourth type of thought is represented by the Testaments of the Twelve Patriarchs and the Ascension of Isaiah. In these works the demonology, while very real and all-pervasive, is made up in a rational way, and such contact as it has with canonical thought is at quite a different point of that thought. As mentioned above, the world is thought to be pervaded by evil spirits, but these are simply the personification of the evil propensities of man—jealousy, lust, pride, chicanery, injustice, rapacity, etc. Writers who thus made evil spirits of the sinful tendencies of men about them moved in a somewhat different realm of thought from those who connected these evil spirits with the story of Gn 6^{2-4} and gave to them orthodox Hebrew names. Over this mass of evil spirits the two writers under consideration believed that Beliar presided. Beliar to them takes the place of the devil in Wisdom and the Secrets of Enoch, of Semyaza in the other Enoch books, and of Asmodæus in Tobit. Beliar is a form of *Belial* (see vol. ii. p. 458^{b} f.). Belial had been used by Nahum (1^{15}) as the name of a great evil power. Possibly Belial was an old name for Sheol, though that is uncertain. It it were so, it is easy to see why these writers took it as the name of the prince and leader of all evil and destructive spirits.

To most Jews of the period, as indeed to most men of that time, the world was full of supernatural agencies. As there were angels to accomplish every good act, so there were demons or evil spirits to perpetrate every evil deed or to prompt every sinful impulse. Some of the writers, however, manifest no trace of this demonology; such are Ben Sira and the authors of the Books of Maccabees. The subject-matter of Sirach as well as the philosophical point of view of its author excluded any reference to them, while the author of 1 Mac had probably come so far under the influence of incipient Sadduceeism that demons had little or no place in his thought. To most men, however, demons in one form or another were very real, and played an important part in life.

GEORGE A. BARTON.

DEMONS AND SPIRITS (Indian).—1. Prevalence of the belief in spirit influence.—The people of India, particularly the forest tribes and the lower castes, from the cradle to the grave or burning-ground, are oppressed with a feeling best described as demonophobia—the belief that they are haunted by evil spirits of all kinds, some malignant fiends, some mischievous elves, to whose agency are attributed all kinds of sickness and misfortune. Their worship is a worship of fear, the higher gods, particularly in the opinion of the less intelligent classes, being regarded as otiose and indifferent to the evils which attack the human race, while demons are habitually active and malignant.

Among the Thārūs of the Himālayan Tarāī, 'the *bhūts*, or demons lurking in the forest trees, especially the weird cotton tree (*Bombax heptaphyllum*), and the *prets*, or spirits of the dead, lead them a very miserable life. When the last ray of light leaves the forest, and the darkness settles down upon their villages, all the Thārūs, men, women, and children, huddle together inside their fast-closed huts, in mortal dread of those ghostly beings, more savage and cruel than the leopards, tigers, and bears that now prowl about for their prey. Only the terrible cry of "Fire" will bring these poor fear-stricken creatures to open the doors and remove the heavy barriers from their huts at night. And even in the daytime, amid the hum of human life, the songs of the birds, and the lowing of the cattle, no Thārū, man, woman, or child, would ever venture along a forest-line, without casting a leaf, a branch, or a piece of old rag, upon the *bansatī* [Skr. *vanaspati*, "king of the woods"], formed at the entrance of deep woods, to save them from the many diseases and accidents the goblins and malignant spirits of the forests can bring upon and cause them' (S. Knowles, *The Gospel in Gonda*, 1889, p. 214).

In S. India, where this belief is even more widely spread than in the N., 'every village is believed by the people to be surrounded by evil spirits, who are always on the watch to inflict disease and misfortunes of all kinds on the unhappy villagers. They lurk everywhere, on the tops of palmyra trees, in caves and rocks, in ravines and chasms. They fly about in the air, like birds of prey, ready to pounce down on any unprotected victim, and the Indian villagers pass through life in constant dread of these invisible enemies. So they turn for protection to the guardian deities of their village, whose function it is to ward off these evil spirits and protect the village from epidemics of cholera, smallpox, or fever, from cattle disease, failure of crops, childlessness, fires, and all the manifold ills that flesh is heir to in an Indian village' (Bishop H. Whitehead, *Bull. Madr. Mus.* v. 126 f.). Traill, who took over charge of Kumaun in 1820, reported that the population was divided into two classes, human beings and ghosts (E. S. Oakley, *Holy Himalaya*, 1905, p. 217 *f.*). For other testimony to the same effect, see S. Mateer, *The Land of Charity*, 207 ff.; Sir W. Sleeman, *Rambles and Recollections*, 1893, i. 268 ff.; Bishop R. Caldwell, 'The Tinnevelly Shanars,' in B. Ziegenbalg, *Genealogy of the S. Indian Gods*, 1869, p. 156 ff. This feeling of pessimism, due partly to racial idiosyncrasy, partly to the rigour of their environment, has prevailed among the races of India from the very earliest times (see H. Oldenberg, *Rel. des Veda*, 1894, p. 39 f.; Atharvaveda, *SBE* xlii. *passim*).

2. Origin and character of the cult of demons and evil spirits.—Demonolatry, the worship of devils or demons, is a form of belief in its origin independent of Brāhmanism or the orthodox form of Hinduism, though the latter has in many cases annexed and absorbed it (see § 12). The cultus is a true form of worship, and here the distinction between 'deity' and 'demon' is unmeaning, the latter being, as in the case of the orthodox gods, controlled by true worship or propitiation. But, like similar forms of popular belief in other parts of the world, it is amorphous and ill-organized, possessing little or no sacred literature and no established priesthood. The most obvious distinction is between non-human and human spirits.

(*a*) *Non-human spirits or fiends* are 'endowed with superhuman powers, and possess material bodies of various kinds, which they can change as they list, and which are subject to destruction. As free agents, they can choose between good and evil, but a disposition towards evil preponderates in their character' (G. Oppert, *Original Inhabitants of Bharatavarṣa or India*, 515 ff.). The so-called Asuras, Dānavas, Daityas, and Rākṣasas belong to this group, 'all personations of the hostile powers of Nature, or of mighty human foes, both which have been eventually converted into superhuman beings.' This group as a whole seems to be derived from pre-Animistic beliefs, the worship or dread of 'powers' (*numina*, not *nomina*), the vague impersonations of the terror of night, hill, cave, or forest. They appear in the Vedas as malevolent beings hostile to the orthodox gods (A. Macdonell, *Vedic Mythology*, 1897, p. 156 ff.). Max Müller and J. Muir agree in denying that all these Vedic evil spirits were borrowed by the Aryans from the aborigines of India (*Contributions to the Science of Mythology*, 1897, i. 212; *Original Sanskrit Texts*, 1860, pt. ii. 380 ff.). It is safer to believe that among both Aryans and non-Aryans they were the result of pre-Animistic beliefs common to both races. At the same time, it is probable that the Aryan view of the demon world was coloured by their association with the indigenous races.

'The black complexion, ferocious aspect, barbarous habits, rude speech, and savage yells of the Dasyus, and the sudden and furtive attacks which, under cover of the impenetrable woods, and the obscurity of night, they would make on the encampment of the Āryas, might naturally lead the latter to speak of them, in the highly figurative language of an imaginative people in the first stage of civilisation, as ghosts or demons; or even to conceive of their hidden assailants as possessed of magical and superhuman powers, or as headed by devils. . . . At length the further advance of the Āryas would either drive the Dasyus into the remotest corners of the country, or lead to their partial incorporation with the conquerors as the lowest grade in their community. When this stage was reached, the Āryas would no longer have any occasion to compose prayers to the gods for protection against the aboriginal tribes; but their superstitious dread of the evil spirits, with which the popular mind in all ages has been prone to people the night, would still continue' (*Orig. Skr. Texts*, pt. ii. p. 409 f.). Hence it was the habit in ancient, as well as in modern times, to personify Niśī or Night as a demon; she comes at midnight, calls the house-master, and forces him to follow her whither she will; she drags him into the forest, drops him among thorns, or on the top of some high tree; and it is very dangerous to answer her call (*JASB* i. [1886] 49 f.; *Kathā-sarit-sāgara* of Somadeva, tr. C. H. Tawney, 1880, ii. 604; Lal Behari Day, *Govinda Samanta*, 1874, i. 9; *NINQ* iii. [1894] 199).

As representing the vague terrors felt by early man in the desert and forest, these Indian spirits resemble in many ways the Arabian *jinn* (W. R. Smith, 119 ff.); or, as Westermarck (*MI*, 1908, ii. 589) designates them, 'beings invented to explain what seems to fall outside the ordinary pale of Nature, the wonderful and unexpected, the superstitious imaginations of men who fear.' Hence many of the Indian races represent their deities or demons as inhabiting wild hills or lonely forests. The Meitheis believe that their demons occupy hills (T. C. Hodson, *The Meitheis*, 1908, p. 120). The Konga Malayans of Cochin worship two demoniacal deities named after the rocks in which they reside; Sasthi, a sylvan deity, is adored by the Vallans, and is said to live in a hill; the Eravallars believe that their forests and hills are full of dangerous demons, who live in trees, and rule the wild beasts, some of them afflicting particular families or villages, and are propitiated to relieve their hunger, not in the hope of gaining any benefit for their worshippers; the Nayādis worship a group of forest demons, one of which brings them game, and is abused for his ingratitude if the hunt proves unsuccessful (L. K. Iyer, *The Cochin Tribes and Castes*, i. 41, 239, 47, 53). Trees are also a favourite demon-haunt (Tylor, *Prim. Cult.*[2], 1873, ii. 221). The Izhuvans believe that trees are occupied by demons; and, when it is proposed to cut a tree, a notice to the demons is written on the bark informing them that it is intended to eject them (Iyer, i. 281; cf. Crooke, *PR*[2], 1896, ii. 90 f.; R. V. Russell, *Census Rep. Central Provinces*, 1901, i. 92). Many of the non-Aryan tribes in Bengal worship deities who reside in hills. Such are the Juāngs, Santāls, Orāons, Cheros, Kandhs, and Bauris (Risley, *Tribes and Castes of Bengal*, 1891, i. 353, ii. 233, 145, i. 202, 403, 80). The Todas believe that, before they were created, their gods occupied the Nīlgirī Hills; they now reside in heights close to the Toda hamlets (Rivers, *The Todas*, 1906, p. 182 ff.). In the same class are the water spirits or deities found all over the country, which are malevolent, and drag down unwary travellers—an idea which appears in the classical tale of Narcissus (Crooke, i. 42 ff.; Frazer, *GB*[2], 1900, i. 293). These Rākṣasas, Dānavas, or Daityas still maintain their position in popular belief, the tradition surviving through the study of the Epic literature and the older collections of folklore, like the Jātakas or the tales of Somadeva.

(*b*) *Human spirits.*—The second and much more important class of evil spirits is that of the ghosts of human beings, known collectively as *Bhūta* (Skr. rt. *bhū*, 'to become, be'). In contradistinction to the fiends or non-human spirits, these are the malignant spirits of men, which for various reasons cherish feelings of hostility to the human race, and, if not expelled or propitiated, do endless mischief. Among the more primitive or debased tribes the belief that disease and death are the result of the normal or abnormal processes of Nature is only imperfectly realized; and these and other calamities are regarded as the work of evil spirits, sometimes acting on their own initiative, sometimes incited by a sorcerer or witch.

3. The Bhūta: their characteristics.—In S. India three terms are used to designate these spirits—*Bhūta*, *Preta*, *Piśācha*, the first name being ordinarily applied to all three classes.

'These beings, always evil, originate from the souls of those who have died untimely or violent deaths, or been deformed, idiotic, or insane; afflicted with fits or unusual ailments; or drunken, dissolute, or wicked during life. The precise distinction between the three classes is that the Prēta [Skr. rt. *pre*, "to depart from life"] is a ghost of a child dying in infancy, or of one born deformed, imperfect, or monstrous—events attributed to neglect in performing certain ceremonies prescribed during the ten days when, according to popular notions, the limbs of the embryo are forming in the womb: such a ghost becomes a misshapen, distorted goblin. The Piśācha ["flesh-eater"], on the other hand, is derived rather from mental characteristics, and is the ghost of madmen, habitual drunkards, the treacherous and violent-tempered. . . . Bhūtas emanate from those who die in any unusual way, by violence, accident, suicide, or sentence of law; or who have been robbers, notorious evil-doers, or dreaded for cruelty and violence. The death of any well-known bad character is a source of terror to all his neighbourhood, as he is sure to become a Bhūta or demon, as powerful and malignant as he was in life' (M. J. Walhouse, *JAI* v. 408 f.). They are represented with small thick bodies, of a red colour, with pigtails round their heads, horrible faces, the teeth of a lion in their mouths, and their bodies covered with ornaments (Caldwell, in Ziegenhalg, 153). In the Deccan they live in large trees, empty houses, or old wells; they often appear as a deer, a tall figure, a strange ox or goat; if a person sleeps under a haunted tree, cuts a branch of it, defiles the abode of the Bhūta, or jostles one on the road, he falls sick or some ill-luck befalls him (*BG* xviii. pt. i. 292). In Gujarāt the Bhūta and Preta, like the European Vampire, are believed to take possession of a corpse, and speak through its mouth; they appear in the form which they possessed when living; enter a living man, and cause him to speak as they please; afflict him with fever or other disease; appear as animals, and frighten people by vanishing in a flame of fire; remain sometimes invisible, and speak only in whispers; a Bhūta has been known to come to fisticuffs with a man, or to carry him off and set him down in a strange place; cases have been reported in which women have been found with child by them; when a Bhūta appears in a tree, a pile of stones is raised at its root, to which every passer-by adds one; if stones be not procurable, a rag is stuck to the tree, which is hence known as the 'Rag-uncle' [cf. Hartland, *LP*, 1895, ii. 175 ff.; Crooke, *PR*[2] i. 161 ff.] (Dalpatrām Dāyā, 'Bhoot Nibundh,' in A. K. Forbes, *Rās Mālā*, 644 ff.). The Bhūta eat filth, and drink any water, however impure; they cannot rest on the ground, and for this reason a peg, or brick, or bamboo pole is placed at their shrines on which they may sit or perch; they speak a sort of gibberish in a nasal tone, and hence 'goblin speech' (*piśācha bhāṣa*) is the term applied to the jargon in the mediæval drama and in modern English (*PR*[2] i. 238); those who come from dead Brāhmans are wheat-coloured, while others, like the ghost of a negro, are black and specially dreaded (*ib.* i. 236 ff.). As a rule they are helpless by day, and move abroad at night; but midday, when they cook, and evening are specially dangerous times, and women should not move about, especially at midday, unprotected (E. Thurston, *Castes and Tribes of S. India*, vi. 230; A. K. Iyer, i. 150; *BG* xviii. pt. i. 292; *PNQ* iv. 132; cf. the similar classical belief [Theocr. *Idyll.* i. 15; Lucan, *Pharsal.* iii. 423; R. Rodd, *Customs and Lore of Modern Greece*, 1892, p. 181; J. T. Bent, *The Cyclades*, 1885, p. 85]; cf. also art. CALENDAR [Celtic], vol. iii. p. 82).

4. Spirits of the murdered, the unsatisfied, the foreigner.—Of these classes of Bhūta the most dangerous are the spirits of the murdered, the unsatisfied, and the dreaded foreigner.

(*a*) *Spirits of the murdered.*—All over the world the ghost of a murdered person is believed to cherish an angry passion for revenge (Westermarck, i. 418 f.). Some of the most dangerous Bhūta are of this class.

In Coorg the demon most widely feared is that of a magician who was shot. Elmakaltai, mother of seven sons, who was buried as a sacrifice under the walls of the Kolhapur fort (cf. Crooke, ii. 173 ff.), causes food supplies to dwindle, the milk to give no butter, and the cattle to sicken; the Orāons distinguish three classes of such demons, who are known as the Bhūla, 'wanderers who have lost their way,' including those who have been murdered, hanged, or killed by a tiger (G. Richter, *Manual of Coorg*, 1870, p. 165; *Mem. As. Soc. Bengal*,[1] 1906, i. 140 f.). Several of the most widely revered local deities of N. India are the spirits of persons, particularly Brāhmans, who have lost their lives in some tragical way, and the ghosts of dead bandits, or of those who were slain by tigers or other wild animals (E. A. Gait, *Census Rep. Bengal*, 1901, i. 196 ff.; Crooke, i. 191 ff., ii. 213 f.).

Hence comes the conception of a special Brāhman demon, known as Brāhma-rākṣasa, Brāhma-daitya, Brāhma-puruṣa, or popularly as Brahm, the spirit of a murdered Brāhman. The Brāhman being himself spirit-laden, his ghost is invested with special potency for good or evil. In Bengal

'such spirits are specially powerful and malicious. Sometimes they are represented as a headless trunk, with the eyes looking from the breast. They are believed to inhabit large trees by the side of a river or in some lonely place, whence they throw stones at travellers and lead them astray on dark nights, and woe betide the unfortunate who should give one of them cause for offence (*e.g.* by unwittingly felling the tree in which they have taken up their abode), or who was in any way responsible for his death. He can only escape the evil consequences by making the Bárhám his family deity and worshipping him regularly' (Gait, i. 198; Crooke, ii. 78). In W. India the rulers of the

[1] Hereafter cited as *MASB*.

State of Sāvantvāḍi are afflicted by the demon-spirit of a Brāhman killed in the 17th century. He is particularly excited if any one uses his seal of office, and down to the present day a Brāhman is always employed to seal the State papers (*BG* x. 440). In the Deccan the Brāhma-samandh, the spirit of a married Brāhman, haunts empty houses, burning-grounds, river-banks, seldom attacks people, but when he does attack them it is difficult to shake him off (*ib.* xxiv. 415). In the same region the Brāhma-puruṣa is the spirit of a miser Brāhman, who died in grief, intent on adding to his hoard; when he lives in his own house, he attacks any member of the family who spends his money, wears his clothes, or does anything to which in life he would have objected (*ib.* xviii. pt. i. 553 f.).

(*b*) *Those who have left this world with unsatisfied desires.*—The spirits of the unhappy or unsatisfied fall into several groups:—

(*a*) *Unhappy widows and widowers, childless women.*—Among these the most dreaded is the Churel, Churail, Chudel, Chudail, or the Alwantin, as she is called in the Deccan—the spirit of a pregnant woman, one dying on the day of childbirth, or within the period of puerperal pollution.

In the Panjāb she appears as a pretty woman, with her feet turned backwards, and is specially dangerous to members of her own family (*PNQ* ii. 168 f.). Among the Orāons, when the exorcist forces her to appear in the flame of his lamp, she looks like the Dākiṇī, the common type of ogress; but her feet are distorted, she is hunch-backed, and has a large hole in her belly like the hollow in a tree (*MASB*, 1906, i. 140). In Madras a woman who dies prematurely, especially as the result of suicide or accident, becomes a she-devil, known by the euphemistical title of Mohanī, 'the charmer,' and she so continues until her normal term of life is over (*NINQ* i. 104). In the Deccan the Jakhin (Skr. *yakṣiṇī*, rt. *yakṣ*, 'to move') is the spirit of an uneasy married woman, who haunts bathing and cooking rooms, attacks her husband's second wife and children, takes her own children from their stepmother, or, like the British fairies, steals babies and returns them after a time (*BG* xxiv. 416). The spirit of a deceased husband or wife, particularly the latter, is most dangerous to his or her successor. This is, in part, an explanation of the objection felt among the higher castes to widow-marriage, of the custom of performing the rite at night in order to avoid the observation of the angry spirit, and of the use of sundry ceremonies which repel evil spirits (R. E. Enthoven, *Bombay Census Rep.*, 1901, i. 208). Among the Kolīs of Aḥmadnagar a widow bride is held to be unlucky for three days after her marriage, and must take care that no married woman sees her until that period is over; if after such a marriage the widow bride or her husband should fall sick, the medium, when consulted, usually reports that it is caused by the spirit of her first husband, who is annoyed because his wife has married again; the bride has to give a feast, spend money in charity, and wear in a copper case round her neck a tiny image of her late husband, or set it among the household gods (*BG* xvii. 206). Such amulets are known in the Panjāb as 'the crown of the rival wife' (*saukan maurā*), and to them all gifts made to her are presented as a measure of precaution (H. A. Rose, *Census Rep.*, 1901, i. 121). Sometimes the widow wears a gold-wire bracelet on her right wrist, and every year, in the name of her deceased husband, feeds a Brāhman woman whose husband is alive, and gives her clothes (*BG* xxii. 814). When a widow of the Let tribe in Bengal marries again, her second husband is usually a widower, and he places the iron bangle of his first wife on the arm of her successor (E. A. Gait, i. 421). In the Deccan the Āsrā is the spirit of a young woman who committed suicide after bearing one or more children; she attacks young women, and must be propitiated by offerings of cooked rice, turmeric, red powder, and a bodice (*BG.* xviii. pt. i. 553). The Hadal or Hedali, the spectre of a woman dying in pregnancy or childbirth, is plump in front and a skeleton behind, lives in wells, trees, or dark corners of the house, attacks women, and, sometimes appearing as a beautiful woman, lives with men until her fiend nature or spectre form is discovered (*ib.* xviii. pt. i. 554). The corpses of women dying under such circumstances are often burnt in order to prevent sorcerers from digging them up and using the unborn fœtus or the bones of the mother for purposes of Black Magic (*ib.* xxiii. 201; A. K. Iyer, i. 77 f.).

(*β*) *Unhappy children and the unmarried.*—Under the influence of the same belief that the spirits of those dying with unsatisfied desires become malignant, children and unmarried persons are included in the army of evil spectres.

In the Himālaya, the Tolā or Maāñ (the latter a term ordinarily used to designate cemetery spectres) are the spirits of children or bachelors, sometimes appearing in the form of a will-o'-the-wisp, banished from the society of other spirits, living in wild and solitary places, sometimes prowling about in the form of bears or other wild animals. They are, as a rule, harmless, and their present estate is only temporary, because after a time they undergo transformation, and assume other shapes (Crooke, i. 261; Oakley, 218).

The spirits of the unmarried dead form a large group.

In S. India such spirits are called Vīrika (Skr. *vīra*, 'heroic,' 'eminent'), 'and to their memory have small temples and images erected, where offerings of cloth, rice, and the like are made to their *manes*. If this be neglected, they appear in dreams, and threaten those who are forgetful of their duty' (F. Buchanan, *A Journey through Mysore, Canara, and Malabar*, i. 359; cf. ii. 120, 152, where the name is extended to the spirits of bad men, who afflict the living). In Kanara, if neglected, such spirits send pestilence among men and sheep, and disturb people by dreams and nightmares (*BG* xv. pt. i. 300). In the Deccan the Jhoting is the spirit of a youth dying unmarried and leaving no relatives; it lives in trees, ruins, or burial-grounds, is most faithless and can be bound by no oath, personifies absent husbands, leads wayfarers into pools and drowns them, waylays postmen, who are safe so long as they do not lay down their bags (*BG* xviii. pt. i. 554). Elsewhere the Jhoting is the ghost of a low-caste Hindu who died with unsatisfied desires, wears no clothes, and lets his hair flow loose; he lives in a house of his own, but, if this be burnt or pulled down, he removes to a river or well; he fears to enter sacred places, or to attack persons learned in the Vedas and strict in the performance of their religious duties (*ib.* xxiv. 417). In the Deccan those who die after the rite of thread-girding and before marriage become evil spirits, known as Muñjā (Skr *muñja*, 'the fibre girdle of the Brāhman') or Aṭhavar (Skr *aṣṭavarṣa*, 'eight years old') (*ib.* xviii. pt. i. 539). Such spirits are greatly feared in the Panjāb, where they are known by the euphemistical title of 'father' (*pitā*); shrines are erected to them near tanks, and offerings are made (*NINQ* v. 179). A typical case of the deification of the unmarried is found in the cult of Dūlhā Deo, 'the deified bridegroom,' which seems to have originated in the Central Provinces, where a bridegroom on his wedding journey was killed by a tiger or in some other tragical way; at marriages a miniature coat, shoes, and bridal crown, with a little swing to amuse the child, are offered to him (R. V. Russell, i. 80; Crooke, i. 119 ff.). In the Panjāb, under the influence of Vaiṣṇava beliefs, he is said to represent the relationship of God to the human soul, exhibited as that of a lover to his mistress (H. A. Rose, i. 130). For similar legends of a bride and bridegroom turned into stone, see J. Grimm, *Teut. Mythol.*, Eng. tr., 1888, iv. 1446; W. C. Borlase, *Dolmens of Ireland*, 1897, ii. 549.

(*c*) *Spirits of foreigners.*—The same feelings of awe or fear naturally attach to the spirits of dead foreigners, whose valour, cruelty, or other qualities have impressed the minds of a subject people.

At Sahāranpur a Musalmān named Allah Bakhsh, who died in a state of impurity, has become a dangerous demon, worshipped by the lower castes of Hindus (*NINQ* v. 183). Such a spirit is known by the euphemistical title of Mamdūḥ 'praised,' 'famous,' or as Najis, 'the impure one.' He wears Musalmān dress, with his hair on end, and carries branches in his hands; even the Pīr, or saint, sometimes becomes hostile to people who unguardedly sit upon his tomb, spit at it, or in other ways annoy him (*ib.* v. 106; *BG* xxiv. 416 f., xviii. pt. i. 554). People resort to the shrine of a Muhammadan saint Ālam Pīr, at Muzaffargarh in the Panjāb, to procure release from such spirits. In fact, the Indian Muhammadans have appropriated much of the demonology of their Hindu neighbours, and exorcism and the modes of securing control of evil spirits have become important branches of science (G. A Herklots, *Qanoon-e-Islam*, 1863, p. 201 ff.; *BG* ix. pt. ii. 147 ff.) In the same way the dread spirits of Europeans are propitiated That of a certain Captain Pole, killed at Travancore in 1809, is appeased with gifts of spirits and cigars (*JASB* i. 104; E Thurston, *Ethnographic Notes*, 1906, p. 296 f.). Similar cases of the propitiation of the spirits of European men and women are common in various parts of the country (Crooke, ii. 199; *BG* xviii. pt. i. 413, pt. iii. 447; *NINQ* ii. 93; *PNQ* ii. 133). In some places, however, such spirits are regarded as kindly, as in the cases of General Raymond, who died at Haidarābād in 1798, and Colonel Wallace, who died in the Deccan in 1809 (S. H. Bilgrami and C. Willmott, *Hist. and Descr. Sketch of H.H. the Nizām's Dominions*, 1883, ii. 600 ff.; *BG* xviii. pt. iii. 447 f.).

5. Modes of repelling or conciliating evil spirits.—Various methods are employed to repel or conciliate evil spirits. If the spirit after death is to pass to the home of the Pitṛi, or sainted dead, or to undergo the necessary stages of transmigration, it is necessary that the funeral rites (*śrāddha*) shall have been duly performed (see ANCESTOR-WORSHIP [Indian], vol. i. p. 450 ff.). Hence the family spirit is usually benevolent, if care be taken to provide for its wants. Thus arises the very common classification of spirits into the 'inside' and the 'outside'—the former usually friendly; the latter, being foreigners, usually hostile. The Orāons divide their spirits into those of the house, the sept, the village, and the Bhūla, or dangerous wanderers (*MASB*, 1906, i. 138). In the Deccan there are 'home' and 'outside' spirits, the latter not being greatly feared, because, though every field has its evil spirit, they are restrained by the Guardians (see § 9), who are more powerful and able to control them. The friendly house spirit generally merges

into the protecting family deity, like Gumo Goṣāin, the Mālē god who dwells in the house pillar, or Dharma Pennū, the Kandh god of the family or tribe (Risley, ii. 58, i. 403).

In any case, after a time, usually represented by the period of human memory, the spirit automatically passes to its rest, and ceases to be a source of danger to the survivors.

In the Deccan the life and influence of a Bhūta last for four, and the evil conditions of haunted places for two, generations (*BG* xviii. pt. i. 555); the Hpon of Upper Burma worship only their fathers and mothers (*Gazetteer Upper Burma*, i. pt. i. 568, 600; cf. Crooke, i. 178).

When the inability to perform the funeral rites and the consequent restlessness or maliciousness of the spirit are due to the absence of the corpse, as in the case of death occurring in a strange land or the failure to recover the body, the relatives perform the funeral in effigy.

Among the Garos, when a man dies away from his village and cannot be cremated at home, the relatives buy a number of cowrie-shells and put them in a pot to represent the bones of the dead man, or erect a mortuary hut in which they are deposited (A. Playfair, *The Garos*, 1909, p. 111). In some cases, among orthodox Hindus, the corpse is represented by branches of the sacred *Butea frondosa* tree—the head by a coco-nut; pearls, or, failing them, cowrie-shells, for the eyes; the whole being covered with paste made of ground pulse to simulate the flesh, and a deer-skin representing the cuticle; the officiating priest, by the use of magical formulæ (*mantra*), infuses life into the image, the animating principle being represented by a lamp placed close by; when the lamp goes out, the usual funeral rites are performed (*NINQ* iii. 201; cf. *BG* xviii. pt. i. 564). When the death of a relative occurs under an unlucky constellation in a Brāhman family, a special quieting rite (*śānti*) is performed to appease the uneasy spirit.

Even in the case of those dying in a natural way, precautions are taken to prevent the spirit from returning to its original home from the burial- or cremation-ground.

Among the Madras tribes, when a Bāvurī is being buried, the friends say: 'You were living with us; now you have left us. Do not trouble the people'; the spirit of a dead Savara is solemnly adjured not to worry his widow: 'Do not send sickness on her children. Her second husband has done no harm to you. She chose him for her husband, and he consented; O man, be appeased! O unseen ones! O ancestors! be you witnesses' (Thurston, i. 179, vi. 321). When the corpse of a Taungtha is carried outside the house, the chief mourner pours water on it, saying: 'As a stream divides countries, so may the water now poured divide us!' (*Gazetteer Upper Burma*, i. pt. i. 557).

Another plan is to endeavour to deceive the spirit, so that it may not find its way back, by taking it out of the house feet foremost, or through a door not usually opened for ingress and egress.

The Meitheis never carry the corpse over the threshold of the main door; sometimes a hole is cut in the wall, or the tiny side entrance is used (Hodson, 117). Among the Maghs of Bengal, when the master of the house has died, the mourners on their return cut away the house ladder, and creep in through a hole cut in the back wall, in order to baffle the ghost (Risley, ii. 34). A similar device is that of making the corpse-bearers change places on the road to the grave, and turn the corpse in the opposite direction (*BG* xviii. pt. i. 424; ix. pt. i. 48). With the same intention, the mourners are forbidden to look back when leaving the cemetery (Crooke, ii. 56 f.), the evil influence being communicated through the sight (E. Crawley, *The Mystic Rose*, 1902, p. 115; *FL* xviii. [1907] 345).

Sometimes the repression of the evil spirit is secured in a physical way.

The thumbs and great toes of the corpse are tied together to prevent the ghost from 'walking,' or it is tied up in a cotton bag, as among the Bhotiyas (Playfair, 106; Thurston, iii. 104, iv. 371, 494, v. 483, vii. 83; *Gazetteer Upper Burma*, i. pt. i. 557; *MASB*, 1905, i. 109). Among the Koyis of Madras, when a girl dies of syphilis, a fish-trap is erected to catch the spirit, and prevent it from entering the village (Thurston, iv. 55). Some people, when returning from the funeral, fling pebbles towards the pyre to scare the spirit, or make a barricade of thorny bushes between the grave and the house (Crooke, ii. 57; Risley, ii. 75). With the same intention, the names of deceased relatives are tabu for a generation, to avoid recalling their spirits; or, when parents die, men assume the names of their deceased grandfather; women, of their grandmother (Sir R. Temple, *Census Rep. Andaman Islands*, 1901, i. 253). One reason given for the wide-spread custom of shaving after a death is that it changes the appearance of the mourners so as to deceive the pursuing spirit, or removes the shelter in which it may hide and cling to the mourner (Frazer, *JAI* xv. [1886] 99). To prevent the spirit rising from the grave and 'walking,' it is a common practice, particularly among menial castes, to bury the corpse face downwards, and to pile stones and thorns on the grave (Thurston, iv. 322, 374, vii. 426; Gait, i. 419; Crooke, ii. 60; *BG* xxii. 196; cf. R. S. Hardy, *Eastern Monachism*, 1850, p. 322).

Precautions in the case of more dangerous spirits.—Precautions of this kind are more urgent in the case of spirits specially malignant.

In the case of the Churel, sometimes the corpse of a woman dying pregnant is cut open and the child removed; or the spirit is scared by fire, earth, and water; or iron nails are driven into her fingers, and the thumbs fastened together with iron rings (Crooke, i. 272 ff.). The Oraons carry the corpse of such a woman to a distance, break the feet above the ankles, and twist them round, bringing the heels in front, into which they drive long thorns; they bury her deep in the earth face downwards, and place with her corpse the bones of an ass, reciting the anathema: 'If you come home, may you turn into an ass!'; the roots of a palm-tree are also buried with her, with the curse: 'May you come home when the leaves of the palm wither!'; when they leave the burial-ground, they spread mustard seeds along the road, saying: 'When you try to come home, pick up all these!' (*MASB*, 1906, i. 140). This last charm is very common, and is one of the usual impossible tasks found in the folk-tales (Crooke, i. 273 f.; *BG* xix. 134, xxiv. 417; Steel-Temple, *Wide-awake Stories*, 1884, p. 430). These precautions, under Brāhman guidance, have been elaborated into a special funeral ritual for women dying during the menstrual period, after the sixth month of pregnancy, and within ten days after childbirth (*BG* xviii. pt. i. 561 f.).

The misery of the unmarried dead is relieved by the curious rite of marriage with the dead (cf. Frazer, *Pausanias*, v. [1898] 389 ff.)—a custom which in India seems to prevail only in Madras and among some Burmese tribes.

When a Toda boy dies unmarried, a girl is selected; her head is covered by her father with a mantle, and she puts food into the pocket of the mantle of the dead; the Nāmbūtiri Brāhmans perform the rite of tying the marriage necklace on a dead unmarried girl (Rivers, 367, 701; *Bull. Madr. Mus.* iii. 61). The disgusting custom of enforced sexual connexion by a male with such a dead girl, ascribed by Abbé Dubois to the Nāyars, seems to be based on a misunderstanding of this rite of mock marriage (J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*[3], 1906, p. 16 f.). Besides the Todas and Nāmbūtiris, several S. Indian tribes perform this mock marriage, such as the Badagas, Billavas, and Komatis, while among the Pallis and Vāniyans the dead bachelor is solemnly married to the *arka* plant (*Calotropis gigantea*) (V. N. Aiya, *Travancore State Manual*, 1906, ii. 259; Thurston, i. 117, 250 f., iii. 334, v. 197, vi. 22, vii. 315). Among the Chins of Upper Burma, if, before the great contracting ceremony is completed, either party dies, the rites are continued with the corpse, which is kept unburied until the rite is finished; in this they probably follow the custom well established among the Chinese (*Gazetteer Upper Burma*, ii. pt. ii. 303; J. J. M. de Groot, *Rel. Syst. of China*, 1894, ii. 800 ff.; J. H. Gray, *China*, 1878, i. 216 ff.).

6. **Possession by spirits.**—Possession by evil spirits or demons is of two kinds:

'The theory of embodiment serves several highly important purposes in savage and barbarian philosophy. On the one hand, it provides an explanation of the phenomena of morbid exaltation and derangement, especially as connected with abnormal utterance, and this view is so far extended as to produce an almost general doctrine of disease. On the other hand, it enables the savage either to "lay" a hurtful spirit in some foreign body, and so get rid of it, or to carry about a useful spirit for his service in a material object, to set it up as a deity for worship in the body of an animal, or in a block or stone or image or other thing, which contains the spirit as a vessel contains a fluid: this is the key to strict fetishism, and in no small measure to idolatry' (Tylor[2], ii. 123).

These two varieties of spirit possession can be traced in Indian beliefs.

(*a*) *Abnormal or disease possession.*—In the first place, we have cases of abnormal possession. Certain persons are supposed to be specially liable to spirit possession, thus defined by a native writer:

'The men most liable to spirit attacks are the impotent, the lustful, the lately widowed, bankrupts, sons and brothers of whores, convicts, the idle, brooders on the unknowable, gluttons, and starvers. The women most liable to spirit attacks are girls, young women who have lately come of age, young widows, idlers, whores, brooders on the unknowable, irregular or gluttonous eaters, and all sickly women. Women are specially liable to spirit attacks during their monthly sickness, during pregnancy, and in childbed; and men, women, and children are all apt to suffer when, dressed in their best, they go to gardens or near wells. Intelligent and educated men and healthy intelligent women are freer than others from spirit attacks' (*BG* xxii. 813).

Demon possession thus accounts for various abnormal states of mind and for the phenomena classed as hysteria. Hence patients, particularly women, suffering in this way require special pro-

tection, or it is necessary to expel the demons by whom they are possessed.

In Cochin, among the Eravallars, if a pregnant woman dreams of dogs, cats, or wild animals coming to attack her, she is believed to be possessed by demons. An exorcist, or 'devil-driver,' is called in, who makes a hideous figure on the ground representing the demon, sings, beats a drum, mutters spells, burns frankincense, and waves round the head of the patient an offering of food for the demon, on receiving which he leaves her (A. K. Iyer, i. 45 f., 107; Thurston, ii. 73, 214). In the Panjāb, a woman after childbirth is specially liable to the attacks of demons, and has to wear an iron ring, made, if possible, out of an old horse-shoe, and to keep a fire burning near her (*PNQ* iii. 81). For the same reason, at the puberty rites of a girl, offerings are made to demons (A. K. Iyer, i. 146). The same is the case with people at various crises of their lives, such as the bride and bridegroom, the mourners, and the corpse-bearers at funeral rites. Such persons are protected by various charms and amulets (see CHARMS AND AMULETS [Indian], vol. iii. p. 441 ff.).

(*b*) *Conciliation by gifts of food*, etc.—Attempts are often made to conciliate demons on such occasions by throwing food for them by the roadside or in the house.

In the Himālaya, food is waved round the head of a possessed person and left out on the road by night, any one touching it being liable to spirit attack (*PNQ* iii. 73). When a birth occurs in the family of a Chitpāvan Brāhman, cooked rice, on which a dough lamp is placed, is laid in a corner of the street (*BG* xviii. pt. i. 113 f.). When the Reddis of Bijapur disturb the field spirits at the first ploughing, pieces of coco-nut are thrown on each side of the plough track; and at a Brāhman funeral in the Deccan a man carries a winnowing-fan full of coco-kernel which he scatters abroad (*ib.* xxiii. 147, xviii. pt. i. 149). The Kūkī priest, in cases of sickness, prescribes the appropriate victim, and eats its flesh, throwing what he cannot eat as an offering into the jungle (E. T. Dalton, *Descriptive Ethnology of Bengal*, 1872, p. 46).

(*c*) *Expulsion of spirits by flagellation.*—Especially in the case of attacks of the hysterical kind, the patient is soundly beaten, until the demon speaks through him or her, and promises to depart.

'If the devil should prove an obstinate one and refuse to leave, charm they never so wisely, his retreat may generally be hastened by the vigorous application of a slipper or broom to the shoulders of the possessed person, the operator taking care to use at the same time the most scurrilous language he can think of' (Bishop R. Caldwell, writing of the Tinnevelly Shanars, in Ziegenbalg, 164). In the Deccan one plan of scaring a demon is for the exorcist to take the possessed person before an idol, seize him by the top-knot, and scourge and abuse him until the Bhūta says what offering or penance will satisfy him (*BG* xviii. pt. i. 292). The tortures inflicted on supposed witches and other possessed persons have resulted in death or serious injury (*NINQ* iii. 202 f.; N. Chevers, *Manual of Medical Jurisprudence for India*, 1870, p. 546 ff.; for further accounts of exorcism by flagellation, see Crooke, i. 99, 155 f., ii. 34; cf. Frazer, *GB*[2] iii. 127 ff., 215 ff.). In Car Nicobar true ceremonial murders of men, women, and even children have been performed for the public benefit by organized bodies, because the victims are considered dangerous or obnoxious to the community; the murdered persons are charged with possession by an evil spirit as illustrated by their propensity to witchcraft, incendiarism, homicide, failure to cure diseases, or theft; but the root cause is that the victim is believed to be possessed by a demon, and hence dangerous; his limbs are broken, he is strangled, and his corpse is flung into the sea (Sir R. Temple, 210).

(*d*) *Expulsion of disease spirits.*—The evil spirits most generally feared are those which bring disease. To their agency are attributed epidemics in general, especially cholera, plague, or smallpox, and maladies which are unforeseen or those which indicate spirit possession, such as fits, fever, rheumatism, colic, and the like. Such spirits are often got rid of by transference, the spirit being compelled or induced to remove to another village or to some distant place.

In the Panjāb, if the fever spirit be detected, the officiant goes at night to a graveyard, brings home some earth, lays it near the patient, and next day suspends a string from an acacia tree, on which it is believed that the spirit hangs itself; or a string is wound in seven strands from toe to head of the patient, and then it is tied round the tree, in the hope of conciliating the tree spirit which causes the fever spirit to depart (*PNQ* i. 40). In Upper Burma, when children fall ill, an egg, some of the child's hair, and some sweetmeats are placed on a little boat and consigned to the river, which carries away the spirit; by a later conception this is supposed to be an offering to the water Nāt or spirit (*Gazetteer*, ii. pt. i. 29 f.; cf. Frazer, *GB*[2] iii. 97 ff., 105 f.). A very common method is to convey the disease by means of a scape-animal from the infected area. In Berār the cholera spirit is expelled by yoking a plough, and driving it round the village to form a sacred circle, which foreign and hostile spirits cannot pass; a fowl and a goat are sacrificed and buried in the ground, and near them the beam and plough-yoke are fixed, daubed with red lead, and worshipped; a cart is then dragged containing the image of Marī, the disease goddess, from her shrine, to the village boundary, where the image is worshipped, and a buffalo calf is sacrificed and buried (*NINQ* iv. 206 f.). In the Telugu country the scape-animal is a buffalo, and, as the image of the goddess is carried in procession, people flourish sticks, swords, or spears, and cut up limes and throw them into the air in order to induce the hungry spirits to seize them and thus be diverted from attacking the man who bears the image (*Bull. Madr. Mus.* v. 130).

7. Possession by spirits of the exorcist.—The exorcism of evil spirits by a professional exorcist has been reduced to a system, and prevails widely in all parts of the country, particularly in S. India. In N. India the medium is known as Bhagat (Skr. *bhakti*, 'fervent faith'), Syānā, 'the wise one,' Ojhā (Skr. *upādhyāya*, 'teacher'); among the hill tribes of Central India as Baigā, Bhomkā, Parihār, or Demano; in the Deccan as Jantā, 'the knowing one,' or Devrishī, 'holy saint.' He is distinguished from the Mautrī, who learns by orthodox methods the charm formulæ (*mantra*) from a teacher (*guru*), by the fact that he does not undergo special training, but works through the inspiration of a familiar spirit or guardian, which enters him when he works himself up into the proper state of ecstasy. This ecstatic state occurs on various occasions and for various purposes. His special province is the expulsion of various kinds of disease; but he also becomes possessed at death rites, when he identifies and announces the pleasure of the spirit, at name-fixing, when he decides the proper name of the child, and at other domestic and religious rites. The medium in his ecstatic state is seized with revolting cramp-like contortions and muscular quivering, head-wagging, and frantic dancing, which usually end in complete or partial insensibility. When Sir C. A. Elliott witnessed a séance, 'the man did not literally revolve; he covered his head well up in his cloth, leaving space over the head for the god to come to; and in this state he twisted and turned himself about rapidly, and soon sank exhausted. Then, from the pit of his stomach, he uttered words which the bystanders interpreted to direct a certain line of conduct for the sick man to pursue. But perhaps the occasion was not a fair test, as the Parihār strongly objected to the presence of an unbeliever, on the pretence that the god was afraid to come before so great a *ḥākim* [official]' (*Settlement Rep. Hoshangābād*, 1867, p. 120). Compare the account by Capt. W. L. Samuells, in Dalton, 232 f., quoted above, vol. ii. p. 488 f.

(*a*) *Tabus imposed upon the medium.*—The medium is subject to numerous tabus.

The god 'would leave his head' if either a cow or a Brāhman attended the rites, thus proving their non-Aryan origin. The Kotā medium must not speak directly to his wife or to any other woman for three months before the rite; he may not sleep on a mat or blanket; at the feast he must have no congress with his wife (Thurston, iv. 10 f.). In the Deccan he loses his power if his lamp goes out while he is eating, and thus leaves him exposed to demon assault; if he happens to hear a menstruous woman speak; if any one sweeps his room; if the name of any spirit is mentioned. Should any such events occur, he must stop eating and fast during the remainder of the day. He must avoid certain vegetables and fruits, and must never eat stale or twice-cooked food. If he be a Musalmān, he must not eat a special kind of millet, or food cooked by a menstruous woman (*BG* xxiv. 418).

(*b*) *Methods of identifying spirits by the medium.*—The medium uses varied methods of identifying the spirit which has seized his patient.

In the Panjāb he waves corn over the sick person, and, making a heap for each suspected demon, keeps on dropping grains that on which the last falls indicating the offender (*NINQ* i. 128). The Berār medium hangs a string over a wood fire and repeats spells; when the smoke touches the string, the appropriate formula is indicated (*PNQ* ii. 170). The Kāchāri medium lays out thirteen leaves, each assigned to a special god, and, hanging a pendulum from his thumb, lets it move; when it touches a particular leaf, that deity must be propitiated (Dalton, 85). In the Gujarāt an officiant tied charmed threads round the house, drove a charmed iron nail into the ground at each corner and two at the door; the house was purified; a Dev, or orthodox god, was installed, and before his image was placed a drawn sword, a lamp lit with butter, and a second lit with oil, while the medium continued to mutter charms for forty-one days, and occasionally visited the cremation ground to make propitiatory offerings to the offended spirit. In another case the spirit was actually expelled, and buried under lime, salt, mustard, lead, and stones, to prevent him from 'walking'; and, as an additional precaution, a charmed iron nail was driven into the

ground. Fumigation of the patient with the smoke of pepper and dogs' dung, as a means of inconveniencing the demon, was also recommended (A. K. Forbes, *Rās Mālā*, p. 657 ff.).

8. Shamanism.—Such methods naturally develop into the practices which have been roughly classified under the head of Shamanism (*q.v.*), though this term is often applied to demonology in general. Bishop Caldwell recognizes various points of contact between the systematized methods of exorcism known as 'devil dancing' and 'devil driving' in S. India and the Shamanism of High Asia: the absence in both of a recognized priesthood; the recognition of a Supreme God to whom, as he is too kindly to do them harm, little worship is offered by the people; the absence of belief in metempsychosis; the objects of Shamanistic worship being not gods, but demons, which are regarded as cruel, revengeful, capricious, and are appeased by blood sacrifices and wild dances; the medium exciting himself to frenzy, and pretending, or supposing himself, to be possessed by the demon to whom worship is being offered, and whilst in this state communicating to those who consult him the information he has received (*Dravid. Gram.*[2], 1875, p. 580 ff.).

Performances of this kind are uncommon in N. India, except in the Himālaya and among other hill and forest tribes. In Kumaun, when a person believes himself to be possessed by a demon, he calls his friends to dance it away; the dance goes on daily for as long as six months in some cases, and, as an additional precaution, large fires are kept alight (Oakley, 207 f.). When the Garos do devil-driving, it is in the name of their god Kalkamā, who holds in his hands the spirits of men; sacrificial stones are erected to him, and are smeared with the blood of the animal victim (Playfair, 82). The methods in use in S. India, where the system has been more fully elaborated, are of the same kind, and need not be more fully described. The basis of the performance is that the officiants, in dress, weapons, and ornaments, impersonate the demon whom they desire to propitiate and cause to depart. (See illustrations of such performers among the Parāyans and Panans of Cochin, in A. K. Iyer, i. 83, 178. Full details will be found in the writings of Bishops Caldwell and Whitehouse already quoted, and in A. C. Burnell, 'The Devil Worship of the Tulavas,' *IA*, 1894.)

Blood-drinking.—The most loathsome incident in these rites is when the medium, in order to bring himself into communion with the deity or demon, and thus gain inspiration, drinks the blood of the sacrificed victim.

The low-caste Mādiga who impersonates the demon Vīraveśin or Poturājā, 'buffalo king,' kills the sacrificial goat by strangling it with his teeth and tearing the throat open (Oppert, 451, 476). The same rite is performed by other mediums of the same class (*Bull. Madr. Mus.* v. 165 f.; Thurston, iv. 187; A. K. Iyer, i. 311). In N. India similar rites are found among the Tāntrik mediums, as when, at the Bhairava festival in Nepāl, a band of masked, yelling devils beset and torture the buffalo victim, drink the blood, and eat pieces of the raw, bleeding flesh (*PNQ* iii. 165; cf. the account in H. A. Oldfield, *Sketches from Nepal*, 1880, ii. 345 ff.). In some cases in S. India the victim is slightly wounded, and forced to eat rice soaked in its own blood; if it eats, the omen is good, but in any case the victim is slain (*Bull. Madr. Mus.* v. 173). The blood is used as a charm, as at Trichinopoly, where clothes soaked in it are hung on the eaves of the houses to protect the cattle from disease; or it is smeared on the doorposts of the shrine, or collected in a vessel and laid before the goddess for her refreshment (*ib.* v. 173, 141, 164).

9. Worship of Guardians.—Particularly in S. India, the chief reliance for protection against demons is placed in the Guardians. These are, first, the Grāmadevatā, or local village-deities; secondly, the leaders of the hosts of evil spirits, who, by appropriate conciliation, can be induced to keep their demon bands under control, and prevent them from doing injury to mankind.

(*a*) *The Grāmadevatā.*—The Grāmadevatā, 'gods of the village,' or, as they are called in N. India, the Dihwār (with the same meaning), are generally non-human spirits, though their ranks are sometimes recruited from those of human origin. They are often identified with the Earth Mother or with the wider host of Mothers (Mātā), the worship of whom prevails widely in W. India. (For Mother-worship, see A. Barth, *Religions of India*, 1882, p. 202 n.; Bishop Whitehouse, in *Bull. Madr. Mus.* v. 116 ff.; Monier-Williams, *Brahmanism and Hinduism*[4], 1891, p. 225 ff.) The connexion of this worship of the female powers with the matriarchate is not clearly established in India. But women are generally supposed to be more susceptible than men to spirit influence, and are mysterious beings charged with supernatural energy (Westermarck, i. 620, 665 ff.). Hence we find women participating in demon propitiation. The Orāons believe that women, known as Bisahī, control the terrible Bhūta known as Dāyan. The woman who desires to acquire this power strips off her clothes (see above, vol. iii. p. 447), wears a girdle of broken twigs taken from a broom, and goes to a cave, the resort of the Dāyan. There she learns spells (*mantra*), and at each séance puts a stone into a hole. If at the end of a year the hole is full, she has become an expert, and can take away life and restore it. If the hole be only partially full, she has the power only of taking away life. Every year she is obliged to sacrifice a black cat and pour its blood into the hole. She and the Dāyan alone can set the Bhūta in action, and to these all diseases are attributed. When a child dies, any Bisahī in the village is charged with causing the death (*MASB* i. 144).

As examples of these village guardians we have Chaṇḍki or Chaṇḍkāī, the low-caste Hindu guardian in the Deccan, who lives in marshes and attacks children. To appease her an image is made of earth taken from the banks of a river; offerings are made to it, and it is finally thrown into water (*BG* xxiv. 416). The field guardian of the Reddis of Bijapur lives in a stone under a sacred tree, which is smeared with red lead, and offerings are made before beginning ploughing (*ib.* xxiii. 147). Darhā is the guardian of the Birhors of Bengal, and is represented by a piece of bamboo stuck slantwise into the ground (Risley, i. 138). Naturally such village guardians are often embodied in the boundary stone. The chief object of worship of the Dāngs of Khāndesh is Simarīā Dev, the boundary god, the Sewaṇriyā of the Bhuiyārs (*BG* xii. 501; Crooke, *TC* ii. 93). The worship of boundaries (*sīmanta-pūjā*) is part of the orthodox marriage rite (*BG* xviii. pt. i. 129). In Tanjore the Ellai-kal, or boundary stone, is the subject of remarkable worship (*Bull. Madr. Mus.* v. 117 f., 166 f.).

(*b*) *The demon Guardians.*—In S. India the chief of these is Aiyanār, 'honourable father,' or, as he is also called, Śāsta or Śāstra, 'ruler' (Oppert, 505). Mounted on a horse or elephant, he rides sword in hand over hill and dale to clear the land from evil spirits; any one who meets him and his demon troop dies at once; when he is not riding, he appears as a red-coloured man, wearing a crown, with lines of sacred ashes (*vibhūti*) on his forehead, and richly dressed; he has two wives, Pūrannai and Pudkalai, who are worshipped with him (Oppert, 505; *Bull. Madr. Mus.* v. 118; A. K. Iyer, i. 312 f.). In the Himālaya the demons go about on horses, in littera, or on foot, led by Bholanāth; death seizes any one meeting them; Airi patrols the land with his dogs (*JASBe*, 1848, p. 609; Crooke, i. 262 f., 280; cf. the European legend of the Wild Huntsman, the Orion of Greek legend, Wuotan of Germany [Frazer, *Pausan.* v. 82; Grimm, iii. 918 ff., 941 f.]).

The Deccan guardian is Vetāla, who also appears as a goblin tenanting dead bodies (see the *Vetāla-pañchaviṇśatika* included in Somadeva, *Kathā-sarit-sāgara*, tr. C. H. Tawney; and Sir R. Burton, *Vikram and the Vampire*, 1870). He is represented in human form, but his hands and feet are turned backwards, his eyes tawny green, his hair standing on end; he holds a cane in his right hand and a conch-shell in his left; when he goes his rounds, he is dressed in green, and sits in a litter or rides a horse, while his attendants follow, holding lighted torches and shouting (*BG* xviii. pt. i. 291, xxiv. 415). In the villages, as a guardian, he occupies a stone smeared with red paint, the top roughly carved into a man's face; but more usually he resides in the pre-historic stone circles scattered over the hills, the centre stone representing the demon, and the surrounding pillars his attendants (*ib.* xviii. pt. i. 291, 553, pt. iii. 347, 388, xxiv. 415).

Like him is Bhairava or Bhairun, who seems to be in origin an old earth-god, the consort of the Mother. In his form as Kāl Bhairava he cures diseases caused by demons (*ib.* xi. 461, xiv. 73, xviii. pt. i. 289). As Bahiroba he is widely revered, and the Dhāngars of Sātāra bury his image with the rich men of the tribe to protect them from evil spirits (*ib.* xi. 461, xiv. 73, xix. 105).

In N. India, where the belief in demons is less intense, the local village-deities, and, in particular, Hanumān, the monkey-god, are installed as guardians at the foundation of every settlement.

10. Periodical or occasional expulsion of evil spirits.—The periodical or occasional expulsion of evil spirits is as common among many Indian tribes as it is among other primitive races (Frazer, *GB*[2] iii. 39 ff.).

This is often done at the close of the harvest season, which is regarded as a period of licence. About harvest time the Karenni of Upper Burma take a piece of smouldering wood from the house fire, place it on a bamboo, and carry it ceremonially outside the village; they are unable or unwilling to explain the object of the rite, but they say that it keeps off fever and other sickness from the house (*Gazetteer*, i. pt. i. 530). Among the Taungthas of the E. frontier there is a general cleaning up of the village after an epidemic, the place being surrounded with a cordon of fresh-spun white threads, and the blood of sacrificed animals scattered (T. H. Lewin, *Wild Races of S.E. India*, 1870, p. 196 f.). The people of Lower Burma expel the cholera demon by scrambling on the house roofs, laying about them with bamboos and billets of wood, drum-beating, trumpet-blowing, yells, and screams (C. J. F. S. Forbes, *British Burma*, 1878, p. 233; Shway Yoe, *The Burman*, 1882, i. 232, ii. 105 ff.). Similar harvest-rites are found among the Ho and Mundāri tribes in Bengal and those of the N.W. frontier (Dalton, 195 f.; J. Biddulph, *Tribes of the Hindoo Koosh*, 1880, p. 103). At the annual

Maler feast the priest scatters rice; all persons supposed to be possessed with devils scramble for it, and are finally cured by drinking the blood of a sacrificed buffalo (Dalton, 270). The Kandhs practise a similar rite at seed-time (W. Macpherson, *Memorials of Service*, 1865, p. 357 f.). In Bengal, during the Holī spring festival, people light torches and fling them over the boundary of the next village, the custom often giving rise to riots (*PNQ* iv. 201). Even among many of the higher castes, like the Prabhūs of Bombay, in order to expel evil spirits at a marriage, a servant rises early and sweeps the house, gathers the sweepings into a basket, lays on it an old broom, a light, some betel, and four copper coins, and waving the basket before each room says: 'May evil go, and Bali's kingdom come!' She then drives the master of the house to the door, and, warning him not to look back, places the sweepings on the roadside and brings back the coins (*BG* xviii. pt. i. 252 f.). In Upper India the Divālī, or feast of lights, is the occasion for observances of the same kind, the lamps scaring demons, and a regular rite of scaring poverty or ill-luck from the house being performed (*IA* xxxii. [1903] 237 ff.; *NINQ* v. 125; Crooke, ii. 188 f., 295 f.). Often these rites take the form of a mock combat or a tug of war, in which one party represents the good, and the other the evil, spirits, arrangements being made that the former shall be victorious. The Burmese Nāts are propitiated by a tug of war, the victorious side being supposed to get better crops; and if, after the contest, rain happens to fall, the efficacy of the appeal is placed beyond question; this is also done in seasons of drought (*Gazetteer Upper Burma*, ii. pt. ii. 95, 279, iii. pt. ii. 64). Among the Aos of Assam, at a festival held in August, there are tugs of war lasting for three days between the young men and unmarried girls of each clan (*khel*) (E. A. Gait, *Census Rep. Assam*, 1891, i. 244). In Ahmadnagar, in April–May, the boys of one village fight with slings and stones against those of another; it is believed that the non-observance of the rite causes failure of rain, or, if rain falls, a plague of field rats; a fight duly waged is followed by plentiful rainfall (*BG* xvii. 722 f.; cf. the Greek λιθοβολία and αἰσχρολογία [Farnell, *CGS* iii. 93, 99; J. E. Harrison, *Prolegomena*, 1903, p. 155; Crooke, ii. 320 f.]).

11. Gaining control of a demon.—In the rites of Black Magic, a demon, if he can be brought under the control of a medium or magician, plays an important part; he may be used as a protector by his master, or his owner may let him loose to work mischief on those whom he desires to injure. The magician, by the use of spells (*mantra*), can often induce him to enter some receptacle, and he thus becomes a marketable commodity.

'When the sale of a Bhūt has been arranged, the Ojhā hands over a corked bamboo cylinder which is supposed to contain him. This is taken to the place, usually a tree, where it is intended that he should in future reside; a small ceremony is performed, liquor being poured on the ground, or small mounds (*piṇḍā*) erected in his honour, and the cork is then taken out, whereupon the Bhūt is supposed to take up his abode in the place chosen for him. His function is to watch the crops and guard them from thieves, and, if any one should be hardy enough to steal from a field thus guarded, he is certain to be stricken by the Bhūt, and in a few days will sicken and die' (E. A. Gait, *Census Rep. Bengal*, 1901, i. 198). Among the Pulluvans of Madras, 'a man who wishes to bring a demon under his control must bathe in the morning for forty-one days, and cook his own meals. He should have no association with his wife, and be free from all pollution. Every night, after 10 o'clock, he should bathe in a tank or river, and stand naked up to the loins in water, while praying to the god whom he wishes to propitiate, in the words: "I offer thee my prayers, so that thou mayst bless me with what I want." These, with his thoughts concentrated on the deity, he should utter 101, 1001, and 100,001 times during the period. Should he do this, in spite of all obstacles, and intimidation by the demons, the god will grant his desires' (Thurston, vi. 231). In Mysore, among the Hasulas and Maleyas, jungle tribes, when a man dies, his spirit is supposed to be stolen by some one else's devil, who is pointed out by the astrologer, who divines by throwing cowrie-shells or rice. The heir, then, as a measure of precaution, redeems the spirit by offering a pig, fowl, or other gift; and he promptly shuts it up in a pot, where it is periodically supplied with drink and food to prevent it from 'walking' and doing mischief (B. L. Rice, *Mysore*, 1897, i. 214; cf. 'The Fisherman and the Jinni,' Sir R. Burton, *Arabian Nights*, 1893, i. 34 ff.; *PNQ* ii. 170). The power of a demon is believed to rest in his hair, and, if a man can succeed in cutting off the topknot of a Bhūt, the latter will be his slave for life (*NINQ* iii. 180). In Travancore, Kuttichāttan, the boy imp, if fed, watches the property of his owner; the master of such a demon possesses infinite powers of evil; but these, if wrongly exercised, recoil upon him, and cause him to die childless and after terrible physical and mental agony (N. Subramhaniya Aiyar, *Census Rep.*, 1901, i. 303). Siddharājā, the great Chalukya king of W. India, is said to have performed his acts of heroism by aid of a demon which he subdued by riding a corpse in a cemetery (*BG* i. pt. i. 174).

12. Relation of demonology to orthodox religion.—From Vedic times the gods ever war against the demons (A. Macdonell, 156 ff.). Kṛṣṇa slays the demoness Pūtanā; Tṛṇāvartta, the whirlwind demon; Ariṣṭa, the bull demon; Keśin, the horse demon (F. S. Growse, *Mathura*[3], 1883, pp. 55, 62). Many gods and goddesses take their cult-titles from their conquest of demons; Devī as Mahiṣa-mardinī, Indra as Vṛtrahan, Viṣṇu as Kaiṭabhajit and Madhusūdana. The scenes of these ghostly combats are still shown, like the gloomy cave at Yān in Kanara, whence Śiva dislodged the demon occupant; the water which flows from hot springs is the blood of the Rākṣasas slain by some deity, or such wells are the haunts of demons which, if not conciliated, bring disease (*BG* xv. pt. ii. 355, xiv. 373; L. A. Waddell, *Among the Himalayas*, 1899, p. 203). This opposition between the worker by magical arts and the priest who works by the aid of the gods is one of the primary facts of Hinduism (Sir A. C. Lyall, *Asiatic Studies*[2], 1907, i. 101 ff.). Even among some of the forest tribes the supremacy of the god over the demon is admitted; but, as already stated, no clear distinction can be drawn between god and demon. The Orāons believe that their tutelary deity, Pāt, controls all the Bhūts, except the Dāyan; and the Kannikans of Madras will not worship the demon Chāthan at Cranganore because he is a rival of the local orthodox god (*MASB*, 1906, i. 142; A. K. Iyer, i. 143).

But, as a matter of fact, this opposition between demonolatry and the orthodox religion is little more than nominal, and popular Hinduism consists of a veneer of the higher beliefs overlying demon-worship, the latter being so closely combined with the former that it is now impossible to discriminate the rival elements. This combination is especially apparent in S. India, where Brāhmanism appeared at a comparatively recent period and was forced to come to terms with the local Dravidian beliefs. In particular, in the Tamil districts, the demon cultus has been elaborated under Brāhman guidance, as is shown by the ceremonial washing of demon images, elaborate processions in their honour, and other forms of an advanced species of worship. While the original Grāmadevatā are, as a rule, female, here their male consorts tend to acquire a more prominent position. Aiyanār, for instance, has become entirely independent, occupies a shrine of his own, and has a special festival, and sacrifices are made to his attendants, Maduraivīran and Mūnadian. As a concession to Brāhman feeling, blood sacrifices are falling into abeyance, and, when these are offered to a goddess, she is often veiled, and a curtain is drawn during the blood-sacrifice to Aiyanār, or the offering is made not to him but to one of his attendants (Bishop Whitehead, *Bull. Madr. Mus.* v. 160). In some places Brāhmans are beginning to act as priests to the village goddesses; but the slaying of victims is left in charge of the low-caste priests; and Brāhmans who serve in village shrines are regarded, among their own body, as holding a distinctly lower position than those who are engaged in secular pursuits (*ib.* 127 f.). The fusion of the two faiths usually manifests itself in the acceptance by the orthodox gods of the demons as their followers or assistants. This is particularly noticeable in the Śākta and Śaiva cultus, Vaiṣṇavism having little sympathy with the cruder rites of demonism. The village goddesses tend to become Śaktis, or manifestations of the female energy of Nature; Śiva himself has, as one of his cult-titles, Bhūteśvara or Bhūteśa, 'lord of demons'; his son Gaṇeśa or Ganpati takes his name as lord of his father's attendant demons (*gaṇa*); in the Karnatak, Aiyanār is identified with Harihara, a duplex figure embodying Śiva and Viṣṇu.

The corrupt Mahāyāna form of Buddhism current in Tibet and the Himālaya has largely adopted Shamanistic beliefs, drawn from the Animistic devil-dancing cults of the Bön, resembling in many

ways the Taoism of China, and reinforced from Indian Tāntrik beliefs (L. A. Waddell, *Buddhism of Tibet*, 1895, pp. 19, 34, 477; Sir H. Yule, *Marco Polo*, 1871, ii. 61 f.).

This process of the absorption of demonolatry by orthodox Hinduism naturally results in the decrease of the former, as intelligence, education, and the active missionary efforts of the orthodox priesthood extend. This is admitted by several native writers. One, speaking of Bengal, states that the numbers of the Bhūts have largely been reduced; fifty years ago there were as many millions of demons as there are men at the present time; characteristically, he seems to attribute this reduction in numbers to the facilities now offered by railways of visiting Gaya and other places for the purpose of performing the obsequial rites which appease the angry spirits of the dead (*NINQ* iii. 199). From Bombay we learn that in Kolhapur some of the most dreaded evil spirits have recently disappeared—the Brāhman ghosts having left the country because they dislike the cow-killing permitted by the British Government; the Muhammadan demons because pork is now freely eaten; only the low-caste spirits are left, and their influence has become much reduced (*BG* xxiv. 421). Even in Cochin and Travancore, the homes of demon-worship, it is said to be gradually giving way to Hinduism, as represented by the cults of Siva, Subrahmaṇya, and Gaṇpati or Gaṇeśa (A. K. Iyer, i. 311).

LITERATURE.—The cults of the demons and evil spirits of India have been as yet imperfectly studied, because many of these rites are repulsive, and performed in secret, and thus do not readily come under the observation of Europeans, while they are offensive to many students of Hinduism belonging to the higher and learned classes. The material, which is of great extent and complexity, is scattered through the anthropological literature of India, some of which has been quoted in the course of this article. It is most abundant in S. India. Much information will be found in the *Census Reports*; the *Manual of the Administration of the Madras Presidency*, 1885–93; the *Bulletins of the Madras Museum*; the *District Manuals*, esp. that by W. Logan on *Malabar*, 1887; general treatises, such as E. Thurston, *Castes and Tribes of S. India*, 1909; V. N. Aiya, *Travancore State Manual*, 1906; B. L. Rice, *Mysore*, 1897; F. Buchanan, *A Journey through Mysore, Canara, and Malabar*, 1807; L. K. Anantha Krishna Iyer, *The Cochin Tribes and Castes*, vol. i. (all published), 1909; P. Percival, *The Land of the Veda*, 1854; S. Mateer, *The Land of Charity*, 1871; R. Caldwell, *Compar. Gram. of the Dravidian or South-Indian Family of Languages*[2], 1875, in which and in B. Ziegenbalg, *Genealogy of the South-Indian Gods*, 1869, the work of the former writer on the Shānārs of Tinnevelly is reproduced; G. Oppert, *The Original Inhabitants of Bharatavarṣa or India*, 1893; Sir M. Monier-Williams, *Brahmanism and Hinduism*[4], 1891; in A. K. Forbes, *Rās Mālā*, 1878, is reproduced the *Bhoot Nibundh or the Destroyer of Superstitions regarding Daimons*, by Trivedī Dalpatrām Dāyā, issued in an Eng. tr. in 1850. To these may be added special monographs, such as P. Dehon, S.J., 'Religion and Customs of the Uraons,' in *Mem. As. Soc. Bengal*, i. (1906); A. C. Burnell, *The Devil Worship of the Tulavas*, reprinted from *IA*, 1894; H. Whitehead, 'The Village Deities of Southern India,' in *Bull. Madr. Mus.* v. (1907); M. J. Walhouse, 'On the Belief in Bhūtas—Devil and Ghost Worship in Western India,' in *JAI* v. (1876) 408.

W. CROOKE.

DEMONS AND SPIRITS (Jain).—Superhuman beings, according to the Jains, fall into two categories—the denizens of hell (*nārakas*), and the gods (*devas*). A sub-division of the latter distinguishes good and bad gods (*daivī*, and *āsurī gati*); the bad gods are also spoken of as *kudevas* or *kadamaras*. Demons would come under the two heads *nārakas* and *kudevas*, and ghosts under that of *kudevas*. It must, however, be kept in mind that, according to the Jains, neither the state of a god nor that of a demon is permanent, but both have their individually fixed duration, which may extend to many 'oceans of years.' The state which a soul may attain in the scale of beings and the duration of this state—his individual lot—depend on the merits and demerits (*karma*) of the soul; when the allotted time is over, the soul will be re-born in some other state according to his *karma*. A god may be re-born as a hell-being, but the latter will be re-born as an animal or a man only.

The *nārakas*, or hell-beings, have a demoniacal nature, but they cannot leave the place where they are condemned to live, nor can they do harm to any other beings than their fellow *nārakas*. The souls of those who have committed heinous sins are on death removed in a few moments (see DEATH AND DISPOSAL OF THE DEAD [Jain]) to one of the seven nether worlds which contain the different hells (see COSMOGONY AND COSMOLOGY [Indian], § 4). There the soul of the condemned is fitted out with an enormous body of a loathsome shape comparable to that of a plucked fowl. The hell-beings possess superhuman mental powers (*avadhi*); they avail them, however, only to find out their enemies and to fight each other. In addition to the pains produced by the wounds they inflict on one another and by the tortures they have to undergo in some hells, the hell-beings continually suffer from extreme heat or cold, the intolerable stink, and the horrid sounds which prevail in the hells, and they can never appease their hunger and thirst. The *nārakas* do not die, however much they are mangled; but their wounds close at once like a furrow in water. They die at their allotted time after a miserable life, which may extend, in the lowest hell, to 33 oceans of years.

The remaining demons and the ghosts are contained in the two lowest sub-divisions of the gods: the *bhavanavāsins* or *bhaumeyakas*, and the *vyantaras*. The lowest class of the *bhavanavāsins* (*i.e.* gods who live in palaces) are the *asurakumāras* or simply *asuras*. They reside in mansions of their own below the surface of the earth, in the upper half of *Ratnaprabhā*, the highest of the seven nether worlds. As in Hindu mythology, the *asuras* may be good or bad; but there are fifteen extremely wicked *asuras*—Ambarīṣa, etc.—who administer tortures in the three uppermost hells; in a former life they had delighted in wanton cruelty. The remaining classes of *bhavanavāsins*, *nāgas*, etc., seem to be demi-gods rather than demons.

The *vyantaras* include demons, goblins, ghosts, and spirits, who live on, above, or below the earth. They are divided into eight classes, viz. *kinnaras*, *kimpuruṣas*, *mahoragas*, *gandharvas*, *yakṣas*, *rākṣasas*, *bhūtas*, and *piśāchas*, all of which occur almost identically in Hindu mythology. The last four classes contain demons and ghosts, but they are not demoniacal as a whole. There are even among the *rākṣasas* good ones, adorers of the *tīrthakaras*, who may take *dīkṣā*, etc. In narratives the demoniacal character is usually indicated by an epithet, e.g. *duṣṭa-vyantara*. Generally speaking, the notions of the Jains on demons, ghosts, etc., are very much the same as those of the other Hindus; but the position of the superhuman beings has been, in many regards, altered by the efforts of the Jains to introduce systematical order into the mythological conceptions current at the time when their religious teachings were reduced to a definite form.

LITERATURE.—Umāsvāti's *Tattvārthādhigama Sūtra*, chs. 3 and 4 (tr. *ZDMG* lx. [1906] 309 ff.); Vinayavijaya's *Lokaprakāśa*, 1906, 9th and 10th sargas.

H. JACOBI.

DEMONS AND SPIRITS (Japanese).—**1. Ghosts.**—'The difficulty,' says a Japanese writer, 'of collecting materials for an article about ghosts is that there are so many of them.' Ghosts and ghost-stories are too numerous to admit of tabulation or classification. There are certain traditional forms which they are supposed to assume. They are mostly of the female sex, are clad in white flowing robes which conceal the

absence of legs, and dishevelled hair hangs loosely over their shoulders. As a rule they are supposed to bear some resemblance to the living original, but this is not invariably the case. The ghosts of the wicked bear on themselves the marks of the punishments they are enduring in the invisible world: they appear with one eye, or three eyes, with a long tongue protruding beyond their lips, or with a long flexible neck like that of a serpent. These corporeal peculiarities are supposed to be the results of the *karma* of a previous existence. The Japanese ghost is not generally malicious: there are times, however, when he can exhibit an amazing amount of perverse and wicked ingenuity.

Dr. T. Inouye, who has devoted much thought to the question of ghosts, summarizes their appearances as follows. (1) They are commonly seen in the twilight or at dead of night when everything is black and indistinct. They appear, (2) as a rule, in lonely or solitary places; or (3) in houses recently visited by death, or that have long been deserted, in shrines, temples, graveyards, or among the shadows of willow-trees. It is very rarely that a ghost appears to a group of persons; apparitions are mostly vouchsafed to single individuals, and especially to persons out of health, feeble in body and mind, deficient in knowledge, and impressionable. There is nothing specially new in Inouye's conclusions: they are given here to show that the Japanese ghost is very much what the ghost is supposed to be elsewhere.

2. Warnings of approaching death.—It is common among temple folk in Japan to say that at the moment of death the soul will often go to the temple to give notice of its death. On such occasions, a jingling or rattling sound is heard by the temple-gate or in the main hall of worship, and it is held that whenever these sounds are heard they are invariably followed by the announcement that a parishioner, male or female, has died. The man from whom the present writer obtained his information warned him that these stories must not be looked upon as mere idle tales. The thing is of constant occurrence, now as in the past. Two stories from *Tōno Monogatari* will illustrate this point.

A certain rich parishioner of a temple in the township of Tōno, in the province of Rikuchū, had long been confined to his bed with a disease which was known to be incurable. One day, however, the incumbent of the temple was surprised to receive a visit from the sick man, who was welcomed with the greatest cordiality, and regaled with tea and cakes. After a long and pleasant conversation, the visitor rose to take his leave. A novice followed him to the front gate. The old man, passing through it, turned suddenly to the right and disappeared mysteriously from sight. The servitors in the temple were in the meantime making the discovery that the cakes had been left untouched and the tea spilled on the mats. Several persons afterwards asserted that they had seen the old gentleman walking mysteriously down the street. The man died that evening, and the family maintained that he had been lying unconscious on his bed all day. The spilling of the tea is characteristic of many of these stories: it seems to be the proper thing for the Japanese ghosts to do.

Another very pretty story comes from the lonely mountain village of Shimo Nügawa, on the banks of the Karobe in Etchiu. The wife of a carrier, living with her husband and son, near to a mineral spring, fell into the river, as she was returning after dark on a moonless night from the spring, and was drowned. Husband and son were awaiting her return at home, very anxious because of the lateness of the hour. Finally, they concluded that, owing to the darkness, she had decided to stay the night somewhere, and would return the next morning. As the boy lay dozing on his bed he was awakened by something tugging at his hand. Seeing nothing, he went to sleep again. But the tug at his hand came again, and the touch was like that of his mother's hand. Then he called his father, and, striking a light, found that the place upon which the strange fingers had closed was covered with blood. The next morning his mother's dead body was found among the rocks in the river bed. The palm of her hand was all torn and bleeding. Evidently, in her fall, she had made a wild grab at some stone or tree, and injured it.

3. The limbs of a ghost.—While the common ghost, and especially the stage-ghost, is generally conceived as a head and shoulders ending off in vague draperies, the following story of the Haunted House of Yotsuya will show that underneath the vague draperies a real man is supposed to exist.

The house in this story was haunted by a troublesome and noisy ghost who allowed the inmates no rest at night. The landlord could find no tenant though the rent was ridiculously low. At last a man, tempted by the cheap rent asked for the otherwise desirable residence, determined to face the ghost and lay him if possible. He shut himself into the house at night and awaited the ghost's arrival. At the wonted hour he came. He was not, however, a terrible ghost at all. When he found that the man showed no disposition to run away he became quite gentle and opened his grief. In the days of his flesh he had been a fighting man, and had had the misfortune to lose his leg as the result of one of his battles. The severed limb lay buried beneath the house, and a one-legged ghost in the realm of the spirits was an object of ridicule. He had long haunted the house for the purpose of recovering his lost limb, but unfortunately he had never yet succeeded in persuading any mortal to listen to his plaint. The man promised to give his assistance, and, instructed by the ghost, proceeded to dig at a certain spot beneath the house. Presently, there arose from the hole a misty shape, a fleecy cloud, in appearance like the leg of a man which drifted off, and joined itself to the body of the ghost. 'Thank you,' said the happy ghost, 'I am satisfied now.' And he ceased to haunt the house. The story shows that the Japanese ghost is thought of as being the exact spiritual counterpart of the material man.

4. Ghostly counterparts of material objects.—The Japanese ghost rarely (if ever) appears naked. He appears sometimes in his grave-clothes, but very frequently in the ghostly counterparts of the clothes which he habitually wore in his material life. He often has a spiritual sword, and has been known in stories to commit murder, *e.g.* strangling, with the ghostly counterparts of material objects, such as a rope or a piece of tough paper.

A Kyōto story, dating from the Kyōhō era (A.D. 1716–1735), tells of a murdered woman who was buried along with her newborn infant, the latter not being truly dead at the time of interment. Prompted by maternal instinct, the ghost of the woman escaped from the tomb and went into the city to buy food for her infant. Two or three times she appeared at a certain shop and purchased some rice-jelly. On each occasion she was served by a different member of the family—by an apprentice, by the mistress, and finally by the master. The sadness of her face impressed itself on the memory of each, and each had a distinct recollection of having seen the woman take out of her purse the proper sum of money and lay it down on the mat before her. In each case, when, after the departure of the woman, they went to take up the money, it had disappeared and could nowhere be found.

It is evident that the Japanese ghost is thought of as surrounded by ghostly counterparts of all the objects that surround him in this world—in other words, there is, in the Japanese mind, a spiritual world which is the exact counterpart of the material world in which we live.

5. Close connexion between the two worlds.—These two worlds are looked upon as being very closely connected. The spiritual world lies as near to the material, and is as closely interwoven with it, as the spirit of man is with his body. The link of connexion is never broken, and the Japanese ghost feels the same keen interest in the welfare of his family, province, or country that he felt when alive.

There are many stories to illustrate this: for example, one recently published by Viscount Tani in the *Kokumin Shimbun*, of a certain Hamada Rokunojō, a *samurai* of the Tosa clan, who, having been beheaded (A.D. 1674) with his whole family on account of embezzlement of provincial funds, appeared to his judge on the day following the execution, to relieve himself of an important message which oppressed his mind. In many stories, the constant persecutions of a stepmother worry her hated stepson into a monastery, where he can have no further influence over the family finances. A pious priest of Hieizan, who had spent many years in the continuous recitation of the Hoke Kyō, edifies (or annoys?) the community by continuing the same practice in the darkness of the tomb. The ghost of a murdered man gives no rest to judges, councillors, or kinsfolk, until he has secured the acquittal of a wrongfully accused person and the arrest of his own guilty brother.

These are but a few instances out of the many ghost stories with which Japanese literature and folk-lore abound. Whether the tales are true or not does not matter. The important thing is that they all illustrate the constant belief of the

Japanese in the reality of the spirit world, and in the constant and close interest which its denizens take in the concerns of men.

6. Effects of this belief on conduct.—'Are you not ashamed,' says a kind-hearted husband, in one of Tokutomi's novels, to his spiteful wife,—'are you not ashamed to stand before the family *ihai* [tablets of the dead], when you have been treating your own brother's child with such cruelty?' There can be no doubt that the belief in the continued interest taken by the dead in the concerns of the world they have left behind them has exerted in the past, and still exerts, a great influence on the moral conduct of the individual Japanese. The influence is fostered by the presence on the domestic shrine of the tablets of the dead, by the observances on death-days and other anniversaries of the dead, by the ceremonies, joyous and otherwise, of the Urabon Festival, by the many lustrations of the Shinto rites, and by the practice, observed in private households as in the great affairs of State, of announcing to the spirits of the deceased, as matters that must touch them closely, any events of importance that have taken place in the family circle or the country. When the second Tokugawa Shōgun, Hidetada, wished to change the succession in his family, he was only dissuaded from his designs by the consideration of the fact that he would have to notify the change by some messenger sent expressly to the realms of the dead. Imperial messengers are constantly being sent to announce some event to the spirits of the Imperial Ancestors, and the Shōkonsha shrines which, during the present reign, have been erected in Tokyo and elsewhere, to the memory of the patriot dead who have died for sovereign or country during the Meiji period, represent the enlargement by design of an old belief that has always been present in Japan under one form or another. The spiritual world of the Japanese is no longer bounded by the narrow limits of the province. Like their patriotism, it has become Imperial: for what lies outside the bounds of the Empire the Japanese have but little concern.

7. The spirits of material objects.—The Japanese ghost differs from ours in conception. It is not, as with us, just the spiritual *portion* of a man, separated at death from the body. It is the *whole man* spiritualized, the exact, immaterial counterpart of the material man. Every material object (*e.g.* money, as we saw above) has this spiritual counterpart, and there has from the earliest times been a tendency to personify the spiritual counterparts of material objects, especially things remarkable for beauty, majesty, age, and the like. We hear occasionally of the ghost of a teapot, a badger, or the like; the poetic imagination of the Japanese has peopled her wilds with gods or spirits of the mountain, the cascade, the tree, the well, the river, the moon, and above all, the sun. The indigenous Japanese cult is threefold. It is nature-worship, ancestor-worship, and, as a corollary to the latter, ruler-worship.

8. The spirits of animals.—If man has a spiritual counterpart to his material self capable of leaving the latter and of continuing its existence apart, and if the same can be said of plants, mountains, and other inanimate bodies, it stands to reason that the same qualities ought, logically, to be attributed to the animals. All animals are, in Japanese popular thought, thus endowed with spiritual counterparts, and some more conspicuously than others. Foxes, badgers, bears, and the like are able not only to appear before the eye in the spiritual counterpart of their own material shape, but even to enter into the bodies of men and other animals, and to speak and act through them.

The fox.—The fox is the hero of a thousand stories. He has, *e.g.*, been known to change himself into a tree. In a legend from Nara we read of a Shinto priest from the Kasuga shrine who, having lost his horse, went into the forest to search for it. He was astonished to see a giant cryptomeria in a place where none had stood only a few days before, and, in order to make sure that he was not being bewitched, discharged his arrow against the tree. The next day the tree had disappeared, but on the place where it had stood there was a poor little dead fox with an arrow through its heart. Again, the fox has been known to turn into a woman, not only as a temporary disguise, but permanently; and there is a popular play known as the *Shinoda no mori*, or 'Forest of Shinoda,' which turns entirely on the supposed marriage of a man with a vixen who had assumed the form of a young woman. The plot has an extremely sad and tragic dénouement. The story of the midwife who was tricked by a fox into assisting at the accouchement of his wife is also a favourite one which may be found in many districts.

The cult of the fox, whilst probably indigenous to Japan, is also found in China, and many of the fox-legends are probably importations. When the fox can find a human skull, and put it on its head, and then worship Myōken, the polar star, it obtains its power of assuming the human form. It is very fond of assuming the shape of a beautiful maiden, and chooses the twilight for the exercise of its witchery. The witchery of a fox is rarely of a malicious kind. It has indeed been known to deal swift and sharp retribution to men for acts of injustice and cruelty, but it is, as a rule, mischievous rather than spiteful, and there are not a few instances in which the fox has shown great gratitude. There are no stories which tell of the fox requiting good with evil; but it never omits to requite evil with evil.

A story from Kai tells of a *samurai* who shot at a fox with intent to kill. He missed his aim, but the fox did not forget the hostile intention, and when the *samurai* got home he found his house on fire. On the other hand, a story from Ōmi tells of the gratitude of the fox to whom the priests had shown kindness; and the great Nichiren, who had a very tender heart for animals, was said to have two familiar and attendant foxes who accompanied him everywhere, predicting the future, and warning him of coming dangers. A story is also told of a certain Yasumichi, who held the office of Dainagon and resided at Takakura, near Kyōto. The grounds surrounding his mansion were so full of foxes that they became a nuisance to the neighbourhood, and Yasumichi was minded to get rid of them. He appointed a day for a great fox-hunt; but, on the evening before, a fox appeared to him in the shape of a handsome boy, and, in the name of the whole tribe, promised the best of behaviour if only Yasumichi would spare them. Yasumichi did so, and never repented of the bargain.

For further stories relating to the power of metamorphosis ascribed to the fox, as well as for similar stories relating to other animals, the reader is referred to M. W. de Visser's excellent treatises on the 'Tengu,' the 'Fox and Badger,' and the 'Cat and Dog,' in Japanese folk-lore, appearing in vols. xxxvi. and xxxvii. of the *Transactions of the Asiatic Society of Japan*.

9. Possession by foxes and other animals.—What we have hitherto said has related to the supposed power of the fox and certain other animals of bewitching men by assuming phantom bodies. In fox-possession, the spirit of the animal intrudes itself into the body of a man or woman, in such a way that the intruding spirit exercises a control, more or less absolute, over the person in whose body it resides. This power is ascribed not only to the fox, but to the dog, the monkey, the badger, and the serpent. Strange to say, these beliefs are more prevalent in Kyūshū and S.W. Japan than in the North and North-eastern districts, and it seems not unnatural to ascribe them to Malay rather than to Chinese or Mongolian influences. The following is a list of the names commonly given to these forms of possession, together with the localities in which they are said to be especially found:

Name.	Locality.
Kitsune-tsuki, 'fox-possession'	No definite locality.
Nekogami, 'cat-god'	,, ,,
Tanuki-gami, 'badger-god'	,, ,,
Inugami, 'dog-god'	Bitchū, Awa, Tosa, and parts of Kyūshū.

Name.	Locality.
Sarugami, 'monkey-god'	Shikoku.
Hebigami, 'serpent-god'	Iyo.
Tōbyō (meaning unknown)	Bitchū, Bingo.
Hinomisaki ,, ,,	,, ,,
[These two are forms of *Kitsune-tsuki*.]	
Ninkō, 'human fox'	Izumo.
Izuna, ,, ,,	Shinano.

[*Oni-tsuki*, or 'demon-possession,' in the strictest sense of the term, and possession by Tengu, are omitted here, as they will be discussed later on. The reader is again recommended to study de Visser's illuminating pages.]

10. Oni.—This is the name given to a certain class of supposed beings of hideous aspect and Herculean strength. They often assume the human form, with the addition of a pair of bull's horns, and a tiger's skin thrown around their loins. These two special symbols denote, so it is said, that they came into the world of men through the *kimon*, or 'spirit-gate,' which, following the arrangement of the Japanese zodiac, is situated in the *ushi-tora* ('bull-tiger') direction (see below).

The word *oni* is said to be of Chinese origin, and to denote 'hidden' or 'secret.' It is therefore connected in idea with the Japanese *kakureru*, 'to go into concealment,' used of the death of eminent persons, and it is thus plain that the primary conception of the *oni* is that they are the spirits of the dead. The oldest purely Japanese term seems to have been *mono* ('the beings,' an euphemism based on the idea of *de mortuis nil nisi bonum*); *arakami*[1] or *araburukami* ('wild spirits'), and *shikome* ('ugly women'), appear to have been used later, and later again we get the word *mononoke* ('spiritual beings'). Many Japanese will say that *mono* or *mononoke* are essentially evil beings, but there seems to be no inherent reason for such a supposition. A still more modern word is *bakemono* ('beings possessed of magical powers'). These words show the beliefs of the Japanese regarding the dead. Death is liberation from the trammels of fleshly existence. The dead, therefore, possessing greater freedom, have larger powers than the living, though their existence is hidden from our eyes. They are the *kishin* or the *kami*, dwelling in the dark regions of *yomi*. But there are many different types of *oni*, and some of them, unable to rest in the dull peace of Elysium, turn to more active employments. In the *Kojiki*, the *yomotsu shikome* drive Izanagi out of Hades; and the *araburukami*, changing himself into a bear, is slain by a celestial thunderbolt discharged by Takemikadzuchi.

11. The oni as modified by Confucianism and Buddhism.—The introduction into Japan of Chinese and Indian influences brought with it certain modifications of the *oni*. The *Kojiki* itself is a book largely influenced by China; it is, therefore, possible that the idea of the *yomotsu shikome* may not be a purely Japanese one. To Buddhism is certainly due the idea which makes of the *oni* the attendants of the god of Hell, Yama. In a story in the *Ujijūi Monogatari* they appear as fairies, amidst surroundings which are almost German.

An old woodcutter, who has a large wen upon his right cheek, is overtaken by a storm and compelled to pass the night in a hollow tree. Unintentionally, he becomes a spectator of the revels of the *oni*, who dance around his tree. The old man, who is a good dancer himself, joins in the dance, and, after a very delightful night, promises to come again to his new-made friends. The *oni* are a little doubtful as to his sincerity, and take the wen off his right cheek as a pledge. When he returns, he becomes an object of envy to his neighbour, who is also a woodcutter, and who has also a wen, but on his left cheek. The neighbour determines that he will also try his luck, and takes his place in the hollow tree to wait for the *oni* dance to commence. But he is not a good dancer, and the *oni* lose their tempers. They drive him out of the dance ring, and, as he flees, one of them takes the wen which they had taken from his predecessor and throws it at his right cheek, where it sticks. Thus the man returns home with a wen on either cheek.

Some of the tricks ascribed to the *oni*, such as the stealing of a lute belonging to the Emperor Murakami (A.D. 947–968), which is afterwards mysteriously lowered by invisible hands from a high tower, and so restored, seem to suggest a credulity that was easily imposed upon. When a woman disappeared from a public park in Kyōto, being last seen walking hand in hand with a man, and when a search made for her resulted only in the discovery of a pair of arms and a leg, the police of the period (A.D. 885–889) were probably very glad to be able to plead that it was the work of the *oni*. An oil-pot, rolling of its own accord along the streets, and entering a house, where it kills a young girl, ought to satisfy the most exacting of spiritualistic séances.

12. The word oni as applied to living persons.—Whilst *oni* corresponds roughly to the *ki* of Confucianism, or to the *gaki*, or inhabitants of the Buddhist Prêtaloka, it is also sometimes metaphorically applied to living people. Thus we get *oni-musha*, 'a fierce warrior'; *oni-shōgun*, 'a daring general'; *oni-kage*, 'a spirited horse.' A beautiful but hard-hearted woman is an *oni*, an ugly, evil face is *oni-zura*, and there is a phrase, *oni no jūhachi*, which suggests that the devil was a handsome enough fellow in his youth.

13. Adaptations of Indian stories.—The Japanese *oni* is sometimes conceived of as playing the part of Māra, the Tempter, who so constantly comes between Buddha and his disciples, and who is the enemy of truth. More frequently he is the Yakṣa or Rākṣasa of Indian demonology. It has been conjectured that the *Onigashima* of the popular Japanese story is the Yakṣadvīpa of the Jātakas. In the same story, the *onitaiji*, or attack on the demons, is said to be an adaptation of Rāma's invasion of Ceylon, as given in the Mahābhārata.

14. Tengu.—We now come to the consideration of the mysterious beings known as *tengu*. The popular explanation of this term is 'heavenly dog'; but the word also appears as *tenko*, 'heavenly fox,' and *tenkō*, 'heavenly light.' The Buddhist explanation of the word *tengu* is 'light and darkness,' 'freedom and non-freedom,' 'enlightenment and error.' Thus considered, the *tengu* is a being in whom are united both sides of these antitheses. A similar interpretation makes *ten* to be the heavenly *mantra* which dominates the Vajradhātu, or Diamond World, and *gu* to be the earthly *mantra* which rules in the Garbhadhātu, or Womb World. The *tengu* participates in the nature of both worlds.

Shintoist and Confucianist writers, Baron Tsuda, for example, do not hesitate to denounce the *tengu* as nothing but figments invented by a crafty priesthood for the purpose of deceiving an ignorant people. It is, nevertheless, interesting to speculate on the sources from which the conception of these fabled creatures came. The *tengu* is frequently found in Chinese literature, and it may perhaps be said that the idea of these beings came from a close observation of animals in their native haunts. The Buddhist monks of old generally built their temples in the recesses of solitary mountains, and one of the commonest of the titles bestowed on the founder of a temple or sect is that of *kaisan-shōnin*, 'the venerable opener of the mountain.' Japanese legend connects all the great *kaisan*, e.g. Saichō, Kōbō, Nichiren, etc., with stories of the *tengu*, and the favourite haunts of these creatures are famous temples, such as Hiyei, Kurama, Atago, Kompira, Ōmine, Ontake, Ōyama, Miyōgi, Akiha, and Nikkō. The frolicsome antics of animals who believe themselves to be absolutely unobserved by human eyes might easily give birth to legends of

[1] In the days of the anti-Christian persecutions, Christian emblems and books were occasionally saved from desecration or destruction by being shut up in shrines dedicated to supposed *arakami*, where they were safe, owing to the superstitious fears of the people. The present writer has been told of a crucifix which was thus treated; also of a copy of the Christian Scriptures

tengu and other weird beings. There would also be ground for imagining that some of the staider of the brute creation were re-incarnations of *yamabushi* and other pious recluses.

15. Garuḍa.—Undoubtedly the *tengu* are connected with the Garuḍa of Buddhist mythology. *Tengu* will appear as priests, riding on foxes, carrying feather fans, or even swords like *samurai*; but their commonest form is that of a bird of prey not unlike an eagle or a vulture.[1] It is a safe generalization to make, that, whenever a *tengu* is represented with the beak and claws of a bird, or with wings to fly with, the prototype is the Garuḍa. When the *tengu* takes some other form, *e.g.* a shooting star, a white badger, and so forth, the original conception is to be looked for, not in India, but in China. But, whether Indian or Chinese, the *tengu* are always subject to the sacerdotal power of the Buddhist priesthood. Some have been Buddhist priests before their present incarnation; some become converted as *tengu*, and so procure re-birth as members of the order. They can hypnotize men into seeing many things that have no existence, but their power does not last for more than a week. When the Sabbath Day comes, their power comes to an end.

16. Tengu-possession.—*Tengu*-possession differs in kind from that by *oni*, or any of the bewitching animals. There is no mischief in it, and no devilry. When a man is obsessed by a *tengu*, he merely becomes preternaturally learned or solemn, reading, writing, or fencing with a skill that would not be expected from him.

17. Exorcism.—When a man is possessed by a *tengu*, exorcism is of little importance. For possession by evil spirits, foxes, badgers, and the like, there are many forms of exorcism in vogue, the sect of Nichiren being especially noted for its labours in this kind of healing. The most famous place near Tokyo is at the village of Nakayama, where, at a certain temple belonging to the Nichiren sect, periodical retreats are held for the purpose of driving out evil spirits of all kinds (see an art. on 'Buddhistische Gnadensmittel,' in the *Mitteilungen der deutschen Gesellschaft für Natur- und Völkerkunde Ostasiens* [vol. v., Tokyo, 1907]).

18. Spirits of the house, etc.—Spirits have much to do with the Japanese conception of the house. No building can take place without a reference of some sort to them. But this is a large subject, and will be more conveniently treated in connexion with the house.

LITERATURE.—In addition to the authorities quoted in the text of this article, the present writer has drawn mainly upon three sources, all Japanese:
(i.) The *Journal of the Tokyo Anthropological Society*.
(ii.) *Tsūzoku Bukkyō Shimbun*, a weekly journal published under the auspices of the reforming school of Buddhists, also in Tokyo.
(iii.) *Tō-a no Hikari* ('The Light of the Far East'), the organ of the Tokyo Philosophical Society. A. LLOYD.

DEMONS AND SPIRITS (Jewish).—There can be no hesitation in saying that the existence of spirits was, during most periods of Jewish history and in most places, regarded as incontestable. Yet this statement is capable of being modified in no small degree. It has been stated, on the one hand, that demonology obtained so strong a grasp of the popular mind as completely to fetter it with superstition and to stifle all higher aspirations; that religious teachers and thinkers were themselves not free from these ideas; and that this belief obscured and in many ways detracted from the value of their ethical teachings. On the other hand, this has been too categorically denied by writers who hold diametrically opposite views. As might be expected, the truth lies in the golden mean. The human mind and soul are capable of accommodating simultaneously opinions which are not only inconsistent, but even mutually exclusive. It is just because man does not always trouble to disentangle his thoughts and to harmonize them that he is willing to retain the incongruent. Consequently a whole-hearted belief in the supremacy of the Godhead need not necessarily exclude an acknowledgment of the working of other powers. To arrive at the conclusion that one or the other of these beliefs must be rejected requires considerable progress along the path of mental reasoning.

The belief in spirits during post-Biblical times was a legacy from earlier periods (see esp. the 'Assyr.-Bab.' and 'Hebrew' artt. on the present subject). What Chaldæa, Arabia, and Egypt gave to Canaan underwent substantial change, and received additions from internal and external sources. In Palestine itself, Galilee[1] may be singled out as being the centre where demonology was strongest, but this must not by any means be taken to exclude other parts. Many causes contributed to the diffusion of these ideas. The ever-growing intercourse with the Greek and Roman world, produced by commercial and political circumstances, can scarcely have failed to make the Jews acquainted with many new forms of spirits. The Jews from the Diaspora who re-visited their native land cannot have returned entirely empty-handed, and foreign ideas must have found a fruitful soil in those parts where religious influences were weakest to counteract them. By a people naturally given to syncretism, dryads and satyrs would easily be associated with *shēdîm* and *sᵉ'îrîm*. Moreover, the intercourse between the coastland of Palestine and the Ægean and Cypriote ports must have led to an interchange of ideas as well as of commodities. But, without going so far afield as Greece, there were enough territorial influences at hand to account for many foreign elements in Jewish demonological beliefs and practices.

A complete list of the various forms of demons may be seen in *JE*, art. 'Demonology.' The scope of the present article is to furnish suggestions which may in some cases account for their existence. While frankly admitting the origin of a large number to be purely superstitious, there are yet many for which other explanations must be sought. The area to be considered is immense, and references of great importance occur in all branches of literature—Apocrypha and Pseudepigrapha, New Testament and Patristic writings, and Talmudic and Rabbinic works of all ages, including Halakha, Haggada, and Qabbala. On account of this wide area, great care must be exercised in drawing conclusions. Demons occurring in late books must be traced to their earliest sources. An isolated reference in the *Shulhan 'Arûkh* (1555) requires investigation as to whether it be a mediæval invention or a lingering survival of a primitive superstition. Secondly, references must be examined to see whether they are the utterances of individuals or genuine examples of popular belief; and distinctions must be drawn between local and general beliefs, between Semitic and non-Semitic, and between Jewish beliefs and those borrowed by Jews from their neighbours in European countries. A requirement, more vital than any of the foregoing, is the exercise of careful analysis in selecting Talmudic material. It is absolutely necessary to assign each authority to its proper local and chronological category; that is to say, evidence which applies to Babylon is inadmissible for Palestine; that which is found to occur in Galilee cannot be used to prove argu-

[1] It is to be noticed that there are *ōtengu*, 'big *tengu*,' with red faces and long human noses; there are also *kotengu*, 'small *tengu*,' with beaks. These are also known as *karasut*, 'crow *tengu*.'

[1] Cf. H. Grätz, *Gesch.*⁴, Leipzig, 1888, iii. 282.

ments for Judæa; and the same care must be exercised in respect of chronology.

In investigating Talmudic evidence as to spirits, the reader will notice, at the outset, different attitudes adopted by the Rabbis in dealing with this question. In some cases the reality of demons seems to be taken for granted absolutely; in others it seems, with no less certainty, to be denied. Stories occur in which both these attitudes may be traced simultaneously. The reason for this may be found if the nationality of the respective teachers be sought. It has already been stated that Galilee was the centre of Palestinian demonology, and it will almost invariably be found that *Galilæan* teachers *accepted*, while *Judæan* teachers *rejected*, the existence of spirits. The numerous instances which the NT furnishes would have been impossible save in Galilee; there is a strong similarity between these and those adduced by Galilæan Rabbis. The same must be said of those Rabbis who came from Mesopotamia. As they were brought up in surroundings in which superstition was rife, their teaching was tinged by a belief in spirits, and in comparison with them the clarity of Palestinian teaching stands out in bold relief.

Justin Martyr (*Dial.* i. 85) accuses the Jews of employing amulets and conjurations to no less an extent than the heathen. The evidence of R. Simon b. Yoḥai, a Galilæan Tanna of the 2nd cent., is equally conclusive for Galilee. Thus Bab. *'Erubhin*, 64*b*, states:

'The Master says: "We do not pass by food (which is lying in the street, and which may have been used for protection against spirits)." R. Yoḥanan in the name of R. Simon b. Yoḥai says: "This decision applies only to the earlier generations, when the daughters of Israel were not practised in all arts of magic (קְרוּצוֹת בְּנָשִׁים); but nowadays, when the daughters of Israel are indeed practised in all magical arts, this does not apply. It has been taught that one should pass by loaves, but not small pieces." R. Asi said to R. Ashi: "Do they, then, not use small pieces also for this purpose?"' [Note that none of these Rabbis is a Judæan. Simon b. Yoḥai was a Galilæan, and R. Asi and R. Ashi were Babylonians.]

The difference between Judæa, on the one hand, and Galilee and Babylon, on the other, may be demonstrated by the story related about Zonin and the Palestinian Aqiba in Bab. *'Abōda Zārā*, 55*a*:[1]

'Zonin said to R. Aqiba: "Both of us know that there is no reality in idols, but how is it that we see men going to them lame and returning sound?" He replied: "I will relate to thee a parable. There was once in the city an honest man, with whom all the inhabitants would deposit their money without witnesses. One man, however, would always do so before witnesses. On one occasion he forgot and omitted the witnesses. Then said the wife of the honest man to him, Now we can deny him; but he replied, And indeed since he is foolish, shall we lose our faithfulness?" So also is it with chastisements (*i.e.* diseases). When they are sent upon man, the precise limits of their duration are specified; they are adjured and warned at what moment, by what physician, and by what drug they are to leave the patient. When the time arrives for the diseases to depart, and it happens that the sufferer is at the (heathen) temple, the diseases say: "By rights we should not go, but shall we prove unfaithful to our oath for the sake of a fool?"'

These and similar anecdotes, which are to be found in the same place, show that the Pal. Rabbis placed no reliance in spirits and conjurations. It should be noted that R. Aqiba (A.D. 50–135) says of himself elsewhere (*Sem.* viii.; *M. K.* 21*b*): 'The people of the south know Aqiba, but whence should the people of Galilee know him?' It was in Galilee that the people believed in possession by evil spirits and in the actuality of demons (*e.g.* NT references), whereas in Palestine the views of Aqiba prevailed.

One of the favourite forms of procuring intercourse with spirits was by spending the night in a cemetery. In connexion with this practice, reference should be made to Jer. *Terumoth*, i. fol. 40*a*, outer column, line 29; *Gittin*, vii. beginning, fol. 48*b*, outer column (ed. Krotoschin, 1866), and Bab. *Ḥagiga*, 3*b*, near end. In all these cases invocation of spirits is mentioned: *e.g.* מְקַטֵּר לִשְׂעִירִים, he who burns incense to the *shēdîm*, and he who passes the night by the graves in order to enter into communion with an unclean spirit. These customs are strongly condemned, and are viewed as an indication of insanity (*i.e.* one who participates is a שׁוֹטֶה). With these passages may be compared the story in *Levit. Rabba*, xxvi. 5:

R. Berakhya in the name of R. Levi relates that a *kohen* and an Israelite were possessed by a demon and went to a skilled physician, who prescribed for the Israelite, but left the *kohen* neglected. The latter asked the reason, and the physician replied: 'He is an Israelite, and is of those who spend the night at the graves; but thou, who art a *kohen*, dost not act thus, therefore I left thee and prescribed for him.'

This story illustrates the difference between the ignorant and the learned classes; it should be contrasted with the statements of Athenagoras (*Legatio pro Christianis*, chs. xxiv., xxvi., xxvii.), to whom demons were a vivid reality.[1]

Probably the earliest demons are those originating from the movements of celestial bodies and from natural phenomena. To the former, of course, belong Bab. and, later on, Persian examples. Similarly the sand-storm in the desert may be safely held to account for some of the aspects of the Arabic *jinn*. So, too, Ps 91[6] 'the destruction that wasteth at noonday' may not improbably refer to the burning heat of midday. The development of this idea may be found in Bab. *Pesaḥim*, 111*b* ff., where the same word *qeṭebh* occurs.

Inasmuch as the functions of religion were, among the Jews, very wide, the scope of the teacher's activity extended to many branches which would not to-day be considered as belonging to the true sphere of religion. He legislated for social as well as for religious matters; the daily intercourse between man and his neighbour was the object of his attention. Consequently, when there are found quasi-religious references to spirits, in connexions which seem very remote from religion in its modern signification, it must be remembered that the word has been greatly restricted in the process of time. In turning back to those spirits which may perhaps have their origin in natural phenomena, the foregoing must be borne in mind. Thus in *Pesaḥim*, 111*b*, to which reference has been made, the following statement occurs:

'From the first of Tammuz to the sixteenth there can be no doubt as to their actuality; after that date it is doubtful. They may be found in the shadow of ivy which is stunted (not a yard high), and in the morning and evening shadows which are not a yard high, but chiefly they may be found in the shadows of a privy.'

The Gemara does not particularize the spirits mentioned in the passage cited, which follows references to many varieties of spirits. There cannot, however, be much doubt that the *qeṭebh mᵉrīrī*, or spirit of poisonous pestilence, is meant, although the passage might refer generally to *shēdîm*, for this spirit is described a few lines earlier in the Gemara:

'The *qeṭebh mᵉrīrī* is of two kinds; one comes in the morning, the other in the afternoon. The former is called *qeṭebh mᵉrīrī*, and causes mealy porridge to ferment (lit., it appears in a vessel of mealy porridge and stirs the spoon). The latter is the pestilence which destroyeth at noonday; it appears like a sieve on the horns of a goat, and it turns like a sieve' (*ib. supra*).

It would not seem a very rash assumption to regard this spirit as the development and personification of midsummer heat. Tammuz is elsewhere stated to be the height of summer, e.g. *Shab.* 53*a*, where a popular proverb is quoted to the effect that even in Tammuz the donkey feels the cold. The fact that attention is drawn to those shadows which afford insufficient protection from the rays of the sun, and the stress laid on the evil effects of proximity to a privy, render this view more prob-

[1] The Gemara is attempting to account for God's tolerating idols and superstitions, and for the fact that spirits do sometimes accomplish cures.

[1] It may be mentioned, incidentally, that the term for possession by a demon is תָּפְשָׂא, תָּפְסָא. The spirits are said to have been created on Friday afternoon before Sabbath; see *Gen. Rabba*, vii. 7; *Pirqe Aboth*, v. 9, where they are included in the category of mythical phenomena.

able; so also does the mention of the action of heat on food and on animals (cf. the danger of sleeping under the rays of the moon [*Pes.* 111*a*, near foot]).

Closely allied to spirits which are embodiments of natural phenomena are those which affect man in his daily life. In the Gemara on the tenth Mishna of *Pesaḥim* many are mentioned. Under the guise of demons, they teach lessons in cleanliness, sobriety, care, and economy. For instance,

'Reš Laqiš says: "Whosoever does one of the following four things risks his life, and his blood is on his own head, namely: he who performs his natural functions between a palm tree and a wall; he who passes between two palm trees; he who drinks borrowed water; he who passes over spilt water, even if his own wife has spilled it in his presence."'

It is unnecessary to show what points underlie these warnings, which are, moreover, still further discussed in the Gemara; but it is well to note that the form of the warning has changed somewhat. The demon is implied, but not actually expressed. Similar instances are the following:

'The Genius (אזדא=Pers. *izad*; so Goldschmidt, in his tr. of Jer., p. 711) of sustenance is called Cleanliness; the Genius of poverty is called Dirt.' R. Papa says: 'A man should not enter a house in which there is a cat, barefooted. Why? Because a cat kills and devours serpents, and serpents have small bones; should one of these bones enter his foot, it could not be dislodged and would become dangerous. Others say that a man should not enter a house in which there is no cat, by night. Why? Because a serpent could, unknown to him, become attached to him.'[1]

One of the peculiarities of the Hebrew language, as compared with Greek, is its paucity of abstract nouns. Although Aramaic, especially that dialect in which the Talmud is composed, has a far larger vocabulary than Mishnic Hebrew, yet it cannot be denied that the mind of the Jew preferred nouns of a concrete meaning. This fact deserves recognition when considering demonology. The vocabulary contained no word which could adequately render such terms as 'dirt,' 'infection,' 'hygiene,' etc., and in dealing with scientific terms it was, and is still, a matter of extreme difficulty to find suitable translations. This fact will be evident to any one who attempts to render into classical or even Mishnic Hebrew a piece of philosophical prose which could be turned into classical Greek with facility. Consequently the personification of a quality is sometimes to be disregarded, and the underlying principle must be extracted. It might be urged that the Greek no less than the Hebrew people had its demons; but other circumstances, which will readily suggest themselves, have to be taken into account. Instances of this kind are the following:

In *Yoma*, 77*b*, reference is made to the demon שִׁבְתָּא, whose name also occurs in *Ta'anith*, 20*b*, where the kind actions of R. Huna are enumerated. *Shibtā* clings to the finger-tips and afflicts people, especially young children, who eat with unwashed hands. R. Huna was acquainted with this demon, and used to place a jar of water ready, saying, 'Whosoever wishes, let him come and wash his hands so as to avoid the danger from the *Shibtā*.' Kohler (*JE*, art. 'Demonology,' p. 517, foot) associates *Shibtā* with croup. In the same way the *Shulḥan 'Arūkh* preserves an early reference to the evil spirit which clings to a man's unwashed finger-tips, and urges the necessity of washing them. It is scarcely conceivable that the evil spirit in this case can have any other meaning than dirt—a word for which the Heb. language does not contain an appropriate equivalent.

It is possible that the demon *Lilith* (see Is 34[14]; *'Erubhin*, 18*b*, 100*b*; *Gen. R.* xx.) belongs to this category. Adam is said to have married Lilith in addition to Eve, and filled the world with *shēdim* and demons of every description, which she bore him. Then, seized with jealousy of Eve's children, she attacks and attempts to slay newly-born infants. The story recalls the myth of Latona's anger against the children of Niobe, but perhaps the Lilith idea is a personification of the perils which beset women in child-birth.

Kohler (*loc. cit.*) enumerates many instances of demons of disease; e.g. *ruaḥ ṣeradā*, catalepsy; *ruaḥ palga*, headache; *ben nᵉfilim*, epilepsy; *ruaḥ qardeyaqos* (καρδιακός), melancholy; for all of which suitable Heb. equivalents are lacking; it cannot be from pure choice that demonology was called upon to furnish descriptive titles.

There are cases in which demons and spirits are cited as playing pranks of a harmless or even amusing character, comparable to those of fairies and kelpies in folk-lore. The fact that such stories are found in most abstruse portions of the Gemara supports the idea above suggested. Children accompanied the Rabbis and listened to their discussions, and a story of the marvellous and supernatural may have been purposely introduced in order to stimulate wandering wits or as a reward for diligent attention.

On the other hand, it cannot be denied that in many cases the demon is of a purely superstitious nature, e.g. *Berakhoth*, 6*a*:

'It is taught: Abba Benjamin says, "Were mortal eye capable of seeing everything, it would be impossible for any human being to exist on account of the Mazziqim ('Harmers')." Abbaye says, "They are more numerous than we, and surround us as the mounds of earth (thrown up by the plough) surround the furrow." R. Huna says, "Each of us has a thousand on his left, and a myriad on his right." Rabba says, "The jostling at lectures is due to them, weariness of the knees is due to them, the wearing out of the clothes of the Rabbis is due to their rubbing, totteriog feet are due to them. Whoever wishes to know them, let him take sifted ashes and strew them round his bed, and in the morning their traces will be seen as of the footprints of a cock. He who wishes to see them must take the after-birth of a black cat, the daughter of a black cat, the firstborn of a firstborn; let him burn it with fire, pound it up, and smear his eyes therewith; then he will see them. Let him cast them into an iron tube and seal them with an iron seal-ring, lest they steal aught. Let him keep his mouth (perhaps the mouth of the tube) closed, lest he be injured. R. Bibi b. Abbaye did this, but he suffered injury; so the Rabbis prayed for him, and he was cured."'

This extract contains both the playful and the superstitious elements, but it is very hard to observe the distinction. It is also a matter of no small difficulty to determine how far the belief in demons was actual or superficial, or, if actual, whether good, innocuous, or definitely harmful. It is to be regarded as an evil thing for a man to regulate his conduct by his belief in spirits, but great objection cannot be raised to a bare acknowledgment of their existence. A child's life would be empty without fairy stories; even to-day the personification of the spirit of Christmas festivity receives good-natured toleration. Religious thinkers belonging to most heterogeneous schools of thought accept angelology and demonology as a necessary concomitant of religion. The presence of both is essential to that mystic element from which no religion is or should be entirely divorced. But the force of the imaginative faculty becomes baneful when it invades the sphere of reason and subverts reason itself. It is almost impossible to establish a hard and fast rule in these cases.

The demonology of the Qabbala, and also of the later Rabbinic writings, is extremely interesting. Many beautiful *Minhagim* of Jewish ceremonial are derived from Qabbala, which assumes a mystic connexion between things terrestrial and celestial, and symbolically identifies the form with the matter.

The prayer at the blowing of the ram's horn on New Year's day makes the notes of the *shōfar* into angels ascending to the Divine Throne, while inability to blow the *shōfar* is due to the *yēṣer ha-rā'* ('evil inclination, lust') which intercepts man's holy thoughts and robs him of *kāwwānāh* ('devotion') and ability to produce a note. So, too, on Friday night, when a man returns from the synagogue to his home, which is prepared to receive the Sabbath bride in peace and love, two good angels accompany him and bless him, while the evil angel is constrained to say Amen. But, if the man's thoughts are not properly attuned, and if the reception of the bride is neglected, the good angels sorrowfully depart and the evil angel prevails.

In such cases the spirits are to be explained as graphic representations of the frame of mind of the man, poetically expressed, and with these the *δαίμων* of Socrates may be compared; it is in such circumstances undoubtedly that the prophylactics suggested by the Rabbis were meant to apply. The recital of verses of Scripture, especially of the

[1] In this case, although the demon has become completely rationalized, the warning is addressed to a man's common sense, and not to his fear of the supernatural. Yet it must be borne in mind that Papa, a Bab. Amora (A.D. 300–375), was noted for his belief in demons. Cf. especially the יהי רצון recited at the end of a *massekhta*.

Psalms, and the observance of *tᵉphillîn*, *mᵉzûzā*, and *ṣîṣîth*, were intended to prove a balm to a troubled mind, and to divert distraught fancies, but not to have a therapeutic effect on the body.[1]

Nevertheless, the belief among mediæval Rabbis as to the actuality of spirits seems to have been real. Maimonides and Ibn Ezra form very striking exceptions (cf. Ibn Ezra on Lv 17^{7}, and contrast Naḥmanides quoted by Kohler, *loc. cit.* ; cf. also Rashi on Dt 32^{24} and Job 5^{17}).

Summary.—(1) Belief in the existence of spirits cannot be denied, but (2) it was largely limited to Galilee and Babylonia. Palestine, on the whole, was free from it, and (3) in some cases other explanations must be sought: (*a*) natural phenomena, (*b*) absence of terms for abstract nouns, (*c*) the occasional root of social and other precepts in man's fondness for the supernatural, (*d*) playful spirits and fairy stories, and (*e*) the action of mysticism on the pious mind. (4) It is difficult to estimate the extent to which credence was given to the actuality of spirits and to which this belief influenced personal conduct.

Kohut, *Angelologie und Dämonologie in ihrer Abhängigkeit vom Parsismus* (1896), is the chief work. Talmudic references may be consulted in Rodkinson's tr. (New York, 1901), or preferably in L. Goldschmidt (text and tr., Berlin, 1897).

Herbert Loewe.

DEMONS AND SPIRITS (Muslim).—Besides the gods to whom they devoted a regular cult, the ancient Arabs recognized a series of inferior spirits, whom they conciliated or conjured by magical practices. In this matter, as in others, Muhammad preserved the ancient beliefs by adapting them to the new religion, in such a way that it is impossible to distinguish which elements in his teaching are sprung from his inward conviction and which are simply a concession to the doctrine of his compatriots. To these notions—Muhammad's inheritance, so to speak—are added outside elements, Jewish and Christian, themselves derived from Chaldæa and Parsiism. It seems impossible to give a precise account of the doctrine of the Qur'ān on the subject of spirits, for even the very earliest commentators are hedged around with innumerable traditions, which it is anything but easy to criticize. It may be said, however, that the Qur'ān traces out all the main divisions of the system: angels, servants of Allah; Satan and his horde who animate the images of false gods; lastly, the *jinn*, some of whom are believers, some unbelievers. If it indicates the existence of several categories of angels, it nevertheless names only two, viz. Jabrīl and Mikā'īl; for Hārūt and Mārūt are fallen angels with a Satanic rôle.

However, just as Judaism, under the influence of the Qabbala, multiplied its list of spirits, and Christianity set up in battle array its armies of angels and demons, Islām also found in this belief and in the magic struggle for the favour, or against the attacks, of spirits an element of reaction against the cold, aloof unity of Allah. From Judaism and Christianity Islām learned the names of spirits not known before, and it gave them definite forms, in descriptions which grew in bulk during the favourable stages of anthropomorphism and the *haushiya*, and then gained in coherence under the influence of Mu'tazilitism. This doctrine we shall discuss in a few lines.

Islām recognizes three classes of living beings higher than man: angels (*malak*, plur. *malā'ika*); demons (*shaiṭān*, plur. *shayāṭīn*); and *jinn*. The essential and common characteristic of these beings is that they are formed from one single substance, instead of from a combination of substances like the human body.

Among these spirits, the front rank is occupied by the angels; they are Allah's bodyguard, and do his will and obey his word. According to Kazwīnī (i. 55), 'the angels are beings formed from a single substance, endowed with life, speech, and reason.' Authorities are not agreed as to the characteristics that distinguish them from demons and *jinn*; according to some, they differ in their very nature, just as one species of terrestrial animal differs from another; others are of opinion that the difference is only in contingencies, or relativities, such as are contained in the notions of complete and incomplete, good and bad, etc. The angels are essentially sacred, untouched by the guilt of passion or the stains of anger. They are in constant attendance upon the commands of Allah. Their food is *tasbīḥ* (the recitation of the formula 'Glory to Allah!'), and their drink is *taqdīs* ('Allah is holy!'). Their occupation is to repeat the name of Allah, and all their joy is in his worship. Allah created them and gave them diverse forms, that they might fulfil his commands and people the heavens. The prophet said: 'The heavens crack, and cannot but crack, for there is not a hand's-breadth of space to be found in them without an angel bending or prostrating himself before Allah.'

The Arabic word *malak*, the general word for angel, means 'sent,' and is a Jewish loan-word. It has lost its true form *mal'ak*, which survives, however, in the characteristic form of the plural *malā'īka*. The exact pronunciation was as in pre-Islāmic Arabia, as we know from a verse of Abu Wajra, quoted in the *Lisān al-'Arab* (xii. 386), where it is necessary to the metre. But a certain number of angels had special names, which will be mentioned later on, partly derived from the Qur'ān. It seems useless to quote all the verses of the Book where angels are mentioned; we shall therefore notice only the most interesting.

The greatest of the angels—those honoured by all the others as dearest to their Lord—are the four throne-bearers of Allah (*ḥamalat al-'arsh*), whose number will be doubled on the resurrection day. Their duty is, besides, to praise Allah and implore him on behalf of true believers. Muslim legend gives them the form of the four beings who passed into Christianity with the Apocalypse to symbolize the evangelists: man, bull, eagle, and lion. This legend defines further the relations established by their form between each of them and a class of living beings on earth: the first angel is humanity's intercessor before Allah; the second pleads for domestic animals; the third for birds; and the fourth for savage beasts.

The cherubim (*karūbiyūn*) are angels who are absolutely absorbed in the holiness of Allah; their function is to repeat the *tasbīḥ* ('Glory to Allah!') unfalteringly all day and all night. They seem to inhabit a secluded part of the sky, where they live in peace, far removed from the attacks of the devil, Iblīs.

There are four angels who have a distinct personality and are each known by a separate name: Jabrīl (Gabriel), Mikā'īl (Michael), 'Azrā'īl, and 'Isrāfīl. Authorities class these in a special group: these four archangels will be the last to die at the end of the world. Jabrīl (or Jabrā'īl, Jibrīl, and sometimes Jibrīn) is, above all, the angel of revelation (*'amīn al-waḥī*): he was the messenger sent by Allah to the prophets and particularly to Muhammad. His formidable appearance would overawe men, and so he has to appear in disguise to the prophets. Muhammad entreated him to reveal himself to him as he really was, and Jabrīl consented; but, when he appeared,

[1] Compare *Sanh.* x. 1, where incantations over wounds are forbidden. He who practises these has no share in the world to come, for he has doubted God's omnipotence.

immense, and covering the whole horizon with his wings, the Prophet fainted away. Even the inhabitants of the sky were alarmed by him. When Allah sent him to deliver the Word to a prophet, they heard a noise like the dragging of chains over rocks, and so terrible that they swooned. When Jabrīl approached them, they recovered their senses, and asked what the Lord had said to him: 'The Truth' (*al-Ḥaqq*), replied the angel, and all repeated: '*Al-Ḥaqq, al-Ḥaqq!*' This function of Jabrīl is explained in Arabic by terms analogous to those mentioned above: he is the 'guardian of holiness' (*ḫāzin al-quds*), the 'faithful spirit' (*ar-rūḥ al-'amīn*), the 'holy spirit' (*ar-rūḥ al-quds*); in which terms we see a borrowing from Christianity. He is also the 'supreme confidant' (*an-nāmūs al-'akbar*), and the 'peacock of the angels' (*ṭā'ūs al-malā'ika*). His rôle, however, is not restricted to the carrying of revelation.

A tradition says that, when the Prophet asked him to reveal all his power, Jabrīl answered: 'On my two winga I bore the country of the people of Loth, and carried it up into the air so high that its inhabitants could no longer hear their cocks crow; then I turned it upside down.'

It is also said that he has assistants who watch over the welfare of the world. Schwab (*Angélol. héb.*, 1897, p. 91) notices some characteristics of his various functions. The most simple descriptions give him six huge wings, each composed of a hundred little ones; he has also two other wings which he uses to destroy rebel cities. But later texts show Jabrīl provided with sixteen hundred wings, and covered with saffron hairs; a sun shines between his eyes, a moon and stars between every two hairs. He enters the Sea of Light (*Baḥr an-Nūr*) three hundred and sixty times every day; and every time he comes out of it a million drops fall from his wings, and form the angels called 'Spiritnal' (*Rūḥānīya*), 'because they spread abroad spirit, peace, and perfumes' (*ar-rūḥ w'ar-rāḥa w'ar-rīḥān*). Jabrīl was created five hundred years after Mīkā'īl. He is named three times in the Qur'ān (ii. 91, 92, lxvi. 4); but he also appears under other names (ii. 81, 254, v. 109, where he is the annunciator to Mary; xvi. 104, xxvi. 193, liv. 5, etc.). In ii. 92, Mīkā'īl (in the form Mikāl) is mentioned after Jabrīl, to reply, the commentaries say, to the Jews, who regarded the former as their ally and the latter as their enemy, and gave this as a pretext for rejecting the revelation brought to Muhammad by Jabrīl (Ṭabarī, *Tafsīr*, i. 330).

Mīkā'īl (Michael) is the angel charged with providing food for the body, and knowledge and prudence for the mind. He is the supreme controller of all the forces of Nature. From each of his eyes there fall a thousand tears, from each of which Allah creates an angel with the same form as Michael. Singing praises to Allah until the day of judgment, they watch over the life of the world; these are the *karābiyūn* (cherubim). Being Michael's assistants, they control the rain, plants, and fruits; every plant on the earth, every tree, every drop of water, is under the care of one of them. The earliest traditions locate Michael in the seventh heaven, on the borders of the Full Sea (*al-Baḥr al-Masjūr*), which is crowded with an innumerable array of angels; Allah alone knows his form and the number of his wings. Later on, however, the descriptions become more precise: his wings are of the colour of green emerald; he is covered with saffron hairs, and each of them contains a million faces and mouths, and as many tongues which, in a million dialects, implore the pardon of Allah; from a million eyes that weep over the sins of the faithful fall the tears from which Allah formed the cherubim. Michael was created five hundred years after 'Isrāfīl. The conception that arises from the representation of the forces of Nature in the form of angels distributed throughout the world is decidedly pantheistic; it was developed in a most curious manner by late Arabic traditions which have been summarized by Kazwīnī (i. 62 f.). As we might have expected, a *ḥadīth* was the origin of this idea:

Around each man appeared a hundred and sixty angels 'flitting round him, like flies around a pot of honey on a summer day'; these are the Agents of Beings (*Maukūlāt al-Kā'ināt*). They are the forces of nutrition, and endow the inert food introduced into the body of man with the power of becoming flesh, bone, and blood. They have to watch that the organism preserves what is necessary to it and gets rid of superfluous matter; that each organ plays its part and not the part of any other. The whole mysterious development of life is thus put into the light fingers of heavenly workmen.

To these we must add still another angel called the Spirit, or the Breath (*ar-Rūḥ*), which may well be only a new form of Jabrīl. To him and to his incarnations Allah entrusted the duty of bringing motion to the heavenly spheres and the stars, and of animating the sublunary bodies and living beings. Just as he can make the heavenly bodies perform their revolutions, he can also stop them in their course—with Allah's permission.

The third of the angels of definite personality is mentioned in the Qur'ān (xxxii. 11) under the name of *malaku 'l-maut*; but tradition calls him 'Azrā'īl.

After Allah created the angel of death, 'Azrā'īl, he kept him hidden for a time from the other angels. When he showed him to them, they all fell into a faint which lasted a thousand years. This terrible being, who plays so important a part in the existence of the world, and who is everywhere at once, is only a passive agent of Allah's will; Allah holds death in his hands. Muslim writers insist on this fact; for it was possible to believe, on the other hand, that the terrible angel of death himself executed the decrees which Allah had inscribed upon the 'Well-guarded Tablet of Destiny' (*al-lūḥ al-maḥfūẓ*); but this is not the case. 'Azrā'īl does nothing without the express command of Allah. He knows nothing but what Allah tells him. He receives from Allah the leaves upon which the names of those who are about to die are written. It is only in details that the traditions differ. According to some, the guardian angel comes and warns 'Azrā'īl that the man under his care is approaching his last moments. The angel of death notes the name of the dying man in his register, with a white mark in the case of a believer, with a black mark in the case of others. But he waits until a leaf falls from the tree that is by the throne of Allah (*'arsh*) with the dying man's name inscribed on it. According to others, this leaf falls from the tree forty days before the death of the man, who is living upon the earth during this interval but dead in the sky. Still another account is that an angel sent by Allah brings to 'Azrā'īl the list of men who are to die during the year: this message no doubt comes to him on the 'night of destiny' (*lailat al-qadar*), which is at the middle of the month Sha'bān, and during which the pious man, rapt in prayer, may see, across a hollow of the sky, the leaf on which his name is written falling from the tree.

All our authorities agree in believing that the angel of death is present wherever a man is ceasing from life, and this presence is anthropomorphized in stories the wide diffusion of which proves its popularity: the story, *e.g.*, of the proud king and the beggar is world-wide (Ṭabarī, Ghazālī, Mūstatref, etc.). Some explain this multiple presence by saying that the angel of death has assistants (*'a'wān*) who make the man's soul rise up to his throat, whence 'Azrā'īl comes and takes it. Others represent the terrible angel in the form of a vague, formidable being, whose feet rest upon

the borders of the world; his head reaches the highest heaven, and his face looks towards the Tablet of Destiny. But this description did not seem satisfying, and writers accordingly give him seventy thousand feet and four thousand wings, while his body is provided with as many eyes and tongues as there are men in the world. Every time a being dies, one of these eyes closes, and at the end of the world only eight eyes will be open, since there will be only eight beings alive—the four archangels and the four throne-bearers. Azrā'īl has four faces, each of which is reserved for a special class of beings: the face on his head is for prophets and angels, that on his chest is for believers, that on his back for unbelievers, and that on his feet for the *jinn*.

The angel of death consigns the souls he has seized to the angels of compassion (*malā'ikat ar-raḥma*) or to the angels of punishment (*malā'ikat al-'adhāb*), according as they are believers or unbelievers; but certain authors say that it is the angels assisting 'Azrā'īl who themselves carry off the soul with gentleness or roughly. It is also said that 'Azrā'īl, with Allah's permission, calls the souls, and they come and place themselves between the two first fingers of his hand. Lastly, according to still others, 'Azrā'īl gathers the believing souls together, with his right hand, in a white silk cloth perfumed with musk, and sends them to the farthest summits of heaven (*al-'aliyyīn*), while the souls of unbelievers are crowded into a rag coated with tar-water and launched into the depths of hell (*as-sijjīn*).

No man can escape 'Azrā'īl; it is impossible to cheat him even by being instantly transported by magical means to the very ends of the earth: 'Azrā'īl is there in an instant. This is seen in the story of Solomon and the young man who was carried to China by his *jinn*; this popular story is found everywhere (Ṭabarī, Ghazālī, Wolff, *The 1001 Nights*, Mūstatref, etc.). The Qur'ān commentators, however, insist on the amicable relations which Solomon vowed with 'Azrā'īl, though he had started by fainting at the sight of the angel in his true shape.

'Isrāfīl is, according to the formula given by Kazwīnī, the angel who brings the orders of Allah to their proper destination, and who puts the soul into the body. He is the angel of whom the Qur'ān speaks without naming him (vi. 73, lxxx. 33, etc.), and who is to sound the trumpet of the last judgment (*ṣūr*). 'The master of the trumpet (*ṣāḥib al-qarn*),' says a *ḥadīth*, 'puts the trumpet to his lips, and, with gaze fixed upon the throne, waits for the command to blow. At the first blast, the blast of terror (*nafḫat al-faz'*), everything will perish in the heavens and on the earth, except what Allah wills,' *i.e.*, according to different opinions, except the eight angels mentioned above, or only the four archangels, who will perish in the following order: Jabrīl, Mīkā'īl, 'Isrāfīl, and, last of all, the angel of death. After forty years passed in *Barzaḫ*, 'Isrāfīl will be re-born and will sound the second blast, the blast of resurrection (*nafḫat al-ba'th*): all the souls, gathered together in the bell of his trumpet, which is as vast as the heavens and the earth, will fly like a swarm of bees to the bodies they are about to animate. While this is the essential function of 'Isrāfīl, it is not his only function. When Allah wishes to give a command to men, he orders the Pen (*qalam*) to write upon the Tablet of Destiny (*lūḥ*). This he gives to 'Isrāfīl, who places it between his eyes, and transmits it to Mīkā'īl. Mīkā'īl gets the command performed by his assistants, who represent, as mentioned above, the forces of Nature. Authors describe 'Isrāfīl under a form borrowed from a *ḥadīth* of 'A'isha, repeating the words of Ka'b al-'Aḥbār, *i.e.* the Jewish tradition. 'Isrāfīl has four wings: with the first he closes up the East; with the second the West; with the third he covers the earth; and with the fourth he veils his face before the Almighty Power of Allah. His feet are under the seventh world, while his head reaches up to the foot of the throne. A late and strange story (Wolff, p. 14) shows him weeping so copiously at the sight of hell that Allah has to stop his tears because they threaten to renew the Flood of Noah.

After a dead man has been placed in the tomb, and his friends have left him, and he has heard the sound of their retreating steps, two formidable angels, Munkar and Nakīr, come and sit by his side, and ask him: 'What say you of this man (*i.e.* Muhammad)?' The believer (*mu'min*) replies: 'I bear witness that he is the prophet of Allah and his servant.' Then the two angels show him the place which he might have occupied in hell, and, on the other hand, the place which he will gain in paradise. The false believer (*munāfiq*) and the unbeliever (*kāfir*) will reply to the same question: 'I do not know; I said what the others said.' Then the two angels will beat him with iron rods so that he will utter a cry which will be heard by men and *jinn*. According to other traditions, the questions will be asked by a special angel, called Rūmān, who, if necessary, will deliver the dead person over to the punishment of the two angels of the tomb. Others, again, say that the angel placed in charge of the departed will question him, and at the sound of his voice the tomb will contract, almost crushing the man dwelling within it, until the first Friday of Rajab. The believer who dies on a Friday is exempt from the questioning at the tomb. The name of these two angels is derived from a root *nakar*, 'to deny'; we here find the parallelism dear to Hebrew traditions, and the presence of the initial M in one of the names—two souvenirs of Parsiism and Ancient Persia.

Man is guarded night and day by the *ḥafaẓa* angels, 'who protect him from *jinn*, men, and Satans,' and who register all his actions. These angels are four in number, two during the day, and two during the night. Some writers admit the existence of a fifth angel, who remains beside men constantly. The two angels stand by the side of the man, one at his right hand and the other at his left, or one in front of him and the other behind; by night they take up their position one at his head and the other at his feet. The day-guardians change places with the night-guardians at the rising and the setting of the sun. These hours are dangerous in themselves, being the times when the *jinn* roam about, but they become much more dangerous to man because it is then that the change of the guard of the *ḥafaẓa* takes place. If the believer makes haste to begin the morning prayer (*ṣubḥ*), and the evening prayer (*maghrib*) at the very earliest opportunity, the angels who have to depart from him leave him safe from the *jinn*, against whom the sacred ceremonies protect him, and ascend to heaven, bearing witness to Allah of the faith of his worshipper. Before he has finished his prayer, the other two guardians come and stand by his sides. But it is not only to the machinations of the *jinn* that man is exposed: 'Iblīs is on the watch for him by day, and his son during the night. This very simple arrangement has also been complicated by the traditionalists of later times. To the four guardians already known they added six others: one of them holds the man by the tuft of hair which Muslims wear on the top of their heads, and drags him one way or the other according as the man shows humility or pride. Another stays in front of his mouth to prevent the serpent from entering it. Two others protect his eyes; and the last two, placed on his lips,

listen only to the words which he pronounces in prayer.

On the *ḥafaẓa* devolves the duty of writing down the actions of men; the one on the right hand keeps an account of the good deeds, and the one on the left of the bad. These registers will be a witness on the judgment day. When the man performs a good deed, the angel on the right hand immediately writes it down; when he commits a sin, the same angel begs his companion not to write it down, but to give the sinner respite—six or seven hours, according to the writers—during which he has time to repent. Some commentators even allow that a compensation may be arranged, and that every good action effaces a bad one. Unbelievers also are said to have guardians (Qur'ān, lxxxvi. 4).

When the *ḥafaẓa* see that the man over whom they had charge has died, they do not know what to do, and they pray to Allah, who tells them to go to the grave of the deceased and repeat the formulæ of adoration (*tasbīḥ*, *takbīr*, *taqdīs*), which, on the judgment day, will be counted among the merits of the deceased.

These angels are mentioned several times in the Qur'ān, into which they have been introduced by Christian tradition. In lxxxii. 11, they are called *kirām kātibīn*, 'noble writers,' indicating their rôle as overseers of human actions; in vi. 61 they are called *ḥafaẓa*; but in xiii. 12 they are at the same time called *mu'aqqibāt*, 'those who relieve each other.' This last expression is puzzling in its form, and the commentators, trying to explain it, say that it is a perfectly logical double plural, and that the second verbal form *'aqqaba* here stands for the third form *'āqaba*. The Qur'ān (l. 17) uses the word *raqīb* to denote the guardian angel of men, and Ṭaharī (*Tafsīr*, xiii. 68, line 16) shows that Qur'ān xiii. 12 was read by 'Alī ben-Ka'b with the following variants: 'he has in front of him *mu'aqqibāt*, and behind him a *raqīb*.' There may be some connexion between these terms and those referring to the two stars which, during the course of the year, appear, one in the East and one in the West, at twilight and at dawn, and the observation of which serves as a foundation for a division of the year into twenty-eight *manāzil* or *'anwā*—a division which is very fruitful in popular practices. The belief in guardian angels, then, over and above Christian traditions, might become connected with an astral cult.

In the crowd of angels who have no special character, certain authors distinguish the 'pious travellers' (*as-sayyāḥūn*) who scour the country with the intention of frequenting only the gatherings where the name of Allah is being repeated. They then ascend to Allah, who questions them, and, on their evidence, pardons his fervent worshippers the faults they may have committed. According to a passage in Ibn al-Athīr (*Lisān al-'Arab*, xii. 386), none of these angels could enter any place in which there was an image or a dog.

We cannot explain the circumstance that has drawn the names of Hārūt and Mārūt from the anonymous crowd of spirits into the broad daylight of the Holy Book (Qur'ān, ii. 97). Traditions have developed rapidly to explain their history, and since the 9th cent. they have been copiously explained by commentators (Ṭaharī, *Tafsīr*, i. 3402).

Two angels having incurred the wrath of Allah have been thrown into a well in the town of Babylon, where, loaded with chains, they will teach mortals the art of magic until the end of the world. In order to punish them, Allah has commanded them to teach this accursed science; but they have to warn those who consult them that they are rebels, and to advise them not to imitate them. According to a *ḥadīth* of 'A'isha, a woman came to her when the prophet was away, and told her that, being uneasy about the absence of her husband, she had consulted a sorceress; carried away at a gallop by two black dogs (one of the ordinary disguises of 'Iblīs), the two women had arrived at the edge of the Babylonian well, where the two fallen angels had put the inquirer in possession of magical powers, from which she was coming to ask the prophet to deliver her.

Who are these two angels, and what was their crime? This is not the place to study in detail the different versions which are prevalent in Arabic literature, or to show how, among the late writers, Kazwīnī, for example, the legend has, under Mu'tazilite influence, been contracted into an account of a more serious kind, but deprived of characteristic details. We shall give here the chief traits of the most fully developed legend, which seems to be the most ancient.

The first men in the world soon gave themselves up to all kinds of debauchery and crime. The angels who looked on at these horrors from the heights of heaven were surprised at the gentleness of Allah. 'Be more tolerant,' he said to them; 'if you were exposed to the passions which agitate men, you would soon commit all their crimes.' The angels protested, and begged Allah to put them to the test; and he consented. They chose two of the most noble and pure among them, Hārūt and Mārūt, who descended to earth. Allah allowed them to live there in their own way, and prohibited them only from polytheism, theft, adultery, wine, and murder. All went well until one day, when a woman came before them; whether by chance or chosen as judges, they had to decide in a quarrel which had arisen between her and her husband. This woman was beautiful; she excited the desire of the two angels. Tradition gives us her name; 'she was called Zaḥara in Arabic, Baidūḫt in Aramaic, and 'Anāhīd in Persian' [*i.e.* Venus]. She set conditions on her favours: according to some, she asked her lovers the word which enabled them to ascend to heaven every day, obtained it, made use of it, and remained attached to the firmament in the form of the planet Venus (Zaḥara), while the two angels remained prisoners on earth for having misused the sacred word. According to other traditions, she commanded them to worship an idol, or she made them drink wine, the intoxication of which led them to murder a beggar who was passing. In any case, Allah called or recalled Venus to the sky, and punished the culprits. On the intercession of Solomon, Idris, or some other good personage, he let them choose between a terrestrial punishment and an everlasting chastisement. They chose the former, and were chained in the well of Bābel, which, according to some, is Babylon of Chaldæa; according to others, a place in Demāvend, famous for its magical traditions. We may mention, as a strange variant of this story, the tradition that the two angels who brought magic to men were Mīkā'īl and Jabrīl.

This legend may have reached Muhammad through Rabbinic traditions, especially according to the version which shows the woman tempter ascending to heaven with the password of the two angels, and remaining there in the form of the planet Venus. Geiger (*Was hat Mohammed a. d. Judenthume aufgenommen?* [2] Leipz. 1902, p. 107 f.) mentions a tradition in which the two angels are called Shamhazi and Azaël (Schwab, p. 209); the daughter of the earth who seduces them is referred to under the name of Aster (='star'; see Schwab on the word 'Biduk'). But we must seek the origin elsewhere; it is in connexion with the cult of Mithra and Anahita that we again come across the names of the two spirits, Haurvatāt and Ameretāt—not to mention the tradition on the Chaldæan origin of magic (cf. vol. i. p. 796[a]).

Paradise and hell are peopled with spirits whose exact description has not been given by any writer. At the entrance to paradise there is sometimes placed an angel called Riḍwān, whose name is probably a rough interpretation of a passage in the Qur'ān (iii. 13). We do not know in what class to place the *ḥūris* (*ḥūr al-'ain*), who are said to share with other women the society of the blessed, and who, shining and pure, are exempt from physical suffering, like all the inhabitants of paradise (Qur'ān, xliv. 54, lii. 20, lv. 56 f., lvi. 22, etc.).

The teaching is much clearer in regard to hell. It is guarded by a terrible angel Mālik, assisted by *sbires* (*zabaniya*), who in their turn have guardians (*ḥafaẓa* or *ḫazanat jahannam*) at their command. These *sbires* are nineteen in number, *i.e.* equal to the number of letters in *bismillāh* (*bismillāhi-r-raḥmani-r-raḥimi*='in the name of Allah, the Compassionate, the Merciful'). People escape from them by reciting this formula. Mālik stirs up the fire which burns the reprobates, and replies to their complaints with jokes; but he is milder in the case of believers guilty of mortal sins, who, according to the prevailing theory, will one day get free from hell by the intercession of Muhammad. He is mentioned in the Qur'ān (xliii. 77).

We have already seen that 'Iblīs was the wicked angel, who, assisted by his son, tempts mortals.

He was cursed for refusing to prostrate himself before Adam, created from clay, when he had been created from fire (Qur'ān, xxxviii. 77 f.). Allah cursed him, calling him 'stoned' (*rajīm*). He has command of the unbelieving *jinn*, who are his agents with men.

The orthodox doctrine, as we have just seen, is very chary of hints as to the names of the spirits. But, in imitation of the Jewish Qabbala and under the influence of conjuration formulæ, the Muslim practice has developed this nomenclature in a peculiar way, as it had commented on the supreme name of Allah in his ninety-nine secondary names. Thus there is formed an interminable list of names of angels in *-'īl*, and of names of *jinn* in *-ūs*, which fill all the works on magic. Without entering into details, it may be useful to recount here a *ḥadīth* which Kazwīnī mentions (i. 59), following 'Ibn 'Abbās:

> Each of the seven heavens is inhabited by a group of angels, who are engaged in praising and worshipping Allah. 'Those who inhabit the lower heaven which encircles the earth have the form of cows, and are under the command of an angel called 'Isma'īl; in the second heaven dwell eagles under the angel Mīhā'īl; in the third, vultures under Sā'adiyā'īl; in the fourth, horses under Ṣalṣā'īl; in the fifth, *houris* under Kalkā'īl; in the sixth, young boys under Samaḥā'īl; in the seventh, men under Rūhā'īl.' Lastly, beyond the veil which closes the heaven, angels, so numerous that they do not know each other, praise Allah in different languages which resound like crashing thunder.

In a word, the ancient beliefs of the pagan Arabs have been preserved by peopling the Muslim world with *jinn*, who, for the most part, are the servants of 'Iblīs. See more fully under art. ARABS (ANCIENT), vol. i. p. 669 f. But, under the influence of Judaism and Christianity, the new religion has also acquired an army of angels and demons, whose history cannot be clearly given without touching on the critical study of the *ḥadīths*.

LITERATURE.—F. A. Klein, *The Religion of Islām*, London, 1906, pp. 64–67, 87; T. P. Hughes, *Dictionary of Islam*, London, 1895, *passim*; M. Wolff, *Muhammedanische Eschatologie*, Leipzig, 1872: Kazwini, *Kosmographie*, ed. Wüstenfeldt, 1849, i. 55–63.

GAUDEFROY-DEMOMBYNES.

DEMONS AND SPIRITS (Persian).—Demonology plays a prominent part in the religion of Persia because of the pronounced dualistic tenets of Zoroastrianism. The opposing forces of evil and good are believed to be in constant warfare until the last millennial cycles of the world preceding the day of judgment, when perfected man shall, by the aid of the heavenly hosts, overcome the power of evil (*druj*) for ever, and righteousness (Av. *aša*) shall reign supreme.

The general designation for 'demon' in the Avesta is *daēva*, the same word as the later Persian *dīv*, 'devil,' and it is etymologically identical with Skr. *dēva*, 'deity,' Lat. *dīvus*, 'divine,' although diametrically opposed in meaning. This direct opposition between the Indian and the Persian terms is generally ascribed to a presumed religious schism in pre-historic times between the two branches of the Indo-Iranian community; but there is considerable uncertainty about the interpretation, and the solution of the problem has not been rendered easier by the fact mentioned below—that the names of two Hindu deities who appear as demons in the Zoroastrian system have recently been found in ancient inscriptions discovered in Asia Minor.

As the Avestan word *daēva* is masculine in gender, the demons in Zoroastrianism are commonly conceived to be of the male sex; but there is a large class of she-devils or female fiends, *drujes*, derived in name from the feminine abstract *druj*, lit. 'deceit,' the essence of evil in the Avesta, a word comparable with the neuter *drauga*, 'falsehood,' 'lie,' in the Old Persian inscriptions. Besides these she-demons there are numerous other feminine personifications that embody the elements of sin as much as do their masculine counterparts.

In numbers, according to the Avesta, the hosts of evil are legion (*Yt.* iv. 2). The Gāthās speak of the demons as 'the seed sprung from evil thought, deceit, and presumption' (*Ys.* xxxii. 3), and for that reason they are elsewhere described as being 'the seed of darkness' (*Vend.* viii. 80). Their creator was Ahriman, who brought them forth to wage war against heaven and earth, as is told in the Pahlavi *Bundahišn* (i. 10, xxviii. 1–46); and Plutarch (*de Is. et Osir.* xlvii.) rightly interpreted the spirit of Zoroastrian demonology when he described Ahriman as having caused a number of demons equal in activity to the Divine forces created by Ormazd to bore through (διαρρήσαντες) the world-egg in which Ormazd had placed his four-and-twenty 'gods' (θεούς). Zoroaster's mission was to banish these diabolical creatures from the world, and it is easy to understand why the Avesta should picture the entire body of fiends as taking flight in dismay before him (*Ys.* ix. 15).

The demons are naturally thought of as spirits or bodiless agents (Av. *mainyava daēva*, 'spiritual demons' [*Yt.* x. 69, 97; *Vend.* viii. 31, 80]), though sometimes they are conceived of as having human shape (*Ys.* ix. 15) in order to accomplish better their fiendish ends. Their purposes are best achieved under the cover of darkness, but their heinous deeds are checked by the rising of the sun (*Yt.* vi. 3 f.). Their favourite haunt is in proximity to whatever is vile or foul, and they lurk, especially as spooks or goblins, in the vicinity of *dakhmas*, or towers of silence. In certain regions they were believed to be more numerous than in others, the whole province of Mazandaran, south of the Caspian Sea, being supposed to be especially infected by their presence. This legendary association with that territory is as old as the Avesta, and it appears throughout the Pahlavi writings, as well as in the *Shāh Nāmah* of Firdausi (Av. *daēva Māzainya*, Pahl. *Māzanīkān dēvān*, Pers. *dīvān-i Māzandarān*). The same tradition was perpetuated in Manichæism, as is proved by allusions to Mazanian demons in the Manichæan texts lately discovered in Eastern Turkestan (see F. W. K. Müller, 'Handschriftenreste aus Turfan,' ii. 18, 19, *ABAW*, Anhang, 1904). The baneful influence of all these ministers of evil could be averted in various ways, and one of the books of the Avesta, the *Vendīdād* (*Vidaēvadāta*, 'Law against Demons'), is devoted almost entirely to providing man with the means of ridding himself of their power.

As might be imagined, the multitudinous host of evil spirits lacks order and organization. It is, therefore, somewhat difficult to divide them into sharply defined bands, but a rough distinction between the masses may be recognized. At the head of the host stands Aŋra Mainyu, or Ahriman, 'the Enemy Spirit,' the prince of darkness personified. The chief characteristics of Aŋra Mainyu, or Angra Mainyu, as he is termed in the Gāthās, have been discussed in a separate article (see AHRIMAN), and need only to be designated here as maleficent in the extreme. Next in power to Ahriman stand six arch-fiends as eminent commanders of the legions of sin. Then follows a confused horde of wicked spirits framed to bring misery and distress into the world. These two bands in their broad grouping will be considered in turn.

The sixfold group of arch-fiends that are gathered as aides about the standard of Ahriman and form the council of hell (cf. *Yt.* xix. 96; *Dīnk.* ix. 21. 4; *Bd.* xxviii. 7 ff. and xxx. 29) are portrayed in Zoroastrian literature as endowed with various evil

qualities and as discharging multifarious diabolical functions. Their names are Aka Manah (Evil Thought), Indra, Sauru, Nāoŋhaithya (parallel with three Indian deities), Taurvī and Zairicha (personifications respectively of overpowering hunger and deadly thirst), and, lastly, Aēšma, the demon of fury, rapine, lust, and outrage. The fact that three of these demoniacal names are identical with gods in the Indian pantheon has been alluded to above, but their figures on the whole are not really sharply defined, though their malign characters are several times alluded to in the passages which enumerate them (*Vend.* x. 9 f., xix. 43; *Bund.* i. 27, xxviii. 7–12, xxx. 29; *Ep. Mān.* i. x. 9; cf. also *Dāt.* xciv. 2; *Dīnk.* ix. 34). Reference has likewise been made to the fact that in the inscriptions of the Hittite kings of the 14th cent. B.C., recently discovered by Winckler at Boghaz-keui in Asia Minor, the names Indra and Nāsatya—the latter noteworthy by its Indian form (with *s*) in contrast to the Iranian form Nāoŋhaithya (with *h*)—appear as divinities and not as demons. Until the full connexion of the passages in these inscriptions is made known by the discoverer, it appears premature to theorize in regard to the possible bearing of the allusions upon the mooted question of the presumed Indo-Iranian religious schism. The mention may be merely a direct reference to Indian deities without having any immediate connexion with Iran.

Of all the sixfold group of arch-fiends, the most clearly defined is the assaulting and outrageous demon *Aēšma*, whose name has been thought to be reflected as *Asmodæus* in the Book of Tobit (see F. Windischmann, *Zoroastr. Studien*, Berlin, 1863, p. 138; A. Kohut, *Jüd. Angelologie und Dämonologie*, Leipzig, 1866, p. 75; F. Spiegel, *Erân. Alterthumskunde*, Leipzig, 1877, ii. 132; E. Stave, *Einfluss des Parsismus auf das Judentum*, Haarlem, 1898, p. 263; J. H. Moulton, 'The Iranian Background of Tobit,' in *ExpT* xi. [1900] 258; for the opposing view, see Ginzberg, in *JE* ii. 217–220).

By the side of these six arch-demons there are named in the Avesta and supplementary Zoroastrian texts more than fifty other demons, personifications of evil forces in the world (for the complete list, see Jackson, *op. cit. infra*, pp. 659–662). It will suffice to mention a few of these, such as *Tarōmaiti*, 'Arrogance'; *Mithaoxta*, 'False Speech'; *Āzī*, 'Greed' (a demon that is preserved likewise in Manichæism [cf. Müller, *op. cit.* pp. 13, 14, 15, 18, 20, 22, 23, 53]); *Vīzareša*, or the fiend that drags the souls of the wicked to hell; *Būšyāstā*, a typification of inordinate sleep and sloth; *Astō-vīdātu*, who divides the bones at death; *Apaoša*, 'drought'; *Zemaka*, 'winter'; and a score or more of personified malignant forces.

The special cohort of fiends (*drujes*), as already noted, is headed by the *Druj* paramount, or the feminine embodiment of deceit and falsehood, who draws in her train a ribald crew of followers, corporeal and incorporeal, entitled in the Avesta *dregvants*, or *drvants*, 'the wicked.' Foremost among these agents in exercising pernicious activity is the *Druj Nasu* (cf. Gr. *νέκυς*), 'corpse-fiend,' the veritable incarnation of pollution and contagion arising from the decomposition of a dead body. Of a similar character in the Avesta is *Ithyeja Maršaona* (*Vend.* xix. 1, 43, xviii. 8; *Yt.* vi. 4, xiii. 130), the same as *Sēj* in the Pahlavi texts (*Bund.* xxviii. 26; *Dīnk.* ix. 21. 4, vii. 4. 37), a form of wasting decay and decrepitude that creeps on unseen. Peculiarly malign in her influence is another fiend, *Jahī*, 'harlot' (cf. *Yt.* iii. 9, 12, 16), who embodies the spirit of whoredom destructive to mankind; while little better are the seductive *Pairikās*, 'enchantresses' (the late Persian *Peris*) and their male partners, *Yātus*, 'sorcerers.'

Among demoniacal monsters is *Azhi Dahāka*, 'the Serpent Dahāka,' a tyrant out of whose shoulders grew two snakes from a kiss imprinted between them by Ahriman. Throughout Zoroastrianism this hideous being is represented as the personification of the thousand years of oppressive rule over Iran by the Babylonian Empire in early days; and he appears equally in the derived demonology of Manichæism (cf. Müller, *op. cit.* pp. 19, 37), as well as in Armenia (above, vol. i. p. 800), while his name, with the signification of 'dragon,' is even found in Slavic (Berneker, *Slav. etymolog. Wörterb.*, Heidelberg, 1908 ff., p. 36). A dozen other execrable creatures in the diabolical list might be mentioned as agents of Ahriman in his warfare against the kingdom of Ormazd, but the list is already long enough to prove the important part which demonology played in Zoroastrianism.

It should, however, be noted that there were yet other demons in Zoroastrianism whose names are not found in the extant Iranian literature. Here belong Khrūra, the son of Ahriman (al-Bīrūnī, *Chron. of Ancient Nations*, tr. Sachau, London, 1879, pp. 108, 398), and Mahmi, whom Eznik (*Against the Sects*, tr. J. M. Schmid, Vienna, 1900, p. 109) describes as revealing to Ormazd the secret plans of Ahriman (for the place occupied by Iranian demons in pre-Christian Armenia see above, vol. i. p. 779 f.).

LITERATURE.—For fuller details and more extensive bibliographical material, see A. V. Williams Jackson, 'Die iran. Religion,' in Geiger-Kuhn's *GIrP* ii. [Strassburg, 1901] 646–688. For material relating to the discovery in Asia Minor of inscriptions with the names of the Indian deities Indra and Nāsatya, who appear as demons in Zoroastrianism, see H. Winckler, in *Mitteilungen der deut. Orientgesellschaft*, 1907, no. 35; and cf. the discussions by Ed. Meyer, in Bezzenberger-Kuhn's *Zeitschr. f. vergleich. Sprachwissenschaft*, xlii. [1908] 1–27; Jacoby, in *JRAS*, 1909, pp. 721–726, 1910, pp. 456–464; and Oldenberg, *ib.* 1910, pp. 846–854. The most recent material in regard to the occurrence of Zoroastrian demons in Manichæan writings will be found in the discoveries made by the German Imperial Expedition at Turfan in Eastern Turkestan (see F. W. K. Müller, 'Handschriftenreste in Estrangelo-Schrift aus Turfan,' in *ABAW*, Anhang, 1904, and other later publications now being issued in the same series).

A. V. WILLIAMS JACKSON.

DEMONS AND SPIRITS (Roman).—The Romans and Latins, and the races of Italy who were nearest of kin to them, appear to have possessed but little in the nature of mythology or folklore before they passed under the spell of the Hellenic culture. The early Italic conception of the supernatural power had not much about it that was definite or personal. There was a vague consciousness of a Divine influence (*numen*) which worked in different spheres and with different manifestations; but the allotment of distinct departments to clearly conceived personages, more or less superhuman, and the gradation of these personages to form a hierarchy, were alien to primitive Italic thought and feeling. In the earliest form of belief, only two classes of beings were intermediate between the human and the Divine. These were the souls of the dead, and certain spirits who attended on the lives of individual human beings.

We shall first deal with these attendant spirits, who, when attached to men, bore the name *genius*, and, when they guarded women, had the title of *juno*. These creations are racy of the soil of Italy, and the faith in them was less affected by contact with the Greeks than any other article of indigenous Italic religion. It hardly needs to be said that the history of culture affords innumerable parallels to this notion of an invisible personality, separable from, yet closely attached to, the life of the visible man. The *fravashi* of the Persians and

the *ka* of the Egyptians were not unlike, and the Greeks viewed the *psyche* in a somewhat similar fashion. Even barbarous peoples often abstract from the individual some striking characteristic or characteristics which they contemplate as belonging to a more or less spiritual person distinct from the man himself. Such a concept is the *genius*, and the power which was at first isolated from the man himself by the Italic tribes, and treated by them as mysterious and in some sense supernatural, was the power of propagating the race. This appears clearly in the expression *lectus genialis*, applied to the marriage bed, which was originally always placed in the *atrium* of the old Roman house. The corresponding power in the case of the matron is her *juno*, and the later goddess Juno is merely a generalization and a glorification of the separate *junones*. That no parallel god emerged on the male side is an anomaly of a common kind. In the *genius* were also embodied all faculties of delight, so that phrases such as *indulgere genio*, 'to do one's *genius* a pleasure,' and *defraudare genium*, 'to cheat the *genius* of an enjoyment,' were common. But the intellectual qualities which we denote by the borrowed word 'genius' never specially pertained to this ancient spirit, though *ingenium* lies very close to *genius* by its structure. The *genius* and the *juno* were at first imagined not only to come into existence along with the human beings to whom they were linked, but also to go out of existence with them. Yet they could exercise strong control not only over the fortunes, but over the temperaments of their companions. There was undoubtedly a sort of fatalism connected with the belief in spirits. The Greeks often conceived that a particular *tyche*, or 'fortune,' accompanied the lives of men in a similar manner, and therefore they usually represented *genius* by τύχη. But occasionally δαίμων is viewed exactly in the light of the Roman *genius*. In a well-known passage (*Ep.* II. ii. 188), Horace does not hesitate to call the *genius* a god, though he at the same time declares him to be subject to death. The snake was the common symbol of the *genius* and the *juno*; hence the pairs of snakes which are painted on the walls of many houses at Pompeii. It was not uncommon to keep a tame snake in the dwelling, and the superstitions believed that the *genius* was incorporated in it. Simple altars were erected to the spirit, and offerings were made to him.

In course of time the ideas attached to the *genius* were in many respects changed and expanded. By a sort of logical absurdity, *genii* of the great gods were invented, and shrines were erected to the *genius* of Juppiter and others, while any collection of human beings gathered together, in a city, for instance, or a gild (*collegium*), or a camp, might have its attendant spirit. Thus a *genius publicus* was worshipped at Rome. But the imagination that things or places not connected with men were thus companioned—an imagination involved in such phrases as *genius sacræ annonæ* or *genius loci*—sprang up only in a late age. In the Imperial time, the severance between the Emperor's *genius* and his tangible personality had many notable consequences, and subserved some political purposes. Augustus was able to allow the veneration of his *genius* to become part of the public worship of Rome without flouting Roman prejudice, though he was compelled (officially) to confine the deification of his person to the provinces. When it became customary for oaths to be taken by the Emperor's *genius*, it was possible to introduce a secular punishment for perjury, which had previously been left to the Divine vengeance.

When Eastern religious influences spread over the Western part of the Roman Empire, and new developments in philosophy aided these influences in transforming culture, old ideas concerning the *genius* underwent contamination. The *genius*, which had been supposed to die with the man, was now held to be identical with the soul which survived the body. Hence on the later tombstones this name sometimes describes the spirit of the deceased. Servius, the commentator on Virgil, tells us that the vulgar did not clearly distinguish between *genii*, *lares*, and *manes*. This confusion had been helped by learned speculation from the time of Varro onwards. We must, therefore, now consider Roman and Italic beliefs concerning the state of the dead.

That a cult of the departed existed from primitive times is clear from many indications. The earliest form of the Roman calendar notes several purificatory ceremonies for the appeasement of the ghostly world. The vanished spirits were not without an influence over the living which was to be dreaded. The month of February took its name from one of the deprecatory observances (*Februa*). Each family in the community had its special concern with the ritual. The ghosts were supposed to approach some openings in the earth, to which the name *mundus* was given. Such was the spot called *Terentum* or *Tarentum* in the Campus Martius, and another place in front of the temple of Apollo on the Palatine. The ceremony called *lustratio* ('purification'), which was performed for the newly-born child, for the army in the field in times of superstition and panic, and for the whole assemblage of past and present warriors every five years (when the censors were said *condere lustrum*), seems to have had its origin more in fear of the unregarded dead than in any sense of sin in face of the offended gods; and the ornament called *bulla* worn by the Roman child appears to have contained charms originally intended to ward off ghostly anger, to which the young were specially exposed. Ancient scholars believed that the worship of the *lares*, or household spirits, was one form of the cult of the dead, and, till recently, they were followed by the moderns. There is, however, much evidence to show that the veneration of the *lares* began outside the house. The earliest mention of them is in the ancient hymn of the Arval Brothers, where they appear amongst the protecting divinities of the fields. Originally each house possessed only one *lar familiaris*, and the use of *lares* to mean 'a household' is not earlier than the late Republic. It is possible that the *lar familiaris* was at first the mythical founder of the separate family, just as each *gens* had its mythical ancestor. But the existence from early times of *lares* in every *compitum*, or quarter of the city, and of *lares permarini* and other *lares* connected with localities, points the other way. And the worship connected with them was joyous in character, not funereal. The scholars who identified the *lares* with the departed souls were influenced, perhaps, by a supposed but improbable connexion between *lar* and *larva* (which is the name for an unsatisfied and, therefore, dangerous ghost), and by the primitive custom of burying the dead within the house of the living. The phrase *di manes*, which is familiar to us on Roman tombstones, appears to have been the earliest applied to the general divinities who ruled the world of shades. Their appearance in Roman religion must have been comparatively late. The term *manes*, properly 'good' or 'kindly,' is euphemistic, like the name *Eumenides*, given to the Greek Furies. The application of *manes* to disembodied men is secondary, especially when the word indicates a single ghost. Yet, from an early time, the ancestors in the other world were deemed to be in a sense Divine, and were called

divi parentes. The *lemures* are the same as the *larvæ*, the spirits with whom, for whatever reason, the living find it hard to maintain a permanent peace. The name is connected with *Lemuria*, a purificatory ceremony held at Rome in the month of May.

When the West was invaded by the religions of the East, including the Christian, and when philosophy, especially in the hands of the Neo-Pythagorean and Neo-Platonic schools, developed much mystical doctrine about things Divine, the belief in beings who were more than men and less than gods became universal. The whole world now abounded in demons of limited power for good or evil. The testimony to this persuasion is scattered broadcast over later literature, from Apuleius onwards, and over the remains of Imperial art. The deified emperors were like the Greek ἥρωες, and to them the name *divi*, which had in earlier days not been distinguished from *dei*, was appropriated. Magic and astrology blended with the faith in demons, which, when Christianity prevailed, were regarded as wholly bad, and were identified with heathen divinities. The minds of men were laden with a burden of which they were not relieved till rationalism sprang out of the Reformation movement.

LITERATURE.—Information on the subject may be obtained from the articles on 'Inferni,' 'Genius,' 'Lares,' and 'Manes,' in Smith's *Dict. of Antiquities*[3], London, 1890–1; in the *Dict. des Antiquités* of Daremberg-Saglio[3], Paris, 1886 ff.; and in Roscher's *Lex. der Mythologie*, 1884 ff. The work of Wissowa on Roman Religion in Iwan Müller's *Handbuch der klass. Alterthumswissenschaft*, Munich, 1892 ff., is important. For the cults of the dead, Warde Fowler's *Roman Festivals*, London, 1899, and his Gifford Lectures, entitled *The Religious Experience of the Roman People*, London, 1911, may be consulted; and for the later belief in demons, Dill's *Roman Society from Nero to Marcus Aurelius*, London, 1904. Many illustrations are to be found in Frazer's *GB*[2], 1900.

J. S. REID.

DEMONS AND SPIRITS (Slavic).—There is abundant evidence of the persistence of the belief in demons and spirits among the Slavic peoples even to the present day, especially in districts where primitive ideas and customs have not yielded to the advance of civilization. Popular imagination traces the agency of supernatural beings in every part of the surrounding world—house and home, field and forest—and sees in every nook and corner the possible hiding-place of an invisible spirit, which, however, may on occasion assume a visible form. In seeking to classify these beings under leading categories, it is often difficult to determine which of them are to be regarded as products of the animistic stage of thought, and which, on the other hand, should be described rather as demons, demanding the prayers, offerings, and worship of human beings. As to the various classes of demons themselves, such as dream-spirits and spirits of disease, domestic spirits and Nature-spirits, it is likewise no easy task to draw distinct lines of demarcation between them.

The origin of demonic beings is explained in a cosmogonic legend of dualistic character, which, it is true, belongs to a relatively late period, and is derived from a foreign source.

According to this story, which is widely known among the Slavs, the Evil principle existed from the first, and quite independently of the Good. As a result of the combined work of both—God and Satan—the world itself came into being. Satan, in the form of a water-fowl, made his way to the bottom of the primal ocean, and in his beak brought up rock and sand, with which materials God then framed the world. Satan, however, secretly retained in his mouth a portion of the sand, and made therewith all the rugged and inaccessible places—mountains, crags, morasses, straits, and barren lands. Satan then tried to drown God, who, fatigued with the effort of creation, was now asleep, and to this end he dug holes in the surface of the earth, and caused floods to gush forth therefrom: thus arose great waters and abysses, into which, however, Satan himself was at length thrust by the power of God. Moved by envy of the Deity, Satan also essayed the work of creation, and noxious plants and animals are the result of his efforts. Desiring to form a retinue for his own service such as would correspond to the angelic hosts of God, he was advised by the latter to wash his hands, and to allow the water to drop from his fingers behind him. From these drops sprang an innumerable multitude of evil spirits, who own him as their head. It is believed in Russia that the same thing takes place whenever a person engaged in washing himself lets the water drip around him.

According to another form of the legend, good angels and demons were produced from a stone upon which blows were dealt by God and Satan respectively. Satan's arrogance and the growth of his retinue induced him at last to make an open revolt, with the result, however, that the archangel Michael hurled the wicked host from the celestial battlements. The ejected demons fell between heaven and earth; one remained in the air, another in the forest, a third in water, etc., while the rest sank down into the under world. This explains why demons have their secret habitations in all places—in the air, in woods, waters, and the like. It is a popular belief that the conflict between the Good and the Evil principle still endures, and manifests itself in thunder and lightning. The thunderstorm is brought about by the thunder-god—Elijah or Michael—who pursues the evil host with a bolt of fire. Every object injured, every person or animal killed, by the lightning-flash affords unmistakable evidence of the fact that some evil demon was fleeing before his heavenly pursuer, and had sought shelter in the neighbourhood of the person or animal or object struck, and that, while the Divine missile destroyed the cowering demon, it did not spare the innocent object that chanced to be near. Thus arose the belief that a human being killed in a thunderstorm wins salvation, as also the notion that the wood of a tree shattered by lightning contains a powerful counteractive to the work of evil spirits.

The people of Little Russia explain the genesis of demons by another myth, which, however, is not nearly so widely known as that which we have just sketched. According to them, evil spirits are the children of Adam. Our first parents, it is related, had twelve pairs of children, but on one occasion, when God came to visit them, Adam tried to conceal half of his offspring from the Divine eye. The children who were thus hidden were transformed into demons.

Although many demons are destroyed in their warfare against God and good men, yet their numbers are not diminished. On the contrary, their ranks are always being reinforced, either by marriages amongst themselves, from which issue new generations, or by sexual intercourse with human beings. Further, their numbers may be recruited by the human children who become demons—a transformation which takes place when a child is cursed by its parents, or dies unbaptized, or when it is taken away by the demons and a changeling (*q.v.*) left in its place. The powers of evil also gain possession of all who die a violent death, such as suicides and children overlain in sleep; hence the idea that it is dangerous to try to save a person in the act of committing suicide, or one who is drowning, etc., as the devil will feel himself wronged in being balked of his expected victim, and may take vengeance upon the rescuer.

The demons are believed to come into touch with human life in various ways. They injure man by causing accident and disease, or they give him help and protection. A common idea is that a demon sits upon the left shoulder of every human being, ready to take possession of him at any moment of weakness, and it is therefore advisable that when a person yawns he should guard his mouth by making the sign of the cross, and so prevent the fiend from gaining an entrance into his body. But, if an individual makes a compact with the devil, signing over his soul in a document subscribed in his own blood, the devil undertakes on his part to serve the man in every possible way, and especially to make him rich. In the course of ages Satan has taught mankind many crafts. It was from him that people learned the arts of iron-working, brewing, and distilling, as also the use of tobacco. He was the discoverer of fire; he built the first mill and the first waggon. The arts of reading and writing were acquired from him. Moreover, when Satan is in a good humour, he finds amusement in plaguing human beings; he likes to beguile the belated traveller from the right way, to worry the driver by causing a breakdown in the middle of the road, or to play tricks upon a drunk man. He may appear under the disguise of a

friend or a lover, and it is even believed that he can serve his minions by taking their place in the ranks of the army. It is also said that, when he wishes to gratify his lust, he visits witches in the form of a flying fiery serpent; such, for example, are the *Letavitsa* of the Huzules and the Polish *Latawiec*, which sometimes assume the form of a man, sometimes that of a fascinating maiden.

It is with witches that the evil spirits and demons have their most active intercourse. At certain seasons, and especially on the principal feast days of the Church, the witches fly away to the meeting-places of the demons, where they drink, dance, and wallow in debauchery. The demons on their part are ready to abet the witches in carrying out those magical operations which, according to popular notions, require the support of supernatural agency. Such, for instance, are the machinations by which the sorcerer causes untimely births, incites love, sows dissension among friends—anything, in a word, which does mischief to mankind. The transactions are performed in the name of the evil spirit, and, when they are followed by an adjuration, this usually takes the form of an appeal 'to the host of unclean spirits conjointly with Satan,' praying that they will work harm to the person the sorcerer has in view. Such an adjuration of the infernal spirits implies, of course, that the sorcerer has by word and action taken the final step in his abandonment of the Christian faith and of all that the Church counts virtuous and laudable. He takes the cross from his neck and tramples upon it; he avoids the use of sacred words, and declares himself an apostate from Christ and His saints. A person who has thus given himself to Satan has something forbidding in his very appearance; it is believed that he no longer washes himself or combs his hair. In Little Russia, a woman who desires to become a witch goes at midnight to some river, whence the evil spirit comes forth to meet her. But she must previously have trodden a saint's image under foot, and removed the cross from her neck.

According to the popular superstition,—reflected also in the language of incantations,—the evil spirits dwell somewhere in the North or West, in a 'nocturnal' land, while the good angels are in possession of the realm lying to the East. The region peopled by demons is dark, shrouded in mist and cloud, and lies deep down in an abyss. Another belief, and one which is widely diffused, is that the hosts of Satan live in a subterranean region, whence they issue forth upon the world at the bidding of their prince; or in deep waters, unclean places, dense forests, and marshes, where the sun never shines. Bushes of elder and willow by the water-side are in some localities believed to be the favourite haunts of demons. They leave their lurking-place in the vicinity of water on the 6th of January, *i.e.* Epiphany, when the priest blesses the water; they then migrate to an abode in the meadows. In Passion-week, again, when the meadows are consecrated, they pass into trees and cornfields, and then, at the festival on the 1st of August, they leave the apple-tree—which is consecrated on that day—and return to their own element. Another favourite resort of demons is the cross-roads (*q.v.*), where evil spirits come together from all quarters of the world. The mill and the uninhabited house are also well adapted to supply a lodging for demons. They like to tarry in the neighbourhood of a spot where treasure is concealed. On Easter Eve and the Eve of St. John, when the bracken is supposed to flourish, the demons endeavour to prevent the blossoms, which possess extraordinary magical virtues, from falling into the hands of human beings. At the hour of noon they muster at their favourite spots on the banks of lakes and rivers, and it is therefore dangerous to linger in the open at that time. There is, indeed, a special midday-demon, the *Běs poludennyj*. It is believed that the spirits retire from the earth and return to Hell in the middle of November, only, however, to resume their expeditions in spring, when Nature re-awakes from her winter sleep.

Hell, the nether lake of fire and smoke, is, in a special sense, the home of these evil spirits. Here *Lutsiper*, with his wife and attendants, swims and sails about, torturing the souls of the dead. The place of eternal fire is depicted as a bathroom or stove, in the heat of which the souls are tormented. The belief in hell-fire and the discovery of iron have conspired to foster another notion, viz. that the demons are smiths. In Russian incantations we find mention of three such demonic smiths, the three being brothers. The idea of a triad of fiends is also current in the folk-lore of other Slavic countries. The oldest demon of all, *Lutsiper*, is very frequently referred to as *Herod*—a name which probably denotes both the murderer of the innocents and the slayer of John the Baptist. Other names applied to the devil are 'the hetman' (of his hosts), Judas, Velzevul (*i.e.* Beelzebub), and Satan. According to the legends, the chief of the infernal forces is bound with a chain, which, however, in consequence of the sins of men, wears thin, and would long ere this have given way altogether, but for the fact that, in virtue of Christ's resurrection, it is restored at every Easter-tide to its original strength.

In addition to the demons named above, we find here and there a large and powerful female being, whose figure, embellished with many a fantastic feature, plays a great part in Slavic legendary lore. This is the *Baba-jaga* (Russ.), *Jedza* (Pol.), or *Ježibaba* (Slovak), a hideous old beldam, whose children are the evil spirits, or who, as the 'devil's dam,' sends forth her subject spirits into the world. She is said to steal children for the purpose of gratifying her craving for human flesh; to fly in company with the spirit of death, who gives her the souls of the dead for food; and to stir up storm and tempest in her flight. The legends also tell that she has teeth and breasts of iron, with which she rends her victims, and that her home is in a far-distant forest.

Among other Slavic names applied to evil spirits may be mentioned the following: *čert* (Bohem.), *čort* (Russ.), *czart* (Pol.); *djavol* (Russ.), *djabel* (Bohem.); *běs*, *vrag* ('adversary'), *lukavyj* ('the crafty'), *kutsyj* ('short-tail'), *nečistyj* ('the unclean'), *dedjko* ('grandfather'). The last-mentioned (Little Russian) epithet is applied to both the domestic spirit and the devil, and in this it resembles the Bohem. *diblík*, i.e. 'house-goblin' (cf. *ďáblík* = *diabolus*, as also the Bohem. *spiritus* [= Lat. *spiritus*], Slovak *pikulik*, which corresponds to the O. Pruss. *pickuls*). This is one of the numerous facts which indicate that heathen demonology and the Christian conception of the devil coalesced in the idea of a single 'unclean power.' In order to avoid giving offence to the demon by uttering his name, the people refer to him simply in the third person, as 'he' or 'himself.'

The demons are represented also as capable of assuming human form, and as having the qualities and propensities of human nature. It is to be noted, however, that such anthropomorphic demons show in every case some peculiar feature which distinguishes them from mankind. Thus, the demon's body may be black, or covered with hair; or he may have a horn, or a tail. In many instances he is remarkably small. Occasionally he can be recognized by his red and fiery eyes, or by the absence of some prominent organ of the body, such as an eye or an ear; or, again, by the resemblance of his feet and ears to those of a domestic animal. A lame person, or one without eyelashes, is suspected of being a demon. The water-spirit often appears in human form, and his real nature is then recognizable only by the water that oozes

from his hair and clothes. The devil, again, has a special liking for music, and dances to it. He is likewise fond of drinking and card-playing. Demonic beings have strong erotic tendencies; one of their common manœuvres is to waylay women and girls, or, again, to appear before a young man in the guise of a beautiful and alluring maiden. It may also be mentioned that some demons even demand food, but, as immaterial beings, may be put off with mere odours and fumes.

Demonic beings stand in awe of things connected with the Church, and consecrated objects generally; and these accordingly are the most potent amulets against their evil practices. Of such prophylactic articles the most important is the cross; and everything that bears that symbol shares its power. Other effective expedients are found in sacred tapers, incense, holy water, and the consecrated palm. A person who wishes to clear his house of evil spirits resorts with all confidence to prickly plants, as well as to the fern and garlic. In Servia, rubbing the breast with garlic is practised as a means of protection against a spirit that flies about by night. It is also believed that the demons have an aversion to wheat and flax, as the consecrated wafer is prepared from the former, and holy oil from the latter. The glowing firebrand is in all cases a powerful specific against demonic agency.

Those demons and demonic spirits which make their abode in human beings—the witch, the vampire, the demoniac—have also the power of assuming an almost endless variety of form. When pressed hard by a thunderstorm, they may change into a cat or a goat. Innumerable stories are told of their having been seen in the shape of a horse, a pig, a dog, a sheep, a mouse, a hare, a bird, a peacock, a hen, a magpie, a butterfly, a fiery serpent, or even a ball of yarn. The Servian sorceress, the *Vješ̆titsa*, harbours a demonic spirit, which leaves her during sleep, and, flying among the houses in the shape of a bird or a butterfly, feeds upon the people—especially children—whom she finds asleep, tearing out and devouring their hearts. The *Jedogonja* of the Serbs, again, may remain invisible. The *Jedogonja*-spirits are said to fight with one another among the mountains, their missiles being huge boulders and uprooted trees. Upon their influence depends the state of the weather, and thus also the fruitfulness of the soil.

A special instance of demonic metamorphosis is found in the Slavic *werwolf*—the *Vlkodlak* (Bohem.), *Vovkulak* (Lit. Russ.), *Vukodlak* (Serbo-Croat.), *Vlă̆kolak* (Bulg.). The werwolf is a man who can change himself into a wolf, or who has really become a wolf by the enchantment of a witch. The belief in such transformations has been widely current for centuries; as far back as the 13th cent., eclipses of the sun and moon were attributed to the werwolf. The werwolf figures largely in legend. A person who has the power of changing at will into a wolf always shows some point of difference —*e.g.* in his birth or in his appearance—from other people. It is believed that his father was a wolf, and that he himself was born into the world feet first. In the upper part of his body he resembles a human being, while the lower part suggests the wolf. He has also a wolf's teeth and heart. To become a werwolf is a matter of no great difficulty. One need only drink a little water taken from the footprints of a wolf, or turn over a fallen tree, and then put on a wolf's skin; on the night thereafter the werwolf appears, bringing terror to man and beast. In some districts of Bulgaria it is believed that the *Vlă̆kolak* is a spirit which has been formed from the blood of a murdered man, and that he haunts the scene of the murder, and causes the place to become arid.

Among all the Slavic peoples, and especially among the Serbs, the werwolf is often confounded with the *vampire* or *upir* (Serv. *vampir*, Lit. Russ. *upyr*). The vampire is the soul of a dead man, which comes forth out of the grave for the purpose of working injury upon the living. The Serbs believe that impious people, and especially witches, become *Vukodlaks* after death, and drink the blood of sleeping persons. When an unusually large number of deaths take place in a village community, the calamity is attributed to the *Vukodlak*. Word passes from mouth to mouth that the ghostly evil-doer has been seen as he moved around with the mortcloth upon his shoulders. The people then go to the churchyard for the purpose of identifying his grave. They take with them a foal, and the grave upon which the foal stands still is opened, and the body taken out and impaled with a stake of blackthorn or hawthorn. In other districts similar measures are resorted to when the people seek to deliver their homes from the nocturnal visits of the vampire. In Russia, for instance, a stake of aspen or maple is thrust into the corpse, or else the grave, of the person upon whom suspicion has fallen. In some districts the corpse is burned, or the blood-vessels severed below the knee. Besides the vampire of the dead, however, who finds pleasure in tormenting sleeping persons by night, we hear also of a living vampire, viz. the witch, a being endowed with demonic power, who is able to kill people, to bring disease and misfortune, and to cause stormy weather. Moreover, all ungodly persons, and all who have been cursed by their fellow-men, or have died by violence, become vampires. We hear also of vampires who were originally children begotten of mankind by the devil, or children who died unbaptized. In point of fact, any ordinary individual is liable to the repulsive transformation after death; if an unclean animal or bird—dog, cat, magpie, cock—springs casually over his dead body, or if he is not buried according to the ordinary ritual of the Church, he thereby becomes a vampire. The vampire can be recognized in the grave by the fact that his corpse does not decay, but retains a ruddy colour in the face, and has the mouth smeared with blood. His limbs bear marks which show the gnawing of his own teeth. When at length he begins to drink human blood, he assumes the form of an animal, or, indeed, of an object of any kind. We may also note here that, according to a popular superstition in Little Russia, every witch is subject to an *upyr*, who was born with her and with whom she co-habits.

To the same class of tormenting spirits belong the *mora*, *mura*, or *mara* (Russ. and Pol.), *marucha* (Russ.), *kikimora* (Russ.), *morava* (Wend. and Bulg.); cf. the Germ. *Mahr* or *Mahre*, Eng. 'mare,' 'nightmare.' They might be described in almost the same terms as the vampire. They, too, are the souls of living men, which leave their bodies by night, and visit sleepers for the purpose of tormenting them. In Russia and Bulgaria, however, the *mora* is thought to be the soul of a child that has died unbaptized, or has been cursed by its parents; or it is a spirit which dwells in the cemetery and makes itself visible to people as a ghastly black spectre. Popular superstition invests it with certain features which distinguish it from ordinary human beings. The soles of its feet are flat, and its eyebrows meet. A child who at birth has visible teeth, or one who, having been taken from his mother, commences to suck again, eventually becomes a *mora*. A similar development is expected in the case of a child whose mother during pregnancy happens to go out of her room just as the clock strikes the hour of noon. Further, should anything that conflicts with the tradition of the Church take place during baptism, the child being

baptized is thereby doomed to become a *mora*. It is also believed that a witch can voluntarily make herself a *mora*. The characteristic pursuit of a *mora* is to plague her sleeping victims with bad dreams and oppression of the chest, while she is sucking blood from their breasts. During the visitation the sleeper is incapable of speech and motion. But the *mora* does not confine her evil practices to human beings; she likewise torments domestic animals, draining them of milk and blood. Nevertheless, it is not a difficult matter to rid oneself of the cruel attentions of the *mora*. All that is necessary is to offer her a gift of some eatable substance, such as bread, salt, or butter. An effective means of keeping her at bay is to place beside the sleeper some such object as a double triangle (the so-called '*mora's* foot'), a mirror, a broom, a steel article, etc.

The further we trace the *mora* or *kikimora* towards the East, the more does she shed her distinctive characteristics and become identified with the household spirit and the Nature-demon, to which are ascribed the traits which belonged originally to her. She has now become an inmate of the house, revealing her presence by her nocturnal movements; she converses with people, puts them into a state of terror and causes disquiet, ravels the work of the sewer or spinner, sits spinning upon the stove, or busies herself with tasks that belong to the housewife. She is a little old woman, and lives behind the stove. When the inmates of the house wish to rid themselves of her presence, they sweep the stove and the corners of the room with a besom, and speak the words: 'Thou must go away from this place, else thou shalt be burned.' In some parts of Russia the *moras* are believed to be repulsive-looking dwarfs, who may be found as crying children among the fields. In Siberia the *kikimora* has become a forest-spirit.

Analogous to the *mora* is the nocturnal demon which is known among the Slovaks, Poles, Serbs, and Russians as the *nočnitsa* ('night-hag'). When a child suffers during the night from some unknown ailment, tossing about and crying, the trouble is set down to the *nočnitsa*, who torments the child by tickling it or sucking its blood, or disturbs its sleep by her mere touch. The liability to such disturbance is attributed to the mother's having neglected to bless her child the evening before. In external appearance the night-hag remains very indistinct; she is simply a female demon who wanders around in the darkness of night. In some localities the *nočnitsas* are supposed to form a group of twelve sisters. It should be noted, moreover, that a similar name, *polunočnitsa*, i.e. 'the midnight-woman,' is sometimes applied to the Virgin Mary. In the Government of Archangel people safeguard themselves from the *nočnitsa* by drawing a circle round the cradle with a knife, or placing the knife within the cradle, or by putting an axe, a doll, and a spindle beneath the floor, or by driving a piece of wood into the wall. The incantations accompanying these actions always contain an expression of the wish that the 'nocturnal *nočnitsa*' will no longer play pranks with the child, but seek to find amusement in the things thus offered her. Sometimes an oblation of bread and salt is made to her, part of it being rubbed upon the head of the fretful child, and the rest placed under the stove. The hag who torments children by night is also known in Russia by the names *kriksy* (cf. *krik*, 'scream') and *plaksy* (cf. *plakat*, 'cry'). In Bulgaria a corresponding part is played by a frightful wood-hag called *gorska makva*, whose head somewhat resembles that of an ox. Among the White Russians the belief has been traced that the nocturnal spirit produces illness in children from within, having first found his way into their bodies.

This superstition introduces us to the *demons of disease* strictly so called. Certain diseases are commonly believed to emanate from demonic beings who have found an entrance into the body of their victim, and thence proceed to torment him. This holds good in particular of fevers, epilepsy, insanity, and plague. Among the White Russians, when the nature of the malady cannot be determined, it is supposed that the patient is tormented by an 'unclean power.' In such cases the body of the afflicted person is rubbed with a piece of bread, which is then carried to a cross-way by night; here the *Dobrochot* (a pet-name for the demon, especially the domestic spirit) is entreated to accept the offering thus made, and to absolve the sick man. Those engaged on an errand of this kind must not cross themselves. Here we have a vestige of the cult of the dead; sometimes, indeed, it is said in so many words that the offering is intended for the dead. There are occasions upon which an individual may very easily fall into the power of the demon of disease. Such an occasion is birth, together with a certain period thereafter, lasting usually until the child is baptized. It is imagined that the unclean spirits swarm round the house of the mother, and resort to every possible means of working injury both to her and to her child.

The demon of *fever* is believed to be one of the three, seven, twelve, or seventy-seven so-called *Lichoradka*-sisters (*lichoradka* = 'fever'). In order to secure her good graces the people speak of her by such endearing epithets as 'god-mother' and 'aunt.' She wanders over the whole world, causing illness wherever she goes, and is represented either as an ugly, lean, naked, and hairy beldam, or as a young and beautiful nymph. Offerings are presented to her with a view to warding off her attacks. If the infection has come by way of the earth, an oblation of corn is made at the particular spot. But the gift is more frequently cast into the water. The fever-patient himself cuts an egg into seventy-seven pieces, which he then throws into a river as he utters the words: 'Ye are seventy-seven; here is a portion for each of you; eat, and meddle not with me.' When the festival commemorating the dead is celebrated in White Russia, the *Lichoradka* gets a share of the feast. Among other measures adopted in battling with the disease, the following is of special interest An attempt is made to deceive the demon in such a way as will prevent her recognizing the sick person when she returns to attack him again. The patient's name is changed; his face is covered with a mask, and words are written on the door to say that he is not at home. Another expedient for scaring the demon is to fire a gun. The diseased person is made to eat bitter and fetid things, or he is fumigated with some evil-smelling substance, in order to render the demon's sojourn within the body as uncomfortable for herself as possible. The most reliable prophylactic of all, however, is a certain incantation in which occurs an interesting story about the origin of the *Lichoradka*-demons. According to this incantation, they are the daughters of Herod, and the oldest and most ferocious of all is the one on whose account John the Baptist was put to death. At the command of their father they issue forth from their subterranean home to plague the inhabitants of the earth.

A frequent disguise of the demon of *pestilence* is the figure of a woman—'the black woman' of the Bulgarians (in Russia, the *Morovaja panna*, *čuma*, or *cholera*; in Servia, the *kuga*), but it may also take shape as a bird or an animal—a cat, horse, or cow. The *Morovaja panna*, clothed in white and

with dishevelled hair, travels by night from place to place, making her journeys either by waggon or upon the back of some one whom she compels to carry her. Her breath and her touch are fatal to human beings, and she feeds upon the bodies of those whom she slays. The most effective means of warding off her attacks is a furrow traced secretly and by night round the village, with a plough guided by women who are naked or clothed only in a shirt, as the pest-hag dare not cross such a furrow. In many districts the demons of pestilence are believed to be three sisters. A widely current notion is that the afflicted person has in some way given offence to the demon of disease, whose resentment finds vent in the disorder. In such a case it is incumbent upon the invalid to ask forgiveness of the demon. In Russia, for instance, one who is ill with smallpox is taken to another in like case, and makes obeisance to the latter, saying: 'I ask forgiveness, spirit of smallpox; absolve me, daughter of Athanasius, if I have behaved rudely towards thee.' The same purpose is served by speaking of the demon under endearing names, and thus regaining her favour.

Mental derangement, 'possession,' affords one of the clearest instances of the sojourn of a demon in a person's body. Such, for example, is the *ikota* or *klikušestvo* malady prevalent in Russia—a state of supposed demoniacal frenzy which can be induced by the machinations of a witch. At her command the evil spirit takes up his abode within the body of his victim, and makes his presence known by giving vent to abnormal sounds, such as neighing, barking, and the like. The sufferer may be relieved by the use of consecrated objects or the adjurations sanctioned by the Church, or, again, by putting on harness, or by dipping in holy water at the feast of Epiphany. There is, however, another theory of the origin of lunacy: the disease is sometimes attributed to an evil spirit (forest demon, etc.), which of no set design simply flies past a person.

The truculent spirit of pestilence resembles in outward appearance the personified figure of Death—the Bohemian *Smrtná žena* or *Smrtnice*. The latter also is a woman, haggard and dressed in white, who walks beneath the windows of a house in which some one is dying. If she sits down at the head of the bed, the last hope of recovery is gone, but, if she places herself at the foot, the invalid may get well again. The people believe that they can drive away the demon by putting crosses or saints' images upon the bed; but they are ready, on the other hand, to admit that Death is deaf to prayer. In Little Russia and Moravia it is thought that Death lives under the earth, in a room lit by innumerable candles, some of which are just being lit, and others upon the point of going out. The candles stand for human lives, over which Death holds sway. This attribute of power over human life belongs both to the spirit of Death and to the goddess of Fate.

The whole course of a man's life, from its first hour to its last, is pre-ordained at his birth by the *goddesses of Fate*. This belief, inherited from Greek and Roman mythology, seems to have been prevalent among the Southern and Western Slavs. In the written documents of these peoples, as far back as the 12th cent. A.D., we find mention of these goddesses and of the sacrificial festivals instituted in their honour. Among the Eastern Slavs, on the other hand, the belief in three Fates who control the lives of all human beings does not appear ever to have had any outstanding vogue. Here, in fact, their function was taken over by the *Dolja* (the *Sreća* or 'Fortune' of the Serbs)—a personification of the good or evil fortune of the individual.

When a birth occurs, the newly-born child is visited in the night-time by the three Fates (Serb and Sloven. *Rodjenice, Sudnice, Sudjenice*; Bohem. *Sudičky*; Bulg. *Roždenici, Orisnici*)—beautiful, richly-attired, diaphanous maidens. They ordain the destiny of the child, and determine the manner of its death. It is generally believed that the decisive forecast is that pronounced by the one who speaks last. In order to induce the Fates to assign a favourable destiny to the child, gifts and offerings are presented to them. Among the Southern Slavs and Bohemians these presents are in the form of food—bread, salt, or wine—placed on the table, or, it may be, in hollows among the rocks, as it is believed by the Slovenians that the *Rodjenice* live in rocks and mountains. In Bulgaria, on the evening upon which the visit of the *Orisnici* is expected, it is customary to partake of a special supper, after which three pieces of bread are placed at the head of the newly-born infant, in the hope that they may prove an acceptable offering to the august visitors. It may be incidentally mentioned that the Virgin Mary is sometimes confounded with the goddess of destiny.

The *Dolja* is, so to speak, a family heirloom which descends to a person from his parents. It accompanies him throughout his whole life; it sleeps with him in the cradle, nor does it desert him when he removes to another locality. It resembles the domestic spirit in so far as it works on behalf of its protégé from morning till night; it takes care of his children, does its best to make his land fruitful, brings him corn from other people's fields, promotes his success in fishing, guards his cattle, and, in a word, secures his good fortune and prosperity in every way. On the other hand, the *Dolja* of an unfortunate man, which in Russia is also called *Bĕda*, 'distress,' *Gore*, 'misery,' or *Zlydni*, 'ill luck,' is a good-for-nothing creature, which dozes idly amongst moss, or tries in every possible way to mar whatever prosperity the man enjoys. In most cases a person's subjugation to the *Zlydni* is an indication that his present employment does not accord with his true vocation. It is sometimes stated that the attendant spirit advises its protégé to choose another pursuit, promising that, if he does so, good fortune will never desert him. The *Dolja* is generally supposed to have the form of a human being, but it should be noted that it need not be of the same sex as the person to whom it belongs. Occasionally, however, its figure is that of an animal—a dog or a cat. It lives under or behind the stove, as is usually the case also with the household spirit. A good *Dolja* may be persuaded by prayers and sacrificial gifts to attend faithfully upon a person. Thus a bride who is setting out for the marriage ceremony prays that the good *Dolja* will sit beside her in the carriage, and that the unfavourable *Dolja* may perish in water. In White Russia the bride says: 'Come out of the stove in the form of a flame and go with me, leaving the room by the chimney.' Young women who wish to be married make pottage, and ask the *Dolja* to take supper with them. A rarer form of the superstition is that there is but one all-embracing *Dolja*, on whom depends the prosperity of every human being. This universal *Dolja* is depicted as an old woman, and as living sometimes in a miserable hovel, and sometimes in a splendid palace. The lot of the newly-born child is determined by the character of the place in which the *Dolja* happens to be residing at the hour of birth.

We proceed next to treat the belief in domestic spirits, the *Domovojs* or *Domoviks*. Many elements in this form of superstition suggest that the being who is worshipped as a household god is really the spirit of the ancestor, or founder of the family, who,

though long dead, still attends to the interests of his descendants. Here and there we find a survival of the belief that all who die in any particular house become its domestic spirits. At the festivals held in commemoration of ancestors, honours are paid to the household spirit as well. In point of fact, the latter is often called *Ded*, or (in Galicia) *Didko*, 'grandfather,' and those who have seen him describe him as a little old man with grey hair and a long beard, clad in old-fashioned garments and resembling in outward appearance the existing head of the family. With the last-mentioned characteristic is connected the designation of 'landlord,' Bohem. *hospodářiček*, sometimes given him; cf. the idiomatic use of 'himself.' In certain localities he is referred to as 'the one who lives on the stove,' as the stove is his favourite resort. Although he is not a Christian, he does not like to be spoken of as a 'devil'—an appellation which may enrage him, and incite him to take revenge by visiting with a disease the person applying the term to him. Consequently people are careful not to offend him in this way, even avoiding the use of his right name. It is sufficient to refer to him as 'he' or 'himself.' When any one has fallen ill in consequence of having insulted the household spirit, prayer is made for him thus: 'Perhaps the invalid has uttered foolish words and slighted you, or kept the cattle-shed unclean: forgive him.'

Every house has its *Domovoj*, who has also a wife and even a family. He engages in such tasks as devolve upon the painstaking head of a house. He bestirs himself by night, and people have even seen him as he moves about the yard with a light in his hand, seeming always to have something to do. Strange noises, movements of doors, mysterious voices, etc., heard during the night, are all attributed to him. He is of a merry and facetious disposition, and many of his actions are but manifestations of his good humour. The cleanliness and good order of the establishment are his great aims. A strange *Domovoj*, on the other hand, causes nothing but mischief and inconvenience, and every effort is made to dislodge the intruder. People believe that, in guarding the house, the true *Domovoj* often comes into conflict with some alien household spirit; and it may also be mentioned that he protects the household against the violence of forest-spirits and witches.

When the domestic spirit finds anything about the house not to his liking, he manifests his displeasure in various ways. He indulges in all kinds of violence; throws utensils upon the floor, annoys people and animals in their sleep, and may even destroy the whole place by fire. Like the *mora*, he leaps upon the sleeper, pressing upon him and causing difficulty in breathing. A person with hairy hands who touches the *Domovoj* in the darkness may expect something good to befall him, but to touch him with a smooth or cold hand is a presage of ill-luck. It is believed generally that when something unusual is about to take place in the household, the *Domovoj* gives warning thereof by letting himself be seen, by his movements, or by his faint utterances. We may observe in passing that the Wends believe in a spirit whose special function it is to convey the message of death. This is the *Božaloshtsh*, 'God's plaint,' a little woman with long hair, who cries like a child beneath the window.

When a person moves into another house, or migrates to another district, he prays the household spirit to accompany him. An offering of bread and salt is placed somewhere for the spirit's acceptance, and the head of the house appeals to him with the petition: 'I bow before thee, my host and father, and beseech thee to enter our new dwelling; there shalt thou find a warm place, and a morsel of provender which has been prepared for thee.' In some localities the housewife heats up the stove of the old house, then draws out the glowing brands, which are to be carried to the new residence, and finally, turning towards the recess at the back, utters the words 'Welcome, grandfather, to the new home!' Occasionally we come upon the belief that, if the old house falls into ruins, or is destroyed by fire, it is a sign that the domestic spirit has never left it. On other occasions likewise, the goodwill of the household spirit is usually secured by means of sacrificial gifts. A dyed egg or other portion of food is placed in the yard for his use, prayer being made at the same time for his friendship. Part of the evening meal is left upon the table in the belief that the *Domovoj* will come in the night and eat it. In the evening, again, broth is placed on the stove, and a meal of eggs on the roof, for the purpose of inducing him to take more interest in the fortunes of the house. Before Lent the head of the house invites the *Domovoj* to supper by going into the yard and bowing towards the four cardinal points, while the meal is allowed to remain on the table during the succeeding night.

In Russia the household spirit is known also by other names, which vary according to the place in which his activity seems to focus. When he lives in the cattle shed, he is called *Chlevnik*; in the yard, *Dvorovoj*; in the drying-kiln, *Ovinnik*; in the bathroom, *Bannik*. A vital condition of successful cattle-rearing is that the *Chlevnik* should have a liking for the cattle, so that he will not molest them by night. The breeder must accordingly try to discover, or else guess, the particular colour of cattle which his *Chlevnik* favours, or the particular place where he wishes the cattle-shed to stand. When an animal is purchased and brought home, it is thought advisable to present an offering of food to the spirit, with the prayer that he will give the new-comer a good reception, guard it from mishap, and provide it with abundant food. In many districts we find the *Domovoj* and the *Chlevnik* included in the group of ill-disposed spirits, and every effort is made to expel them from the homestead, either by striking the walls and corners and sprinkling them with holy water, or by placing upon the roof an overturned harrow or a magpie that has been killed. In the province of Archangel, when the women enter the cattle-shed in the morning, they entreat the *Chlevnik* to go out by the window. The *Bannik* lives in the bathroom, behind the stove or under the seat. It is dangerous for any one to go there alone in the evening or by night, as the spirit who presides there may work him harm. When the inmates of the house bathe, they leave a little water in the bath, and a little soap upon the bench, as it is believed that the *Bannik* and other domestic spirits will wish to bathe a little later. To ensure the prosperity of the bath-room, a black hen is buried under the threshold as a sacrifice. As regards the *Ovinnik*, again, the people beseech him to grant them a successful threshing. He is solicitous that the drying-kiln should not be heated on the great festival-days. Should this be done he may take revenge by destroying the building with fire. When the workers have completed some task in the drying-house, they thank him for his faithful service. Those who desire to be on amicable terms with him drop the blood of a cock round about the kiln.

What has been said above regarding the household spirit applies more particularly to Russia. Among the Western and Southern Slavs, however, a less important place is assigned to him. Here, in fact, he has acquired the attributes of a protective and ministrant spirit. The Galician *didko*,

the Bohemian *šetek* ('old one'), *hospodářček*, and *skřítek*, the Wendic *kobud* ('goblin'), the Polish *skrzat*, and the Slovakian *škrat* are each of them ready to give their services on condition that the person requiring help will make a compact with them, or summon them by incantations, or present oblations of food to them. But there are other ways of securing the good offices of such demons. Thus, a man may give a written undertaking assigning to the demon his own soul, or one of his relatives, or some part of his body. The spirit is invoked either under the stove-pipe or at cross-roads. He may also be brought forth from an egg; the egg of a black hen is carried about in the left breast for seven days, after which period the demon comes visibly out of the egg. The spirit, who has the appearance either of a boy or of a little old man, bestows money and corn upon his protégé, protects his property, and fodders his cattle. The Polish *skrzatek* is a winged creature which supplies corn, and, when flying about in the vicinity of houses, steals children. Its Wendic counterpart is the *plon*, a dragon in the form of a fiery sphere; a common saying about a rich man is: 'He has a *plon*.' The *plon* may assume various shapes, and the proper place to confer with him is the cross-roads. The flying dragon *smok* appears in the folklore of all the Slavic peoples. Another widely prevalent idea is that every house has its own 'lucky serpent,' which has its habitat under the floor or the stove, and brings wealth to the house. Among the Bohemians and the Wends it is believed that the house has both a male and a female serpent, the former representing the head of the house, the latter his wife. The death of either of the serpents presages the death of the corresponding human individual. Similarly the Bulgarians have their *stihija* or *tolosom*, a household spirit in the form of a serpent. The *škrat* of Slovenian folklore dwells in woods and mountains —a belief which indicates that this demon was originally a forest-spirit: cf. the *Scrat*, or *Schrat*, of the Germans.

This brings us to the domain of *Nature-demons*, and here we have, first of all, the large group of *forest- and field-spirits*. In Russia the forest-spirit is named *Lješ'yj*, or *Lješovik*, 'wood-king,' in Bohemia, *Hejkal*, or 'the wild man.' In outward appearance he resembles a human being, but his skin and hairy body betray his real nature. The hair of his head is long and his beard is green. Other points that differentiate him from mankind are his solitary eye and his lack of eyebrows. He has the power of changing his size at will, showing himself sometimes as large as a tree and sometimes no taller than grass. He can also transform himself into an animal, his favourite disguise being the shape of a wolf. He is said to retire under the earth during winter. The beasts and birds of the forest are subject to him, and he frequently drives them in huge flocks from one wood to another. In guarding his own particular forest, he sometimes comes into conflict with the demons of other forests and with the water-demon, and the battles that ensue become manifest to man in the falling of trees and the shriek of the storm. The forest-spirit likes to lead people out of their way, enticing them to follow him, and taking them to some dangerous spot. He also kidnaps children, leaving changelings of his own family in their place. Should he happen merely to pass a person, the latter may sicken with disease; nay, one has only to tread upon his footprint and a like unfortunate result follows. The forest-spirit makes his presence known by all kinds of sounds: he laughs, claps his hands, and imitates the cries of various animals. When a person calls and an echo follows, the demon is supposed to be answering him. One of his favourite amusements is swinging on trees.

The hunter and the herdsman depend for their success upon the good-will of the forest-spirit, and accordingly they offer sacrifices to him and beseech him to make them prosperous. For his acceptance the hunter sets bread and salt upon the trunk of a tree; the herdsman, in order to induce the spirit to keep the wild beasts from his cattle, promises him a cow. If a huntsman will pledge his soul to the demon, the latter will give in exchange success in the chase. The man who desires to make such a bargain turns towards the north, and prays the demon to enter into a covenant of friendship with him; the demon may then show himself favourable to the man's prayer. The White Russians speak of their forest-spirit as *Onufrius*, and in fact they frequently give saints' names to the spirits of the fields and the meadows. It should be noted here that the patron saint of the woods is St. George, and that all wild animals are subject to him.

Besides the male forest-spirit, there are also numerous female spirits of the woods—the Bohem. *Divé ženy*, the Polish *Dziwožony* and *Mamony*, 'wild women.' They, too, resemble human beings in appearance, as also in their manner of life. They are represented as women of enormous stature, with long hair and large breasts. They have their abode in mountain caverns. They are very fond of taking human children in exchange for their own ugly, large-headed offspring, or they simply steal the children. The forest-nymphs, on the other hand, are fair and fascinating creatures, lightly garbed and covered with leaves. They like to dance, and will continue dancing with a man till he dies, unless he happen to know how to free himself from their toils, as, *e.g.*, by turning his pocket inside out. It is believed that a person who accidentally intrudes upon their invisible dancing parties is doomed to die. It sometimes happens that a man marries a wood-nymph, but such a union is very easily dissolved, and, unless the man is all the more circumspect, his spirit-wife may vanish without leaving a trace behind. In certain localities it is supposed that these forest-maidens are human children whom some one has cursed, and that they can deliver themselves from the curse only by marriage with a human being.

The characteristics of the forest-spirits are almost without exception ascribed likewise to the Servian and Bulgarian *Vila* and the Russian *Rusalka*. With regard to the *Vilas* (Bulg. *Samovila*, *Juda-Samovila*, *Samodiva*) the belief still survives that they are the souls of deceased children or virgins. They are beautiful, white-robed, light-footed damsels, who dwell in woods, mountains, and lakes, and fly in the clouds. They too are noted for their dancing and exquisite singing. They have been observed washing their garments and drying them in the sun. They have a considerable amount of intercourse with mankind, and in popular legend they sometimes even intermarry with men. They are represented in folk-songs as the adopted sisters of popular heroes. Should a person excite their resentment, especially by intruding upon their *kolo*-dance, they take revenge by shooting the unfortunate man with their deadly arrows. It is believed among the Bulgarians that blindness, deafness, and apoplexy are the work of the *Samovilas*. The state of the weather depends to some extent on them, as they have the power of causing tempest and rain. In many districts the people offer sacrifices to the *Vilas* in the form of flowers, fruits, or garments, placed upon trees or stones.

What has been said of the *Vilas* holds good, for the most part, also of the Russian *Rusalkas*—deli-

cate female beings who live in forests, fields, and waters. These likewise are souls of the dead, mainly of unbaptized children, and women who have died by drowning. Among the Little Russians and the Slovenians they are sometimes called *Mavki, Mavje*, 'the dead.' They are said to solicit human beings for crosses, in the hope that these sacred objects may deliver them from the curse under which they lie. With their ravishing songs in the night they draw people irresistibly into their power, and then tickle them till they die. Another of their means of allurement is the *ignis fatuus*. The Wends, we may note in passing, think that the *Blud*, 'will-o'-the-wisp,' is itself the soul of an unbaptized child. When the crops begin to ripen, the *Rusalkas* find their favourite abode in the cornfields. They have it in their power to bless the earth with fruitfulness. It is also said that they take pleasure in spinning, and that they hang their clothes on trees. During Whitsun-week—a period which in many districts is dedicated to them and to the souls of the departed in general—they come to women in visible form, requesting gifts of shirts and clothes, and such garments are accordingly presented to them by being placed upon trees. The week after Pentecost was in ancient times called 'the week of the *Rusalkas*.' At that season is held 'the escort of the *Rusalkas*,' a procession in which a straw doll representing the *Rusalka* is carried out of the village, then torn to pieces and thrown into the water. This ceremony has been explained as symbolizing the expulsion of the *Rusalkas* from the place, in view of their propensity to inflict damage on the ripening grain. But in all probability the practice was originally connected with the Spring festival. The name *Rusalka*, and the conception of the *Rusalka* festival, had their origin in the Græco-Roman solemnity called 'Rosalia,' 'dies rosae,' observed in spring in memory of the dead. The design of commemorating the dead may still be traced in certain ideas associated with the *Rusalka* festival, as, *e.g.*, in the belief that a person who does not take part in the memorial function for the dead, and does not offer sacrifice to them, thereby becomes liable to the vengeance of the *Rusalkas*. It should also be mentioned that, just as the name *Rusalka* is derived from 'Rosalia,' so the word *Vila* has been explained as a survival from another memorial festival for the dead observed among the Romans, viz. the 'dies violae.'

In some districts a distinction is drawn between forest *Rusalkas* and water *Rusalkas*. The latter have their abode in rivers and cascades; they disport themselves upon the surface of the water, and comb their long hair upon the banks. They also prowl after bathers, and bathing is therefore avoided during the *Rusalka* festival. Similar traits are popularly ascribed to the 'water-man' (Russ. *Vodjanoj, Morskoj tsaŕ*; Sloven. *Povodnji*; Wend. *Vodny muž, Nyks*; Bohem. *Vodník, Hastrman*; Pol. *Topielec, Topnik*), and also to the 'water-people,' as it is believed that the water-man has a family—a wife, 'the water-woman,' and children—and even cattle. Every body of water has its presiding demon, who dwells in a magnificent palace far below. A water-spirit can make a new lake for himself, passing out of his old resort in the form of a brook. His favourite haunt is in the vicinity of mills, but, as mills and weirs block his way, he often destroys them in his rage. When any one is drowned, the water-man is the cause, and it is dangerous to rescue a drowning person, as one thereby provokes the animosity of the demon. The souls of those who have died by drowning are immured in his house. He is said to marry women who have been drowned and girls who have been expatriated. He has, in fact, a special liking for inveigling women into his toils. He plays all sorts of pranks with people; he chases the traveller, or seats himself upon the cart of the belated waggoner; and the victims of his jocularity, fearing his resentment, generally submit without resistance. His power is at its height in the middle of the day, and it is at that time that the female water-wraith of the Wends comes forth from the water. In Bohemia people tell how he dances on clear moonlit nights. He sometimes indulges in strong drink, and, when drunk, makes an uproar and jumps about, thus disturbing the ordinary flow of the stream. It not seldom happens that the water-spirit and the forest-spirit have fierce encounters with each other. When the wife of the water-spirit requires the midwife, he applies for human help. He gives timely warning of coming floods to those with whom he is on friendly terms. Millers and fishermen seek to win his goodwill by sacrifices. For his use the miller casts fat, swine's flesh, or a horse into the water. In former times, when a mill was built, it was the custom to present a live offering—sometimes even a human being—to the water-man. The fisher tenders him salt, bread, tobacco, and the first fish of his catch. The bee-keeper tries to win his good graces by oblations of bees and honey. As the water-man is lord over all aquatic birds, the goose-herd undertakes to make him the offering of a goose in the autumn. We may here draw attention to the curious fact that among the White Russians those who desire success in fishing invoke the aid of Neptune. This classical name was no doubt introduced among the people from literary sources, such as chap-books. The water-man is thought to resemble a human being. Sometimes he is represented as an old man, with a green beard and with green clothing, sometimes as a mere stripling. But he may always be recognized by the water that flows from the border of his garments. He has other forms of disguise at command, however, and may assume the appearance of some known person, or of an animal, such as a dog, a horse, a fish, or a frog. We hear also of a peculiar class of water-spirits which in one half of their body are human, while in the other they resemble a fish or aquatic animal. Such are the Little Russian *Faraony* (the warriors of Pharaoh who were drowned in the Red Sea), *Boginky, Memoziny, Meljuziny*; the Slovenian *Morske deklice*; and the Bulgarian *Stija*. The last-named are remarkable for their long hair, which they sometimes employ to choke those who fall into their power.

We have already mentioned that the middle of the day ranks in popular superstition as the most congenial time for the demons. In point of fact, imagination has fabricated a special figure to represent midday—the white-robed 'noon-wife,' who walks abroad among the cornfields, usually during the midday interval in which the people snatch a little repose. The *Pshesponitsa* of the Wends and the *Poludnitsa* of the Poles take care that no one shall be in the fields at that hour. They try to puzzle any one they meet with difficult questions and riddles; and, if he cannot answer them satisfactorily, they kill him, or infect him with disease. The 'noon-wife' keeps watch over the fields, protects the crops, especially the flax, against thieves, and threatens with her sickle children who pull up the corn. The sickle is also the symbol of another noon-tide fiend among the Wends, the *Serp* or *Serpyšyja*, who kills children with it when they steal the peas. At midday the Bohemian *Polednice* fly about in field and wood, and come into the neighbourhood of human dwellings. Their flights are accompanied by wind and

storm. Their practice is to steal little children whose mothers have negligently left them by themselves. The Russians likewise have a *Poludnitsa*, or *Zitna matka*, the protectress of the cornfield, who, especially at the season when the corn begins to shoot, perambulates the balks. She also molests children whom she finds idly strolling among the fields, and in Northern Russia parents warn their children against going amongst the rye lest the *Poludnitsa* burn them. In Bohemia the *Polednice* is supposed to be the spirit of the midday bell, and to live in the belfry. Of a somewhat similar character is the Moravian *Klekanitsa*, who stalks around after the evening chimes, and entraps the children whom she finds still out of doors.

In many parts of the Slavic world we find, besides the 'noon-wife,' a male 'midday spirit,' who in Bohemia is called *Poledníček*, and among the Wends *Serp*, while there is also a special field-spirit, the Russian *Polevoj*. The *Poledníček* is a little boy in a white shirt, who at midday passes from the forest into the fields, and punishes those whom he finds doing damage there. He calls to people by their names, and those who follow his call he leads to the far-off hills. The *Polevoj* or *Polevik*, on the other hand, is a personification of the tilled land, and his body is therefore black, like earth, while his hair is the colour of grass. The people think that the spirit of harvest, who is also known as *Ded*, resides in the last gathered sheaf, which is accordingly dressed to look like a doll, and is borne in festive procession to the landlord.

We come, finally, to the Nature-demons whose sphere of action is the air. In Bohemia there is a special spirit of the wind, *Vetrnice* or *Meluzina*, 'the wind-mother,' a white, barefooted being. When the wind roars, the people say that the *Vetrnice* is sobbing, and to comfort her they throw bread and salt into the air for her food. Her voice is believed to bear prophetic import. In Russia likewise we find the 'wind-mother,' and also the 'wind-father,' while the Wends speak of a 'wind-king.' The wind is thought to proceed from the demon's breathing or his movements. Then there is a group of 'wind-brethren'—sometimes four, sometimes twelve—who dwell at the ends of the earth, and who are constantly blowing against one another. With these wind-brethren have been confounded the four angels or evangelists borrowed from the sphere of Christian ideas, and supposed to live in the four quarters of the globe. In Russia we still find sporadically the belief that the wind, and especially the whirlwind, emanates from evil spirits, and that the devil is the chief commander. In the tempest and whirlwind it is believed that Satan himself or the soul of a witch is speeding along, and, if a knife be thrown into the gust, it will inflict a wound upon the hurrying spirit. When the demon is pursued by the thunderstorm, he may transform himself into an animal or a human being. An idea current among the Wends is that the whirlwind is really an invisible spirit, who may be seen, however, by pulling off one's shirt and looking through the sleeves. In certain Russian incantations the whirlwind is spoken of as the captain of the winds, who are personified as evil spirits, and he is styled 'Whirlwind, the son of Whirlwind.' His aid is implored by such as seek by magical means to arouse a responsive affection in the breasts of those they love. In Russia even *frost* is represented by a spirit. He is depicted as a grey-haired, white-bearded old man, wearing a snow-covered fur and shoes of ice. At Christmas he receives offerings of pottage, and is invited to partake of the Christmas fare, in the hope that he will not expose the grain to damage by frost.

Our discussion would remain incomplete without some reference, finally, to the fact that in the popular mind, more particularly in Russia, certain days of the week are personified. We have already had under consideration an analogous phenomenon, viz. the development of the 'Rosalia,' the memorial festival for the dead, into the personified *Rusalka*. In popular poetry, moreover, we find that the naive imagination has invested with human attributes certain important dates in the year, such as Christmas (*Rizdvo* or *Koljada*, from Lat. *calendæ*) and Christmas Eve (*Karatshun*, *Kratshun*; cf. Lat. *colatio*); in Russia, indeed, the latter term has for some reason or other come to signify the evil spirit. The days of the week similarly personified are Friday (*Pjätnitsa*, which is also known by the Greek name *Paraskeva*) and Sunday (*St. Nedelja*). With dishevelled hair, and bodies covered with sores, these two spirits are said to travel from village to village—a fancy which implies that women who perform such work as sewing or spinning on Friday or Sunday really wound the day with the articles they use. The spirits punish those who thus injure them, while, on the other hand, to those who observe these days, they show favour by helping them in their household duties, promoting the growth of their flax, enhancing the fertility of their land, and, as the protectresses of women, rendering assistance to married people. It was a custom among Bulgarian women not so very long ago to make offerings of bread and eggs to Friday. It only remains to be said that the ideas relating to those female personifications of days have been greatly influenced by the worship of the Virgin Mary and other patron saints, and therefore really belong to a sphere of thought which lies outside the belief in spirits and demons in the stricter sense.

DEMONS AND SPIRITS (Teutonic).—The ancient Teutons, like almost all other primitive peoples, believed that the whole surrounding world of Nature was alive with demons and spirits. This belief has survived from one of the primitive stages of religious thought till the present time, or has in the course of ages given rise to new phantoms of the human mind. The operations and occurrences observed in the natural world were all attributed to these imaginary beings. The primitive mind did not represent such existences as having any definite shape; it was only in a later phase of reflexion that they were invested now with animal, now with human, forms. Even such forms, however, were not the purely natural ones; the spirits were figured sometimes as very small, sometimes as enormously large. The next step was to endow the imaginary beings with a new class of activities, borrowed from the human sphere, and in this way was at length evolved the myth. The spirits of wind, water, and air were supposed to hold sway in Nature, while the spirits of vegetation, disease, and fate interfered in human life. They were thought of at first as existing in multitudes, but in course of time single spirits were disengaged from the mass. With the rise of the belief in the soul, the demons were sometimes invested with a soul-like nature; the souls of the dead were believed to survive in them. This explains why it is difficult—often, indeed, impossible—to distinguish between spirits and beings of soul-like, or rather ghost-like, nature. Nowhere has the action of religious syncretism been more powerful than in the fusion of the belief in spirits and the belief in

souls. Thus, *e.g.*, the demons of the wind coalesced with the moving host of souls, and the worship once accorded to the latter was transferred to the former. Hence arises our uncertainty as to whether Wodan-Óðin was originally a wind-demon or a leader of the soul-host.

While demons or spirits had their origin in the surrounding world and the phenomena of Nature, the belief in the soul was suggested by occurrences in the sphere of human life. Animism, the belief in the soul as a separate entity, arose out of the world of dreams, while Manism, the belief in the continued existence of the soul and the worship of the dead based thereon, originated in the phenomena of death. Ideas regarding the dream-soul are found in endless variety among all the Teutonic tribes. Thus, the soul, equally with the body, was an independent entity, and might leave the body and wander about in the interval of sleep. It was supposed to have its seat in various parts of the body—the blood, the heart, the kidneys, the liver, or the head; but it might also reside in the breath or the shadow; a man without a shadow had sold his soul. The soul could readily assume various forms; it sometimes appeared as an animal (serpent, weasel, toad, etc.), sometimes as an *incubus* (goblin, mare, troll) or other noxious being. In this way arose the ideas of the werwolf, the *fylgja* (see below), or attendant spirit, and the witch. Among the Northern Teutons a person who allowed his soul to wander was called a *hamrammr*, 'one who can change his shape.' This vagrant soul sees what is hidden from the bodily eye; it can look into both the past and the future. It was this belief which in great measure gave rise to the Teutonic conception of prophecy. When the soul was out of the body, moreover, it was endowed with active powers of abnormal character; it could work injury or bring benefit to other men, and accordingly the powers of magic were transferred to it. Persons who could at will thus cause their souls to leave their bodies, whether in sleep or in a trance, were regarded as magicians.

The powers of the dream-soul, however, were as nothing compared with those ascribed to the soul of the dead. The Teutons thought of the latter as a grasping, maleficent being, which returns to its place, claims its former possessions, and takes vengeance upon any one who withholds them. It was the abject fear of the returning soul and its evil powers that prompted the numerous duties which, according to primitive Teutonic ideas, the survivors owed to the dead (see artt. ANCESTOR-WORSHIP [Teut.] and ARYAN RELIGION). These various duties arise out of the belief that, unless the dead are treated with due honour and respect, they will return and do harm to the living. This superstition was once universal, and is not yet finally eradicated from the mind of any of the Teutonic peoples. There is probably no district in the whole Teutonic area where the people are entirely free from the belief in ghosts and haunted places. Persons who in their lifetime were regarded as wizards, or who had died an unnatural death, would, it was believed, come back for the express purpose of injuring the living. When such injury showed itself, the bodies of the malevolent beings were exhumed and burned, or transfixed through breast and heart with a stake, so that they might be held fast in their graves. Throughout the Middle Ages impalement was still practised as an apotropæic penalty for such crimes as rape or the murder of a relative (cf. Brunner, *Ztschr. d. Savigny-stiftung für Rechtsgesch.* xxvi. [1905] 258 ff.).

The souls of the dead had their times of moving abroad, and courses by which they fared. It was a universal belief among the Teutons that wind and storm were the hurrying host of the dead. What leaves the body at death is the breath, and the breath was therefore the soul or spirit. But wind—agitated air—is also breath. When the breath leaves the body, it unites with other souls, and joins the soul-host. It was a widely diffused idea that a wind arose when any one was hanged; the spirits were coming for their new associate. The departing soul goes to the 'wöden her, da die bösen geister ir wonung hân.' As early as the time of Tacitus (*Germ.* 43), the Harii, with their painted bodies and black shields, used to imitate by night the 'raging host.' Belief in this raging host—or, as it was variously called, the wild hunt, Holla's troop, Perchta's host, the Norse *gandreid*, 'the spirits' ride,' *Aasgaardsreia*, 'Asgard's chase,' or *Hulderfolk*—is not even yet extinct. In certain places, and above all at cross-roads (*q.v.*), the spirit-host rouses itself to special activity, and at certain seasons it manifests itself. The principal time for this manifestation was the long winter night in the season of Epiphany, as, among the Teutons, the festival of Christmas had taken the place of the ancient heathen festival of the dead. It was believed that at such times the souls of the dead took part in the celebration and feasting. Special dishes and special cakes were dedicated to the souls of those who had died in the foregoing year. At no other season of the year were superstition and popular divination so rife. All manner of figures and masquerades were resorted to in personating the spirits. This was the feast of Yule (Goth. *jiuleis*, A.S. *giuli*, O.N. *jól*). The more vehement the rush of the spirit-host in the wind, the more bountiful would be the ensuing year, and accordingly offerings were made *til árs*, 'for a good, fruitful year.' As regards locality, the spirit-host manifested itself most frequently over battlefields. The slain were believed to continue their strife in the air. This belief finds expression in the Hildensage, according to which she summons the fallen Vikings every morning to renewed warfare on the island of Hoy in the Orkneys (Snorri Sturluson, *Edda*, i. 434). Popular belief also gave the spirit-host a leader—Wode or Wodan, a word which is a collective form for the 'raging host' (cf. Eng. *wood*, Scot. *wud*, 'mad'). In process of time Wodan was deified, and in some Teutonic countries came to be regarded as the supreme god.

Among the Teutons the belief in the soul gave rise to a great variety of demonic and legendary beings. From the superstition that the soul could leave the body in sleep or in the trance arose in particular the conception of *incubi*—souls that went forth to afflict and torment others in their sleep. The natural phenomenon at the root of this idea is the nightmare, which the physiologist traces to a congestion of the blood during sleep. The imaginary being to which this distressing condition was attributed is known by a great many different names, the most widely diffused of which is of the form *mare* (O.H.G., A.S., and Scand. *mara*; Germ. *Mahr* or *Mahre*; English 'nightmare'). In Central Germany the term *Alp* has come into use; in Upper Germany we find *Trude*, *Schrat*, *Ratz*, *Rätzele*, *Doggele*; in Western Germany, *Letzel*, *Trempe*; and in Oldenburg, *Walriderske*—all applied to the nightmare, and frequently used also to designate the witch. The *incubi* 'ride upon human beings,' and may actually torture them to death. In the Middle Ages persons who were suspected of injuring their fellowmen in this way were frequently prosecuted at law. Not only human beings, however, but also animals, and even trees, might be the victims of the *mare*. She afflicted people by squatting on the breast; she sucked the milk of women and cows; she wreaked such malice upon horses that

in the morning they were found bathed in sweat and with their hair all awry. She found her way into the sleeper's room by the keyhole, or through a crack, and these were also her only possible means of exit. If the sleeper awoke and held her in his grasp, all that he found was a straw, but, if he spoke the name of the person who had been thus tormenting him, he discovered a naked woman.

Among those who could cause their souls to pass out of their bodies and injure others was the *Hexe* of the Western Teutons (A.S. *hægtisse*, O.H.G. *hagazussa=strio, furia*), the Scandinavian *trold*, the English 'witch.' These terms, however, had a wider application, and denoted also those who dealt in any way with magic, especially of a maleficent kind. It was really in virtue of their magical powers that the *Hexen* could disengage their souls from their bodies, and they were therefore also called *zûnriten* (M.H.G), *túnriður*, 'hedge-riders,' or *kveldmyrkriður* (O.N.), 'night-riders.' In these excursions they could assume an endless variety of form: they might take shape as a whale, a bear, a raven, or a toad. Bad weather, thunder, and hail were generally attributed to them. According to the Old Icelandic sources, they used to bring themselves into the ecstatic condition by means of incantations, and then launch forth the storm. In later mediæval times they were frequently brought to trial for causing bad weather. But their power of working injury extended to many other things; they induced diseases, and especially lunacy, they killed people, they filled the land with vermin, and caused the cows to give red milk, or none at all. The belief in witchcraft found among all the Teutonic peoples was reinforced during the Middle Ages by the Oriental belief in the devil. The witch was now supposed to be in league with the Evil One; she was one who had sold her soul to him and received the gift of magic in exchange. Thus arose the belief in the witches' meetings on the so-called Brockelsbergs, where the hags abandoned themselves to love-making with the devil. From this again sprang the discreditable trials for witchcraft, which lasted till the 18th century. It was also commonly believed that witches continued their nefarious practices even after death, and, when indications of such activity appeared, their bodies were exhumed and either burned or impaled.

Closely related to the trolls and witches were the Norse *Völves* (O.N. *völur*). These likewise were sorceresses, but they used their magical powers as a means of intercourse with the dead, and in order to acquire knowledge regarding secret things and the future. To their peculiar trade belonged the magic wand, the magic chair, and other accessaries; while they had a retinue of boys and girls to chant their magic songs and so induce the trance in which the souls of the *Völves* left their bodies. These human *Völves*—the 'wise women' of other Teutonic peoples—were held in great veneration; in the winter nights of the season, when the spirit-host swarms around, they travelled from steading to steading, and were everywhere received with ceremony. Women thus endowed with prophetic vision were supposed to exercise their powers even after death. The Eddas often tell of men and gods who visited the grave of a *Völva* for the purpose of obtaining knowledge of the future. Thus Óðin, for instance, rides to such a grave, awakes the *Völva* from the sleep of death, and receives from her the interpretation of Balder's dreams (*Baldrsdraumar*).

A male counterpart to the witch is the *werwolf*, *i.e.* man-wolf. This was a superstition current among all the Teutonic peoples (O.H.G. *werwolf*, A.S. *werewolf*, O.N. *vargulfr* or *ulfhamr*), and is found far beyond the limits of Teutonic lands. The werwolf was a human soul which roamed about in the shape of a wolf, and wreaked horrible cruelties upon other human beings. A person who chooses, or is forced, to wander about in wolf's form has the power of falling asleep at will. Then he passes into a wolf's skin, which he fastens with thick coils of gold, and in this disguise he kills every person and animal he meets. According to popular belief, in which the werwolf still plays a part, the creature was bullet-proof, but, when wounded by a shot or a severe blow, it reverted to human form. The enchantment could be dissolved also by pronouncing the name of the person who had assumed the disguise, or by throwing a piece of steel or iron over the creature. A supernatural being of similar maleficent powers—a second counterpart to the witch—was the *Bilwis*, whose season of special activity was Walpurgis Night. This was a creature of soul-like character, which flitted through the fields, and wrought havoc to the crops with the sickle upon its great toe. When the people found their corn laid, or the ears stripped, they blamed the *Bilwis*; such work was the 'Bilwis-reaping.' It had its abode in trees—the 'Bilwis-trees'—at which gifts of children's clothing were offered by way of disposing the *Bilwis* to protect the children against disease.

Besides the souls which wander forth in dreams and trances, however, the souls of the dead played a great part in Teutonic folklore, presenting an endless variety of form and action. Among the various Teutonic peoples these spirits bear different names, and the fear of the returning dead is often reflected in the very nomenclature. Thus the O.H.G. *gitróc*, A.S. *gidrôg*, O.N. *draugr* are connected with the root **dreugh*, 'to hurt'; other terms for such haunting spirits are Germ. *Gespenst* (O.H.G. *spanan*, 'entice,' 'deceive'), Dan. *genganger* (Icel. *apturgaungur*, 'one who walks again'), Eng. 'ghost' (A.S. *ghæstan*, 'terrify'). This belief in the haunting presence of the dead survives to-day with a scarcely abated power of legend-making, and in modern spiritualism it would seem to have entered on a new lease of life. The ideas popularly held regarding the returning spirits are certainly somewhat vague. The ghost is sometimes thought of as invisible, and able to make its presence known only by voice or action; sometimes it is supposed to appear as a human being or an animal (*e.g.* the fiery dog, cat, horse, serpent, toad, and the like). In some districts it was considered wrong to kill certain animals, such as toads and snakes, since they were the living homes of hapless souls. But, on the other hand, animals thus possessed by souls might work injury to human beings, and this belief gave occasion to the common mediæval practice of subjecting animals to trial and punishment (cf. von Amira, *Tierstrafen u. Tierprozesse*, Innsbruck, 1891). The belief that the departed soul might survive in the body of an animal gave rise to the supposition that certain animals had the gift of prophecy, and, as it was assumed that they had also the faculty of speech, it was possible to converse with them—above all with birds—as with human beings. Souls might also survive in plants: thus the oak which sprang from the mouth of a king slain in battle, and the rose and lily which grew on the grave of lovers, were really the abodes of the departed souls. The belief that the dead pass into trees was very common; the guardian tree and the tree of life associated with individuals or families were the abodes of tutelary or ancestral spirits, and were thus often made the recipients of gifts and offerings, while the act of damaging trees was a crime demanding the severest penalties.

The belief in the soul gave birth to a large number of fabulous beings. One of these was the Norse

fylgja ('following spirit'), which attended a person either as his soul or as his guardian spirit. As a soul, it took the form of an animal; while, as a tutelary spirit, it was a female being who appeared, especially in dreams, to its protégé, and warned him of danger or urged him to action. The *fylgjas* sometimes come singly, sometimes in troops. After a person's death his attendant spirit passes to his heirs, and in this way occasionally becomes a family-*fylgja*. The Norse *valkyrs* differ so far from the *fylgjas* in that they are almost always found in groups, and especially in groups of nine. The battle-maidens of the ancient folklore, frequently mentioned both in the southern and in the northern sources (cf. Dio Cass. lxxi. 3; Flav. Vopiscus, *Vita Aurelii*, 37; Paulus Diaconus, i. 15; Saxo Gramm. i. 333 ff., 361, etc.) become *valkyrs* (A.S. *wælcyrza*, O.N. *valkyrja*) after their death. They are armed with helmet, shield, and lance; they ride through air and sea; the manes of their horses shed dew and hail upon the earth. Their appearance presages war and bloodshed. In Norse poetry they are closely associated with Óðin; they are his maids, his 'wish-maidens' who carry out his commands, who strike down in battle the heroes destined for Valhöll, and bear them thither, where at the banquets they foretaste the mead for the *einherjar*. The group of wish-maidens also included *Brynhildr-Sigrdrífa*, who disobeyed the commands of her lord by giving the victory to another king, and was in consequence pierced with the 'thorn of sleep' and surrounded by a flame until such time as Sigurðr should awake her and set her free. It is a moot point whether the *Norns*, the 'Fates' of Norse mythology, who have many features in common with the *valkyrs*, should be regarded as souls or as demons. A similar ambiguity attaches to the *elves*, who are sometimes represented as souls, sometimes as purely demonic beings. Both the name and the idea of these products of religious phantasy are common to all the Teutonic race; O.H.G. *der alp* (pl. *elbe*), or *das alp*, also *diu elbe*, A.S. *ælf* (pl. *ylfe*), O.N. *álfr* (pl. *álfar*) are applied to both male and female beings living in the earth, the air, the sea, the hills, etc. They are often associated with the *Asir* (*æsir ok álfar* is a favourite Norse expression, and Anglo-Saxon has a cognate phrase), and, like the latter, embrace the entire multitude of soul-like powers at work in Nature. In later, and especially English, forms of superstition, the elves possess a Proteus-like character, and show a preference for animal shapes. They are sometimes regarded as helpful to man, but sometimes also as capable of injuring him, and accordingly both good and bad elves are recognized among the Northern Teutons. Snorri Sturluson (*Edda*, i. 18) classifies them according to their domiciles as 'elves of light,' who are whiter than the sunbeam and live in the air, and 'elves of darkness,' who dwell in the earth, and are blacker than pitch. From the elves of light the sun takes his name of *álfröðull*, 'elf-ray.' Their head is the sun-god Freyr, whose abode is Álfheim, 'the realm of the elves.' The 'elves of darkness' are sometimes all but identified with the dwarfs, and this explains why the deft-handed smith Völundr (Wieland) is called 'lord of the elves.' In M.H.G. poetry the king of the elves is Alberich, who found his way to the West Franks as Oberon. In England, owing to the influences of the Irish belief in fairies, superstition dwelt mainly on the bright and beautiful elves, who thus became objects of popular favour. A similar development took place in Scandinavia, where, especially in Sweden, the elves were thought of as comely maidens, who live in hills and mountains, hold their dances on the green sward, and by their ravishing songs draw the traveller to destruction. Further, the elves are sometimes *incubi*; and thus the Germ. word *Alp* has been used only in this sense from the 16th century. The *Elfen* of German poetry are really of English origin, having been introduced into Germany towards the end of the 18th century by the translation of Shakespeare.

The elves of ancient times are often identical with the *wights* (Goth. *vaíhts*, fem., O.N. *vættr*, fem., O.H.G. *wiht*, neut.). The conception of the wight likewise developed on various lines according to locality. In Old Norse superstition *wights* were tutelary spirits who had their abode in groves, hills, and waterfalls, and were able to dispense fortune or misfortune to human beings. In German folklore they were vivacious spirit-like creatures who assisted men in their work, and demanded gifts in return. To the same class of soul-like, or demonic, beings must be assigned the *dwarfs* (O.H.G. *twerg*, A.S. *dveorh*, O.N. *dvergr*). Their abode, however, was confined to a particular place, and their field of activity was similarly circumscribed. Popular imagination depicted them as diminutive old men—sometimes deformed—with large heads and long white beards. They lived in mountains or under the earth, and were thus known as the 'Unterirdische,' 'hill-folk,' 'earth-dwellers.' They shunned the light of day, for the sun's rays would transform them to stone. Among their possessions is the tarn-cap or magic hood which enables them to become invisible at will, and endows them with supernatural powers. Their principal occupation is smith's work; their forge is situated within the hills, and accordingly dwarf-legend flourishes most profusely where there are ore-bearing mountains, and where mining is carried on. In the Norse poetical literature all weapons of a superior kind, especially swords, are the handiwork of dwarfs. But Thor's hammer, Frey's ship *Skiðblaðnir*, Óðin's ring *Draupnir*, Sif's golden hair, Freyja's necklace *Brísingamen*, and other articles of ornament are also products of their skill. Such arts, however, are not their only characteristic; they are distinguished also for craft and cunning. They are often thought of as united in a realm of their own, with a dwarf-king (Laurin, Heiling, Alberich) at their head. As lords of the mountains they are possessed of immense treasures, from which they draw to reward such persons as pledge themselves to their service. See, further, art. FAIRIES.

An elfish origin is to be assigned to the *household spirits*, who protect the home, and bring it good fortune and wealth. They were frequently regarded as having an animal form, especially that of a serpent or a toad, and they lived under the threshold, in the roof-beams, or on the hearth, at which places it was usual to present offerings of milk or other food in a dish. The household spirit is also met with as a mannikin with the figure of a dwarf, and in this form is known under many different names: thus the A.S. *cofgodar*, 'house-gods,' survive as *Kobolds*, or goblins; the Germans have also the *Butze*, the *Hütchen*, while in England we have Puck (Scot. 'brownie,'), and in Scandinavia the *Gardsvor* ('house-guardian'), *Tomte* ('house-spirit'), and *Nisse*. In many places it is still believed that these household spirits are the souls of deceased ancestors or other relatives.

Superstition assigned a guardian spirit not only to the house, but to the *ship*, in which he was known as the *Klabautermann* (Germ.). He dwelt in the mast, and the sailors believed that he was a child's spirit which had come into the vessel in the felled tree of which the mast was made. The *Klabautermann* warned the sailors by certain noises of any imminent danger, assisted them in their work, and, like the domestic spirit, received

payment for his services in the form of gifts. If the ship went down, he flew away, but first bade farewell to the steersman. Miners likewise had their guardian spirit, the *Schachtmandl* ('shaft-mannie'), who assisted them in the workings, and showed them where the good ore was to be found.

Another form of superstition current among all the Teutonic peoples was the belief in the demonic beings which live in rivers, brooks, and wells, in forests, in the waving cornfields, in the moving air, and within and upon the mountains, and which in many cases are hardly distinguishable from the ghostly creatures already dealt with. Imagination represented them as of human or superhuman dimensions, and as of human or animal form, according to the magnitude of the natural facts associated with them. At an early period, however, popular imagination had detached these spirits from their original habitat, and, as in the case of the dwarfs, had invested them with all manner of fabulous features and incidents, so that the natural facts which suggested them cannot always be identified in detail, and only the general form remains. This is specially true of the *giants*, who, like the dwarfs, were favourite subjects of popular poetry. But, while the dwarfs were personifications of the bountiful powers of Nature, and are therefore thought of as well-disposed towards mankind, the giants represent Nature in her hostile aspects, and thus came to be regarded as the destroyers and devourers of men. That nearly all the more impressive phenomena of Nature were personified as colossal beings of this kind, is shown by the Norse genealogy of the giants (*Fornaldarsögur* ii. 3 ff.). To the family of *Fornjót* ('the old giant') belong the following, as his children or children's children: *Hlér*, the boisterous sea; *Logi*, the wild-fire; *Kari*, the tempest; *Jökull*, the glacier; *Frosti*, cold; *Snær*, snow; *Drífa*, the snow-drift, and other effects of a severe winter. Similar gigantic beings were with special frequency suggested by mountains. Almost every mountain peak and range was a petrified giant or a seat of giants: *e.g.* Pilatus in Switzerland; Watzmann in the Bavarian highlands; Hütt, the queen of the giants, in the Tyrol, etc. The Norwegian *Jötenfjeld*, 'giant-range,' was the home of the giants. Hence the giant was called *bergbúi* ('mountain-dweller'), or *bergjarl* ('lord of the mountain'), and, in fact, the Germ. *Riese* had originally the same meaning (O.H.G. *riso*, A.S. *wrisil*, O.N. *risi*, all cognate with Gr. *βλον*, 'peak'). The strength of these mountain-giants is expressed in the O.H.G. *duris*, A.S. *ðyrs*, O.N. *þurs* (Skr. *turas*, 'strong,' 'powerful'); their size in the O.H.G. *Hüne* (Celt. *kunos*, 'high'); their rapacity in the O.H.G. *etan*, A.S. *eotan*, O.N. *jǫtunn*, 'the devourer.' See, further, art. GIANTS.

Certain other classes of demons, however, differ from those just referred to in that they are never dissociated from their original haunts. Among these are the *forest-spirits*, who are connected with the yearly renewal and decay of Nature, and thus, like the field-spirits (see below), become spirits of vegetation. These demons remain quiescent in the woods during winter, but awake to activity with the re-birth of Nature. In the spring the people used to carry home young trees and green shoots, in which the demons were supposed to live, and plant them near their houses, as it was believed that persons who came into contact with the branches absorbed the fresh energies of the re-awakened spirits. But the forest was likewise the abode of supernatural beings of a more independent type, and principally female in form—the 'feminae agrestes, quas silvaticas vocant' (Burchard of Worms, *Decreta*, Cologne, 1548, p. 198[b]), who appear suddenly, yield themselves to their lovers, and then as suddenly vanish. These are the 'wild maidens,' the German *Moos-*, *Holz-*, and *Buschweiber*, the *Fangen* and *Saligen*, the Swedish *skogsfrúar* (wood-nymphs), and the Danish *askefruer* (ash-nymphs) of present-day superstition. Their bodies are usually covered with hair, their faces wrinkled; they have hanging breasts and dishevelled hair, and are often clad with moss. It is a common notion that they are chased by the storm-giant, the Wild Hunter, Wode, or the giant Fasolt, and that they seek refuge among men, liberally rewarding those who succour them. These wood-nymphs are also endowed with occult powers, especially the power of curing disease—a belief originally suggested by the medicinal properties of plants found in the woods. The forest-spirits, however, are sometimes males, mostly of gigantic size, and always of the same hideous appearance as the females.

There are many points of resemblance between the forest-spirits and the *field-spirits*. The latter likewise were originally spirits of vegetation, which popular imagination first of all detached from their native sphere, and then elaborated in detail. Field-spirits grow with the stalks of grain, and become visible when the wind blows across the cornfields. The long ridges or 'backs' of the tilled land suggested the animal shape ascribed to these spirits. They are known by many different names, as *e.g.* in Germany, *Kornwolf*, *Roggenhund* ('rye-dog'), *Haferbock* ('oat-goat'), *Rockensau* ('rye-sow'), *Bullkater* ('tom-cat'), in Sweden, *Gloso* ('glow-sow'), in Norway, *Herregudsbuk* ('the Lord's goat'), etc. Sometimes, again, the field-spirits were of a human type; hence the *Kornmutter* ('corn-mother'), the *Rockenmuhme* ('rye-aunt'), the *Roggenalte* (especially in Denmark), and, in male form, the *Alte* ('old one'), or the *Gerstenalte* ('barley-gaffer'). The 'grass-demon' lived in meadows, the 'clover-mannikin' in clover-fields. When the corn was cut, the spirit flitted from one swathe to another. The person who cut or bound the last sheaf caught the 'old one,' the 'corn-mother,' etc. That sheaf was formed into some kind of figure, and presented with due ceremony to the landlord; then a dance was held around it. The ears of the last sheaf were carefully stored in the barn until the next seed-time, and then used for the purpose of stimulating the spirit of vegetation to renewed activity. But that could be secured only by killing the old spirit, and this was done by binding up a cock with the last sheaf, and then letting it loose and chasing it through the fields, till at last it was overtaken and killed. As the spirit of vegetation was believed to be in the people who happened to pass by while this ceremony was being performed, they were seized and bound by the reapers, and had to buy themselves off with a gift.

A still greater fertility of invention is exhibited by the Teutonic belief in *water-spirits*. Almost every body of water—spring and river, pond and lake, marsh and cascade—was imagined to be the abode of a spirit. These spirits varied in size as dwarfs, men, or giants, according to the extent of the masses of water with which they were associated, while fancy lent them sometimes human, and sometimes animal, shapes. Here and there they were supposed to be the souls of the dead. Departed souls were associated very specially with fountains and wells, which accordingly were regarded as resorts of the leaders of the soul-hosts, such as Frau Holle and the Wild Hunter; hence, too, the widely prevalent belief that the souls of the newly-born came from such places. On similar grounds arose in primitive times the custom of treating fountains and wells as places of divination. The spirits who haunted such places were marked out from others by their prophetic gift and their

supernatural wisdom. One of the water-spirits thus endowed was the Norse *Mimir*, into whose waters Óðin had put his eye in pledge in order to gain wisdom, and to whose knowledge he resorted when he desired light upon the future. The demons who resided in rivers, streams, and seas were in the main hostile to mankind; they tried to seize men and drag them down into the watery kingdom, and were therefore propitiated with offerings, frequently, indeed, with human sacrifices. Such hostile spirits are known to the various Teutonic peoples by variants of the name *nix* (Germ. *Nix* [masc.] or *Nixe* [fem.], Eng. *nick*, also *nixie*, Norw. *nökk*, Swed. *nœkk*). The *nix* was fish-like in the lower half; the upper part, or sometimes the head only, was of human shape. He wore a green garb, and his teeth were also green. He lived with his family at the bottom of rivers and lakes. The female *nixies* were noted for the beautiful singing by which they allured human beings into their toils. They sometimes intermarried with mankind. The male *nix* was occasionally armed with a hook, with which he dragged people under the water; he was accordingly also called *Hakenmann* ('hook-man'). In Denmark the water-spirit is known as *Havmand* ('sea-man,' cf. 'merman,' 'mermaid'); in Sweden as *Strömkarl* ('river-man'); in Norway, the land of waterfalls, we find the *Grim* or *Fossegrim*, as the spirit of waterfalls; in Iceland, the *Skrimsl* ('monster'), *Vatnskratti* ('water-wraith'), and *Margýgr* ('sea-monster').

The Old Norse mythology gave great prominence to the water-demons Ægir and his wife Rán. Ægir, whose name is connected with Goth. *ahva*, 'water' and Gr. ὠκεανός, was the spirit of the calm still sea—one with whom the gods were on hospitable terms. His consort Rán—or Sjörán, as she is still designated in Swedish folklore—was of an entirely different nature. She was the man-stealing demon of the sea, a hag who had no heart in her body, and who lay in wait for sailors with her net, or tried to grasp the ship with her arms, and drag it down to the depths. Of similar character were her nine daughters—personifications of the surging billows—who during the storm offered their embraces to the seamen, and, like their mother, pursued the ship. The Miðgarð-serpent—the snake-shaped monster which coils itself round the earth—and the Fenris-wolf, which contends with Óðin at the annihilation of the world, as also Grendel and his mother, who lived in swamps by the sea, and at night stole men from the palace of the Danish king, Hröðgâr, are also frequently included among the sea-demons.

Throughout the entire Teutonic race, as we have seen, there prevailed the belief that all the natural elements were ruled by spirits, and that the good and evil fortunes of human life proceeded from soul-like, or spirit-like, beings, friendly or hostile to man. Demons and spirits caused rain, tempest, and thunderstorm. Demons pursued the sun and the moon, and brought about solar and lunar eclipses. They promoted or hindered the growth of vegetation. Disease and pestilence were their evil work. They hovered around human beings on all the important occasions of life: at birth, when they sought to gain possession of the child; at marriage, when they were specially active in mischief-making; and at death, when they endeavoured to draw the living after the dead. Savage man sought to guard himself against their machinations by all manner of ritual devices, which have left their traces in the manners and customs of the present day. He shot at them, he lit fires, he hung up glittering objects, he uncovered certain parts of the body, he avoided stepping on the threshold under which they lived, and performed endless other actions for the purpose of protecting himself or driving them away. The ideas underlying such practices, thus brought down by the Teutons from the earliest ages, are found to correspond with ideas which prevail among the primitive races of the present day.

DEMONS AND SPIRITS (Tibetan).—The Tibetan lives in an atmosphere charged with malignant demons and spirits; and the great practical attraction of Buddhism for him is that it can protect him, so he is led to believe, against most of these supernatural enemies. Yet it should be remembered that in the higher Hindu civilization of India the ostensible object of the Brahmanical sacrifice was also to chain the demons.

The great majority of the Tibetan demons are of a non-Buddhist character. A considerable proportion of the aboriginal evil spirits have been adjusted by the Lamas to the type of somewhat analogous bloodthirsty demons in the later Tantrik Buddhism of India, and these are to be coerced or propitiated on the lines of the Indian ritual. But the larger number demand the rites of the pre-Buddhist religion to which they belong, namely, the Bon (see TIBET). These spirits are mainly personified natural forces and malignant ghosts, but several are animistic and fetishes, and all are saturated with sacrificial ideas.

The word for 'spirit,' namely *lha*, is that which is adopted for the gods of the Brahmanical and Indian Buddhist pantheon. It is applied generally to those aboriginal gods who are supposed to live in the sky, even though they be unfriendly to man. The demons, or *rDud* (pronounced *düt*), are always evil genii or fiends of an actively malignant type; Māra is considered one of them. These indigenous spirits may be broadly divided into the following eight classes:—

(1) Good spirits (*Lha*), mostly male, white in colour, and generally genial, though the war-god (*sGra-lha*) is as fierce and powerful as the greatest fiend. The countryside gods (*Yul-lha*) and the fairy guardians (*Srung-ma*) have been made defenders of Lamaism. (2) Ghosts and goblins (*Tsan*), all male, red in colour. These are usually the vindictive ghosts of discontented disembodied priests. They especially haunt the vicinity of temples. (3) Devils (*bDud*), mostly male, black in colour, and very malignant. The most malignant of all are '*Dre* (or *Lha-'dre*), male and female, or literally 'father' and 'mother.' They are persecutors of Lamaism, and cannot be properly appeased without the sacrifice of a pig. (4) Planet fiends (*gDon*), piebald in colour; producing diseases. Fifteen great ones are recognized. (5) Bloated fiends (*dMu*), dark purple in colour. (6) Ghouls and vampires (*Srin-po*), raw-flesh-coloured and bloodthirsty. (7) King-fiends (*rGyal-po*), the 'treasure-masters' (*dKor-bdag*), usually white in colour, the spirits of apotheosized heroes. (8) 'Mother' furies (*Ma-mo*), black-coloured she-devils. They are the disease-mistresses (*nad-bdag*), and are sometimes the spouses of certain of the above demons. The twelve *bStan-ma* (pronounced *Tänma*) especially inhabit the snowy ranges.

Many of the above are local genii, fixed to particular localities. Of these the most numerous are the 'earth-owners' (*Sa-bdag*), truly local spirits inhabiting the soil, springs, and lakes, like the *nāgas* of the Hindus. Others more malignant, called *gÑan*, and believed to cause pestilential disease, infest certain trees, rocks, and springs, which are avoided in consequence or made into shrines for propitiatory offerings. They are believed by the present writer to represent the spirit of the gigantic wild sheep, the *gÑan* or *Ovis ammou*, which, according to early Chinese accounts, was worshipped by the Tibetans, and the horns of which are offered on the cairns at the tops of the passes. At every temple or monastery the local spirit is represented as an idol or fresco within the outer gateway, usually to the right of the door, and worshipped with wine and occasionally with bloody sacrifice; and it is given a more or less honorific name. One of the fiercest of the country fiends is *Pe-kar* (not *Pe-har*, as spelt by some writers), who has been adopted as a special protector of monasteries by the Yellow-hat sect of Lamas. There are also the 'house-god,' the ancestral gods, and the personal spirits or familiars, good and bad, of the individual.

The representations of these spirits at their shrines, or on altars, or in their masks at the sacred plays portray them in human form, though some of them may have the head of a beast or bird, and they are pictured by the Tibetan artists as clad in the costume of the country. The local spirits sometimes may be represented by mere sticks and stones.

Living sacrifice is not offered to these spirits nowadays, but the dough effigies of animals which are offered indicate, in the opinion of the present writer, the prevalence of animal sacrifice in pre-Buddhist days. The animals most commonly represented in this way are the dog, sheep, and yak. Actual blood and the brains and flesh of animals slain by butchers in the ordinary way are frequently offered in bowls made out of human skulls, as in Indian Śaivite rites.

Of the special implements used in Tibetan demon-worship an important one is the three-cornered dagger called *pûr-pa* or *pûr-bu*. This is used by the priests to stab and drive off the demons, or to impale them when it is stuck into the ground. What appears probably to be a Buddhistic variation of this worship is the feast offered in charity to the devils from time to time. The spirits are summoned by the blowing of human thigh-bone trumpets and the beating of skull drums and gongs, and are afterwards dismissed in an imperative way.

The evil spirits of Indian Buddhism bear the following names in Tibetan, the latter being usually the literal etymological translation of the Sanskrit names:

Sanskrit.	Tibetan.	Sanskrit.	Tibetan.
Preta	Yi-dvag.	Unmāda	sMyo-byed.
Kumbhāṇḍa	sGrul-'bum.	Skanda	sKyem-byed.
Piśācha	Sa-za.	Chhāyā	Grib-gnon.
Bhūta	'Byung-po.	Rākṣa	Srin-po.
Pūtana and Katapūtana	Srul-pû(= 'rotten') and Lus Srul-po.	Revati-graha and Śakuni-graha	Nam-gruī gdon and Byai gdon.

These, as well as the other deities of Indian Buddhism, are usually represented by Tibetan artists in conventional Indian dress, in contradistinction to the indigenous deities.

L. A. Waddell.

DÉNÉS.—A most important aboriginal group of tribes north of Mexico. Owing to the great temperamental disparity of its component parts, it affords an excellent field for the study of psychic peculiarities and the gradual development in opposite directions of the mental faculties. Within the bosom of that great American family are to be found extremes in more ways than one. We have the fierce Apaches in the south, and the timid Hares in the north, while the industrious Navahos of Arizona are in as strong contrast to the indolent, unæsthetic Dog-Ribs and Slaves of the Canadian sub-arctic forests. All its tribes, however, are more or less remarkable for their pronounced sense of dependence on the powers of the invisible world. Religious feeling and its outward manifestations pervade their whole lives, though by some careless travellers they have been regarded as destitute of any religion.

The Dénés, also improperly called **Athapascans**, from Lake Athabasca, the habitat of one of their tribes, are divided into Northern, Southern, and Pacific Dénés. The Northern Dénés, whose ranks are now reduced to about 19,390 souls, people the wilds of Canada from the Churchill River, and almost from the Northern Saskatchewan, up to the territory of the Eskimos. In British Columbia, the immense coniferous forests and snow-capped mountains, extending from 51° 30′ N. lat. to the northern confines of the Province, and beyond as far as the wastes claimed by the above-mentioned hyperborean aborigines, are also their patrimonial domain. Their best known tribes within that area are the Loucheux (5500 souls) in Alaska, the Yukon Territory, and the lower Mackenzie; the Hares (600), their neighbours in the east; the Slaves (1100), west of Great Slave Lake, from Fort Simpson to Fort Norman; the Dog-Ribs (same population), east of the latter, as far as Back River; the Yellow-Knives (500), a somewhat licentious tribe, to the north-east of Great Slave Lake; the Chippewas (4000) and Caribou-Eaters (1700), the first representatives of the stock in the north who ever came into contact with the whites; the Nahanais (1000), on the Stikine and, in the same latitude, east of the Rocky Mountains; and the Carriers (970), who, with the Babines (530) and the Chilcotins (450), constitute the South-western Dénés. The well-known Apaches (6068) and the numerous Navahos (27,365) form the Southern branch of the family (cf. Apaches and Navahos). As to the Pacific Dénés, they consist of unimportant tribes, or remnants of tribes, scattered throughout N. California, Oregon, and Washington. Their present aggregate does not come to more than 900 souls.

When in their original state, the Dénés are eminently a nomadic race of hunters and fishermen. Nowhere, except in British Columbia, have they anything like villages or any elaborate social system. Father-right was primitively, and has remained to a great extent, the fundamental law of their society. The father of a family is con-

sidered its fountain-head, its natural chief, and the controller of the children, who, after marrying, stay with him, unless the mental superiority and better circumstances of another paternal relative claim them for his own followers. They soon form groups of kindred families, over which he presides as patriarch or head of the band. These aggregates are then the social unit, the family not being recognized as such. His power, however, is very limited: directing the movements of the band, giving orders for camping, and, occasionally, very gentle reproof are about the sum-total of his prerogatives. His influence, of course, depends greatly on the number of his suite, and their efficiency as hunters. Hence it is the Dénés' ambition to have as many children as possible, especially of the male sex. Polygamy was in honour among all the tribes. While some unimportant men had but one wife, the majority had two, and the lodges of the chiefs might contain from two to eight. D. W. Harmon ('A General Account of the Indians on the East Side of the Rocky Mountain,' in *Journal of Voyages*, N.Y. ed. 1903, p. 294) cites one who had eleven, with more than forty children, and W. H. Dall (*Travels on the Yukon and in the Yukon Territory*, p. 111) speaks of one who had 'at least eighteen wives.' A few cases of polyandry were also found among the Sékanais, a Rocky Mountain tribe.

Five methods of contracting marriage may be said to have obtained among the Northern Dénés. Marriage by mutual consent was exceedingly rare before the advent of the missionaries. Some such arrangement can, however, be placed to the credit of a few mountain tribes. 'Will you pack my beaver-snares?' the dusky youth would ask of the object of his choice. A hesitating 'Perhaps' would seal her fate, and, without further ado, the couple would thenceforth become man and wife. Wooing the bride's parents, that is, working for them and endeavouring by every possible good office to become acceptable to them, was proper to the South-western Dénés (cf. CARRIER INDIANS). The most common gateway to sexual intercourse east of the Rockies was wrestling. Two young men would publicly wrestle for the possession of a maiden, and the same took place in connexion with any married woman as well. No husband could ever consider himself secure in the company of his wife, as he was liable to see her any day snatched away from him by a stronger man. So much so, indeed, that S. Hearne, the first author to give us any satisfactory account of the eastern tribes, asserts (*A Journey from Prince of Wales's Fort to the Northern Ocean*, p. 104) that 'a weak man . . . is seldom permitted to keep a wife that a stronger man thinks worth his notice.' He adds that some professional wrestlers 'make almost a livelihood by taking what they please from the weaker parties, without making them any return' (*ib.* 105). A fourth way of contracting marriage was even more suggestive of savagery. A man would simply seize by the hair and drag to his tent the object of his passion. Finally, occasions were not wanting when women were bought as so many chattels, and cases are also on record when the same object of traffic was later ravished by wrestling from her quondam purchaser, the unfortunate creature being thus a passive party to transactions whereby she was 'married' according to the two different methods obtaining in her tribe.

From this it will be inferred how exceedingly low was the position that the woman occupied in primitive society. She was merely a drudge, the factotum of the household, a slave to her husband, buffeted even by her own male children, fond of them though she invariably was. Her fate was more satisfactory among the Navahos; and, by reason of the rank to which she might occasionally succeed, among the South-western Dénés, life was also accidentally made bearable for her, though in private life most of the menial work of the family still fell to her lot. It goes without saying that, with such loose systems governing the relations of the sexes, divorce followed in many cases as a matter of course, especially when the union had not been cemented by the birth of any children.

Indiscriminate as these matrimonial affairs apparently were, blood-relationship was always a bar thereto. But among the tribes who had adopted mother-right as their law controlling succession to rank and property, agnates were not recognized as relatives. A child hardly cared for his father, and took no notice whatever of his kindred through the male line. Hence first cousins on the father's side were considered strangers to one another, and as such very generally intermarried. On the other hand, even very distant relatives on the maternal side still call themselves brothers and sisters, as the case may be. This applies also to the members of the same clan, wherever this social organization prevails. Primitively, all marriages were strictly exogamous, the gentile tie being considered even more binding than blood-relationship. In the case of widows, the prescriptions of the levirate were scrupulously obeyed by all the tribes, and they had to marry the surviving brother of their late husband.

The dread which a woman in her catamenial periods, or immediately after parturition, inspired in a man can hardly be exaggerated. Such a creature was—indeed, continues to be—regarded as the very incarnation of evil. As soon as the first symptoms of that momentous change in the female organism appeared, the maiden was until a late date, and is still in many tribes, sequestered from the company of her fellow-Dénés. A little hut was built for her on the outskirts of the village, or some distance from the tepees of the migrating party, where she dwelt until her menses were well over, away from the gaze of the public, and visited only by some female relative, who brought her, in small birch bark vessels which nobody else could touch, the meagre fare of dried fish and water which custom prescribed for her, to the exclusion of any nourishing food, especially that derived from any large animal freshly killed. So portentous of evil was her condition deemed, that all contact, however indirect, with the living creation was denied her. Hence eating, while in her impure state, of the flesh of any game was reputed to entail a deliberate insult to all the representatives of the same species, which would infallibly take their revenge by keeping away from the traps or arrows of her relatives. She could not follow in the trail of her male companions for fear of incapacitating them for the chase; she must abstain from bathing or washing her feet in lakes or rivers, lest she should cause the death of the fish they contained. Hearne goes even so far as to say that in his time (1782) 'women in this situation are never permitted to walk on the ice of rivers or lakes, or near the part where the men are hunting beaver, or where a fish-net is set, for fear of averting their success' (*op. cit.* 315).

On her return from the hut of her first menstruation, the maiden wore, during the following three or four years, a kind of veil made of the strands of a long fringe ornamented with beads, passing over her face and resting on her breast. This Hearne supposed to be 'a mark of modesty' (p. 314). It served the same purposes as the *prætexta* of the Romans and the long outer garment of the Jewish virgins mentioned by Josephus (*Ant.* VII. viii. 1), being a badge of puberty and a sort of public notice that the wearer was marriageable. To this was added a bone tube to drink with and a two-

pronged comb to scratch her head, thereby avoiding immediate contact between her head and her fingers.

So deleterious were believed to be the emanations from the menstruating woman, that the tabu of which she was the object extended even to the contact with any weapon, or implement, designed for the capture of animals. Captain G. Back records the 'consternation' and hasty flight of a poor woman who had unwittingly trodden on her husband's gun—an offence which the explorer declares (*Narr. of the Arctic Land Expedition to the Mouth of the Great Fish River*, p. 124) did not usually meet with any lighter punishment than 'a slit nose or a bit cut off the ears.' The same legal uncleanness attached to a new mother, and a like sequestration followed, which was then protracted to a month or five weeks after child-birth. During that period the father would not, as a rule, see his child.

Speaking of legal uncleanness, we must not forget to mention that some such state was also supposed to be consequent on the shedding of human blood. Hearne relates that, after his Déné companions had massacred over twenty inoffensive Eskimos, all those immediately concerned in the affair considered themselves debarred from cooking either for themselves or for others. Before every meal they painted their upper lips and the greater part of the cheeks with red ochre. They would not drink out of any other dish or use any other pipe than their own, nor would those who had had no hand in the massacre touch the murderer's dish or pipe. This, as well as the abstaining from many parts of the game they ate, was regularly followed for an entire season, after which 'the men, without a female being present, made a fire at some distance from the tents, into which they threw all their ornaments, pipe-stems, and dishes, which were soon consumed to ashes; after which a feast was prepared, consisting of such articles as they had long been prohibited from eating; and, when all was over, each man was at liberty to eat, drink, and smoke as they pleased; and also to kiss their wives and children at discretion,' which they had previously been forbidden to do (*op. cit.* 206).

Much married as the Dénés usually were, they regarded continence as essential for success in certain undertakings. No hunter would ever dream of leaving for any important trapping expedition who had not first separated *a toro* from his wives for quite an extended period. Did he succeed in capturing a beaver or a bear, he would carefully see to it that no dog—an unclean animal—should be permitted to touch any of its bones. The skull and molars, especially, were reputed sacred, and were invariably stuck up on the branches of a tree or, more commonly, on the forked end of a tent-pole. The fear lest an unclean animal—dog, fox, or wolf—might profane the same by contact therewith was the reason prompting those precautions. Should such a dreadful contingency occur, the hunter immediately desisted from exerting himself in any way, being firmly persuaded that all his efforts towards trapping any game of the same species would prove futile.

To understand these superstitions and most of those relating to menstruating women, we must remember that, in the Déné cosmogony, all the present entities of Nature were originally endowed with human-like faculties. Even trees spoke and fought, and the fowls of the air and the animals of the earth were men like ourselves, though distinguished by potent faculties which we do not possess. These wonderful powers, though now somewhat attenuated, are supposed still to exist in the brute creation. A share of them possessed by a few privileged individuals constitutes what we call magic. This is the connecting link between man and beast, and also the means whereby one may commune with the world of spirits, and by whose aid a person is enabled to succeed in his quest after happiness and the necessaries of life. Hence the sympathy or antipathy which may exist between hunter and hunted, according to the way in which the former treats the latter. The language of the best Christianized Déné has retained to this day unequivocal traces of these zootheistic ideas. If unsuccessful in his hunt after game, the modern Déné will not say: 'I had bad luck with this or that animal,' but: 'Bears or beavers,' as the case may be, 'did not want me.' The spirits, which have their seats in the various parts of the universe and are co-existent with them, are good or bad, or rather noxious or friendly to man. The evil spirits, on the occasion of breaches of the moral law, or the neglect of the traditional observances, attack man and dwell in him, causing thereby madness, fits, and other nervous disorders, disease, and death. The kindly spirits manifest themselves to him during his sleep, or suddenly in the woods or elsewhere, under the shape of the particular entity—animal, sun, celestial phenomenon, etc.—with which they are so intimately connected that to the Indian mind mundane being and indwelling power are almost one and the same. This manifestation is a token of their wish to act towards him as protecting genii, in return for some consideration shown to their present concretized forms or symbols. These are the personal totems (*manitous*), the only ones known to the unadulterated Dénés (cf. TOTEMISM). The adopted party will thenceforth show his regard for his protector by not suffering the particular being in which it resides to be lightly treated or abused in any way; by exposing in his lodge its spoils (if an animal, or its symbol, if a heavenly orb, etc.), or carrying on his person a reminder of it in the shape of its tail, a feather flowing from his head-dress, etc. In times of need the Déné will secretly invoke the aid of his *manitou*, saying: 'May you do this or that to me!' Before an assault on his enemies, or previous to his hunt, he will daub its symbol in red ochre on his bow and arrows, or sing out in its honour a rude chant consisting of a single phrase repeated *ad infinitum*. Magic and song, in the mind of the American native, have a most intimate correlation, and few important attempts to influence the spirits one way or another are unaccompanied by loud chanting and the noisy beating of drums. Should his appeal for help be heard, he will give expression to his gratitude by burning, or throwing into the water, any piece of property on hand, goods or clothing, or in later times tobacco.

In the North this was the only kind of sacrifice known to the Dénés. At times it took a propitiatory or rogatory character, being intended to obtain favours or avert calamities. The personified elements, especially wind with the tribes dwelling on the banks of the large Northern lakes, were the most common beneficiaries of such offerings, unless we add thereto another class of spirits, which have some resemblance to the *genii locorum* of the Romans. These were believed to haunt places prominent for some natural peculiarity—the steepness of a hill, the magnitude or striking appearance of a rock, etc. It was usual for any wayfarer passing by such spots to offer a stone to the spirit or its materialized form. A custom similar to this can be traced to the wastes of Tartary (cf. Huc, *Souvenirs d'un voyage dans la Tartarie*, Paris, 1850, i. 25 f.), and the Déné practice may even be compared with the prayer-machines set up on some mountain-tops in far-away Tibet.

Instead of quietly revealing itself in a dream or a vision, the *manitou* occasionally prostrated the

Déné to the extent of depriving him of his senses. In such accidents the bystanders would never recognize a mere cataleptic fit. They would insist that the mind of the smitten individual had been attracted by some powerful spirit, with which it was communing. To them any kind of fainting malady was much the same as epilepsy to the Romans. It was a *morbus sacer*, denoting mysterious influences. Swooning is still called by the Carriers *ne-kha-uthézœt*, or the attack of a spirit. When loud chanting, enhanced by louder beating of drums, had succeeded in breaking the spell, the soul of the patient was supposed to return from the spirit world, and he was looked upon with a veneration bordering on awe. Henceforth he was regarded as possessed of the mysterious powers over Nature, and the spirits controlling it, which we call magic, and his ministrations were resorted to whenever it was a question of counteracting the influence of the evil spirits which cause disease and public calamities. In a word, he was a regular shaman, and the religious system of which he had become the chief representative was the shamanism of the north-eastern Asiatic races in almost all its purity (cf. SHAMANISM). Among the Navahos of the South this is still at the base of the religious edifice; but commiscegenation with alien stocks and the influence of environment have notably modified it by the addition of rites and elaborate ceremonies based on the remembrance of the many adventures of their culture heroes (cf. NAVAHOS).

The functions of the shaman will be found fully explained in the article SHAMANISM. Suffice it to say here that they were seven-fold among the Northern Dénés. Shamanistic conjuring with that particular American race was curative, preventive, inquisitive, malefic, operative, prestidigitative, or prophetical. A rôle which was perhaps proper to the profession in the North was that of father confessor. Auricular confession of personal delinquencies to him who might be represented as the nearest aboriginal equivalent of a priest—though he could not strictly be called by such a name for the lack of any regular sacrifice or cult—was one of the religious institutions of the primeval forests of northern Canada. Of the shaman among the Western Dénés, Harmon wrote as early as 1820:

'When the Carriers are very sick, they often think that they shall not recover unless they divulge to a priest or magician every crime which they may have committed, which has hitherto been kept secret. In such a case, they will make a full confession, and then they expect that their lives will be spared for a time longer. But should they keep back a single crime, they as fully believe that they shall suffer instant death' ('An Account of the Indians living West of the Rocky Mountain,' in *Journal of Voyages*, N.Y. ed. 1903, p. 256 f.).

The present writer had recorded the same custom long before he saw the old trader's volume. On the other hand, in the course of his *Trad. ind. du Canada nord-ouest*, p. 418 f., E. Petitot gives a Chippewa (Eastern) text furnished him in 1863 by an old shaman of Great Slave Lake, of which the following is a partial translation:

'The man who is sick as a consequence of his sins . . sits by the shaman, to whom he confesses his misdeeds. The shaman asks him many a question, reprimands him in order to draw out the sins he conceals. . . . Finally, the patient having confessed everything, the shaman brings down on him the Far-off Spirit, his own familiar, which, entering into the sick man, takes away his sins, whereupon disease immediately leaves him.'

The greatest importance was attached to dreams. It was through the medium of dreams that most of their communications with the invisible world took place, and to this day the Dénés consider dreaming as a token of occult powers over Nature and man. For this reason they are loth to wake up any sleeping person, as he or she may just be enjoying a dream, that is, communing with the spirits. Anybody talking in his sleep is *nolens volens* regarded as a great sorcerer or shaman.

Though the spirits are much more in evidence than any other hidden power in the Déné theogony, they were not without the notion of a Supreme Being governing the world and punishing the wicked. In the West, the nature of this ruling principle was not very clear, though it was generally recognized as the great controller of the celestial forces—wind, rain, and snow. Thunder they still firmly believe to be a gigantic bird of the eagle genus, the winking of whose eyelids produces lightning, while the detonations are due to the flapping of its wings. That this Deity was, indeed, paramount and personal in the estimation of those Indians is made evident by the usual formula of their oaths. *Yuttœre sœtit'sâ*: 'That-which-is-on-high heareth me,' and *Yuttœre nalh œdœsni*: 'I say it in presence of That-which-is-on-high' (the Celestial Power), are forms used by the old Carriers to this day. The new generation has another name for the Supreme Being, based on more adequate knowledge due to the missionaries.

The majority of the North American Indians attribute the work of creation to a prodigious hero, of a human nature, but exceedingly powerful, generally more or less tricky and not too scrupulous, whose many deeds and miraculous adventures furnish the subject-matter of endless tales. This is the culture hero of the Americanists, the *Œstas* of the Western Dénés, who borrowed his personality from the N. Pacific coast tribes, and the *Yîmantûwiñyai*, 'the One who is lost across the ocean,' of the Hupas, the principal tribe of the Pacific group of Dénés. But the Eastern Dénés know of a God who is Creator as well as Ruler of the universe. He is, however, less spiritualized with them than the chief Deity of their Western kin, since they lend him human attributes. *Inkfwin-wetay*, 'He that sits on the zenith,' is the name by which the Hare Indians know him, and, according to Petitot, that tribe makes him trine: father, mother, and son. The father is in the zenith, the mother in the nadir, and the son travels incessantly from the one to the other. The father by his mere volition made the earth and all it contains, after which he lit the celestial orbs, the sun and the moon—most of the stars and constellations were originally inhabitants of our own globe—at the prayer of his son, who, having perceived the earth during one of his voyages, sang out: 'O my Father who sittest on high, do light the heavenly fire, for on that small island (the earth) my brothers-in-law (men) have been wretched for a long time' (Petitot, *Monographie des Déné-Dindjié*, p. xxiii).

Most of the tribes have also a tradition pointing to the extinction of mankind by water, with the exception of the Wise One, among the Eastern Dénés, or *Œstas*, the chief legendary hero of the Western tribes. In the legends relating these events the musk-rat and the beaver, two animals famous for their nimbleness and skill, are said to have been instrumental in reconstructing the earth, after it had been destroyed through the submersion of its highest mountains.

The sacredness of the number seven among the Jews is a matter of common knowledge. That number is among the majority of the American aborigines replaced by four; but both seven and four yield in sacredness to the number two in the legends and traditions of the Western Déné tribes.

By the side of, and in opposition to, the Supreme Being of the nation is, according to Petitot, a counterpart of our devil in the theogony of the North-eastern tribes. If we are to believe that author, the knowledge of such an entity preceded the advent of the missionaries, and it was called 'the Bad One,' 'the Forsaken One,' 'He that passed through heaven,' etc., according to the

various localities. The older Carriers call him to-day by the first-mentioned name; but the present writer is inclined to believe that they owe this notion to intercourse with the whites.

No tribe worshipped the Deity in any way; no cult of any kind, sacred dances or public prayers, obtained in the North. The only dance whose object was not mere recreation took place in connexion with an eclipse (cf. PRODIGIES AND PORTENTS [Amer.]). But in the South the Navahos have elaborate rites and know of public praying, though their requests are addressed more to the personified elements and their culture-heroes, or semi-deified ancestors, than to any Supreme Deity.

As to man, he is believed to be made up of a perishable body and a transformable, and therefore surviving, soul—if this be the proper word for an element which is perhaps as much the effect as the cause of life. The name given it by most tribes literally means in the West 'warmth.' Yet it is to-day used to designate the principle of life, while the Eastern Dénés have for the soul animating the body words varying according to the dialects, though almost all of them are the counterparts of the Lat. *spiritus*. Analogous terms serve in the West to express not the vital principle, but the outward sign of life, breath, and, by extension, life itself.

Besides this principle, or physical condition, there is *ne-tsen*, man's shadow, usually called 'second self.' This is a reflexion of the individual personality, invisible in time of good health, because then confined within its normal seat, the body, but which on the approach of sickness and death wanders out of its home, and roams about, seldom seen but often heard. Its absence from its proper corporeal seat, if too prolonged, infallibly results in death.

Finally, *ne-zul* in the Déné psychology may be said to represent the soul or surviving principle after death. Strictly speaking, the word refers to the impalpable, dematerialized remnants of one's individuality, or a transformed self adapted to the conditions of the next world. That world is very generally believed to be situated underground, and watered by a large river, in which the shades catch small fry for their subsistence, visiting their nets in double canoes—a craft otherwise unknown in N. America. Their condition there seems to be unequal, inasmuch as those who have not received the last funeral rites according to the customs of their tribes are constantly wandering, fed on mice, toads, fœtuses, and squirrels, or even cast into the waters of the big river instead of being ferried across, while others are reported to be playing on the grass, or dancing to the tune of a song, the main burden of which is the words *lhe'qa t'sethine*, 'we sleep separated from one another,' *i.e.* 'there is no more any matrimonial union between us.'

Metempsychosis was strongly believed in by the Eastern Dénés. Petitot writes in his *Monographie des Déné-Dindjié*, p. xxx:

> 'I have been unable to eradicate from the mind of a certain girl the persuasion that, before her birth, she had lived under a name and with features unknown to me, nor could I prevent an old woman from claiming the child of her neighbour, under the pretext that she recognized in him the migrated soul of her own late son. I am personally acquainted with several such cases.'

The art. CARRIER INDIANS makes it clear that such notions were not confined to the East. Yet, we must add that the Western Dénés now seem to have entirely discarded them, while the beliefs connected with menstruating women, the spirits, and shamanism still lurk in the minds of many, and are openly professed by a few. With others they are at best obsolescent. This re-incarnation of the soul did not always result in a mere exchange of bodies of a similar kind. The author just quoted further says that he has known a poor mother who as lamenting because an old shaman had assured her that she had seen her dead son walking by the shore of the lake under the form of a bear. He adds: 'It is seldom that we see any man of influence die without hearing soon after his former companions claim that they have seen him metamorphosed into a bipedal caribou, a bear, or an elk.'

The original mode of disposing of dead bodies in the North seems to have been by enclosing them within rough cratings made of small logs crossed at the ends, which were raised from 3 ft. to 7 ft. above ground on stout poles or posts. Any object which might have belonged to the deceased either accompanied him in his final retreat or was cast into the water, burnt, or hidden in the branches of trees. Sometimes the remains were concealed within trees hollowed out for the purpose, or naturally hollow through age and decay; but in the East it was much more usual simply to abandon them where they fell. They were never buried, except among the Chilcotins, a South-western tribe, while their neighbours, the Carriers and the Babines, cremated them, after the custom of the coast Indians.

Such were the Dénés when first met by the whites. The Apaches were the first representatives of the nation to make the acquaintance of the pale-faced strangers, in the persons of the Spaniards of Mexico. In the North, their first contact with our civilization occurred in the vicinity of Hudson Bay, where the Fur Trading Company named after that inland sea established posts, from one of which Arthur Dobbs wrote in 1744 the earliest printed reference to the race which has come to the present writer's knowledge. In 1771–72, Samuel Hearne, one of the traders, reached the Arctic Ocean in the company of a large band of Eastern Dénés, who then perpetrated the unprovoked massacre of Eskimos already mentioned. Then came Alex. Mackenzie, who, in 1789, descended the noble stream now known under his name, and in 1793 penetrated as far west as the Pacific Ocean, always accompanied by a few Northern Dénés, who did not succeed in securing him a peaceful reception at the hands of all the new Déné tribes. About 1811, the Yellow-Knives repeated on the poor Eskimos the exploit of Hearne's companions, killing some thirty of them near the month of the Coppermine River, and two years later a party of Rocky Mountains Dénés, acting under provocation, destroyed Fort Nelson, on the Liard River, and murdered its inmates. Ten years thereafter (1823), the Dog-Ribs and Hares, long oppressed by the Yellow-Knives, fell upon them unawares and cut off a large number of them. Then came the visits of the Arctic explorers, Sir John Franklin, Captain G. Back, and Dr. King, Thomas Simpson, Sir John Richardson, etc. The dates attached to their respective works in the following bibliography are safe indications of the epochs of their travels among the Dénés.

Finally, we have the missionaries. The Catholics reached Isle-à-la-Crosse in 1845, Lake Athabasca in 1847, Great Slave Lake in 1852, Peace River in 1858, and the Lower Mackenzie in 1859. Father Petitot, a prolific ethnographer, was the first minister of the gospel to visit Great Bear Lake, which he did for the first time in the course of 1866. The missionaries were almost everywhere well received, and readily made numerous proselytes: 1859 saw the establishment of the first Protestant mission at Fort Simpson, on the Mackenzie, after which outposts were started among the Loucheux Indians west of the Rocky Mountains. To-day practically the entire nation in the North is Christian, about nine-tenths having adopted the Catholic faith, and the remainder the Protestant.

A. G. MORICE.

DEOGARH — (Skr. *deva-gaḍa*, 'fort of the gods').—A town in the Santāl Parganas of Bengal, lat. 24° 30′ N., long. 86° 42′ E., containing the famous temple of Baidyanāth (Skr. *vaiḍyanātha*, 'lord of physicians,' an epithet of Śiva). By a folk etymology the place is connected with one Baijū, a member of a Dravidian tribe, who by one account was a Gwālā, or cowherd, by caste. It is said that he was so disgusted with the laziness and indifference of the Brāhman priests of the shrine, that he vowed that he would daily, as evidence of his contempt for them, strike the image of the god with his club. One day, as he perpetrated this insult, the idol spoke and blessed him because he, though not a worshipper, had resented the carelessness of his priests. When asked to claim a boon from the god, Baijū prayed that he might be known as Nātha, 'lord,' and that the temple should be called after his name. The request was granted, and the shrine has since been known as that of Baijnāth.

It has been suggested without any valid reason that the legend implies some connexion between the present cultus and the rites of the Dravidian tribes. According to the Hindu legend, the selection of the site was due to the demon Rāvaṇa, king of Laṅkā or Ceylon, who in the epic of the Rāmāyaṇa is the ravisher of Sītā, wife of Rāma. It is said that he got possession of a famous *liṅgam* of Śiva to aid him in his fight with Rāma, and on his way south halted to purify himself at the site of Deogarh. Finding no water, he dashed his fist into the ground and formed the existing Śivagaṅgā lake. But, when the *liṅgam* was set down, seeing the place to be fair, it refused to move further with Rāvaṇa, and has been there ever since, known by the name of Mahādeva Rāvaṇeśvara, 'lord Rāvaṇa.' The same story is told to account for the position of many other sacred images in India (Cunningham, *Archæological Survey Reports*, viii. 143 ff.; Oppert, *Original Inhabitants of Bharatavarṣa*, 1893, pp. 137, 375).

The early history of the shrine is obscure. When the British occupied the country, they tried, but with ill-success, to manage the endowments and collect the offerings of pilgrims. Finally it was made over to the present priests, who are known as *ojhā* (Skr. *upādhyāya*, 'teacher'). In front of the temple is a remarkable structure, consisting of two massive monoliths supporting a third stone of similar shape and size. It is known as the Swinging Platform (*ḍolā-māñchā*), and was possibly originally used in the rite of swinging the idol. The chief temple is that of Śiva, and close by is a later shrine of his spouse, Gaurī, 'the yellow or brilliant one,' which is joined to that of her consort by festoons of gaudy-coloured cloth, thus typifying the union of the god and the goddess. At the back of the god's temple is a verandah in which suppliants for his favours—recovery from disease, the blessing of children, and so on—make their vigils. With the usual catholicity of modern Hinduism, the chief shrines are surrounded by those of the lesser gods—Rāma and Lakshmaṇa representing Viṣṇu in this Śaiva atmosphere; Sūraj Nārāyan, the sun-god; Sarasvatī, goddess of learning; Manasā, the snake-goddess; Hanumān, the monkey-god; Kāla Bhairava, god of destruction; and Annapūrnā, 'she who gives wealth in grain.' But all these shrines bear marks of neglect. To illustrate the fusion of Islām with Hinduism, Gait (*Census Report Bengal*, 1901, i. 176) remarks that 'Muhammadans are often seen to carry sacred water to the shrine of Baidyanāth, and, as they may not enter the shrine, pour it as a libation on the outside verandah.'

W. CROOKE.

DEONTOLOGY.—*Deontology* is the science of ethics. The term seems to have been used first by Jeremy Bentham. Apparently he wished to distinguish by it between duty and the principles of morals and legislation—which is the subject of an earlier work, dealing with the principles that men had to assume in their relations to each other. In deontology he evidently had in mind the principles of duty as distinct from those of prudence and interest. The work by this name, however, was posthumous, and was incomplete before his death. The term has not come into general usage. It serves, however, the purpose of distinguishing clearly between the science of mere custom and the science of obligation. The one studies actual practices; the other tries to ascertain the actions which ought to be performed as distinguished from those that may actually be done.

JAMES H. HYSLOP.

DEOPRAYĀG (Skr. *deva-prayāga*, 'the divine place of sacrifice').—A village in the Garhwāl District of the United Provinces of India, situated in lat. 30° 10′ N., long. 78° 37′ E., at the confluence of the rivers Alaknandā (*q.v.*) and Bhāgīrathī. Below the village the streams now united take the name of Ganges (*q.v.*), and this is regarded as one of the five sacred places of pilgrimage on the way to the higher Himālayan peaks. The principal temple is dedicated to Rāmāchandra. It is built of large blocks of cut stone piled on each other, bulging in the middle and decreasing rapidly towards the summit, which is surmounted by a white cupola. Over all is a square sloping roof, composed of plates of copper, crowned above with a golden ball and spire. The image of the god, about six feet high, carved in black stone, but painted red except the face, is seated opposite the door, and under the eastern portion of the cupola. Before the idol is a brazen image of Garuḍa, the mythical vulture, half man, half bird, on which Viṣṇu rides. The chief rite at this holy place is ablution, which takes place at the sacred confluence of the two rivers, in basins excavated in the rock at a level a little lower than the surface of the current, which is here so rapid as to sweep away any person daring to bathe in it.

DEPRAVITY.—See HOLINESS AND SIN.

DERVISH (*darwīsh*).—A Pers. word signifying 'mendicant' (corresponding with *bhikṣu*, the name borne by the Brahman in the fourth stage of his existence), applied, in Persian and Turkish and thence in European languages, to the ascetics of Islām, whose Arab. name is *zāhid*, which appears to mean originally 'satisfied with a little,' in ac-

cordance with the usage of this phrase in the Qur'ān (xii. 20). Its connotation does not appear to differ from that of *ṣūfī* (*q.v.*), 'wearer of wool,' a term applied by the early Islāmic writer Jāḥiẓ († A.H. 255 [= A.D. 868], *Ḥayawān*, i. 103) both to those Muslim ascetics and to Christian monks, who, in order to indulge their laziness, pretend to disapprove of labour and wage-earning, and make their mendicity a means of obtaining the reverence of their fellows. Most Muslims, indeed, take a less cynical view of the ascetic, who is supposed to abandon his possessions before taking to the mendicant life, in the belief that they stand between him and the attainment of the higher life. And, though many dervishes are mendicants, this is by no means the case with all; the bulk of the members of Orders belong to the labouring and trading classes. In Arab. literature the name first occurs (in the form *daryūsh*) as the epithet of one Khālid, who in the year A.H. 201 (=A.D. 816) endeavoured to organize the citizens of Baghdad for the suppression of anarchy. In Pers. literature of the 5th and 6th cents., and even later, the dervish is a holy man who has overcome the world; and in S. Arabia it is said to be used in the sense of *shaikh* as a term of dignity. In general, we may distinguish between *ṣūfī* and dervish as between theory and practice; the former holds a certain philosophical doctrine, the latter practises a particular form of life. The latter is called in some countries by the Arab. name *faqīr*, 'poor man' (plur. *fuqarā*); to those who are members of associations the name *khwān*, for *ikhwān* ('brethren'), is sometimes applied.

The practice of asceticism, and the wearing of wool in indication of it, are, of course, as early as the time of Muhammad, and far earlier; according to the most authentic accounts, the Prophet himself gave little encouragement to asceticism, which rarely suits the plans of statesmen and warriors. But the notion of religious exercises in addition to those prescribed by the ordinary ritual, culminating in ecstasy, meets us early in the history of Islām; and with this went theories of states and stages in the religious life which belong to the subject of Ṣūfiism.

It is not till the 6th cent. of Islām that we hear of actual Orders of ascetics; attempts which are made to trace them further back are mythological. In the 6th cent., however, they commenced, and in the 7th they are familiar. The unity of an Order is constituted by a special form of devotion, whereby its members endeavour to induce what spiritualists call 'the superior condition'; it usually consists in the repetition of religious formulæ, especially the first article of the Muslim creed, and each Order has its *dhikr*, as this process is called; other religious exercises of the same sort bear the titles *wird* and *ḥizb*.

The first founder of an Order is supposed to have been 'Abd al-Qādir (*q.v.*) of Jīlān, who died A.H. 561 (=A.D. 1166); but that founded by Aḥmad al-Rifā'ī, who died A.H. 578 (=A.D. 1182), was nearly contemporaneous. Of both these persons we possess biographies, and, indeed, in the case of the former a series of works, chiefly homiletic in character. In general, the founders of Orders are historical personages; some have left works, and in other cases there are authoritative treatises, revealing the mysteries of the Order, though, perhaps, in most cases these can only be acquired through oral instruction, and by persons who have undergone probation.

The founding of Orders has gone on steadily since the 6th cent. of Islām; and their enumeration is no easy matter, since it is difficult to distinguish between independent and branch Orders. Von Hammer enumerated 36, of which 12 were supposed to have existed before the rise of the Ottoman empire, and 24 to have sprung up after that event; the former number includes some that are mythical, whereas the latter is too small. The most interesting, in some ways, is the Bektashi Order, which appears to be a syncretism of Islām with Christianity, and which (according to G. Jacob, who has made a special study of it) retains many vestiges of Christian doctrines and rites. Next after this comes the Naḳshabandī, which is wide-spread; the Maulawiyyah, Rifā'iyyah, and 'Isawiyyah also play important rôles, while some political importance is ascribed to the Malāmiyyah. In certain provinces of the Ottoman empire there is a shaikh *al-ṭuruq*, or head of the Orders, who is responsible to the Government for their conduct.

The acts which enter into the life of the member of an Order are in part disciplinary, in part devotional. The devotional acts take the form of a service, called *ḥaḍrah*, which with certain communities is daily, with others weekly; probably the form which it most commonly takes is that of the repetition of formulæ, especially *la ilāha illa 'llahu*, a vast number of times with various differences of intonation, occasionally to the sound of music; elaborate rules are given in some of the books belonging to the Orders, regulating the bodily motions which should accompany the production of each syllable. *Ḥaḍrahs* familiar to visitors to the Nearer East are those of the Maulawī dervishes in Pera, who move in circles to the accompaniment of music; of the Rifā'ī dervishes in Scutari, who, first sitting, and then standing on their right and left feet alternately, and bending sideways, repeat the formula of the Unity. The same may be seen in Cairo. At the service of the Jahriyyah dervishes in Tashkent, visited by Schuyler (*Turkistan*, New York, 1876, i. 158–161), the repetition of the formulæ was accompanied by a violent movement of the head over the left shoulder towards the heart, then back, then to the right shoulder, then down, as if directing all movements to the heart. Indeed, the directions in the books of the sects imply the use of the heart in pronouncing the formula of the Unity, though the process seems scarcely intelligible. In most of the performances the motions gradually accelerate as they proceed, and different forms of ecstasy have a tendency to be produced.

Besides these services, various forms of discipline are prescribed to neophytes in many of the Orders. One of these is 'solitude,' *khalwah*, a discipline of the Khalwatīs, who are called thereafter, and who are ordered to recite long prayers in complete solitude, for which cells are provided in the monasteries (called *takiyyah*, or *zāwiyah*). With the Maulawīs the aspirant has, it is said, to serve 1001 days in the kitchen of the Order. With some other Orders the discipline consists, like the devotion, in trials of the power to recite the formula of the Unity a vast number of times with the least expenditure of breath, and promotion is made dependent on the attainment of a certain standard in this matter.

The members of the Orders are also distinguished by certain peculiarities in their attire, whether in shape, substance, or colour. Great importance is attached to the head-gear, and the number of *tark*, or gores, of which it is composed. This word in Arabic signifies 'abandoning,' and the number is said to symbolize the number of worldly vanities abandoned by the dervish. Some Orders wear gaiters; some carry stones in their belts, said to signify hunger; the Maulawīs are distinguished by a wide skirt (worn at their services) called *tannūr*, 'oven,' indicative of the oven of misfortune whence the head has been withdrawn.

'The sheikhs of the Orders wear robes of green or white cloth; and any of those who in winter line them with fur use that kind

called *petit gris* and zibeline marten. Few dervishes use cloth for their dress. Black or white felt called *'abā*, such as is made in some of the cities of Anatolia, is most usual. . . . Generally all the dervishes allow their beards and mustachios to grow. Some of the Orders still wear long hair' (J. P. Brown, *The Dervishes*, p. 214).

On the tombs of some of them are mystic signs.

In general, the dervishes are credited with mystic powers, and as early as the 7th cent. of Islām we are informed of various wonders which the Rifā'īs could perform: they could eat living serpents and go into burning furnaces, of which they extinguished the fire. Some of their wonders seem to have puzzled Lane, the author of *Modern Egyptians* (London, 1846). Oman, in his work on the Muslims of India (*Brahmans, Theists, and Muslims of India*, London, 1907, p. 323 ff.), describes a fire-bath undergone by a Sayyid, trusting to the power of Ḥusain; he had apparently taken care to drench his feet with water before walking over the coals, but those who attempted to do it, not knowing how, were severely burned. Other travellers who have witnessed these miracles can often give an explanation: the serpents with which the 'Isawīs play have their venom removed; similarly, in the ceremony of the *Doseh*, practised by the Egyptian Sa'dīs, whose shaikh rode over the backs of the devotees, it appears that the horse had been carefully trained, and it was arranged that he should step nowhere where serious injury could result. It is, of course, possible that in some of these cases there is no conscious imposture, and hypnotism accounts for anything that is wonderful; but in many places the holy man appears to be a low form of conjurer. The biographies of the founders of the Orders have a tendency to embody many manifestations of supernatural power; but it is probable that, like those admitted into the lives of Christian saints, they are thought to be edifying rather than historical.

The Orders of dervishes seem at an early period to have acquired a definite form of organization, of which the nucleus is the *zāwiyah*, or 'retreat'; such a place is usually built by or for the founder of the Order, and is inherited by his successors, who in most cases are his actual heirs. As the Order spreads, other *zāwiyahs* are erected, which, however, maintain a filial relation to the parent institution; *i.e.* the presidents of the former are appointed from the latter. The name *shaikh* is properly applied exclusively to the founder of the Order; his successors are *khalīfs*, i.e. 'substitutes'; it was on this principle that the successor of the Sudanese Mahdi was known in Europe as the Khalīf. The non-official members of the Order are called 'disciples' (*ṭalabah* or *murīdūn*). The head of a dependent *zāwiyah* is called *muqaddam*; the revenues are in charge of a trustee, or *wakīl*.

Membership of an Order does not necessarily interfere with the normal duties of life; the dervishes of Egypt are said to belong mainly to the class of small shopkeepers. The performances are thought, however, by some observers to have a tendency to produce insanity, or, at any rate, nervous affections. Begging is in theory forbidden by some Orders, but is usually permitted, and certain dervishes carry a bowl or wallet for the purpose.

French writers hold that the underlying idea of most of the Orders is the reclamation of the Islāmic world, and the eventual expulsion of Europeans at least from Asia and Africa; whereas another suggestion, which is perhaps nearer the truth, is that they are all in origin revivalist, not so much with the object of injuring Europeans as with that of increasing the faith of Muslims. Some systematic classifications of the Orders we owe to a number of French writers, partly employed by the French Government to investigate this important element in their African possessions.

D. S. MARGOLIOUTH.

DESCARTES.—1. Life and writings.—René Descartes was born on 31st March 1596. It seems to be well established, in spite of rival claims, that the place of his birth was La Haye, in Touraine, not far from Poitiers. At eight years of age he was sent to the famous College of La Flèche, recently established by the Jesuit fathers and endowed by King Henry IV. The eight years passed at La Flèche had a profound influence on Descartes' future life, and he always spoke of his instructors with the deepest gratitude. After leaving school, young Descartes, who was provided with a moderate competency from his father, proceeded to travel, though he first of all spent some time in Paris, where he found his lifelong friend Père Mersenne, who had been seven years his senior at La Flèche. On the commencement of the Thirty Years' War, Descartes volunteered for service with Prince Maurice of Nassau, then in Holland. But, while serving as an unpaid soldier, he did not lay aside his studies, and, indeed, at this time wrote certain fragmentary works, most of which are lost, such as Reflexions entitled *Cogitationes Privatæ*—discovered comparatively lately in the Library at Hanover. Amongst these early works may also be mentioned the *Compendium Musicæ*, which was not intended for publication, but was brought to light after its author's death. Of those enumerated in an inventory found after Descartes' death are: (1) *Some Considerations on the Sciences*; (2) a paper on *Algebra*; (3) reflexions called *Democritica*; (4) observations entitled *Experimenta*; (5) a treatise begun under the name of *Præambula: Initium sapientiæ timor Domini*; and (6) another called *Olympica*. Descartes' biographer, Baillet, who wrote very soon after his death, mentions yet another work entitled *Studium Bonæ Mentis*, which was addressed to a friend,—very probably Mersenne,—and which was largely biographical. In the *Cogitationes* he tells of his 'conversion' in the year 1619, when with the army in its winter quarters at Neuberg, on the Danube. Smitten with remorse for sins committed, he resolved to follow after the ways of Truth, and also to make a pilgrimage to the shrine of Our Lady of Loretto.

Descartes, on quitting Maurice's army, volunteered to serve with Maximilian, Duke of Bavaria, and chief of the great Catholic League, in his warfare with Frederick, the Elector Palatine, who had been crowned at Prague in 1619. But, as far as we can judge, the young soldier was much more occupied with his speculations than with the profession which he had taken up. Indeed, it seems very doubtful whether he actually fought at the battle of Prague, which decided the Elector Frederick's fortunes. With the Elector his children fled, and, curiously enough, one of them was Elizabeth, just four years old, Descartes' future correspondent and friend. During these exciting years the events took place which are so well described in the biographical portion of the *Method*, where Descartes tells of the mental struggle through which he passed in making up his mind as to the course he was to pursue in his future life. It was at this time that he decided to sweep away the opinions which up to that time he had embraced, so that he

'might afterwards be in a position to admit either others more correct, or even perhaps the same when they had undergone the scrutiny of Reason.' 'I firmly believed,' he said, 'that in this way I should much better succeed in the conduct of my life, than if I built only upon old foundations, and leant upon principles which in my youth I had taken on trust.'

After the battle of Prague, Descartes joined the Bavarian army once more; but it was not long before he gave up military service and started upon his travels. After nine years' absence he returned to Paris, where he was accused of favouring the secret society known as the Rosicrucians. Descartes' father put him in possession of the property to which he was entitled, and he found himself in consequence in easy circumstances. He started off on further travels almost at once, and made his way to Switzerland and then to Italy, where he redeemed his promise of making a pilgrimage to Loretto. On his return journey he made scientific investigations in regard to the height of Mont Cenis. Once more he returned to Paris; and he is said to have set aside a former inclination for the gaming table, and applied himself to serious reflexion. Finally, he decided to settle in Holland, where he believed peace and quiet as well as liberty of conscience were to be had.

In 1636, Descartes determined at last to publish, and the book known as *The Method of rightly conducting the Reason and seeking Truth in the Sciences* appeared, along with the *Dioptric*, *Meteors*, *and Geometry*, termed 'Essays in this Method.' It was written in French, unlike many others of his recent treatises, in order that it might be read by any of his countrymen who chose to do so. Its conclusions had long been cogitated, and they express the mature result arrived at by one who desired to know not only *what*, but also *why*, he believed. It is a simple and sincere record of personal experience, a 'Pilgrim's Progress' of the human soul. It was not the first important book written by Descartes. Of extant treatises we have the *Regulæ ad directionem ingenii*, written almost certainly during his earlier life, but left incomplete, and also a treatise called *Le Monde*, which was never published; but the *Method* has a place possessed by no other of Descartes' works in the estimation of posterity.

Descartes' next work was almost equally famous, *Meditations on the First Philosophy*. The *Meditations* is a study of Truth in its highest aspect. It is not, like the *Method*, a charming biography and philosophy of life: it is a more profound study of the facts of existence, and an exposition of Descartes' system in all its fullness. In this book he deals with the great question of Philosophic Doubt that was always in his mind, and discusses its relationship to true Knowledge. He asked for criticism, and found plenty of opposition to his views. There were in all seven formal 'Objections' collected from men distinguished in their several lines, and these 'Objections' were dealt with *seriatim* by the author.

The first 'Objection' was by Caterus, a Dutch theologian and an appreciative reader, who represented the standpoint of the Church; the second and sixth were collected from various sources, and represent the point of view of 'common sense'; the third is by Hobbes. By him, as by Gassendi, the fifth objector, we have the materialistic or 'sensational' standpoint clearly set forth, and in his reply Descartes gives an interesting exposition of the Cartesian idealism, which he opposes to that doctrine. Arnauld, the fourth author of 'Objections,' on the other hand, is by no means so hostile as Hobbes and Gassendi, and to him Descartes replies with suavity and consideration. He is simply concerned about the application of Cartesian principles to the doctrines of theology and morality. His sympathies are with St. Augustine, and he holds that we must *believe* what we cannot *know*. The last 'Objections,' by the Jesuit father Bourdin, are too elaborate for us in these days to follow with interest. The 'Objections and Replies' are, however, deserving of perusal, since they present very clearly the difficulties that occur in accepting Descartes' doctrine, and the arguments that may be used in their defence.

The next treatise written by Descartes was the *Principles of Philosophy*, published in Latin in the year 1644. In this book its author enunciates the same doctrines that he set forth in the *Method* and the *Meditations*. He praises his mistress Philosophy in no stinted terms. 'Philosophy is like a tree of which Metaphysics is the root, Physics the trunk, and all the other sciences the branches that grow out of the trunk.' But, having once more established his ground-work, he goes on to deal with the general principles of Physics, with the nature of body, the laws of motion, the phenomena of the heavens, and all pertaining thereto. He sets forth his theory of vortices, discusses the Ptolemaic and Copernican systems, and that other which he more or less favoured, the system of Tycho Brahe. He also discusses the nature of springs, tides, etc., and believes that the principles of geometry and mechanics are shown to be capable of supplying a satisfactory key to all the phenomena of Nature, and that no other principles can take their place. Descartes' theory of vortices is especially interesting. He represents the whole of the planetary system as being carried round the sun in a sort of vortex, while the various satellites of other planets move in lesser vortices within this vortex; the earth is in a sense at rest, as a man might be at rest who is in a boat. But, while expounding this possible doctrine, the writer shows the extremest caution, and guards himself against the suspicion of unorthodoxy by pointing out that he is merely describing what might be termed a 'working theory' of the world.

It must not, however, be thought that Descartes was merely a theorizer, to the neglect of practical experiments. In Amsterdam he frequently visited the butchers' shops to find material for his investigations in anatomy, and physical experiments were constantly being made by him. One notable example of the latter is to be found in the famous experiments made upon the barometric principle, on the mountain Puy-de-Dôme in Auvergne, which were carried out by Pascal and his brother-in-law Perier, but which, it seems clear, had been suggested by Descartes.

Descartes had many controversies during his residence in Holland, most of them with Protestant divines. In Utrecht, Voetius, Rector of the University, was a keen antagonist, and Regius, or Le Roy, was first of all a supporter and then an opponent. Descartes was ever ready to enter upon these controversies, but his quarrels sometimes ended happily. 'There is nothing in life sweeter than peace,' he is reported to have said; 'hatred can be useful to none; I should not refuse the friendship even of Voetius if I believed it to be offered in good faith.' A dispute with Fermat, the mathematician, was a famous one, and it was carried on by his followers after Descartes' death.

There was little romance in the philosopher's life. He was never married, though he had a child to whom he was devoted, and who died young. He had, however, a great friendship, which lasted from the year 1640, with the Princess Elizabeth, known as the 'Queen of Hearts,' daughter of Frederick, Elector Palatine, and Elizabeth, daughter of James II. of England. Princess Elizabeth was then living at The Hague, where her parents held a miniature exile court with their lively family of boys and girls. Descartes' letters to the young Princess are serious in tone, and nearly all are on philosophic questions, to which Elizabeth applied her mind with the greatest strenuousness, and to good effect, for her questions are put and her criticisms are made with great discrimination and understanding. The correspondence is very interesting to students of Cartesianism.

Another friendship formed by Descartes in later life was with Queen Christina of Sweden, the daughter of the great Gustavus; and it was she who caused him to travel to Sweden, where he met his death. In 1648, Descartes had visited his native land for the last time. He was pressed to go, but when he arrived he found Paris wholly occupied with the political agitation of the Frondes; and all he could say of those who invited him was that he 'would regard them as friends who had bidden him to dine with them, and when he arrived he found their kitchen in disorder and their saucepans upset.' When Queen Christina's invitation to Sweden arrived through the French Ambassador Chanut, Descartes' inclination was to refuse it, lest misfortune should befall him in this expedition also. However, Queen Christina was very pressing, and Descartes' admiration for her was unbounded, so that at length he consented to take the long journey. First of all, however, he had to see that his latest book, the *Passions of the Soul*, which was written to prove that all the

various psychological manifestations may be rationally explained by purely mechanical causes, was safely placed for publication in Elzevir's hands. Then he left the 'dear solitude of Egmont' for his new home. But his days in Stockholm were destined to be short. The exigeante young Queen was not only occupied in endeavouring to establish an Academy of which she intended to make Descartes director, but she also desired to be instructed in philosophy at five o'clock in the morning, and Descartes was in the habit of meditating in bed until late in the day. The result was what might have been anticipated in a bitterly cold climate. He fell ill of an inflammation of the lungs after nursing his friend Chanut through the same illness, and he died on 11th February 1650, at the age of fifty-four. He was buried at Stockholm, but later on, in 1666, his body was removed with considerable difficulty to Paris and laid in the church of Ste. Geneviève du Mont. In 1819 the remains were removed to the church of St. Germain-des-Près, where they now are. Descartes died in the faith of his forefathers, but it was not long before serious suspicion fell upon his teaching, and his works were placed upon the Index. Clerselier, his friend and one of the translators of his works, who after Descartes' death wrote a panegyric on his virtues, records that amongst his last words were these: 'My soul, thou hast long been held captive; the hour has now come for thee to quit thy prison, to leave the trammels of this body; suffer then this separation with joy and courage.'

In addition to the works mentioned above, there was published after his death an unfinished work entitled *La Recherche de la vérité par la lumière de la nature*, an interesting dialogue upon Cartesian principles between three friends in a country house. Another very short work is his *Notæ in Programma*, which was written in refutation of his opponent Regius (Le Roy).

2. System of philosophy.—It is true in more than a traditional sense that Descartes is the father of Modern Philosophy, for in him the modern spirit came into existence. His was an age when men were confronted with the new conception of Nature and of man, and were led to new methods of investigation. The great upheaval which we call the Reformation brought about a form of individualism which ended in a reaction against the new standards—judged to be as arbitrary as the old. But the real work of the Reformation had already been brought about in Protestant and in Roman Catholic alike. Man learned to be *himself*, and was no longer restrained by artificial bonds. The spirit of investigation was everywhere, all phenomena of Nature were of interest, and all men tried to obtain exact knowledge, and thereby to strengthen their powers of originality and self-reliance. The 17th century—the century in which Descartes lived—was the period in which science became a reality, and in which the scientific spirit became the spirit of the land. Historically, too, it was a time of turmoil and change. A career of bloodshed on the part of the House of Valois had been ended by the assassination of Henry III., and on the accession of Henry IV. religious warfare was brought to a conclusion: his death was an inexpressible loss to the French nation.

Descartes' work in the midst of this time of unrest and ferment was that of a great systematizer. He took all those new ideas that had come into being and endeavoured to bring them into a definite, concrete, and comprehensible system. In rejecting the old dogmas of the Schools, the New Learning came to provide something better able to satisfy the inquiring mind; it brought with it certainty of its own results. The world had become of infinite importance and interest, and it was necessary that the knowledge of it, and also the knowledge of man, should be certain and definite. The problem, then, that Descartes had to deal with was how to work out a system which should reconcile two sides, now come into prominence—the spiritual and the physical, the soul and the body, the point of view of orthodoxy and the point of view of science; and it is because this is a modern question which is before us even in the present day that the Cartesian philosophy is a modern philosophy. Descartes' attempt to bring about this reconciliation was the first of many on similar lines. His object was to arrive at certainty—a certainty which he believed could be reached only by following definite rules laid down by his *Method*, and by beginning with the Doubt which is the absolute essential before any successful quest after Truth is made—'de omnibus dubitandum est,' as he expresses it. This doubt must be applied to all those inherited traditions and beliefs which form, to his mind, a mass of incongruous opinions; we must ruthlessly reject what cannot be justified to ourselves as truth; we must free ourselves from all prejudice and uncertainty. And yet this philosophic doubt is in nowise scepticism, but the doubt that precedes true knowledge.

Descartes' system of philosophy was thus, above all, a method, and the interesting thing about this method is that it presented itself to him as his life-history might. The order of his experiences was simply the order of his method writ large. This is what makes the immortal little book called by the name of the *Method* a masterpiece of spiritual biography, as an account of moral and mental development, as it is also a masterpiece of direct and simple style. It was in his quiet room, in that cold winter with the army on the Danube, that Descartes first awoke to the fact that man is not to seek happiness here or there, for it is only to be found within him. The world and he, the spirit and the body, mind and matter, are really one. Traditions, hypotheses, assumptions of all kinds should go, and we must build again from the foundation. This may sound easy, but nothing is more difficult, and in Descartes' opinion there are only a few who should undertake the task, and those who do so must be modest and ready to accept with humility what is given them. He then states certain rules to be followed—rules which simply make for accuracy and thoroughness of thought: 'Do not accept what is not clearly known, divide your difficulties into parts so far as possible, work your way up from the easy to the more complicated—above all, omit nothing.' Such rules would seem to be rules of common sense, but they mean an accuracy of method such as no immediately preceding philosophic thinkers had dreamed of as necessary.

Knowing at last what his method of science must be, Descartes boldly attacks the great question of the foundation on which thought is based. On what does all this reasoning rest? It rests on the knowledge of self. One proposition alone cannot be doubted by man, and that is that he exists, inferred from the fact that he possesses consciousness—*Cogito ergo sum*, as he puts it in his immortal phrase. Descartes saw clearly that in order to think he must exist. His philosophy turned on the fact of his personal existence. The senses may indeed mislead us, and we cannot place absolute confidence in what has even sometimes deceived us; but, however much I may have been deceived, the fact remains that I am—I as a thinking being.

'I had the persuasion that there was absolutely nothing in the world, that there was no sky, no earth, neither minds, nor bodies; was I not, therefore, at the same time persuaded that I did not exist? Far from it; I assuredly existed, since I was persuaded. But there is I know not what being, who is possessed at once of the highest power and the deepest cunning, who is constantly employing all his ingenuity in deceiving me. Doubtless, then, I exist, since I am deceived, and let him deceive me as he may, he can never bring it about that I am nothing, so long as I shall be conscious that I am something.'

This is clearly a great step forward; it signifies that a new phase in philosophy has been entered on, a change of front as great as the Kantian transformation of a later date, which in a measure it foreshadows. 'I think' is present in all our ideas and even in doubt itself. We are brought back from the external and unrelated facts of consciousness to the basis of Truth on which all

other truth is founded. We have arrived at the conception of thought as the groundwork of all knowledge. Further on in the *Meditations* he says that in thought is found that which properly belongs to the self.

'This is alone inseparable from me. I am—I exist; this is certain; but how often? As often as I think; for perhaps it would even happen, if I should wholly cease to think, that I should at the same time cease to be. I now admit nothing that is not necessarily true; I am, therefore, precisely speaking, only a thinking being, that is, a mind understanding a reason—terms whose signification was before unknown to me.'

In this we have a firm foundation on which we can build, setting aside the old disputations of the Schools as to 'substances' and 'qualities.' Understanding or reason is for the first time made the basis in a philosophic comprehension of the world as it presents itself to us. Descartes says that the outside world is not perceived in its true signification by the senses or imagination, but by the mind alone.

'They [outside things] are not perceived,' he says, 'because they are seen and touched, but only because they are understood,' that is, rightly comprehended by thought. 'I readily discover,' he goes on, 'that there is nothing more clearly apprehended than my own mind.'

Having got so far, he goes on to apply his method; he shows how, when the mind is cleared of all preconceived notions and prejudices, what is known must be known clearly and distinctly. This signifies that we must now apply ourselves to making our knowledge absolutely certain, so that we may be sure that we are ascertaining what is truth.

'I am certain that I am a thinking thing, but do I not therefore know what is required to render me certain of a truth? In the first knowledge there is nothing that gives me assurance of its truth except the clear and distinct perception of what I affirm, which would not indeed be sufficient to give me assurance that what I say is true, if it could ever happen that anything I thus clearly and distinctly perceived should prove false, and, accordingly, it seems to me that I may now take as a general rule, that all that is very clearly and distinctly apprehended is true.'

With the attitude of doubt the so-called secondary qualities, dependent as they are on the relations of one object to another and to the sentient subject, are naturally first brought under the ban of criticism. These qualities do not appear to be fixed in any object. What remains secure is, however, what possesses the two attributes of extension and capacity of motion; and hence Descartes appeals to the truths of the mathematical sciences. Even they, however, might be false; some malevolent being may be all the while deceiving us in what we accept as truth. Hence we must reject even these apparent truths and fall back upon our own minds. Here again we find modes of consciousness in feeling, willing, imagining, etc., 'so that I must also abstract from these and concentrate upon myself as I am, without borrowing in any way from elsewhere.' In this way we reach Descartes' thinking substance, which, as he points out, is present and is affirmed, even as it denies or doubts; and on the other hand we have the external object as extension.

Descartes maintains that amongst the ideas that are clear and distinct we must recognize that of God as a Perfect Being of whom we have a clear and distinct conception. The idea of God cannot, he says, be derived from our limited existence; its origin must be in one who contains all in Himself. From the idea of perfection he infers the existence of it in God as its originator. The *idea* of perfection involves *existence*; and this is the so-called ontological argument which is so frequently brought forward by later philosophers. But, if such a God exists, we have a guarantee that we cannot be deceived, for such a perfect Being could not deceive us, and therefore we may accept the teaching of our consciousness. The errors of the atheists—no small class at the time, if Mersenne is to be believed—are by Descartes said to be due to their anthropological ways of looking at God, and to their forgetting the fact that, while men's minds are finite, God is infinite.

It is thus evident that Descartes considered that in his essence man is a thinking and unextended being who has a clear and distinct idea of body as an extended and unthinking thing, and thus that man as mind is absolutely distinct from body, and may exist without it. It is this dualistic conception of mind and body that constitutes the difficulty in forming any adequate conception of the universe according to Cartesian principles. The question arises as to how we can possibly reconcile the two sides—the outside world, or extension, as Descartes called it, on the one hand, and intelligence, or Thought, on the other—for the qualities of the object are reduced to bare extension, and those of the subject to bare thought. As a matter of fact, Descartes introduced this new view of the outside world as extended, that is, as that which occupies space and has length, breadth, and depth; and it was to this extension that he applied the mathematical reasoning for which his name is famous. And confronting it we have the Intelligence, Thought, or Reason which apprehends this external matter. This is also a profound philosophic conception. But the difficulty comes when we try to explain how the one side acts upon the other. We have before us two entities, one of which is passive and inert, and yet is acted on by a unifying intelligence endowing it with those relationships which make it comprehensible by us; while, on the other hand, we have the mind, which is wholly immaterial and spiritual. How is the transference effected from the natural to the spiritual? How does the physical action convey anything to the perceiving mind? Doubtless there was in Descartes' mind a solution of the difficulty. He would have considered that there is a unity to be found in thought; but, if this is so, the idea is by no means clearly worked out. Indeed we have but intimations of it which are only comprehended in the light of later developments in thought. The mind is conscious of the infinite as having in it more reality than the finite substance.

'Our consciousness of God is prior to our consciousness of self. For how could we doubt or desire, how could we be conscious that anything is wanting to us, and that we are not altogether perfect, if we had not in ourselves the idea of a Perfect Being in comparison with whom we recognize the defects of our nature?'

Though there is no doubt that Descartes' system was a dualistic one, the progress made by him in his search after truth was immense. He took knowledge as the one great and important fact, and sought out its elements as best he could. He played a notable part in the great discovery which meant so much in his age, that the world is governed by law. It has been said of him that 'he established liberty of mind and sovereignty of reason.' In his writings he brought the whole of Nature within the reign of law, and showed how both the starry heavens and the earth beneath are governed by the same inevitable physical law. He showed also how such views are consistent with a philosophic outlook. Perhaps one of his greatest claims to our gratitude rests on his work in Mathematics (see below), that is to say, not in his well-known discoveries in Geometry and in the development of the application of Algebra to the solution of Geometrical problems, important as these might be, but, in the large sense of the term, in his scientific work; for Mathematics in those days included all the immense amount of work done in the direction of Physics, Astronomy, Optics, Physiology, and the other branches of science. Descartes was not an investigator of the type of the present day—a patient observer of a mass of phenomena from whose careful examination

some results might be deduced. He had his theories well defined before he began his work, and laid them down in what we should consider a dogmatic fashion. But, this granted, he applied himself to examine man in all his aspects. In Physiology, for instance, he forms his theory, and then enunciates it, explaining how the human body might be and might act. A great deal—indeed most—of what he tells us about the physiology of the body, though very interesting and in a degree enlightening, is not correct in the view of later investigation. But then Descartes has the credit of maintaining the theory of the body as a machine, a very complicated machine of course, but one which acts as a machine. He narrated what he knew to be true about the machine, and also what he considered was probably true, and formed the whole into a system which was perfectly clear and intelligible to those who had only the facts presented before them. In our view, many of these 'facts,' both physical and physiological, are to the last degree absurd, but still it was better to have a comprehensible theory such as he gives than nothing at all. That is to say, it was better to have a principle capable of verification or subsequent alteration than to remain in the confusion of the theories of the day. He pictured a physical world in which everything was explained—springs, rivers, mines, metals, seas—sometimes explaining facts that were not facts at all. He also pictured, in his works *de Homine* and *La Formation du fœtus*, a wonderful machine-man carrying on all the processes of digestion, circulation, growth, sleep, etc., and endowed with sense-perception and ideas, memories and passions, just as though it were a complicated clock. To him to know the beginning of things, and the laws that govern action, was to know the whole, for the operation of physical law, once set in motion, can clearly explain the rest. This same principle is to be found in the most advanced theories of the day, as Huxley, in writing on the automatism of animals, tells us. Huxley declares that Descartes' physiology, like the modern physiology of which it anticipates the spirit, leads straight to materialism. On the other hand, by the fact that it is based on conscious thought, it is as true to say that it leads us directly to the idealism of Berkeley and Kant. As a matter of fact, we see, by the way in which the Cartesian philosophy developed, that, if in the one direction it made for a materialistic system, in the other it brought about the conclusion that all the knowledge we can have is a knowledge of our states of consciousness. But the first step taken was that represented by the pantheism of Spinoza. The Infinite alone is affirmative, the finite only is in so far as it is not; and so we are led on to the denial of the finite, and then the absolute unity swallows up all difference in itself.

In his last published treatise, the *Passions de l'âme*, Descartes shows how the various psychological manifestations may be explained by purely mechanical means. He sets forth there the differences between soul and body; thought pertains to soul, and heat to body. The soul cannot give heat to the body, or we should not have death: a dead man, in Descartes' view, is just a broken watch. After explaining how this wonderful machine, when wound up, acts, he considers the thought pertaining to the soul, *i.e.* the actions of our will which directly proceed from and depend on it, and the passions which are the various kinds of perception found in us. 'The soul from its seat in the gland in the middle of the brain spreads abroad throughout the body by means of the spirits, nerves, and even blood, which last, participating in the impressions of the spirits, can carry them by the arteries into all the members.' If the image which is unified in the gland inspires fear, and has relation to what has formerly been hurtful to the body, the passion of fear is aroused, and then the passions of courage and the reverse, according to the temperament of the body, or strength of the soul. Passions are thus caused by the movement of the 'spirits,' and bring with them certain movements of the body. The will, however, unlike the passions, is always free; the action or will of the soul can only be indirectly affected by the body, while the passions depend absolutely on the actions which bring them about, and are only indirectly affected by the soul, excepting when it is itself their cause. The soul, however feeble, may indeed obtain absolute power over the passions, although with difficulty. The reason may give us a just appreciation of the value of good and evil, and our good judgment regarding them enables us to resist the influence of our passions. 'If we clearly saw that what we are doing is wrong,' he says in the same book, 'it would be impossible for us to sin, so long as we saw it in that light.' Will and intellect must be united in the perfect man, as they are united in God. Here also we are met with the unexplained difficulty as to the action of mind on matter. How the movement of the passions can be altered by reason is a question which is not answered.

[3. Services to Mathematics.—From the time of the Greeks until that of Descartes, practically no new results had been obtained in Geometry, though Algebra had been greatly advanced, notably by Cardan and Vieta. Descartes made great progress in Algebra, and gave new life to Geometry by the introduction of the powerful analytical method.

Descartes was not the first to realize that a curve might be defined as the locus of a point whose distances from two given straight lines are connected by some known law, but he was the first to see that the points in a plane are completely determined by their co-ordinates and conversely. This was largely due to the introduction of negative co-ordinates. As a necessary consequence, he saw that several curves might be drawn with the same axes, and their intersection found algebraically. After this, their tangents were easily determined, though Descartes' own method was indirect, and applicable only to curves with an axis of symmetry. On this axis he found the centre of a circle touching the curve at any given point, and then found the tangent to the circle at the point of contact. He defines the tangent as the limiting position of the secant.

Descartes classifies curves according to the relation of the velocities of the lines moving parallel to the axes, by whose intersection he conceives the curves as generated. If these velocities are 'commensurable' (*i.e.* if y is an algebraical function of x as in conics), the curve is 'geometrical'; if not (as in the cycloid), it is 'mechanical.' This is roughly equivalent to the Newtonian division into algebraic and transcendental curves. In order further to classify the 'geometrical' curves he discusses a problem, due to Pappus, which may roughly be enunciated as follows: 'To find the locus of a point the product of whose perpendiculars on m straight lines is proportional to that on n others.' Where $m=n=1$ we have a straight line, where $m=3$, $n=1$, a parabola. This was known to the ancients, who had also conjectured that $m=n=2$ gave a conic. Descartes classed curves where neither m nor n exceeds 2 as of the first *genre*; where neither exceeds 4, as of the second *genre*, and so on. Thus one *genre* corresponds to two of our degrees. He also discussed curves which are the loci of a point whose distances from the fixed points are interdependent, in particular the Cartesian ovals, where the product of the distances is constant.

The foregoing work is found in the first two books of the *Géométrie*; the third book is algebraic. It is important as introducing our modern index-notation, and the use of the last letters of the alphabet for variables (Vieta had used the vowels), and the first for constants. Descartes also used negative quantities and indeterminate co-efficients freely, and was the first to realize the advantage of taking all the terms of an equation to one side. The book is mainly occupied with the theory of equations. It shows how to construct an equation with given roots, to determine from the signs of the co-efficient a limit to the number of positive and negative roots, to increase or multiply the roots of a given equation by a given quantity, to eliminate its second term, and so on. It is proved that the number of roots of an equation is equal to its degree. Solutions of cubic and quartic equations are given, and Descartes believed that his method could be extended to those of higher degrees.

Descartes' Mechanics is largely inaccurate, but very suggestive, being the first systematic account of the universe on mathematical principles. Of his ten Laws of Motion the first

two correspond to Newton's first Law, while the other eight are incorrect. But, by his recognition of the mutual independence of the resolved velocities of a moving particle, he rendered invaluable service to Dynamics.

His work is throughout characterized by great originality and boldness of thought. It is generally in a condensed form, and meant rather to be suggestive than rigidly logical, but it is none the less important as the foundation of all modern Mathematics.—J. B. S. HALDANE.]

LITERATURE.—The tercentenary of Descartes' birth was celebrated at the Sorbonne on 31st March 1896, and in the beginning of the following year arrangements were made for issuing a new edition of his works under the direction of Charles Adam and Paul Tannery (Léopold Cerf). This admirable work is now completed, though not in the lifetime of Tannery. In it we have, as far as possible, a complete edition of Descartes' works in the tongues in which they were written, and with his invaluable correspondence carefully edited and arranged. The final volume is a biography by M. Adam, *Descartes, sa vie et ses œuvres*, 1910. The early editions of the collected works were two Latin texts—one by Elzevir in 9 vols., Amsterdam, 1713, another published in 7 vols. at Frankfort, 1697. Then there is Cousin's Fr. ed. in 11 vols., Paris, 1824–26. This includes the correspondence. The main source of our information about Descartes' life comes from the *Vie de Descartes*, written by Baillet in 1691 in two large vols.; of this a short abridgment was made, and issued in English in 1692. A modern life of Descartes (*Descartes, his Life and Times*) was published, London, 1905, by Elizabeth S. Haldane. Foucher de Careil published various manuscripts which he discovered in the Library at Hanover. The *Method, Meditations*, and part of the *Principles* were translated into English by J. Veitch, London, 1879, and an Eng. ed. of Descartes' Philosophical Works by E. S. Haldane and G. R. T. Ross has been issued (1911) by the Cambridge University Press.

The Literature on Descartes and Cartesianism is enormous; the following works may be mentioned: J. Millet, *Hist. de Descartes avant 1637*, and *depuis 1637*, Paris, 1867–1870; F. Bouillier, *Hist. de la philos. cartés.*, Paris, 1854; A. Foucher de Careil, *Descartes et la princesse Palatine*, Paris, 1862, also *Descartes, la princesse Élisabeth et la reine Christine*, Paris, 1879; J. P. Mahaffy, *Descartes*, in Blackwood's Philosophical Classics, 1880; N. Smith, *Studies in Cartesian Philosophy*, London, 1903; Alfred Fouillée, *Descartes*, Paris, 1903; Louis Liard, *Descartes*, Paris, 1882; see also the various *Histories of Philosophy*, such as that of Kuno Fischer (Eng. tr., London, 1887); E. Caird, art. 'Cartesianism,' in *EBr*[9]; J. Iverach, *Descartes, Spinoza, and the New Philosophy*, Edin. 1904; Huxley deals with Descartes' teaching in his *Lay Sermons*[6], London, 1877, and elsewhere. E. S. HALDANE.

DESCENT TO HADES (Ethnic).—**1. Introductory.**—Myths or legends of visits paid by mortals or immortals to the under world for some definite purpose are of common occurrence, and some are of remote origin. They are intimately connected with primitive and savage man's ideas of death and of the dead, joined to his affection for those who have been severed from him by death.

Before a separate abode of the dead was imagined, and while yet they were believed to exist in the grave or to hover round their old haunts, a living man saw—in dreams, in trances, or in hallucinations—the dead, and believed that they had come to him, or that his spirit had gone forth to join them for a time. So, when a separate land of the dead became an article of primitive belief, men believed that they visited that land in dreams or trances, or those who had been given up for dead but had revived told how they had been to the Other-world and had been permitted to return and resume their earthly life. Preconceived notions of the nature and scenery of that world coloured such dreams, but these in turn gave support or added to current ideas regarding it. There was nothing improbable in such dream or trance visits, since the nature of death is never really comprehended by savages, and the division between life and death is slight, universal folk-belief telling of the restoration to life of the dead or dismembered (see *CF*, chs. iii. iv.).[1]

But, in considering the origin of mythic descents to Hades, primitive and savage affection for the dead must also be taken into account. Generally the savage fears the dead or their spirits, but in individual cases affection often overcomes fear, and gives rise to the wish to see and commune with them. Hence it also influences the dreams of the living. And, the division between life and death being slight to the primitive mind, while it was also believed that the soul of the dying or recently dead could be recalled, affection would easily suggest that, if men could go in dreams to the Other-world, they might go there in their waking state to rescue the dead. From possibility to fact, from the 'might be' to the 'had been,' was an easy step to the primitive mind. Thus accounts of visions of the Other-world easily passed into tales of visits there, because in dreams the savage believes not merely that he is a passive witness, but that his soul is projected from his body and actually goes to the place of which he has a vision. Stories of actual journeys to Hades to bring back a dead wife, lover, or friend were perfectly credible, because generally the entrance to it was well known or had a local situation, though the road was often difficult and dangerous.

Examples of such ways or entrances are copious in Polynesian and Melanesian belief, and there are also W. African, Eskimo, and Ainu instances. In Italy and Greece there were many local entrances to Hades—some of them the scene of mythical descents. Mediæval Christianity also knew several entrances to purgatory or hell, *e.g.* volcanoes like Etna (cf. Tert. *de Pœnit.* 12); the cave in an island of Lough Dearg in Ireland, known as St. Patrick's Purgatory; the 'vale perilous' in the kingdom of Prester John, etc.; and the belief is found in Brittany, where it is thought that hell can be reached by a journey (Le Braz, *Légende de la mort*[2], Paris, 1902, i. pp. xxx, xxxix). Cf. also local entrances to a subterranean fairy-land.

Dream or trance visits were probably the first subjects of story or myth,[1] but they must soon have been succeeded by tales of actual descent. Other motives besides the rescuing of, or speaking to, the dead (doubtless suggested by these) are found—to seek a boon, or to satisfy curiosity—while in some of the higher religions the object occasionally is to enlighten the dead or to free them from torment. In early times, as in actual savage life, there must have been many stories of visits to Hades by named, but more frequently by unnamed, heroes or heroines. But, with the advance of religious ideas, the stories were usually told of semi-divine heroes or divinities, as many examples show (see below). All such stories and myths of descent are paralleled by similar tales of ascent to a heavenly region (see BLEST, ABODE OF THE [Primitive and Savage], § 8; Hartland, *Science of Fairy Tales*, 1891, p. 224 f.; Scott, *Demon. and Witchcraft*, ed. 1898, p. 29; Görres, *Die christl. Mystik*, 1842, bk. v. ch. 5).

Tylor (ii. 48) maintains that descent to Hades was suggested to 'the ancient myth-maker, who watched the sun descend to the dark under world, and return at dawn to the land of living men.' But, though this natural phenomenon may have coloured later myths, it was rather man's dream experiences which suggested the tales. Some writers connect the myths of Ištar and Tammuz, of Dionysos and Semele, of Orpheus and Eurydice, with the myth and ritual of the death and revival of a divinity of vegetation, fertility, etc., and find their origin in these. J. E. Harrison (*Prol. to Study of Greek Rel.*[2], Camb. 1908, p. 603) says: 'Anyone who realizes Orpheus [whom she regards as a historical personage] at all would feel that the intrusion of desperate emotion puts him out of key. Semele, the green earth, comes up from below, year by year; with her comes her son Dionysos, and by a certain instinct of chivalry men said he had gone to fetch her. The mantle of Dionysos descends on Orpheus' (cf. also *CGS* ii. 651; Tiele, *Actes du vime Congrès intern. des Orient.* ii. 1. 495). This is to reverse the order of things. Precisely similar tales are told elsewhere of personages in no way connected with vegetation, while Eurydice, unlike Semele, does not rise again. Such tales doubtless existed in Babylonia and Greece, and they would easily become part of, and give precise form to, the myths of vegetation-divinities who were thought to die and come to life again. But it is certain that the latter belief did not originate the tales themselves. For another theory connecting them with supposed death and renewal in rites of initiation, see Van Gennep, *Les Rites de passage*, Paris, 1909, p. 131.

2. Dream or trance visits.—Catalepsy and trance are hardly distinguishable by the savage from death. Hence those who revive from them are

[1] Cf. also the myths of Attis, Zagreus, Osiris, etc.

[1] In Jewish and Christian legend both Hades and Heaven are often visited or seen in vision.

thought to have died and come to life again; and, in many cases, their minds being haunted by the current ideas of Hades, they relate as actual visits of the soul there what has been experienced in dream (Tylor, ii. 48). Such trance visits of the apparently dead are also known at higher levels, where detailed stories of the visit—all greatly alike—are told (Plato, *Rep.* x.; Pliny, *HN* vii. 52; Aston, *Shinto*, 1905, p. 181; Scherman, *Gesch. der ind. Visionslitt.*, Leipzig, 1892, p. 91 ff.; Aug. *de Cura pro mortuis*, 12; Greg. the Great, *Dial.* iv. 36). Or the dream experiences may occur in ordinary sleep, or accompany the hallucinations of illness. In some cases they have assumed the stereotyped form of a folk-tale. A Maori woman told, on returning to consciousness, how her spirit descended to *Reinga*, the place of the dead, exactly like this world. Her father's spirit commanded her to return and look after her child, and to beware of eating the food of *Reinga*. She was pursued, on leaving, by two spirits, but escaped them by throwing down a root which they stayed to eat. Then her spirit rejoined her body (Shortland, *Trad. and Sup. of the N. Zealanders*, 1856, p. 150; for another tale see his *Maori Rel. and Myth.*, 1882, p. 45). In a story from the Hervey Islands the spirit of a man apparently dead descends to Hades, but by a stratagem he escapes being eaten by the hag Miru, its ruler, who bids him return to earth (Gill, *Myths and Songs of the S. Pacific*, 1876, p. 172). In a Japanese story Ono-no-Kimi died and went to Hades, but was sent back by its ruler because his allotted time was not exhausted (Hearn, *Unfamiliar Japan*, 1894, i. 68). Many stories of dream visits to the land of the dead are found among the American Indians, with elaborate descriptions of that land, based on current beliefs, and telling of the dangers of the way, the narrow bridge spanning the river of death, and the life of the spirits (Schoolcraft, *Ind. Tribes*, Philad. 1853–6, iii. 233; Tanner, *Captivity and Adventures*, N.Y. 1830, p. 290, etc.).

Savage medicine-men very commonly claim the power of sending their spirits during a trance into the under world. Thus the Eskimo *angekok* is securely bound and, during a dark séance, visits the *torngak*, or spirit, in Hades. He then appears unbound and gives an account of his visit (Crantz, *Hist. of Greenland*, 1820, p. 269). In Melanesia a wizard sent his soul during a trance to *Panoi* (Hades), where it spoke with the dead about whom their friends were anxious, and professed to be able to bring them back to earth. This is a common belief in all the islands of the group. Burlesque parodies of these and other tales of descent exist (Codrington, *The Melanesians*, Oxford, 1891, p. 277). Sorcerers in Borneo who have visited the under world will show a piece of wood or stone given them by the spirits there (*L'Anthrop.*, Paris, x. [1899] 728; cf. ANCESTOR-WORSHIP, vol. i. p. 429[a]). Among the Karens, necromancers claim the power of going into the unseen world to bring back the *la*, or soul, of a sick man when it has wandered away (Mason, *JASBe* xxxiv. 201). In Siberia the shaman is supposed to conduct the souls of the dead to the lower world and there secure for them a favourable welcome by gifts of brandy (Radloff, *Aus Sibirien*, Leipzig, 1884, ii. 52 f.). For a Chinook instance of the souls of shamans visiting Hades to recover the soul of a sick man, see CHINOOKS, vol. iii. p. 562.

Visions of Hades were doubtless known to the ancient world, and they may have suggested an artificial introduction of them for religious or other ends. Thus, at the sanctuary and cave of Trophonius in Lebadeia, the inquirer, after a due ritual, descended to an underground region, where he was perhaps shown scenic representations of Hades, or, under the influence of mephitic vapours or narcotics, fell into a trance and experienced in dream what he deemed to be realities. These experiences, to judge from the vision of Timarchos, were visions of the Other-world, of Tartarus and Elysium (Plutarch, *de Gen. Socr.* 21 ff.; Paus. ix. 39. 5 ff.). But a literary use was also made of tales of such dream experiences, and there are many accounts of descents to Hades or visions of the Other-world, *e.g.* the visit of Odysseus, Plutarch's stories of Thespesius and Antyllus (*de Tard. Just. Div.*; Euseb. *Præp. Evang.* xi. 36), the visit of Æneas, Lucian's story of Cleodemes (*Philops.* 25), as well as burlesque accounts of descents to Hades—that of Dionysos in the *Frogs* of Aristophanes, and that of Menippus told by Lucian (see also Rohde, *Psyche*, Freiburg, 1894, p. 289). The scenes of Hades, as described in Homer, were reproduced by Polygnotus on the walls of the Lesche at Delphi (Paus. x. 28. 4).

A late Egyptian demotic papyrus of the 1st cent. A.D., but probably representing a story of far earlier date, tells how the high priest of Memphis, Setne Khamuas (*c.* 1250 B.C.), descended, under the guidance of his son, Si-Osiri, to the *Tê* or *Duat*, where he saw the judgment of souls and the various halls of Amenti, or Hades, and the state of the dead there (Griffith, *Stories of the High Priests of Memphis*, Oxford, 1900, p. 45 ff.). In Hinduism and Buddhism there are many stories of visions of hell or of visits paid there, perhaps based on actual visions induced by meditation and asceticism, and shaped in accordance with the current dogmatic beliefs. They served to buttress the latter, and were perhaps regarded as reminiscences of actual experiences in a previous existence. In other instances they are told of people who fell into a trance, or whose souls were summoned too soon to the Other-world and were then permitted to return to the body (Scherman, 91 ff.). In later Parsiism the *Book of Ardā Vīrāf* (ed. Haug and West, Bombay, 1872) relates how this pious Parsi priest was selected by lot to take a narcotic, so that his soul might go, while he was still alive, from this world to the next and bring back a report of the fate of souls. The bliss of the righteous and the tortures of the wicked are described in detail, and the book is still read and firmly believed in by all classes of the Zoroastrian community. Several editions of it exist in both prose and verse. In later Judaism the authors of such works as the *Book of Enoch* (ed. Charles, Oxford, 1893) and the *Book of the Secrets of Enoch* (do. 1896) describe visits to Sheol and to the various heavens, with their different divisions for the righteous and the wicked. There can be no doubt that most of these narratives, especially where they describe the punishments of sinners and the bliss of the righteous, served the purpose of teaching a dogmatic eschatology and of urging men to live righteously.

The same phenomena are met with in the history of Christianity. There are records of genuine visions of the Other-world such as have been experienced by the devout or imaginative in all ages, and based on recollection of what had been heard or read, as Tertullian shows of a female visionary known to him (*de Anima*, 9). Of such a class are the visions of SS. Perpetua and Saturus, with their reminiscences of passages in canonical or apocryphal Scriptures (Robinson, *Passion of S. Perp.* [*TS*, Cambridge, 1892, i. pt. 2]). But there are also innumerable literary versions of visionary or actual visits to hell, purgatory, and paradise, perhaps based on these, but in many cases borrowing from pagan or Jewish sources. This is most marked in the description of the various divisions of Hades (found in Egyptian, Oriental, and Jewish instances), and in the frequent mention

of the narrow and dangerous bridge of the under world, an early instance of which occurs in the *Dialogues* of Gregory the Great (iv. 36; see also art. BRIDGE). The prototype of all these visions, to which Dante gave immortal form, is found in the *Apocalypse of Peter* (c. A.D. 100–150), on which many later visions are based. These stories (which, with wearisome iteration, tell how the seer or visitor or, in some cases, the soul of the dead person raised to life by an apostle or saint[1] was led through the regions of torment, of purgatory, or of paradise) were highly popular in the Middle Ages, when there existed a passionate desire for exact details of the Other-world, and they were used to enforce dogmatic teaching. But they were burlesqued as early as the 11th cent., and also in later times in the *fabliaux*, by the troubadours, and by Rabelais, who helped to discredit them (Wright, *S. Patrick's Purgatory*, 1844, p. 47; Lecky, *Hist. of Europ. Morals*[9], 1890, ii. 232; Rabelais, bk. ii. ch. 30). Their scenes were also reproduced by art, *e.g.* on the walls of ancient Greek churches, just as Dante's poem affected Italian painting from the time of Orcagna onwards (see Heuzey, 'Les Supplices de l'Enfer d'après les peintures byzantines,' *Ann. de l'assoc. pour l'encourag. des études grecques*, Paris, 1871, p. 114 ff.). The cave of Trophonius had also its double in the Irish St. Patrick's purgatory, exploited from at least the 12th or 13th century. After ritual preparation, the pilgrim was allowed to enter, and, in the windings of the cavern, under the influence of its hot vapours, he fell asleep. In most cases his dreams took the form of preconceived notions of purgatory, but this was not always the case, and sometimes the pilgrim perished in the cavern (Wright, 139, 153, 135). Possibly some scenic representations may have been used, and there seems to have been actual bodily experience of pains and torments which remitted some of the future penalties. Several literary accounts of visits and visions at this famous spot, beginning with that of the descent of Owain in 1153 by Henry of Sawtrey (of which English and French versions exist [D. Laing, *Owain Miles*, Edin. 1837; Marie de France, *Poésies*, ed. Roquefort, Paris, 1820, vol. ii.]), had a great vogue in Europe.

In the Norse Elder Edda the 11th or 12th cent. *Sólarliódh*, ascribed to Sæmundr, describes a son's vision of his dead father, who tells him of his death, and how he at last reached the place of torment, and saw the tortures inflicted there on various classes of sinners. Then he describes the joys of heaven. Pagan and Christian ideas are curiously intermingled, as if the poet had held the two faiths at once, or was a heathen with glimpses of Christianity (Vigfusson-Powell, *Corp. Poet. Boreale*, Oxford, 1883, i. 202 ff.).

3. Descent to rescue a dead relative.—This series of stories is one of the most pathetic in all mythology, showing man's instinctive belief that love is stronger than death, while the savage examples are quite as touching as those from higher levels. Of the savage legends, the most numerous versions occur among the Amer. Indians, Polynesians, and Melanesians.

A Wyandot story tells of a brother who went to the land of souls to recover his sister. He met an old man, who gave him a calabash in which to put her spirit. After some failures he captured her, and hastened back to earth. There he summoned his friends to witness the revival of the dead body, but a woman opened the calabash, and the spirit flew back to the land of souls (Schoolcraft, ii. 235). There are numerous variants of this tale, and generally, through curiosity or the breaking of a tabu, the soul escapes (see Dorman, *Prim. Superst.*, Philad. 1881, p. 43; Lafitau, *Mœurs des Sauv. amér.*, 1724, i. 402; Charencey, *Le Folklore dans les deux mondes*, Paris, 1894, p. 286 ff.; *NR* iii. 530 f.; BLEST, ABODE OF THE [Prim. and Savage], vol. ii. p. 685[b]). In some cases a woman's spirit is allowed to return to her husband without his visiting the land of souls, but again he loses her, or he himself dies through breaking a tabu (*2 RBEW* [1883] 103; *NR* iii. 531).[1] Tales of the latter class are analogous to those of the Dead Mother or Wife cycle (*CF*, p. 42 f.; Sandys' tr. of Ovid's *Metam.*, Oxford, 1632, p. 354; cf. the Maori tale, § 2 above). In a Polynesian tale a woman fell into *Avaiki*, or Hades, and her husband descended to release her from the captivity of the spirits. He heard her crying in the hut where she was imprisoned, and, going to her, bade her escape. He remained, imitating her voice, and then fled. The spirits pursued, but he, catching his wife in his arms at the chasm which led up to earth, escaped with her just in time (Gill, 221 ff.). A beautiful Maori story tells of Pané, who died of love for Hutu. Hutu prayed to the gods, who showed him the way to *Reinga*, telling him not to touch the food offered him there. He amused the spirits by making them sit on the top of a tree fastened by a rope to the ground. When the rope was let go, they were shot up into the air. Finally, Pané appeared, and took her place by Hutu's side on the tree. When the rope was freed, it caught in the creepers far above, up which Hutu escaped with her to earth (Clarke, *Maori Tales*, 1896, p. 1 ff.; cf. p. 126 for a story of a chief who went to *Reinga* to recover his dead wife). In Melanesia such stories are common. A woman descended to *Panoi* to see her dead brother, first giving herself a 'death-like smell.' She was supposed to be a ghost, and conversed with her brother, who bade her touch no food there lest she should be permanently detained. Again, a wizard, descending in the spirit, took with him a man who wished to recover his wife. He begged her to return, but she said it was impossible, and gave him an armlet for remembrance. He seized her hand, and tried to drag her away, but it came off and her body fell asunder, for in *Panoi* ghosts have a substantial frame (Codrington, pp. 227 f., 286). For other S. Pacific tales, see Bastian, *Allerlei aus Volks- und Menschenkunde*, i. 8, 111 ff.

At higher levels these tales are told of gods, and have become myths. In early Japanese mythology the goddess called 'the Female-who-invites' died and went to *Yomi*, or Hades. Her brother-husband, the Male-who-invites, followed her there and invited her to come back. She told him he had come too late, as she had eaten of the food of Hades, but that she would consult its deities. Meanwhile he was not to look at her. Impatient at her absence, he lit one of the teeth of his comb and found her rotting. He thus put her to shame, and she sent the Ugly Female of Hades to pursue him; but he stayed her by casting articles behind him which changed to food, which she stopped to eat.[2] She then sent the Thunder Deities and warriors in pursuit, but he smote them. Finally, she pursued him herself, but he blocked the way with a great rock. The goddess is now the Great Deity of Hades (*Kojiki*, tr. Chamberlain, Suppl. to *TASJ* x. [1883] 34 ff.).

In Babylonia, the poem describing the Descent of Ištar into *Aralû*, or Hades, contains elements of ancient origin, and presents several problems for solution. Ištar demands entrance to 'the land whence there is no return.' She has come to weep over heroes who have left wives, over wives taken from husbands, and over the only son (Tammuz) taken away before his time. By order of Allatu, she is stripped of her dress and ornaments at each of the seven gates, and then struck with disease. There is now desolation on earth, life dies away, and the gods lament her disappearance. Ea creates Ud-dushu-namir, and sends him to *Aralû* to demand the Water of Life as a preliminary to the release of Ištar. Allatu is compelled to cause Ištar to be sprinkled with it. She is led back, and at each gate her clothing and ornaments are restored to her. The story, as connected with Tammuz, must have described his restoration by means of the life-giving water at the instance of Ištar, come in quest of him—an incident enacted in the Tammuz ritual. But this is not set forth in the poem, though there is an obscure reference to Tammuz at the end, in the form of ritual directions to mourners, to whom the poem appears to have been addressed. Pure water is to be poured out for Tammuz. The poem as it stands may have been derived from two myths, one telling how Ištar rescued Tammuz from the dead (since his restoration was annually

[1] See 'Acts of Thomas,' 'Hist. of John,' in Wright, *Apoc. Acts*, 1871, ii. 23, 149; Budge, *Gods of the Egyptians*, 1904, i. 208; Preaching of Andrew,' 'Story of John,' in Lewis, *Myth. Acts of Apostles*, 1904 pp. 7, 163.

[1] Cf. the Greek myth of Protesilaus and Laomedia.

[2] This is the *Märchen* formula of the Transformation Flight, already met with in a Maori instance, § 2.

celebrated), the other telling of the rescue of Ištar from Hades at the intervention of the gods. The present poem bears more abundant traces of the latter myth than of the former, though it also hints at a descent for purposes of rescue; Ištar descends violently, and threatens to break down the gates (see Talbot, *TSBA* iii. 118 ff.; Sayce, *Rel. of the Ancient Bab.*, 1887, p. 221 ff.; Jastrow, *Rel. of Bab. and Assyria*, Boston, 1898, pp. 563 ff., 588 f.; see *ERE* ii. 315[b]). The recovery of Tammuz by Ištar is also suggested by the fact that there was a Greek myth telling how Aphrodite (Ištar) went down to Hades to redeem Adonis (Tammuz) from Persephone (*Apol. of Aristides*, § 11). At the sanctuary of the Syriac Aphrodite sexual relations with the priestesses representing her were believed to ransom one from Hades, as Adonis had been freed from it (Euseb. *Vita Const.* iii. 55; Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907, p. 72).

The so-called prayer of a Navaho shaman has a certain likeness to the Ištar myth. It is a kind of prayer-spell, describing the action of the gods as the shaman desires them to act. He fears his soul may be detained by sorcery in the under world. The war-gods are therefore to descend and rescue it from the 'underground witch.' They pass gate after gate, sentinel after sentinel, of the lower world, by magical means, and there find the suppliant's soul. Returning through chamber after chamber, they bring it back to him, so that 'the world before me is restored in beauty' (Matthews, *Amer. Anthrop.*, 1888, i.).

The Greeks had several descent-myths, that of Orpheus being the best known, thanks to Vergil's version. After the death of Eurydice her image haunted him, until he determined to seek her in Hades. He descended there, and the sweet notes of his lyre enchanted its denizens. Pluto and Persephone were moved to pity. Eurydice would be restored on one condition—that Orpheus should precede her and not look back till they arrived on earth. Just before reaching the fatal limit, his love overcame him. He looked round and lost her for ever (Verg. *Georg.* iv.; Paus. ix. 30. 4–6; Apollodorus, i. 3. 2).

The Orphic poem Κατάβασις εἰς Ἅιδου has not survived, but it may have had for subject the descent of Orpheus. Foucart thinks it was a ritual poem containing instructions for the dead in Hades, like the Orphic tablets engraved on sheets of gold, and the Egyptian *Book of the Dead* (*Recherches sur l'origine et la nature des mystères d'Eleusis*, Paris, 1895, p. 7; cf. also Dieterich, *Nekyia*, Leipzig, 1893, p. 128 ff.).

Dionysos, as certain myths taught, was also said to have descended to Hades to bring back Semele, and, according to local Argive tradition, he descended through the Alcyonian lake, Polymnus having shown him the way. His return from Hades was annually celebrated there, and in all probability the myth had become fused with that of his resurrection (Paus. ii. 31. 2, 37. 5; Apollod. iii. 5. 3). Another myth told how Alcestis, the wife of Admetus, having willingly died in his stead, was delivered by Herakles, who, seeing the grief of her husband and people, descended to Hades to rescue her from death. In a variant of the myth, Persephone was her rescuer (Apollod. i. 9. 15; Hyginus, *Fab.* 50; Eurip. *Alcestis*). Another myth—the subject of a lost poem of Hesiod—related that Theseus agreed to assist Pirithoos in carrying off Persephone from Hades. They descended there, but, according to one version, were outwitted; for, expecting to receive gifts, they sat down on the chair of Forgetfulness, to which they were held fast by coils of serpents. Herakles caused the release of one or both when he descended to fetch Cerberus (Paus. ix. 31. 5, x. 29. 2; and for a euhemerized version, see i. 17. 4, and Plut. *Thes.* 31, 35; *Epit. Vat. ex Apollod. Bibl.*, ed. Wagner, Leipzig, 1891, pp. 58, 155 ff.). Cf. also the myth of Castor and Pollux. For the Pythagorean descent, see Rohde, 456; Dieterich, 129.

In Scandinavian mythology descent-myths are connected with Balder's death. Hermodr offered to descend to Hel to recover Balder. Taking Odin's horse, he travelled for nine days through dark valleys till he reached the river Gjöll, crossed by a bridge covered with gold and guarded by Modgudr. After some delay she permitted him to cross, and at last he reached the place of the dead and saw Balder. He begged Hela to permit Balder's return, but she made his release conditional upon all things mourning his loss. Hermodr obtained Balder's ring as a token of remembrance, and returned to the gods. All things were begged to mourn, and all did so save the witch Thok (= Loke), who said she would weep with dry eyes and Hela would keep her prey (Dasent, *Prose or Younger Edda*, Stockholm, 1842; see also § 4).

In Hindu mythology a descent-myth is told of Kṛṣṇa, who went to the kingdom of Yama and demanded the dead son of his pupil Sāndīpani. After having conquered Yama in fight, he accomplished his purpose (*Harivaṁśa*, v. 4913 ff., in Scherman, p. 64). Not quite parallel, but showing the possibility of rescuing a dead person from Hades, is the story of Yama's marriage to Vijaya. He cautioned her not to go near the southern part of his domain; but curiosity tempted her, and there she saw the wicked, including her mother, in torments. She told Yama she would leave him unless he consented to release her mother, but this took place only after the due performance of certain ceremonies (Wilkins, *Hindu Myth.*[2], Calcutta, 1900, p. 83 f.). In a Tibetan Buddhist legend, Maudgalyāyana learns from his father that his mother is in hell. At once he sets out, and descends deeper and deeper. The doors open before him, and none of the demons opposes him. When he finally discovers her, he offers to take her place; but this is refused. Finally, Buddha is appealed to, and he visits hell, with the result that all the sorrowing beings are re-born in heaven. The mother is still subjected, for her sins, to certain torments; but, at the exhortation of her son, she feels shame, and advances by re-birth till she reaches the god-region where her husband is (Scherman, 80 ff.; and for a Chinese parallel, Edkins, *Chinese Buddhism*, 1880, p. 225 ff.). In a Chinese tale the Buddhist Lo Pah, on passing into paradise at death, realized that his mother was in hell. He at once descended there, and by his virtues and intercessions succeeded in rescuing her (*Asiat. Journal*, xxxi. [1840] 211).

4. Descent to obtain a boon, etc.—Some examples from the lower culture may be cited first. In an Eskimo tale a man, to obtain luck, is advised by his mother to raise a stone and descend through the opening to the under world, where he will receive a piece of sealskin which will ensure good luck (Rink, *Tales and Trad. of the Eskimo*, 1875, p. 461). In an Ainu story a youth defrauded of his heritage went to Hades to get his father's help. He arrived at a village and saw his father, but (in accordance with Ainu belief) could not make himself heard by the spirit until he entered another spirit and spoke through him. His father told him he had left him a share, and with this information he returned to earth, and his brother assigned a portion to him (Batchelor, *Ainu of Japan*, 1892, p. 228). The Esthonian epic relates how its hero found, in the cave leading to Hades, three girls who enabled him by magic to overcome Sarvik, its lord. Later he penetrated farther and reached the gates of Porgu (Hades), where its hosts advanced to meet him at a river of pitch crossed by a bridge. He defeated them, conquered Sarvik once more, and returned to earth with his treasures (Kirby, *Hero of Esthonia*, 1895, i. 100, 124). In the Finnish *Kalevala* its hero Wäinämöinen, after long travel through a forest, induced the maiden who acts the part of Charon to ferry him over to *Tuonela* (Hades), where he desired to

learn certain magic words from its wise lord. By avoiding the beer of *Tuonela* he was able to return and describe on earth the horrors he had seen (Schiefner, *Kalewala*, Helsingfors, 1852, rune 16). A Japanese myth tells how the deity Oho-na-mochi went to Hades to seek counsel of its lord, whose daughter he married. The lord of Hades tried to compass his death by setting him tasks, but, after help from his wife and a friendly mouse, he finally escaped with the treasures of the god, and forced him to give the advice he sought (Aston, 106; *Ko-ji-ki*, 71 ff.). This myth of descent includes some common *Märchen* formulæ. Herodotus (ii. 122) relates an Egyptian story of Rhampsinitus (Ramses III.) to the effect that he descended to Hades and played at dice with Demeter (Isis), sometimes winning, sometimes losing, and that he ascended, bringing with him as a gift from her a napkin of gold.

This tale is not corroborated from the monuments or texts. Possibly it is a distorted form of the myth of Thoth's winning the five days of the epact from the moon at a game of dice (Plut. *de Isid.* 12). Sayce suggests that the myth may have been affixed to the name of Ramsea in consequence of a representation on his temple of his playing at dice with a woman (*Ancient Emp. of the East*, 1883, p. 92). The dead played at a game with counters, and the story of Setne tells how, having descended into the tomb of Neneferkaptah in order to obtain his magical book, he played a game at draughts with him and was beaten, but eventually escaped with it by magical means (Griffith, 13 ff.).

A Hindu myth in the Kaṭha-Upanishad tells how Nachiketas, delivered by his father to death, remained without food in the kingdom of Yama, who granted him fulfilment of three wishes. Nachiketas then desired his restoration to life and reconciliation to his father, the knowledge of the sacrificial fire, and the knowledge of the nature of death. Yama offered him gifts if he would forego the last wish, but he was insistent and it was granted to him (Oldenberg, *Buddha*, London, 1882, p. 55). The visit of Odysseus to the shades to inquire of the ghost of Tiresias (*Od.* xi.), and the descent of Æneas to speak with his father Anchises (*Æn.* vi.), are well-known poetic examples of seeking a boon from the world of the dead. The myth of Psyche, related by Apuleius in his *Metamorphoses*, tells how, among the tasks exacted of her before she recovered Eros, was that of going down to Hades to bring back from Persephone a box of beauty. Through innumerable perils, and sustained by the love of Eros, she succeeded and returned to earth, where she opened the box, to find, not beauty, but a deadly sleep. The myth of the descent of Herakles to bring the dog Cerberus from Hades (one of the labours exacted by Eurystheus) is mentioned by Homer, who says that Hermes and Athene escorted him (*Od.* xi. 626, *Il.* viii. 367). But the myth was later amplified, and we learn how he descended by the entrance near Cape Tænarum. After many exploits, including the liberation of Theseus, he demanded permission from Pluto to carry off the hound. This was granted provided he did it without weapons. On the shore of Acheron he met Cerberus, and, seizing him by the throat, ascended with him to earth, showed him to Eurystheus, and then returned with him to Hades (Apollod. ii. 5. 12).

Those who have seen a parallel between the labours of Herakles and the adventures of the Bab. Gilgameš, and a possible derivation of the former from the latter, point to the likeness between the journey of Herakles to Hades and that of Gilgameš beyond the limits of the world, through dangers and darkness, across the ocean and the Waters of Death (probably connected with the River of Death in *Aralû*, or Hades), to the paradise of Utnapištim, that he might learn from him the secret of immortality (Sayce, *Rel. of Anc. Egypt and Bab.*, 1902, pp. 436 ff., 446; *ERE* ii. 316[a]; Jastrow, 516). In another Bab. myth, the purpose of which may have been to show how a god superseded the ancient goddess of Hades, a conflict having arisen between the gods and Eresh-kigal, goddess of Hades, Nergal was chosen to descend to the under world. He arrived there, passed through gate after gate (fourteen in all), dragged the goddess from her throne, and would have slain her. But she begged for mercy, and offered to become his wife and to give him dominion in Hades, which he accepted (Winckler-Abel, *Der Thontafelfund von El-Amarna*, Berlin, 1891, iii. 164; Sayce, 288, 428).[1]

In Scandinavian myth, Odin, in order to discover the cause of Balder's evil dreams, rode down to Niflhel, till he reached the hall where mead was standing brewed for Balder. He roused the Sibyl from her barrow by spells, and learned from her the tidings of Balder's fate (Vigfusson-Powell, i. 181 ff.). For Celtic myths of visits to the under world (or to Elysium) to obtain the gifts of civilization, see BLEST, ABODE OF THE (Celtic), § 7. Mandæan mythology presents an interesting myth of the descent of Hibil Ziwā, before the creation of the world, to the lower realms, in order to forestall the revolt of their rulers against the powers of light. He descends in the might of the great Raza (an embodiment of the mysterious Name) to the seven worlds of darkness (not, of course, the regions of the dead).

In each world to which he descends he remains for many thousands of years, unknown to and unseen by its lord. Finally he reaches the seventh and lowest world, and speaks to its lord, the giant Krūn. Krūn partially swallows him, but Hibil cuts his inwards to pieces and is disgorged, and obtains from him a pass and seal-ring by which the might of the opposing demon will be brought to nought. Then he ascends, sealing the doors of each world so that none can pass through. In the fourth world he takes the form of its ruler and obtains by craft the Memrā and Qemrā, the strength of the world of darkness. By a similar change of form he learns the secrets of the third world, and obtains its magic mirror. Then he leaves it, taking with him Ruhā, daughter of its lord, pregnant with Ur, the demon who is to oppose the worlds of light. Finally, after sealing all the doors of the worlds, he returns to the light kingdom, and is hailed with joy. The remainder of the myth describes his repeated unseen visits to the imprisoned Ruhā and Ur, his robbing Ur of his magical talismans, and his final overpowering of him (Brandt, *Mand. Schriften*, Göttingen, 1893, p. 138 ff.). The story is full of well-known folk-tale formulæ, and, while the descent through seven worlds recalls that of Ištar, the main incident is based on that of Marduk's strife with the dragon of chaos, Tiamāt (cf. Brandt, *Mand. Rel.*, Leipzig, 1889, p. 182). Another myth relates how Mānda d'Hayyā descends to the lower worlds and conquers Ruhā and Ur. Afterwards Ruhā and her sons assemble on Mt. Carmel and plan a revolution against the powers of light. Mānda appears among them in their own form, whereupon they desire to make him their ruler. He agrees on condition that they reveal to him the secrets of their mysteries. When they have done this, he manifests himself in his true form and overpowers them (Brandt, *Mand. Rel.* 34, 38; Norberg, *Codex Nasaræus*, 1815–6, i. 223).

For a Buriat instance of descent to seek a boon, see *ERE* iii. 9[a], and for a Quiché myth of two heroes descending and overcoming the lords of the under world, *ib.* 308[a].

5. Descent out of curiosity.—This motive is occasionally met with. In an Ainu example a youth, learning that a certain cave led to Hades, entered it, and, after passing through darkness, found himself in a beautiful land where he saw many of his friends and relatives. On his return he met a spirit descending, which proved to be that of a dear friend who had just died (Batchelor, 226; cf. a variant in Chamberlain, *Aino Folk-tales*, 1888, p. 42, where the visitor is ignominiously treated and never wishes to see Hades again). Several Norse tales, reminiscent of earlier pagan beliefs, describe the adventures of mortals who set out to seek the Land of Living Men, part of the older under world (for these see BLEST, ABODE OF THE [Teutonic], § 4; and for Amer. Ind. instance, *ERE* iii. 230[a]).

[1] Jastrow (586) thinks that it may originally have been told of Nergal that, like Tammuz, he was *carried off* into Hades.

6. Descent to free the damned.—The freeing of a soul in pain in Hades has already been found in Hindu instances. This idea, as well as that of the general release of the damned or the amelioration of their tortures, is a natural outgrowth of existing legends of rescue from Hades, but it occurs mainly in Eastern instances. Several myths of this kind are found in Hindu and Buddhist mythology.

In the *Rāmāyaṇa* (vii. 21 f.), Rāvaṇa enters hell, and, as he enters, the darkness flies away, and the damned, whom he desires to free, experience an unexpected happiness. He encounters Yama in fight, and would have been worsted but for the help of Brahmā, to whose will Yama bows and leaves Rāvaṇa victor. In the *Mahābhārata* (xvii. 3–xviii. 4), Yudhiṣṭhira is subjected to a last test by the gods. When he reaches heaven, he learns that his relations are in hell, and beseeches the gods to let him share their dwelling. 'What is heaven without them? Only where they are is my heaven.' He is conducted thither, and, on his coming, a cool wind arises and the torments cease. He refuses to leave hell, since his presence makes its denizens happy. Now the gods appear, and he learns that all he has undergone is but a trial of his faith. For a descent of Viṣṇu with similar results to the damned, see Dubois, *Hindu Manners*, Oxford, 1897, p. 706. In other cases, those who have transgressed slightly and are sent to hell suffer only formally because of their virtues, and are given an opportunity to free the damned, *e.g.* Janaka in the *Padma Purāṇa* (Wilson, *JRAS* v. 295).

In the *Lalita Vistara*, at several moments of Buddha's existence—when he descends from heaven, on his journey to Bodhimaṇḍa, and at Benares—a marvellous light is said to have been projected from his body which lit up by its splendour the 3000 worlds, caused all evil, suffering, and fear to cease, and filled all beings with joy. This extended even to the hell Avichi, the region of the *pretas*, and the kingdom of Yama. Darkness was dissipated, and all beings there suffering from thirst and hunger, or other torment, found themselves free from pain and were filled with great joy. At Buddha's birth he prophesies that, in order to destroy the fires of hell, he will cause the rain from the great cloud of the law to fall, and all beings there will be glad. At that moment the sufferings of all in Avichi and the kingdom of Yama were appeased (*Lal. Vist.* 51, 240, 257, 341, 79, 80, in *AMG*, vol. vi., Paris, 1884). The North Buddhist legend of Avalokiteśvara, 'he who shows the damned the way to Nirvāṇa,' furnishes a striking instance of this group of descent-stories. It was said in the *Saddharma-Puṇḍarika* (c. 24) that he would bring all misery to an end, including the torments of Yama's kingdom. To effect this, he visits the hell Avichi as a glorious prince clad in light, and frees the victims from their pains. Mild air takes the place of flames, the cauldron of boiling water in which men suffer bursts, and the sea of fire becomes a pool with lotus flowers. Hell becomes a place of joy, and Yama shows him reverence. The saving work is pursued in the city of the *pretas*, where Avalokiteśvara frees its denizens from torments and, granting the gift of right knowledge to the damned, leads them as Bodhisattvas to the Sukhāvatī world (Cowell, *JPh* vi. [1873] 222 ff.; for a Tibetan legend of a similar kind, see Rockhill, *Land of the Lamas*, 1891, p. 331 f.). In a Chinese Buddhist myth, the soul of the goddess Kwanyin visits hell in trance, and by her invocation of Amitābha a rain of flowers falls, the implements of tormeots break, hell is changed to Paradise, and the damned return to earth. The lords of hell desire to hear this mighty prayer, and their wish is granted on the stipulation that all souls attain to redemption. At this point she awakes from her trance (Eitel, *Three Lect. on Bud.*, 1871, p. 31; de Groot, *AMG* xi. [1886] 188 ff.). In a Tibetan myth, as soon as a new Tathāgata descends to the under world and sounds the mussel-trumpet (=proclamation of the sacred doctrine), all who hear its sound are saved and go to the heaven Tuṣitā (Scherman, 66, note 2).

In other instances the belief in metempsychosis is utilized to show the experiences of the narrator in a former state. While in hell, a Brahman experiences a sudden cessation of torture and a joy as of paradise. This is caused by the arrival of a king, Vipaścit, who has committed a small fault. Having expiated it, he is bidden to go to heaven; but the damned beg him to remain as his presence relieves their miseries. Yama and Indra beg him to go, but he demands that his virtues may ransom sinners from hell. He is raised to a higher state, and the narrator and others in hell attain a new existence free from torture (*Mārkaṇḍeya Purāṇa*, xiii ff., in Scherman, 38 ff.).

In later Judaism similar ideas were current, sometimes in connexion with the Messiah. Thus in *Bereshith Rabba*, regarding the appearance of Messiah at the gates of Gehinnom, it is said:

'But, when they that are bound, they that are in Gehinnom, saw the light of the Messiah, they rejoiced to receive him, saying, He will lead us forth from this darkness, as it is said (Hos 13^{14}), "I will redeem them from hell, from death I will set them free," and so says Isaiah (35^{10}) "The ransomed of the Lord will return and come to Zion." By "Zion" is to be understood Paradise; and in another passage, "This is that which stands written, We shall rejoice and exult in Thee. When? When the captives climb up out of hell, with the Shechinah at their head"' (Weber², 358; Bertholdt, *Christologia Judæorum*, Erlangen, 1811, p. 170 ff.).

In *Yalkut Shim'oni* the godless are rescued from hell by the righteous dead and pass to eternal life, while in the *Zohar* the righteous or the patriarchs are said to descend to hell to rescue sinners from the place of torment (Gfrörer, *Jahrhundert des Heils*, Stuttgart, 1838, ii. 77, 184; Weber², 343).

Later Muhammadan theology describes how the righteous souls intercede for their brethren detained on the bridge which passes through hell to Paradise. They are sent to hell to see if any there have faith, and finding such they bring them out. These are then washed in the Water of Life and admitted to Paradise (*JThSt* vi. [1904] 35).

In Gnosticism (save in the case of Marcion [Iren. *adv. Hær.* i. 27. 3]) the descent of Christ to Hades (see next art.) is transformed, and shows the influence of pagan myths of a deliverer. The Divine Æon descends not to Hades, but to the dark earth-world to conquer the world rulers and to spoil them of spiritual souls imprisoned in bodies. As He passes through the spheres of the heavens He is invisible, or takes the form of these rulers, and so deceives them or robs them of their might (Iren. i. 23. 3, i. 30. 12; Hippol. viii. 10; cf. *Ascension of Isaiah*, 10^{3}–11^{19}). Through Gnosticism the later form of the orthodox descent idea, especially in the tradition of the binding of Satan, may have received a pagan colouring. Gnosticism knew also of a descent of the Divine Æon out of the Pleroma to rescue the fallen Sophia (Iren. i. 4. 1 f.), and, in the teaching of the Valentinian Theodotus, He, on His return from earth, transfers the souls of the righteous in the 'place of rest' to a higher region, the place of Sophia (Clem. Alex. *Excerpt. ex Theod.* c. 18).

In various Christian documents the idea of the transference of souls from the place of punishment to a place of bliss, at the prayer of saints on earth, is found, e.g. *Acts of Paul and Thecla*, § 28; *Passio Perpetuæ*, § 7; and *Test. of Abraham*, § 14. In the *Apocalypses of Paul and of the Virgin*, in which they visit hell, they and the angels and saints pray for remission of tortures to the lost. Christ descends and announces that on the Lord's day or on the day of Pentecost this will be granted.

7. In many European folk-tales a visit is paid by a mortal (1) to a subterranean fairy-land to rescue a stolen person, to capture a treasure, etc., or (2) to a land below the earth or the sea ruled by a mysterious personage. The subterranean land is doubtless a reminiscence of the old pagan under world, and the submarine region the old mythic world of sea-divinities (*CF* 44; Scott, *Minstrelsy*, 1839, p. 195 f.; Wright, 85, 87). Folk-tales also recount visits to the Christian hell, where the visitor usually outwits the devil (Le Braz, ii. 337; Dottin, *Contes et légendes d'Irlande*, 1901, p. 164; Larminie, *W. Irish Folk Tales*, 1893, p. 188).

8. The tabu regarding not eating the food of Hades has been found in several of the tales and myths cited, and it also occurs in stories of visits to fairy-land, as well as in many other myths and eschatological beliefs.

Pluto secretly makes Persephone eat seven seeds of a pomegranate, and she is then bound to him in Hades (*Hom. Hymn to Dem.* 399). In Egyptian belief the dead who ate and drank the food and water offered them by a goddess could not return without special permission (Maspero, *Études de myth. ég.*, Paris, 1893, ii. 226). On the Orphic tablets buried with the dead, they are bidden to avoid a certain well in Hades (Dieterich, 86). Those who visit Yama's kingdom as guests are bidden not to eat his food (Muir, *Orig. Skr. Texts*, 1858–72, v. 320). For Teutonic instances, see *ERE* ii. 709b, and for a Chinook example, iii. 562b. The same tabu applies to the visitor to Fairy-land, the classic example being found in the ballad of *Thomas of Ercildoune*. See also Tylor, ii. 47 ff. Scott, in 'Wandering Willie's Tale,' *Redgauntlet*, ch. 12, speaks of the visitor to hell refusing 'the devil's arles, for such was the offer of meat and drink.'

The result of breaking the tabu—detention in Hades, etc.—is derived from primitive and savage notions regarding food. To eat the food of a strange tribe establishes kinship with them (see COVENANT). Hence to eat the food of gods, ghosts, or fairies makes the eater one with them, and he must remain with them (cf. the Bab. myth of Adapa [Jastrow, 550]; the 'Navajo Mountain Chant' [Mathews, *5 RBEW*, 1887, in which the hero is forbidden to eat animals' food lest he become an animal]; Parker, *More Austr. Legendary Tales*, 1898, p. xi, where the native belief is noted that for a child to touch fungus growing on trees is to make him liable to be spirited away by ghosts).

The tabu imposed on Orpheus—not to look back

—is freqnently found both in ritual and magic, especially in under-world rites (see CROSS-ROADS), and may be explained by the idea that man may not gaze with impunity on what pertains to a supernatural plane, lest it harm him or force him to join the under-world ghosts.

Becker, *Cont. to Comparative Study of the Medieval Visions of Heaven and Hell*, Baltimore, 1899; P. de Félice, *L'Autre Monde, mythes et légendes*, Paris, 1906; Labitte, 'La Divine Comédie avant Dante,' *RDM*, 4th ser., xxxi. 730; J. Monnier, *La Descente aux enfers: étude de pensée relig., d'art, et de littérature*, Paris, 1905; L. Scherman, *Materialen zur Gesch. der ind. Visionslitteratur*, Leipzig, 1892; E. B. Tylor, *Prim. Cult.*[4], 1903, ch. 13; J. A. MacCulloch, *Early Christian Visions of the Other-World*, Edinburgh, 1912. See also the literature cited throughout the article.

J. A. MACCULLOCH.

DESCENT TO HADES (Christ's).—**1. Summary.**—The *Descensus Christi ad inferos* is an article in the doctrinal tradition of the entire Christian Church, but the several main divisions of the Church, viz. the Eastern or 'Orthodox' (§ 2), the Roman Catholic (§ 3), the Lutheran (§ 4), and the Reformed Churches (§ 5), differ greatly from one another in their Confessional interpretations of the doctrine. Moreover, while in Protestantism generally the older views have in modern times been abandoned, yet not a few theologians have essayed to interpret the doctrine on fresh lines (§ 6). These attempts at reconstruction, it is true, fail to find justification either in Scripture (§ 7) or in early Church tradition (§ 8). Nevertheless, the idea of the *Descensus* is well worthy of our interest, as its original meaning, which is not identical with any of the Confessional views (§ 9), is bound up with certain fundamental conceptions in the primitive Christian interpretation of Christianity, and probably asserts itself here and there in the NT as a presupposition in the minds of the writers (§ 10). The endeavour to trace the idea to influences from non-Christian religions is thus quite unwarranted (§ 11). The *Descensus* belongs in fact to a group of primitive Christian conceptions which are inseparable from views then current but now abandoned, and which accordingly can now be appraised only in a historical sense, *i.e.* as expressions of Christian beliefs which, while adequate enough for their time, have at length become obsolete (§ 12).

2. The doctrine in the Greek Church.—In the Greek, or rather the Eastern or 'Orthodox' Churches the two wrongly so-called Ecumenical Creeds which contain the clause 'descendit ad inferos,' viz. the *Symbolum Apostolicum* and the *Symbolum Athanasianum*, are not recognized, while their own Creed, the so-called *Nicæno-Constantinopolitanum*—the third of the 'Ecumenical' Symbols—makes no mention of the *Descensus*. This explains why even the more elaborate catechetical manuals emanating from these Churches sometimes ignore the doctrine altogether (*e.g.* Konstantinos, Κατήχησις, Athens, 1868, p. 46 f.). None the less, however, is the *Descensus* an element in the Eastern tradition. Even discounting the testimony of the *Confessio orthodoxa* of Petrus Mogilas (i. 49 [Kimmel, *Libri symbolici ecclesiae orientalis*, Jena, 1843, p. 118 f.]), and the wholly unauthoritative *Confessio Metrophanis Critopuli* (Kimmel, *Appendix libror. symbol.* etc., Jena, 1850, pp. 73–76), which both show a leavening of Western thought, and whose statements regarding the *Descensus*, therefore, may have been framed under that influence, we have the less questionable evidence of genuinely Eastern Church catechisms of the present day, as also of recent expositions of the Eastern theology.[1]

[1] Cf. Philaret, *Longer Catechism*, quest. 213–216, in *Bibliotheca symbolica*, ed. P. Schaff, ii. (New York, 1890) 477 f.; Bernardakis, Ἱερὰ κατήχησις, Constantinople, 1872, p. 122; Kalliphron, Ὀρθόδοξος ἱερὰ κατήχησις, Constantinople, 1880, p. 58; Macaire (Makarios), *Théologie dogmatique orthodoxe; trad. par un Russe*, Paris, 1859–60, ii. 195 ff.; Androutsos, Δογματική, Athens, 1907, pp. 211–214).

In the 'Orthodox' tradition the *Descensus*, ἡ εἰς Ἅιδου κάθοδος (Androutsos, p. 211), is universally regarded as an act of the soul of Jesus, occurring during the interval in which His body rested in the tomb, and belonging to the *munus regium*—His soul, however, still maintaining its unity with the Godhead or Logos. Other elements universally recognized are the triumph of Christ 'over Hades,' or 'over death,' which ensued as a result of His *Descensus*, His preaching of salvation in Hades, and His deliverance of certain spirits held captive there. Moreover, it is only in appearance that there is some dubiety as to the persons to whom Christ preached and brought deliverance (cf. Androutsos); for such dubiety arises purely from consideration of the difficult passage in 1 Peter, which, together with Ac 2^{27}, Eph 4^{9}, and other texts, is usually cited as the Scripture authority for the doctrine; and it is agreed by all—even by Metrophanes Critopulos (cf. p. 75: εἰς αὐτὸν ἤδη πιστεύσασιν)—that the tradition limits the deliverance effected by Christ to the OT saints who believed in the Messiah. Nay, Makarios duly rejects as unwarranted every attempt to widen this limit, and Androutsos, in whose judgment the 'most probable' hypothesis is that the deliverance was restricted to the OT saints, states explicitly: καθόλου δὲ ἡ δόξα, ὅτι ὑπάρχει καὶ μετὰ θάνατον ἐπιστροφὴ καὶ σωτηρία, προσκρούει πρὸς τὰς θεμελιώδεις τοῦ Χριστιανισμοῦ ἀληθείας (p. 211).

It must, nevertheless, be admitted that the 'Orthodox' tradition shows here some ambiguity and inconsistency. This arises from the prevailing views regarding the destiny of the soul after death. As regards the state of the soul in the period between the particular judgment which follows immediately upon death and the universal judgment at the Last Day, the theology of the Eastern Church, when not dealing with the *Descensus*, recognizes two alternatives: the souls of the dead either enter a provisional state of salvation, viz. Paradise (Lk 23^{43}), Abraham's bosom (Lk 16^{22}), or the Kingdom of Heaven (Mt 25^{34}, Lk 13^{29}, 2 Ti 4^{18}, 2 P 1^{11}); or they go to the provisional place of punishment, *i.e.* Hades (Lk 16^{23}), Gehenna (Mt $5^{22.\ 29f.}$), or 'the furnace of fire' (Mt $13^{42.\ 50}$), from which there is a possible transition to Paradise before the Last Day. But, when the *Descensus* is expressly in question, Hades is manifestly regarded as the habitation of *all* departed spirits (cf. Kalliphron, p. 58: εἰς τὸν Ἅιδην ἤτοι τὸ κατοικητήριον ἁπάντων τῶν ἀπ' αἰῶνος τεθνεώτων). Now, if Paradise be simply one of the sections of Hades, existing as such before Christ's descent into the lower world, one fails to see what advantage or deliverance His action wrought for the OT saints. But, if it was the deliverance from Hades which first secured the entrance of the saints of old into Paradise, then the 'Abraham's bosom' of Lk 16^{22} cannot be identical with the 'Paradise' of Lk 23^{43}, and we ask in vain what it really is. Finally, the union in Paradise mentioned in Lk 23^{43} is assuredly not to be thought of as transient merely, for it is impossible to think of the glorified Christ as remaining permanently in the provisional state of salvation.

3. Roman Catholic doctrine.—These obscurities are avoided by the Roman Catholic doctrine (cf. Wetzer-Welte, *Kirchenlex.*[2], Freiburg, 1882–1903, vi. 124–139, and the literature given there). The *dogma declaratum*, it is true, is simply that Christ—as is affirmed by the *Apostolicum* and the *Athanasianum*—'descendit ad inferos' in the interval between His burial and His resurrection, and that in this *Descensus* His soul 'per se, non per potentiam tantum descendit' (*Conc. Senon.*,

anni 1140; Denzinger, *Enchiridion symbolorum*[10], Freiburg, 1908, no. 385). The Symbol of the fourth Synod of Toledo (633) certainly supplements the stereotyped Article with a clause expressing the purpose of the Descent, viz. 'ut sanctos, qui ibidem tenebantur, erueret' (Hahn, *Bibliothek d. Symbole*[3], Breslau, 1897, p. 236), but that Symbol cannot be regarded as doctrinally binding upon the Catholic Church as a whole, while the *Catechismus Romanus*, which deals very fully with the *Descensus* (i. 6, quæst. 1–6), has only a 'high dogmatic, but no primary symbolic authority' (*Kirchenlex*[2]. xi. 1055). There is, nevertheless, no manner of doubt that every Article in which the modern catechisms agree with the *Catechismus Romanus* is to be claimed as Catholic doctrine in the sense of *dogma formale* (*ib.* iii. 1884). Hence the official Catholic doctrine of the *Descensus* is as follows.[1]

The scene of the Descent is laid in the place 'in quo animae sanctorum ante Christi domini adventum excipiebantur' (*Cat. Rom.* i. 6. 3), *i.e.* the forecourt of Hell (Deharbe, qu. 231, etc.), the *limbus patrum* (Simar, i. 538; *Compendio*, p. 79), or the *sinus Abrahae* (Lk 16^{22}, *Cat. Rom., loc. cit.*). For 'antequam Christus moreretur et resurgeret, coeli portae nemini unquam patuerunt' (cf. He 9^{6-8}; *Cat. Rom., loc. cit.* qu. 6). It was into this *limbus patrum*, accordingly, that Christ in His Spirit—not 'per potentiam tantum,' but 're et praesentia' (*Cat. Rom., loc. cit.* qu. 4)—descended, in order to manifest His power and glory even in the under world (Deharbe, qu. 233. 2; *Cat. Rom., loc. cit.* qu. 6: 'ereptis daemonum spoliis') and to comfort and deliver the souls of the just held captive there, *i.e.* to take them to Heaven (*Cat. Rom., loc. cit.* qu. 3 and 6; Deharbe, qu. 233. 1, and 241). All this is probably clear enough to the laity; but the theologians of the Roman Catholic Church encounter difficulties in regard to Christ's repose in the sepulchre, and the passages Lk 23^{43}, Ac 1^{3}, and 1 P $3^{19f.}$. All Catholic theologians solve the first difficulty in the same way as the *Cat. Rom.* with the help of Scholastic logic solves it:

'Christo jam mortuo, ejus anima ad inferos descendit ibique tamdiu mansit, quamdiu ejus corpus in sepulchro fuit; eadem Christi persona eo tempore et apud inferos fuit et in sepulchro jacuit, propterea quod, quamvis anima a corpore discesserit, numquam tamen divinitas vel ab anima vel a corpore separata est' (qu. 1).

A second difficulty arises from the fact that in Lk 23^{43} the place in which Christ tarried after His death and on the day of His burial is given as 'Paradise.' Now, clear as is the distinction drawn by many theologians, in harmony with the *Cat. Rom.*, between *Limbus* (which involves no 'poena damni' but only the 'carentia visionis Dei' [cf. Loofs, *Symbolik*, Tüb. 1902, i. 270] and in which, according to the *Cat. Rom.* [*loc. cit.* qu. 3], the fathers 'sine ullo doloris sensu, beata redemptionis spe sustentati, quieta habitatione fruebantur') and the *Gehenna damnatorum*, the former is nevertheless a part of the *inferi*, of Hell. Is it permissible then to locate 'Paradise' in Hell (cf. *Kirchenlex*[2]. vi. 130)? Many theologians have done so without misgiving (cf. Martin, ii. 93: 'forecourt of Hell,' *sinus Abrahae* or *limbus patrum*, also simply called 'Paradise'); but sometimes a distinction is made between *paradisus inferior* and *paradisus superior* (= Heaven). The *Cat. Rom.*, whose interpretation is adopted by *Kirchenlex.*[2] vi. 135 and Simar (*Dogmatik*, i. 538), expounds the matter more felicitously thus:

'Christi aspectus clarissimam lucem captivis attulit, eorumque animas immensa laetitia gaudioque implevit; quibus etiam optatissimam beatitudinem, quae in Dei visione consistit, impertivit. Quo facto id comprobatum est, quod latroni promiserat illis verbis Luc. 23, 43.'

Here, accordingly, the *limbus patrum*, which after the liberation of the fathers is left absolutely empty, has, in virtue of Christ's presence, become Paradise even before their departure—has been 'transformed, so to speak, into a heaven' (*Kirchenlex.*[2] vi. 135).

With this particular point, however, is connected a third difficulty. Christ did not ascend to Heaven till forty days after His departure from *Limbus*, and only then 'did He take with Him to Heaven' the souls of the just whom He 'had liberated' from that place (Deharbe, qu. 241). Where, then, were the souls of the fathers during these forty days? For attempts to answer this question the curious may be referred to *Kirchenlex.*[2] (vi. 136).

The greatest difficulty of all is presented by 1 P $3^{19ff.}$ (cf. 4^{6}). This is not one of the passages traditionally cited in support of the *Descensus*; the usual *dicta probantia* are Ac $2^{24.\ 27.\ 31}$, Eph 4^{9}, Ro 10^{7}, Mt 12^{40}, Hos 13^{14} (cf. 1 Co $15^{54f.}$), Sir 24^{45} ('Penetrabo omnes inferiores partes terrae, et inspiciam omnes dormientes, et illuminabo omnes sperantes in Domino'), Zec 9^{11} ('Tu quoque in sanguine testamenti tui emisisti vinctos tuos de lacu, in quo non est aqua'). Augustine, indeed, in a celebrated letter (*ad Evodium*, *Ep.* clxiv., *al.* xcix.; Migne, *PL* xxxiii. 709–718), which in many passages reads like a modern treatise on the *Descensus*, emphatically denies that the two Petrine passages bear upon the subject at all (*op. cit.* 5. 15, p. 715, and 7. 21, p. 717). He explains 1 P $3^{19ff.}$ as referring to a preaching of the pre-existent Christ to the contemporaries of Noah who were overwhelmed in their sins (*loc. cit.* 6. 17, p. 716), and applies 4^{6} to a preaching of the gospel in this life to the spiritually dead (7. 21, p. 717 f.). And this, or a similar, explanation is adopted, with approval, by many mediæval theologians, including Thomas Aquinas, who writes (*Summa*, 3. 52, 2 *ad* 3):

'His qui in carcere conclusi erant viventes, scilicet in corpore mortali, quod est quasi quidam carcer animae, spiritu suae divinitatis veniens praedicavit per internas inspirationes et etiam externas admonitiones per ora justorum' (cf. *ib.*: 'Qui increduli fuerunt Noe praedicanti').

At present, however, the exegesis which—largely under the influence of Hundhausen (*Das erste Pontificalschreiben des Apostelfürsten Petrus*, Mainz, 1873)—finds most favour is that which makes the earlier passage ($3^{19f.}$) refer to the *Descensus*. The unbelieving contemporaries of Noah, accordingly, are supposed to be mentioned only by way of example, and the statement that Christ's preaching in the under world was vouchsafed even to such *unrepentant* souls in the place of *perdition* is narrowed down to mean that His preaching was made known to the condemned without a special *Descensus* to them at all, or, in other words, that the effects of the *Descensus* extended also to the lost (Simar, i. 539 ff., following Hundhausen, p. 350). Now this modification of the sense of 1 P $3^{19f.}$ brings it into harmony with a view which Aquinas (*Summa*, 3. 52, 2*c*) had advanced without reference to that passage:

'per suum effectum (*not*: per suam essentiam) Christus in quemlibet inferorum descendit; in infernum damnatorum babuit hunc effectum, quod descendens ad inferos eos de sua incredulitate et malitia confutavit.'

Certain catechisms, again, come to terms with 1 P $3^{19f.}$ in a very simple fashion, by amending

[1] Besides the *Cat. Rom.*, cf. G. Bareille, *Le Catéchisme romain, ou l'enseignement de la doctrine chrétienne*, Montréjeau, 1907 ff., ii. 386–403; J. Deharbe, *Grosser Katechismus*, Regensburg, New York, and Cincinnati, 1896; *Grosser Kat. für sämtliche Bistümer Bayerns*, Regensburg, 1904; *Kath. Kat. f. d. Diöcese Trier*, Trèves, 1888; *Kath. Kat. f. d. Bistum Mainz*, Mainz, 1886; *Kath. Kat. f. d. Bistum Paderborn*, Paderborn, 1892; *Kat. d. kath. Religion, herausg. auf Befehl d. hochwürdigsten Herrn Dr. K. J. v. Hefele, Bischofs v. Rottenburg*, Freiburg, 1889; *Cat. du diocèse de Paris*, Paris, 1897; *Compendio della dottrina cristiana ad uso dell' arcidiocesi di Torino*, Turin, 1893; cf. Th. Hub. Simar († as archbp. of Cologne, 1902), *Lehrb. der Dogmatik*[4], 2 vols., Freiburg, 1899, i. 538–541; K. Martin († as bishop of Paderborn), *Lehrb. d. kath. Religion*[15], 2 pts., Mainz, 1873, ii. 92 f.

the language of Scripture to make it suit Catholic dogma. Thus, after expounding the doctrine of the Descent to the *limbus patrum*, they cite the passage in question in the following form: 'He was put to death according to the flesh, but in soul He went to the spirits who were in prison, and preached, *i.e.* proclaimed redemption to them' (*Grosser Katechismus f. d. Bistümer Bayerns*, p. 75; *Paderborner Kat.* p. 93; similarly, though not quite so crudely, Deharbe, qu. 231, and *Trierer Kat.*, p. 26). It is a singular fact that Aquinas (*Summa*, 3. 52, 2c) speaks also of an 'effectus' of the *Descensus* upon the souls in *Purgatory*: 'illis qui detinebantur in purgatorio spem gloriae consequendae dedit'; and in a special *quæstio* (3. 52, 8) he even discusses the problem whether Christ, in virtue of His *Descensus*, delivered souls also from Purgatory, and solves it as follows:

'Si qui inventi sunt tales, quales etiam nunc virtute passionis Christi a purgatorio liberantur, tales nihil prohibet per descensum Christi ad inferos a purgatorio esse liberatos.'

The strange thing is that Aquinas should think of souls as being in Purgatory at the time of the *Descensus*; for the Catholic doctrine is that all who have died in original sin (which could not be absolved before the death of Christ) are in *Hell*. Even the *sancti patres* who believed in the Messiah, and who, according to Aquinas (3. 49, 5 *ad* 1), had cancelled their actual sins by their faith and works, must be regarded as having been in Hell, or, at least, in the 'fore-court' thereof, by reason of their original sin; and it is believed even to-day that, when the children of Christian parents die unbaptized, and thus have not been cleansed of original sin, they go to Hell—to a region, it is true, resembling that in which the *patres* dwelt, viz. the *limbus infantium* (Loofs, *Symbolik*, i. 269). Unless, therefore, there have been exceptions to this rule of doctrine (the Innocents whose festival occurs on the 28th of December need not be regarded as forming an exception, since their baptism of blood would avail instead of baptism by water, and they could accordingly go to the *limbus patrum*), or unless a great migration from Hell to Purgatory took place at the instant of Christ's death—a theory likewise not easy to accept—we must believe that Purgatory was as empty before the death of Christ as the *limbus patrum* was after His Descent.

4. **Lutheran doctrine.**—The doctrine of the *Descensus* set forth in the Formula of Concord, and thus regarded by orthodox Lutherans as bearing the seal of their Church, is of a peculiar character. It cannot be understood without a retrospective glance at Luther himself. We must, however, distinguish between his real theological view and his presentation of the subject in his popular discourses. As a theologian Luther of course (*a*) adhered at first to the Catholic tradition (*Psalmenvorlesung* of 1513–15, Weimar ed. iii. 103. 20; 317. 37). But (*b*) he could not continue to hold this view after asserting that the faith of the 'fathers' is identical with our own (cf. *Predigten über 1 Mosis*, 1527, Weimar ed., 100. 4: 'vides Adamum Christianum fuisse ut nos'; Erlangen ed. [German], 33. 99). He had come to believe (cf. J. Köstlin, *Luthers Theologie*[2], Stuttgart, 1901, ii. 341)—even (see below) before 1522 (at Amsdorf, 13 Jan. 1522; Enders, *Briefwechsel Luthers*, Calw and Stuttgart, 1903, iii. 269–271)—that the 'fathers,' like departed believers in Christ, continue until the resurrection in a perfectly happy sleep of the soul, since they are, so to speak, enclosed and safeguarded in the belief in God's word as in a bosom ('Abraham's bosom,' Lk 16[22]; *Kirchenpostille*, Erl. ed.[2], 12 f.). Similarly, he thought that the souls of the wicked in the state of death are tormented by their unbelieving evil conscience until they are cast into Hell at the Last Day; and with reference to the 'Hell' of Lk 16[23] he writes:

'The hell mentioned here cannot be the true Hell, which will come into being at the Last Day. . . . But it must be a place where the soul can live, and where it has no rest: therefore it cannnt be a real locality. We judge, therefore, that this hell is the evil conscience—without faith and the word of God—in which the soul is buried and confined until the Last Day, when the person, body and soul together, will he cast into the real bodily Hell.'

A view of the *Descensus* corresponding to these ideas regarding the sleep of the soul had already been set forth by Luther in the *Operationes in Psalmos* of 1519–21:

'Anima Christi secundum substantiam descendit ad inferos . . . dolores mortis et inferni pro eodem ego habeo. Infernus enim est pavor mortis, id est sensus mortis, qun horrent mortem et tamen non effugiunt damnati, nam mors contempta non sentitur estque velut somnus. . . . Christus sicut cum summo dolors mortuus est, ita videtur et dolores post mortem in inferno sustinuisse, . . . ita . . . ut caro quidem ejus requieverit in spe, sed anima ejus infernum gustaverit' (Weim. ed. v. 463, 18 ff.; Erl. ed. *Opp. exeg.* xv. 15, 378 f.).

Luther still adhered to this theory in 1530 (*Enarr. in ps. 10*, Erl. ed. *Opp. exeg.* xvii. 125 f., cf. 124; [Germ.] xxxviii. 145 f., cf. 144); and, in fact, if we would set forth his own distinctive view of the subject, we must keep these thoughts before our minds. There is nothing to suggest that he ever abandoned the belief that the true Hell has no existence until the Last Day; he seems to have remained constant to the opinion to which he gave utterance in 1526:

'That there exists a special place in which the souls of the condemned now reside—as artists paint and belly-gods preach it—I regard as mere delusion, for even the devils are not yet in Hell' (*Expos. of Jonah*, Weim. ed. xix. 225; Erl. ed. [Germ.] xli. 378).

But he was not quite certain that the conception of the *Descensus* corresponding to this idea was final and exhaustive, and, accordingly, (*c*) while he had in 1523 sought to expound the Petrine passages on impossible lines, and in a sense which ignored the *Descensus* (*Auslegung d. 1 Petrusbriefes*, Weim. ed. xii. 367 f., 375 f., Erl. ed. [Germ.] li. 458 ff. 467; in a second form, Erl. ed. lii. 152 f. 162), we find that subsequently, in his lectures on *Genesis* (*c.* 1537)—which, it is true, do not survive in a verbally authentic form—he takes account of the hypothesis that the verses may throw light on the Article 'descendit ad inferos' (Erl. ed. *Opp. exeg.* ii. 222). He deems it possible that Peter was thinking of a preaching of the *mortuus Christus* to *mortui* of the time of the Deluge, but believes that this was restricted entirely to 'infantes et alios quos simplicitas sua impedivit, ne possent credere' (*loc. cit.*). (*d*) A little later Luther seems to have made a further advance. In 1543, according to Melanchthon's statement (*Corp. Ref.* v. 58), he was disposed to think—with Melanchthon himself—that Christ's preaching in Hades, as referred to in 1 Peter, might have effected the salvation of the nobler heathen; while in an edition of his lecture on *Hosea*, issued with his own consent by Veit Dietrich in 1545 (Letter of 16th Oct. 1545 [de Wette, *Luthers Briefe*, Berlin, 1825–56, v. 761]), he gives—if, that is to say, he ever read this edition of his lecture—his sanction to a similar exegesis (Erl. ed. *Opp. exeg.* xxiv. 330), which, however, is not found in the transcriptions of the lecture of 1524 (Weim. ed. xiii. 27) revised by Dietrich in his edition. In any case, Luther was far from certain that the views of the *Descensus* which went beyond the position stated above (in *b*) were correct. Hence, in 1544—and here we have his last utterance on the subject, though again not authentic in its verbal transmission—(*e*) he pronounced a 'non liquet' upon all conjectures that would add to the simple fact of the sojourn of Christ's spirit *in inferno*:

'Quid anima fecerit in inferno, multi multa disputant, an spoliaverit inferos et liberaverit suos qui ante ipsum in sinum Abrahae congregati fuerant, nihil attinet quaerere et rimari curiosius' (*in Gen.* [Erl. ed., *Opp. exeg.* x. 219]).

In his popular discourses Luther joins hands with the artists, whose pictures of the *Descensus* portray Christ—in the only way in which He can be portrayed, *i.e.* in the body—as going down 'with a banner in His hand,' appearing before Hell, dislodging Satan, taking Hell by storm, and carrying away those who are His (cf. Erl. ed. [Germ.] xix.^{2} 41). Thus, in order that 'children and simple folk' might attain to a clear idea of Christ's triumph over Hell and Satan—a fact which must become part of their receptive faith—Luther did not hesitate repeatedly (cf. even the short form of the Ten Commandments, 1520 [Weim. ed. vii. 217 = Erl. ed. [Germ.] xxii. 8], and elsewhere, *e.g.* in the *Hauspostille* [Erl. ed. [Germ.] v.^{2} 1–17]), and notably in an Easter sermon preached at Torgau on the 13th of April 1533 (Erl. ed. [Germ.] xix.^{2} 40–54), to speak of the *Descensus* as if 'the Lord Christ—the entire person, God and man, with body and soul, undivided—had journeyed to Hell, and had in person demolished Hell and bound the Devil' (cf. Erl. ed. [Germ.] xix.^{2} 44 f.). But these expositions are obviously clothed in the language of popular metaphor, and there is not the slightest doubt that Luther was aware of their exoteric character. He makes this quite clear in the exordium of his Torgau discourse:

'And it pleases me well that, for the simple, it [the Descent] should be painted, played, sung, or spoken in this manner (*i.e.* as represented by the artists), and I shall be quite content if people do not vex themselves greatly with high and subtle thoughts as to how it was carried out; for it did not take place in the body at all, as He remained in the grave for three days' (Erl. ed. [Germ.] xix.^{2} 41).

It is instructive to note, as bearing in the same direction, what Luther adds to the words quoted above regarding the Descent of the whole person: 'Please God, the banner, doors, gate, and chains were of wood, or of iron, or did not exist at all' (*op. cit.* p. 45). Yet these utterances in the Torgau discourse, notwithstanding their unmistakably exoteric and metaphorical cast, came at length to be formulated as dogma. Owing, in some unexplained way, to local controversies regarding the Descent (F. H. R. Frank, *Theol. der Concordienformel*, iii., Erlangen, 1863, p. 418 ff.), the framers of the Formula of Concord (and even of its forerunner, the so-called Book of Torgau) deemed it necessary to insert a special Article (ix.) 'de Descensu Christi.' Their ostensible purpose in so doing was merely 'simplicitatem fidei in symbolo apostolico comprehensam retinere' (J. T. Müller, *Die symbol. Bücher d. evang.-luth. Kirche*, stereotype ed., Gütersloh, 1882, p. 696. 1). But when, in Art. ix., with a reference to Luther's Torgau discourse, they declare: 'Simpliciter ergo credimus quod *tota persona*, Deus et homo, post sepulturam ad inferos descenderit, Satanam devicerit, potestatem inferorum everterit, et diabolo omnem vim et potentiam eripuerit' (*ib.* 696. 2), it is clear that the statement has behind it the whole argumentation of Art. viii. on the 'Communicatio idiomatum' (*ib.* 697. 3).

Lutheran orthodoxy, in maintaining (in opposition to the Reformed theology: see § 5 below), as an element of the true doctrine, that the *Descensus* was an act which, occurring after the ζωοποιηθῆναι and immediately before the Resurrection, involved the *entire* person of Christ, and belonged to the *status exaltationis*, was simply proceeding upon the lines laid down by the Formula of Concord. But, in seeking to establish these positions, it appealed to the Petrine passage (1 P 3^{19}) which was not cited by that Formula, asserting that the preaching of Christ was a 'praedicatio (verbalis!) elenchtica,' and therefore a 'triumphum agere' (Hollaz, in H. Schmid, *Die Dogmatik d. evang.-luth. Kirche*[4], Frankfort, 1858, § 38, note 21). In so doing, however, it also makes a complete surrender of the '*simplicitas fidei*,' as its Christology compelled it to qualify the 'descendit' by the phrase 'secundum humanam naturam,' for 'secundum divinam naturam jam ante in inferno per dominium omnia replens erat' (Quenstedt, in Schmid, *op. cit.* § 38, note 23). On a closer view, in fact, the 'descendit' becomes more attenuated still, since, according to the doctrine of Christ's omnipresence, His humanity is—after His exaltation, at all events—wherever His Divinity is. The 'supernaturalis *motus* non localis' (Hollaz, in *loc. cit.* note 22) is thus merely the first phase of the non-local *ubiquitas corporis*. According to the Tübingen school, indeed, the humanity of Christ was not to be separated from His non-local omnipresent Divinity, even at the beginning of His rest in the grave, or at any time, in fact, after His *conceptio* (Dorner, *Gesch. d. prot. Theol.*, Munich, 1867, ii. 788 ff.).

5. **Reformed doctrine.**—If the Lutheran doctrine may be regarded as a modification of the Catholic—and it can be explained only by reference to the latter—the view of the Reformed Churches, so far as a single generic view of the question may be attributed to them, is characterized by a complete abandonment of the Roman dogma. It is true that Zwingli, in his first discourse at Berne (*Werke*, ed. Schuler and Schulthess, Zürich, 1828–1842, ii. 1. p. 211), kept close to the Catholic interpretation, asserting that the pious who lived before Christ and believed in the coming Messiah were delivered from Hades; and that later (*Fidei expositio* 7 [*Werke*, iv. 49]), while of opinion that the 'descendit' of the *Apostolicum* signifies only that Christ really died ('inferis enim connumerari ex humanis abiisse est'), he still clung to that view, which rests upon a peculiar exegesis of 1 P 3$^{19f.}$. Leo Jud, again, in his Catechism of 1534, finds no more in the 'descendit' than 'vere mortuus est': 'He died and was buried—went to Hell indeed, *i.e.* He really died' (A. Schweizer, *Die Glaubenslehre der evang.-ref. Kirche*, ii., Zürich, 1847, p. 349). Then Calvin, while deeming it an error to take the 'descendit' as equivalent to 'sepultus est' (*Inst.* 1536 [*Opp.* i. 70: 'haec particula de descensu . . . minime superflua']; emphatic repudiation in *Inst.* 1539–54 [*Opp.* i. 529] and 1559 [*Opp.* ii. 375]), nevertheless characterizes the Roman view as a 'fabula' not only in *Inst.* 1536 (i. 69 f.) but also later (*Inst.* 1539–54, 7. 27 [i. 529 f.]; 1559, 2. 16, 9 [ii. 375 f.]); the idea that the souls of the dead are confined in a prison he regards as simply 'childish' (1559, 2. 16, 9 [ii. 376]). From 1536 to 1559 the only meaning which he drew from the Petrine passages—without applying them to the *Descensus* at all—was as follows:

'virtutem redemptionis per Christum partae exhibitam et plane manifestatam esse eorum spiritibus qui ante id tempus defuncti fuerant.' 'Fideles,' he believes, 'tunc plane et praesenti aspectu perspexerunt ejus visitationem; contra reprobi . . . nullam sibi spem residuam tunc planius agnoverunt' (*Inst.* 1539–54, 7. 27, p. 530; cf. 1536, p. 70, and 1559, 2. 16, 9, p. 376).

To Calvin's mind the true sense of the article 'descendit ad inferos' was this:

'Christum afflictum a Deo fuisse ac divini judicii horrorem et severitatem sensisse, ut irae Dei intercederet ac ejus justitiae nostro nomine satisfaceret' (*Inst.* 1536, p. 69; cf. 1559, 2. 16, 10, ii. 376: 'Nihil actum erat, si corporea tantum morte defunctus fuisset Christus, sed operae simul pretium erat, ut divinae ultionis severitatem sentiret, quo et irae ipsius intercederet et satisfaceret justo judicio; unde etiam eum oportuit cum inferorum copiis aeternaeque mortis horrore quasi consertis manibus luctari').

Calvin is thinking here, not of the experiences through which Jesus passed after His death, but of the agonies of soul which preceded it. To challenge this interpretation on the ground that

it conflicts with the sequence of the Symbolical clauses, he regards as frivolous:

'Ubi enim quae in hominum conspectu passus est Christus exposita fuerunt, opportune subjicitur invisibile illud et incomprehensibile judicium quod coram Deo sustinuit' (*Inst.* 1559, 2. 16, 10, p. 376 f.).

In the Reformed Churches of the succeeding period, as is shown by F. Wendelin (*Systema*, 1656, p. 719, in Schweizer, ii. 350), the views of Leo Jud and Calvin took precedence of all others, though in varying measure:

'Per descensum nihil aliud significari nisi sepulturam, pii et docti viri nonnulli approbant; plerique orthodoxorum intelligunt dolores infernales quos in anima sua Christus sensit' (F. Wendelin, *loc. cit.*).

With regard to the latter point the Reformed theologians often differ from Calvin in not restricting Christ's endurance of the *dolores infernales* to His earthly life. In both statements it is of course implied—in opposition to the Lutheran theory—that the *Descensus* belongs to the *status exinanitionis* or *humiliationis* (*Westminster Larger Catechism*, qu. 46, 49, 50). Among the formularies which adopt the distinctively Calvinistic view are the Geneva Catechism (E. F. K. Müller, *Bekenntnisschriften d. ref. Kirche*, Leipzig, 1903, p. 122 f.: 'horribiles angustias intelligo quibus Christi anima constricta fuit') and the Heidelberg Catechism (qu. 44 [Müller, p. 694: 'unspeakable distress, agony, and horror, which He suffered in His soul, and previously']). The *Westminster Larger Catechism* sets forth the Calvinistic view—without mention of the 'Descent' however—in qu. 49, while in qu. 50 it supplements this by speaking of Christ 'as after His death . . . continuing in the state of the dead, and under the power of death,' and expressly adds that this 'hath been otherwise expressed in these words,—*He descended into hell.*' But most of the Reformed Confessions give no explanation of the *Descensus* at all. The Anglican XXXIX Articles of 1563 likewise discard that portion of Art. iii. (Müller, p. 506: 'nam corpus usque ad resurrectionem in sepulchro jacuit; spiritus, ab illo emissus, cum spiritibus qui in carcere sive in inferno detinebantur fuit, illisque praedicavit, quemadmodum testatur Petri locus') which in the XLII Articles of 1552 followed the statement 'Christus est credendus ad inferos descendisse.'

6. Modern interpretation and re-statement.—In the Greek and Roman Churches the formulated doctrines of the *Descensus* dealt with above (§§ 2 and 3) have maintained an all but absolute predominance since mediæval times; of the few divergent tendencies the more important are mentioned by Dietelmaier (*Hist. dogmatis de Descensu*[2], Altorf, 1762, pp. 128–139, 144–153, 179). Within the pale of Lutheranism, again, a great variety of views gained a footing at the very outset. Luther himself advocated more than one interpretation (cf. § 4); Johannes Agricola, in his *Christliche Kinderzucht*, propounded views similar to those afterwards maintained by Calvin (cf. G. Kawerau, *Joh. Agricola*, Berlin, 1881, p. 72), and with these views, again, Joh. Aepinus of Hamburg († 1553) incorporated the theory that the *Descensus* was really a vicarious descent of the Spirit of Jesus into that *infernum* in which sinners deserve to suffer until the Final Judgment and the inception of Gehenna fire (F. H. R. Frank, *Die Theologie der Concordienformel*, 4 vols., Erlangen, 1858–65, iii. 397–415); many others have approximated to the position of Aepinus (Frank, p. 415 f.), while Joh. Brenz († 1570), in the interests of the *ubiquitas corporis Christi* and the non-local character of 'Heaven' and the *infernum*, was inclined to favour a spiritual theory of the *Descensus*—an interpretation which amounted to little more than the notion that the crucified Christ is *supposed by human beings* to have gone down to Hell and to have utterly perished (Frank, pp. 418–420; for other theologians, cf. Frank, pp. 416 f., 420–424, and for Urbanus Rhegius and Matthesius, Dietelmaier, p. 179 f.). From the issue of the Formula of Concord till after the middle of the 18th cent., however, the view formulated in that document prevailed generally within the Lutheran communion (cf. Dietelmaier, pp. 170, 180, 204–209). In the Reformed Churches neither of the Confessional views referred to in § 5 ever gained a position of absolute supremacy. As a matter of fact, it was in this section of the Church—in which the serious study of historical questions was entered upon earlier than among the Lutherans—that the certitude of the Confessional interpretations was first shattered. Besides the great theologian G. J. Vossius († 1649), two renowned English scholars, John Lightfoot († 1675) and John Pearson († 1686), succeeded in undermining the confidence hitherto placed in the formulated views, and for these thinkers the *Descensus* meant no more than the sojourn of the Spirit of Jesus in the realm of death. Then in the period of the Illumination the dogma largely lost its earlier signification, nor did the theology of post-Illumination times restore it.

But a fresh theory of the *Descensus* was advanced, and found favour in many quarters. The distinctive feature of the new interpretation was that it associated the preaching of Christ in Hades with a possible offer of salvation after death to all who had been denied the opportunity in this life. The κηρύσσειν of 1 P 3[19] was regarded as a preaching of the gospel; the contemporaries of Noah (v.[20]) were supposed to be referred to only as examples, or as abnormally depraved, and it was thus inferred, *a majore ad minus*, that, if salvation was proffered to such as these, a similar invitation must be granted to all who have not been called, or called effectually, in this life. To a certain extent recourse was had also to a hypothesis with which Augustine was acquainted (*Ep.* clxiv. 4. 13; Migne, *PL* xxxiii. 714), viz. that a knowledge of the salvation wrought by Christ must have remained in the realm of death ever since His preaching there. The present writer is unable, so far as regards the countries outside Germany, to trace the rise of this now widely diffused idea; considerable information on the subject is given by C. Clemen, '*Niedergefahren zu den Toten*,' Giessen, 1900, p. 215 ff. In Germany certain theologians—above all, J. L. König (*Die Lehre von Christi Höllenfahrt*, Frankfort a.M., 1842), E. Güder (*Die Lehre von der Erscheinung Jesu Christi unter d. Toten*, Berne, 1853), and Clemen (*op. cit.*)—have given their support to this re-statement of the *Descensus* doctrine, or at least (thus Clemen) of what is supposed to be its religious bearing. These new ideas have found their way even into the precincts of Lutheran orthodoxy, and have become incorporated in a peculiar manner with other modifications of orthodox (=Lutheran) tradition (cf. *e.g.* Alex. von Oettingen, *Lutherische Dogmatik*, ii. 2, Munich, 1902, pp. 140–148). The theory which would affirm the possibility of an offer of salvation after death must, in our judgment, be conceded, and indeed many modern writers of the most diverse theological tendencies give it their approval (cf. König, p. 204 ff., Clemen, p. 212 ff.); but whether the theory can be legitimately combined with the *Descensus* as presented in Scripture (see below, § 7) or in the tradition of the Church (§ 8) is another question.

7. Re-statement compared with Scripture.—Of the various passages of Scripture which have at one time or another been appealed to in support of the *Descensus* those drawn from the OT need not be discussed here, as it is only by an obsolete

exegesis that references to Jesus Christ could be found in them. Nor do the NT passages—Mt 12^{40}, Ac 2^{27}, Ro 10^{7} and Eph 4^{8-10}—speak of a *Descensus* of the nature implied by the 'Orthodox,' Catholic, Lutheran, Calvinistic, or 'modern' interpretations; these passages, or some of them, point at most to a sojourn of Jesus, or of His soul (Ac 2^{27}), in 'Hades.' We shall have an opportunity below (see § 10) of gauging the significance of this datum. The only passages which need be considered here are 1 P $3^{19ff.}$ and 4^{6}, which are very generally regarded as the *loci classici* for the *Descensus*, though, as we have already seen, Augustine and Aquinas (cf. § 3), Calvin (§ 5) and—for many years at least—Luther as well (§ 4), denied that the verses in question refer to the subject at all.

1 P 4^{6} must certainly be surrendered. For, while Augustine's idea that the *νεκροί* is equivalent to *infideles* (*Ep.* clxiv. 7. 21 [*PL* xxxiii. 718])—an exegesis adopted by Luther (*Epist. S. Petr. ausgelegt*, 1523 [Erl. ed. [Germ.] ii. 468])—is undoubtedly wrong, Luther is as certainly right in saying (*loc. cit.* p. 467): 'He (St. Peter) adds further that they (the *νεκροί*) are judged according to man in the flesh. But they are not in the flesh; hence it can be understood only as applied to living persons.' If this reasoning be conclusive, and the application of the passage to the *Descensus* thus shown to be wrong, other points of difference among expositors may be left out of consideration here. The only correct explanation, in the present writer's opinion, is that which takes the *νεκροί* to signify those who were dead when the Epistle was written, but who in their lifetime had—as the *εὐηγγελίσθη* shows—a knowledge of the gospel: just because they have died, and have not remained alive until the Parousia, they are 'judged in the flesh,' *ipsa morte carnis* (Augustine, *Ep.* clxiv. 7. 21 [*PL* xxxiii. 718]), but they live to God *πνεύματι*. This agrees with the whole train of thought which sets out from 3^{17} and reaches its middle point in 4^{1}; for the emphasis is laid upon the idea that the dead, though it has been their lot *κριθῆναι σαρκί*, nevertheless *ζῶσι κατὰ θεὸν πνεύματι*.

The case of 1 P $3^{19f.}$ cannot be so easily disposed of. Of the various interpretations applied to this passage, not a few find no reference to the *Descensus* in it either.

We have one example of this when the clause *ἐν ᾧ* (*sc.* *πνεύματι*) *πορευθεὶς ἐκήρυξεν* is assumed to refer to the pre-existent Christ (I.). Such is the interpretation of Augustine (cf. § 3), J. C. K. v. Hofmann (*Die heilige Schrift d. NT*, vii., Nördlingen, 1875, p. 124–134), and A. Schweizer (*Hinabgefahren zur Hölle*, etc., Zürich, 1868), who thinks that (I.*a*) the *πνεύματα* to whom Christ preached were the people of Noah's time, and that these are spoken of as *πνεύματα ἐν φυλακῇ* because they 'in ignorantiae tenebris claudebantur' (Aug. *Ep.* clxiv. 5, 16 [*PL* xxxiii. 715]), or because they were *ἐν φυλακῇ* when the Epistle was written (v. Hofmann, *et al.*). Another form of this interpretation is that of F. Spitta (*Christi Predigt an die Geister*, Göttingen, 1890), that (I.*b*) the *ἐν φυλακῇ πνεύματα* are the angels whose fall (Gn 6^{2}) was a theme of such profound interest in the Jewish apocalyptic literature and in certain Christian circles of the early centuries (cf. 2 P 2^{4}). Similarly, the idea of the *Descensus* is surrendered by the interpretation which refers the clause *πορευθεὶς ἐκήρυξεν* to the period *after* the Resurrection (II.). This exegesis is certainly untenable in the form represented by Luther, viz. that (II.*a*) Christ after His Ascension comes in the Spirit (*i.e.* in preaching) to the spirits (*i.e.* spirits or hearts of men), who are as disobedient as the contemporaries of Noah (Erl. ed. [Germ.] ii. 458–460); but in the form given to it by F. C. Baur (*Vorlesungen ü. d. neutest. Theologie*, Leipzig, 1864, p. 291)—that (II.*b*) those to whom Christ preached were the fallen angels (cf. 1 Ti 3^{16}: *ὤφθη ἀγγέλοις*)—it still finds adherents (M. Lauterburg, *PRE*^{3} viii. 201, l. 21 ff.). But a new interest gathers around the passage when the *πορευθεὶς ἐκήρυξεν* is understood to indicate an event which occurred in the interval between Christ's death and His resurrection (III.). The theories based on this exegesis fall into two main classes, corresponding to a twofold explanation of *ἐκήρυξεν*. If the word be taken to mean a preaching of salvation (III.*a*), then the verse asserts that during the interval in question Christ proclaimed salvation to the generation destroyed by the Deluge. But, if *ἐκήρυξεν* be interpreted as implying only an 'elenchtic proclamation' (III.*b*), we have a view which seems to approximate to the position of Lutheran Orthodoxy (cf. § 4).

Which of the above five exegetical theories still advocated to-day (I.*a*, *b*, II.*b*, III.*a*, *b*) is the most probable is a question which each must decide for himself; to seek to prove that any single one is exclusively correct were a hopeless task. The present writer has a considerable preference for the first form of explanation (I.), and especially for that of Spitta (I.*b*), though he hardly shares the confidence with which the latter scholar refers the *ἐκήρυξεν* to the commination uttered, according to the Book of Enoch (xii. 4, ed. Fleming and Radermacher, Leipzig, 1901, p. 34 ff.), over the fallen angels by Enoch: so many ideas of like nature must have been current in Apostolic times. But, even if either of the interpretations specified in III. is the right one, *i.e.* if we are to postulate a preaching of Christ in the interval between His death and His resurrection, yet 1 P $3^{19f.}$ gives as little warrant for the 'modern' conception of the *Descensus* as for that of the Lutheran Orthodoxy. Both theories, in fact, alike the Orthodox Lutheran, which does not harmonize with the *ἐν ᾧ* (=*ἐν πνεύματι*), and the modern, are in conflict with the indisputable fact that the only people mentioned in v.^{20} as those to whom Christ preached are the contemporaries of Noah. To assume that the latter are mentioned only by way of example, and that the preaching of salvation, or of judgment, was heard by *all* *ἀπειθήσαντές ποτε*, is certainly unwarranted. As regards the whole passage, in fact, only one thing is certain, viz. that, if it speaks of the *Descensus* at all, whether in the sense of interpretation III.*a* or in that of III.*b*, it presents an altogether unique conception of the event—unique not only with respect to the Confessional interpretations (§§ 2–5) and the 'modern' theories, but also with respect to the traditions of the early Church. The conception of the *Descensus* current in the early Church proceeded on entirely different lines (see § 8) and arose independently of 1 P $3^{19f.}$ Prior to the time of Clement of Alexandria (*Strom.* vi. 6. 45, ed. O. Stählin, Leipzig, 1906, p. 454, 14 ff.) and Origen (*in Joann.* vi. 35, ed. E. Preuschen, Leipzig, 1903, p. 144, 15 ff.), this passage, so far as we know, was never referred to in connexion with the *Descensus*; while Irenæus, who often speaks of the *Descensus*, and brings many Biblical passages to bear upon it (cf. *adv. Hær.* v. 31. 1, Massuet [ed. Harvey, Cambridge, 1877, ii. 411]), and who, moreover, was acquainted with 1 Peter and regarded it as authentic (*op. cit.* iv. 9. 2 [ii. 170]), never quotes the passage at all, nor, in dealing specially with the *Descensus*, does he even allude to it.

8. Re-statement compared with early Church tradition.—It is absolutely certain that the early Church tradition regarding the *Descensus* moves in an orbit quite apart from the 'modern' treatment of the conception. As regards the Western Baptismal Confession, it is well known that the 'descendit ad inferos,' which does not occur in the early Roman Symbol (Hahn, *Bibliothek d. Symbole*^{3}, Breslau, 1897, p. 22 ff.), makes its first appearance in the Symbol of Aquileia by Rufinus (Hahn, p. 42, cf. note 63; Caspari, *Quellen*, ii. [Christiania, 1869] 46, note 133; also F. Kattenbusch, *Das apostol. Symbol*, ii. [Leipzig, 1900] 895 ff.). In the Eastern Confessions (not, however, in the Baptismal formulæ) the clause appears somewhat earlier, viz. in the Fourth Sirmian formula of 359 (Hahn, § 163: *καὶ εἰς τὰ καταχθόνια κατελθόντα*), the kindred formula of Nice of the same year (Hahn, § 164), and the Constantinopolitan formula of 360 (Hahn, § 167). But, long before these Confessions saw the light, the *Descensus* was already part of the Church tradition, alike in the East and in the West. This appears, to begin with, from the circumstance that among the things 'quae testatissima veritate de Christo conscripta sunt' Augustine places the fact

'quod apud inferos fuit' (*Ep.* clxiv. 5. 14; cf. *ib.* 4. 12: 'Christo ad inferos descendente,' and 2. 3 '[Christum] . . . venisse in infernum satis constat, . . . quis ergo nisi infidelis negaverit fuisse apud inferos Christum?'); but in point of fact the idea of the *Descensus* can be clearly traced through Clement of Alexandria (cf. § 7), Tertullian (*de Anima*, 7 and 55, ed. Reifferscheid, Vienna, 1890, p. 308, 14 and 387 ff.), and Irenæus (*adv. Hær.* iii. 20. 4, Massuet [ed. Harvey, ii. 108]; iv. 22. 1 [ii. 228]; iv. 33. 1 [ii. 256]; iv. 33. 12 [ii. 267]; v. 31. 1 [ii. 411], and Ἀπόδειξις, *TU* xxx. 1. p. 42), to Justin (*Dial.* 72, ed. Otto, 1876–81, ii. 260) and one of the 'presbyters' of Irenæus (cf. *adv. Hær.* iv. 27. 2 [ii. 241]). Now, what significance did these Fathers attach to the idea? In answering this question it will be well to begin with the popular account of the *Descensus* given in the second part (*i.e.* the so-called *Descensus*) of the *Gospel of Nicodemus*, which probably belongs to the 4th cent. A.D. (*Evangelia apocrypha*[2], ed. Tischendorf, Leipzig, 1876, pp. 322 ff. and 389 ff.). Here it is told in most dramatic style how Christ after His death came to Hades, set free the OT saints, and took them to Heaven, while He cast Satan, who desired to detain Him in Hades, into Tartarus (Gr. text, cap. vi. p. 329; Lat. text B, cap. viii. p. 429; somewhat differently Lat. text A, cap. vi. p. 400: 'tradidit eum inferi potestati'). According to this account, therefore, there are two elements in the *Descensus*, viz. Christ's deliverance of the OT fathers from Hades, and His victory over Satan. The latter is not found in the earlier sources, being a mythological expansion—traceable as far back as Origen (*in Gen.* hom. 17. 5, ed. Lommatzsch, Berlin, 1831–48, viii. 290)—of the NT conception of Christ's victory over Satan combined with Ac 2[27]; the former—the deliverance of the saints—corresponds to the tradition which can be traced back to Justin's time. And that this conception of the *Descensus* may be regarded as distinctively that of the early Church is corroborated by the following facts. (1) Irenæns (in all the passages quoted above) and Justin (*loc. cit.*) give Scripture proofs of the view in question, and they also cite an OT (apocryphal) passage as follows: 'Commemoratus est Dominus, sanctus Israel, mortuorum suorum qui dormierant in terra sepultionis, et descendit ad eos evangelizare salutem, quae est ab eo, ut salvaret eos' (Iren. iii. 20. 4 [ii. 108]; cf. A. Resch, 'Ausserkanon. Parallelltexte zu d. Evangelien,' *TU* x. 1 and 2, p. 372 ff.). (2) It is evident that Celsus, the pagan adversary of Christianity, was acquainted with this view; according to Origen (*c. Celsum*, ii. 43 [ed. Koetschau, Leipzig, 1899, i. 166]), he speaks of Christ thus: *μὴ πείσας τοὺς ὧδε ὄντας ἐστέλλετο εἰς ᾅδου πείσων τοὺς ἐκεῖ.* (3) Marcion's conception of the *Descensus* is obviously a characteristic travesty of that recognized by the Church; thus, according to Irenæus (*adv. Hær.* i. 27. 3 [i. 218 f.]), Marcion taught:

'Cain et eos qui similes sunt ei, et Sodomitas et Aegyptios et similes eis et omnes omnino gentes quae in omni permixtione malignitatis ambulaverunt, salvatas esse a Domino, cum descendisset ad inferos, . . . Abel autem et Enoch et Noe et reliquos justos et eos qui sunt erga Abraham patriarchas, cum omnibus prophetis et his qui placuerunt Deo, non participasse salutem. . . . Quoniam enim sciebant, inquit, Deum suum semper tentantem eos, et tunc tentare eum suspicati, non accurrerunt Jesu neque crediderunt annuntiationi ejus; et propterea remansisse animas ipsorum apud inferos dixit.'

Moreover, we cannot appeal to Rufinus as a witness against the theory that the conception of the *Descensus* thus travestied by Marcion was the accredited doctrine of the Church. It may well be that Rufinus did not know what to make of the 'descendit ad inferos' in his own Symbol. His first remark regarding it is: 'vis verbi eadem videtur esse in eo, quod sepultus dicitur,' while, further on, along with other passages of Scripture, he incidentally refers to 1 P 3[19], which, as he thinks, tells us 'quid operis [Christus] in inferno egerit' (*Comm. in Symbol.* cap. 18 and 28 [Migne, *PL* xxi. 356 and 364]). After all, it is quite true that the Article 'descendit ad inferos' bears essentially the same meaning as the people of that day found in the Article 'sepultus est.' Christ went to Hades, according to the beliefs of the age, precisely because He died and was buried: 'Christus Deus,' says Tertullian, 'quia et homo, mortuus secundum scripturas, et sepultus secundum easdem, huic quoque legi satisfecit, forma humanae mortis apud inferos functus' (*de Anima*, 55 [ed. Reifferscheid, i. 388, 1–3]). We must not forget that Jews as well as Greeks regarded the grave and Hades as identical; the *Didaskalia Apostolorum* contains a passage—one, moreover, of quasi-Symbolical character—which brings Christ's liberation of the OT saints into immediate connexion with His death:

'qui crucifixus est sub Pontio Pilato *et dormivit*, ut evangelizaret Abraham et Isaak et Jakob et sanctis suis universis tam finem saeculi quam resurrectionem quae erit mortuorum' (vi. 6, 23. 8; ed. Funk, *Didascalia et Constitutiones Apostolorum*, Paderborn, 1905, i. 382).

9. **Original signification of the doctrine.**—We proceed to ask whether the conception of the *Descensus* thus recognized by the early Church—the conception which has been preserved most faithfully in the Orthodox Eastern Church, and still looms through the Roman Catholic doctrine, but which differs radically from the formulated views of the Protestant Churches, as also from the 'modern' interpretation of the *Descensus* as a preaching to unbelievers—was the original. But this really leads to the antecedent question whether the view shown to have been held by Tertullian, Irenæus, and Justin can be traced still further back. In Hermas (*Simil.* ix. 16. 5) we find the theologoumenon: *οἱ ἀπόστολοι καὶ οἱ διδάσκαλοι οἱ κηρύξαντες τὸ ὄνομα τοῦ υἱοῦ τοῦ θεοῦ κοιμηθέντες . . . ἐκήρυξαν καὶ τοῖς προκεκοιμημένοις.* Clearly, therefore, Hermas knew nothing of a 'Descensus Christi ad inferos' in the sense ascribed to it by Tertullian, Irenæus, and Justin. The present writer is, nevertheless, convinced—with J. B. Lightfoot and other scholars—that an idea of the *Descensus* very similar to that held by these Fathers can be traced even in Ignatius. Speaking of the prophets, the latter says that they had hoped and waited for Jesus Christ, *ἐν ᾧ* (*sc.* Ἰησοῦ Χριστῷ) *καὶ πιστεύσαντες ἐσώθησαν . . . ὑπὸ* Ἰησοῦ Χριστοῦ *. . . συνηριθμημένοι ἐν τῷ εὐαγγελίῳ τῆς κοινῆς ἐλπίδος* (*Philad.* v. 2, ed. Lightfoot, Lond. 1889, ii. 262 f.), while the same thought is found in *Magn.* ix. 2 (ii. 131), which speaks of Christ and the prophets thus: *ὃν δικαίως ἀνέμενον, παρὼν ἤγειρεν αὐτοὺς ἐκ νεκρῶν.* Nor does the present writer doubt that these ideas of the *Descensus* likewise underlie the thought of Ignatius when he speaks of Jesus Christ as the *θύρα τοῦ πατρὸς, δι' ἧς εἰσέρχονται* Ἀβραὰμ *καὶ* Ἰσαὰκ *καὶ* Ἰακὼβ *καὶ οἱ προφῆται καὶ οἱ ἀπόστολοι καὶ ἡ ἐκκλησία* (*Philad.* ix. 1; Lightfoot, ii. 274). Are we to assume, then, that the ideas of Ignatius regarding the deliverance of the OT saints from Hades were identical with those of Tertullian and Irenæus? The present writer is of opinion that they were not quite identical. In order to become convinced of this we must first examine the eschatological beliefs of Irenæus and Tertullian. Here Tertullian is the clearer of the two. He says, quite unmistakably, that 'no one enters Heaven before the end of the world': 'nulli patet coelum, terra adhuc salva, ne dixerim clausa, cum transactione enim mundi reserabuntur regna coelorum' (*de Anima*, 55 [ed. Reifferscheid, i. 388. 17 ff.]). Until the Last Day, therefore, the dead are in an intermediate state; the universal law is that all the dead, Christians included, pass after death into Hades: 'omnis ergo anima penes inferos,

inquis? Velis ac nolis, et supplicia jam illic et refrigeria. Habes pauperem et divitem' (*ib.* 58; i. 394. 9–11). The allusion to Lk $16^{19ff.}$ shows that Tertullian located 'Abraham's bosom' (v.$^{22f.}$), likewise 'apud inferos.' But he was also aware that the souls of martyrs pass immediately into 'Paradise': 'nemo enim peregrinatus a corpore statim immoratur penes Dominum *nisi ex martyrii praerogativa, paradiso scilicet, non inferis diversurus*' (*de Res. Carn.* 43, ed. Oehler, Leipzig, 1851–53, p. 973; cf. *de Anima*, 55 [Reifferscheid, i. 389. 3]: 'tota paradisi clavis tuus sanguis'). Nor does Tertullian appear to deny that even the patriarchs saved by Christ—the 'appendices dominicae resurrectionis'—tarry in Paradise till the 'transactio mundi' (*de Anima*, 55 [Reifferscheid, i. 388. 21 ff.]). What then is Paradise? A 'locus divinae amoenitatis recipiendis sanctorum spiritibus destinatus' (*Apol.* 47 [Oehler, p. 145]), to be distingnished from that Hades which contains the souls of most of the dead, as an 'aliud et privatum hospitium' (*de Anima*, 55 [Reifferscheid, i. 388. 29]), yet in the last resort clearly a section of the 'inferi,' identical with the 'sinus Abrahae,' where 'expectandae resurrectionis solacium capitur' (*ib.*). Irenæus, who, it must be confessed, appears not to have fully mastered the heterogeneous mass of traditions before him, held a view essentially the same (cf. L. Atzberger, *Gesch. d. christl. Eschatol. innerhalb d. vornicän. Zeit*, Freiburg in B., 1896, p. 238 ff.). But he seems to think of the πνευματοφόροι (*i.e.* truly spiritual Christians, martyrs, and other specially mature believers) who enjoy in Paradise a foretaste of ἀφθαρσία (*adv. Hær.* v. 5. 1 [ii. 331]) not merely—with Tertullian—as 'spiritus,' but also, perhaps on the authority of 1 Co 5^4 (a passage which he often cites [cf. Harvey, ii. 521])—as endowed with what we may call provisional bodies (cf. what is said, *op. cit.* p. 330, about Enoch and Elijah). Now, we see at once that, with respect to the views of Irenæus and Tertullian, the same questions urge themselves upon us as arose in connexion with the recognized doctrine of the Eastern Church (see above, end of § 2). According to the beliefs of the two Fathers regarding Paradise, all that Christ could accomplish on the occasion of His *Descensus* was—to put it somewhat crudely—to place the OT saints in a better region of Hades. Did Ignatius too share this view? And is this the original idea of the *Descensus*? The former question—little as Ignatius says of the matter—may, as we think, be answered in the negative. What Christ did for the prophets, according to Ignatius (*Magn.* ix. 2), was: ἤγειρεν αὐτοὺς ἐκ νεκρῶν. Was Ignatius thinking here of a bodily resurrection, and of what is narrated in Mt $27^{52f.}$? T. Zahn (*Ign. v. Antiochien*, Gotha, 1873, p. 598 f.) believes that he was. But the hypothesis is belied by the first of the Ignatian passages already quoted (*Philad.* v. 2), according to which the prophets are συνηριθμημένοι ἐν τῷ εὐαγγελίῳ τῆς κοινῆς ἐλπίδος, *i.e.* they look forward, exactly like the Christians, to the ἀνάστασις σαρκός. It is certainly possible that Ignatius agreed with Irenæus in believing that prophets and patriarchs had acquired provisional bodies. But the true sense of the Ignatian references, as the present writer thinks, leaves us free either to accept this theory or to assume that, like Tertullian, he was thinking only of the 'spiritus' of the prophets. Perhaps his cogitations had never brought him face to face with the alternative; for it is obvious that in his eyes the essence of the matter was that Christ had vouchsafed to the OT saints the same salvation as Christians had obtained. What then, according to Ignatius, is the position of Christians with respect to death? So far as he himself was concerned, he does not look forward to a sojourn in Hades; he hopes, at his approaching decease, to win God (Θεοῦ ἐπιτυχεῖν, *Rom.* i. 2, ii. 1, etc.), to go to the Father (*ib.* vii. 2), to be united to Christ (*ib.* vii. 3; cf. E. von der Goltz, *Ign. als Theologe*, Leipzig, 1894, p. 38). Do these words imply that Ignatius, as one about to become a martyr, longed for the 'prerogative' (cf. Tertullian's phrase quoted in preced. col.) of 'statim penes dominum esse'? Such an interpretation seems quite at variance with the manner in which he speaks of himself elsewhere. He must have supposed, accordingly, that, although Christians will not attain the resurrection of the body until the Last Day, yet they do not fall under the bondage of death, *i.e.* Hades, but pass through the gate of death to eternal life. It is clear that, according to Ignatius, that which Christians experience immediately after death was imparted, in virtue of Christ's descent, also to the OT saints. That these reflexions of Ignatius are of a more primitive character than those of Irenæus and Tertullian appears probable from the fact that they exhibit a higher degree of self-consistency, and are in perfect accord with ideas suggested by Jn 8^{51} and $11^{26ff.}$ (cf. 11^{24}). But this priority is also capable of proof. First of all, it is worthy of note that the phrase ἤγειρεν αὐτοὺς ἐκ νεκρῶν used by Ignatius is found in later statements regarding the *Descensus* which are unquestionably independent of him. In the *Acta Thaddaei*, written *c.* A.D. 250, Christ is referred to in these terms: ἐσταυρώθη, καὶ κατέβη εἰς τὸν ᾅδην, καὶ διέσχισε φραγμὸν τὸν ἐξ αἰῶνος μὴ σχισθέντα, καὶ ἀνήγειρεν νεκρούς· καὶ κατέβη μόνος, ἀνέβη δὲ μετὰ πολλοῦ ὄχλου πρὸς τὸν πατέρα αὐτοῦ (Euseb. *HE* i. 13. 20, ed. E. Schwartz, Leipzig, 1907, i. 96). The ἐγείρειν, indeed, is still found in the *Gospel of Nicodemus* (viii., p. 330). Another important point is that Tertullian and Irenæus expressly oppose the theory that Christians do not go to Hades (cf. Kattenbusch, *op. cit.* ii. 902 ff.). Of his opponents on this point Tertullian says: 'qui satis superbe non putant animas fidelium inferis dignas' (*de Anima*, 55 [Reiff. i. 388. 7]); 'In hoc, inquiunt, Christus inferos adiit, ne nos adiremus; ceterum quod discrimen ethnicorum et christianorum, si carcer mortuis idem?' (*ib.* 55 [Reiff. i. 388. 10 ff.]). Irenæus, again, censures those within the Church (cf. *adv. Hær.* v. 31. 1: 'qui putantur recte credidisse') who believe 'interiorem hominem ipsorum derelinquentem hic corpus, in supercoelestem ascendere locum' (*adv. Hær.* v. 31. 2 [ii. 412]). Now, the real innovators here are not those who were thus assailed by Irenæus and Tertullian, and whose views, it may be added, were still at work in the time of Pelagius (cf. Loofs, *Dogmengesch.*^{4}, Halle, 1907, p. 421), but these Fathers themselves. Finally, the older view still asserts itself in the thought of Irenæus: 'Ecclesia . . . multitudinem martyrum . . . praemittit ad patrem' (*adv. Hær.* iv. 33. 9 [ii. 263]), and, in fact, the belief that the martyrs and saints are even now with Christ long survived throughout the Western Church, as also—though with manifold inconsistencies—in the East.

Thus the most primitive, or, at least, the earliest traceable, element in the conception of the *Descensus* would seem to be the belief that Christ, having descended into the under world after His death, delivered the OT saints from that necessity of being confined in Hades which was thenceforward abrogated in the case of believers, and conveyed them to the Heaven which all believers have hereafter the right to enter.

10. Relation of doctrine to primitive Christian ideas.—That in this most primitive, *i.e.* earliest traceable, view we have reached the primordial element of the doctrine is rendered probable by the fact that the view in question is closely connected with certain important and, indeed, central ideas in primitive Christianity. Reference can be

made here only to a few points. (1) This earliest phase of the conception shows not the slightest influence of that high esteem accorded, from the days of the Apologists, to the pious heathen who lived before Christ; it numbers with the Church of God only the *saints of the Old Covenant*. (2) It does justice to the primitive Christian conviction that Christ was the πρωτότοκος ἐκ νεκρῶν (Col 1^{18}, 1 Co 15^{20}), the One who brought life (Paul, John, 1 P 1^{3}, Heb., Ac 4^{2} $13^{32ff.}$ 17^{31}). (3) It ignores the distinction between the Resurrection and the Ascension of Christ, and, indeed, with not a few primitive Christian documents (cf. *Barnab.* xv. 9, ed. Harnack[2], Leipzig, 1878, p. 66, and Harnack's note), treats the two as one. We may well wonder, indeed, that the opponents of the bodily resurrection of Jesus have never appealed to this conception of the *Descensus*, *i.e.* the ἐγερθῆναι ἐκ νεκρῶν of the patriarchs and their entrance into Heaven with Christ—though there are, of course, arguments which would tell against such a procedure. Even the relatively late *Gospel of Nicodemus* allows no time at all for the bodily resurrection of Christ, and that event is made known to the world, not by His appearance, but by the preaching of those who have come with Him from Hades (xi. 332; Lat. text A, 406 f.; B, 431).

Another link of evidence for the antiquity of the conception set forth in § 9 is that traces of it are found in the NT. Not certainly in 1 Peter; for, as will be seen from all that has been said, if the much-canvassed passages in that work refer to the *Descensus* at all, they would indicate a view which is quite unique and finds no support in the tradition of the early Church. The Pauline Epistles, again, in spite of Ro 10^{7} and Eph 4^{9}, have in our opinion as little to say of the *Descensus* as Ac $2^{27.31}$: all that these passages imply is the sojourn of Christ in Hades which, in the minds of the writers, was necessarily involved in His death. It is possible, however, that the belief in the *Descensus* is presupposed in Rev 1^{18} (ἔχω τὰς κλεῖς τοῦ θανάτου καὶ τοῦ ᾅδου); while Jn 8^{56} (Ἀβραὰμ ὁ πατὴρ ὑμῶν ἠγαλλιάσατο ἵνα ἴδῃ τὴν ἡμέραν τὴν ἐμήν· καὶ εἶδε καὶ ἐχάρη) —a passage which, as we think, still awaits a satisfactory exegesis—becomes intelligible when it is taken to refer to Christ's presence in Hades. It is true that the saying, as put into the mouth of Jesus, would thus involve a violent anachronism. But is an adequate exposition of, *e.g.*, Jn 6 possible except on the hypothesis of similar anachronisms?

We are on surer ground in saying that the idea of the *Descensus* was known to the author of Hebrews. Thus, of the OT saints whom he cites in ch. 11 as witnesses of faith he says expressly: οὗτοι πάντες . . . οὐκ ἐκομίσαντο τὴν ἐπαγγελίαν, τοῦ Θεοῦ περὶ ἡμῶν κρεῖττόν τι προβλεψαμένου, ἵνα μὴ χωρὶς ἡμῶν τελειωθῶσιν ($11^{39f.}$); then in ch. 12 he assumes that even now the heavenly Jerusalem contains not only the ἐκκλησία πρωτοτόκων (Apostles and other believers of the first generation), but also the πνεύματα δικαίων τετελειωμένων ($12^{22f.}$). Now these δίκαιοι τετελειωμένοι must also include the heroes of faith mentioned in ch. 11. Until Christ came, however, the way into the holy place was not open to them (cf. 9^{8}: τοῦτο δηλοῦντος τοῦ Πνεύματος τοῦ Ἁγίου, μήπω πεφανερῶσθαι τὴν τῶν ἁγίων ὁδὸν ἔτι τῆς πρώτης σκηνῆς ἐχούσης στάσιν). Christ alone, who τελειωθεὶς ἐγένετο πᾶσι τοῖς ὑπακούουσιν αὐτῷ αἴτιος σωτηρίας αἰωνίου (5^{9}), can have opened to them the holy place; through His death our πρόδρομος (6^{20}) entered the holy place, εἰς αὐτὸν τὸν οὐρανόν (9^{24}); ἐνεκαίνισεν ἡμῖν ὁδὸν πρόσφατον καὶ ζῶσαν, διὰ τοῦ καταπετάσματος, τοῦτ' ἔστι τῆς σαρκὸς αὐτοῦ (10^{20}). In all these passages, no doubt, the writer is thinking primarily of Christ's *sacrificial* death, but do his words not gain in clearness when we assume that he had also the *Descensus* in his mind?

Finally, it seems to the writer to be beyond question that the idea of the *Descensus* underlies Mt 27^{51-53}. It has been aptly observed by Resch ('Ausserkanon Paralleltexte z. d. Evangelien,' *TU* x. 1 and 2, 1893–94, p. 362) that the *Gospel of Nicodemus* indicates the sense in which the opening of the graves and the resurrection of saints narrated in these verses was understood, since it is hardly possible to doubt that the writer of the First Gospel favoured a similar view. We might even ask, indeed, whether the rending of the καταπέτασμα in Mt 27^{51} is not simply a mythical representation of the thought expressed in He 10^{20}, viz. that Christ set open the way into the holy place διὰ τοῦ καταπετάσματος.

11. Hybrid origin of doctrine excluded.—The Johannine writings, the Ep. to the Hebrews, and Mt 27^{51-53} belong, however, to the latest stratum of the NT. That the conception of the *Descensus*, as set forth in § 9, was current in the earlier Apostolic period must, in view of the fact that the Pauline Epp. are silent regarding it, and that there is no trace of it in Hermas (cf. p. 660[b]), be regarded as improbable. But from what was said in the foregoing paragraph we must recognize the presence of the idea in the later Apostolic period. This fact, and, still more, the fact that the idea of the *Descensus* is connected with primitive Christian-Jewish views of Hades and eternal life (cf. also § 10), are sufficient, as we think, to negative the theory that the belief was in part generated by non-Jewish and non-Christian influences—ideas from alien religions. Such a mixed origin has been ascribed to it by not a few modern scholars (cf. Clemen, *Religionsgesch. Erklärung d. NT*, Giessen, 1909, pp. 153–156; H. Zimmern, *KAT*[3], pp. 388, 563; H. Gunkel, *Zum religionsgesch. Verständnis d. NT*, Göttingen, 1903, p. 72; O. Pfleiderer, *Das Urchristentum*[2], Berlin, 1902, ii. 288, also *Das Christusbild des urchristl. Glaubens in religionsgesch. Beleuchtung*, Berlin, 1903, pp. 65–71; A. Meyer, *Die Auferstehung Christi*, Tübingen, 1905, pp. 10 and 80; W. Bousset, *Hauptprobleme d. Gnosis*, Göttingen, 1907, pp. 255–260; Percy Gardner, *Exploratio Evangelica*[2], London, 1907, pp. 263–74; and others). But the many and various parallels that have been pointed out are—as parallels—anything but convincing; the similarities are nothing like so many as the differences, and the hypothesis that these exotic ideas exerted an influence upon the genesis of the *Descensus*-idea not only remains unproved, but is in the highest degree improbable.

12. Specifically early Christian character of doctrine.—The conception of the *Descensus*, as defined above (§ 9), must accordingly be recognized as a specifically Christian idea which goes back to the later decades of the primitive Church, and as such it has a strong claim upon our interest. The conception, in fact, holds a quite peculiar position, for it is the sole vestige of primitive Christian thought which, independently of the Bible—with marked modifications and variations, indeed,—still retains a place in the tradition of all the main divisions of the Christian Church. Even so, however, the modern mind cannot bring to it more than interest; we cannot now accept it as part of our faith. The Jewish-Christian beliefs regarding Hades and the sojourn of the soul therein, as also those regarding Heaven, which underlie the idea of the *Descensus*, belong to a cosmology which even the most determined *laudator temporis acti* cannot now accept. The conception, moreover, is really inseparable from these underlying beliefs, and, when the latter crumble away, nothing of the former remains. We can appraise the doctrine of the *Descensus* only in a historical sense, *i.e.* as a conception which brings into strong relief the primitive Christian conviction

that the resurrection of Jesus Christ was something altogether *new*, and which with its naive imagery graphically expresses not only the connexion between the Old and New Testaments, but also the original element in the new covenant. In fact, the *Descensus*-idea embodies in its own manner the very same thought as is expressed in the words of Ignatius, *Philad.* ix. 2: ἐξαίρετόν τι ἔχει τὸ εὐαγγέλιον, τὴν παρουσίαν τοῦ σωτῆρος, κυρίου ἡμῶν Ἰησοῦ Χριστοῦ, τὸ πάθος αὐτοῦ καὶ τὴν ἀνάστασιν· οἱ γὰρ ἀγαπητοὶ προφῆται κατήγγειλαν εἰς αὐτόν, τὸ δὲ εὐαγγέλιον ἀπάρτισμά ἐστιν ἀφθαρσίας. But precisely this manner of expression is one of the most antiquated and assailable elements with which the tradition of the Christian Churches is still encumbered. It were fitting, therefore, that the Churches distinguished as Evangelical should omit the Article 'descendit ad inferos' from their programmes of instruction in Christian doctrine and worship.

DESCENT OF MAN.—See EVOLUTION.

DESIGN.—See TELEOLOGY.

DESIRE.—The inner nature and outer scope of human desire are such as to raise important questions concerning man's relation to the world and his estimate of his own life therein. In both a theoretical and a practical manner, desire proposes certain questions for philosophy: on the one side, it is asked whether man can desire aught but the pleasurable; on the other, it is questioned whether his attitude toward desire should be one of acceptance or rejection. Just as perception establishes a theoretical connexion between the mind and the world, so desire elaborates a volitional relation between the soul and Nature, so that man is led to wonder whether, like the animal, he could silently take his life for granted or, self-conscious and self-propelled as he is, should question the authority of natural desire over him. Owing to the problematic nature of desire, it becomes necessary to inquire concerning the exact psychological type and ethical worth of this human function; to this constructive work must be added critical considerations drawn from æsthetics and religion. Thus we must investigate what desire really is, and in what way, and to what extent, it is supposed to exercise sway over the human soul.

1. Psychology of desire.—The nature of desire is such as to place it between instinct and volition; it is superior to instinct inasmuch as it is a definite and conscious form of activity, while it is inferior to volition because it is not propelled by a disinterested, impersonal idea. Belonging to the emotional process, desire has the nature of active feeling; all feeling tends to arouse activity in either mind or body, so that desire may be regarded as feeling plus activity—a process according to which a painful want is satisfied or a pleasurable experience retained. Nevertheless, desire is related to both cognition and volition; but, where pure intellection and pure conation work directly in relating the ego to its object as idea or act, desire follows an indirect path, which involves instinctive and personal considerations. In a certain sense, the position of desire in consciousness is exceptional, for the reason that acts are usually performed directly, while ideas are entertained in a purely mental manner not coloured by desire; in contrast to these more staid forms of cognitive and conative activity, desire expresses a condition of intensified human interest.

(*a*) The *volitional* factor in desire occasions a problem whose nature is expressed by the question, Does one always desire pleasure? If desire were purely affectional, it could easily be pointed out that desire is ever related to the pleasurable, aversion to the painful; but the presence of conation spoils the simplicity of this hedonic arrangement, and makes necessary one that is more extensive and complicated. Perceiving the influence of the will's activity, Aristotle was led to say: 'There are many things, so to speak, which we should choose on account of something else than pleasure' (ἅπαντα γὰρ ὡς εἰπεῖν ἑτέρου ἕνεκα αἱρούμεθα πλὴν τῆς εὐδαιμονίας [*Eth. Nic.* x. 6]). In contrast to Aristotle's eudæmonism, J. S. Mill urged a hedonism on the basis of which he insisted upon identifying desire with a sense of pleasure:

'I believe that desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather two parts of the same phenomenon; in strictness of language, two different modes of naming the same psychological fact: that to think of an object as desirable (unless for the sake of its consequences), and to think of it as pleasant, are one and the same thing; and that to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical absurdity' (*Utilitarianism*[10], 1888, p. 56).

This dogmatism on Mill's part may be explained by observing that, where desire is viewed in independence of pleasure, the invalidity of the hedonic argument is at once demonstrated; for the ability of the ego to transcend pleasure and pain as determinants of action is a preliminary proof of idealism. On the psychological side, it is apparent that, where desiring an object indicates a volitional decision in favour of it, as worth while, still this does not mean emotional delight in it as something pleasurable. The later hedonism of Sidgwick admits this, and its author, in his anxiety to escape the egoistic implications of the older hedonism, declares:

'What I am concerned to maintain is that men do not *now* normally desire pleasure alone, but to an important extent other things also' (*Methods of Ethics*[6], London, 1901, i. ch. iv. § 4).

In identifying the pleasurable and desirable, the hedonist has confused desire in its active condition with the passive experience of delight, but the human mind is so constituted that it can choose other than delightful experiences. From the evolutionary standpoint, desire is related to pleasure, aversion to pain, upon the basis of the hedonic law which declares that the pleasurable is indicative of the beneficial in the organism, the painful of the harmful.

'Every pleasure,' says Herbert Spencer, 'increases vitality; every pain decreases vitality. Every pleasure raises the tide of life; every pain lowers the tide of life' (*Data of Ethics*, New York, 1893, § 36).

But the claim that the pleasure-giving is equivalent to the life-increasing, the pain-giving to the life-decreasing, is based upon purely biological considerations, and is discussed by Spencer in the chapter entitled 'The Biological View'; when he advances to 'The Psychological View,' as this is involved in the evolutionary plan, he repudiates the original hedonic scheme, by claiming that

man submits to guidance, not by simple, but by representative, feelings, whose ends are far removed from the sense of bodily benefit or injury (*ib.* § 42). The evolutionary conception of conduct is thus called upon to admit the presence of something like a disinterested play of consciousness, whereby man, emancipated from purely biological principles, chooses either pain or pleasure according to his idea of what has worth for the will.

(*b*) The *cognitive* factor in desire appears first of all in the presence of a presentative element which involves the idea of an object or end, so that cognition as well as conation tends to separate desire from the realm of purely instinctive feeling. As Sully says, 'where there is no knowledge, there can be no desire' (*The Human Mind*, ii. 196). Such knowledge consists in the memory of former pleasurable experiences which we would have repeated, or the idea of similar feelings which we could realize. The perceptible appreciable result to be obtained by activity in the direction of the desired object distinguishes desire from instinct, which functions immediately without the idea of an end. As Bergson has expressed it, 'there are things instinct alone finds, but it never seeks them' (*L'Evolution créatrice*[6], 1910, p. 164). On the cognitive side, desire consists in knowledge of an object rather than merely some pleasurable experience with its qualities, where one reads a book or listens to an opera, not merely for the attendant pleasure of the perusal or the performance, but for the sake of having read such a book or having heard such an opera. Desire is satisfied, not merely by pleasure, but by means of a conscious experience with an object, such as a foreign country which one visits. With its broad interests, the intellect transcends immediate pleasures, and advances to the idea of thrill which is afforded by contact with reality. In this way, art, which necessarily demands the disinterested, may mean more to the mind than actual life, just as tragic art, with its constant suggestion of pain and defeat, may be more entertaining than the comic, with its ideas of happiness and success. Through his desire for intellectual excitement, man has demonstrated his ability to rise above pleasure, just as he has shown that to perform acts peculiar to his will is of more value to him than to entertain pleasurable emotions. Desire thus involves an ideal as well as a purely cognitive element, for by its very nature it contrasts the actual condition of the ego with an ideal state of mind; the present as given, with the future as the not yet attained. This reference to the future is indicative of the difference between desire and pleasure; for, where pleasure is necessarily contemporaneous, desire is ever anticipatory, so that, as pleasure enters, desire departs. One desires pleasure when he does not possess it, but, when pleasure comes, the delight in it dispels the mere desire for it. In this way arises the larger question concerning happiness, which is sometimes conceived of as the possession of the good, sometimes as the pursuit of it.

(*c*) In addition to the conative and cognitive in desire, there is a third element, without recognition of which the problem of desire cannot be sufficiently presented; this is the *egoistic*. Desire indicates a form of activity streaming forth from the ego, while it is aimed at a form of experience calculated to affect the ego's condition. In themselves, both action and thought possess an impersonal character, since they relate to causal and substantial forms of reality found in the outer world; desire, however, makes use of these fundamental forms of mental reality only so far as they are of personal interest to the ego which desires to direct its faculties of conation and cognition in some particular channel. Desire is so identified with personal interest that æsthetical and religious systems which counsel man to avoid desire do not fail to advise him to neglect self. As to the relation of man to the world about him, desire makes use of an egoistic form of expression whereby instinct becomes conscious and voluntary. The fatality that may attach to such a personal exhibition of instinctive traits was portrayed by Balzac in his philosophic story, 'The Magic Skin,' which, as a token, had power to confer any desire, but which itself dwindled with the gratification of the wish until at last it destroyed the possessor—a suggestion that one must desire even though the desiderative life will eventually destroy itself.

2. Ethics of desire.—Where the psychology of desire ends, the ethics of desire begins—in the idea of value. With its egoistic and emotional limitations, desire cannot serve as an ethical norm, for it has already been shown to be incapable of accounting for impersonal volition and ideation. Nevertheless, desire may become a determinant of value, because, where one does not necessarily desire the pleasurable, he does desire what he deems valuable. 'Man,' said Nietzsche, 'is the valuing animal as such' (*Genealogy of Morals*, tr. Hausemann, 1897, ii. § 8), and the valuational in him may be attributed to the desiderative element in his nature. In this way, value becomes subjective; instead of adhering to a thing as one of its properties, instead of belonging to the moral principle as one of its attributes, value is relative to human desire. From this subjective point, Chr. v. Ehrenfels has declared:

'We do not desire things because we recognize a mystical, unintelligible essence of value in them; but we attribute value to them because we desire them' (*Syst. der Werttheorie*, vol. i. § 1).

Basing value upon desire, Ehrenfels follows Brentano in asserting that 'one can feel pleasure and pain without desiring; and, second, one can desire without feeling pleasure or pain' (*ib.* § 5). Having made value to consist of something subjective, he seeks to show how, in valuing a thing because of its desirability, we are not exchanging absolutism for egoism, for we are able to erect the idea of an absolute concept of value upon a psychic and subjective basis (*ib.* § 16). Value thus stands for a relation between an object and a subject, according to which the subject actually desires the object, or would desire it were it not convinced that the object existed for it (*ib.* § 21). The empiricism and eudæmonism of this view have been criticized by F. Krueger, who substitutes for the idea of actual desire that of a relatively constant desire (*Der Begriff des absolut Wertvollen*, ch. iii. 1). As Ehrenfels had clung to realism in desire, Krueger seeks to advance towards idealism. It is possible, however, to advance a stage beyond the point of view which regards value as the relatively constant desire of the subject. Desire contains not only the egoistic element, but the impersonal factors of cognition and conation whereby the moralist may secure a conception of the supreme good conceived neither eudæmonistically nor rigoristically, but in a valuational manner.

The attempt to idealize desire, that it may be elevated to the plane of the valuable, is quite in keeping with the inner nature of desire, with its perpetual contrast between the real and the ideal, the present and the future. At the same time, the mingling of pain and pleasure in desire—pain as to the given condition, pleasure with regard to a conceivable one—is only another phase of the idealizing tendency in all desire. At first view, desire seems to be but a natural principle, at one with the will to live and the struggle for existence, its inner nature consisting apparently in the conscious voluntary choice of the fundamental striving of all life. Thus viewed, human values are only human

desires directed towards an end. But in the moral consciousness of man the actual desire cannot be accepted as an ethical norm, whence arose idealism in conduct; and yet it is suggested that, were man truly man, the intelligible rather than the empirical ego, then the spontaneous desires of the human heart would represent genuine values of spiritual life. Man as a *valeur* lives according to idealized desires, so that, where Nature originates through organic striving and instinctive activity, reason continues this preliminary work by creating subjective values, whose essence consists in that which would be desired by man in his moral perfection. Inasmuch as ethics must begin with man as he is, it finds it necessary to express this idea of value by means of rectitude and duty. As a result, ethics, like psychology, cannot advance beyond the limits of mediocrity in man, who through desire is put in a condition of sufficiency, wherein interests take the place of ideals, and man transcends Nature only to the degree of elaborating the idea of the human species, and not that of internal spiritual life. This defect in the psychologico-ethical view of man is made up by the æsthetico-religious one, according to which desire is repudiated.

3. Æsthetics of desire.—In the artistic world, human desire is not accepted in its immediacy, but is subjected to spiritual scrutiny. Where the constructive mood of æsthetics prevails, desire is increased by the perception of beauty, which Stendhal (1783–1842) defined as 'a promise of happiness' (Nietzsche, *op. cit.* iii. § 6); where the critical mood is uppermost, beauty is regarded as the dwindling of desire in the form of disinterested contemplation. One is aphrodisiac, the other anti-aphrodisiac, in its effect upon desire. Even among the Greeks there was no lack of antipathy towards the desiderative in æsthetics, and it was in this spirit that Plato condemned the poet, not only because his imitative art yielded an inferior degree of truth, but because the excitement he aroused expressed an inferior part of the soul—the passionate rather than the reflective. This criticism he applied to the drama especially (*Rep.* 604–5). Aristotle conceived of art as having the function of cleansing the soul from such desires as cause distress by virtue of their occupancy in and sway over the soul; accordingly, he defines tragedy as the imitation of an action where the effect is produced by men acting and through pity and fear effecting a purification of such passions (δι' ἐλέου καὶ φόβου περαίνουσα τὴν τῶν τοιούτων παθημάτων κάθαρσιν [*Poet.* ch. vi. 2]). Modern æsthetics has met the problem of desire upon a basis more psychological, while it has been less rigorous than was Hellenism in its judgment of the desirable in beauty. The general effect has been to place the disinterested in the position of the desiderative, which idea was first formulated by Kant, although Burke's *The Sublime and the Beautiful* (1756) and Baumgarten's *Æsthetics* (1750–58) showed him where beauty might be found. Kant seeks to indicate the possibility of a feeling-judgment, or taste; the latter he describes by saying:

'Taste is the faculty of judging of an object by an entirely disinterested satisfaction or dissatisfaction' (*Critique of Judgment*, tr. Bernard, 1892, § 5).

In Kant's mind, desire is fatal to beauty, as to virtue also; hence his insistence upon the disinterested in æsthetic feeling.

Schopenhauer was more voluntaristic, more pessimistic; hence, his doctrine of desire is more severe.

'All willing springs from want, hence from need, hence from suffering. The satisfaction of a wish may end it, but for every one that is satisfied there remain at least ten which are denied; further, desire lasts long, while its demands are infinite; the satisfaction is short and scantily meted out. . . . Therefore, so long as our consciousness is filled with will, so long as we are thronged by desires, with their perpetual hopes and fears, so long as we are the subject of willing, there can be no lasting happiness or peace for us. . . . Thus the subject of willing is ever stretched upon the revolving wheel of Ixion, pours water into the sieve of the Danaids, is the ever fruitlessly pining Tantalus (*Welt als Wille und Vorstellung*, § 38).

This constant condition due to human desire is relieved from time to time by æsthetic contemplation, in whose ecstatic moments the subject, raised above the desiderative, enjoys the stillness of the will to live:

'It is the painless condition which Epicurus prized as the highest good, as also the condition of the gods; for we are for the moment delivered from the shameful striving of the will, we celebrate the Sabbath of the forced servitude of willing while the wheel of Ixion stands still' (*ib.*).

Wagner follows Schopenhauer in postulating renunciation of desire as the most perfect æsthetic condition, although he finds it hard to explain how the particular art of music, which involves the highest excitation of the will, can consist with the state of stillness demanded by the æsthetic ideal (cf. Beethoven, *Schriften u. Dichtungen*[3], Leipzig, 1898, v. 9, p. 72). In the *Ring des Niebelungen*, Wagner indicates a double doctrine of desirelessness: first, in Siegfried, whose superabundance of power raises him above want; secondly, in Wotan, who learns to relinquish the gold of baneful desiring (cf. *Siegfried*, Act ii.; *Rheingold*, Sc. iv.). In contrast to these æsthetic attacks upon desire, based upon a dread of the will to live, other Schopenhauerians consider beauty as consisting in an excess of the natural function of willing. Nietzsche thus criticizes Schopenhauer and Wagner, and returns to the views set forth by Stendhal, as also by Flaubert.

'Stendhal,' says he, 'a not less sensual but more happily constituted nature than Schopenhauer, lays stress on a different effect of beauty: beauty promises happiness. With him the very stimulation of will (interest) by beauty seems to be the fact' (*op. cit.* iii. § 6).

In this positive treatment of desire, Nietzsche is followed by Sudermann, whose literary art constantly repudiates all restraint. With Sudermann, this affirmation of desire is carried out consciously and with apparent sincerity, and, instead of following the animal instinctiveness of Maupassant, he uses the sensual with the aim of inculcating an egoistic ethical doctrine. Much the same may be said of George Moore in distinction from Oscar Wilde, because Moore employs the sensual for the purpose of developing a trans-traditional morality (J. Huneker, *Overtones*, New York, 1906, iv. 2). This contradiction between the two views of desire is due to a difference in interpretation of the ego and its position in the world-whole. Those who believe in the reality of spiritual life are inclined to eliminate desire by removing the ego from the field of activity, while those who are aware of no beyond know no reason why man should do aught but further the native tendencies towards self-realization. But, even where the ego's desires appear to be the most obvious things in experience, the artistic consciousness distrusts desire as something tending to delude the mind which appeals to the stillness of the inner life. This occasional elevation in art is the rule in religion.

4. Desire and religion.—Since spiritual religion consists in a detachment from the world of impressions and a repudiation of immediate impulses, it is necessary to consider its relation to desire. With various religions, the attitude towards desire is determined in accordance with their general attitude towards the world. Thus Taoism, which regards reality as something empty of content and wanting in attributes, upholds the repression of desire; Buddhism, with its acosmic tendency, urges its complete extirpation; Christianity, while not wanting in this critical attitude towards the natural in both man and the world, advises one to train the desires.

The leading principle in Taoism is that of emptiness and inactivity, wherein the dialectical superiority of the Tao consists (*Tao Teh King*, tr. Legge, 1891, chs. 11, 37). Accordingly the man of Tao seeks by the repression of desire to reduce himself to this kenotic condition; hence the sage seeks to withdraw the mind from external impressions like colours, tones, flavours, and the like (*ib.* ch. 12). This course of repression is further called 'returning to the root'—a teaching which calls attention to the tendency on the part of all forms of vegetable life to return from their full-flowering to their original condition. 'This returning to their root is what we call the state of stillness,' says Lao-tze, who counsels the disciple to produce this state to the utmost degree (*ib.* ch. 16). The man of Tao is considered 'different from ordinary men, in that he has so repressed his desires as to have become infant-like and primeval. "I am like an infant, which has not yet smiled," says he. The mind is that of a stupid man; I am in a state of chaos' (*ib.* ch. 20, cf. chs. 23, 28). Inasmuch as 'the Tao does nothing for the sake of doing it,' the Taoist is without desire, inactive, and simple (*ib.* ch. 37).

Buddhism treats desire in its major rather than its minor premiss, by discussing it in 'The Noble Truth Concerning Suffering' (in the *Mahāvagga*, tr. Davids and Oldenberg, Oxford, 1881, i. 1). This truth is fourfold. It is based upon the individual's attachment to life, to his desire for continued existence and happiness; the resulting suffering is removed by detachment from desire, the way of which lies along the eightfold path wherein is found the destruction of sorrow (cf. 'Dhamma Kakka,' tr. Davids, *SBE* xi. [1900], §§ 5–8). With Buddhism, desire is repudiated because it leads to delusion, and he who would find reality must detach himself from objects of sense. See, further, the next article.

Where Hellenism indulged the idea of desire in the enjoyment of life and the elaboration of the beautiful, it did not fail to express some sense of regret for life in the world of sense. Like the Cynics before them, the Stoics set themselves against desire and extolled a rigorous course of conduct, the spirit of which was *ἀπάθεια*, or cultivated indifference. Such in general was the attitude of the opposite school of Epicurus, who praised *ἀταραξία*, or passive pleasure, as the highest moral condition (Diog. Laert. x. 136). Where Erdmann (*Hist. Philos.* tr. Hough, 1898, § 97, 4) seeks to identify these ideals, Windelband (*Hist. Philos.* tr. Cushman, New York, 1906, § 47) believes the likeness to be but superficial. The former is the virtue of ethical indifference to all passions; the latter is passionlessness which is based upon the perfect satisfaction of all desire. On this account, it was looked upon, by both Epicureans and Cynics, as acquired only through a limitation of desire (*ib.*). It was in this spirit that Horace wrote his famous epistle beginning 'Nil admirari prope res est una' (*Ep.* I. vi.), while Seneca expressed the same apathetic sentiment in his 'sine admiratione' (*de Vita Beata*, iii. 3). In dealing with desire and aversion, Epictetus adopts the same attitude, counselling man to cease desiring things beyond his power (iii. 24). Marcus Aurelius rehabilitates Horace's 'nil admirari' with his own *ἀθαύμαστον*, whereby, like Maximus his master, he ceased to wonder at anything (i. 15). See also the 'Greek' article, below.

While Christianity does not attack desire upon the same cosmological grounds as Taoism, Buddhism, and Stoicism, it does not fail to relate the function of desire, which it condemns, to the world, which it repudiates. In the great value-judgment of the Gospels, 'What doth it profit a man, to gain the whole world, and forfeit his life?' (Mk 8^{36}), the principle at work is that of detachment from the world. On the psychological side, this is expressed in terms of will, where it is declared, 'Whosoever would save his life shall lose it' (*ὃς γὰρ ἐὰν θέλῃ τὴν ἑαυτοῦ ψυχὴν σῶσαι ἀπολέσει αὐτήν* [Mk 8^{35}]). But, with more direct reference to desire, *ἐπιθυμία*, it may be said that, when the NT writers assume an attitude towards it, this is always a deprecating one, for it is looked upon as equivalent to lust. This was the view of Christ in His comment upon the Seventh Commandment—*πᾶς ὁ βλέπων γυναῖκα πρὸς τὸ ἐπιθυμῆσαι* (Mt 5^{28}). St. Paul connects desire with passion, and likens the desiring mood to the habits of the Gentiles, *πάθος ἐπιθυμίας* (1 Th 4^{5}); St. Peter speaks of the believer as one who has escaped the corruption in the world through desire—*ἐν τῷ κόσμῳ ἐν ἐπιθυμίᾳ* (2 P 1^{4}); and St. James speaks of the tempted man as one who is drawn away by his own desire—*ὑπὸ τῆς ἰδίας ἐπιθυμίας* (Ja 1^{14}). St. John relates these forms of the mind to the world, and thus tends to give a dialectic of desire. In this way, the content of the world is likened to desire in both a sensuous and an intellectual form: *πᾶν τὸ ἐν τῷ κόσμῳ, ἡ ἐπιθυμία τῆς σαρκὸς καὶ ἡ ἐπιθυμία τῶν ὀφθαλμῶν* (1 Jn 2^{16}); the lust of the flesh and the eyes is thus repudiated by Christianity, which aims at detaching the ego from the immediate world, that it may find its true place in the world of spiritual life. This doctrine of detachment from life is now under discussion in religious circles where Mysticism prevails.

While current thought accepts desire as a fact of experience and develops it according to ethics, religion, like art, refuses to take it for granted and tends to repudiate it altogether. Such a tendency appears in Wagner's view of religion (cf. above); in Tolstoi's conception of Christianity, as developed in *My Religion* (tr. H. Smith, New York, 1885), where asceticism mingles with sympathism; in Villiers de L'Isle-Adam, whose *Axël* (Paris, 1890) involves 'the rejection of life at the moment when life becomes ideal' (J. Huneker, *Iconoclasts*, New York, 1908, p. 357); and in Ernest Hello, who attacks desire under its armour of the pride of life (cf. *L'Homme*^{3}, Paris, 1894, *Le Siècle*, do. 1896). More after the Russian manner, J. K. Huysmans, who passed from the sensual to the spiritual, has revealed an august world-withdrawal whose path is indicated in *En Route* (Paris, 1895), while its result is elaborated in *La Cathédrale* (Paris, 1898), where Durtal, the hero, cloistered at Chartres, glorifies the inner life, 'la vie contemplative,' which he contrasts with 'la vie active' (*op. cit.* 28, ch. v. p. 125, ch. xi. p. 330). Huysmans, who mentions Hello (*ib.* ch. vi. p. 138), reveals the same combination of Catholicism and Mysticism that guided the former to his striking attitude towards human desire. The economic interest, which to-day predominates, tends to forbid the artistic disinterestedness and religious renunciation which seek to neutralize desire, so that the present age might well be called the age of desire.

'Desire,' in *DCG*.

CHARLES GRAY SHAW.

DESIRE (Buddhist).—There is no more intimate, more radical self-expression of the conscious individual than that which is conveyed by the term 'desire.' It is the one genuine subjective register of character. A man is known by his works, but he knows himself by his desires. When these emerge, if they do emerge, in action, external limitations

of environment and opportunity permit only a distorted output of the ideal act, which had taken shape in the creative flame of desire. Religion and ethics are therefore deeply concerned with desire. *A fortiori*, whether Buddhism is considered to be religion, or ethics, or both, desire should bulk very largely in its doctrines, and the attitude of those doctrines towards it should be held crucial in our judgments respecting them. Buddhism faces the phenomenon of desire as frankly and as critically as other systems, and perhaps even more so; and this is because it is essentially psychological, and does not start from the external universe and its first or final cause, but with the heart of man.

Discounting the remoter and immaterial planes of existence (*rūpa-loka* and *arūpa-loka*), the world of earth, with its purgatories and its nearer heavens, is, by Buddhism, conceived and named in terms of desire. It is *kāmā-vachara*, the sphere of *kāma*, i.e. desire understood simply as wishing for what is pleasant; and *kāma-loka*, 'world of desire'—*kāma*, according to the commentators, includes both desiring (*kāmetīti kāmo*) and that which is desired (*kāmiyatīti kāmo*). Now, as might be expected, in Buddhist philosophical treatises the universality of desire is dealt with as a natural phenomenon, and is neither praised nor condemned, while, with respect to the life of laymen, *kāma*, that is, natural desires and the enjoyment thereof, is not, as such, condemned. In the oldest narrative of the birth of the Buddha (*Dīgha-Nikāya*, ii. 13; *Majjhima-Nikāya*, iii. 121), it is written that his mother, a lady of pure and virtuous life, was living before his birth in the enjoyment of the five modes of sense-desire (*pañcha kāmaguṇā*, i.e. of sights, sounds, odours, tastes, and contacts). Again, in the *Siṅgālovāda-suttanta* (*Dīgha*, iii. 180ff., called by R. Childers 'The Whole Duty of the Buddhist Layman'), the Buddha does not warn the young layman off a single form of natural desire or enjoyment, but only against vicious or wanton desires. For those who had left the world and devoted their lives to holiness and missionary work, the case was different. The *kāmas* were for them constant sources of danger, and were likened to burning coals, knives, snakes, dry bones, dreams, and other perilous and disappointing objects ('Psalms of the Sisters' [*Therīgāthā*], London, 1909, p. 144 f.). They belonged to the pursuit of sensuous pleasures and the life of the world. An abdicating king might say: 'I have enjoyed human *kāmas*; it is time to seek after celestial *kāmas*' (*Dīgha*, iii. 60). But, for one who was aiming at the highest goal, there was really nothing to choose between either human or celestial desires and objects of desire. The word *kāma* was dropped from his vocabulary. But he did not therefore cease to desire, for, though his *quo vadis* was different, he aspired to a goal none the less, and, if he obeyed the injunctions of his Order preserved in its scriptures, he pursued this end with greater ardour and singleness of purpose than he had ever felt over worldly objects.

If, in the earliest version of those scriptures surviving, viz. the Pāli *Pitakas*, natural desire and its objects—in a word, the *kāmas*—are usually mentioned in terms of depreciation, it must be remembered (1) that the Pitakas were compiled by *religieux*, and that the greater part of the Suttas are discourses addressed to *religieux*; and (2) that Buddhism started as an evangel of protest, reform, and regeneration against worldliness and superstition, and evangels do not compromise. But it is characteristic of this gospel that it does not seek to quench earthly desires (*manussaka kāmā*) by heavenly desires (*dibba kāmā*).

In the first place, the *summum bonum* of *arhat*-ship, of complete emancipation of heart and mind, could be won only in this earthly region of the *kāma-loka*, with the single exception of the remotest sphere of the *arūpa-loka*, where it was believed that some mortals attained *parinibbāna*, i.e. completion of perfected life and final death, who here, on their way to perfection, had not lived to touch the highest 'Path and Fruit' (*e.g. Dīgha*, ii. 200; *Saṁyutta*, v. 346, etc.); yet this *parinibbāna* is never recorded as a climax and glorious consummation, but rather as an epilogue to the life here below of those who, in a 'world of desire,' and in virtue of unworldly desire, had attained to the assurance of victory in spiritual evolution (*nibbāna*).

Secondly, whereas the Buddhist *Dhamma* is essentially a method for diverting and transforming the natural phenomenon of desire, it held up, before those whose quest was for the highest, no supramundane place as the proper object of desire, nor before any one did it hold up a superhuman being or person in that light. It is true that re-birth in 'heaven' is frequently proclaimed as the natural inevitable result of virtue in this life—this to laymen and to those of the Order who were spiritually babes. But it is virtue and goodness that are shown as desirable, rather than promotion hereafter, in the reconstituted life. Those who were judged as ripening to perfect emancipation aimed only at an impersonal goal, having no relation to time or space (*Milinda*, ii. 105, 186), but regarded, positively, as a blissful consciousness of salvation, liberty, mastery, insight, and peace (C. A. F. Rhys Davids, *Psalms of the Early Buddhists*, vol. i. p. xxxvii).

At the opposite extreme of these aspirations, which might be called the *vis a fronte*, Buddhism places, as the driving power *a tergo*, the world's great burden of ill, as fed by the constant working of unregenerate and uncontrolled desire, called 'thirst' or 'craving' (*taṇhā*, Skr. *tṛṣṇā*). This religio-philosophical term is another illustration of the immense significance of the vital phenomenon of desire in the Buddhist consciousness; and its scope embraces the whole of human desires, in so far as these are attracted by life itself, or by the idea of its extinction. There are three modes or channels of *taṇhā*: *kāma-taṇhā*, desire for what is sensuously pleasant; *bhava-taṇhā*, desire for becoming or life hereafter; and *vibhava-taṇhā*, desire for the extinction of becoming. *Taṇhā* in general is defined as 'concerned with repeated becoming' (lit. 're-birth-ic,' *punobbhavikā*), 'associated with pleasure and passion' (*nandi-rāga-sahagatā*), and 'delighting in various objects' (*tatra-tatrābhinandinī* [*Vibh.* 101, 365; *Saṁyutta*, iii. 26]). It was only when set on 'the Paths, the Fruits, *Nibbāna*,' that the desire, which had been called *taṇhā*, became the aspiration and the purpose called *sammā-saṅkappa* and *dhamma-chhanda*. 'For, as there is no inducement,' writes the commentator (*Attha-sālinī*, 347), 'to a mosquito to alight on a ball of iron heated in the sun, so these [goals] by their radiant glory do not attract *taṇhā*.'

The person of the Buddha, however, as an object of desire, lent warmth and colour to aspirations after impersonal goals. Not once only in the world's history, but from time to time through cycles of involution and evolution, do Buddhists hold that mankind may hope for a day when 'the desire of all nations shall come,' who will in love and wisdom satisfy their yearnings. The conditions and order of his advent are considered by the canonical books in the light of a natural law. Buddha-epochs were not equidistant in time, but they happened when, amid an ignorant and erring majority, there were some who would understand the message of salvation.

'As on a crag, on crest of mountain standing,
A man might watch the people far below,
E'en so do Thou, O Wisdom fair, ascending,
O Seer of all, the terraced heights of truth,
Look down, from grief released, upon the nations
Sunken in grief, oppressed with birth and age.
Arise, thou hero! Conqueror in the battle!
Thou freed from debt! Lord of the pilgrim-band,
Walk the world o'er, sublime and blessed Teacher!
Teach us the Truth—there are who'll understand'
(*Dialogues*, ii. 32; *Vin. Texts*, i. 86 f.).

The faith and devotion evoked by the person of the Buddha and by the nature of his doctrine are also usually described in terms of satisfied desire, namely, *pasāda*, *pasanna*, the passages being too numerous to quote (but cf. *Saṁyutta*, v. 381, with *Buddhist Psychological Ethics*, 174 n.). Nevertheless, the desire itself for a Buddha, and for the salvation he should bring, is expressed in terms of altruistic desire for the good and happiness of all men. It is 'out of compassion for all creatures, for the advantage and the welfare and the happiness of gods and men,' that a Buddha arises,

'Who from all ill and sorrow hast released
Me and so many many stricken folk'
(*Therīgāthā*, 157; cf. *Dialogues*, ii. 111; *JRAS*, 1906, p. 241).

Mediately therefore, in the desire for the Buddha, the impersonal desire for universal good, as well as the desire for personal salvation, finds expression.

For those who, as converts, were sufficiently won by the *Dhamma* to devote their lives to it, a career of mental and moral training was prescribed, which, judging by the terms employed, called into exercise the emotional and volitional, no less than the intellectual, faculties. The exercises might be in the expansion of a concept or sentiment—suffusion, irradiation (*pharaṇā*), they called it—or in concentration of attention and will (*samādhi*, *jhāna*, etc.), or in control of consciousness, recollection, self-collectedness (*sati-sampajañña*), and so on. In no case, however, was the training to be carried on with cool impassivity, except in certain advanced stages. The sincere student is constantly described as being aglow or ardent (*ātāpī*), strenuous or earnest (*appamatta*), full of energy and endeavour (*viriya*, *vāyāma*, *ussoḷhi*), and filled with eager active desire (*tibbachchanda*); but the emotional side of consciousness is not encouraged, except in intimate connexion with the conative or volitional. The term *chchanda*, for instance, which is as unmoral as our own 'desire,' but which, like 'desire,' is sometimes used with a sensual or passional import, is more allied to will than *kāma* is, and is explained by commentaries as meaning *kattukamyatā*, 'desire-to-do.' Few subjects, indeed, are of greater interest in Buddhist culture than this evolution of *chchanda*. For instance, *dukkha*, the generic term for 'ill,' 'misery,' or 'pain,' is said to be 'rooted' in *chchanda* (*Saṁyutta*, iv. 328), as, indeed, are 'all states of consciousness' (*Aṅguttara*, iv. 339). On one occasion the end of the Buddha's system of holy living is called the removal of desire (*chchanda-pahāna* [*Saṁyutta*, v. 272]). Yet this is stated to be accomplished by certain exercises in which *chchanda* is called into play. 'What then,' is an inquirer's comment, 'would you put away desire by desire?' And the Thera replies to the Brahman: 'Was there not desire, effort, thought, deliberation in your mind, when you set out to find me in this garden? And now that you have found me, is not all that abated?' Again, a homely simile of the ass who does not make himself into a valued cow by walking after the herd saying 'I, too, can bellow,' serves to show that the criterion of a genuine student is his displaying eager active desire (*tibbachchanda*) for the highest virtues and the most advanced mental development (*Aṅguttara*, i. 229). Finally, the Buddha is represented in the *Akaṅkheyya-Sutta* as showing how seventeen pious ways in which a *bhikkhu* 'might desire' (*ākaṅkheyya*) may severally be satisfied ('Buddhist Suttas,' *SBE* xi. 210 ff.).

Hence in Buddhist ethics, desire is, as such, not only not immoral, but an indispensable instrument for attaining higher (no less than meaner) ends; it becomes a source of danger only when the object of desire is such as to give no lasting satisfaction to desire when it is attained.

And hence it is strictly in accordance with the spirit of the older writings, if with an added tinge of intense emotion, when the author of the *Milinda Questions* declares that *Nibbāna* is to be realized. not by quiescent meditation, or in hypnotic trance, much less by mortification of desire, but by rational discontent, strong anguish, and longing, followed by a forward leap of the mind into peace and calm, then again by a vibrating zeal, in which the aspirant 'strives with might and main along the path,' and so on.

It had been the fate of Buddhism, before the authorities quoted above became accessible, to become for the general English reader synonymous not only with pessimism but with the 'extinction of desire.' And the error still persists. This is largely due to the fact that the earliest translators of the canonical works of Buddhism were not English, or, if English, were lacking in psychological training. The anthologies of the *Dhamma* and *Sutta-Nipāta* were rendered into English prose by those veteran Indologists, Max Müller and Fausböll, and between them they render no fewer than sixteen Pāli words, which really mean sensuous, or vicious, or unregulated desire, by the one unqualified word 'desire.' St. Hilaire, Burnouf, and Foucaux do much the same disservice with the one over-worked word *désir*. Warren (*Buddhism in Translations*, Camb. Mass., 1896) is no better; yet see his Index, *s.v.* 'Desire' ('desire = lust'). This slovenly usage partly justifies writers of more general and comparative treatises in arriving at sweeping but erroneous conclusions (*e.g.* Crozier in *Hist. of Intellectual Development*, London, 1897–1901). But it were undesirable to impoverish our ethical and religious concepts by making over to such terms as *taṇhā* all the moral as well as the immoral implications in desire. After all, it was in response to a desire, a yearning, an impulse, a resolution, that the founder of Buddhism is represented as having renounced the world and dedicated his life to the service of his fellow-men. See also art. LOVE (Buddhist).

LITERATURE.—C. A. F. Rhys Davids, 'On the Will in Buddhism,' *JRAS*, Jan. 1898, and *Buddhist Psychological Ethics*, London, 1900; C. A. F. Rhys Davids and S. Z. Aung, *Compendium of Philosophy*, 1910, p. 244, n. 2; T. W. Rhys Davids, 'Buddhist Suttas,' *SBE* xi. [1900], 210 ff., and 'Questions of King Milinda,' *ib.* xxxvi. [1894], 199 ff. The *Nikāyas* are all published by the Pāli Text Society, London; references are to volume and page. The *Dīgha-* and *Majjhima-Nikāyas* are in process of being translated as *Dialogues of the Buddha* (London), by T. W. and C. A. F. Rhys Davids, and the evolution of desire among Buddhist saints may be studied in the latter's *Psalms of the Early Buddhists*, London, 1909, 1912.

C. A. F. RHYS DAVIDS.

DESIRE (Greek).—**1. Socrates and the pre-Socratics.**—The beginning of ethical investigation in ancient Greece is usually assigned to Socrates. And, no doubt, Socrates did in a special manner direct men's attention to ethical principles and concepts, and give the impulse to the further study and elaboration of the philosophy of morals. He it was also who, by his rigorous insistence on self-control (*ἐγκράτεια*) as the supreme virtue, gave special prominence to the twofold nature of man—a higher and a lower nature, with the tendency on the part of the lower (the desires) to usurp the mastery; thereby initiating a point of view that was to dominate Greek philosophy henceforth, definitely formulated for all time by Plato. Moreover, he himself could 'scorn delights and live

laborious days' better than any man of his time, so that he could not only teach robust ethical doctrine by precept, but show it also by example. But, long before the time of Socrates, the subject of desire had thrust itself upon men's notice, and from of old precepts had been enunciated for the practical regulation of life, even though it were only from the prudential standpoint of Hesiod (see his *Works and Days*), the Gnomic poets, and the Seven Wise Men. This explains the existence of Orphism and Pythagoreanism, which—religious more than philosophical—had the highest welfare of the individual at heart, and organized a system, distinctly mystical, for the purification of the soul and the cultivation of the higher life. This was avowedly ethical in its character, and, being cathartic, had the subjugation of the desires and the development of the spiritual nature as the basal principle. But, apart altogether from the poets and the moralists and the mystics, the pre-Socratic philosophers, who are usually represented simply as devotees of physics and physical speculation, were, many of them, also ethicists; and the ethical teaching of Heraclitus of Ephesus, in particular, and of Democritus of Abdera, forms an interesting side of their philosophy. Sir Alexander Grant does them less than justice when he says:

'The moral doctrines of these early philosophers . . . seem to belong rather to the personal character of the men than to the result of their systems' (*Ethics of Aristotle*, i. 103).

Nevertheless, the great impulse to ethical analysis and ethical thinking came from Socrates: an epoch in Greek philosophy was marked when, under the sanction of the god at Delphi, he insisted in the way that he did on the principle 'Know thyself' (*γνῶθι σεαυτόν*); and the question of desire found its first impressive handling in his greatest disciple Plato, in the true Socratic spirit.

2. **Plato.**—(1) In his psychological analysis of human nature, Plato regarded the soul of man as consisting of three parts—the rational (*τὸ λογιστικόν*), the fiery or spirited (*τὸ θυμοειδές*), and the appetitive (*τὸ ἐπιθυμητικόν*).

There is a great temptation to interpret this as an anticipation or foreshadowing of the modern psychological threefold division of mental processes into intellection, feeling, and conation or volition. But, when we remember that each soul, according to Plato, had its own distinct habitation in the body—the rational soul being situated in the head or cranium, the spirited soul in the breast or thorax, and the appetitive soul in the belly, below the diaphragm—and when we remember, further, that the three souls are represented as having their counterparts in the Ideal Republic—the first being embodied in the philosophical guardians of the State, the second in the soldiers, and the third in the artisans and husbandmen—we see that the Platonic psychology is a good way removed from anything to be found in the psychologies of the present day.

Between the three souls, or three parts of the soul, there is a distinction of native authority or value. The rational soul, being immortal, is naturally supreme, placed where it is in the body (viz. in the commanding position of the head) in order to guide and control the others. The spirited or courageous soul is the seat of ambition, honour, and the like, and is indispensable for high achievement in any sphere, and is by nature ancillary to reason, though, on occasion, it may require restraint. But the third soul is that which needs careful watching and curbing—viz. the appetitive or lustful soul, the seat of desire, of inordinate passion, and, therefore, pre-eminently of lawlessness and insubordination. This is the 'black' horse of the allegory of the Charioteer in the *Phædrus*, which requires to be kept in by bit and bridle, and to which the whip has to be unsparingly applied until it is subdued and tamed. It is also the 'many-headed monster' of *Republic*, 588 C. From the place that the appetitive soul occupies in the body (below the diaphragm), it is in close proximity to the liver, which (according to Plato) is the organ of imagination, issuing oracles in dreams and acting as a mirror registering the wishes, commands, and reprobations of the rational soul, thereby encouraging, warning, and, if need be, terrifying the recalcitrant transgressor, with the design of checking him in his wayward course.

This doctrine of desire is clearly of an ethical character, and is specially suited to ethical purpose. It is not so much a complete logical analysis of the notion, or even a systematic psychological exposition of the subject, as a suggestive statement of the hierarchy of principles in human nature (for the different souls, though separated locally by Plato, may be interpreted in that way), with an appreciation of their various functions and a grading of them according to worth. It is, above all, an enforcement of the truth that, for the highest health and welfare of the individual, the desires must be strictly and rationally controlled: it is of their very nature to tend to transgress limits, to usurp authority; and this, if unchecked, means moral shipwreck and disaster (see APPETITE).

In *Philebus*, however, a psychological analysis of desire in one of its aspects is essayed—viz. when it is declared to presuppose a bodily want that has been gratified and the memory of the gratification comes in to arouse expectation of future gratification. In this, two salient points in the phenomenon are clearly noted: (*a*) that, until a want is gratified, we experience only uneasiness, not desire; and (*b*) that desire depends upon memory or recollection.

(2) But Plato's doctrine of desire goes deeper than this: it penetrates to the very centre of man's being, to what may be specifically designated his natural spiritual wants. The highest form of desire is represented as philosophical Love or Eros, which is inseparably connected with the Platonic theory of Ideas and the doctrine of Reminiscence (*ἀνάμνησις*). The object of this kind of desire is set forth in the *Phædrus* as the Beautiful, as Beauty Absolute, the super-celestial Divine essence, which is reached by the individual here through the mediation of the perception of beauty in objects of sense, especially in the beauty of bodily form, as seen in beautiful youths; and, in the *Symposium* (211 C), the mode of ascent is declared by Diotima to be as follows:

'To begin from the beauties of earth and mount upwards for the sake of that other beauty, using these as steps only, and from one going on to two, and from two to all fair forms, and from fair forms to fair practices, and from fair practices to fair notions, until from fair notions he arrives at the notion of absolute beauty, and at last knows what the essence of beauty is. This, my dear Socrates, said the stranger of Mantineia, is that life above all others which mao should live, in the contemplation of beauty absolute.'

In the *Republic* it is set forth as the Good, which is the supreme transcendent Idea, permeating being, and giving meaning to intelligibles and opinables alike in the realm of Knowledge. In the *Timæus*, the Good is identified with God; and, as 'likeness to God' (*ὁμοίωσις Θεῷ*) is the chief end of man, according to *Theætetus*, the ultimate object of man's highest desire is the Deity. Nor is 'the Deity' a mere abstract term to Plato; it expresses the ideal of holiness, as well as of knowledge or contemplation; so that, in the assimilation of the Divine by man, character no less than intellect is involved. But, in order to become conformed to the great Ideal, the soul needs to be purified, and purification is a thing of degrees, so that *κάθαρσις* becomes the leading note, and *κάθαρσις* 'effected by personal effort in a Cosmos governed by God'—a doctrine which is, as J. A. Stewart expresses it (*The Myths of Plato*, p. 352), 'the great contribution made by Plato to the religious thought and practice of Europe.' Hence, in *Protagoras* (349, 359 A), 'holiness' (*ὁσιότης*) is added to the four cardinal virtues; Socrates in Xenophon called it 'piety' (*εὐσέβεια*). With this is specially to be

associated the Platonic eschatology (for purification does not cease at a man's death), where the soul is represented as finally purified through a series of metempsychoses—as seen, for instance, in the *Republic*, in the myth of Er, the son of Armenius, and in the doctrine of Eros, with its essentially elevating and purificatory character, as described in the *Phædrus* myth.

(3) In line with this is Plato's proof of the immortality of the soul (see *Phædo* and *Symposium*), drawn from men's universal longing or desire for continued existence and for the everlasting possession of the Good—a proof that became popular in Western Christendom through St. Augustine's acceptance of it, and which finds its poetical expression in English in Addison's 'Cato' and in Tennyson's 'The Two Voices.' The argument here is that the soul continues to live hereafter because men everywhere cling to life 'together with good' and shrink from death; the presupposition being that whatever crops up as a general craving among mankind indicates a natural want of man and has its truth thereby established. With this may be joined an attractive Platonic thought regarding the future life and men's desire of knowledge and of virtue. In *Cratylus* (403, 404) the dead are represented as continuing in willing subjection to Hades, the god of Death, because of their thirst for knowledge and their desire of being made better. They find that with Hades is true Wisdom —he has experience and is the great Philosopher; and, as his wisdom charms them, and as association with himself betters them, they cling to him as disciples to a master. Thus desire is seen to be a stronger bond than necessity: necessity *coerces*, desire *constrains*.

3. Aristotle.—(1) In the analysis of desire as given in *de Anima*, Aristotle uses the term 'desire' (*ὄρεξις*) generically, including in it, as species, spiritedness or passion (*θυμός*), appetitive desire (*ἐπιθυμία*), and wish (*βούλησις*). Of these three, wish (*βούλησις*) attaches to the rational part of man, and the other two to the irrational (iii. 9. 432*b*, 5). When, again, he enumerates and arranges in due order the functions or faculties of the soul (vegetative, sentient, conative, noetic—passive and active), there is one function that he specifies as the orectic or conative faculty (*τὸ ὀρεκτικόν*), which sometimes he brackets along with the sensitive faculty (*τὸ αἰσθητικόν*), and sometimes gives an independent position subsequent to it (ii. 3. 414*a*, 31); but, either way, he bases desire on sensation. With regard to all the faculties or functions, however, it is to be remembered that the independence ascribed to any one of them is only relative: each has its place in a graded system arranged in the order of implication, the higher presupposing the lower (though not reversely)—'the earlier form always exists potentially in the later' (*de An.* ii. 3. 414*b*, 29). Aristotle is very insistent on the unity of the soul; so that the faculties are not absolutely separate, as if each were self-contained.

But it is in the *Ethics*, in connexion with will, that we have Aristotle's fullest handling of desire; and, putting the two accounts together, we obtain the following summary.

Will is the desire (*ὄρεξις*) of something regarded as a good, *i.e.* as bringing satisfaction or pleasure to the person desiring it—which is what Aristotle designates *βούλησις*. But, obviously, if there is an object towards which desire is directed and upon which it is set, this implies an ideal or conceptual element in the process—some notion of what the object desirable and desired is: in other words, it involves imagination or representation (*φαντασία*). Further, inasmuch as between desire as a psychical state and the attainment of its object there is an interval of time interposed, this indicates that there is need of means for the realization of the desired object, and, consequently, need of deliberation with a view to choice—especially when more than one set of means appear competent to effect the end. This process of deliberation in connexion with means, and having reference to 'things that are within our own power' (*τὰ ἐφ' ἡμῖν*), Aristotle calls *βούλευσις*. When deliberation is completed, choice or determination ensues. This is *προαίρεσις*, which is regarded by Aristotle as distinctive of man, marking him off from the lower animals. In choice after deliberation *ὄρεξις* again appears; for the individual identifies himself not only with the end, but with the means necessary to effect the end. Hence, deliberate choice is inseparably conjoined with desire, and is termed *βουλευτικὴ ὄρεξις*.

From this brief analysis it is evident that Aristotle connects desire very intimately with will; maintaining, indeed, practically, that there can be no will without desire. Desire is the moving power in the whole conative process, indispensable alike to its origination and to the keeping up of the interest in the end until it is realized. This active or movent character of desire marks it off from emotion, which is a species of feeling and is subjective, although emotion may very readily ally itself with desire, and thereby give an added intensity or vigour to it.

(2) It is evident, further, that, according to Aristotle, in the determination of right conduct (and here comes in the ethical bearing of the psychological doctrine) desire and reason act together—neither is sufficient by itself. Hence, *προαίρεσις*, or choice, may equally well be described as reason motived by desire (*νοῦς ὀρεκτικός*), or as desire guided by understanding (*ὄρεξις διανοητική*, *Eth. Nic.* vi. 2). The doctrine of 'the practical syllogism' brings this out distinctly.

This syllogism is denominated 'practical' for two reasons: first, because it deals with men's actions (*πράξεις*), not with their mere thinking or reasoning as logically correct; and, secondly, because it attaches to the practical or moral, not to the theoretical, reason. Being a 'syllogism,' however, it has a specific formal character—it is expressible as conclusion, and necessary conclusion, from premisses, although it is not maintained that moral actions, in the case of 'the plain man,' are always *consciously* thus formulated by him. If there is an unconscious spontaneous logical reasoning of the plain man, there is equally an unconscious spontaneous moral reasoning; but, when analyzed by the philosopher, both reasonings may be found to be only the unsophisticated form of what may be philosophically generalized and expressed in scholastic phraseology and assimilated each to the other.

In the 'practical syllogism,' we are dealing with end and motive—with the generalized expression of the object of desire and of the means by which it may be attained. The procedure whereby we accept an end and work towards it through desire and intellection is clearly of the nature of syllogistic reasoning, though the conclusion of the procedure is not a definite theoretical consequence satisfactory to the logical reason, but an action, or series of actions, necessitated by the principle that we adopt. It is a matter of 'principles,' of living moral principles, not of abstract propositions; and hence the conclusion is not abstract but practical, and embodied in human conduct.

And so, in the practical syllogism, Aristotle aims at giving syllogistic form to action—at analyzing the process that underlies moral conduct, so as to bring out its rational character. In making choice with a view to action, one proceeds upon a general principle—the principle, namely, that a man ought to do or not to do a certain kind of thing. That is the major premiss of the resultant action. The minor premiss is the perception that such and such a particular action is or is not of the kind in question. Then follows, as natural consequence, the doing or not doing of that particular action. The great implication in the practical syllogism is that, if one accepts a principle as a guide of life, one is bound to accept whatever action or course of action that principle dictates. For example, if I allow that I ought to pursue my own highest good, then I commit myself to accepting whatever conduces to the furtherance of that end, and to behaving accordingly. On what ground, however, the principles that I accept as competent to guide me in life rest, Aristotle does not always determine in the same way. Sometimes he says that they are intuitive—I perceive them to be self-evident and, therefore, beyond the need of proof. At other times he bases them on experience; and, still again, on moral character. The last of these is clearly not fundamental. Moreover, intuition and experience are not contradictory.

Whether or not the 'practical syllogism' is fully expressive of what exactly takes place in moral action (action of a voluntary agent, responsible for his choice, and, therefore, for his conduct), it serves admirably to emphasize the fact that intellection and desire enter into deliberative volition and choice, and that we cannot explain the phenomenon without taking account of both, and of both acting in unison, 'like the ball and the socket in the organic unity of the joint' (οἷον ὁ γιγγλυμός [*de An.* iii. 10. 433*b*, 22]).

(3) Over and above this psychology of desire, with its application in ethics, Aristotle also recognizes desire as a movent power in the higher reaches of ontology and cosmology. For God to him is, first and chiefly, the Prime Mover of the universe, the Source of all motion in the world, 'Himself unmoved the while.' He is the object of desire (ὀρεκτόν) as well as of intellection (νοητόν) to the universe. As otherwise expressed, God, as the unmoved eternal active principle, moves the heavens as the beloved one moves the lover: He is the attractive force, the final end, of all existence —'the final cause, then, produces motion by being loved, and, by that which it moves, it moves all other things' (*Met.* xii. 7. 1072*b*, 4).

This, though metaphorically expressed, is no myth, as Stewart (*Myths of Plato*, p. 355) would make it out to be: it is the measured and subdued enunciation of the grand ontological conception that God necessarily *is* and is good, and that the cosmos, which, in Aristotle's view, exists from all eternity as a cosmos (and not as mere 'matter'), is not self-centred and absolutely independent, but is eternally dependent on and derived from the Deity; it exists because it is turned over towards the Divine; it has no being apart from Him. It is thus emphatically asserted that the world is not fully explicable on merely mechanical principles: Mind is the ruling factor, and so the explanation of existence, to be satisfactory, must be teleological.

4. **Stoics and Epicureans.**—(1) We get back to a purely ethical and practical consideration of desire when we turn to the Stoics. Desire was a topic of supreme consideration with them: indeed, their doctrine of desire may almost be said to have constituted their philosophy. According to them, it is man's great characteristic that he was made to be virtuous. He is a being endowed with rational insight into the true values of things, and with power over his own inclinations and impulses. He can despise pleasure, he can scorn wealth, he can sit absolutely loose to everything that is not under control of his own will,—to fortune and to fame, even to death itself,—and can find his freedom only in his love of virtue and his abnegation of the desires. A man should have only one great desire, and that is the desire of virtue, of a noble life, of pure and upright character; all else is 'indifferent,' and, if surrendered to, would sap his moral vigour and degrade his nature. 'In the world, but not of it,' should be his motto; and to be master of his own soul, supreme in the realm of his motives and intentions, is the only end that is worth pursuing. The principle underlying this was precisely that which Kant reproduced in modern times when he said: 'There is nothing in the world which can be termed absolutely and altogether good, a good will alone excepted' (opening of the *Grundleg. zur Metaph. d. Sitten*). To submit to any other desire but that of virtue seemed to the Stoics to be elevating what is contingent and beyond one's power—extraneous, therefore, to one's will (which alone is in one's power)—to a place which it has no right to occupy, and which, if allowed to it, can only spell ruin. Consequently, everything that is not love of virtue is, to the Stoic, to be resisted. The desires are, one and all of them, perturbing; and it is characteristic of the wise man that he is calm, unperturbed, emotionless—he is self-sufficient (αὐτάρκης), independent of and above every non-rational spring of action: 'The view taken is everything; and that rests with yourself. Disown the view, at will; and, behold, the headland rounded, there are calm, still waters, and a waveless bay' (Marc. Aurel. *Med.* xii. 22). The desires are not simply weaknesses, they are 'contrary to nature'; they should be not merely controlled, but eradicated.

The ideal man, then, to the Stoics was a very impassive being—the embodiment of stern virtue, shorn of emotion and desire. The same might be said of the ideal man of the Cynics (*q.v.*), from which the Stoic conception was originally drawn only, in Cynicism the mastery of the desires was accompanied with a contempt for social conventions and for mental culture that was abhorrent to the Stoic.

(2) It was different with the ideal man of the Epicureans, whose *summum bonum* was pleasure. And yet the Epicureans were keenly alive to the ethical danger that lurked in the desires. For, although pleasure was to them the ultimate end of action, and so the object of desire, they quite clearly recognized the tendency of the desires to outrun discretion and, if uncontrolled, to deprive a man of that calm and peaceful state of mind (ἀταραξία) which was his goal. Consequently, they could counsel, and Epicurus himself did counsel: 'If you wish to make Pythocles happy, add not to his riches, but diminish his desires.' But in this they differed from the Stoics, that, whereas the Stoics counselled the impossible task of eradicating the desires, the Epicureans, like Plato and Aristotle, counselled moderating and directing them. The desires, they saw, are a part of human nature, and, therefore, legitimate springs of action, but only if they are kept under rational control. Some of them, they said, are natural and necessary; others are natural, but not necessary; and others still are neither natural nor necessary. And they recognized a distinction of worth amongst them, the goods of the mind being to them of greater value than those of the body. Hence, their Hedonism could assume a robust character.

'Says Epicurus: "When I was sick, I did not converse about my bodily ailments, or discuss such matters with my visitors; but continued to dwell upon the principles of natural philosophy, and more particularly how the understanding, while participating in such disturbances of the flesh, yet remains in unperturbed possession of its proper good. And I would not," he adds, "give the doctors a chance of blustering and making ado, but let life go on cheerily and well"' (Marc. Aurel. *Med.* ix. 41).

5. **The Neo-Platonists.**—'Back to Plato' was the cry of the Neo-Platonists; but not back to Plato through disowning Aristotle or refusing to be influenced by him. On the contrary, Plotinus himself owed much to Aristotle, and some of the greatest of the Neo-Platonic teachers (*e.g.* Porphyry) were among the most eminent of the expositors of Aristotle. The Neo-Platonists were essentially religious philosophers and mystics, and the purification of the soul and its gradual deliverance from sense and matter was their supreme aim. Hence, they laid special stress on that part of the teaching of Plato which dealt with κάθαρσις, and, taking into their system Orphism and Pythagoreanism also, in so far as they served their purpose, they advocated a mode of living which, if consistently pursued, would lead to the abnegation of the world and the absorption of the individual in the Divine. The great end of all was to get away from the trammels of the body, which was regarded as by nature vile, as both a clog and a prison-house to the soul, and the source of sin and ugliness. 'True waking,' said Plotinus (*Enneads*, iii. 6. 6), 'is a true rising up from the body, not with a body.' There was a dualism here which was never fully overcome in the Plotinian or Neo-Platonic monism. To be united to a body at all was regarded as a descent for the soul, a degradation, a fall—it is a separation, though not

absolutely complete, from its original source, the Universal Soul or *Anima Mundi*, and has to be made good by an ascent or return. The steps by which this is done are the various virtues, which, according to Porphyry and the later Platonists, form four degrees in the path of perfection and self-accomplishment.

'And first there is the career of honesty and worldly prudence, which makes the duty of the citizen [Civic or Political virtue]. Secondly, there is the progress in purity which casts earthly things behind, and reaches the angelic height of passionless serenity [Cathartic virtue]. And the third step is the Divine life, which by intellectual energy is turned to behold the truth of things [Theoretic virtue]. Lastly, in the fourth grade, the mind, free and sublime in self-sustaining wisdom, makes itself an "exemplar" of virtue, and is even a "father of gods" [Paradeigmatic virtue]' (W. Wallace, *Hegel's Philosophy of Mind*, Oxford, 1894, p. xx).

Not yet, however, has the soul, in its efforts to get free from matter and the thraldom of the desires, reached its highest aim. That aim is union with the Absolute, undisturbed contemplation of the One, the Ineffable Being, when subject and object are identical. This is obtained, not through practical virtue or through intellectual cognition (though these prepare for it), but by non-rational ecstasy, or spiritual trance,

'by the suspension,' says Porphyry (*Sententiæ* 26), 'of all the intellectual faculties, by repose and the annihilation of thought. As the soul learns to know sleep when slumbering, so it is in ecstasy, or the annihilation of all the faculties of her being, that she knows that which is above existence and above truth.'

Thus are the desires effectually vanquished by mysticism: in absolute union with God (ἕνωσις), desire is not.

DETERMINISM.—See NECESSITARIANISM.

DEUTSCH-KATHOLICISMUS.—I. Character of the movement.—*Deutsch-Katholicismus* is the name given to a movement of reform that sprang up within the Catholic Church in Germany about the middle of the 19th century. The object of the movement was to establish a type of Catholicism which should be in harmony with modern thought, leaving the individual in perfect freedom in matters of doctrine and in the expression of his religious views, and so far take account of the patriotic sentiments of the Roman Catholics of Germany as to permit the use of their mother tongue in the services of the Church. These aims were in some respects similar to those of Febronianism in the 18th cent., which strove to make the Catholic Church in Germany independent of the Roman curia by putting an end to the sponsorship exercised over it by the latter. The 'German-Catholic' movement, however, took a course different from that of the Febronians, inasmuch as it neglected the politico-ecclesiastical factor, which had eventually proved the decisive factor in the conflicts regarding the resolutions of the Ems Congress (1786); and this difference between the two reforming enterprises finds outward expression in the circumstance that, whereas the movement which disturbed the closing years of the 18th cent. found its leaders in the German archbishops, the schism of the so-called 'German Catholics' had not a single active supporter in the higher ranks of the clergy.

One of the vital elements in the situation which gave rise to 'German Catholicism' was contributed by the rise of Ultramontanism, *i.e.* of that movement in the Roman Catholic Church which, after the frightful disasters experienced by that Church during the French Revolution, looked to the Jesuits for its rehabilitation, made common cause with that Order, and sought to disseminate the type of religion characteristic thereof. In the period following upon the restoration of the Jesuit Order in 1814, Ultramontanism had made headway in Germany as in other countries, but it had also aroused opposition in a corresponding degree. Although the immediate occasion of the rise of 'German Catholicism' was given by the protest made against the proceedings of an individual bishop, yet this protest really sprang from the broader grounds of a fundamental contrast with the Ultramontane form of religion; and it was to this difference that the schismatic movement owed all the vigour which—for no long time indeed—it was capable of putting forth.

Another potent influence in the rise and development of 'German Catholicism' was contributed by the progressive tendencies of the day. The reactionary policy pursued by the various governments of Europe after the Napoleonic wars was incompetent to quell the wide-spread liberal movement instigated by the great Revolution. On the contrary, the disposition to break away from the bonds of authority and the leading-strings of patronage, and the striving after liberty to mould life and conduct on lines independent of hoary convention, asserted themselves and gained ground in every department of human experience—in politics, in social relationships, and even in the province of scientific research. As the Roman Catholic Church, however, is inherently conservative, and was not merely antipathetic to such longings, but was inclined rather, under the influence of the recently revived Jesuit Order, to seek the path of deliverance from the prevailing welter of things in a return to the principles of the Middle Ages, it could not fail to come into conflict with the liberal spirit that was making itself felt even within its own pale.

'German Catholicism' appeared first of all as simply the criticism of an incident in practical religious policy, viz. the exhibition of a relic as

an object of devotion. Very soon, however, it drew the whole course of ecclesiastical procedure and religious doctrine within the range of its strictures. Eventually it took the decisive step of organizing its adherents in communities, thus placing them in the position of schismatics. That the whole course of this development was traversed within the term of a few weeks was due to the fact that those who identified themselves with the movement were already alienated from the Church of Rome, and that the bishops who had to deal with the rising lost no time in lengthy deliberations, but proceeded at once to administer penalties of such severity as to drive the refractory elements into open rupture.

2. Origin and development.—The immediate occasion of the schism was the exhibition of the seamless robe of Christ which belonged to the Cathedral Church of Trèves. The 'Holy Coat' was regarded by that Church as its supreme treasure, and had been exhibited previously at special seasons as an object of reverence. When Bishop Arnoldi of Trèves, ignoring the doubts cast upon the genuineness of the relic, repeated the solemnity in 1844, a most extraordinary sensation was aroused. He certainly scored a great triumph in bringing vast multitudes of pilgrims to the city, and so far the affair formed an effective demonstration of the power of Catholicism. But, on the other hand, such a method of strengthening Christian belief gave great umbrage to many. Those within the Roman fold who took objection to the bishop's action found a champion in a priest named Ronge, who, in an open letter to Arnoldi, first published in the *Sächsische Vaterlandsblätter*, urged a vigorous protest against what he called a *Götzenfest*, an idolatrous celebration.

Johannes Ronge was born on the 16th of October 1813, at Bischofswerda in Silesia, and was trained and eventually ordained as a priest at Breslau. He served for a time as chaplain at Grottkau, but had been suspended on account of certain publications, and was now a teacher at Laurahütte in Upper Silesia. Having neither inclination nor aptitude for the clerical office, he had become utterly alienated in spirit from the Catholic Church, and, as he refused to retract his letter when called upon to do so, he was sentenced to degradation and excommunication by his superior, the bishop of Breslau, on the 4th of December 1844. This act of censure, however, failed to reduce him to submission; its actual effect, indeed, was to stimulate his refractory disposition to its full manifestation. He challenged the claims of the Roman hierarchy in numerous pamphlets and articles, and what was at first a criticism of the proceedings at Trèves became at length an all-round attack upon the authority of the Catholic Church and its leading institutions.

About the same time a Catholic priest named Czerski had arrived at conclusions similar to those of Ronge, though quite independently. Johann Czerski was born on the 12th of May 1813, in Western Prussia. While attending the Seminary at Posen, he passed through severe mental conflicts, but at length took office in the Cathedral Church of that town. While in this position he made a profound study of the Scriptures, with the result that he became quite unsettled regarding the fundamental institutions of the Roman Catholic Church—the primacy of the Pope, the hierarchy, auricular confession, the sacrifice of the Mass, etc. With such doubts in his heart he was transferred to the position of vicar at Schneidemühl, where, as a matter of fact, the congregation was no less critically disposed towards Catholicism than he was. It was, however, a purely personal matter which at length brought him into direct conflict with ecclesiastical authority; he was suspended from office in consequence of his relations with a young woman. But his congregation remained loyal to him, and when, renouncing his office, he abandoned the Roman Catholic Church altogether, they followed his example (19th October 1844). A few months later, sentence of degradation and excommunication was passed upon him.

Ronge's challenge found considerable support throughout large sections of Catholicism in Germany. He travelled widely as an agitator, exerting himself to maintain the movement and organize his followers. The first congregation of the new sect was constituted at Breslau. But even in the operations preliminary to this step the seceders felt themselves faced by the difficulty of finding a common basis for the heterogeneous elements in the 'Universal Christian Church,' as its adherents called it at first. Nor was this embarrassment one of a merely incidental and transitory character; on the contrary, it indicated a real and inherent weakness of the whole movement, asserting itself whenever an attempt was made to unite the communities which sprang up in large numbers throughout the country. For the purpose of effecting such a union, a Conference, attended by 31 delegates from 15 congregations, was held at Leipzig, from the 23rd to the 26th of March 1845. The proceedings of this Conference are given in the official report, *Die erste allgemeine Kirchenversammlung der deutsch-katholischen Kirche* (Leipzig, 1845), edited by R. Blum and F. Wigard. It was here decided that the name of the new cause should be *Deutsch-Katholicismus*, with the Bible as its doctrinal basis: a short Confession was also adopted. It was made a proviso, however, that neither Scripture nor this Confession was to rank as an external authority, but that they were to be regarded as standards only in so far as they harmonized with rational thought. The verification of Christianity in a life of Christian love was set forth as the prime duty of the members. It was resolved to retain the sacraments of Baptism and the Lord's Supper (under both kinds), but to have done with the Papacy, the hierarchy, auricular confession, the celibacy of priests, the adoration of saints, relics, and images, indulgences, pilgrimages, etc.—in a word, to effect a thoroughgoing separation from the Roman Church and its distinctive institutions. In the order for public worship, the liturgy of the Mass and the use of the Latin language were discarded. The constitution of the new church was to be Presbyterian, and General Assemblies were to be regularly called.

Such was the ground-plan for a new religious body, but the plan presently met with opposition within the community itself. The abandonment of the Apostolic Confession gave umbrage to the 'German Catholics' at Berlin, and led to a separation there. Czerski himself was dissatisfied with the resolutions of the Conference, as he had been thwarted in his endeavour to obtain Confessional recognition of the Divinity of Christ, Ronge's influence on the other side proving too strong. This difference, however, did not lead to a breach, as Czerski gave way and simply claimed the right to adhere to his own position. But, while imminent disintegration was thus avoided, no genuine inward harmony was attained, and the movement became even more revolutionary. The adherents of Ronge, in fact, drawn together as they were by the most diverse motives and interests, formed an aggregate so heterogeneous that every attempt to secure a basis of union came to nought. It was maintained that even the Leipzig Confession was not to be held as binding, and there was a general desire to discard everything of the nature of dogma; but, of course, no real progress towards unity could be made on such negative lines, and it still remained impossible to define the scope and aim of the new church, as the visible embodiment of that religion of liberty which had lain so long under the tyranny of dogma. The outcome of this vagueness and indecision was that many Roman Catholics, who, while favourably disposed to a broader conception of Christianity, were by no means ready to relinquish Christianity itself turned away from 'German Catholicism,' and that some who desired to have no further dealings with Christianity allied themselves with the new movement. Ronge's incapacity to grapple with this critical state of affairs soon became evident to all, and, as there was no leading spirit to step into his place, the cause soon lost all its attractive power. After 1847, indeed, Ronge was a spent force in public life. He died at Vienna in 1887; Czerski, in 1893.

3. The 'Friends of Light' (*Lichtfreunde*).—The subsequent development of 'German Catholicism' reached its final stages in close connexion with the history of the 'Friends of Light'—a parallel movement among Protestants which had sprung up in 1841. In that year certain Evangelical clergy in the Prussian province of Saxony instituted a society which claimed for its members the right of unrestricted scientific investigation and of complete freedom in personal development. They called themselves *Protestant Friends*, but were popularly known as *Lichtfreunde*, which became their accepted designation. Their meetings were thronged; the number of divines resorting to them constantly increased; teachers also began to attend, and soon the laity followed. As the leaders of the movement were clergymen of the National Church, collision with the ecclesiastical authorities was inevitable. In 1840 the consistorium of Magdeburg reprimanded a minister named Sintenis for having spoken of prayer to Christ as a superstition. Sentence of deposition was passed upon G. A. Wislicenus of Halle and J. Rupp of Königsberg, while others, such as W. E. Baltzer and A. T. Wislicenus, anticipated formal dismissal by voluntarily abandoning their office. In all these cases the point at issue was essentially the same, viz. whether and how far an incumbent might be permitted to take an independent attitude towards the doctrine and the order of public worship recognized as statutory in the National Church. The claim of liberty was obviously against the law as commonly interpreted. These conflicts, however, were a matter of profound significance for the whole Evangelical Church of Germany, as the clergymen in question did not stand alone, but were supported by larger or smaller groups of members. The process of subjecting the clerical offenders to ecclesiastical discipline was followed by secessions from the Established Church, and dissident congregations were formed in Königsberg, Halle, Magdeburg, Nordhausen, Halberstadt, Hamburg, and other places.

4. Relations between the 'Friends of Light' and the 'German Catholics' down to 1858.—These two bodies soon developed intimate mutual relations. The fact that the one originated within Protestantism and the other within Catholicism did not constitute a ground of difference, as it lay in the very nature of both movements to attenuate all the peculiar elements of the creed, and to deprive them of the value generally assigned to them. Both were at one in their demand for freedom and progress, and in both the more radical section, which aimed at disengaging religion from the prevailing ecclesiastical conditions, gained the upper hand. Between the two, accordingly, there existed an essential affinity, and it was due to something more than tactical considerations that they showed a tendency to come together. The growth of this tendency was greatly hastened by the circumstance that both bodies suffered alike from the coercive measures of the public authorities; it was, in fact, persecution from the side of the various governments which brought about their union.

The governments of the different States regarded 'Free Protestants' and 'German Catholics' alike with suspicion, seeing in both an embodiment of the revolutionary spirit which made itself felt throughout Germany in the early forties of the 19th century. The practical expression of this antipathy took many forms, and every method of repression permitted by the legal systems of the several States was resorted to. In some cases the new sects were treated as illicit religious associations, while in others the designation 'religious associations' was denied them; in many districts they were simply let alone; in others they were proceeded against with all the rigours of the law. The Revolution of 1848 put an end to this state of affairs, and gave complete liberty of action to the 'Friends of Light' and the 'German Catholics' alike. The immediate effect of the change, in the case of the former at least, was a notable increase in the number of their congregations. This was more particularly the case in Middle and North Germany, and here it became evident that the dissentient cause found its most fruitful soil in urban populations. Another characteristic phenomenon was that the membership of the various congregations was subject to frequent and sudden fluctuations, while the lines of demarcation between 'Free Protestants' and 'German Catholics' became more and more unsettled. These facts render it difficult to obtain accurate statistics regarding the numerical strength of the movements. We must restrict ourselves to the statement that, according to the most reliable authorities, the combined membership of the two bodies during the period of their greatest vogue, *i.e.* about the middle of the 19th cent., may be reckoned approximately at 150,000. The closeness of the relations between the two may be gauged by the fact that the third 'German Catholic' Council and the third 'Free Protestant' Conference met in the same house in Leipzig on the same day of May, 1850. It was at this session also that the governments began to revert to their policy of persecution. When the agitation aroused by the Revolution of 1848 had died down, the legislatures of the various German States made it their express aim to suppress all liberal tendencies in State and Church, thus inaugurating the 'period of reaction.' As both the 'Friends of Light' and the 'German Catholics' lay under suspicion, and were regarded as illegal societies and as sources of danger to the State, the governments resorted to every available means to render impossible the continued existence of these bodies. The first blow in the revived policy of repression was struck on the occasion of the double Convention at Leipzig in 1850. Just as the proceedings were about to begin, the police appeared upon the scene and broke up the meetings, and within the next few years all the States of Germany adopted measures for which this incident provided an example. The ruthless procedure of the Prussian government in particular provoked the indignation of its victims. Even the religious services of the Free Congregations were interrupted by soldiers. Such of the official acts of their ministers as had an important bearing upon civil life were not recognized by the legislature, so that, for instance, marriages performed by them were treated as mere illicit unions. They were forbidden to celebrate the Lord's Supper, to prepare candidates for confirmation, or to officiate at funerals. This policy of persecution, however, was finally abandoned when Prince Wilhelm of Prussia (afterwards Emperor Wilhelm I.), in consequence of the illness of his brother, Friedrich Wilhelm IV., assumed the regency in 1858. Thereafter the 'Friends of Light' and the 'German Catholics' were able to maintain and develop their position without let or hindrance from the authorities.

5. 'German Catholics' and Free Congregations after 1858.—In 1859 the majority of the two bodies brought the friendly relations long subsisting between them to a focus in a corporate union, thus forming the 'Association of Free Religious Communities' (*Bund freier religiöser Gemeinden*). A biennial Conference of representatives from the various congregations was instituted; but the resolutions of this Conference have the validity of 'counsels' merely, and apply only to questions of organization. The individual congregation accordingly has absolute freedom in the management of

its own affairs, as is meanwhile guaranteed by the constitution of the society, which provides that 'freedom to act in all religious matters according to one's own increasing knowledge' shall be one of its own accepted principles. The object of the society is set forth as 'the promotion of a practical religion independent of dogma.' In 1899 the Union embraced 24 congregations with an aggregate of 17,000 members. Twenty-four congregations with some 5000 members remained outside the Union. The majority of the original 'German Catholic' communities joined the *Bund*, and many of these keep alive the memory of their origin by continuing to use the old name, either by itself or in conjunction with the designation *frei-religiös*. Amongst other appellations still in use are 'Christian Catholic,' 'Free Christian,' and even 'Free Evangelical-Catholic Church.' It is no longer possible, therefore, to draw a sharp distinction between 'German Catholicism' and the Free Religious Communities. It is only in the kingdom of Saxony that the former has chosen to maintain its independence in an organized form. 'The German Catholic Church in the Kingdom of Saxony' has a membership of about 2000, and is represented in Dresden, Leipzig, and Chemnitz by fairly large congregations.

We learn from these figures that the movement which originated in the early forties of the 19th cent. embraces at the present day a very insignificant portion of German Protestantism. The new society soon lost its better educated adherents, and it now appears to find its main support amongst working people who have left the State Churches. The Free Religious Communities form the residual elements of an initially powerful movement, and now to their cost find themselves upon the horns of a practical dilemma. On the one hand, they must renounce all definite formulation of doctrine, in order to avoid falling back into the dogmatic Christianity which they condemn in other Churches; while, on the other hand, for the work of instruction, of preaching, and of gaining new members, they cannot well do without distinct principles expressive of their actual religious beliefs. In consequence of this embarrassment, the Free Religious Communities show great diversity in practice. Some still make use of the Scriptures in religious instruction; some still maintain their adherence at least to Christian ethics; but there are others who have abandoned all connexion with Christianity whatever, and take their stand upon a basis of naturalism and atheism. The one point of uniformity amongst these communities is that they all alike repudiate the existing Christian Churches, whether Evangelical or Roman Catholic. Great diversity likewise prevails in their ceremonial. They still to some extent celebrate the Christian festivals, but always with a change from their original significance. The Lord's Supper continues to be observed in many congregations, but Baptism has been set aside. The course of religious instruction is brought to a close by a sort of confirmation, or 'initiation of the young' (*Jugendweihe*), which forms the gateway to full membership in the community. In this ordinance the candidates for confirmation give a pledge that they will seek truth, do right, and strive after perfection. Thus the Christian element still persisting in these communities is no longer the vital factor for them, and their past history goes to show that in course of time they will eliminate it altogether.

(1898) 583–589, and his art. 'Lichtfreunde,' *ib.* xi. (1902) 465–474 (cf. xvii. pt. ii. [Berichtigung]); Drews, 'Die freien religiösen Gemeinden d. Gegenwart,' in *ZTK* xi. (Tübingen, 1901) 484–527; G. Tschirn, *Zur 60 jähr. Gesch. d. freireligiösen Bewegung* (Bamberg, 1904–1905).

C. MIRBT.

DEVADATTA.—A Śākya noble, probably a cousin of the Buddha, who joined the Order in the 20th year of the movement, but held opinions of his own, both in doctrine and in discipline, at variance with those inculcated by the Master. He received a certain amount of support, both within the Order and from laymen, but seems to have remained quiet till about ten years before the death of the Buddha. At that date he asked the latter to retire in his favour, and, being refused, started a new Order of his own. It is curious that these dissensions, and this final rupture, which must have had so important an influence on the early history of the Buddhist community (we find traces of them a thousand years afterwards), should receive so slight a notice in the earliest documents relating to Buddhist doctrine. Devadatta is not even mentioned in the *Sutta Nipāta*, or in the collection of longer Dialogues (the *Dīgha Nikāya*). In the other three collections of Suttas he is a few times barely referred to, in the discussion of some ethical proposition, as an example. In the minds of the editors of these collections the doctrine itself loomed so much more largely than any personal or historical matter, that Devadatta and his schism are all but ignored; but in the oldest collection of the rules of the Order (in the Pāli *Vinaya*), under the head of 'Schism,' a chapter is devoted to the final episode in Devadatta's life. Our discussion of the matter will therefore be most conveniently divided into: (1) the *Vinaya* account, (2) the isolated passages in the early books of doctrine, and (3) the later notices.

1. **The Vinaya account.**—This is in the 18th *khandhaka* (chapter) of the *Sutta Vibhaṅga*, relating to dissensions in the Order.[1] It commences with an account of the circumstances under which six young men of the Śākya clan, one of whom was Devadatta, entered the Order together.

This must have been in the 20th year of the Buddha's ministry, as is shown by a comparison of *Theragāthā*, 1039, with *Vin.* ii. 286. The latter passage tells us that Ananda (one of the six) attained *arhat*-ship in the year of the Buddha's death; the former states that he had been 25 years in the Order before he did so. Twenty-five years before the Buddha's death brings us to the 20th year of his ministry.

Throughout the passage in question the details given concern the others. At the end it is stated that, whereas each of the other five soon attained to some particular stage of the religious life, Devadatta attained to that magic power and charm which a worldly man may have.[2] There follows another episode having no relation to Devadatta, and then a third.

As usual, no intimation is given as to whether we are to suppose any interval of time between these episodes, but the very absence of continuity in the narrative would seem to imply that the editors supposed that there was.

The third episode introduces Devadatta considering whom he could win over so as to acquire gain and honour. He decides on Ajātasattu, the Crown Prince of Magadha, and accordingly goes there and practises his magic arts upon the Prince. These are quite successful; and Devadatta, dazed with prosperity, aspires to lead the Order. This is revealed by a spirit to Moggallāna, who informs the Buddha; but the latter, in reply, merely discusses the character of an ideal teacher. He then proceeds to Rājagaha, where the brethren inform him of Devadatta's prosperity. In reply, the Buddha discourses on the text that pride goeth before a fall, and concludes with a verse on honour ruining the mean man.[3]

In the next episode Devadatta asks the Buddha, in the presence of the king, to give up to him the

[1] *Vin.* ii. 180 ff., tr. T. W. Rhys Davids and H. Oldenberg, in *Vinaya Texts*, iii. 224 ff. (*SBE* xx. [1885]).

[2] *Pothujjanikā iddhi.* On the exact meaning of this technical phrase, see the passages collected and discussed by the present writer in *Dialogues of the Buddha*, i. 88, 273; ii. 6.

[3] *Vin.* ii. 188; recurs at *Aṅguttara*, ii. 73; *Saṁyutta*, i. 154, ii. 241; *Milinda*, 166; *Netti*, 131.

leadership of the Order, on the ground that the Buddha is now an old man. He is refused, and a formal act of the Chapter of the Order decrees that in future, whatever he may do, Devadatta shall be considered by the people as acting or speaking, not as a member of the Order, but for himself alone. Then Devadatta incites the Crown Prince to kill his father, and to help him (Devadatta) to kill the Buddha. The various attempts, all of which are unsuccessful, are described in detail.

There follows an episode in which Devadatta, with four adherents, whose names are given, lays before the Buddha five points to be incorporated in the rules of the Order. They are: (1) that the *bhikkhus* should dwell in the woods, (2) that they should live entirely by begging, (3) that their clothing should be exclusively made of cast-off rags, (4) that they should sleep under trees, and (5) that they should not eat fish or meat.

The existing rules were more elastic. It will be sufficient here to state roughly that: (1) *bhikkhus* were not to dwell in the woods during the rainy season—it was considered unhealthy; at other seasons they might wander about, or dwell in hermitages in hills or forests, or in huts put up for them in parks, or the like; the only restriction was that they should not dwell in the houses of the laity; (2) they might beg, or accept invitations, or live on food provided at the residences for *bhikkhus*; (3) they might receive presents of clothing, made either personally to one *bhikkhu* or generally to the Order; (4) they might sleep anywhere except in houses of the laity, and even there they might stay for a limited period, if on a journey; (5) they might accept any food given, but not fish or flesh if specially caught or killed for the purpose of the meal. The five points recur at *Vin.* iii. 171, and are therefore probably correct.

The five points were rejected. Devadatta rejoiced, and told the people that, whereas Gautama and his *bhikkhus* were luxurious and lived in the enjoyment of abundance, he and his would abide by the strict rules of the five points. Five hundred of the younger *bhikkhus* accepted tickets that he issued, and joined his party. The success of the schism seemed assured.

The following and final episode introduces Devadatta, surrounded by a great number of adherents, discoursing on his doctrine. Sāriputta and Moggallāna, the principal disciples of Gautama, are seen approaching. On seeing them, Devadatta exults, and, in spite of a warning from Kokālika, he bids them welcome, and they take their seats. Devadatta continues his conversational discourse till far on into the night. Then, feeling tired, he asks Sāriputta to lead the assembly while he rests. Devadatta falls asleep. Sāriputta leads the talk on the subject of preaching, and then Moggallāna leads it on the subject of *iddhi*. Next Sāriputta suggests that those who approve should return to the Buddha, and most of the assembly do so. Kokālika awakes Devadatta, points out what has happened, and says, 'I warned you.' Then hot blood comes forth from Devadatta's mouth. Sāriputta, on his return, proposes that the renegades who had come back should be readmitted to the Order. This Gautama declares unnecessary, and the chapter closes with edifying discourse. First, we have a parable of elephants who ate dirt and lost their beauty and died. Just so will Devadatta die. Then the eight qualifications of one worthy to be an emissary are pointed out. Next, the eight qualifications of Devadatta, which doom him to remain for an æon (*kappa*) in states of suffering and woe, are given. Finally, another paragraph gives three reasons for the same result.

It is probable, from the details, that the eight have been elaborated out of the three, no doubt to make Devadatta's qualifications parallel in number with those of Sāriputta, the ideal emissary.

2. Isolated passages.—In *Majjhima*, i. 192 a Suttanta is dated as having been delivered shortly after Devadatta went away. Not a word is said about him; but the discourse discusses the object of religion, which, it is said, should be cultivated, not for the sake of gain or honour, not for the sake of virtue, not for the sake of mystic concentration, not for the sake of knowledge, 'but has its meaning, its essence, its ideal in emancipation of mind.' The objects here rejected are precisely those for which, in the *Vinaya* passages, Devadatta is said to have striven. At *Majjhima*, i. 392, a Jain is urged to put Gautama on the following two-horned dilemma (*ubhato-koṭikaṃ paññaṃ*): 'Do you say that one ought to speak words pleasant to others? If so, did you make the statement about the inevitable fate about to befall Devadatta?' The puzzle is easily solved, and on general grounds (without any reference at all to Devadatta). This passage is important, because it shows that, before the time when the Dialogues were composed, and *a fortiori* before the time when the *Vinaya* account arose, the episode about the future fate of Devadatta was already in existence, and was widely known in the community, and even outside of it.

The *Milinda* (p. 107 ff.) has a greatly altered and expanded version of this 'double-horned dilemma'; and it is probable that the whole of the dilemma portion of that interesting work is based on the scheme of the dilemma in this Suttānta.

The *Saṁyutta* (at ii. 240–242) has the episode of honour bringing ruin to the mean man, in the same words as *Vin.* ii. 188, but divided into two stories; and at i. 153 it puts the concluding verse of that episode into the mouth of the god Brahmā. At ii. 156 Devadatta and his followers are called 'men of evil desire.' In four passages[1] the *Aṅguttara* has, word for word, episodes occurring in the *Vinaya* account. Besides those, it discusses at iii. 402 the statement about the fate that will inevitably befall Devadatta; and at iv. 402 ff. it discloses a view held by Devadatta that it was concentration of mind (and not the ethical training of the 'Aryan Path') that made a man an *arhat*. This is the only one of these isolated passages in the oldest books which really adds anything to our knowledge of Devadatta. In the later books of the Canon there are two or three more references to him. Thus the episode at *Vin.* ii. 198 recurs at *Udāna*, v. 8, and that at *Vin.* ii. 203 at *Iti-vuttaka*, no. 89, and at *Udāna*, i. 5, Devadatta's name is included in a list of eleven leaders in the Order who are called *buddha*, 'awakened.' This is the only passage in the Canon which speaks of Devadatta with approval; and it doubtless refers to a period before the schism. Lastly, in *Vin.* i. 115 it is said that Devadatta, before the rule to the contrary had been promulgated, allowed the local chapter of the Order, when the *Pātimokkha* was being recited, to be attended by laymen.

H. Oldenberg has shown, in the Introduction to his edition of the *Vinaya*, that the work, as we now have it, is composed of material belonging to three periods, the oldest of which goes back nearly, if not quite, to the time of the Buddha. The chapter analyzed above belongs to the latest of those periods. The episodes found also in other parts of the Canon belong to the earliest period. The summary at the beginning of this article is based exclusively on such episodes.

3. The later notices.—In books later than the Canon, the above story of Devadatta is often told or referred to, and with embellishments which purport to add details not found in the earlier version. Such additional details must be regarded with suspicion: many are insignificant, some are evidently added merely to heighten the edification of the narrative, all are some centuries later than the alleged facts they, for the first time, record. It will be sufficient to mention a few of the most striking.

The *Mahāvastu*, iii. 176, and the *Mahāvaṁsa*, ii. 21, give contradictory accounts of Devadatta's parentage. Had these two traditions (the one handed down in the Ganges valley, the other in Ceylon) agreed, the evidence might have been accepted. The *Milinda* (at p. 101) states that Devadatta was swallowed up by the earth; and

[1] *Aṅ.* ii. 73 = *Saṁ.* ii. 241 = *Vin.* ii. 188; *Aṅ.* iii. 123 = *Vin.* ii. 185; *Aṅ.* iv. 160; and again 164 = *Vin.* ii. 202.

(at p. 111) that, at the moment of his death, he took refuge in the Buddha. Both traditions were accepted in Ceylon in the 5th cent. A.D. (see the commentary on the *Dhammapada*, i. 147). A statement of Fa Hien (Legge's tr., p. 60) shows that the first of these traditions was still current in India at the end of the 4th cent. A.D. The same authority (p. 62) tells us that there were still, at that time, followers of Devadatta who paid honour to the three previous Buddhas, but not to Gautama. This is possibly confirmed by Yuan Chwāng, more than two centuries later, and in another locality; but Watters (ii. 191) thinks that the pilgrim himself may have supplied the name Devadatta. Yuan Chwāng elsewhere (Watters, i. 339) credits Devadatta with the murder of the nun Uppala-vaṇṇā; but we have no confirmation of this unlikely story, and it depends probably on a Chinese misunderstanding of some Indian text. We have two 5th cent. biographies of Uppala-vaṇṇā, and it occurs in neither.

T. W. RHYS DAVIDS.

DEVAYĀNA.—This term in ancient Vedic thought and speculation denoted the path or paths leading to the gods, elsewhere the road which the gods themselves were wont to traverse in their descent or ascent between heaven and earth. In the earliest literature of India it formed part of the recognized terminology of the priests and poets; and it passed through a long course of development and refinement, during which it gained clearness of definition, and was brought into relation with other movements of religious thought. In a lower, more literal, and mechanical sense, *devayāna* was also the car or vehicle (*yāna*) of a god; but no special significance or importance seems to have attached to this use of the word. The correlative to *devayāna*, 'the way of the gods,' was *pitṛyāna*, 'the way of the fathers'—a term which assumed importance only in the later speculation, and perhaps was consciously invented on the analogy of the former word, to express an inferior path or progress, at a time when *devayāna* became specialized and appropriated to the conception of a higher or the highest degree of bliss.

Hence in origin at least both terms belong to a lower stratum or form of religious belief, and are conceived in a material or semi-material sense. The term *pitṛyāna* especially answered to the primitive and wide-spread conception of the life after death, which pictures it as a meagre continuation of the present, reproducing the conditions and occupations of a worldly existence, where the ancestors dwell in weal or woe according to their deserts, but where all is more or less unreal and speculative, and the prospect exerts no determining influence on the actions or conduct of the present. In India, however, almost from the very beginning, the term *devayāna*, so soon as it was interpreted in the human sphere of the fortunes and destinies of men, was conceived apparently in a higher and more ethical sense, and for the most part connoted Divine escort, companionship, or guardian care, on a road which had its termination in a paradise of blessedness and good; the elements and conditions of which conception were necessarily contributed by earthly experiences, and the pleasures enjoyed were those of earth, renewed, however, in a more or less etherealized and exalted form in fellowship with beneficent and righteous gods. The travellers by the *pitṛyāna* attained only a lower goal, where the superhuman associates were at the best the gods of the lower world, but where the company was for the most part those mortal men who had preceded them on the path. These all shared the same colourless and temporary existence, from which they eventually returned to tread the same cycle of renewed birth, life, and death, in this world. Thus finally, with the growth of speculation with regard to the future, and of the consciousness of merit and demerit attaching to conduct and involving reward or penalty, the ways of the gods and of the fathers were brought into association with the great Indian doctrines of *saṁsāra*, 'transmigration,' and inevitable *karma*; and were incorporated into the rich store of Indian beliefs that had reference to the life beyond the grave.

The earliest conception of a 'path of the gods' is to be found in the hymns of the Rigveda. There apparently it is always associated with Agni, the divine priest and intermediary between gods and men. Agni—both the sacrificer and the sacrificial flame—bears the offerings to the gods, and conducts the gods to receive the offerings which are prepared for them. He knows the path that leads to the gods, and is the messenger and guide thereon:

'Knowing the ways by which the gods go, thou (Agni) hast become the unwearied messenger, the bearer of oblations.'[1]

The path trodden by the gods, and on which the sacrifices were borne to the heavenly world, became later the road by which the sacrificer himself ascended to the company of the gods. This extension or development of the thought of the *devayāna* was early made, probably in connexion with the practice of burning the dead. The soul, released from the body, which was consumed by the fire and returned to its earthly elements, was carried on high in the smoke and flame, on a fiery path whereon was consummated that purification from earthly taint which the fires of the funeral pyre had begun.

Śat. Brāhm. i. 9. 3. 2: 'That same path[2] leads either to the gods or to the fathers. On both sides two flames are ever burning: they scorch him who deserves to be scorched, and allow him to pass who deserves to pass.'

The way was thus prepared for the philosophical development which the doctrine received in the Upaniṣads and later systems of Indian thought and teaching. The purification which the soul underwent to fit it for the communion and company of the gods was conceived as a process not completed in one act or at one time, but carried on through a series of graduated stages or degrees; and it was only at its close that the emancipated soul was admitted to the fullness of bliss.

The earliest enumeration of the 'stations' on the two paths is found in the *Chhāndogya Upaniṣad* (v. 10. 1):

'Those who know this (*i.e.* the so-called doctrine of the five fires, and the fate of men after death, with regard to which Śvetaketu Āruṇeya has been obliged to confess ignorance [v. 3. 1–5]), and those who in the forest follow faith and austerities (*vānaprastha*) enter into the flame, from the flame to the day, from the day to the bright half of the month, from the bright half of the month to the six months of the sun's northward movement, from the six months to the year, from the year to the sun, from the sun to the moon, from the moon to the lightning.'

Thence they are led to Brahman; and it is further

[1] Rigv. i. 72. 7, cf. ii. 2. 4 f., *al.*; Atharv. iii. 15. 2, etc.; and, for the paths between heaven and earth, which Agni knows (Rigv. vi. 16. 3, x. 98. 11, etc.), see Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 88 ff.

[2] *i.e.* the funeral fire; see *SBE* xii. 267 and note; and cf. *Śat Brahm.* xiii. 8. 3. 4.

explained that this is the way of the gods, from which there is no return (cf. iv. 15. 5):

'But they who living in a village (*gṛhastha*) practise sacrifices and almsgiving, enter into the smoke, from the smoke to the night, from the night to the dark half of the month, from the dark half of the month to the six months of the sun's southward movement. But they do not reach the year. From the months they go to the world of the fathers, from the world of the fathers to the ether, from the ether to the moon. . . . Having dwelt there as long as a remnant (of good works) yet exists (*yāvat sampātam*, "till their good works are consumed" [Müller]), they return again, by that way by which they came, to the ether, from the ether to the wind. Having become wind, the sacrificer becomes smoke; having become smoke, he becomes mist; having become mist, he becomes cloud; having become cloud, he rains down. Then is he born as rice and corn, herbs and trees, sesamum and beans. Thence the escape is beset with most difficulties. . . . Those whose conduct has been good will quickly attain some good birth, the birth of a Brāhman, or a Kṣatriya, or a Vaiśya; but those whose conduct has been evil will quickly attain an evil birth, the birth of a dog or a hog or a Chaṇḍāla' (v. 10. 3–7).

The same description, with minor variations and in a somewhat briefer form, recurs in *Bṛhad. Up.* vi. 2. 15 f. For the year, however, on the *devayāna* is substituted the Devaloka, 'the world of the gods.' In the stations of the *pitṛyāna* the ether is omitted, and progress is made direct from the world of the fathers to the moon. The omission, however, is apparently merely accidental; for, when the merit of their good works is exhausted, they are said to return again to the ether, from the ether to the air, from the air to the rain, from the rain to the earth.

'And when they have reached the earth they become food, they are offered again in the fire of man, and thence are born in the fire of woman. Thus they rise up towards the worlds, and go the same round as before.'

It is not easy to determine which of these two versions is the earlier. They are probably to be traced back to a common original, which has been slightly modified in the course of transmission in different schools of Vedic learning. The form of the *Bṛhadāraṇyaka* most closely and formally identifies itself with the doctrine of transmigration and the theory of a satisfaction rendered upon earth for all past deeds, after which a new career is entered upon. There underlies both, however, the ancient Vedic conception of retribution or felicity after death, in another world, from which there was no necessary return to an existence upon earth—a conception which was more or less definitely combined with and accommodated to the teaching with regard to a new life upon earth. The latter, in its origin at least, was probably derived from external sources, but was adopted into the Brāhmanical system and elaborated in the philosophical schools (see artt. TRANSMIGRATION, UPANIṢADS).

In the later literature also reference is frequently made to the two paths, and the essential difference between them is emphasized, viz. that of a permanent or a merely temporary deliverance from the conditions of an earthly life, e.g. *Bhāg.-Gītā*, viii. 23–26:

'I will declare the time, O descendant of Bharata, at which devotees (*yogin*) departing from this world go, never to return or to return. The fire, the flame, the day, the bright fortnight, the six months of the sun's northern movement, departing in these, those who know the Brahman go to the Brahman. Smoke, night, the dark fortnight, the six months of the sun's southern movement, departing in these, the devotee attains the lunar light and returns. These two paths, the bright and the dark, are deemed to be eternal in this world. By the one a man goes never to return, by the other he returns again.' Cf. *Praśna Up.* i. 9, 10, where the paths are termed southern and northern; *Muṇḍ. Up.* i. 2. 10, 11, iii. 1. 6; *Anug.* 20 (*SBE* viii. 314, 316), etc.

It is evident that the stations themselves are artificial, and are made artificially to correspond, those of the *devayāna* indicating regions of progressive knowledge and light, those of the *pitṛyāna* successive regions of darkness and decay. Occasionally, in passages which are probably later and prompted by individual speculation or fancy, other stations are added or substituted for those of the *Bṛhad.* or *Chānd.*; *e.g.* in *Kauś. Up.* i. 3, from the fire, the world of Agni, the path of the gods leads through the world of Vāyu (wind, air) to the world of Varuṇa, and thence through the worlds of Indra and Prajāpati to the world of Brahman.

The same Upaniṣad essays an explanation of the fact that the moon appears as a station on both paths. On the *devayāna* it occupies a place beyond the sun, intermediary between that and the lightning, but is in no way distinguished from the other stations. On the *pitṛyāna*, however, it is the final resting-place, or place of sojourn, from which the return to earth begins. The author of the *Kauś. Up.* appears to regard the moon as a testing-place or opportunity of trial, the future being determined by the degree of knowledge which the disembodied soul is proved to possess. The wise find a permanent home; the ignorant are dismissed to a new earthly existence which is graduated according to their deserts.[1] That all souls after death are received into the moon is an ancient and widely accepted view, and probably accounts for the position which the moon occupies as a station common to the two paths.

Provision is also made for those who are ignorant of the ways, *i.e.* for out-castes who have no knowledge of the gods and no capacity or right to study the scriptures. Elsewhere, however, this 'third place' appears to be conceived as a lot of punishment or degradation reserved for the wicked. To the philosophical thought of India the two conceptions are not incompatible, and the latter, indeed, is almost necessarily an accompaniment of the former.

'Those who know neither of these paths become worms, birds, and biting things.'[2]

A further question much discussed had reference to the qualifications necessary for those who on the higher path attain to light and immortality. The primary qualification was universally admitted to be knowledge, *i.e.* knowledge of the supreme or Brahman. Difference of opinion, however, appears to have existed on the one question as to the degree of knowledge the possession of which would admit to the *devayāna*. With regard to those who have lived in the two last *āśramas* as *vānaprasthas* or *sannyāsins*, there is no doubt: they tread the path of the gods. In the case of *gṛhasthas* the *Chānd. Up.* appears to draw a distinction between those who know the secret doctrine of the five fires, and those whose life proceeds in the routine of ordinary sacrifices. The former after death go to the flame, etc., and finally reach Brahman. The latter are destined for the *pitṛyāna* and a return to earth. The *brahmachārin*, in a state of pupilage, to whom the knowledge of the Brahman had not yet been communicated, was naturally excluded from the highest path. A later representation, perhaps more liberally inspired, or to which the conception of the sphere of the *brahmachārin's* life had become definitely widened, conceded this also, and, entirely in harmony with later developments of thought, laid the emphasis not on status, but on behaviour and a life of meditation and devotion.[3]

[1] *Kauś.* i. 2. The passage is difficult, and perhaps corrupt. Max Müller renders: 'All who depart from this world go to the moon. In the former (the bright) half, the moon delights in their spirits; in the other (the dark) half, the moon sends them on to be born again. Verily, the moon is the door of the Svarga (heavenly) world. Now, if a man objects to the moon (is not satisfied with life there), the moon sets him free. But, if a man does not object, then the moon sends him down as rain upon this earth,' etc. (*SBE* i. 273 f.; cf. Deussen, *Sechzig Upanishads*, Leipzig, 1897, p. 24).

[2] *Bṛhad. Up.* vi. 2. 16, cf. *Chānd.* v. 10. 7 f., Śaṅkara on *Ved. Sūt.* iii. 1. 18, who explains that, in the case of those who are destined for the 'third place,' the appropriate sacrifices have not been offered, and therefore they return to life in new bodies which are constituted from inferior ingredients (*SBE* xxxviii. 123–25, cf. 121 f.).

[3] *Anug.* 31. 7 f.: 'a Brahmachārin . . . who is thus devoted, who is concentrated in mind and continent, conquers heaven, and reaching the highest seat does not return to birth'; cf. Rāmānuja on *Ved. Sūt.* iii. 3. 32, who declares that all those who practise meditation proceed on the path of the gods, without

The same question of qualifications for the higher path, the path that led to Brahman without return, was considered in relation to the doctrine of the *yoga* (*q.v.*). *Bhāg.-Gītā*, viii. 24 f. appears to suggest that the immediate destiny of the *yogin*, or ascetic, depends upon the time of death, whether in the light or dark half of the year, the northern or southern progress of the sun (*SBE* viii. 80 f.). Rāmānuja, however, rejects this inference, and asserts that the text enjoins on all *yogins* the duty of daily meditation on the two paths, quoting in proof of his contention the words that follow: 'no *yogin* who knows these two paths is deluded' (*ib.* viii. 27). The text, therefore, has no reference to the time or season of the year at which death takes place (*SBE* xlviii. 472 f.).

A further and final development of doctrine took place in harmony with the teaching of the Vedānta, and the importance attached to knowledge of the highest Brahman, the supreme knowledge (*parā vidyā*), as the one avenue of escape from attachment to the world and the possibilities of re-birth. Those, on the other hand, who were possessed only of the lower degree of knowledge (*aparā vidyā*), the knowledge of the Brahman *saguṇa* ('endowed with qualities'), were still entangled in the snares of delusion, and liable after death to a return to earth. It became, then, necessary to find a link of connexion between the new metaphysics which exalted the secret esoteric wisdom, and the older authoritative teaching of the two ways. It was not possible, however, to deny that those who possessed a knowledge of Brahman even in an inferior degree departed on the *devayāna*, the path of the gods, or to consign them to a lower destiny; for all such the scripture declared that there was no return. A solution of the difficulty was found in the doctrine of the *kramamukti*, 'emancipation by steps or stages.' The question is discussed by Śaṅkara on *Ved. Sūt.* iii. 3. 29 (*SBE* xxxviii. 231–235; cf. *ib.* 124 f.), where he explains that a twofold meaning underlies the phrase 'going on the path of the gods.' In the case of those possessed of the highest knowledge, the knowledge of the unqualified Brahman (*nirguṇa*), it is a mere phrase; for they are already in union with Brahman, and have no need to move on any path to reach that end. But all who have only the knowledge of the qualified Brahman (*saguṇa*) advance on that road. And, since it is said that they attain to Brahman and do not return, it must be that in union with the (*saguṇa*) Brahman they eventually win perfect enlightenment and gain the highest knowledge. During this period of probation and imperfect knowledge the soul is in possession of complete bliss and unrestrained capacities of will power, etc. (*aiśvarya*). As it approaches the highest light, it finds itself, assumes a 'new form,' and is truly and finally set free. This is the doctrine of the *kramamukti*. And it is further explained that all thus enter into absolute and final emancipation at the end of the world-cycle.[1]

A variety of the teaching concerning the paths, which is merely an elaboration of the doctrine of the two roads, and remained without further significance or development, postulated four paths from earth to the gods, which were explained as corresponding to four forms of sacrifice. Both the reference and the interpretation are given by Baudhāyana:

'Some teach a fourfold division of these sacred duties. The text, however, "Four paths," etc. (*Taitt. Saṁh.* v. 7. 2. 3) refers to sacrificial rites, *iṣṭis*, animal and Soma sacrifices, and *darvihomas* (offerings made with a *darvī*, or sacred ladle). The following declares that "Four paths, leading to the world of the gods, go severally from the earth to heaven"' (Baudhāy. ii. 6. 9 ff., cf. 29; *Āpast.* ii. 9. 23. 5).

The context suggests that the conception of the four paths is not unconnected with the doctrine of the four *āśramas*.

An isolated passage in the *Bṛhad. Up.* (iv. 4. 9) describes the path to the Svargaloka as marked out in varied colours:

'On that path (to the Svargaloka) they say that there is white or blue or yellow or green or red; that path was found by Brahman, and on it goes whoever knows Brahman, and who has done good, and obtained splendour.'

The colours are the same as those of the veins (*hitā*; *ib.* iv. 3. 20), and the conception has therefore in all probability a physiological basis. Neither in this instance, however, nor in that of the four paths of the *Taitt. Saṁh.* and Baudhāyana was any inference drawn or further development sought. And it remains doubtful how far any connexion is to be traced between the ideas underlying these texts and the formal doctrine of the *devayāna*.

Parallels to the latter doctrine of roads traced out between earth and heaven by which the dead souls pass and repass are to be found in many of the religions of the nearer and further East. They are present in the eschatological teaching especially of Babylon and Egypt.[1] Similar conceptions are presupposed in the dream of Jacob (Gn $28^{12\,ff.}$).[2]

A. S. GEDEN.

DEVELOPMENT (Biological).—Development is the 'becoming' of the individual organism, the attainment of a specific form and structure, and of the not less characteristic associated faculties. The starting-point is usually a fertilized egg-cell—a new unity formed from the intimate and orderly combination of paternal and maternal inheritances. The fertilized ovum divides and re-divides, the daughter-cells or blastomeres are arranged in germinal layers, differentiation sets in, and an embryo is built up. This is embryonic development. At a certain stage, differing greatly in the different types, the egg is 'hatched,' and the embryo emerges from the egg-envelope—sometimes like a miniature of the adult, as in the case of a chicken; sometimes very unlike the adult and adapted to a different kind of life, as in the case of caterpillar and tadpole. Thus there may be a larval development. The embryo is the quiescent stage within the egg membrane; the larva is free-living and able to feed for itself. As long as the realization or expression of the inheritance goes on, as long as differentiation and integration continue, we may speak of development, but mere increase in size is not development, and it is very difficult to decide where to put in the stop. Thus some would say that development includes all the normal changes of form and structure that occur throughout life, and that the breaking-down in old age is as much part of development as the building-up in youth. Others put in the stop when the limit of growth is reached, but the brain may go on developing long after that, though in mammals there seems to be no increase in the number of brain-cells after birth. Moreover, there are many fishes and reptiles that show no limit of growth. Others, again, put in the stop when the specific characters begin to be well defined, but that would exclude much that can be fairly called development, *e.g.* the changes associ-

restriction (*SBE* xlviii. 650–652); also on iii. 1, 17 f., iv. 3. 1 ff., where the two paths are discussed, and are said to be dependent respectively on knowledge and works (*SBE* xlviii. 594 f., 744 ff.); see also Śaṅkara, *locc. citt.*

[1] Cf. also Rāmānuja on *Ved. Sūt.* iv. 4. 1 f. (*SBE* xlviii. 755 ff.); Deussen, *Allg. Gesch. d. Philos.*, Leipzig, 1908, i. 3. p. 608 ff. The *Śvetāśvatara Upaniṣad* contains a suggestion or pre-intimation of the same theory: 'When that god is known, all fetters fall off, sufferings are destroyed, and birth and death cease. From meditating on him there arises, on the dissolution of the body, the third state, that of universal lordship (*aiśvarya*); but he only who is alone is satisfied' (*Śvet. Up.* i. 11).

ated with sexual maturity. The fact is that, in studying development, we are considering the living creature in its time-relations, and definition is a matter of convenience. In the present article we propose to restrict ourselves for the most part to the problems of embryonic development.

Let us state very briefly some of the outstanding facts of development. We know that the germ-cells, and their nuclei in particular, form the physical basis of inheritance—the means, at least, of development; that a genetic continuity is kept up from generation to generation by a lineage of unspecialized germ-cells, which do not share in body-making; that this accounts for like tending to beget like; that fertilization implies an intimate and orderly union of two individualities, condensed and integrated for the time being in the ovum and the spermatozoon; that the spermatozoon, besides being the bearer of the paternal half of the inheritance, acts as a liberating stimulus to the ovum, and introduces into the ovum a peculiar little body, the centrosome, which plays an important part in the subsequent division of the fertilized egg-cell. We know that the mode of all development is by the division of nuclei and the segregation of the living matter into unit-areas or cells, each presided over by a nucleus; that differentiation comes about very gradually, the obviously complex slowly arising out of the apparently simple; that paternal and maternal characteristics—so far as the nuclei of the germ-cells bear these—are distributed in exact equality by the nuclear or cellular divisions, and that the paternal and maternal contributions thus form the warp and woof of the web which we call the organism, though the expression or realization of the bi-parental heritage varies greatly in individual cases. In many cases the parental contributions seem to include ancestral items which may find expression in development or may lie latent. We know that development is a regular sequence of events which requires, stage by stage, an appropriate external environment; that there are continual interactions between the developing organism and its environment; and that there are continual mutual adjustments of the different constituents of the developing organism. In certain aspects the development appears like the building-up of a mosaic out of many independently heritable and independently developable parts; in other aspects it appears as the expression of an integrated unity, with subtle correlations between the parts, and with remarkable regulative processes working towards an unconsciously predetermined end. We know also that in a general way the individual development of organs often progresses from stage to stage in a manner which suggests a recapitulation of the steps in the presumed racial evolution.

It may be said that the data for the study of development are threefold, viz. (*a*) embryologists have worked out the sequence of stages in the development of a large number of types; (*b*) experimentalists have shown in a variety of instances that particular changes in the external conditions are followed by particular changes in the developing organism; and (*c*) students of heredity have distinguished various modes of inheritance which obtain, such as 'blended' and 'Mendelian.' The facts known in regard to development are many and various, as we have briefly indicated, and they are continuously increasing in precision and penetration; yet it seems doubtful whether we have got much nearer an understanding of development since the days of Aristotle, to whom facts were so few. It seems as if his *de Generatione* remained the most important contribution to the subject. How little light we have that he had not in regard to the deep problems of development, such as those suggested by the following questions: How are the heritable characteristics of the race summed up potentially within the minute germ-cells? How do they gradually find expression in the individual development, so that what we call differentiation results? What is the nature of the compelling necessity that mints and coins the chick out of a drop of living matter? What is the regulative principle of the ordered progress which, by intricate and often strangely circuitous paths, leads to the fully-formed organism?

From reflexion on these general questions the scientific mind always turns, sometimes too quickly, to concrete investigation, it may be of the humblest sort, with the results of which the theory of development must be consistent. Thus there are numerous inquiries into the external factors of development, such as light, temperature, oxygen, osmotic pressure, and the chemical composition of the medium. Experiments are devised which alter or remove one factor at a time, and the significance of the factor is inferred from the resulting changes, transient or permanent, in the developing organism. It appears that each germ is adapted to develop in an appropriate environment, that changes in this environment may occur without permanent prejudicial effects on the organism, but that the latitude of endurable change varies greatly for different types, some being much less plastic than others. It appears that some of the environmental factors, like oxygen and water, are analogous to nutrition; that others, like the osmotic pressure or the presence of calcium salts in the water, are conditions of embryonic coherence; that others, like light and heat, are accelerants and inhibitants; and that particular combinations of factors are required as the 'liberating stimuli' of particular characters in the developing organism. It does not appear, however, that we can speak of the environmental factors as being in any other sense directive.

A second kind of inquiry asks, What in point of fact goes on in the development of the fertilized egg-cell? We know that there is an expression of the inheritance: that is just another spelling of the word development; but what processes are known to occur? This is an inquiry into the physiology of development, which is still a very young department of science, too young for safe generalization. It is also difficult to disentangle the physiology of growth from that of development, yet every one is agreed that mere growth is not development. What processes are known to occur? (*a*) We know of various sets of chemical changes significant in different ways. Thus, to cite three different cases, the fermentative changes in seeds make the legacy of nutritive reserves available; the anabolic formation of nuclein-substances seems to bring about cell-division; the diffusion of the products of internal secretion certainly affords the liberating stimulus to certain previously unexpressed parts of the inheritance, for instance in adolescence. (*b*) We know also of a continuous succession of cell-divisions. That, indeed, is how all development goes on. The original idea of Roux, that there is qualitative nuclear division, shuffling the pack of inherited qualities, has been given up in favour of a more plausible view suggested below. (*c*) We also know a little of even subtler processes—of protoplasmic movements within the developing germ, and of apparent attractions towards specific parts. (*d*) There are also phenomena of surface-tension and capillarity, etc., which seem to be rather parts of the vital machinery of growing than implicated in the essential secret of progressive differentiation.

A third line of investigation concerns the initial structure of the germ, and one result stands out—that in many cases the egg-cell contains pre-formed, sometimes pre-localized, organ-forming substances, whose removal involves the absence of a corresponding structure, should development proceed. Thus, the old view of the ovum as homogeneous and isotropic has given way before experimental proof of heterogeneity. It may be that, in the heterogeneous, anisotropic cytoplasm of the egg, there is the foundation of the progressive differentiation that follows, and it may be, as Driesch and Boveri suggest, that the dividing nuclei—each a microcosm—are differently stimulated to expression in different areas of the cytoplasm, and that they thus call forth new differentiations in these, in ever-increasing complexity of action and reaction.

Another line of investigation inquires into the mutual influences of the parts of the developing organism. An egg divides into a ball of cells (or blastomeres), and it seems reasonable to suppose—what experiment confirms—that the prospective value of a particular blastomere depends on its position in the whole. In the development of a colony of polymorphic Hydroids, such as Hydractinia, it is probable that the prospective value of any young polyp—whether it is to become nutritive, reproductive, or sensory—depends, in part at least, on its position in the whole. Similarly, in the development of an embryo, it is probable that there are subtler than spatial correlations between the developing cells or groups of cells. Driesch has especially emphasized this idea of the mutual stimulation of developing parts, but further research is necessary before we can securely estimate the action of parts upon one another. This, indeed, brings us right up against one of the distinctive riddles of development—that there is, on the one hand, so much inter-dependence of parts, and yet, on the other hand, so much power of self-differentiation.

In regard to the question so often asked, whether we can understand development in terms of chemistry and physics, the scientific answer must be that we cannot at present in the very least describe embryonic development—that wonderful individual unpacking of a racial treasure-box—in terms of chemistry and physics. There are chemical and physical processes going on, of course, which reward study, but a knowledge of them does not help us greatly to understand the result. There is nothing known in regard to development that is at variance with the conclusions of chemistry and physics, but we cannot give a physico-chemical rendering of the observed facts. Nowhere is the autonomy of Biology clearer than here. Driesch in particular has done great service in showing that mechanistic formulæ will not suffice when we come to deal with organic development, notably when we consider the localization of the various successive steps of differentiation. But many who are at one with him on that point are unable to follow him in his constructive hypothesis of an entelechy which exerts a directive influence on the transformations of energy that go on in development.

J. ARTHUR THOMSON.

DEVELOPMENT (Mental).—1. Introduction.—During and after the period of bodily growth and development, from infancy to adult life, the individual gradually acquires and completes his mental powers. The study of mental development has as its aim to determine the conditions which govern this gradual process, and its successive stages both for the mind in general and for the special functions or capacities. It has been remarked that, while some of the lowest animals are born 'grown up,' being able from the first to secure food for themselves and otherwise to live a life similar to that of their parents, the higher we ascend the scale of animal life the longer is the period of immaturity, infancy, or development which the individual undergoes. This is not a mere accident: the length of infancy has a *direct* relation to the height achieved by the animal's species in the evolutionary scale, in other words, to the complexity of its structure and functions, the variety of its adaptation to environment, and especially the degree of plasticity, or power of modifying behaviour, which it possesses. The argument applies equally to the physical and the mental aspects of evolution.

Comparative tables show that the ratio of the period of immaturity to that of length of life, which in man is 25:75, or 1:3, is an increasingly small fraction as we descend the scale: thus elephant, 1:4; horse, lion, 1:6; dog, 1:8; cattle, 1:9; cat, 1:10; rabbit, 1:11; guinea-pig, 1:12 (A. F. Chamberlain [after Hollis and Bell], *The Child*[2], ch. 4). The same differences may be observed within the human race itself: the young savage, or barbarian, Papuan, Fuegian, Bushman, Eskimo, is adult, and begins to take a man's or woman's part in the tribal work, at from 10 to 12 or 13 years; while, within civilization, the date of perfect maturity has been progressively advancing to 21, 25, and even to 30 years for complete mental development. It must be supposed that the ordinary forces making for evolution have determined this increasing length of infancy and immaturity; it has the following advantages: (1) Completed growth means rigidity; the more firmly a structure is organized, the more completely a habit is fixed by the organic mechanism, the more difficult is it for either structure or habit to be modified to suit new conditions; hence longer infancy means more gradual and therefore more effective adaptation to the general environment. (2) Completed development means completed adaptation to a number of *special* forces in the environment; the period of development is that during which selection occurs among the forces to which adaptation is to be made; thus longer infancy means ultimately more specialized adaptation to, and greater control over, the environment. (3) The main value of mental as contrasted with physical development is to give the individual a mastery of the means of economizing behaviour—by selective attention, by language, by technical skill, by thinking, abstraction, and reason—the mastery of those varied means of summarizing experience which the race has in its evolution perfected: such powers cannot be transmitted by physical heredity, but must be re-acquired by each individual by imitation or education: the longer development corresponds, therefore, to the greater refinement of the race in these products of experience. (4) In regard to physical structures as well as to mental achievements, the individual must by exercise and activity *acquire* even those functions for which it has a congenital disposition: the simple structure does not become the complex organization, without effort on the individual's part. This is true whether or not the individual is supposed to pass through the same stages of growth as those by which its ancestral line has come down from simpler life-forms (recapitulation theory). Hence, the higher the evolution of the race, the longer must be the period occupied by the individual in reaching its race-type (K. Groos, *Play of Animals*, ch. 2, Eng. tr., London, 1898; Chamberlain, *op. cit.*; E. Claparède, *Psychol. de l'enfant*[3], chs. 2 and 4).

2. Relation of development to evolution.—The recapitulation theory, once accepted as almost a truism, has recently met with much criticism. It has been applied to mental development most frankly and fully by Stanley Hall and his school. According to these writers, there are three ways in which the individual reveals the story of his race. (1) There is the actually observed correspondence between the stages and order of development and those of race-evolution ('recapitulation'). (2) There is the occasional appearance, even in adult normal life, of mental forms which are echoes of primitive mental stages; these occur more especially in states of mental weakness, fatigue, exhaustion, illness, the drug-psychoses, sleep, hypnosis ('reverberations,' 'reminiscences'). Our souls, like our bodies, represent the organized experiences of past ancestors: fears,

affections, thoughts, which appear even in quite healthy states, may be 'rudimentary spectres' (Stanley Hall) due to survivals from distant ages of man. (3) A given individual may show arrest of mental (as well as of physical) development, stopping short at a stage which the race in general has long since passed; in such a case we have a 'reversion,' or an atavism (*q.v.*), in which the characteristics of remote ancestors dominate, in the child's development, those derived from his parents or near ancestors. The mind, like the body, thus consists of segmentary divisions or strata derived from different periods of evolution: the older strata are naturally those which are most fixed and uniform throughout a race (*e.g.* the primitive instincts); the more recent strata are more variable in the different individuals (*e.g.* the forms of intellectual development); again, the older strata represent the foundation from which the more recent have been derived, and on which, therefore, the latter must be built up by the individual: hence not only *does* the individual, as a matter of fact, tend to develop along racial lines, but also parents and teachers *ought* to encourage and strengthen this tendency, in order to secure adequate and proportional development of all the different powers ('culture-epoch theory').[1]

The recapitulation theory has been defended (1) in the stages at which the different senses mature; (2) in the stages at which accurate discrimination of the different qualities within the same sensory group appears; (3) in the appearance of the different instinctive activities; (4) in the play activities of children; (5) in the successive objects of imitation which children select for themselves; (6) in the stages of intelligent behaviour, and in the development of abstract thought; (7) in the development of emotion; (8) in language. The principle has been greatly over-driven by its supporters, and probably the correspondence in question is limited to the broad general lines of development and evolution respectively. Special objections apply to the culture-epoch theory both as an interpretation of the facts of observation and as a basis of educational reform, but in the course of its discussion many valuable suggestions have been made. The child is not mentally, any more than physically, a mere miniature adult; its powers do not differ merely in quantity from those of the adult; they differ also in proportion and in kind.

Nature and nurture.—The question is still very far from settled as to the respective influence in development of factors which are present in the individual at birth, and of factors which come from the environment and operate from without. The arguments for the former, in the case of mental development, are: the tendency of the individual to reach the type or standard of his race, mentally as physically; the remarkably close resemblances which the adult individual shows to his parents and nearer ancestors, in character as in body—a resemblance which is still greater, it is said, between parent and child when both are considered at the stage of infancy or childhood; and the phenomena of atavism, so far as they are certified. Such facts suggest that, as the bodily germ-cell contains elements, or at least conditions, by which the future growth of the individual bodily organism is determined along definite lines, with definite limits, and definite proportions between the parts, so the mind, or perhaps we should say the brain as the basis of mind, also has its development pre-determined from the first. In support of this the statistical observations of Galton, Pearson, Heymans, and others have been adduced on the resemblances and correlations between the mental capacities of individuals and those of their parents or other members of their family.

The result of Galton's observations on the prevalence of eminence and genius in different families may be placed in this form: that the chances of an eminent man having an eminent relative are as 1 to 4, while the chances that an ordinary man, or a man chosen at random without reference to eminence, will have an eminent relative are as 1 to 250. That this is not due to opportunity or to social influences he argues by a comparison between the adopted sons of Popes and the real sons of gifted men. Again, if both parents are artistic, the probability of a child being artistic is 2 to 1; while, if neither parent is artistic, the probability of the child being so is 1 to 4. Another and later statement shows that, while 35 families, of a certain relatively high degree of eminence or capacity in the fathers, will contain at least 6 sons of the same capacity, as many as 5000 families of average or mediocre ability in the fathers will be required to furnish the same number of sons of that higher degree of eminence (F. Galton, *Hereditary Genius*, London, 1869, *Natural Inheritance*, London, 1889. For further references, see J. Arthur Thomson, *Heredity*, London, 1908).

Again, Karl Pearson dealt with families statistically in regard to such characteristics as intelligence, vivacity, conscientiousness, popularity, temper; he had previously compared them in regard to such physical characters as the colour of hair, size and capacity of skull, stature, etc. The application of the correlation-formula may be simply explained in this way, that if every two brothers had always the same stature, or the same colour of hair, then the correlation-index would be 1·00; if there were no law whatever, so that in one case the two brothers might be equally tall, in another the one tall and the other moderate, in a third the one tall and the other short, then the index would be 0·00; while, conversely, if there were such a law that in every case of two brothers one was tall and the other short (of course in exact proportion), then the index would be −1·00. The index Karl Pearson found for the colour of the hair was 0·54, for the skull 0·49, for the stature 0·51; while for the mental characters the average correlation was 0·52, in other words, practically the same as the physical index. These are comparatively high degrees of correlation, and suggest that the same cause has been operative in both classes of cases considered in the statistical measurement. Now, it is quite obvious that post-natal conditions have nothing to do with the colour of the hair or with the size of the skull; hence it is equally unlikely, he argues, that the environment has anything to do with the intelligence, or vivacity, or temper of the individual. Later, more particular and accurate tests gave similar results, although the correlations were not quite so high; in any case, the brother of a bright child is much more likely to be bright than the brother of a dull child; brightness or dullness of intelligence is derived from the parents and is not due to education or environment, and not only is it the *general* mental character that is inherited in this way, but even quite special characteristics (K. Pearson, *Nature*, lxv. [1901] 118, also Huxley Lect. for 1903 in the *Trans. Anthr. Inst.* p. 179 ff., and *Biometrika*, ii. [1903] 357, and iii. [1904] 131; Heymans, *Ztschr. f. angew. Psych.* i. [1907]. On the whole question, see E. L. Thorndike, *Educational Psychology*, New York, 1903, ch. 6).

On the other side, Loeb and his school are able to produce an increasing mass of evidence showing that the development of the bodily organism, since it can be enormously modified by changes in the environment, is to a large extent directly due to the action of external forces. Hence the mental development may be a product of environment and opportunity rather than of innate factors. Thus, the conclusions of Galton and Pearson, for example, are insecure so long as we do not and cannot exclude the environmental influence: just as children of healthy parents tend to have healthy bodies because of the sufficient and proper food which their parents (*because of* their healthiness) are able to provide them, so the children of mentally gifted parents tend also to be mentally gifted, because of the immensely greater stimulation which they receive from the conversation, the life, the surroundings of their parents, and their parents' friends; it is a question not of innate, but of external, conditioning. See, further, art. HEREDITY.

3. Relation of mental to physical development: periods of development.—It has been shown (see BODY AND MIND, BRAIN AND MIND) that the development of the mental powers is in intimate

[1] See the Herbartian Ziller's *Allg. Pädag.*[2], Leipzig, 1884, p. 215 ff., and *Grundlegung zur Lehre vom erzieh. Unter.*[2], do. 1884, and the criticisms of K. Lange, *Apperzeption*[3], do. 1908, p. 142 f.

relation with that of the bodily organs, and especially the brain.

The term 'development' is here used in a wide sense to cover both growth and development proper; strictly it is preferable to confine the term 'growth' to the increase in size or amount, while 'development' is reserved for increase in organization and connexion of parts; but these processes occur simultaneously in physical development, and it is extremely difficult to draw any line between them in mental expansion.

The stages of physical growth and maturity have been used to delimit the periods of childhood generally; broadly, we may take four periods of seven years each: (1) *childhood*, from birth to 7 years (about the time of the completion of the second dentition); (2) *the period of girlhood or boyhood*, from the 7th to the 14th year; (3) *the period of adolescence or youth*, from the 14th to the 21st year; and (4) from the 21st to the 28th year, by which time the mental development, as well as the skeletal growth, is approximately completed. The first period is also divided into *infancy* (the first two years, to completion of first dentition) and *childhood proper* (to the 7th year).

(1) Characteristic of the first period are the development of the senses, which at first are extremely imperfect; rapid body and brain growth; the acquirement of the fundamental motor co-ordinations—walking, grasping, climbing, etc.—and the acquirement of speech; emotions are readily excited, but are of short duration; the prominent instincts are the self-preservative ones, 'experimentation play,' and imitation. (2) The second period is marked by a slower bodily growth; the brain is relatively fixed in its size and weight before the middle of this period, but undergoes rapid development or organization during the latter part of it; the important physiological changes that occur towards the middle of the period are accompanied by susceptibility to emotional excitement; the individual is easily fatigued; bodily and mental habits are being formed and fixed; the beginnings of abstract thought and of self-consciousness present themselves: action is co-ordinated with reflective intelligence and thought. (3) In the third stage there is, again, at the beginning, a rapid advance in bodily growth followed by another period of slow growth to its completion at about 21; there is a strengthening of the social consciousness; greater interest is shown in adults and their work; it is also the period of idealism, of romance, and generally of great emotional and social development—'storm and stress'; the mental powers begin to be definitely fixed and proportioned; even play takes a more serious form—in tests of endurance, self-control, skill, and ability. (On this important period, see Stanley Hall's *Adolescence*, and art. ADOLESCENCE, vol. i. p. 101). (4) The last period referred to is that in which the general mental character is finally hardened or set. (On the periods of childhood, see the historical summary in Chamberlain, ch. 4, and Claparède, ch. 4, par. 1). The development of the brain is peculiar in this respect, that at birth it bears a higher proportion relatively to the rest of the body, and to its adult value, than any other organ. While the weight of body of the newly born infant is to that of the adult as 1 to 20, the corresponding ratio in the case of the brain alone is 1 to 3·8 (see the tables given in H. H. Donaldson, *Growth of the Brain*, London, 1895, chs. 2 and 5). Nearly the full weight of the brain, however, and therefore its completed 'growth,' is reached between the 7th and the 10th year, whereas the full stature is not attained until about the 21st year, and the body may go on increasing in weight till the 50th year or later. On the other hand, the brain after the 7th year undergoes changes of great importance in its organization; growth is replaced by development, in the proper sense of the word, although there has also been some degree of development during the earlier stages.

According to Flechsig's discoveries, the *sensory* areas of the brain are the first to show functional maturity, that is, they are the first whose connecting fibres acquire the medullary-sheath (*Localisation der geistigen Vorgänge*, Leipzig, 1896). The earliest fibres to be functionally perfect are those which lead from and to the large region of the brain, which he calls the area for 'body sensation,' including under this broad term both the internal sensations, conveyed from the viscera, muscles, etc., and the external, conveyed from the skin (organic, kinæsthetic, pain, touch, and temperature sensations, sensations of position); these connexions begin before birth, and are completed in the first few months after birth. Within this region it is the fibres connected with the internal organs, and with the extremities, that are first completed; then follow those connected with the trunk, and with the special muscles that are afterwards used for speech. They convey the great masses of sensation with which the feelings and emotions, and also the sense of self, are directly correlated (H. Beaunis, *Les Sensations internes*, Paris, 1889). It may be concluded that these impressions are the earliest which the child is capable of receiving, and the first to be connected into systematic perceptions. Next in order of development are the fibres connected with the smell-centre, and probably those of the taste-centre; third are those which lead to and from the sight area, which do not begin to show the medullary-sheath until after birth; while those of hearing come last. Outside the more or less sharply defined areas of the brain, from which these fibres derive, are those which Flechsig, after Meynert, names the *association areas*, the two chief areas being the large occipital zone, and the pre-frontal zone. It is noticeable that these are all much later in completing their connexions than the sensory zones, and that their connexions are almost entirely of the intra-cerebral type; that is to say, they pass between the different parts of the cortex within a hemisphere or from one hemisphere to the other; these are hardly present at all in the third month of life, but continue to form for several years afterwards.

Flechsig holds, from a comparison between his anatomical researches and the results of clinical and pathological observation, that the sensory zones 'mediate' not only sensations proper, but also those mental forms which are based upon groups or combinations of similar sensations; for example, tactual space-perceptions, and perceptions of auditive series such as those involved in the appreciation of spoken words. With the large association-area in the hind part of the brain are correlated such perceptions as involve combinations of heterogeneous sensations, associations, and memories; in other words, ideas of external objects, of the *meaning* of words, and all forms of higher knowledge. Injury to, or destruction of, these regions leads to an entire loss both of visual and of auditory memory, and the state which has sometimes been called *apraxia*, or *agnosis*, that is, an apparent inability not only to name familiar objects or to recognize them when seen, but even to use them when placed in the hand; yet at the same time power of sensation appears to be intact. The general term 'intelligence' might fitly be used to cover the mental faculties which are lost in such a case. On the other hand, the pre-frontal region, standing in the closest relation with the area for the tactual, kinæsthetic, and organic sensations, is that which runs parallel with the development of the will, character, and self-consciousness; the one certain fact about injury to it is that there is a loss of interest, spontaneity, power of concentrating the attention, in short, a general depreciation of the character.

The close relation between normal development of the brain and normal mental capacity, between abnormal development or one-sided development and genius, between defective development and imbecility, etc., have been referred to elsewhere (BRAIN AND MIND); modern appeals for improved hygiene in schools, medical inspection of children, feeding of necessitous children, special classes for defective children, and the avoidance of over-strain, have their ground or justification in the intimate correlation between the development of the body and that of the mind; and, needless to say, in the case of the child, even more than in that of the adult, the health of the mind is mainly dependent upon that of the body.

4. The conditions of development. — It has already been pointed out that it is difficult to say how far development proceeds from internal, and how far from external factors. It may be urged that, just as a child will reach a certain predetermined *height*, provided that it obtains adequate food and exercise and is protected from injury, and as no amount of extra feeding or exercise will enable it to go beyond this height, while under-feeding, under-exercise, and injury will make it fall below

it, so it is in the case of the mind. The child is born with the possibility of so much mental capacity, so much 'intelligence,' or retentive memory, so acute a sense of sight or hearing, etc.; care and practice will enable it to reach these fixed limits, but not to pass beyond them, while neglect and want of exercise may keep it far short of them. The conclusion is that the function of the teacher or parent is limited to the providing of the necessary *material* for development, that the amount and the direction of the development are, however, determined already by the nature which the child has received at birth. It is probable that the two most important factors in the question are, on the one hand, the *activity* of the child, which is partly a matter of congenital faculty, and partly a matter of healthy nutrition; and, on the other hand, *opportunity* of exercise and practice. The child who is constantly moving about not only improves his health in general, but also puts himself within reach of varied stimuli by which his mental powers are evoked, and in the course of time developed; while the sluggish child does not come so much within reach of stimulation, and therefore has a relatively slower development. Opportunity includes both the ordinary social and educational advantages or disadvantages, and especially those factors which depend on the health, culture, and economic position of the parents. Nature determines that the fundamental instincts shall appear in a certain order, and each contribute its share to the complete development; but, if stimulation and exercise are not provided, any instinct, when it appears, will remain undeveloped, and therefore the whole mental growth will suffer a certain amount of distortion.

Play and imitation.—The principal *internal* conditions of development are the two 'instincts,' if they may be so called—play and imitation. *Play* in the wide sense includes all activities or tendencies which do not contribute to the immediate needs of the organism, which are spontaneously carried out, and which give pleasure in their operation apart from any result derived from them. The natural view of play is such as is expressed in Spencer's surplus energy theory, viz. that play is the outcome of the excessive amount of stored nervous energy in the young, the exercise of which is not required for the organic needs, or of the tendency or faculty of imitation, according to which the child in its play imitates adult activities (*Principles of Psychology*[2], 1872, vol. ii. pt. 8, ch. 9). The theory with which Groos (*Play of Animals* and *Play of Man* [Eng. tr., London, 1910]), Baldwin (Pref. to Groos' *Play of Animals*), and others seek to replace this is that play has a biological function, viz. that of *preparing* the immature individual for the activities of adult life, without exposing it to danger such as would be implied if it had to acquire the same experience apart from the parent's protection. There is in each of the mental powers (or in each of the relative centres of the brain) a tendency to expression or exercise, and, long before there is real need for such powers, this exercise is obtained through play; thus the plays of children follow roughly the stages of the race evolution, as Hugh Miller suggested (*My Schools and Schoolmasters*). The corresponding instincts and interests develop successively in the child's mind; as they develop in their order, each in turn seeks, as it were, for self-expansion or expression, and this takes the form of play. A specially important feature of play is that it prepares the way for intelligence, or, rather, it is the means by which intelligence gradually comes to replace instinct, both in the race and in the individual; the more fixed and limited the environment of an organism is, the more rigid are its instincts, the less developed is its nervous system, and the less is its power to adapt itself to changes in the environment; on the other hand, the more varied the environment, the less rigid, although perhaps more numerous, the instinctive tendencies are, and the greater the ultimate development of the intelligence; play enables the instincts to be sufficiently exercised without dominating the development as a whole. In general, then, play is a preparation for the adult life; hence, the higher the physical and also the mental development ultimately achieved, the longer, as a rule, is the period of play; this, according to Groos, is the object, the biological function, of youth; animals do not play because they are young, but they have a period of youth in order to play. This play includes the *simple experimentation* of the child, as that of the infant when exercising its muscles and its senses upon the objects around it; thus it obtains experience of the qualities of objects, and at the same time strengthens and develops its own active powers. Nature has provided ample means for this experimentation-play in the pleasure which the child manifestly obtains from it, and which is, here as elsewhere, the correlative and index of action which is for the benefit of the organism. Next follow those plays by which the organism as a whole is strengthened physically, and by which the memory is organized and experience consolidated; finally, plays in which the higher mental powers, as well as the wider social instincts, are brought out and exercised. The following is Groos' classification of the plays of the child (*Play of Man*) :—

	Examples.
I. Playful experimentation :	
(*a*) With the sensory apparatus.	Experimentation with noises, tones, tastes, colours, forms, etc.
(*b*) With the motor apparatus.	Movement of its own body, moving plays, destructive and constructive plays, throwing plays.
(*c*) Playful use of the higher mental powers.	
1. Experimentation with the mental powers, memory, imagination.	Illusion and recognition plays; imaginary tales, etc.
2. Experimentation with the feelings (physical pain, mental suffering, surprise, fear).	Games involving tests of endurance, pain; tales involving surprises and perils, dangerous situations, etc.
3. Experimentation with the will.	Experimentation or play involving control of reflex actions or of habits.
II. Playful exercise of impulses of the second or socionomic order; (*a*) fighting plays (physical and mental tests, rivalry, teasing, hunting plays, etc.); (*b*) love plays; (*c*) imitative play (imitation of movements, dramatic imitation, constructive imitation, and inner or artistic imitation); (*d*) social play.	

As to *imitation*, it also, like play, is a universal tendency in normal childhood,[1] and indeed in all young animal life; both imitation and play differ, as Groos points out (*op. cit.* p. 2), from ordinary instincts, in the fact that they have not a specific stimulus, or a specific reaction, but are called out by any kind of stimulus, and involve a reaction which varies with the stimulus calling them out. The essential conditions of imitation are (1) some sort of interest (*rapport*), by which the attention of the young animal is caught and held by an older animal; (2) the perception of some movement in the older animal; (3) the experience of some reflex or inborn tendency towards the same movement in the young. Thus imitation is always based partly on innate powers, partly on the social conditions, and partly also on the development of the senses and powers of perception. There is a gradual change in childhood (*a*) in the type of objects or persons whom the child seeks to imitate, in the interest which it feels for different personalities,

[1] Idiot children, as a rule, neither play nor imitate (Sollier, *Psychol. de l'idiot et de l'imbécile*[2], Paris, 1901, ch. 5).

and the attraction of its attention by them; (*b*) in the complexity of the actions imitated; (*c*) in the fidelity of the imitation, the earlier actions being more limited and more faithful copies, the later being more spontaneous, original, and dramatic in their form (cf. the development of children's ideals with age in Earl Barnes, *Studies in Education*, ii. [1902], and a recent study by Varendonck, in *Arch. de psych.*, no. xxviii., July 1908). The biological function of imitation is, like that of play, to prepare the individual for adult life, while he is being protected from the dangers that might otherwise lie in acquiring such experience. The child, imitating its parents, its teachers, or its friends, acquires the habits of expression and of action which they already have, and also—a more important matter—acquires their habits of emotion, their mental attitudes. Imitation thus becomes a form of heredity, replacing physical heredity, bringing the same advantages more rapidly, and at less cost. The child tends through it to resemble its parents, not only physically but also mentally (Baldwin, *Mental Development*, p. 332 ff.).

5. The original activities.—The child is born with a complex nervous structure, by which adequate response is provided to a large number of stimuli from the environment, in the form of reflex, automatic, and instinctive actions. Some of these actions are carried out before consciousness, and therefore, presumably, before mind is present, or at least active; and even in later development we still find that a large part of the work of the body is carried on reflexly or automatically, and without the intervention of consciousness. The question arises as to the relation between consciousness on the one hand, and reflex activity on the other, in development. It is still sometimes argued that consciousness has no biological function, and that the whole mental development is simply a result of, and therefore sequent to, the bodily and cerebral development itself, which in its turn is determined by purely physiological and physical forces. H. Ziegler, A. Bethe, J. Loeb, J. P. Nuel, and other 'modernists' in Comparative Psychology would entirely exclude the use of consciousness (not merely the word, but the thing) from biology. On the other side, it is held that consciousness is, or exercises, a controlling power by which the reflexes present, or provided for, at birth are organized into higher combinations, and modified on the ground of experience (Lloyd Morgan, *Introd. to Comp. Psychol.*, ch. 11, London, 1894; *Animal Behaviour*, London, 1900); and, again, that the reflex actions themselves are a product of conscious effort in the ancestors of the individual (Wundt, *Physiol. Psychol.*[5], Leipzig, 1903, iii. 278 ff.). Thus consciousness or mind is now and has been in the past the main force making not merely for mental, but also for physical development and evolution. There is a law of economy by which every action, as it is repeated, becomes less and less of a conscious action, until in the end it may be purely automatic; the value of this is that the energy of consciousness, or the physical energy underlying consciousness, is thereby set free for other activities; wherever an action is resisted, or is prevented by any cause from issuing in its ordinary way, there consciousness is immediately present; wherever a new circumstance arises which requires a different reaction from any provided by the reflex or automatic systems, there again consciousness arises; on the other hand, the less resistance there is the smoother the action, the more familiar the situation the less is consciousness directed towards it. Consciousness thus represents the 'growing point' of the organism; correlated with it are changes in the central nervous system, and in the body as a whole, which ultimately become the basis of organized intelligence and will (cf. J. Jastrow, *The Subconscious*, London, 1906, pt. 2).

The special activities and powers involved in the process of mental development may be classified as follows: (1) the physiological reflex actions; (2) the sense-organs, sensations, and sensory reflexes; (3) perception, in relation to the primary attention-reflexes; (4) instinctive behaviour; (5) feelings and emotions; (6) will; (7) memory, its conditions and varieties; (8) imagery and imagery types; (9) language and abstract thought.

(1) *Physiological reflexes* are those connected with the circulation of the blood, the respiration, the digestion, and other processes of bodily metabolism; of these it is not necessary to treat in this connexion, since they are entirely removed from the control of the child's consciousness, except so far as they are liable to modification by emotion, to which reference will be made later. These processes take place at a much more rapid rate in the infant than in the adult.

'The metabolic activities of the infant are more pronounced than those of the adult, for the sake, not so much of energies which are spent on the world without, as of energies which are for a while buried in the rapidly increasing mass of flesh.' It is 'a metabolism directed largely to constructive ends' (M. Foster, *Text-book of Physiology*[6], 1891, p. 1544).

(2) *Sensations.*—The normal child is provided at birth with the external apparatus for all classes of sensation, and these are connected, through nerve fibres, with the central organs in the brain; but, as has been remarked above, this connexion is not functionally complete for a considerable time after birth. The child at first is deaf, is 'light-shy,' is insensitive to odours, and to a large extent to taste, so that the sense of touch and perhaps the muscular sense are the only ones which at birth show certain indications of activity. According to the tests which have been made, the sensitiveness in general increases very rapidly in the first few years, reaching its maximum development probably about the 10th year, after which there is a decline in sensitiveness proper, although the power of discrimination remains capable of great improvement thereafter (J. A. Gilbert, *Studies from Yale Psychol. Lab.*, 1893, 1894; E. Meumann, i. 102 ff.). The sensorial reaction-time also improves in rate during the first 10 or 12 years of life, after which there is, apart from special training, a gradual dulling. The different qualities of each sense become capable of discrimination in a regular succession, which, according to some observers, follows that of their supposed evolution in the race.

The development of visual sensation may be taken as an illustration of the problem and of the obstacles to its solution. There is very great difficulty in determining whether a child has or has not a power to perceive and distinguish different colours. Even where speech is appealed to, the results are by no means conclusive. The earliest attempt to determine the order in which the different visual sensations are arrived at was that of Preyer in 1882 (*op. cit. infra*, ch. I). The tests were begun in the third quarter of the second year of life, and continued to the fourth year. He found that the colours yellow and red were those which were most constantly and accurately named, or picked out when the names were given, while green and blue came last; by the beginning of the 4th year the child could name all but the very dark or light shades correctly. With a similar method Miss Shinn (*op. cit. infra*) found that her subject (a little girl) was successfully trained to name all the colours correctly, before the end of the second year. By a special method, appealing to the preference of the child, as shown by its selection of one from a pair of colours, Baldwin (*Mental Development*, pp. 39, 50) concluded that a child of 9 months can distinguish all the colours, and has a distinct preference for blue. The above were individual studies. From a thorough collective test on children, boys and girls, from birth to 7 years, by a 'matching' method, Garbini (*Arch. per l'antrop.* xxiv., Florence, 1894) concluded that a child begins to develop the power of discrimination between *light* and *dark* during the first month of life; and to distinguish different objects by their shade or brightness in the second month; it is not till the middle of the second year that he has any perception of colour, and then it is *red* which is first marked out; *green* begins to be added about the end of the second year, and *yellow* in the

course of the third year, while it is not till the fourth that he can distinguish such colours as *orange*, *blue*, *violet*, etc. In the fifth year the different shades of the same colour become easily distinguished, but the colour vision is still relatively imperfect until the end of the sixth year. Thus the order of development is red, green, yellow; then orange, blue, and violet. With regard to the power of naming, he found that 2 per cent of the children in their sixth year cannot name any colour, and that only 35 per cent can name the six main colours given above; the power to name a colour accurately seems to follow, in about a year's space, the power to distinguish the colour in question. Ziegler, in 1905 (*Inaugural Dissertation*, Zürich, n.d., but c. 1905), tried, with more accurate methods, to determine the degree of colour sensibility in 200 children, one half boys and one half girls, at the age of beginning school life in the Munich schools. The 'matching' method gave a distinct preference in accuracy of matching to *orange*, *violet*, *blue*, and *yellow* in that order, *red*, *grey*, and *green* being relatively less accurately matched. *Black* and *white* were invariably correctly placed. It does not, of course, follow that the order of correctness in matching corresponds to the order of development; on the contrary, it may be concluded that the colours were preferred on account of their æsthetic value, their novelty, etc. In the naming method (the child giving the name) the order of correctness was *black*, *white*, *red*, *blue*, *green*, *yellow*, with *violet* and *orange* last; the darker shades of colour on the whole were better named than the lighter, presumably because they were more familiar to the children; none of the boys could name *orange*, and only 5 per cent of the girls. Every one of the tests employed brought out the fact, already suggested by other observers, that girls have a much more accurate sense of colour than boys. Neither Garbini nor Ziegler found that any one of the children they examined was colour-blind (in a total of 750); in adults, as is well known, colour-blindness occurs much more frequently among men than among women; in the former case the frequency is variously given as from 1 to 5 per cent. It is probable that by properly devised means of training, the colour sense of children might be greatly developed, and thereby their general mental capacity greatly improved.

(3) The development of *perception* from sensation takes place through the exercise of the sensory reflexes, which play a large part in the process of attention. Thus a child does not at first see objects either as clearly, as distinctly, or as proportionately as the adult. In the earlier months it sees no colours, but only light and shade; it has no means of determining the distance at which any seen object is; it is unable to fix an object so as to obtain a clear image of its outlines and details; it is unable to determine, and indeed has no conception of, the third dimension; objects are probably seen as blotches of light and shade merely; it has no power of distinguishing a real from a reflected or imaged object; in short, it can hardly be said to have any perceptual or object-consciousness at all, through sight (Preyer, *op. cit.* ch. 1). All these powers are gradually acquired through exercise and the resulting co-ordination of the movements of the eyes with the visual sensations. The three sets of muscles in question are those of *accommodation*, by which the object is clearly focused; of *fixation*, by which the object is brought into the centre of the retina—the part of the eye which is most sensitive to form as well as to colour; and of *convergence*, by which binocular vision is determined, and the two eyes are guided so as to obtain single vision of solid objects. These co-ordinations are only acquired, as has been said, through exercise; and it is therefore extremely important that a child should be given all possible opportunities of exercising its ocular muscles from the very first. It is interest—*instinctive* interest in the first place—that calls forth movements; and, where objects of interest are not presented, the exercise fails to take place. This is an illustration of the importance of environment in deciding development.

The following gives some idea of the dates at which these powers are finally achieved, according to Preyer and others (cf. Kirkpatrick, *op. cit. infra*, ch. 4). The protective reflex closing of the eyes when bright light falls upon them is present almost immediately after birth; also the pupillary reflex (adaptation to increase or decrease of light); the blinking reflex, when an object is brought close to the eye, is not immediately present, but occurs after a few weeks; atypic or independent movements of the two eyes and the eyelids (*e.g.* one eye remaining fixed while the other moves, or the eyes being turned downwards while the eyelids remain fixed) occur occasionally until the beginning of the second month; voluntary fixation is not complete until about the end of the first quarter year; voluntary and accurate convergence according to the distance of objects is not perfect even before the end of the second year; the interpretation of visual impressions and their co-ordination with bodily movements are not established till much later.

This history really describes the origin of the visual perceptions of space in the child; the question whether the idea of space is innate or acquired is impossible to answer, because it is wrongly put. The child is not born with a ready-made idea of space which it merely applies to experiences derived from the senses (Kant), but neither is its idea of space a product of sensations and of associations formed between the images derived from the sensations: it is a result of inter-action between sensations, feelings and desires, impulses and movements, to which in each case the 'disposition' is congenital, but which are only realized and combined through the acquired experience of the child (cf. Wundt's 'psychic synthesis,' and Stumpf's 'synergy'). The evidence from the born-blind, who have been enabled, by an operation, to see in later life, is conflicting. It does not prove that they at first see only colours and brightness, not things or objects, as Preyer argues. It is true, however that they are entirely unable to appreciate distance (see B. Bourdon, *La Perception visuelle de l'espace*, Paris, 1902, ch. 13, for a complete account of these observations, up to that date). A similar 'synergy' of sensations, feelings, and attention-reflexes goes to form the tactual perceptions (extent, hardness and softness, sharpness and bluntness, etc.) and the auditory perceptions (rhythm, tone-interval, melody, speech, etc.).

(4) An *instinctive action* is a response evoked in direct relation to a perception of some kind, while a reflex action is called out by a simple sensation or by a purely physiological stimulus. The difference is mainly one of degree, although there is undoubtedly a much greater power of control, and liability to modification on the ground of experience, in the instinctive than in the reflex action (see discussion on 'Instinct and Intelligence' in *Brit. Journ. of Psychol.* iii. pt. 3 [1910] by Myers, Lloyd Morgan, Carr, Stout, and Macdougall). The following is a classification of the instincts shown by the child, modified from that given by E. A. Kirkpatrick (ch. 4): (1) individual instincts; (2) social, including (*a*) the gregarious instinct, the instinct to *be* with others, (*b*) the co-operative instinct, to *act* with others, (*c*) play, (*d*) imitation, (*e*) expression and communication, and (*f*) more complex instincts such as the collective, destructive, and creative instincts. Such an instinct implies three things: a need on the part of the child (organic sensation, feeling, impulse), an object capable of satisfying this need, and some consciousness on the part of the child of the meaning of the object in relation to the want or need. It is the want or the interest which determines the direction of the attention towards the object. Thus the child's whole interest is absorbed at first by the needs of food and of rest; its grasping and food-taking instincts are the first to express themselves; the giver of food, and articles used in connexion with its food, are the first objects which it learns to distinguish and recognize; later the needs of its sense-development cause interest in objects for the mere sensations they give, bright lights and colours, loud noises and musical tones, etc. At this stage the instinct of play appears, especially of experimentation play and of movement play. In its early years the child is naturally self-centred; it is biologically of advantage to the race that the individualist instincts should be strong at this time. Accordingly, its wants are strongly expressed and vigorously insisted upon. Yet there is no conscious idea of the self, as opposed in interest to other persons, until from the fourth or fifth year, when selfishness in the strict sense of the word begins to appear, controlled, however, by the equally instinctive desire for social approval. The constant desire of the normal child to be with others, especially other children, his shyness towards strange elders, but ready acceptance as playmates of other children, about his own age, seen for the first time; his eagerness to accompany the adults of his family in all their goings and in all their activities; his constant repetition of the

actions of adults in his play; his treatment of animal pets, younger children, dolls, etc.—are illustrations of the force of the social instincts and of their part in the development of the social consciousness. Later, the individualist and social instincts combine in (i.) the impulse of self-display, adornment, etc.; (ii.) the impulse to co-operate with others for common ends, in games, or in school and household or farm work; (iii.) the impulse of competition and rivalry, which tends to the rapid development of the physical and mental powers; (iv.) with expanding imagination, the sympathetic feelings arise, and the impulse to help, to defend, to support others, which reaches its height in the unselfish idealism of adolescence. The progressive appearance of these instincts, as also those of play, imitation, emotional expression and speech, determines a gradual change in the interests of the child, and this in its turn reacts upon its intelligence and character. (On the development of *instinct*, and its relation to *interest*, etc., see Kirkpatrick and E. Claparède, *opp. citt.*)

(5) *Feelings and emotions.*—It has been recognized that the affective life of the child is proportionally much more extensive than that of the adult; as judged at any rate by his expressions, the child's feelings are both more vivid and less enduring than those of the adult; impressions when they reach consciousness at all are felt more keenly and are responded to more actively and strongly. This is true both of pleasures and of pains. On the other hand, the feelings are not so permanent; the child passes rapidly from one mood of feeling to its opposite—from laughter to tears, from anger to pity. It may be questioned, however, whether the actual feelings are as strong as they appear.

Preyer has argued that the child's life is one of intense feeling, and that in it pain predominates over pleasure, being in fact the necessary stimulus to development; against this it may be urged: (*a*) that the feelings are not in general intense, but that their apparent expression is really an instinctive or reflex act, which is not accompanied by so many internal changes as occur in adult life, and hence is not reflected in the conscious life to the same extent as in the adult; (*b*) that, owing to the short duration of the feelings and other factors, pleasure predominates largely over pain even in the youngest child, with normal health; and (*c*) that pleasure is a stronger driving force than pain in development, as in evolution. The general happiness of healthy children, their constant play and activity, their capacity for deep and prolonged sleep, are all indications that this is the truer view of the case. Many signs also—their easy recovery from wounds, rapid forgetfulness of injury, etc.—prove that the young child has a much lower degree of sensibility to physical pain than the adult.

A full description of the expressions of the different feelings and emotions, as observed in the child from birth onwards, is to be found in Preyer, ch. 6. The classical account, for animals and man alike, is Darwin's *Expression of the Emotions* (London, 1872). That even so complex expressions as laughter and blushing are congenital, and not acquired by imitation, is shown in Sir A. Mitchell's *About Dreaming, Laughing, and Blushing* (Edin. and London, 1905). Such facts do not, however, solve the question whether the 'expression' is called out by an actual feeling, or whether the feeling is the reverberation in consciousness of the expression, which it thus succeeds in time, and which is directly evoked by the perception of the situation (Lange-James theory). The latter, at least, is probably true genetically.

An interesting question is as to whether the child has *innate* fears or dislikes of particular objects; for example, fear of the dark, of wind and storms, of animals, etc.; or whether these fears can be reduced to the simpler ones, viz. those of intense stimuli, of novel stimuli, or the like; or whether they are due to adult suggestion. Stanley Hall attributes such fears to reminiscences, emerging in the child, of the experience of its ancestors at far distant dates, by whom, for example, dark was feared because of the animals and enemies attacking in it; so, wind and storms were feared during the tree-life of man's ancestry, while wild animals in the same way must have been to primitive man, as to the still more remote ancestors, objects of terror. It must be said, however, that the evidence for such instinctive fears of definite objects or classes of objects is by no means convincing (cf. Stanley Hall, *Adolescence*, vol. ii. ch. 10, which contains a general statement of the author's position; the detailed evidence in regard to child-emotions is collected in numerous reports, by himself and his collaborators, published in the *Pedagogical Seminary* and in *AJPs*).

(6) *Development of the will.*—The outward life of the child begins, as we have seen, in reflex, instinctive, and automatic activity undetermined by conscious motives, although in many of the more complex forms an accompanying or controlling consciousness must be supposed to exist. The term 'impulse' may be used for those phases of the mind by which such actions are preceded, or which they accompany; such an impulse does not involve any idea of the nature of the action to be done, or of more than the immediate means by which it is to be brought about. Thus the impulse to expel an unpleasant food, or *any* food when the child is satiated, does not involve any idea of the advantage to the organism which the expulsion brings, or of the muscular actions by which it is carried out; but there probably is some consciousness of the position of the food in the mouth, and the parts of the tongue touched by it, etc., and it is by this sensation that the action is definitely initiated; it is probably only at a later stage that the muscular sensations themselves become conscious. The impulse, then, is simply the motor aspect of a sensation which is toned with feeling, positive or negative, the action itself lying as a whole outside consciousness. Such impulses may be supposed to accompany all those actions by which the organism is in early life protected from dangerous stimulation, and by which objects of advantage to it are brought towards the body, into the mouth, etc.; thus these impulses are always in connexion with some need of the organism, either prolonged as in the case of hunger, or momentary as in the case of physical pain. A second stage of development is arrived at when (*a*) the individual begins to select stimuli or sensations on the basis of personal interest, built up by experiences; (*b*) when memory occurs of the movements by which these sensations have been automatically or reflexly responded to; and (*c*) when, under the influence of the subjective combination and synthesis of sensations in perception, the movements also begin to be co-ordinated and controlled. This is the stage at which impulse begins to be replaced by motived action, that is to say, by *will* in some at least of its lower forms.

(*a*) The selection of sensations is at first provided for by the needs of the organism, as has been indicated above, and in this sense *will*, as Höffding suggests (e.g. *Problems of Philosophy*, Eng. tr., N.Y. 1905, p. 55, *Outlines of Psychol.*, Eng. tr., Lond. 1891, sect. 4), is the fundamental fact in mental life, and is present from the very beginning; later, however, and very early in life, the selection begins to be determined on the ground of previous experience; that is to say, the child begins to seek out those impressions which have previously given it pleasure, and not merely to react upon impressions that have arrived of themselves. Correlatively with this, it begins to avoid consciously those impressions which have been already experienced as painful, and also to neglect or inhibit impressions which have proved indifferent to it, not being accompanied by any positive or negative feeling tone. In this development *perception* gradually arises through the combination of sensations of the same or different classes with each other, or with sub-conscious memory images; in this way one impression gradually becomes a sign or symbol of a number of others, and especially the visual impressions come to represent or stand for the tactual impressions to which they had ordinarily led, and which may be reproduced to some slight extent in memory, on the arrival of the visual impressions themselves.[1] The pleasure or pain originally attached to the *direct* impression is now

[1] On this, see W. James, *Principles of Psychology*, 1891, vol. ii. chs. 17 on 'Sensation,' 19 on 'The Perception of Things,' and esp. 20 on 'The Perception of Space.'

transferred to the *indirect*, as when the child shows pleasure at the sight of a rattle, after experience of the agreeable noise which the rattle gives in its hands, or shows pleasure at the sight of its food, before the actual tasting of it. It is unnecessary that conscious memory of the former experience should arise, and in the vast majority of cases such memory probably does not arise; there is simply a transfer of feeling, and in consequence a transfer of action from a direct impression to a more indirect one uniformly connected with the former. It is in the case of these indirect impressions that interest gradually develops, and that conscious and individual selection begins to take place.

(*b*) The movements themselves enter consciousness partly as muscular and tactual experiences,[1] partly also as visual experiences—in the case of those movements which the child can see itself carrying out. As soon as the memory begins to be able to 'fixate' such consciousness, the child learns to modify its actions, or to choose between various possible actions, in response to sensations, through remembering the success or failure of the previous reactions.

(*c*) In the co-ordination of movements there are two steps—the inhibition of unessential movements, and the reinforcement and connecting together of series of necessary movements. Reflex action is excessive, uneconomical, and generally contains a large number of movements not required for the removal of the particular stimulus (H. Ebbinghaus, *Grundzüge der Psychol.*, pt. i., Leipzig, 1897, p. 124); for example, the movements of a young child when irritated by a pin in its clothing. With the development of perception, the movements become more limited, are brought more under the control of consciousness, until in a particular case the necessary act is carried out in the shortest time, and with the minimum of effort. It must be supposed that in this case the *impulse* has come to be associated with the special action, which has been constantly repeated in every experience of the kind; while those actions which were unessential, and therefore were not repeated, or not always repeated, are less firmly connected with the impulse, and become finally detached from it. Corresponding with this limitation in simpler cases, there is the forming of chain actions, or series of actions, in more complex cases—for example, in learning to walk; the several movements necessary have come, through exercise and through conscious effort, to be gradually cemented to each other, so that later, without conscious effort, the one tends to follow the other in the same order as that in which they were acquired (see Preyer, ch. 11). Consciousness still retains a grasp, as it were, of the whole group of movements, as is shown when any resistance is met, or any error occurs; but it does so only in a general way, covering a larger and larger span in its grasp, as skill and practice increase (J. Jastrow, *op. cit.*, chs. 3 and 4).

The terms 'habit' and 'practice' refer to the forming and cementing of such co-ordinations. When out of several possible ways of doing a thing, or of acting, *one* has actually been adopted, then, if the situation is repeated, the former action *tends* to be adopted again, merely from the fact of its earlier occurrence. The same is true of a connexion or series of actions. The greater the number of times the action has been done, the stronger the tendency to repeat it. This is *habit*, the primary and universal condition of all mental development. Since will consists, as we have seen, in selective activity, it is formally opposed to habit; but, in reality, neither it nor any other higher mental power is possible except on the basis of habit. Walking, running, listening, looking, smelling, tasting, dressing, speaking, and hundreds of other skilled actions, which form elementary parts of more complex, voluntary, and deliberate actions, are in us habitual acts become unconscious and mechanical through repetition. Adults and children differ widely in the rapidity with which a habit is formed, in the tenacity with which it is retained, and in the promptness with which it is exercised. With age the power to form new habits slowly declines, and also the power to resist or overcome habits when formed. To some extent this is due to the decreasing vitality of the nervous system, but mainly to the fact that habit corresponds to the organizing of connexions between different parts of the cerebral system: the greater the number of these, and the greater their strength or firmness through repetition, the less the likelihood of a new associative connexion being formed or old ones broken up (see James, *op. cit.*, ch. 4; Ebbinghaus, *Grundzüge der Psychol.*, pt. ii., Leipzig, 1902, p. 672). The development of the will is also conditioned by the general changes both in the intensity of *feelings* and in the objects to which they attach. At first, as we have seen, the child's feelings are entirely determined by its organic needs; later, repetition and instinctive experimentation and play bring new experiences of pleasure and of pain, not so directly connected with the requirements of the organism; the objects of such feelings are retained in memory, and the thought of them, or the perception of them, forms new motives of action; the actions are governed by ideal rather than by direct sensory motives. (On the development and influence of feeling, see T. Ziegler, *Das Gefühl*, Stuttgart, 1893.)

The most direct indication of the nature of an individual's will is to be found in the characteristics of his *attention* (*q.v.*). Neither will nor attention, however, is to be regarded as a *general* power, which can be directed indifferently upon this or that impression or action, or can be moved from one to the other. They are simply general names for a class of particular phenomena, which possess certain features in common. The characteristic of acts of attention is that a part of the field of consciousness is selected from the rest, becoming clear and distinct, persisting longer than it otherwise would, and thereby becoming more adequately known, and tending to realize itself more effectively in action. The means by which this change is effected are either *external*, as when the senses are focused upon the impression, irrelevant movements inhibited, and the like; or *internal*, as when convergent associate ideas are called up from past experience. The underlying conditions are the intensity of the impression or idea itself, the strength of the interest to which it corresponds, the feeling aroused, and the development of the muscular system by which the focusing or 'fixating' and controlling of impressions is effected. In all these respects the child undergoes a gradual development. A distinction is familiarly drawn between *spontaneous* or natural, and *voluntary* or acquired, attention; the former is supposed to be characteristic of the child, the latter a product of education.[1] These are not, however, differences in attention itself; they are differences only in the interests which lie behind the act of attention.

Thus interests are either *primary*—those provided by the innate instincts of the child—or *secondary*—those due to the acquired experience and reflexion which life and education call out.

[1] On the whole question of the nature of our consciousness of movement, and its function in mental development, see Wundt, *op. cit.* ii. 474 f., 538 f., iii. 307 f.

[1] Th. Ribot, *Psychol. of Attention*, Eng. tr., N.Y. 1889 (3Chicago, 1896).

It is, therefore, natural that voluntary attention to objects which are primarily without interest in themselves should succeed the more elementary expressions of attention in child life. It is also clear that, where an individual is incapable of prolonged primary attention, he will be incapable of the education which voluntary attention presupposes. This occurs, for example, both in idiot and in imbecile children, and to a certain extent causes typical differences between normal individuals also. Wherever, owing to the weakness or disease of the brain or nervous system, sensation is less vivid, or movement less rapid and less vigorous, or instincts and feelings less strong, there the attention will be correspondingly difficult to catch or to hold, with resulting defect in mental development. Ability to work for continuous spells, and ability to profit by discipline, to appreciate rewards and punishments, depend mainly upon the power to focus and retain impressions long enough to associate them with one another, and to compare them with similar experiences in the past.[1]

A second typical difference in attention is that between *concentration* and *distribution*; the term 'concentration' refers to the effect which attention usually has of narrowing or limiting consciousness, or at least effective consciousness, to some small portion of a real or ideal situation; the mind is absorbed by some particular interest, and impressions or ideas that would otherwise have stimulated feeling and action are kept on the verge of consciousness, or entirely repressed. The familiar illustrations of absence of mind on the part of men of genius will readily occur as an instance. Concentration or specialization is thus a condition of effective mental progress. 'Distribution' of attention, on the other hand, refers to the power to appreciate and attend to a number of *diverse* impressions or ideas simultaneously; it is in many respects a valuable power, as, for example, in the teacher, who must, while his main attention is given to his subject, also have regard to the positions and actions of the different children in the class; the conductor of a choir, the director of an orchestra, and the organizer generally, are other instances of the same ability. It is immaterial, for our present purpose, whether there is any real division of attention in a given moment, or whether distribution depends rather on rapid alternations of the attention from one fact to another. In the normal individual, concentration and distribution are inverse to one another; the greater the one, the less the other. But concentration does not necessarily mean intensity, nor does distribution necessarily mean that the different impressions attended to at the moment are ineffectively appreciated. It obviously depends upon education and training to what extent distribution can be carried. Children, and animals also, show great concentration where the primary instincts are involved, but defective concentration in the case of secondary interests; one of the chief problems of the teacher is to increase the concentration-value of the latter. Some children are never able to acquire this power to the normal extent, and in consequence remain all their lives an easy prey to distraction.

A third typical difference is in the *steadiness* or *fluctuation* of the attention. Meumann uses the term 'fixating attention' for the former of these types; it is that which is able to keep away side impressions and ideas, and to take in only the impressions that are directly before it; in this way it represents an *objective*, observing, recording type of mind: thus a picture, a sentence, any group of materials, when attended to, is appreciated *as it is*.

[1] Sollier, *loc. cit.*

The 'fluctuating' type, on the other hand, is liable to be caught both by sensory impressions and by memories or ideas which are not directly connected with the object presented; hence it tends to transform the material given to it, taking a superficial outline view, passing rapidly from the object to its meaning or associations: it is a *subjective* or imaginative type. In childhood the latter is much more frequent, and, in fact, may be regarded as a characteristic child form of attention; the power to see or hear things as they are is one which has to be acquired by education (Meumann, i. 499 ff.).

(7) *Memory.*—In memory, three phases or functions must be distinguished—immediate memory (as illustrated by 'learning by heart'), retention, and reproduction or recognition; these three phases are subject to different conditions, and vary independently of each other in different individuals, and at different stages of mental development. *Immediate memory* has been shown to improve steadily with age (as tested, for example, by the number of syllables or words which can be reproduced after a single exposure, or by the length of time required to learn a given number of syllables or words by heart), and Meumann has found that even into late adult life this capacity is capable of great improvement through practice.[1] The method of memorizing also changes with age, the young child depending entirely on mechanical association between the different members of the series tested, the adult depending more and more upon associations of meaning, upon rhythm and other forms of grouping. On the other hand, *retentiveness*, as measured by the rate of forgetting, or the amount forgotten after a given interval, reaches its maximum about the 10th or 12th year of life, and decreases slowly but steadily from that time onwards (E. Meumann, *Exper. Pädagogik*, i. 170 f., and esp. p. 192). That is to say, young children have greater difficulty in *learning* than older children; with practice an individual may improve in this faculty almost, if not quite, up to middle age; at the same time, children *retain* what they have learned for a longer time and more accurately than the adult under the same conditions. The fact that memories which go back to early childhood (earlier than the 5th year) are relatively rare, the fact that children who have become deaf before the 5th year tend to lose the power of speech they may already have acquired (from the lapse of the auditory memories, and inability to acquire new auditory impressions), that children who have become blind before the 5th year, and even to some extent up to the 7th year, rapidly lose their visual memories, and rarely, if ever, in after life have visual dreams, and the corresponding phenomena in the case of amputated limbs (J. Jastrow, W. James [see M. de Manacéine, *Sleep*, London, 1897, ch. 4])—all these facts correspond accurately with the incomplete development of the cerebral connexions before the end of the 5th year. Finally, *reproduction*, that is, the rate, accuracy, and fertility of association and of voluntary memory, in which there are strong individual differences, tends to improve with age and with practice continuously up to about the 50th year.

A much-debated question is how far training or practice in one field of memory is transferable to another—a question closely connected with that as to whether memory is a general power or faculty, or simply a combination of particular experiences which are somehow stored in the brain of the individual. In the latter case it is obvious that memorizing any particular material, while it in-

[1] In the general improvement there are occasional retardations, *e.g.* at the age of 10 to 12 (girls) and 12 to 14 (boys). Girls are in advance of boys till about 16, when the latter overtake and pass them. It is said that the young profit less than adults from practice, but that any gain is more permanent.

creases the amount we are able to recall, and through association of ideas makes it easier to learn *similar* material, still does not add to our stock in any other field, or help us to acquire such more easily. Exercising the visual memory improves that memory itself, but does not improve the auditive memory, without special practice in it also. The greater number of observers decide against such transfer of improvement, or the possibility or value of 'formal training'; on the other hand, some recent studies (Meumann, Winch, etc.) seem to show that a very substantial gain can actually be transferred, whatever the interpretation of it may be. The interpretation to which most of the facts point is a training of the *attention*, that is, of the nerve-centres and muscles which are involved in the accurate and ready uptake of an impression, and its retention in the field of observation; and those muscles also by which the control or suppression of distracting impressions, and the reinforcement of associative impressions, are carried out. Such capacities can undoubtedly be transferred—for example, from one kind of *visual* material to any other—and, as the experiments show that the transfer is greatest with a material similar to that in which the improvement has been actually acquired, this entirely harmonizes with the above suggestion. The practical conclusions are: (*a*) that much of what a child learns at school and afterwards forgets is not necessarily pure loss—the exercise in learning is to a great extent at least transferable to later occupations; (*b*) the use of purely mechanical and meaningless materials, for the formal exercise of the senses, and especially of the memory, seems to be 'indicated' as a pedagogical method by the experimental results.

(8) *Imagery and imagery types.*—Fechner, Galton, Charcot, and other more recent observers have given ample evidence that individuals in adult life differ widely, and in certain typical forms, as regards the sensorial material in which their 'thinking' is carried on; the *visualist* dealing mainly in images derived from optical experiences; the *auditive* in images of sound derived from acoustic experiences; and the *kinæsthetic* or *motor* type in images, memories, or even 'nascent sensations' repeating the tactual and muscular experiences of the past. 'Thinking,' however, has two broadly different senses, according as it means *picture-thinking*, as in reverie, or *word-thinking*, as in abstract reasoning or scientific work. Much of our important thinking is done by means of words as signs or representatives of experiences, without employing the actual memory pictures of the experiences themselves. The majority of individuals are probably of a mixed type, both for picture and even perhaps for verbal thinking; but the enormous predominance of visual experiences in our lives compels all of us to use visual memories to a large extent, while the methods of school teaching, and the necessary use of the ears and vocal muscles in speech, render most of us of an acoustic-motile type in word-thinking. Again, the majority of individuals are probably unable to give to their favourite field of imagination such an exclusive exercise or training as is necessary to develop purity of type; a boy who is articled to an architect, and who is by nature an auditive, must cultivate visualizing or fail in his profession. It seems to be proved that in children, perhaps owing to the method of education, auditive imagery predominates in the early years, but is more and more displaced in importance by visual imagery as age increases; again, that even in the case of visual imagery the vividness and 'warmth' of imagery decrease with age; thus, according to one report (Miss Calkins) at least 9 per cent of students have very little or no colour imagery; while in the average scientist, according to Galton, the power of visualizing appears to have been entirely lost; abstract thought tends to weaken imagery—in other words, verbal tends to replace picture- or object-thinking. The following are some of the indications by which the type of a given individual can be determined with some degree of accuracy; at the same time they illustrate the functioning of the different characteristics.

(1) The object-type can be determined by observing to what extent the descriptions of visual scenes in literature are realized by the individual, or dialogues and conversations in plays and novels (auditive), or the extent to which deeds and feats of skill reverberate, so to speak, in the individual's organism in reading accounts of them; and how far organic sensations and memories accompany the reading or the hearing of affecting or emotional passages in literature, etc.; also by the trade or occupation which is preferred by an individual, his hobbies, the kind of games, physical and mental, in which he indulges, his tastes in art or in literature, and especially his creative powers in these fields.

(2) The verbal type is indicated: (*a*) by the way in which an individual sets about learning by heart a poem or passage in a book; whether he does so by frequently repeating the passage over, aloud or half aloud (*kinæsthetic*), or whether he translates the printed words into inner speech (*auditive*), or learns it by steadily fixing the eyes upon it and reading it over (*visualist*); in the last case the subject is usually able accurately to refer to the page in the book, when recalling the passage, seeing it printed up before his mental vision; he can readily find the passage in a book where he has left off reading, and can refer for any desired passage to the page on which it occurs. (*b*) The various slips that are made in speaking or writing are good indications of whether the subject is thinking in auditive or in visual words, the former confusing words with a similar sound, the latter confusing words with a similar appearance. (*c*) In syllables or meaningless material, the visualist retains the consonants more accurately, the auditive the vowels: and again the visualist's errors tend to be those of omission, while the auditive's tend to be errors of order or of position. (*d*) The visualist can with great ease read backwards a series of impressions laid to heart, since they are, as it were, printed up before his mind, while the auditive or kinæsthetic has great, or at least greater, difficulty in doing the same; the one takes a short, the other a long time to accomplish the feat, if it is possible at all. (*e*) Segal (*Arch. f. d. gesamte Psychol.* xii. [1908]) adds the following signs: the visualist frequently shuts his eyes and covers them when recalling a memory: his recall is slower than that of the auditive; usually the latter remembers the material in groups, while the visualist remembers parts singly and separately. But visualists retain poetry or prose more accurately than others, and do not repeat parts already given, while auditives and kinæsthetics reproduce more rapidly, but in less quantity, and often with unconscious repetitions. When he does not repeat the material in its proper order, it is with the last few words or syllables that the auditive begins; and when the task is accomplished, the material as a rule disappears at once out of his memory, unless he re-learns it frequently.

In regard to the importance of these differences for mental development, it should be remembered that the question is never one of an exclusive use of a single class of imagery; it is merely a question of the predominance of one over others; but occasionally there occur cases in which one or other form of imagery is completely lacking. Normally, however, every one is both an object-thinker and a word-thinker, at different times, and uses in the former case alike visual, auditive, and motor imagery. Nevertheless, it is true that in children object-thinking predominates greatly over verbal thinking until about the age of 14, when, in civilized life, word-thinking begins to occupy a larger space: thus, when a child under 14 is reading or listening to speech, it tends to fill out the meaning of the words, to 'body' them out concretely in its mind, to a much greater extent than the adult does. It has been pointed out that, while the majority of adults are visualists in object-thinking, the majority are also acoustic-motile in word-thinking. Children probably use a greater variety of kinds of imagery than adults. Nevertheless, it will be found that in mental work one of the classes or forms predominates over the others. Since education appeals increasingly to visual perception, it follows that a child whose natural type is the auditive one has little opportunity of perfecting this type till after school-life is over; hence in general the type is uncertain until the age of 16

or so. There is throughout a higher prevalence of pure visualists among girls than among boys. It is of course clear that a child will learn more easily, more quickly, and retain for a longer time material learned through his special and dominating form of imagery; and conversely, that the teacher will naturally teach, and will best teach, by the use of *his* special form. Hence a certain amount of consideration is necessary in school work, both to the type of the child and to the type of the teacher. On the other hand, as has been remarked, the average child is of a mixed type, and the average teacher also; while under modern conditions familiarity with different media is essential for all. The conclusion is that the teachers should try to convey knowledge of any subject by as many senses as possible, and that care should always be taken to determine whether apparent incapacity in a child to learn a particular subject (*e.g.* geography) is not due rather to a deficiency in the imagery to which appeal is made than to dullness or inattention. (A full account of recent work on this subject is to be found in E. Meumann, *Exper. Pädagogik*, i., esp. p. 435 f.)

It is a matter of dispute how the power of abstraction, and thinking in general, are related to imagery; there can be no doubt that, genetically, the concrete image precedes the abstract, or symbolic, thought, and that in general a training of the imagination is of great value in preparation for scientific thought and practical reasoning (see A. Binet, *L'Intelligence*, Paris, 1903; E. Meumann, *Intelligenz und Wille*, Leipzig, 1908). On the general subject of the psychological nature of thought and its relation to imagery, see the discussion by Titchener of the work of Ach, Binet, Bühler, Messer, and Watt, in his *Experimental Psychology of the Thought Process*, N.Y. 1909.

(9) *Language and abstract thought.*—Many lines of evidence both from race psychology and from individual psychology go to prove that the language of its parents is in no sense whatever innate in the child, and that none even of the conditions which have led to the differentiation of its parents' language from other languages is innate. (On this question, see L. W. Stern, *Helen Keller*, Berlin, 1905.) What is really innate is the instinct of expression, and the various special forms which this instinct takes—facial, vocal, gesture, etc. As it is certainly on these that language has, racially, been built up, so in the child they precede all knowledge of language. As illustration of the former point, experience shows that any child can learn any language whatsoever, provided it is brought up among a people speaking that language; and that no child has any special difficulty even in learning the language which is most remote in its sounds, signs, or grammar from the language of its parents. Again, it is known that the most complex thoughts and emotions are equally well expressible in any mode of language whatsoever, including under this not merely speech and ordinary gesture languages, but even such highly artificial languages as those taught to deaf-mutes, etc. The stages at which a child acquires the language of its environment may be stated as follows:[1] (1) the reflex and instinctive expressions of emotion on the child's own part; (2) the imitation of the sounds made by its parents and others in their speech; (3) the frequent repetition of signs and sounds—complexes found pleasant to itself; on the receptive side: (4) the gradual discrimination of the sounds heard in the speech of its parents; (5) the association between a particular sound and the object to which it is referred by the parents; (6) the formation of an idea of the meaning or connotation of the words, derived from these associations (apperception); and (7) the gradual correction of such ideas by experience. The conditions of development are keen auditive perception on the part of the child, opportunity of hearing varied speech in its environment, and freedom to exercise its linguistic powers, in play or otherwise, as it seems inclined.[1]

The relation of writing to speech may be touched upon here. Evidence shows that the child is ear-minded before it is eye-minded, and that it is able to learn by ear much more rapidly and more tenaciously than by sight; people among whom there is a large percentage of illiterates are frequently, as Borrow noticed among the Portuguese (*Bible in Spain*, ch. i.), brilliant and correct speakers; the probability is that the child would profit if in this respect its development were assimilated to the evolution of the race, so that (for example) writing and reading were not taught until it had reached about its 10th year. By this time it might have acquired two or more languages by the ear alone, and would probably for the future have a much more easy command of its speech than children ordinarily acquire under our present system (Chamberlain, ch. 5).

6. Abnormalities of development.—*Defective children.*—Where there is an actual loss of one or more of the senses, whether through injury or defect of the sense-organ, or from lesion of the central organ in the brain, the resulting defects are due rather to lack of material (*e.g.* deaf-mutism) than to any defect in the mental powers themselves, and can be compensated by adequate training, as the celebrated cases of Laura Bridgman and Helen Keller show. Apart from these cases, defective children may be grouped in the following classes: backward children, the feeble-minded, imbeciles, idiots, and the demented. The last are those who, through injury in childhood to the central nervous system, or through a disease of that system both congenital and progressive, gradually lose any acquired mental faculty they may possess, and therefore not only fail to develop further, but actually regress, perhaps to a purely instinctive or even reflex and automatic or vegetative level. *Idiocy*, on the other hand, springs from a lesion or defect of the cerebrum, either congenital or occurring in early childhood, carrying as its consequence a lowered general vitality, and especially a lowered sensitiveness and power of movement, as a consequence of which the individual is almost or entirely unable to acquire the education which is regarded as the standard in his country and position. In this there may be all degrees, depending upon the extent of the injury, and the period of life at which it occurs. In *imbecility*, there is not, as a rule, any marked physical or

[1] On the development of language in the child, see Sully, ch. 5; Preyer, ch. 16 ff.; W. Ament, *Die Entwicklung von Sprechen und Denken beim Kinde*, Leipzig, 1899, p. 213; Chamberlain, ch. 5; and Ament, 'Fortschritte in Kinderseelenkunde,' in *Arch. f. d. gesamte Psychol.* ii. (1904).

[1] The following is Stern's classification of the stages in the development of language from the point of view of the forms and structure of speech: (1) the beginning of the development of speech by means of *articulate sounds* (end of the 1st year); (2) 2nd year (1st quarter), *substantive stage*: the child uses substantives only as names for concrete persons and things; (3) *stage of action*: verbs appear for the designation of concrete activity in the present and in the immediate future (2nd quarter of this year); (4) *first questioning stage*: questions about the *names* of objects (3rd quarter); (5) *first sentences* (synthetic): conjunctives; negative sentences (end of the 3rd quarter of year; (6) *relation and quality stage*: adjectives and adverbs (4th quarter of the year); (7) sentences with an object (end of the 4th quarter year); (8) uss of numbers, inflexions, past tense (4th to the 5th quarter year); (9) *second questioning stage*: questions as to the where, how, and whither (3rd year); (10) pronouns become numerous (2nd quarter of 3rd year); and (11) *questions as to why* (in the 3rd year). Stern points to a very remarkable parallelism between the stages by which the normal child acquires its language, and the stages by which Helen Keller, beginning at the end of her 7th year, acquired precisely the same form of development through the finger-alphabet which Miss Sulivan began to teach her at that age (*op. cit.* p. 34 ff.).

even cerebral defect; on the contrary, imbeciles are frequently of great vitality, and of full physical development; nevertheless the existence of some functional defect of the brain is proved by the peculiar instability of their mental character, and, as a result, the difficulty which there is in extending their education, mental and moral, up to the standard of the time. These classes may be grouped together as abnormal; their differences from their fellows are so great, and in their outcome unfit them to so great an extent for participation in social life, that no one would seek to rank them with either normal children or normal adults. On the other hand, the *feeble-minded* and the *backward* represent a class which is, as it were, on the lower edge of the normal group; they are simple variations, on the negative side, from the average, corresponding to the specially talented and gifted on the positive side. The backward child is one who is much slower in development than his neighbours, and in consequence falls below the standard of his years; at school he is placed along with children three or four years younger than himself. The feeble-minded, or simple defective, again, is not only slow, but unable at any time, or under any conditions, to overtake the average child in education; he can, however, be taught a simple trade, and by special methods can be brought to a level of intelligence and of morality by which he is enabled to take a place among his fellows.

Various suggestions have been made as to the most prominent symptom by which the *degree* of defectiveness can be estimated: ability to acquire the power of speech (Esquirol, who divided idiots and imbeciles into five classes, according to degree of facility which they were able to acquire in this respect); the presence or absence of primary and secondary instincts (Dubois, etc.). Almost certainly the most valuable of these is that on which Sollier lays chief stress—the power of attention. The inability of the idiot or imbecile child to learn (whether language, industrial work, or moral habits) depends primarily on the two characteristics of his attention—its low intensity, or strength, or degree of concentration, and its instability, or liability to distraction and dissipation. The spontaneous attention (still less the voluntary attention) of the idiot cannot be caught, except for a few objects associated with its most fundamental physical needs: (1) because, owing to the disease of the brain, its sensations are excessively blunted or dulled, and (2) because for the same reason its organs of movement, on which the possibility of attending depends, are also imperfect in the highest degree. In the lowest degree of idiocy there is no possibility of attention; in the second degree (simple idiocy), the attention is with difficulty and occasionally held by a few objects; in the latter case, by efforts which strengthen the sensitiveness, or which build up associations between the few objects that are apprehended and the corresponding actions, some degree of education may be accomplished; in the former none is possible. On the other hand, in the case of the imbecile, it is not so much the intensity of the attention as its stability that is at fault; it is flighty, intermittent, unable to be retained for any length of time by a single object; hence memory is weak, impressions do not remain long enough before the mind to be retained; associations are not formed between separate sense-qualities or between perceptions and actions; sustained action and serial thought are alike impossible. The lower instincts, however, are usually sufficiently strong to give the sensations and perceptions which appeal to the imbecile considerable attention-value; hence education is possible to a relatively high degree, through the direction and control of this attention by the teacher. Imbeciles may learn to speak, although they rarely learn to write or read; and the ability to speak does not with them carry the power of concentrated and deliberate thought or reflexion. On the moral side, Sollier divides these defectives by the terms *extra-social*, which he applies to the idiots, and *anti-social* which he applies to the imbeciles. The former, as the term implies, is essentially a solitary, unable to come into relation with, or to understand any of the purposes of, his fellows; he neither imitates nor plays with others, and, while entirely incapable of appreciating moral standards, nevertheless remains for the most part passive, inert, and therefore harmless. The imbecile, on the other hand, having the lower instincts strongly, and the higher weakly (or not at all), developed, is governed almost entirely by selfish motives, without being able to appreciate either the feelings of others, their duties, or their rights; he has intelligence enough to pick up and appreciate the evil, but not the good, around him, and for the most part is on that account a constant danger both to his fellows and to himself. In the case of the backward and simple or weak-minded child, the attention is also defective; the reaction time is slower, the span or width of a single act of attention is narrower, the stability is for the most part less than in the average child. In the case of the idiot, the defect is primarily due to an organic lesion of the brain, and in the imbecile to a functional defect (see art. DEGENERATION), but in the backward child the defect may ordinarily be found in some somatic physical weakness, in the digestive or other internal system, by which the brain is relatively poorly nourished, and in consequence both functions more feebly and develops more slowly than in the average child. The evil can to some extent be remedied by physical regimen, and the great danger in such cases is that of intensifying the disease by over-pressure in school work. There can be no doubt that, where it is possible, such children ought to be treated separately from others—in separate classes, or still better in separate institutions. Binet, Decroly and Degand, and de Sanctis have worked out series of standard mental tests by which the degree of defectiveness in a child of a given age can be diagnosed in a simple and rapid, but adequate, way. It is natural that some difficulty should be experienced at first in arriving at such a series, appealing to the different mental powers in the order of their development, which shall be agreed upon by a sufficiently representative number of observers; but, when it is successfully accomplished, it will form a most useful basis of reference, both in the initial determination of the grade of a child and in estimating the degree of progress which may be attained under any particular system of training and education (see A. Binet and T. Simon, *Année psychologique*, xi. [1905], xiv. [1908], xv. [1909]; O. Decroly and J. Degand, *Arch. de psychol.* ix. [1910]; de Sanctis, *Année psychologique*, xii. [1906]. These tests are also discussed in Meumann, i. 387 ff., and are illustrated in G. M. Whipple, *Manual of Mental and Physical Tests*, 1910).

DEVIL, DEVIL-WORSHIP.—See DEMONS AND SPIRITS.

DEVIL'S ADVOCATE.—See ADVOCATE.

DEVĪ PĀTAN (*Devī-paṭṭana*, 'city of the goddess Devī').—An ancient village in the Gonḍā District of Oudh, supposed to be one of the oldest seats of the Śaiva cultus in Northern India. Legend connects the establishment of the cult in this place with Karṇa, the hero of the Mahābhārata epic; but it is more probable that the existing remains belong to the time of Chandragupta II., of the Imperial Gupta dynasty, who restored the old sacred places at Ayodhya, and perhaps did the same service for the petty shrine of the goddess of the pre-Aryan races, who had been adopted into Hinduism. A temple is said to have been erected in the beginning of the 15th cent. by Ratannāth, the third in descent from the famous Gorakhnāth, the deified saint, whose worship has spread all over the Nepāl valley and many other parts of India. Its importance was sufficient to attract the attention of the iconoclast Aurangzīb, who partially destroyed it. This temple seems to have been dedicated to Śiva, and when repaired was converted into the present building, where the service of the Mother-goddess in the form of Pārvatī or Durgā is conducted. The religious fair in connexion with the shrine takes place early in the spring, and is largely attended by pilgrims from the Plains and the lower slopes of the Himālaya. Benett, describing the fair in 1871, writes: 'Some 20 buffaloes, 250 goats, and 250 pigs were sacrificed daily at the temple. Under the altar a large hole was dug and filled with sand, which was changed twice a day, and the old sand buried; all the blood was thus absorbed. There was no filth lying about, and no stench.'

W. CROOKE.

DEVOTION AND DEVOTIONAL LITERATURE.—*Introductory.*—In a general sense, devotion has frequently been regarded as co-extensive with, or at least as embracing, the entire field of facts relevant to religion. Sometimes the attitude of the human *will* towards the Divine (howsoever conceived), which is a common feature of all religions, and the dominant characteristic in every religion of the spirit, has been illegitimately isolated and its true function distorted; consequently 'devotion' and 'religion' have often been used as synonymous terms. Aquinas writes: 'Devotio nihil aliud esse videtur quam voluntas quaedam prompte tradendi se ad ea quae pertinent ad Dei famulatum' (*Summa*, II.[2] lxxxii. 1). But surely this definition is too wide in scope. Even where devotion has not been confused with religion, it has commonly been cited as a synonym for worship —'whatsoever men worship for religion's sake' (Tomson's marg. note [*NT*, 1576]). But, while devotion suffuses all genuine religion, and will find expression normally in a form of worship directed towards an object or objects conceived as spiritual, unseen, or Divine, it certainly ought not to be defined as 'an object of religious worship.'

The idea of devotion is expressed in a concrete manner by the devotee—one set apart for a unique purpose, dedicated by a vow to the service of a deity; and perhaps we may best define devotion as the inner, intimate, essential side of worship. It is the attitude of the worshipping soul towards God; or, more widely viewed, the self-dedication 'to a deity, or to any one invested in thought for a time with some of the qualities or claims of a deity.' In its higher reaches it calls into play the entire forces and resources of man's personality.

Devotion, then, involves the deliberate movement of the will towards the object of worship.

'Devotion signifies a life given, or *devoted*, to God. He therefore is the devout man who lives no longer to his own *will*, or the *way* and *spirit* of the world, but to the sole will of God, who considers God in everything, who serves God in everything, who makes all the parts of his *common* life parts of piety, by doing everything in the name of God, and under such rules as are conformable to His glory' (Law, *Serious Call*, Lond. 1898, ch. i.).

In the theistic religions, especially in Christianity, where the bloom and fragrance of devotion are incomparably rich, the definite and full determination of the will towards Deity is the first step in the direction of a devout life. The higher experiences of the consecrated life are unattainable apart from the initial and insistent self-dedicatory act. The will of the individual is wholly determined towards the being or beings conceived as Divine, and, apart from this ardent attachment, devotion, strictly speaking, cannot exist. It is thus marked off from religion narrowly defined as 'a propitiation or conciliation of powers superior to man' (J. G. Frazer, *GB*[2], 1900, i. 63) by this spontaneous self-committal.

'True devotion springs from the will; it is the choice and the love of the highest good manifested to the soul, and, wherever the will of man is found choosing, and adhering to, the highest known ideal of good, there you have the true child of God' (C. Bodington, *Books of Devotion*, London, 1903, ch. ii.). Or, as Thomas à Kempis expresses it, great devotion consists 'in giving up thyself with all thy heart to the Divine Will, not seeking the things which are thine own, either in small or in great, either in time or in eternity' (*Imitation of Christ*, bk. iii. ch. xxv.).

In this self-determination of the soul both intellectual and emotional appetites are present in varying degree; no movement would be possible apart from desire; the intellect by itself, as Aristotle pointed out, moves nothing. Some conception of the end of devotion is necessary before the heart and the affections are yielded in free spontaneity to their Divine objective. Thus, in all religions which create and foster the devotional spirit—notably in the Christian religion—the soul intensely, sincerely, and lovingly desires, and moves in faith, reverence, and purity of intention towards, communion with God. Even the pagan Mysteries and the most ancient sacrificial feasts bear witness to this fact.

1. This approach of the soul towards the Divine, with its definite, conscious experience of the Divine presence, is seen in the distinctive exercises and practices of devotion. These are infinite in variety, but primacy must be given to **prayer.**

'Devotion,' writes William Law, 'is neither *private* nor *public* prayer, but prayers, whether private or public, are particular parts or instances of devotion' (*Serious Call*, ch. i.).

Without attempting any survey of the various forms prayer has assumed in the history of religions, we may mark its unfailing and universal characteristics throughout the devotional life of the varied races and generations of mankind. Remembering the true saying of Kierkegaard—that a heathen who heartily and ardently prays to an idol prays in reality to the true God, but he who outwardly and impersonally prays to the true God

in reality prays to an idol—we see that the value of the external observance depends on the internal disposition of the suppliant. Prayer must be pure and ingenuous, for the devout life must be free from any element of sophistication. Where prayer is viewed so largely and so generally, sometimes so exclusively, under the aspect of petition or request, it is obvious that its possible perils are very great. Material wants and mundane considerations obtrude themselves, while the spiritual needs are crowded out, forgotten, ignored—sometimes even unrecognized. But, though not without its dangers, the act of asking a boon of the Unseen, if it be the sincere expression of the spiritually enlightened, is an act which not only describes the fervent longing of the human soul, but also suggests the intimacy of a genuine spiritual communion. It is an aspect of the great passion to establish communication with the Divine or with God, which expresses itself in an outgoing of the human spirit towards the object worshipped and adored. As such, it is an infallible mark of the devout soul wheresoever placed, in crude and elementary religious environment as truly, though not as fruitfully, as in realms of high spiritual culture and attainment. In its more advanced phases, it becomes not merely a spiritual intercession, but passes in a sublime elevation of soul from soliloquy to silence, from spiritual striving to contemplative calm. The higher reaches of the devotional life are sacred to the prayer of 'quiet' and the prayer of 'union' which Madame Guyon describes in her *Autobiography* (Eng. tr., London, 1897) as 'emptied of all form, species, and images.'

2. Allied to and often commingled with prayer is the act or exercise of praise—the tribute of homage which the human renders to the Divine. The relation between prayer and praise is so intimate that, in experience, it is found that instinctively and imperceptibly the one is constantly passing over into the other. This is as notable in the hymns of the Veda, which embody 'some of the earliest religious conceptions of the Hindus' (M. Williams, *Hinduism*, London, 1901, ch. ii.), as it is in the Jewish Psalms or in the spiritual songs of the Christian Church; and, although perhaps these are all primarily adapted to worship in an institutional ceremonial sense, they yet express with true poetical passion the personal devotional life of their particular age. The outward dissimilarities are undoubtedly great; the Vedic hymns were 'addressed to certain deifications of the forces of Nature' (M. Williams, *op. cit.* p. 23); a post-exilic theology is implicit in the Psalter; but under all the outward forms of 'temple festivities, processions, and ceremonial' there is present and discernible the thrill of the individual soul, as, in reverence and thanksgiving, homage and gratitude, it prostrates itself before the Divine.

We may certainly affirm that beneath all external expressions, which, of course, reflect the particular sentiments (sometimes, it may be said, immature, and even repugnant, to a developed moral sense) of a people, age, or religion, the elements we have noted are all present in the act of praise. They differ, it is true, in emphasis and in the degree of intensity by which they are sustained; but it may be doubted if any one of them is ever entirely absent. From the manner in which they are present and the mode in which they are combined, the exercise of praise as a personal outburst in East and West does appear ultimately to result in a qualitative distinction, *i.e.* to be different in kind. It may, indeed, be regarded as an established fact that the place of praise in the devotional life is seen most clearly and recorded most completely in religions where the subduing and overwhelming sense of Divine holiness, love, and beneficent energy prevails, and in which the soul's searching sense of guilt is finally submerged—not merely in mercy, but in victorious grace.

In illustration of this, we may note the contrast presented between the attitude of the devout Buddhist, who embalms his lord Gautama 'in the richest and sweetest mythology known to man' (A. M. Fairbairn, *Philos. of Chr. Rel.*, London, 1902, p. 243 f.), and the attitude of the devout Jew towards God, as expressed in the superb and richly varied praise of the Synagogue liturgy (cf. T. K. Cheyne, *Book of Psalms*, London, 1888, p. 118). This contrast is further heightened by a consideration of Christian hymnody, in which, from the ψαλμοί, ὕμνοι, ᾠδαὶ πνευματικαί (Eph 5^{19}) of the early Christians to the sacred lyric or hymn of the Church to-day, the holiness and grace of God are conspicuously honoured and celebrated as much in private devotion as in public worship.

3. The act of adoration, the prostration of the soul in profound reverence, utmost affection, highest love, is usually associated with the outburst of gratitude or thanksgiving addressed to a deity. As one ascends in the scale of religions, the ethical and spiritual meaning of the adoring soul becomes more significant, and gleams and glows like sunshine. Where worship was addressed directly to elemental forces of Nature (as in the hymns of the Veda), or where the objects of worship were characterized by a dull, dry formalism (as in Roman religion to a considerable extent), or where a 'brilliant gaiety,' passing often into hilarity and levity (as among the Greeks), was subtly united with sacred offices and exercises (cf. F. Granger, *The Worship of the Romans*, London, 1895, p. 271), it is clear that the outward semblance of adoration could not conceivably denote the rich and profound spiritual significance which is so manifest a content of the reverent honour given by the devout Christian to the sacred and adorable Trinity.

The sentiment of adoration is seen at its highest only where the idea of God is marked by supreme moral and ethical excellence. Thus, in China, even where there prevails a persistent worship of ancestors which aims at the maintenance of friendly relations with the spirits of the dead, or a devotion to Shang-ti and popular divinities, adoration occupies no high place in the desire of the worshippers. In Christianity, on the other hand, devotion seems impossible apart from adoration, and manifests itself as markedly, and perhaps more truly, in the awe and austerity of the Puritan conception of the relation of the soul to God as in the Roman Catholic devotion to saints and images, the Eucharistic elements, the Cross, and the Sacred Heart—the latter cult, indeed, possibly taking its rise from *The Heart of Christ in Heaven towards Sinners upon Earth* (1645), a writing of the great Puritan theologian, Dr. Thomas Goodwin.

4. All the classics of devotion announce the cultivation of the meditative mood as indispensable to the devout life. And, although there is a great gulf between the *Meditations* of the saintly Roman Emperor Marcus Aurelius, or the Indian mystic for whom contemplation (*dhyāna*) takes the place of prayer, and the devout Christian for whom meditation is the 'eye of the soul' which enables him to see 'the light that never changes' (Aug. *Confess.* bk. vii. ch. x.), in all alike there is the recognition that 'the most sublime object of thought' demands the deliberate and definite concentration of man's whole soul in a 'current of contemplative feeling.'

Recollection is the act which is the precursor of pure spiritual contemplation; and this drawing together of the forces of the inner life, 'each man's conversation with himself,' to use the expression of Lacordaire (*Lettres à des jeunes gens*, Paris, 1862,

p. 204 ff.), is the prelude to meditation proper, which Ruysbroeck defines as 'a concentration of all the interior and exterior forces in the unity of the spirit and in the bonds of love' (*L'Ornement des noces spirituelles*, tr. M. Maeterlinck, Brussels, 1900, bk. ii. ch. iv.).

Meditation or active contemplation is then 'a long process of internal quietude, of abstraction from sense, and of absorption in reason,' by which the human soul is attuned to the Divine; and the soul exercised thereby has, among other spiritual possessions, 'the power of seeing into eternity' (*Theologia Germanica*, 14th cent.). By this interior process of meditation the whole personality is raised to a higher level, for the act of contemplation sounds 'the abysmal deeps of personality,' and releases mysterious spiritual forces otherwise hidden and unknown. Of this, William Law writes in 'The Spirit of Prayer':

'There is a root or depth in thee from whence all these faculties come forth as lines from a centre, or as branches from the body of a tree. This depth is called the centre, the fund, or bottom, of the soul, for it is so infinite that nothing can satisfy it or give it any rest, but the infinity of God' (*The Liberal and Mystical Writings of W. Law*, ed. W. Scott Palmer, London, 1908, p. 14).

Only the spiritually strenuous and purposeful can accomplish this, for it is not merely 'the yielding to an instinct, the indulgence of a natural taste for reverie.'

'All the scattered interests of the self have here to be collected; there must be a deliberate and unnatural act of attention, a deliberate expelling of all discordant images from the consciousness—a hard and ungrateful task' (E. Underhill, *Mysticism*, London, 1911, p. 374).

Spiritual meditation is, indeed, a difficult thing. St. Teresa, who finally achieved so much in this respect, confessed that, when she first made the attempt, she felt the impossibility of collecting her thoughts and fixing her attention; and it was not until more than fourteen years had passed that she was able to practise meditation without the aid of a book.

Boehme, in his *Dialogues on the Super-sensual Life* (ed. Bernard Holland, London, 1901, p. 56), describes the process of meditation as the cessation of individual activity, and urges the direct and steadfast fixing of the eye upon one point:

'For this end, gather in all thy thoughts, and by faith press into the Centre, laying hold upon the Word of God, which is infallible, and which hath called thee. Be thou obedient to this call, and be silent before the Lord, sitting alone with Him in thy inmost and most hidden cell, thy mind being centrally united in itself, and attending His will in the patience of Hope.'

This is a blessed foretaste of the supernal satisfaction—of the *vita contemplativa*.

5. Again, devotion is expressed, not only in the loving fulfilment of all those duties commonly named 'religious,' but more particularly and appropriately in definite spiritual exercises. In that great devotional classic, *The Spiritual Exercises of St. Ignatius* (Eng. tr., London, 1880), the spiritual development of the individual is shown to be dependent upon the rigorous training to which the powers of the mind, heart, and will are subjected. After retirement into solitude and a season of quiet contemplation, in which the soul listens only to the 'whispering silence,' the exercised spirit passes on, in absorbed intensity, to the various methods and rules by which the desired goal is to be attained. The value of the rules and exercises lies in the fact that, when followed in docility and fidelity with whole-hearted abandonment, the soul is led to the end for which it was ordained by God. They are rules which become 'more and more authoritative by constant obedience.'

'The number, length, and nature of the exercises are to be adapted to the age, capacity, and inclination of the person in retreat, so that no one may be overburdened, and all may find what is suitable to their wants' (Bodington, *op. cit.* 130).

All forms of spiritual exercise, whether such as are involved in the 'ladder' of mystic states and perfections of Neo-Platonic mysticism, the method of Persian Ṣūfiism, or the way of Christian mysticism, are aspects of self-discipline—of the *vita purgativa*. Self-discipline, strenuous and prolonged, has always been deemed an essential factor in devotion; and the devout of all ages have insisted upon the renunciation of self. Whether it is the Christian mystic who speaks of self-surrender, or the Indian mystic who teaches that the illusion of the finite can be overcome only by entering into the universal life, or the Ṣūfī who practises detachment from all that is not God that the heart may give itself for its only work—meditation upon the Divine Being—a deliberate self-abandonment is demanded by each alike, though the nature of that abandonment is variously interpreted and differently enforced. Perhaps the asceticism of our Lord (Clem. Alex. *Strom.* iii. 6) supplies us with the key to a true understanding of the place and power of self-discipline. It does not appear that *poverty*, as such, is a necessary inevitable mark of self-renunciation (Jerome, *c. Vigilant.* 14), though it is true that the life of Jesus was lived under conditions of poverty. But poverty may, in specific instances, be the *sine qua non* of a genuine self-oblation; and assuredly *almsgiving* has very generally been regarded as an indispensable exercise of the devout. In this connexion it should be noted, however, that by modern thought greater possibilities of a positive character, tending towards an energetic social devotion, are being disclosed to the devout soul who sees, with vision preternaturally sharpened, the passionate and heroic service of man in wider ways than formerly, as no mean expression or exemplification alike of self-sacrifice and of the worship and service of God.

Supremely essential is a sincere and utter detachment from earthly things, apart from which there can be no true self-abnegation, and no high spirit of devotion. This ideal has perennially cast its spell over the minds of devoted men; many attempts have been made to realize it, not the least significant—despite the inevitable limitations of their conception—being that of the 'Brethren of the Common Life' (*q.v.*), under the inspiration of Gerard Groot and Florentius. The importance of the ideal has never been questioned by the devout. According to St. Francis of Assisi, poverty is

'a treasure so high excelling and so divine that we be not worthy to lay it up in our vile vessels; since this is that celestial virtue whereby all earthly things and fleeting are trodden underfoot, and whereby all hindrances are lifted from the soul so that freely she may join herself to God Eternal (*Fioretti*, ch. xiii.).

The essence of self-discipline has been said to be 'self-simplification'; this can be attained only by the soul viewing with sacred indifference the superfluous, deceptive, or vain things of earth. Thus, it comes to be seen that inward not outward poverty is the indispensable thing; the goal of the devout soul is, like the Kingdom of Heaven, attainable only by 'the poor in spirit.' It is in such essential vital detachment, according to St. John of the Cross, that

'the spirit finds quiet and repose, for, coveting nothing, nothing wearies it by elation; and nothing oppresses it by dejection, because it stands in the centre of its own humility: for, as soon as it covets anything, it is immediately fatigued thereby' (*Ascent of Mount Carmel*, tr. David Lewis, London, 1906, bk. i. ch. xiii.).

Fasting, 'a piece of devotion whereby the primitive believers effected very great things' (Anthony Horneck, *The Crucified Jesus*, London, 1685, ch. iv.), has been persistently taught, encouraged, and practised as a form of self-renunciation and a method of self-discipline. Fasting may be partial or complete. As practised among the Oriental peoples, it usually took the form of total abstinence from both food and drink; and, according

to Robertson Smith (*Rel. Sem.*[2], London, 1894, p. 434), it is almost certain that such fasting was designed especially with a view to the partaking sacramentally of holy flesh. We may well believe this to be the fact, inasmuch as the sacrificial rites of all nations express in their devotional aspect the surrendered self of the creature to the Creator. It does not seem open to doubt that all ancient sacrifices were related to the basal belief in the possibility of communion with the Deity; and the discipline of fasting as a preparation to the partaking of a sacrifice which involved some kind of Divine fellowship was the prescribed method of the Oriental peoples. If it is true, as has been affirmed, that 'both the idea of sacramental worship and the forms under which it is performed by the Christian Church are the almost universal heritage of mankind' (W. R. Inge's Essay in *Contentio Veritatis*, London, 1902, p. 279), it will not be regarded as a singular thing or strange survival that the concurrent act of fasting should appear with perennial persistence. And further, if a vital communion with the Unseen is conditioned by a transparent sincerity of will and intention, fasting may well have approved itself as a sign of, as well as a means towards, such self-discipline of the soul. Especially might this be expected in the Christian Church, where the avowed aim of the faithful is to be 'one with the Lord and He with us,' and the devout person seeks to present himself a reasonable, holy, and living sacrifice to God (Ro 12[1]). The custom of fasting before communion certainly finds its explanation, if not its justification, not so much in 'the practice of the universal Church' as in the acknowledged need of self-disciplinary exercise for those who would worthily and reverently prepare themselves for the receiving of the Lord's Supper.

'Let us,' says Jeremy Taylor, 'receive the consecrated elements with all devotion and humility of body and spirit; and do this honour to it, that it be the first food we eat and the first beverage we drink that day, unless it be in case of sickness or other great necessity; and that your body and soul both be prepared to its reception with abstinence from secular pleasures' (*Holy Living*, London, 1649, ch. iv. sect. x.).

It is admitted that such fasting 'is not a duty commanded by God,' but it is undeniably a custom which has commended itself to many of the most devout. In the more general sense, fasting has been endured by the devout almost universally; and by many saints it has been ardently embraced as a valuable means towards the discipline and conquest of self—urged often by an inner necessity of the spirit. It cannot be denied that, as a spiritual exercise, evoking, training, and shaping the mysterious potentialities of the soul, fasting under its various forms does effect in many instances most fruitful spiritual developments, and justifies itself as a 'gymnastic of eternity.'

6. In this connexion we note that spiritual raptures and ecstatic experiences of peculiar significance follow, though not invariably, the self-disciplinary exercises of the devout. Catherine of Siena and Catherine of Genoa may be cited as types of devout souls who constantly resorted to the discipline of fasting, and experienced the enrichment of life which ecstatic states confer. The saints, however, do not adopt fasting or any other spiritual exercise as a means of artificially producing or inducing 'ecstasy.' This spiritual state and 'dazzling obscurity,' while it has affinities with the 'ecstasy' of philosophic communion and exaltation,—the crown of the mystical teaching of the Neo-Platonists,—must be carefully distinguished from all those extraordinary forms of ecstasy which at different periods have been sought for successfully by barbarous orgiastic worship or by rude and crude rites of initiation. Jacob Boehme, describing the hard battle he waged against the desires that belong to the flesh and blood, and his attempt to enter wholly into the Love of God, says:

'Now, while I was wrestling and battling, being aided by God, *a wonderful light arose within my soul.* It was a light entirely foreign to my unruly nature, but in it I recognized the true nature of God and man, and the relation existing between them, a thing which heretofore I had never understood, and for which I would never have sought' (F. Hartmann, *The Life and Doctrines of Jacob Boehme*, London, 1891, p. 50).

Here, obviously, the 'ecstasy' was of an illuminative character; this constituted its inner grace and spiritual value. But 'ecstasy,' according to Richard Rolle, may take the form of 'being ravished out of fleshly feeling,' 'and on this manner saints sometimes are ravished to their profit and other men's learning; as Paul ravished to the third heaven' (*The Fire of Love*, ed. Lond. 1896, bk. ii. ch. vii.). The essential mark, however, of this spiritual ecstasy would seem to be a supreme and overwhelming joy in the possession of a new knowledge gained not as the prize of toiling thought, but 'in the upper school of the Holy Ghost.' Certainly such 'ecstasy' is no more the product of human sagacity than it is the fruit of an assumed or pretended sanctity.

7. This leads to a consideration of the fact previously stated, that, as devotion springs primarily from the movement of the individual will towards the Divine, such movement being expressed in the various activities already noted, the supreme phase of devotion passes from the service of God, expressed in manifold ways, into those solemn elements of religious feeling which distinguish by their intensity and seriousness communion with God. 'I sought,' says Jacob Boehme, 'only for the heart of God, therein to hide myself' ('Aurora,' *Works of Jacob Boehme*, Eng. tr., London, 1764, p. 237). This is no mere 'morbid condition of mental emotion,' but the end desired with an incorruptible sincerity by all devout persons at all times. Among the Greeks, for example, one secret of the attractiveness of the Eleusinian Mysteries lay in the fact that the esoteric symbolism employed therein ministered, not to a sickly dreaming, but to a magnificent desire for an intimate spiritual communion with Deity. Similarly the Christian mystics, in their spiritual exercises and disciplined employments, sought, with all their fiery strength, the path which afforded close, indeed immediate, access to God—through Christ to God. This 'subjective intensity' of the mystic, though not without its dangers, witnesses to the zeal with which they pursued their quest. Thus, if the communion of man with God is to be attained, the devout soul, whether inside or outside the Christian Church, has always seen that the Divine life, potential or actual, within him must be tended with 'an intense solemnity and energy.' To the Christian, devotion is based on the certainty of communion between God and man through Christ. It springs from a faith in Christ (or, to use Luther's word, a 'right trust') which involves ultimately, if it does not embody presently, a moral union with Christ; and there is no devotion comparable for a moment with the devotion of utter penitential humility which is offered up by the soul that has found the new life in Christ and is entrenched in that reality of regeneration which is the certainty of its so great salvation. As Christ is the perfect means whereby the soul of man may realize itself in full and unclouded communion with its Creator, so the practice of devotion has gathered and drawn from the human life of the Lord—that consummate achievement of stainless communion—not only its supreme ideal and heroic standard, but its rarest and most precious power. 'Non comprehenditur Deus per investigationem sed per imitationem.'

We must, in our devotion, as Thomas à Kempis urges, copy the life and conduct of our Lord, 'if we wish to be truly enlightened, and to be delivered from all blindness of heart' (*Imitation of Christ*, bk. i. ch. i.). Neither must the call to fellowship with the Saviour's sufferings be evaded or disobeyed, nor the eyes closed to the imperative demand for 'mediatorial ministries.' The passivity of Quietism can never be the ideal of the devotional life.

> 'With Him the corner-stone,
> The living stones conjoin;
> Christ and His Church are one,
> One Body and one Vine'
> (Wesley, *Hymns on the Lord's Supper*, no. 129).

In sacrificial service, not less than in sacramental worship, the devout soul shares in the joyous travail of the spiritual Kingdom, sustained by the effectual irresistible energies of the Holy Spirit of God.

8. Devotional literature is the outcome, the record, or the expression of a vital devotion. Devotion may exist and manifest its presence without any attempt to express itself in literary form; but every true book of devotion involves the pre-existence of a true devotion. Spurious devotional works and morbid or maudlin books on devotion, whether marked by grandiloquent language or spiritual insipidity, may generally be detected by their atmosphere of moral enervation, or an accompanying suggestion of mental paralysis. The genuinely devout man is unconscious of his devotion; and all the great devotional classics, even those most intimately personal, are marked by the absence of anything approaching, in sinister guise, either a baleful self-consciousness or the hesitating sentiment of the feeble or the dull. They are in the highest degree self-revealing, often introspective, but they show no traces of self-posturing. The Bible is undoubtedly the greatest and most influential book of devotion in the world; it not only bears all the infallible marks of a deep and developing devotion, but it possesses, in a pre-eminent degree, the power of awakening and sustaining the devotional life of all who read and use it aright. But, outside the Holy Scriptures, all the great spiritual books of devotion owe their position and power to their possession of the characteristic marks already mentioned. The incomparable *Imitatio Christi*, *The Pilgrim's Progress*, Augustine's *Confessions*, with their power to 'stimulate the heart and mind of man to approach unto God,' Anselm's *Meditations*, Andrewes' *Private Prayers*, breathing indeed a 'pure and primitive devotion,' Francis de Sales' *Spiritual Letters*, and Baxter's *Saints' Everlasting Rest*, are among the most spiritually moving books in the world. The great books of devotion elude our attempts to classify them, though we may trace affinities and mark divergencies. They all owe their existence to the spirit of conspicuous devotion which marked the lives of their authors; and, although respectively they exhibit the fashions of a particular age and reflect pre-eminently the spiritual needs and satisfactions of their own special time, they owe their persistent power to the presence in them of an unconscious self-revelation of spiritual insight, and the faculty of inducing and begetting a deeper devotional life in those who wisely read them. They unlock the door to the rich inheritance of the saints; they unveil inconceivable spiritual mysteries, as they lead the wondering soul to the Christ in whom are hid all the treasures of wisdom and knowledge. Where may the growth, development, and perfection of the life that is hid with Christ in God be found more surely or sweetly expounded than in Jeremy Taylor's *Golden Grove*, his *Holy Living* and *Holy Dying*; Law's *Serious Call*, *Spirit of Prayer*, and *Christian Perfection*; Samuel Rutherford's *Letters*; *The Spiritual Guide* of Miguel de Molinos; or Walter Marshall's *Gospel Mystery of Sanctification*—a book too little known and read? The devotional life of thousands has been established and enriched by books so widely divergent in many respects as the *Sermons* of Bernard of Clairvaux, where the 'illuminative way' is described with searching insight as the rising to the love of God with heart, mind, and soul; Tauler's *Sermons*; the *Theologia Germanica*; A. Baker's *Holy Wisdom*; Louis of Granada's *Sinners' Guide*; Scupoli's *Spiritual Combat*, in which, despite obscurities and perversities, there burns steadily 'the lamp of fire within the earthen pitcher'; Pascal's *Thoughts*; the *Journal* of George Fox; and the mystical *Devotional Works* of John Norris. Perreyve's *Journée du malade*, Gratry's *Meditations*, with their striking and suggestive sincerities of thought, Scougal's *Life of God in the Soul of Man*, and Milman's *Love of the Atonement* all unite to disclose to the expectant soul some of the august possibilities of faith, prayer, and sacrifice. The work of Alphonsus Rodriguez, *On Spiritual and Religious Perfection*, in which 'our greatest, or rather, our only business,' the union of our souls with God by love, is set forth with arresting ardour and spiritual knowledge; the *Poems* of George Herbert and his *Priest to the Temple*, burning with the sacred passion for holiness; *Hymns on the Lord's Supper* by John and Charles Wesley, in which, assuming discretion and discrimination on the part of the reader, the fervour of an intense rapture fills the soul with unalloyed joy; and the *Christian Year* of John Keble—must be named as occupying distinct and honoured places in the impressive library of devotional literature, although, of course, they do not 'unite all great attributes in an equal degree.'

In the realm of devotion, doubtless, new heights wait to be scaled, untrodden territories allure the intrepid spiritual explorer, and vast spiritual tracts are yet to be surveyed; thus, while we hold steadfastly to the precious devotional gains of the past, we believe that greater works than these may be achieved by the soul following the Supreme Spiritual Director who guides into all truth.

LITERATURE.—In addition to the authors and works referred to, the various writings of the great mystics—especially their supreme spiritual classics—should be consulted. Also the following: J. Adam, *The Religious Teachers of Greece*, Edin. 1908, p. 92; J. P. Arthur, *The Founders of the New Devotion* Eng. tr., London, 1905; F. Atterbury, *Sermons*[8], London, 1766, iv. 213; T. K. Cheyne, *Aids to the Devout Study of Criticism*, London, 1892, pt. ii.; R. W. Dale, *Fellowship with Christ*, London, 1896, ch. i.; C. A. F. Rhys Davids, *Psalms of the Early Buddhists*, i. (*PTS*), 1909; E. von Dobschütz, *Christian Life in the Prim. Church*, Eng. tr. 1904; L. Duchesne, *Christian Worship*, Eng. tr., London, 1903-4, ch. xii.; J. O. Dykes, *Manifesto of the King*, London, 1887, pp. 127-144; Dora Greenwell, *Essays*, London, 1875, and *Poems*, London, 1848; W. Hermann, *Communion with God*, Eng. tr. 1895, pp. 49-133; E. E. Holmes, *Prayer and Action*, London, 1911; R. F. Horton, *The Open Secret*, London, 1904; F. von Hügel, *The Mystical Element of Religion*, 2 vols., London, 1908; J. R. Illingworth, *Christian Character*, London, 1904; W. R. Inge, *Christian Mysticism*, London, 1899; W. James, *Varieties of Religious Experience*, London, 1902; F. B. Jevons, *Introd. Hist. Rel.*, London, 1896, pp. 54, 106; Rufus M. Jones, *Studies in Mystical Religion*, London, 1909; J. Julian, *Dict. of Hymnology*, London, 1892; A. Lang, *Magic and Religion*, London, 1901; J. Legge, *Chinese Classics*, Hongkong, 1861-72, vol. iii.; E. Lehmann, *Mysticism in Heathendom and Christendom*, Eng. tr., London, 1910; H. S. Lunn, *The Love of Jesus*, London, 1911; K. Marti, *Rel. of the OT*, Eng. tr., London, 1907; W. R. Nicoll, *The Garden of Nuts*, London, 1905; F. W. MAJOR SCOTT.

DEW.—The cooling of the ground causes, during clear nights, a deposit of some of the atmospheric moisture held in suspension during the day. It was not till 1814 that the main facts of the process of the formation of dew were established. Mention of Wells' famous theory—a perfect example of the inductive method—is in point, since primitive speculation upon the origin of dew has joined with observation of its value to plant-life in attaching to it various ideas of spiritual mystery and various uses in ritual.

In the OT the origin of dew is one of the mysteries of creation;[1] the deposition of dew is gentle, sudden, and invisible;[2] its evaporation in the sun is a metaphor for speedy departure or disappearance.[3] Early observation, of course, distinguished dew from rain, but noted their connexion.[4] Both drop from the clouds 'by the knowledge' of Jahweh.[5] The closer connexion of dew with mist and fog naturally involved some confusion in both language and observation. This is of some importance in the Biblical and post-Biblical literatures.

'The spirit of the dew has its dwelling at the ends of the heaven and is connected with the chambers of the rain, and its course is in winter and summer; and its clouds and the clouds of the mist are connected, and the one passes over into the other.'[6]

The old Jewish literature is enthusiastic on the subject of dew. It is a constant symbol for invigoration and vivification, fertility, blessing, prosperity, richness, and resurrection.[7] Jahweh promises that He will be 'as the dew unto Israel.'[8] The youthful warriors of the royal Messiah are compared, for numbers and freshness, and perhaps brilliance (see also below), to the dewdrops from 'the womb of the morning.'[9] The simile was borrowed by Milton (*Par. Lost*, v. 746 f.) for his description of the angelic hosts. The withholding of dew is a dire calamity, and one of the most terrible of curses.[10] We have here, in fact, the best illustration extant in folklore or literature of the pastoral and agricultural importance of the dew-fall. That importance is greatest in Eastern countries which have no irrigation to supplement an insufficient water-supply, and where every drop of moisture counts. But in Palestine the genuine dew of spring and winter is of far less importance than the night-mist of summer. This is not dew, but moisture condensed in the air before it reaches the ground. It is brought from the sea by the west winds, and for abundance and consistency may be compared to a Scotch mist. Cheyne, following Neil,[11] who analyzed the phenomenon, is of opinion that the *ṭal* ('sprinkled moisture' of the OT; EV 'dew') signifies in the majority of cases not dew proper, but this characteristic night-mist.[12] Such mists from the sea have an extraordinary influence on vegetation,[13] more in accordance with the OT descriptions than that of dew.[14] But the same term is employed, and the two phenomena were hardly differentiated.

From the two facts that it is ground-moisture, and that it bears upon life and growth, early thought developed various ideas. In connexion with the belief that growth in plants is dependent on the influence of the moon, Frazer notes that, since dew falls most thickly on cloudless nights,

[1] Job 38^{28}. [2] 2 S 17^{12}, Dt 32^{2}. [3] Hos 6^{4} 13^{3}.
[4] Mic 5^{7}. [5] Pr 3^{20}.
[6] Enoch (ed. Charles, Oxf. 1893) 60^{20}.
[7] Dt 32^{2}, Is 18^{4}, Ps 110^{3}, Dt 33^{13}, Gn 27^{28}, Ps 133^{3}, Is 26^{19}.
[8] Hos 14^{5}. [9] Ps 110^{3}. [10] 2 S 1^{21}, 1 K 17^{1}, Hag 1^{10}.
[11] *Palestine Explored*, pp. 129–151. [12] *EBi*, *s.v.* 'Dew.'
[13] Cf. the δρόσος ποντία of Greece (δρόσος = 'shower' as well as 'dew'). For Syrian countries, see E. W. Lane, *Arabic Lexicon*, *s.v.* 'Ṭallā'; *Qur'ān*, ii. 267. J. G. Frazer (*Totemism and Exogamy*, 1910, i. 168 f.) describes their importance for the coast lands of Australia.
[14] 'The drops of dew,' Job 38^{28}; the saturation of Gideon's fleece, Jg $6^{37ff.}$; the traveller's head soaked with 'dew,' Ca 5^{2}; 'showers on the grass,' Mic 5^{7}.

the inference that such deposit in particular and all moisture in general were caused by the moon was a clear result of primitive observation. Alcman says that Dew is a daughter of Zeus and the Moon. Greek and Latin folklore regarded the moon as the great source of moisture, and the sun as the great source of heat.

'As the humid power of the moon was assumed to be greater when the planet was waxing than when it was waning, they thought that timber cut during the increase of the luminary would be saturated with moisture, whereas timber cut in the wane would be comparatively dry. Hence we are told that in antiquity carpenters would reject timber felled when the moon was growing or full, because they believed that such timber teemed with sap; and in the Vosges at the present day people allege that wood cut at the new moon does not dry. In the Hebrides, peasants give the same reason for cutting their peats when the moon is on the wane; "for they observe that if they are cut in the increase, they continue still moist and never burn clear, nor are they without smoke, but the contrary is daily observed of peats cut in the decrease."'[1]

It is possible that the fact of plants growing more during the night than during the day was known at an early date. The contrast between the light of the moon and the torrid force of the sun is obvious. Plutarch observes that

'the moon, with her humid and generative light, is favourable to the propagation of animals and the growth of plants; while the sun, with his fierce fire, scorches and burns up all growing things.'[2]

Equally natural is the inference that things grow with the waxing, and decrease with the waning, of the moon. The deposition of dew on plants corroborates such observations, and introduces another line of thought. The connexion of moisture with life and growth is most strikingly proved by vegetable phenomena. Hydrostatic turgor is the essential condition of growth. Pliny's remark shows the extension of the principle to animal processes:

'Even the blood of men grows and diminishes with the light of the moon.'[3]

Thus, primitive philosophy views the moon

'as the great cause of vegetable growth, first, because the planet seems itself to grow, and second, because it is supposed to be the source of dew and moisture.'[4]

A contributory inference is the connexion of the changes of the moon with the monthly periodicity of women.[5] The Ahts and Greenlanders, like the majority of primitive peoples, regard the moon as male. The latter people believe that the moon is able to impregnate women. Girls are afraid to look long at it; no woman will sleep on her back, without first spitting on her fingers and rubbing the spittle on her stomach.[6]

The symbolism of the last-cited practice may be compared with several scattered facts. The cosmology of the Hindus, in its theory of the marriage of heaven and earth, employed the very obvious symbolism of rain as the impregnating fluid; and the soul, as the male and life-giving principle, *puruṣa*, descends in the form of rain and re-issues from men as the germ.[7] This notion of the philosophers of the Upaniṣads is but a crystallization of the general connexion of moisture with life.[8] Such ideas are in flux, and constantly passing into each other; but a tendency is clearly observable to regard dew as a sort of heavenly seed, fertilizing earth and its products, and stimulating growth.

The union of sky and earth, which results in the propagation of plant-life, is a world-wide theory; and sympathetic ritual is extensively employed to

[1] Frazer, *GB*^{2}, 1900, ii. 158 f., who quotes Plut. *Qu. conv.* iii. 10. 3; Macrob. *Saturn.* vii. 16; Roscher, *Ueber Selene u. Verwandtes*, 1890, p. 49 ff.; Pliny, *HN* ii. 223, xx. 1; Aristotle, *Probl.* xxiv. 14; Sauvé, *Folklore des Hautes Vosges*, 1889, p. 5; Martin, in Pinkerton, *Voyages and Travels*, 1808–14, xvi. 630.

ensure and expedite it. It is, however, probable that some of the agricultural customs included in the general practice by which individuals or couples 'roll' over the fields[1] are not survivals of a ritual of sympathetic intercourse, but simply express the intention of rubbing the fertilizing dew into the ground. In Russia, for instance, the spiritual person of the priest is rolled over the sprouting crop.[2] In Holland there is still practised a custom of 'fertilizing' the crops by actual sexual intercourse. It takes place at Whitsuntide and is significantly called *dauwtroppen*, 'dew-treading.'[3] Here there is perhaps a combination, natural enough, of the two methods. Rolling in the dew may be practised for various reasons.

In Spain the custom still exists among country folk of rolling naked in the dew of the meadows on Midsummer Day. It is regarded as being preventive of skin-diseases. The same custom, with the same reason, is found in Normandy, Périgord, and the Abruzzo.[4] The vivifying power of a liquid generated under conditions of mystery is a sufficient reason for its use in medicinal and other magic. Attached to this use is a natural ascription of purifying power. It is worth noting that a good deal of the dew referred to in folklore and by poets is not dew, but water evaporated from leaves, and that this water is peculiarly pure. The people of Java are fond of washing the hair in dew to prevent greyness.[5] The custom of washing the face with dew on May morning for the promoting of beauty is still common in Europe. In Nias, dew is employed medicinally, especially by the 'priests.' A 'spiritual' power is ascribed to it.[6] In the Moluccas, various medicines are prescribed to be taken not in water but in dew.[7] Among the Thompson Indians, part of the course of training undergone by boys at puberty, by way of acquiring a guardian spirit, is rolling naked in the dew, or washing the body with branches covered with dew.[8]

Kruijt is of opinion that in East Indian belief dew is regarded as the sweat of the earth, and that its magical powers may be thus explained. Certainly the Poso word for 'dew' also connotes 'sweat'; but the general considerations referred to above and the special connexion of impregnatory power are more probable reasons, though sweat in folk-belief and custom possesses magical properties of invigoration.

In connexion with vegetation, the idea of dew is crossed with ideas of magical bloom, and even of magical food, no less than of seed. The very ethereal quality of the liquid state of dew seems to invite such focusing of analogies. Thus, in the old English custom of gathering 'May,' the blossom of the hawthorn, and the dew from the grass, and bringing them home with music,[9] the dew may be regarded as the spiritual analogue of the blossom. In the German May Day processions of the peasant youth, the dew is swept off the grass with a 'May-bush.'[10] The miraculous bloom or seed of the fern which appears on Midsummer Eve, according to European folklore, is liable, when being gathered, to vanish 'like dew on sand' or mist in the air.[11] This is not a merely descriptive, but an effective, analogy.

The dew, in other words, is the concrete concomitant of the spiritual substance. It may be conjectured that the miraculous power, conferred by fern-seed, of discovering hidden treasure is derived from the jewel-like scintillations of dew-drops.

A good illustration of such homologies between the concrete and the spiritual is to be seen in the OT account of manna and its deposition. Like fern-seed, it came with mystery, and, like fern-seed, it was to be gathered according to rule. Its invariable antecedent was the dew, and, in the same way as it apparently crystallized out of the dew in the wilderness, so we may imagine the idea and the story of it to have crystallized out of the fluid notions concerning dew.

'At even,' says Jahweh, 'ye shall eat flesh, and in the morning ye shall be filled with bread. . . . And it came to pass at even, that the quails came up, and covered the camp: and in the morning the dew lay round about the camp. And when the dew that lay was gone up, behold, upon the face of the wilderness there lay a small round thing, as small as the hoar frost on the ground. And when the children of Israel saw it, they said one to another, It is manna (What is this?): for they wist not what it was.'[1] When the sun waxed hot, it melted. It was 'like coriander seed, white,'[2] or the colour of bdellium.[3] The connexion with dew is more precisely noted in the second account: 'And when the dew fell upon the camp in the night, the manna fell upon it.'[4] After eating the corn of the promised land, the Israelites found that the manna automatically ceased.[5] It was 'the corn of heaven'; 'angels' food' (RV 'the bread of the mighty'), and from heaven it was 'rained down.'[6] As was the case with the quails, and the water, and with the preservation of clothes, manna was a magical detail of a magically supported existence in the wilderness. The writer of Deuteronomy actually rationalizes it into moral instruction—'manna, which thou knewest not, neither did thy fathers know; that he might make thee know that man doth not live by bread only, but by every thing that proceedeth out of the mouth of the Lord doth man live.'[7] Significantly enough, the people found it unsatisfying, and they murmured: 'We remember the fish, which we did eat in Egypt for nought; the cucumbers, and the melons, and the leeks, and the onions, and the garlick: but now our soul is dried away; there is nothing at all: we have nought save this manna to look to'; 'there is no bread, and there is no water; and our soul loatheth this light bread.'[8]

The whole account, with its significant analogies, is important as illustrating the psychological process by which a concrete idea may take shape from visual perception aided by imagination. Fern-seed, which sparkles like fire, and vanishes like dew, is, we suggest, an imaginative product of dew, as elusive as its source; manna, we suggest also, is equally an imaginative product of dew, developed along another line—that of the ideas of food stimulated by starvation. Coming after or upon the dew, an ethereal light food from heaven, the food of angels, easily passing into intellectual pabulum, it is as elusive as dew in its behaviour and as unsatisfying in its results. But it supports life miraculously for those who are in a state of supernaturalism. Most certainly it is erroneous to base the story of manna upon such actual phenomena as the secretions of the *Tamarix mannifera* or other plants.[9] The comparison with coriander seed amounts merely to its standing for the *essence* of bread.[10]

These ideas may be more closely illustrated. The people of Halmahera hold that dew is the food of spirits.[11] In Minahassa it is said that the first man fed on dew.[12] Further, an essentially spiritual connexion is claimed for dew. The people last cited believe that the final end of the soul of man is to be merged in dew. The Balinese hold that the soul returns to earth, after being dissipated into the air by the cremation of the body, in the form of dew.[13] The Toradja belief is that the soul dies eight or nine deaths before it finally changes into water and disappears in mist.[14] The

following beliefs are particularly significant. The Sea Dayaks report that souls die seven times after the death of the body.

'After having become degenerated by these successive dyings, they become practically annihilated by absorption into air and fog, or by a final dissolution into various jungle plants not recognized by any name.' [1]

The Olo-Ngadju and other peoples of the East Indian Islands speak of the souls of the dead as passing into plants. The Mualang Dayaks say that the soul after a time dies, and then descends upon the rice in the form of dew. The more souls there are to descend upon it, the richer is the rice-harvest.[2] In reference to manna, it may be noted that the East Indians believe that, if the soul of the rice be absent, the grain has no nutritive property; a man may eat it but will never be satisfied.[3] The soul of the Lushai turns into water, and evaporates as dew. If dew falls on a man, his child will be a re-incarnation of the dead.[4]

Here the ideas of moisture in relation to life, and of unindividualized haze or mist, out of which individual forms are precipitated, meet again in dew. Thus, while the Hill Toradjas believe the soul to pass into a cloud, the Samoans believe it to be 'the daughter' of 'vapour of the land' which forms clouds; and the Tracey Islanders say that the first man was created out of vapour.[5] Thus the descent of the soul to earth and its ascent, after the death of the body, to heaven have been, in the evolution of religious thought, not only compared to, but identified with, the rise and fall of the dew. The identification has served the complex purpose of explaining the process of dew-formation and that of the nutritive physiology of plants, and incidentally the origin and end of the soul of man. The Gorontalese of Celebes apply an instructive analogy to the relations of the four souls of man. The greatest of these resides in the brain, and is 'like the sea.' Part of it is separated in the form of moisture and produces dew. The ascending dew is *rahmani*; this is the second soul, *njawa rahmani*, residing above the heart. The dew which ascends to the sky is *rohani*, the third soul, 'lustre of breath,' residing in the heart; the dew which descends as rain is *djasmani*, the fourth soul, 'soul of the body,' residing in the whole body.[6] This account illustrates the spiritual potentiality of the idea of dew.

There was a special development of the ideas of dew in both the Athenian and the Hebrew religions.

(1) In Athenian mythology, Herse (Dew) and Pandrosos (All-dewy) are daughters of Cecrops and Agraulos. A rite, termed Ἀρρηφορία or Ἑρσηφορία, was performed in honour of Athene. Little is known either of Herse or the rite which seems to bear her name, or of Pandrosos.[7] The statement of Moeris, that the ἀρρηφόροι 'carried dew to Herse' in the *Arrhephoria* is uncorroborated.[8] But the *arrhephoroi*, or *hersephoroi*, are verified as 'maidens trained in the service of Athena, and living near the temple of Athena Polias.'[9] In the *Arrhephoria* they 'brought a mysterious offering by an underground passage from the temple of Aphrodite ἐν Κήποις,' not to Herse, or to Pandrosos, but to Athene. Farnell concludes that

'the fruits of the earth appear to have been in some way consecrated' to Athene. 'It is also evident that at Athens she came into some contact with the earth-goddess. . . . To reconcile her cult with Athena's, it may well have happened that the latter goddess was given two of her titles,' namely, Pandrosos and Herse.

Pandrosos is thus no individual spirit, nor originally an epithet of Athene, but an epithet of the Earth Goddess, in reference to her dewy covering and its connexion with the growth of the crops. The ceremony embodying this connexion was transferred to the centralized deity of Attica —Athene. The dew-carriers are mentioned in inscriptions,[1] but there is no such verification of the existence of Herse. She is apparently a mere name, developed from the terms Ἑρσηφόροι and Ἑρσηφορία.[2] But it is a question what these terms themselves imply.

The story of Erichthonios being given to the three sisters, Herse, Pandrosos, and Agraulos, to nurse, Pandrosos alone being faithful to her trust, is explained by Miss Harrison as an ætiological myth, invented to account for the rite of *Arrhephoria* or *Hersephoria*. The scholiast on Aristoph. *Lysistrata*, 64, observes: 'Some say, on account of the α, it is ἀρρηφορία, because maidens carry "nameless things" (ἄρρητα); others, on account of the ε, ἑρσηφορία, because maidens walk in procession in honour of Herse, daughter of Cecrops.' The terms δρόσος and ἕρση are also used for the young of animals, such as lambs and sucking pigs.[3] A remarkable feature of the *Thesmophoria*, another ritual performed by women alone, and also in connexion with the fertility of the crops, was the casting of pigs into μέγαρα or ἄδυτα, underground chasms, and the bringing out of the rotten flesh, presumably the following year. These services were performed by the *thesmophoroi*, and the flesh was used, as in many agricultural customs, as a magical fertilizer of the fields. Miss Harrison suggests that the ἕρσαι or δρόσοι 'carried' by the *hersephoroi* were young animals, and that they were used in a manner and for a purpose similar to those of the *Thesmophoria*.[4] The *Arrhephoria* is certainly associated with the *Thesmophoria* and *Skirophoria*, and it is in accordance with the principles of myth-formation that, as she suggests, both the name Herse and the story of Erichthonios should have been invented to explain a rite that had become mysterious.

Preller, on the other hand, had regarded Herse as a Dew Goddess—a personification of the Dew.[5] Later German scholars regard her as a nymph of the same class as Auxo and Thallo—personifications of the 'growth' of the crops.[6] No reliance is to be placed on the scholiast's reference to ἄρρητα. Any 'mysterious,' that is, ritual, object—even a branch laden with dew—might be styled ἄρρητον, just as much as a young animal or its flesh. And the word ἕρση has the forms ἔρρη and ἄρρη, hence ἀρρηφορία and ἐρρηφορία. ἕρση as a 'young thing' is a metaphor, *a priori* later in origin than a primitive agricultural ritual, and therefore unlikely to be the original meaning of the name of the ceremony. The scholiast on Aristophanes says: 'Maidens walk in procession in honour of Herse'; there is here no mention of dew, but he may have known that the maidens carried branches laden with dew, and omitted to mention the fact, branch-carrying being a regular detail of processions.

Otfried Müller suggested that the *arrhephoroi* carried simply leafy branches wet with dew, symbolical of a petition for a supply of dew during the heat of summer.[7] Thus we have a ceremony similar to the wide-spread European custom of carrying May boughs dipped in dew.[8] In these and in the Athenian custom there may have been a magical demand for dew rather than a prayer for it, but the branch is the important object, the focus of the demand for growth and fruitfulness of the crops; and the dew may be merely an accessary. This explanation, on the whole, seems the most probable. Herse may be unreal as a deity, but the fact remains that the Athenian mythologists, if not the Athenian priests, actually personified the Dew, while the *hersephoroi* certainly carried something in procession. Though unverified, Moeris' statement may have hit the truth, and what they carried may have been dew. Here it is possibly significant that the *arrhephoroi* carried their offering from the temple of Aphrodite ἐν Κήποις. The dew-laden branches may have grown in the gardens of the goddess of procreation, and possibly the generative symbolism

of dew was a factor in the ritual (see above). The dew would thus serve to impregnate the fields.

In the case of Apollo *Hersos* at Vari, the epithet seems to be of the same character as *Pandrosos*.

(2) The post-Biblical literature and ritual of the Hebrews show an interesting development of the ideas of the OT concerning dew. The Book of Enoch, after describing the dwelling of the spirit of the dew, and the connexion between its clouds and the clouds of the mist,[1] speaks of 'winds coming from the middle of the twelve portals'; these bring 'beneficial dew of prosperity'; from other portals, 'hurtful dew' emerges, accompanied by locusts and other calamities.[2] So the Rabbinical writings state that 'in the sixth heaven, Makon, there are treasuries of hurtful dews and of beneficial dewdrops.'[3] A prayer is offered between *Pesaḥ* and *Shābû'ôth* that God may preserve the people from the hurtful dews.[4] The two loaves of bread 'waved' on *Shābû'ôth* are a symbolic petition to the Ruler of heaven and earth and the four winds, to withhold the unpropitious winds and dews.[5] As for the dew of blessing, thus fluctuating between the material and the moral, it is said that, since the destruction of the Temple, no dew of unmixed blessing falls[6]—apparently on account of the cessation of the tithes and the heave-offering.[7] Dew falls as a heavenly gift, and by the merit of no man.[8] Yet only on account of Israel does dew come as a blessing upon the world; on account of Jacob or of Job.[9] God promised Abraham under an oath never to let dew cease to bless his descendants, and therefore the words of Elijah could not stop its fall.[10]

The Dew of the Resurrection is a remarkable concentration of these ideas, originating chiefly from a passage of Isaiah: 'Awake and sing, ye that dwell in the dust: for thy dew is as the dew of herbs, and the earth shall cast forth the dead.'[11] The passage, 'Thou, O God, didst send a plentiful rain, thou didst confirm thine inheritance, when it was weary,'[12] was interpreted to refer to an incident at the giving of the Law:

'When God appeared amidst the trembling of the earth on Sinai, life fled from the people of Israel and from all the living people in the land of Israel; and the angels said: "Dost Thou desire to give Thy Law unto the dead or unto the living?" Then God dropped the dew of Resurrection upon all, and they revived.'[13]

This Dew of the Resurrection is stored up in *'Arabot*, the highest heaven;[14] and by it the dead are revived.[15]

In the modern Hebrew liturgies *Geshem*, 'rain,' and *Ṭal*, 'dew,' have an important place, though the prayers for them are 'regarded rather as an affirmation of the Divine control of the seasons.'[16] On the first day of Passover, *Ṭal* is substituted for *Geshem*. On this and other occasions for *Ṭal*, the reader of *Musaf* puts on the white shroud and cap, as on the Day of Atonement. The Talmudists decided that the actual prayer for rain—'Give dew and rain for a blessing upon the face of the earth'—should be introduced only at the inception of the rainy season. The melodies accompanying *Geshem* and *Ṭal* are various throughout Europe, and are distinguished by a quaint charm.[17]

A. E. CRAWLEY.

DHAMMAPĀLA.—This epithet means 'Defender of the Faith'; it has been chosen as an honorary title by Buddhist kings, and as their name in religion by members of the Buddhist Order, but laymen do not use it. As a royal title it has been traced only in N. India and Burma (*Buddhaghoṣuppatti*, 11, 21); as a name for *bhikkhus* it has been fairly prevalent in India and Ceylon from the 6th cent. B.C. down to the present day. A Dhammapāla is included among the *theras* ('elders') contemporary with the Buddha, to whom are ascribed the poems preserved in the *Therīgāthā*; and several others are mentioned as the authors of minor works of later date. The only one who played an important part in the history of the religion is distinguished from the others by the special title of *Ācariya*, 'the Teacher.'

In the colophons to those of his works that have so far been edited we find two statements: (1) that he claimed to have followed the traditional interpretation of his texts as handed down in the Great Minster at Anurādhapura in Ceylon; and (2) that his life was spent at the Badara Tittha-Vihāra. And from the *Sāsana-vaṃsa* (p. 33) we learn that this place was in the Tamil country, not far from Ceylon. It would seem, therefore, that Dhammapāla was educated at the same university as Buddhaghoṣa, and that he was a Tamil by birth and lived and wrote in South India.

The first of these conclusions is confirmed by the published works of the two writers. They have very similar views, they appeal to the same authorities, they have the same method of exegesis, they have reached the same stage in philological and etymological science (a stage far beyond that reached at that time in Europe), they have the same lack of any knowledge of the simplest rules of the higher criticism. So far as we can at present judge, they must have been trained in the same school.

As to the second point—the birth and life of Dhammapāla in South India—we have a curious confirmation from outside. Yüan Chwāng visited Kāñchīpura, the capital of the Tamil country, in A.D. 640. The brethren there told him that Dhammapāla had been born there.

'He was a boy of good natural parts which received great development as he grew up. When he came of age, a daughter of the king was assigned to him as wife. But on the night before the ceremony of marriage was to be performed, being greatly distressed in mind, he prayed earnestly before an image of the Buddha. In answer to his prayer a god bore him away to a mountain monastery some hundreds of *li* from the capital. When the brethren there heard his story, they complied with his request and gave him ordination.'[1]

It is true that the English translators of Yüan Chwāng use the Sanskritized form of the name (Dharmapāla). This would not necessarily show that the Chinese pilgrim applied the story to a person different from our Dhammapāla; for both he and his translators frequently give the Sanskritized form (which they imagine to be more correct) for Pāli names of persons and places. But Yüan Chwāng adds the title *Phusa* (that is, *Bodhisattva*). This shows that he applied the story to the teacher of his own teacher, a Dharmapāla who had been a famous dignitary of the university of Nālandā in North India, and who must have flourished at the end of the 6th century. To him he would naturally and properly apply this title, which was used among the Mahāyāna Buddhists in a sense about equivalent to our honorary degree of D.D.

But it is much more probable that the Kāñchīpura *bhikkhus* told the story of their own distinguished

colleague, and that the pilgrim, who knew nothing of him, misapplied it.[1] In any case the two scholars are quite distinct. Their views differed as widely as those of a Calvinist and a Catholic; one wrote in Pāli, the other in Sanskrit; one was trained at Anurādhapura, the other at Nālandā; and the Pāli scholar was about a century older than the Sanskrit one, the one having flourished in the last quarter of the 5th cent., the other in the last quarter of the 6th.

The *Gandha-vaṃsa*, a very late librarian's catalogue, enumerates (p. 60) 14 works ascribed to Dhammapāla. Even the bare names are full of interest. Whereas Buddhaghoṣa commented on the five principal prose works in the Canon, seven of Dhammapāla's works are commentaries on the principal books of poetry preserved in the Canon, two others are sub-commentaries on Buddhaghoṣa's works, and two more are sub-commentaries on commentaries not written by Buddhaghoṣa. This shows the importance attached, at that period in the history of the orthodox Buddhists, to the work of re-writing in Pāli the commentaries hitherto handed down in the local dialects, such as Sinhalese and Tamil.

In his own commentaries, Dhammapāla follows a regular scheme. First comes an Introduction to the whole collection of poems, giving the traditional account of how it came to be put together. Then each poem is taken separately. After explaining how, when, and by whom it was composed, each clause in the poem is quoted and explained philologically and exegetically. These explanations are indispensable for a right understanding of the difficult texts with which he deals. The remaining three works are two commentaries on the *Netti*, the oldest Pāli work not included in the Canon, and a psychological treatise.

Of these 14 works by Dhammapāla, three (the commentaries on the *Therīgāthā* and on the *Peta-* and *Vimāna-vatthus*) have been published in full by the Pāli Text Society; and an edition of a fourth, his comment on the *Therīgāthā*, is being prepared. Hardy and Windisch, in their editions of the texts, have also given extracts from his comments on the *Netti* and the *Iti-vuttaka*.

It is evident, from Yüan Chwāng's account of his stay in the Tamil country, that in Dhammapāla's time it was preponderatingly Buddhist, and that of the non-Buddhists the majority were Jains. It is now all but exclusively Hindu. We have only the vaguest hints as to when and how this remarkable change was brought about.

T. W. RHYS DAVIDS.

DHARMA.—Sacred law and duty, justice, religious merit. This is one of the most comprehensive and important terms in the whole range of Sanskrit literature. Indian commentators have explained it as denoting an act which produces the quality of the soul called *apūrva*, the cause of heavenly bliss and of final liberation. In ordinary usage, however, it has a far wider meaning than this, and may denote established practice or custom of any caste or community. One of the six systems of philosophy, the *Pūrvamīmāṃsā*, expressly professes to teach *dharma*. The special manuals of the sacred law, of which the Code of Manu is the most familiar example, are called *dharmaśāstra*, 'lawbooks,' or *smṛti*, 'records of tradition.' Dharma personified is the god of justice and judge of the dead. Adharma, the god of injustice, is his adversary. The ordeal of Dharma and Adharma consists in drawing lots from an earthen vessel. One lot contains a white figure of Dharma, and the other a black figure of Adharma. In Buddhism, Dharma is one of the three members of the trinity (*triratna*, 'the three jewels'): Buddha, the law, and the priesthood. The worship of Dharma, which is largely prevalent in Western Bengal at the present day, appears to be a remnant of Buddhism. See *Census of India*, 1901, vol. vi. p. 204; cf. LAW AND LAWBOOKS (Hindu).

J. JOLLY.

[1] This question is discussed at length by E. Hardy in *ZDMG* li. (1898) 100–127.

DHINODHAR.—A sacred hill in Western India situated in the State of Cutch. A ridiculous legend explains the name to mean 'the patiently bearing,' because the saint Dharamnāth, weighed down by the load of his sins, determined to mortify the flesh by standing on his head upon some sacred hill. Two hills burst asunder under the weight of his iniquities; but Dhinodhar stood the test, and thus gained its name. The saint founded a monastery here and established the order of the Kanphaṭā, or 'ear-pierced' Jogīs. The stone on which the saint is reported to have done penance is smeared with vermilion and venerated, and the head of the community when he comes to worship is received with adoration by the people of the neighbourhood and by pilgrims who flock to the holy place.

LITERATURE.—*Bombay Gazetteer*, v. [1880] 220.

W. CROOKE.

DHYĀNA (Pāli *jhāna*).—**1. Meditation,** or **dhyāna,** in Sanskrit.—This is a religious practice which presupposes a life in retirement, and concentration of mind upon a single thought. In the Rigvedic period we find penance (*tapas*) or bodily mortification,[1] but in the Upaniṣad or post-Upaniṣad religious schools the idea was transferred from body to mind, until it took the form of *dhyāna*, which began with a meditation on the sacred syllable *Om*. The object, method, and other details of meditation vary in different schools, but we may safely say that it has been and is the universal method of the mental culture of all Indian religious schools. The use of the word *dhyāna*, too, is not very definite even in the Upaniṣads themselves. Sometimes it is different from *yoga* (concentration), which is a general term for such practices, or synonymous with it, or sometimes it is a part of the *yoga* practice. See art. YOGA. We shall here limit ourselves to the idea of *dhyāna* in Buddhism.

2. Dhyāna and samādhi.—In Buddhism *dhyāna* forms an important factor in religious practice. First of all, we must clearly distinguish *dhyāna* (meditation) from *samādhi* (absorption), for a confusion of the two terms often leads to hopeless misunderstanding. Generally speaking, meditation on an object becomes absorption when subject and object, the meditater and the meditated, are so completely blended into one that the consciousness of the separate subject altogether disappears. To attain Arhat-ship is to reach the tranquil state of *samādhi* without being affected at all by outward environment and inward sinful thought. An Arhat is accordingly called the *Samāhita* ('tranquil'). *Samādhi* forms the fourth factor of the Five Forces (*bala*) and the Five Faculties (*indriya*); the sixth of the Seven Constituents of Bodhi (*bodhyaṅga*); and the eighth of the Noble Eightfold Path (*mārga*).[2] To attain *samādhi* is therefore the sole object of Buddhists, and *dhyāna* is one of the most important means leading to that end. The common classification of *dhyāna* into four degrees (see below) probably prevailed already in the pre-Buddhist period. At any rate the mention of the fourfold *dhyāna* in the *Mahābhārata* (XII. cxcv. 1), the counting among heretics of

[1] *e.g.* Rigv. x. 109. 4, 154. 2, etc.

[2] See *Mahāvyutpatti*, §§ 41–44; and Childers, *Pali Dict.* 1875, *s.v.* 'Bala,' 'Indriya,' 'Bojjhaṅga,' and 'Magga,' and cf. art. SAMĀDHI.

those who regard each of the four *dhyānas* as the state of Nirvāṇa in the *Brahma-jāla-sutta*, and the reference to a Ṛṣi, senior to the Buddha, practising the eight *samāpattis* (four *dhyānas* and four *ārūpyas*) in the *Jātaka*, seem to point to the fact that the practice of the four *dhyānas* was common to both Brahmans and Buddhists. It was the Buddha's part to adapt it by adding some further steps to the four *dhyānas*.[1]

3. Religious practices preliminary to dhyāna.—*Dhyāna*, as stated above, is divided into four degrees in Buddhism. Even the first and lowest of the four *dhyānas* corresponds in its quality to a state higher than the sixth of the eight constituents of *yoga* (*yoga-aṅga*). To reach the first *dhyāna* several preliminary practices are needed. These correspond to the first five constituents of *yoga*. First of all one has to keep precepts and rules (*śīla*) laid down by the Buddha (*yama* of the *yoga-aṅgas*); secondly, to keep one's body and mind pure and serene, living in solitary retirement away from the people, in a forest or a cave (*niyama*), and sitting cross-legged, always thinking on a religious subject (*āsana*). There are several methods of preparatory meditation, according to the ability of the meditater. We shall give a few examples. A quick-tempered novice should practise the meditation on love (Pāli *mettā-karuṇā-bhāvanā*), in which he is to regard all sentient beings as his parents or brothers, desiring their happiness and welfare, as all the good he would seek for himself. A novice who needs concentration of attention should practise at first the method of counting the number of his inspirations and expirations (Pāli *ānāpāna-sati*, corresponding to the *prāṇāyāma* of the *yoga-aṅga*). Another novice whose impure desire is hard to suppress should meditate on the impurity and impermanence of the human body (Pāli *asubhā-bhāvanā*). Another novice whose mind is stupid should practise self-culture by meditating on the Twelve Chains of Causation. In this way a Buddhist should give himself to some kind of meditation at the outset. Ten *kasiṇas*,[2] ten *anussati*,[3] four or six *anussati-ṭṭhānas*,[4] in fact, the processes of the so-called *kamma-ṭṭhānas* (analytic meditation), are all preparatory to the practice of the right *dhyānas*.

4. Details of the four meditations.—When one gets accustomed to a concentration of mind amounting to a suppressing of the senses, one gradually attains the state of ecstasy, which is often compared with the feelings of a debt being paid off or of a prisoner being released (e.g. *Sāmaññā-sutta*). Roughly speaking, this state of ecstasy is *dhyāna*, yet in it we have still four successive states. (*a*) The first *dhyāna* is a state of joy and gladness born of seclusion, full of reflexion and investigation, the meditater having separated himself from all sensuality and sin. (*b*) The second *dhyāna* is a state of joy and gladness born of deep tranquillity, without reflexion and investigation, these being suppressed; it is the tranquillizing of thought, the predominance of intuition. (*c*) In the third *dhyāna* the meditater is patient through gladness and the destruction of passion, joyful and conscious, aware in his body of that delight which the Arhats announce, patient, recollecting, glad. (*d*) The fourth *dhyāna* is purity of equanimity and recollection, without sorrow and without joy, by the destruction of previous gladness and grief, by the rejection of joy and the rejection of sorrow.[1]

Childers (p. 169) explains the four states with reference to the process of meditation:—'He concentrates his mind upon a single thought. Gradually his soul becomes filled with a supernatural ecstasy and serenity, while his mind still reasons upon and investigates the subject chosen for contemplation; this is the first *jhāna*. Still fixing his thoughts upon the same subject, he then frees his mind from reasoning and investigation, while the ecstasy and serenity remain, and this is the second *jhāna*. Next, his thoughts still fixed as before, he divests himself of ecstasy, and attains the third *jhāna*, which is a state of tranquil serenity. Lastly, he passes to the fourth *jhāna*, in which the mind, exalted and purified, is indifferent to all emotion, alike of pleasure and of pain.'

This has been very conveniently summed up by Pāli commentators as follows:—'The first *jhāna* is accompanied by reflexion (*vitakka*), investigation (*vichāra*), joy (*pīti*), gladness (*sukha*), and attention (*chittekaggatā*); the second *jhāna* is accompanied by joy, gladness, and attention; the third *jhāna* is accompanied by gladness and attention; the fourth *jhāna* is accompanied by indifference (*upekha*).'

The four thus form progressive steps of meditation in which we can go up step by step. Each of the first three is further divided into three orders —initial (*paritta*), medial (*majjhima*), and final (*paṇīta*); the fourth *dhyāna* alone is the immovable state, free from all the eight troubles—inspiration, respiration, reflexion, investigation, sorrow, pleasure, pain, and joy.

The Buddhist cosmological arrangement of *Rūpa-loka* (world with form), divided into sixteen heavens, is made to suit those who have attained the four *dhyānas*, and who can freely enjoy the heavenly life either before or after death. The state of *samādhi* resulting from each of the four *dhyānas* determines one's position in the heavens, which are generally assigned as follows:—

Rūpa-loka-heavens.[2]

1. Brahma-pārisajjā devā		First Dhyāna heavens.
2. Brahma-purohitā	,,	
3. Mahābrahmā	,,	
4. Parittābhā	,,	Second Dhyāna heavens.
5. Appamāṇābhā	,,	
6. Ābhassarā	,,	
7. Paritta-suhhā	,,	Third Dhyāna heavens.
8. Appamāṇa-subhā	,,	
9. Subha-kiṇṇā	,,	
10. Vehapphalā	,,	Fourth Dhyāna heavens.
11. Asaññā-sattā	,,	
12. Avihā	,,	
13. Atappā	,,	
14. Sudassā	,,	
15. Sudassī	,,	
16. Akaniṭṭhā	,,	

5. The effect of meditation.—The aim of meditation is the attainment of Arhat-ship, perfect enlightenment, which possesses the following merits. (*a*) Extinction of desire (*taṇhā*). The fickle thought and indulgence of physical power produce sin and illusion, which are the chief obstacles to the acquisition of Arhat-ship. The complete annihilation of sinful thought, *i.e.* the state of the fourth meditation, will lead to perfect enlightenment, the highest aim of the Buddhist. The first three *dhyānas* therefore belong to *sekho* (the first seven grades of the Holy Paths), while the fourth belongs only to an *asekho*, i.e. an Arhat.

(*b*) Consolidation of knowledge (*ñāṇa-dassana*). The practice of *dhyāna* will naturally lead to the easy concentration of the mental faculties on a certain thought, and strengthen special functions proper to the consciousness. The right understanding of the Four Noble Truths (*ariya-sachcha*), the cultivation of the four *appamaññā*,[3] etc., can

[2] Childers, *s.v.* It is a mystic meditation in which one reduces the universe to any of the ten predominant ideas, viz. earth, water, fire, air, ether, blue, yellow, red, white, black.

[3] Childers, *s.v.* 'Kammaṭṭhāna.' It is a remembrance of Buddha, *dharma*, *saṅgha*, precepts, gifts, gods, breaths, body, death, and nirvāṇa.

[4] Childers, *s.v.* It embraces recollections of Buddha, *saṅgha*, *dharma*, precepts, gifts, and gods.

[1] Rhys Davids, *Buddhism*, London, 1899, pp. 175–176.

[2] Buddhist cosmology assumes the existence of three heavenly worlds: (1) *Kāma-loka* (world of love), consisting of six grades; (2) *Rūpa-loka* (world of form), in sixteen grades; and (3) *Arūpa-loka* (world without form), in four grades. The last can be enjoyed only by one who has reached Arhat-ship. See, further, art. Cosmogony and Cosmology (Buddhist).

[3] *Appamaññā* is the unlimited exercise of the qualities of friendliness (*mettā*), compassion (*karuṇā*), goodwill (*muditā*), equanimity (*upekhā*).

be attained only by the practice of *dhyāna*. Especially the all-important *appamaññā*, which is common to Buddhism and the *yoga* philosophy, can be exercised only by the medium of *dhyānas*. In short, the attainment of knowledge cannot be perfectly accomplished, according to the Buddhist theory, without practice of meditation.

(*c*) Acquisition of superhuman faculties (*iddhi*). There are six supernatural powers (*abhiññā*), viz. various magical powers (*iddhividhā*), divine ear (*dibbasota*), divine eye (*dibbachakhu*), knowledge of the thought of others (*parachittavijānana*), knowledge of the former existences (*pubbenivāsānussatiñāṇa*), and knowledge which causes the destruction of human passion (*āsavakkhayakara-ñāna*). These may be perfected by meditation. The *Yogins*, too, expect *vibhūti* (superhuman faculties) by means of meditation.

(*d*) Enjoyment of the peace of *dhyāna*. Meditation gives the tranquillity of rest. The dying Buddha is said to have sunk in meditation and passed all its steps forward and backward, till at last he reposed at the fourth meditation, and then went into the Great Decease (*Parinibbāna*).[1] *Dhyāna* is practised by one with the purpose of cultivating oneself, but at the same time with the aim of reposing oneself in peace, utilizing the result of it. Therefore it is sometimes called the 'practice of great enjoyment' (cf. *Brahmavihāra*).

6. Development of the idea of meditation.—*Dhyāna* in primitive Buddhism is a means of attaining *samādhi*. In the Mahāyāna school its scope has been very much widened. The *dhyānapāramitā*, the fifth of the six *pāramitās* (perfections) is only the way for the Bodhisattvas or Mahāyānists, but not for an Arhat or Hīnayānist. One of Nāgārjuna's works[2] enumerates sixteen kinds of *dhyāna* confined to Bodhisattvas. Asaṅga's *Yogāchārabhūmi* mentions nine *dhyānas*, and again subdivides them into thirty-nine.[3] Further, in the *Laṅkāvatāra sūtra* (ch. 2), *dhyāna* is divided into four: (1) *bālāpichārika*, 'practised by ordinary persons'; (2) *arthapravichaya*, 'contemplating of objects'; (3) *tathatālambana*, 'meditating on Truth'; (4) *tathāgata*, 'meditation of Buddha.' The four *dhyānas* of primitive Buddhism as well as those of the Yogins are all included in the first category, the remaining three being a development in the Mahāyāna schools.

The ideal of early Buddhism is the equilibrium of morals (*śīla*), meditation (*dhyāna*), and knowledge (*prajñā*); but in later Buddhism the balance was not supposed to be an important feature for a Buddhist, and meditation came to have more weight than the other two factors, until in China and Japan there arose a sect, the Zen (Japanese for *dhyāna*), in which it is the most essential part of the entire teaching. This sect has been gaining ground more and more, especially among the upper classes. See art. ZEN.

LITERATURE.—The literature has been indicated throughout the article. M. ANESAKI and J. TAKAKUSU.

DIGAMBARAS.—The Digambaras, also called Digvasanas, form one of the two branches of the Jains. The name, lit. = 'clothed in the quarters of the sky,' designates them as naked monks, in contradistinction to the monks of the other branch of the Jains, the Śvetāmbaras, who wear white clothes. There is very little difference between these two branches as regards the creed; indeed, one of the most authoritative books of the Digambaras, the *Tattvārthādhigama Sūtra* by Umāsvāti, is also one of the standard books of the Śvetāmbaras, and its author most probably was a Śvetāmbara.

[1] Cf. Warren, *Buddhism*, Camb., Mass., 1896, p. 109 f.
[2] Nanjio, no. 1181. [3] *Ib.*, no. 1170, ch. 43.

The peculiar tenets of the Digambaras are the following. (1) Perfect saints (*kevalins*), such as the Tīrthakaras, live without food. (2) The embryo of Mahāvīra, the last Tīrthakara, was not removed from the womb of Devānandā to that of Triśalā, as the Śvetāmbaras contend. (3) A monk who owns any property, *e.g.* wears clothes, cannot reach Nirvāṇa. (4) No woman can reach Nirvāṇa. Though, therefore, the difference in matters of belief between the two sects is, from our point of view, rather trifling, still the division between them is very marked. The following points deserve to be specially noticed. The Digambaras disown the canonical books of the Śvetāmbaras, and contend that they have gradually been lost during the first centuries after the Nirvāṇa of Mahāvīra; accordingly they have no canonical books of their own. In consequence of their having, in early times, separated from the other sect and developed independently of it, the Digambaras have an ecclesiastical as well as a literary history of their own, and have religious ceremonies, especially with regard to the laity, which differ from those of their rivals.

As regards the origin of the Digambara sect, it is ascribed by the Śvetāmbaras to Śivabhūti, who started the heretical sect of the 'Boṭikas' in 609 after the Nirvāṇa, or A.D. 83. This report is denied by the Digambaras; they maintain that they have preserved the original practices, but that, under the eighth successor of Mahāvīra, Bhadrabāhu, a sect with laxer principles arose; and that this sect, which was called that of the Ardhaphālakas, developed 136 years after Vikrama, or A.D. 80, into the present sect of Śvetāmbaras (*ZDMG* xxxviii. [1884] 7 ff.).

The Digambaras are most numerous in Southern India, where they must have held an important position in the early centuries of our era; for in the literature of the Dravidian people the influence of Jainism is admitted by the specialists. It may be mentioned that the Digambaras have an extensive literature of their own, chiefly in Sanskrit, which goes back to a greater antiquity than that of the Śvetāmbaras, if we except the canonical books of the latter. For further details, the reader is referred to the art. JAINISM. H. JACOBI.

DINKA.—1. Geographical distribution and organization.—The Dinka are a congeries of independent tribes spread over a vast area, stretching from Renk in the north (scarcely 300 miles south of Khartum) to within 100 miles of Gondokoro, and reaching many miles to the west in the Bahr el-Ghazal Province. All these tribes call themselves *Jieng* or *Jenge*, corrupted by the Arabs into *Dinka*; but no Dinka nation has arisen, for the tribes have never recognized a supreme chief, as do their neighbours the Shilluk, nor have they ever been united under a military despot, as the Zulus were united under Chaka. They differ in manners and customs and even in physique, and are often at war with one another. One of the most obvious distinctions in habits is between the relatively powerful cattle-owning Dinka and the small and comparatively poor tribes who have no cattle and scarcely cultivate the ground, but live in the marshes in the neighbourhood of the Sudd, and depend largely for their sustenance on fishing and hippopotamus-hunting. Their villages, generally dirty and evil-smelling, are built on ground which rises but little above the reed-covered surface of the country. The members of these poor tribes call themselves Moin Tain, *i.e.* 'Tain people,' *tain* meaning a piece of dry ground in the midst of the marshes; and, although many quite distinct tribes live in the marshes and lead the life this habitat entails, their cattle-owning neighbours

speak of them all as Moin Tain, just as they speak of themselves by their tribal names, *e.g.* Agar, Bor, Aliab, and Shish.[1]

As there has been room for considerable modification in the development of those common ideas which lie at the root of the social organization and religious beliefs of all Dinka, the writer of the present article indicates the source from which his information was obtained, whenever there is any probability that a custom is not universal among them. The information is derived principally from members of the following tribes: (1) the Shish, living near Shambe in the region of the Sudd; and (2) the Bor Dinka and the Chiro and Ngong Nyang tribes of the Moin Tain, living some 20 to 30 miles to the south of the Sudd. He has also had the opportunity of discussing various matters with some very intelligent Niel Dinka from the neighbourhood of the Khor Adar, near Melut, north of Kodok; with the Nok Dinka of the neighbourhood of Lake No; and with some Agar Dinka from the Bahr el-Ghazal Province serving in the Xth Sudanese Battalion.

Each community is largely autonomous, under the leadership of a chief or headman (*bain*), who, though primarily a spiritual ruler, controls the village with the help of the elders. The actual authority exerted by the *bain* varies enormously; in many communities he is little more than the local magician, but in one community in each tribe he is the hereditary rain-maker, the most important man in the tribe, who is consulted and deferred to on every occasion, and whose wish is law. Except among the Tain tribes, cattle form the economic basis of Dinka society; they are the currency in which bride-price and blood-fines are paid; and the desire to acquire a neighbour's herds is the common cause of those inter-tribal raids which constitute Dinka warfare.

2. Totemism.—The Dinka tribes are divided into a number of exogamous clans which the Bor Dinka call *ut*, the Tain and Aliab *gol*, and the Shish *deb*. The meanings of these words cannot be discussed here, though it is significant that among the cattle-owning tribes these same terms are also used for the cattle kraals of their clans. The Dinka are totemistic, and the large majority of their clans speak of certain animals as their 'ancestors,' *kwar* being the word used by the Tain tribes. Usually the *kwar* has nothing to do with a man's personal name (one man whose name signified hyæna had a crocodile as his *kwar*), but, in the words of one of the writer's Tain informants, it is the 'animal who is the spirit (*jok*) of the clan (*gol*).' Further, *ruai*, the ordinary word meaning 'related,' is used when speaking of the bond between a man and his *kwar*, i.e. they are *ruai*, 'relatives.' No man injures his *kwar* animal, but all respect it in various ways. Sometimes the *kwar* is a plant, as among some Agar and Shish clans, who treat the totem plant with much the same reverence as is commonly shown to the totem animal. Besides these fairly typical totem ancestors, there are clans whose totems (*kwar*) do not belong to the animal kingdom; thus the Mai clan of the Bor Dinka have fire as their totem, and in this case there is no story of direct descent from fire. Certain clans have as *kwar* heroes to whom more than human wisdom is attributed, or who came among them under circumstances that betoken that they are superhuman. The clans are usually designated by the name of their (reputed) first human ancestor; comparatively few are spoken of by the name of their animal, though there is a Niel (snake) clan, and even a Niel tribe, in the neighbourhood of the Khor Adar Dinka.

[1] The writer takes this opportunity of expressing his thanks to the Rev. Archibald Shaw, in charge of the C.M.S. station at Malek, for his invaluable help among the Tain and Bor Dinka, whose language he speaks fluently; to him he is indebted for the translation of the majority of the Dinka words and phrases in this article. No attempt has been made to do more than to reproduce very roughly the sound of the Dinka words. In pronouncing *c* and *j* a Dinka presses the tip of his tongue into the gap left by the removal of his lower incisor teeth, and it seems doubtful whether there is a true *s* sound in Dinka, so that 'Shish' might be written (probably with a nearer approach to accuracy) 'Chich' or 'Twich.'

Most of the Dinka clans whose *kwar* is an animal derive their origin from a man born as one of twins, his fellow-twin being an animal of the species which is the totem of the clan. Sometimes the association is not quite so close, in which case the totem animal usually lays certain commands upon one of the members of the clan, offering in return certain privileges. Commands and privileges alike show the close relationship existing between the animal and the man to whom he speaks, who is traditionally looked upon as the ancestor of the clan. Although children take their father's totem, they respect their mother's totem animal or plant, and an animal may be avoided for several generations for this reason. Thus, a man whose paternal grandmother had the poisonous snake *anong* as totem said that, if he saw any one kill a snake of this species, he would bury it, because it was the *jok* of his father's mother. Further, it is customary for men and women to avoid eating their spouses' totem animal.

The following information concerning the origin of their totems was obtained from men of the Ngong Nyang tribe. It will be noted that the clans are not called by the name of their totem animal, but by that of their legendary human founder.

Gol ē Mariak.—This clan has as totem the snake (*niel*). Long ago a snake came into the hut of a man named Mariak, and there gave birth to its young. The snake spoke to Mariak, telling him not to hurt it or its children: 'If you see a man hurt one of my children, tie the mourning band of palm-leaf round your head.' Another informant who belongs to this clan said that his snake would come into his hut at night and talk to him. He declared that this did not occur in a dream, but that the snake really entered his hut, and he offered it boiled fish or hippopotamus meat, turning this out on the floor of the hut for the snake to eat. He said that he occasionally sacrificed a goat to his snake and made offerings of goats' milk. Another Ngong Nyang man gave the following account of his conduct towards snakes of the *aro* species, his mother's totem animal. If he saw one of these snakes in the forest, he would sprinkle dust on its back, for otherwise the snake might upbraid him for lack of friendliness. If the snake were angry and tried to bite him, dust sprinkled on its back would propitiate it; but, if he could not appease it and it bit him, he and the snake would both die. If the snake bit a man of a strange clan, the man would die, but not the snake, for the snake and the folk of foreign clans are not related (*ruai*). His children show the same reverence for this snake as he does, and so also do all descendants of one Nyal, with whom the snake first made friends. Nyal was sleeping in his hut when a snake (*aro*) crept in, and, seeing him sleeping, slipped in between his body and the ground for warmth. Nyal woke up, but the snake did him no harm. Then Nyal took some fat and put it upon the snake's tongue, which so pleased it that it stayed in the hut many days. Nyal fetched a *tiet* (on whom see below, § 4), and 'the snake went into the throat of the *tiet*,' and said: 'I do not desire any evil; do you give me fat like this, and I shall be well pleased.'

Gol Akōn Chang Jūrkwait.—Akōn Chang Jūrkwait was the name of the boy born to one Nyanajok Alērjok as one of twins, his fellow-twin being an elephant. The boy was brought up in the village in the usual way, but the elephant was turned loose in the jungle.

Gol ē Luel has the crocodile for totem. Long ago Luel found the eggs of a crocodile; he put them in his canoe, and, when he reached home, buried them under the floor of his hut. One night, as the eggs were on the point of hatching, the old crocodile came and scratched them up, and then led the young to the river. Before leaving the hut, the crocodile said to Luel: 'Do not hurt us, and we will not hurt you. Wear mourning on your head and stomach for the crocodile, if any of you see another man kill one.' A man of this clan will not hesitate to swim in the river even at night, for the crocodiles will not hurt him.

Gol ē Yukwal ē Lukab ē Lerkwē has the hippopotamus as totem.

Gol ē Yichol has the lion as totem, the founder of this clan having been the twin-brother of a lion. One Chol, a man who lives in Yelakort village, belongs to this clan. When others have to barricade themselves in their houses, he can sleep out in the open. When a lion kills game, it calls to Chol at night, who goes out next morning and finds the meat; and, when he kills a hippopotamus, he leaves some of the meat in the forest for the lions. If Chol were not of the party, no one would touch a lion's kill, for to do this would offend the lion, who would then attack them; but, if Chol were with them, no one would hesitate to take the meat. If a lion suffered from a splinter of bone or portion of gristle becoming wedged between its teeth, it would roar round the hut in which Chol lay, until he came out and removed the source of its discomfort.

Similar beliefs occur among other Dinka tribes. The Ramba clan of the Niel tribe derives its name from that of an ancestor

who was born as one of twins, his fellow being a snake called *Gor*. Gor was placed in a large pot of water, but he soon died; so a bullock was killed, and the body of Gor was prepared for burial by being smeared with dung and wrapped in the skin of the sacrifice. This was at Anako, where there is still a shrine to which sick people go in order to sacrifice. A Shish man having as totem the poisonous snake *anong* said that, though this snake might bite him, the wound would give him little trouble, and he would certainly not die, as would men of other clans.

The Niel Dinka have a number of stories concerning animal ancestors which refer to a time when animals and men who had long been associated together in groups began to separate. When each class began to go its own way, it was thought well that men should know which animals had been their particular friends.

One of these stories relates that once, long ago, a woman lay sleeping, when a hyæna ran up and leapt over her. Some of her people wanted to kill the animal, but others restrained them, saying that it was there for some wise purpose. When her child—a boy—was born, he limped like a hyæna, so he was named *Den*, which is one of the names of the hyæna, and his descendants have the hyæna as their totem animal.

According to the Niel, all Dinka recognize two kinds of lions, viz. man-eaters, which are not considered relations even by men of the lion totem; and a cattle-eating variety, which the lion men believe to be of one blood with themselves. The lion people occasionally feed the cattle-killing lions. They kill a sheep and cut it into joints, which are placed upon an old bullock skin, taken a little distance from the village, and left there. The clansmen pray that the lions may come and eat; but, if the food has not been taken after a few hours, it is eaten by the men themselves. Man-eaters are killed without scruple, when opportunity occurs. Fox men feed their totem animal, throwing down fragments of meat on the outskirts of the village; and hyæna men treat hyænas in the same way. It is said that formerly it was a common practice to expose pieces of meat where the totem animals could find them, and that sacrifices were offered to them; these customs, however, seem to be observed no longer, though it is alleged that they might still be performed in times of great difficulty and danger.

The writer has no record of plant totems among the Tain Dinka, but there is a tree called *rual*, bearing fruit supposed to resemble a woman's breast (the Sudanese Arabs call it *Abu shutūr* for this reason). Among the Agar and Shish Dinka this tree is considered an ancestor, and is treated with the respect shown to other totems. Two Agar men, whose mothers had *rual* as their totem, would neither come into any contact with the tree nor use its fruit as a ball, as other clans would do. If they disregarded this prohibition, their eyes would become inflamed. Among the Shish Dinka there is a clan, or perhaps a family, which claims descent from a girl who was twin to a gourd plant. Its members do not care to drink from a newly made gourd-vessel, and apparently do not grow gourds, or, if they grow them at all, do so sparingly.

The account given above, of the reciprocal favours conferred by lions and by Chol of the lion clan, raises the question whether all folk of this clan possess the powers exercised by Chol and enjoy the same privileges. The writer was not able to investigate this matter among the Tain Dinka, but some Niel Dinka gave the fullest details of how they would leave flesh in the jungle for their carnivorous totem animals, without receiving any corresponding favours from the latter. This suggests that Chol was regarded as possessing certain powers not shared by all his clansmen, an idea which is strengthened by information given by some Agar Dinka from the Bahr el-Ghazal, one of whom said that his totem (which he called an ancestor) was a small bird, *amur*, which damages the corn crop. No doubt *amur* is one of the small birds called *dura*-birds in the Sudan, thousands of which infest the corn fields, where they do much damage. When these birds become dangerous to the unripe crop, the informant's grandfather would take a head of *dura*, some porridge made from the old crop, and two sheep, one black, the other white. The white sheep was killed and the meat given to the men of other clans; the black sheep was thrown into the river with the porridge and the unripe head of *dura*. Although the sheep was not tied up, it was said to sink immediately, for the 'river people'[1] took it. The man who makes the porridge does not taste it, nor does he eat of the flesh of the sheep given to the other clans. This ceremony prevents the birds from injuring the crop. It is performed by one man only, who is head of the clan, and who would teach the procedure to one of his sons, or perhaps to a brother.

Among the Dinka living in the neighbourhood of the Khor Adar there are certain clans which do not trace their descent to an animal, but to a human being possessed of super-human or non-human qualities.

Long ago, men and women of the 'river people' would sometimes come out of the river, marry, and settle down in the neighbouring villages. The description of the coming to land of one of the 'river people' is curiously like the birth of a child; the river becomes agitated, and the waters rise up around a human being whose umbilicus is joined by a cord to a flat object beneath the water. The cord is cut, and bullocks are killed and thrown whole into the river; then the river man or woman is brought, with more sacrifices, to the village. Their descendants should sacrifice on the bank, throwing a live cow into the river, after giving it a pot of milk to drink, into which the old and important men of the clan have spat. At the present day the men of the Faiyer clan of the Denjol tribe, who trace their descent from a river man, do no more than throw the head and bowels of a bullock into the river, cooking the meat and eating it themselves.

The Boweng clan of the Niel Dinka appear to have the river for their totem.

Long ago a party coming to the river saw a beautiful girl called Alek borne up by the water and carried on to the bank. She accompanied them to the village, but, when they tried to touch her, she became liquid as water; so, taking bullocks and cows, the villagers escorted her back to the river, where they sacrificed the cattle. As they did this, the girl disappeared into the river, taking a calf with her. At the end of the rains, the Boweng clan still take a cow and her calf and a bullock, and kill the latter on the river bank, while the cow and calf are thrown alive into the river, which takes them away, so that they are never seen again.

There is some evidence that, when a clan is particularly strong in a given locality, its members tend to forget that their totem is but one among many, so that they may show annoyance if other folk do not treat it with respect.

The Shish in the neighbourhood of Shambe said that the first people to settle there were snake men, and that for some time they formed the majority. After a time the crocodile clan became powerful, and, because its members killed and ate snakes, the men of the now weakened snake clan left the country and went to live among a group of Aliab Dinka, where they were free from the horrible odour of cooked snake's flesh. More recently a Shish family, belonging to a clan that does not eat the fish *shur*, left their own tribe and went to live at a place called Dot, among a group of Bor Dinka who also respect this fish.

Besides these clans with more or less typical animal ancestors (totems), certain groups of people, often larger than a clan, revere particular objects which they also speak of as their 'ancestor.' A stone called Madwich, which the Tain say fell from the sky within the past twenty years, is an example of this. The group that reveres Madwich is smaller than a clan, for its cult appears to be limited to members of a part of the Pariak clan (of one of the Tain tribes), whose totem is the snake (*niel*).

A youth of about twenty, who was named Madwich after the meteorite, said that his father sacrificed many oxen when the stone fell, though the rest of the village did not concern themselves so deeply, and that at the present time his family alone pay constant attention to Madwich. The stone, which is now at Pariak village, fell before his birth, but after that of his elder brother. When it fell, 'every one,' including his parents and even the dogs, except his elder brother, became *muol*. This word is applied to the possession of a *tiet* by a spirit; perhaps it has a slightly different meaning in this instance; at any rate, the fact that the informant's elder brother did not become *muol* was taken to show that he was 'a child of the stone.' When the stone fell, a few men and many cattle died of a disease called *abut puo* (lit. 'swelling of the heart'), which was considered to be due to the *jok*, and sacrifices were offered in the usual way. The coming of the meteorite Madwich is said to have been prophesied by a *tiet* called Jalang, who was killed during an Arab raid; and the stone itself was thought to have the powers and attributes of an animal ancestor. Thus it might make men ill in order that a sacrifice might be offered, and it would communicate its wishes through a *tiet* in the usual way, asking that a bullock should be killed.

Another meteorite, said to have been found near the Tain village of Agho, is called Dek, and is regarded as the 'ancestor' of the two clans Jakchir and Chulil living in the village, whence have sprung settlements which in turn have given rise to other

[1] On the river people, see, further, pp. 710[1], 711[a].

villages, the inhabitants of which together constitute the Chiro tribe. All the Chiro clan revere Dek, though their members have animal totems of the usual Dinka type.

Some of the Bor Dinka speak of Lerpiu as their *kwar*; but this is an example which is very far from typical, for Lerpiu is both a spear which fell from the sky six generations ago, and a spirit immanent in every rain-maker of the Bor tribe, and is one of the most powerful of their *jok* (see below, § 4). It is clear that Lerpiu is not homologous with the ordinary Dinka totems; in his spear form he corresponds with the meteorite Madwich. His adherents, the family in whose succeeding generations he is immanent, have the elephant as their totem.

Finally, there is evidence that, apart from meteorites and other unusual *kwar*, some of the clans of the Tain Dinka have, or had, more than one totem.

The members of the Chiro, Ngong Nyang, and Pariak tribes consider the fish *rechol* an ancestor, telling the usual story that their ancestor was born as a twin of the fish, the latter being taken to the river, where he instructed mankind that, in spite of the relationship existing between them, they might catch and eat his descendants. There can be no doubt that the relationship still acknowledged as existing between the fish and the members of these tribes is but the shadow of the normal totemic relationship that formerly existed; nevertheless the rings that Apuot threw into the river (see below) indicate that, shadowy as the relationship is, it is not utterly ignored in practice.

It will be noted that all these examples of unusual 'ancestors' are said to have fallen from the skies. The absence of stone in the Dinka country (perhaps this applies only to those tribes living near the Nile) would easily lead the Dinka to seek a supernatural origin for any fragments they might find, while the importance of rain and the reverence they pay to Dengdit who is above, as well as the striking appearance of a falling star, could scarcely fail to suggest to them that so strange an object had come from the skies. Once this view is entertained, it is but natural that the marvellous objects should be spoken of by the most holy term known, namely that applied to the revered animal ancestors of the tribe.

3. The worship of Dengdit.—The Dinka are a deeply religious people. They worship a high god, Dengdit, lit. 'Great Rain,' sometimes called Nyalich, and a host of ancestral spirits called *jok*. The name Nyalich is the locative of a word meaning 'above,' and, literally translated, signifies 'in the above.' It is not used, however, except as a synonym for Dengdit, and the common beginning of the prayers of the Tain and Bor Dinka is *Nyalich ko kwar*, 'God and our ancestors.' This phrase indicates the two main elements of their religious faith and their relative importance, for there is no doubt that Dengdit (Nyalich) is greater than the *jok*. It was he who created the world, and established the order of things, and it is he who sends the rain from the 'rain-place' above, which is especially his home. Nevertheless, in the ordinary affairs of life the *jok* are appealed to far more than Dengdit, and in some cases in which the appeal is nominally made to Dengdit, its form seems to imply that he has been confused with the *jok*. Among the Tain tribes there is a word *ram* or *aram* which is called out to the new moon, and seems to be an expression of greeting or praise, or perhaps is used to deprecate anger.

It will be convenient to consider the worship of Dengdit and the cult of the *jok* separately, though it must be realized that they constantly touch, and even overlap, each other. The Southern Dinka (to whom the following specially refers) do not appear to use set forms of prayer, but seem to ask in ordinary simple sentences that their immediate want may be granted. They also have a number of hymns which are sung when an ox is slaughtered to avert drought or sickness; but, as Mr. Shaw informed the writer, men sing them when doing light work, and lately during a severe thunderstorm every one joined in lustily to appease the elements. They also burst into one of these songs when bidding farewell to the Sirdar who visited them recently. The following songs collected and translated by Mr. Shaw were composed by the *tiet* Wal of Bang village, who asserts that his spirit is Deng, *i.e.* Dengdit (see below, § 4). It must be noted that in Dinka hymns Dengdit habitually speaks of men as ants (*aichuk*).

Deng Wa ka loin te lar ror
Deng Wa ka loin te lar ror
Bainh achi a lalech
Muka Wa apuoth a muk we lienkwa
Muka Deng apuoth a muk we lienkwa.
'Father Rain falls into a solitary place.
Father Rain falls into a solitary place.
The Lord was in untrodden ground.
Hold the Father well, He holds our few souls.
Hold the Rain well, He holds our few souls.'

In a variant of this hymn 'Creator' is substituted for 'Rain' in the second and fourth lines. In the next two hymns it is clearly the Creator who speaks.

Aichungdia gau gut ko thain ye thar
Aichungdia gau gut ko thain ye thar
Cha gwobdia ye ran
Cha gwobdia yen e nhyor e gau-e.
'My ant hoes the marsh grass and rests hand on hip.
My ant hoes the marsh grass and rests hand on hip.
Have I not given of my substance to man?
Have I not given of my substance to the spikes of the marsh grass, alas!'

Ye yenga bi dol?
Y'aichung e wang k'aichung e rie
Yenga bi nong bai?
Man aichung nhom
Ye yenga bi dol?
Y'aichung e wang k'aichung e rie
Aichuok a lo ne Deng nhom
Ko bainh e rec aken tuol
Chamku yai
Bainhdan e rab aken tuol
Chamku yai.
'Who will laugh?
The cattle-ant and the ant of the boat (*i.e.* the Cattle Dinka and the Tain Dinka).
Who will possess a homestead?
Unite the ants to a head.
Who will laugh?
The cattle-ant and the ant of the boat.
The ants have gone to Rain (as their) head
And the Fish-lord has not appeared.
Let us worship.
Our Dura-lord has not appeared.
Let us worship.'

The majority of Dinka have no legends of the origin of Dengdit, but they say that long ago he became angry with his wife Abuk, and in his wrath sent the bird *atoich* to sever the path between heaven and earth which had existed till then. In this account, as well as in one obtained by Major S. Lyle Cummins from the Nok Dinka of the Bahr el-Ghazal Province (*JAI* xxxiv. [1904] 157–158), Dengdit figures as a god, without beginning and with no expected end; but among the Niel Dinka he appears as a less remote being who at one time ruled his tribe in human guise, and so approximates to the superhuman ancestors described in the section on totemism (above, § 2). The Adero clan of the Niel Dinka have the rain (*deng*) as their totem, the reason being given as follows:

The first ancestor of the clan appeared from the sky as a young woman pregnant with her first child. The people reverentially formed a circle round her, killed bullocks, and then rubbed her from head to foot with the belly fat. Next they built a hut for her, but were so frightened that it was not like other *tukl*, for the door was omitted, or in some other way it was made difficult for her to leave it. In about a month her child was born, yet no one came to help her. Then she called to the people, who brought one white cow, one spotted cow, and one bullock: she told them to sacrifice these and then to come back to her. They found her nursing a marvellous babe with teeth like an adult, and whose tears were blood. Then the mother said to them: 'This is your *bain*, look after him well, for I can stay with you no longer.' As she spoke, the rain came down in torrents, and therefore the boy was called Deng (Rain) or Dengdit (Great Rain). He ruled them for a long time, and, when he was very old, disappeared in a great storm.

Offerings are made to Dengdit at certain shrines —perhaps they might be called temples—which seem to be scattered all over the Dinka territory. Most Dinka tribes have one shrine in their territory, and this is certainly the case among the Shish and Agar. Probably these differ little in appearance from the shrine of Lerpiu served by Biyordit (see below, § 5). It is true that neither Shish nor Agar made any mention of the existence of an *akoi* bush near the shrine, but perhaps too much stress should not be laid on this negative evidence, and a photograph of the great shrine at Luang Deng shows that this consists of three ordinary looking *tukl*. According to the Agar informants, one *bain* at Luong Ajok near Rumbek is in charge of a hut bigger than an ordinary *tukl* which is surrounded by a fence. This is called *luak* (not to be confused with a cattle *luak*); it is not a tomb, nor has any one been buried near it. The door is always shut, and may not be opened even by the *bain* (the high priest of the shrine and the rain-maker of the tribe) unless a sacrifice is made and milk is spilt in front of the door. In the shrine at Luong Ajok there are stools of copper and brass, shields, spears, sticks of rhinoceros horn, and a number of clay pots. All these things belong to Dengdit, who long ago came to earth bringing them with him. One morning the people found the *luak* built, and the stools and other things inside it, and decided that Dengdit alone could have done this, and that it was his place. Dengdit still lives in this shrine. The Shish say that there is a hut called *luak* sacred to Dengdit at Lau, within which are certain sacred spears and an iron rod, and a pot full of oil hangs from the roof; Dengdit is always there. The great ancestral rain-making ceremony of each tribe takes place at one of these shrines, as does the harvest ceremony held after the cutting of the *dura*; here, too, the Agar install their new rain-maker.

The shrine at Luang Deng[1] is one of the holiest existing among the Dinka, who visit it in large numbers. One of the three *tukl* is the house of Dengdit. The door is always kept shut, its guardians being certain men (and women?) who are regarded as being especially the servants of Dengdit. Only they may enter the shrine, but a man desirous of offspring may take cattle and offer them to Dengdit, asking that the desire of his heart may be granted. The door of the shrine is opened when one of the animals brought for Dengdit is slaughtered, and, looking in through the doorway, the worshipper sees in the darkness of the shrine, in spirit form, the shifting shapes of men and animals and even of abstract qualities —happiness, hunger, satisfaction, cattle-sickness—and among them he may see the eyes and umbilicus of a man. No sacrifice is made until Dengdit has sent a dream to the keeper of the shrine instructing him to accept the offering, so that worshippers are nearly always kept waiting for a few days. It is very rare for a sacrifice to be refused; but, if a man be dismissed without being allowed to sacrifice, he will soon die, or disease will attack his people. As the worshipper approaches, he is accompanied by two servants of the shrine, one on either side. A spear specially kept for the purpose is used for killing the victim, and the spirit of the animal goes to join the other spirits in the shrine.[2] Before the worshipper leaves the shrine, one of the servants of Dengdit takes dust from the holy precincts, and, mixing it with oil, rubs it over the body of the worshipper. Sometimes a material object such as a spear may be given to the man as a sign of favour and a guarantee that he will obtain his wish. Offerings such as pieces of tobacco may be thrown upon a low mound of ashes which has arisen in front of the shrine from the cooking of many sacrifices. The contents of the large intestine of the victim are scattered about and over this mound, and near it the worshippers thrust the branch of a tree called *akoch* into the ground. It did not appear that any attention was paid to the fate of this branch, though it was said that it might take root and grow.

Among the Shish, certain men who lived long ago were spoken of as 'the sons of Dengdit,' though this expression must not be considered to imply any physical relationship; it seems that the Shish considered these 'sons' as spirits who came from above to possess certain men who became known by their names — Walkerijok, Majush, Mabor, and Malan. Each of them is regarded as the ancestor of one of the Shish clans and has become a powerful *jok* of the usual type (for worship at their graves, see § 4).

[1] According to prevailing views, this shrine is situated in Nuer territory, though it was formerly held by Dinka, and there are Dinka priests at the shrine. The writer believes the distinction drawn between Dinka and Nuer to be erroneous, and that the Nuer are simply a tribe of Dinka differing no more from other admittedly Dinka tribes than these do among themselves.

[2] In answer to a question it was said that, if a man died near a shrine, his spirit would go there, but not if he died far off.

4. **The worship of the dead.** — Every human being has within him two souls. The *atiep*, which leaves the body in sleep and whose wanderings are the common source of dreams, resembles, or perhaps may take the form of, the shadow. The second 'soul' is by no means so well defined as the *atiep*; it is sometimes called *rol*, and sometimes *we*. The writer could not learn anything definite about the *rol* during life; it may be connected with the vegetative functions of the body, but after death it remains with the body in the grave. In this article it is the *atiep* that is meant whenever the word 'spirit' is used to refer to the spirit of a dead man. The *atiep* of a father, mother, or ancestor may at any time ask for food in a dream. A man will then take *dura* flour and mix it with fat in a little pot which he places in a corner of his hut, where it is left until the evening, when he may eat it or even share it with any one belonging to his clan, but with no one else (Tain). If food were not provided, the *atiep* might, and probably would, make the dreamer or his wife and children ill. It was stated everywhere that the customs observed after a death, especially the death feasts, were held to propitiate the *atiep* of the deceased and to prevent it from sending sickness or misfortune on the survivors. Sometimes the spirit of a person recently dead is spoken of as *jok*, but this term is generally reserved for the spirits of long dead and powerful ancestors. Thus the spirit of the founder of any clan is a *jok*, and the spirit of the animal ancestor is a specially powerful *jok*. The matter was summed up by a Tain man as follows: 'The *atiep* of my animal [ancestor] is a *jok*, the *atiep* of my mother is a human spirit (*atiep*); [the spirit of] my mother is also a *jok*, but [the spirit of] my animal [ancestor] is a *jorndit* (a very great *jok*), and would be angry if food for it and my mother's *jok* were put together.' Although the *jok* may send sickness, death, and misfortune, when annoyed or neglected, they are the guardian spirits of the house and the clan, taking constant interest in the doings of their descendants, and being ever ready to help them. From this point of view there is a certain amount of confusion between the *atiep* of the recent dead and the *jok* of long dead and powerful ancestors. It seems that, although the former are not specially invoked for aid in difficulties, they are considered to take an active interest in their descendants, and probably all that is said concerning the lovingkindness and power of the *jok* applies in a lesser degree to the *atiep*.

The *jok* know when a child is born, and protect it from the very beginning, though a man does not tell his child about the *jok* until it is well grown, perhaps not till about the age of ten. The *jok* on both sides of the family protect the child, coming to its assistance in any sudden danger. In adult life, when invoking the *jok* at a time of stress, a man calls upon the *jok* of his ancestors, regardless whether the appeal be to the spirits of his own or his mother's clan. Thus, when harpooning a hippopotamus, the word usually spoken is *jongawa*, 'O *jok* of my ancestors!' The *jok* hear the invocation and come to their descendant's assistance, entering his body and giving strength to his arms, and leaving him only when the spear has been flung and danger is over, for a man's *jok* are ever near him in enterprise or peril. Sometimes the appeal is made specially to the *jok* in animal form. Thus Bol, a man of the Mariak clan of the Ngong Nyang

tribe, when about to cast his harpoon at a hippopotamus, would say: *Ayub lil ajong ē gol Mariak ē jongdiena niel abwordie*, 'Strike, O spirit of my clan, my spirit the snake!'

Men and women who are able to see and to communicate with the spirits (*atiep* and *jok*) are called *tiet*. Their power is attributed to a spirit, always, we believe, an ancestral spirit, that is immanent in the *tiet*; and, as the spirit on the death of the *tiet* will generally take up its residence in the body of a near relative, the office tends to become hereditary. Often a *tiet* will explain to a relative that, after his or her death, the spirit will come to him; and a change of manner, trembling fits, and periods of unconsciousness are regarded as signs that the spirit has taken up its new abode. The powers of the *tiet* are most commonly directed to discover what should be done in cases of sickness, *i.e.* he indicates what *jok* is responsible for the illness, and what must be done in order that the patient may get well; but he also gives advice concerning lost cattle and other accidents of daily life. The amount of influence exerted by the *tiet* varies enormously.

The *tiet* of a Malek village was an old woman of whom it was openly said that she was little good. On the other hand, Wal, an Aliab Dinka living in the village of Bang, exercises enormous influence not limited to his fellow-tribesmen; for, although his spirit only came to him in 1907, Bari and Nuer alike come to consult him and pay the strictest attention to his commands. Wal is a man of about fifty, differing in no obvious external character from his fellows, though deference is shown him in that, however dense the crowd round him, he is never jostled. Wal says that his spirit is Deng, which appears in one aspect at least to be identical with Dengdit, and at the present time he is certainly the most important factor in the spiritual life of the Aliab and neighbouring tribes. Some men of the Chiro tribe said that, if another stone like Madwich (see above, § 2) were to fall from the sky, it would be called Deng, because the spirit Deng had come to the *tiet* Wal in Bang village. Wal is most anxious to make clear his adhesion to the Government, and even goes so far as to state that his spirit is 'red' (as Europeans are) and came from Khartum, which all the black tribes regard as the home of the white man. He is certainly opposed to bloodshed, and has lately condemned the participators in a quite insignificant brawl, in which but little blood flowed, to an elaborate ceremony of atonement, the essential part of which is that two goats are killed, the flesh of one being eaten, while the other is cast into the bush. Wal asserts that this is not a revival of an old custom, but a new form of sacrifice dictated by his spirit; and this was certainly the opinion of those with whom the writer discussed the subject.

Although Mitterrutzner (*Die Dinka-Spraehe in Central-Africa*, Brixen, 1866) accepts the view adopted by the early missionaries, that the word *jok* can be adequately rendered by 'Satan' or '*der Teufel*' (*op. cit.* esp. p. 57), this is incorrect, and the relation of the *jok* to sickness and death is in outline somewhat as follows. The spirits of the old and mighty dead (*jok*) and of the recent dead (*atiep*) exist in and around the villages in which their descendants live. *Jok* are more powerful and energetic than *atiep*, and sometimes have special shrines built for them. They are also thought to have their habitat in the earth in the immediate neighbourhood of these shrines. *Atiep* are at their strongest immediately after death, and, although funeral feasts are held for no other reason than to propitiate them lest they should cause sickness and death, they become gradually weaker, and in a very few generations may safely be forgotten. *Jok*, on the other hand, retain their strength and energy, and require to be freely propitiated by sacrifices. Nor are the sacrifices offered to them on stated occasions sufficient. They accept these, but also make known their wants by appearing to their descendants in dreams, and demanding that a bullock or other animal shall be killed; or they may appear to a *tiet* and command him to deliver their message. If their demands are disregarded, they send sickness or bad luck, and matters can be remedied only by sacrifice. There may be no preliminary dream or vision before the *jok* sends sickness; in fact, the routine treatment of all sickness is to make offerings to the *jok* (or Dengdit, when he and the *jok* are confused) in the hope that they will remove the sickness for which they are held responsible. So, when the illness runs a fatal course, it is the *jok* who are considered responsible for the death. The following account given by the Shish shows how the sacrifice to the *jok* is conducted:—

When a man is ill, a bullock or one or more sheep or goats are killed as a sacrifice to the *jok*. The animal or animals should be provided by a near relative, and should be killed by a married man with children, preferably the father of a large family. Some of the meat is left over night in the house of the sick man, for the *jok*. In the morning it is brought out and eaten by the clansfolk, but the fat is collected in a pot, and again left in the house, for one night, for the *jok*. Next day this is cooked by the old women, who eat it with the old men. The blood of the sacrifice is left to dry on the ground, and is afterwards buried in front of the house near the place where the animal was killed.

Even childlessness may be attributed to the displeasure of the *jok*, and in those cases in which the husband does not attribute this to his own impotence a *tiet* may be consulted. The *tiet* often says: 'Give more cows to your father-in-law,' the idea being that this will appease the *jok* of the wife's family, who, the *tiet* can see, are angry. Or the *tiet* may prescribe an offering to the *jok* to be made by the other side of the family, for the *jok* of the husband's family may be angry if the woman's brothers have been sneering at her husband for not begetting children. Incest angers the *jok* and thus causes barrenness; and a girl guilty of this offence will have no children, even should she marry, until she has owned her sin, when her lover will be forced to provide a bullock to be sacrificed in atonement. The youth's father kills the bullock, and the girl's father takes some of the contents of the large intestine and smears it on his daughter's abdomen and that of her partner, thus removing the taint of sin and rendering her capable of bearing children.

Shrines raised to ancestral spirits fall into two classes: (1) grave shrines, and (2) shrines erected by order of a spirit (*jok* or *atiep*), or on account of the appearance of a spirit in a dream, or built to provide a new home for a spirit. Grave shrines do not appear to be common, though the writer has records of the graves of the founders of four of the Shish clans that have become shrines. These are the graves of the so-called 'sons of Dengdit' already referred to. These four men are to some extent regarded as culture heroes, for they taught men how to grow *dura* and to fish. It is said that formerly huts were built over their graves; these have decayed, but even now a ceremony is held at each grave after the *dura* is cut. In every case, only the people descended from the founder take part in this, though their wives, who of necessity belong to other clans, accompany them. There is no resident guardian at any of the shrines, but at the yearly sacrifice one man, in whom the ancestral spirit is immanent, kills a sheep or a bull, and smears its blood and the contents of the large intestine upon the grave, before the assembled descendants of the hero. The flesh is boiled, all eat thereof, and great care is taken not to break the bones, which are thrown into the river. Shrines of the second class appear to be found in all Dinka villages. The worship at one of them in the Shilluk village of Tonga near the Shilluk-Dinka boundary is especially interesting, because it clearly indicates the hereditary nature of the priesthood that these shrines call into existence, and also because it shows that the *jok* on the maternal side are regarded with the same awe and affection as those of a man's own clan. The shrine is within the yard of an ordinary Shilluk homestead. It consists of a few long, roughly trimmed sticks thrust into the ground, from which are hung a number of beads, small gourds, snuff-boxes, and fragments of sheep bones. On the ground is a heap of ashes, the remains of the fires at which sacrifices have been cooked, and frag-

ments of the skulls of sheep killed at the shrine. By the side of the ashes there is a faggot of sticks placed upright, supporting a gourd in which food had once been placed.

The shrine is served by one Agwer, whose grandmother, a Dinka, was made ill by an ancestral spirit, Deng,[1] in order that offerings should be made to him. As the offerings accumulated, a shrine came into existence; in fact, a *tiet* seems to have ascertained that Deng wished his descendants to make repeated sacrifices to him at Tonga. At the present day offerings are made frequently by sick folk, descendants of Deng, and a ceremony is said to be held at the beginning of every rainy season.

Another shrine, existing at the Chiro village of Malek, consists of the trunk of a small tree thrust into the ground; the main branches have been broken off short, and part of the vertebral column and horns of a goat have been attached to them. There are also several pieces of rope, of the kind attached to hippopotamus harpoons, and several small gourds, while a number of fragments of hippopotamus bones lie at the foot of the post. The origin of this shrine is as follows.

About three years ago the children of Apuot, the *bain* of the village, sickened, but it was not until they had been ill for about four months that the *jok* of Balit, the ancestor who sent the sickness, appeared to the *tiet* in a dream and demanded that a goat should be given him. The *tiet* told Apuot to raise up a post and to kill a fat he-goat. The post was prepared, a hole was dug, the goat's throat was cut, and the blood and contents of the gut were collected and buried in the hole. Then the post was thrust into the centre of the hole, and earth was thrown in and pressed down. The meat was cut into pieces, boiled, and eaten. The bones were not broken, but were placed on the ground round the post and left there for a month, after which all were thrown into the river, except the skull and backbone, which were put upon the post. The *tiet* was given the skin. At the time of the sacrifice Apuot threw four small pieces of meat in four directions, apparently towards the cardinal points, and then placed them on the ground round the stick, saying: 'O my grandfather, I have made a sacrifice for you, do not let my children be sick any more.' Apuot himself carried the bones to the river, and at the same time threw into the water a small iron bracelet which he took from the arm of one of the sick children. These things were cast into the river because Ran, the father of Balit, was twin with the fish *rechol*, for whom the things were intended. The hippopotamus bones at the foot of the post were placed there by a brother of Apuot, after he had speared one of these animals. He did this in order that the spirit of his ancestor might help him to kill other hippopotami. The ground round and under this post is in a special sense the habitation of the *jok*, and, even if the sickness had not occurred, it would still have been necessary to prepare a habitation for the *jok*, where men might come to invoke their assistance before going fishing or hippopotamus-hunting, or before starting on a journey. In the last event the traveller puts his right hand flat on the ground near the post, and says: 'Grandfather, I am going away, take care of me, do not let me be sick.' Before going fishing or hippopotamus-hunting, a man takes his harpoons to the wife of the *bain*, who rubs them with oil made from hippopotamus fat, and pours some of the oil on the ground at the foot of the post.

Another form of shrine, called *bŭor*, is found in the Tain villages near Bor. The construction of the *bŭor* is very simple. No chamber is made; a hole about a foot deep is dug and filled up with mud, in which the horns are fixed, for only the horns, and not the skull, are used.

One of these shrines was raised by Der in his new village of Arek for the *atiep* of his father Anet, to live in 'just as a house,' for the spirit knows of the wanderings of its people and moves with them. This was done at the instance of a *tiet*, who said that, if this were neglected, Der and his children would sicken, and perhaps die. The shrine itself consists of a mound of mud, at one end of which are fixed the horns of a bullock, while in front of this there is one of the pickets to which cattle are commonly tethered.[2] The bullock providing the horns was sacrificed by Der, who explained aloud that he was making a place for the *atiep* of his father Anet. The bullock was killed by having a spear plunged into its heart, and small pieces of all the organs and parts of the animal were scattered on the ground for the spirits of the dead. At each new moon some *dura*, a few drops of new milk, and a little butter, are placed upon the shrine at sunset. The shrine is repaired whenever necessary, without sacrifice or any ceremony.

Bŭor are found in all the Tain and in some, at least, of the Bor villages, but usually they do not resemble the back of a bullock, the mud being built into a more or less circular mound flattened above. A stick or young sapling, 6 or 8 ft. tall, is thrust into the ground near the horns, and a cattle-rope is hung from this. Among the Tain Dinka the sons of a dead man will procure a bullock and build a *bŭor* whenever possible, the widow making the mud mound, in which the sons plant the horns of the bullock. This is done not only to propitiate the spirit of the dead, but as a resting-place for his spirit (*atiep*). There is often the greatest confusion as to whether these *bŭor* are built for Dengdit or for the *jok*; in fact, the two are often spoken of and treated as if they were identical. As an example of this confusion, reference may be made to a *bŭor* at Arek village meant to secure the help of the *jok* in fishing and in harpooning hippopotami. When a fishing or hunting party is about to start, they take some *dura*, dip the grains in a bowl of water, roast them, and, when cold, scatter them upon and around the *bŭor*. In spite of this, the *bŭor* is often said to belong to Dengdit, and the usual explanation is given of the cattle rope, namely, that Dengdit will see the empty halter and know that an animal has been sacrificed.

Besides the numerous offerings to the *jok* already mentioned, certain annual sacrifices are made to them, of which the following are examples.

The Bor Dinka sacrifice one or more young goats at the beginning of each wet season, in order that the *jok* may not injure the cattle in the *luak*, the horns and legs with the dried skin adhering to them being hung up within the entrance to the *luak*. The Shish make an annual sacrifice to the *jok* and also to the 'river people,' who, as already indicated, must be considered as a special form of *jok*. This sacrifice is made by every householder, for, if any omitted to perform it, his *dura* crop would be poor, and his cattle would sicken or die. Each householder kills a sheep and allows the blood to soak into the ground; the flesh, which is boiled in front of the house, is eaten, care being taken not to break the bones, which are collected and thrown into the river. As he kills the animal, the housefather says: '*Jok*! this is your right.' Pieces from different parts of the sacrifice are boiled in a pot and left outside the hut during the night; in the morning the contents are scattered round the house, when the dogs and birds soon dispose of them.

The sacrifice to the 'river people' takes place after the rains, when the people leave their inland settlements to come down to their dry-season abodes on the river bank, and before they build any houses or cattle kraals. The members of each clan kill a sheep soon after they reach the river, cutting its throat before sunrise, on the bank, so that the blood flows into the river, into which the sheep is thrown as soon as it is dead. This sacrifice is held in order that the 'river people' may not send sickness to men or cattle, and it is also said to please Dengdit.

Belief in the guiding and protecting influence of the *jok* is perhaps the only part of their eschatology which is common to all Dinka, and is so well defined that it can be definitely formulated; the examples already given of the action of the *jok* and the sacrifices offered to them make their action and power reasonably plain as far as they relate to humanity. In other words, while the relation of the *atiep* to the living is tolerably well known, the very opposite is the case in regard to the *rol* or *we*, for its condition excites none of the interest which is felt in the *atiep*. The generally accepted view with regard to the *atiep* of the old and mighty dead (*jok*) has been indicated already. The *atiep* of the recently dead are usually thought to frequent the villages and houses of their descendants, taking an interest in their doings and moving about with them. Certain of the burial customs, which provide for the welfare of the dead, are modified in the case of old influential men, increasingly lavish funeral feasts being provided for important men such as *bain*, the avowed purpose of all funeral ceremonies being to propitiate the dead man, lest he should send sickness and misfortune on the

[1] Deng is a common Dinka name, and must not be confused with Deng, the spirit of the *tiet* Wal (above, p. 709[a]), or with Dengdit.

[2] The whole structure presents a certain resemblance to a bullock sunk in the earth, so that only the back projects; but the writer could not learn that this resemblance was intentional, though a Dinka whom he met at Omdurman, where he had lived for a long time, said that in his country mud representations of cattle were erected over the graves of powerful men.

living. Apart from the funeral and mourning feasts, *atiep* are not given sacrifices unless they appear to their descendants or to the *tiet* in dreams and ask for them.

Side by side with this doctrine of the *atiep* and its corollary that the spirits of the dead everywhere surround and mix with the living, there is another, which, if it were accepted and applied logically, would be incompatible with the first. According to this belief, the *atiep* leaves the neighbourhood of the body at the time of its burial, and passes above to the place of Dengdit. The spirits that reach Dengdit do not lose their power of returning to the earth, for it is a common belief that *jok* may pass to and from this earth to Dengdit, while one of the commonest Dinka beliefs is that the *jok* come to the dying to take their *atiep*. Among the Niel Dinka the *jok* come in the (spiritual) form of the animal ancestors (totem animals) of each man at his death and take his spirit to Kok, the place of Dengdit between earth and sky, whence comes the rain. The men who gave this information were perfectly convinced that every Dinka had some animal relative which would come to him at death, and they stated that some men had seen them as they lay dying.

It is possible to obtain a hint of another phase of Dinka eschatology by considering their habit of pouring a little water or *merissa* (native beer) on the ground before drinking. According to some Nok Dinka who did this after a long and thirsty march, the water poured out was for the dead. The Shish denied that *merissa*, purposely spilt on the ground, was for the benefit of the dead, but said that, when a man died, he would find in his grave all the *merissa* he had poured out and the food he had thrown on the ground. It is, however, possible that this belief may be due to Arab influence.

According to the Shish, the 'river-people' are also *jok*, and they can be seen by *tiet*, for 'land and river *jok* have the same origin,' and 'some *jok* are in the river, some on land.' It must, however, be admitted that many Dinka seem to look upon the 'river people' as distinctly mysterious beings, whom they do not regard as *jok* in the ordinary sense of the word.

5. Rain-makers and rain-making.—The rain-makers of the Dinka tribe are called *bain*, but it seems that not every *bain* is a practising rain-maker, though, in theory at least, all are potential rain-makers. The men commonly spoken of as the 'chiefs' or 'shaikhs' of the Dinka tribes are actual or potential *bain*, but there does not appear to be any tendency for village chiefs to attempt to emulate the rain-maker, or for quack practitioners to appear, for the successful rain-maker has within him the spirit of the great rain-makers of the past, and all recognize the futility of competing with him. Further, the existence of a powerful and successful rain-maker naturally leads those who live within his sphere of influence to leave all such matters to him. Thus a successful rain-maker attains to very great power, and would be consulted about all important affairs, for the spirit of a great ancestor that has come down to him through a succession of rain-makers ensures that he is far-seeing, and wiser than common men. A *bain* should not drink *merissa*, lest he get angry and quarrel with the men of his village. Although the authority of a *bain* is great, it is not absolute, for one *bain* foretold the defeat of his people at the hands of the Government, and entreated them not to fight; yet his people fought and were defeated.

The Shish said that the name of the spirit immanent in their rain-maker (who lived at Lau) was Mabor. This, as has been stated in § 3, is the name of one of the four 'sons of Dengdit.' It was obvious that to the Shish of Shambe (some miles from Lau) the personality of the rain-maker was entirely submerged in that of the spirit immanent in him, so that, when they spoke of Mabor, the dominant idea in their mind was that of the ancestral spirit of this name working through the body of the man in whom it was immanent.

The Shish do not specially protect their rain-maker from a violent death, and he may even take part in warfare; for no doubt is felt that, if he be killed, the ancestral spirit will pass to a suitable successor. But an important rain-maker is not allowed to die of old age or as the result of chronic lingering illness; for, if this occurred, sickness would attack the tribe; there would be famine, and the herds would not yield their increase. When a rain-maker feels that he is getting old and infirm, he tells his children that he wishes to die.

Among the Agar Dinka a large grave is dug, and an *angareb* is placed in it, upon which the rain-maker lies on his right side, with a skin under his head. He is surrounded by his friends and relatives, including his younger children, but his elder children are not allowed near the grave, at any rate towards the end, lest in their despair they should injure themselves. The *bain* lies upon the *angareb* without food or drink for many hours, generally for more than a day. From time to time he speaks to his people, recalling the past history of the tribe, how he has ruled and advised them, and instructing them how to act in the future. During this time he takes no food. At last he tells them he has finished, and bids them cover him up; earth is thrown into the grave, and he is soon suffocated. Although the above information was obtained from a number of Agar Dinka, there is little doubt that with minor variations it applies to all the Dinka tribes.

The Niel Dinka said that they strangled their *bain* in his own house, having first prepared his grave. They would then wash the corpse and kill a bullock in front of the house, skinning it immediately and making an *angareb* of the skin. This is placed in the grave, and the body is laid upon it, a cell being built over the *angareb* so that the earth does not come into contact with the body. Even if the *bain* were quite young, he would be killed if it was thought that he was dangerously ill. The Niel take every care to guard the *bain* from accidental death, for, even if he should die suddenly as the result of accident, some sickness would surely occur, though his son or a near blood relation would immediately succeed him. It would be a far more serious matter if the *bain* were to die of illness, but this had never happened; indeed, the writer's informant (whose father and paternal uncle had both been killed in the appropriate manner) pointed out that this would prevent any of his sons (*i.e.* presumably any relative) from becoming *bain* in his turn. The writer believes that all tribes sprinkle milk on the grave, while some bury a bullock, or even a cow, with their *bain*, and it is probable that all place some property in the grave.

The following information was given by Biyordit, an old but still active man, the rain-maker of the Bor tribe, who [1911] has the greatest influence over all the Bor and Tain Dinka:

In each of the eight rain-makers who preceded Biyordit there was immanent a great and powerful spirit called Lerpiu, now immanent in Biyordit, who says quite simply that at his death Lerpiu will pass into his son. Near a hut belonging to Biyordit there is another *tukl*, constituting a shrine, in which the *jok* of Lerpiu is thought to reside more or less constantly. Within this hut is kept a very sacred spear, also called Lerpiu, and before it stands a post called *rit*, to which are attached the horns of many bullocks sacrificed to Lerpiu. Behind the hut there is a bush of the kind called *akoi*, which must not be cut or damaged in any way, but which strangers are allowed to

approach without the least ceremony. The *akoi* hush is clearly the least sacred part of the shrine, yet its presence is essential, for the *jok* leaves the hut to come to the *akoi* during the great rain-making ceremony, and the slight sanctity of the *akoi* at other times is well explained by the absence of the *jok*.

The rain ceremony consists of a sacrifice to Lerpiu, to induce him to move Dengdit to send rain. It is held in the spring (about April), when the new moon is a few days old. In the morning two bullocks are led twice round the shrine, and are tied to the *rit* by Biyordit: then the people beat drums; and men and women, boys and girls, all dance round the shrine. Nothing further is done until the bullocks urinate, when every one who can get near the beasts rubs his body with the urine. After this all except the old people go away. Presently the bullocks are killed by Biyordit, who spears them and cuts their throats. While the sacrifice is being prepared, the people chant: 'Lerpiu, our ancestor, we have brought you a sacrifice: be pleased to cause rain to fall.' The blood is collected in a gourd, transferred to a pot, put on the fire, and eaten by the old and important people of the clan. Some of the flesh of one bullock is put into two pots and cooked with much fat; this is left near the *akoi* for many (perhaps ten) months, yet it is said not to smell unpleasantly, and is ultimately eaten by people who have no cattle of their own. The food in the pots near the *akoi* is said to be for the *jok*, but the meat from the other bullock is eaten on the same day. The bones of the sacrifice are thrown away, but the horns are added to those already attached to the *rit*.

Besides the great rain-making ceremony performed at a central shrine, some tribes offer a sacrifice for rain in each settlement. Among the Shish this takes place before, or at the beginning of, the rainy season.

The old men of the settlement (*bai*) kill a sheep, thanking and praising Dengdit; the animal is bisected longitudinally, and that half which is away from the ground is cut into fragments and cast into the air as an offering to Dengdit. As they fall upon the ground, so they are left, and are soon eaten by dogs and birds. The blood of the sacrifice is allowed to soak into the ground, but the remainder of the meat is boiled and eaten, the bones, which must not be broken, being buried in the skin for seven days, and afterwards thrown into the river. Some *dura* is boiled, and this is thrown into the air and left lying upon the ground in the same way as the flesh of the sacrifice was left.

6. **Sacred spears.**—Mention has already been made of certain spears kept in the shrines of Dengdit. One of the spears in the Shish shrine at Lau is of the form named *bit* by the Dinka, and is called *bit yat*. Another spear with the usual leaf-shaped blade is called *ton yat*, and the iron rod is named *len yat*. These spears and the iron rod are described as playing an important part in the great rain-making ceremony held in the *luak* at Lau, and when the time comes to replace them an elaborate ceremony is performed. Long ago Dengdit ordered the *bain* Mabor to get the finest spear he could, and to put it in his shrine at Lau. This command was said to apply not only to the *ton yat*, but also to the *bit yat* and *len yat*, and all these are renewed periodically, by order of Dengdit, who, in a dream, indicates that the spears are getting old and that new ones must be provided. It seems that a new *ton yat* is brought to the *luak* about every tenth year, a white sheep being killed with the new spear by the *bain* as an act of consecration. Some of the blood is left on the blade for three days, after which it is washed and oiled. Certain old men and women, near relatives of the *bain*, boil and eat the flesh of this sacrifice in the courtyard of the *luak*, after which they wash their hands and throw the bones, none of which has been broken, into the river. The sacredness of the old spear appears to be transmitted to the new by thrusting the former into the earth by the side of the sacrifice, after which it is given to a son or other near relative of the *bain*.

7. **Oaths.**—In small matters the Shish affirm 'by Nyalich.' To swear a binding oath a man goes to the blacksmith and licks his hammer; then, putting it on the ground, he says: 'If I have done this thing, may I die!' Any one swearing falsely would certainly die within a couple of days. An Agar Dinka will swear by licking his iron bracelet and saying what he has done or not done, and that he is prepared to die if he is not speaking the truth. Another oath is to place a spear or stick on the ground and jump over it, saying: 'By Dengdit, I have not done this thing; if I have, may my spear be speedily put on my grave!' This refers to the Agar custom of putting a man's spear, bracelets, and shield upon his grave for seven days. The most terrific oath of all is to go to the shrine (*luak*) of Dengdit and swear by it.

8. **Blessings and curses: the evil eye.**—The Dinka firmly believe in the efficacy of both blessings and curses, and that people and cattle can be 'overlooked.' The following information was obtained from Tain Dinka living south of the Sudd, but it probably holds good over a much wider area. The blessings and curses of strangers are of little effect (it must be assumed that this does not apply to great and powerful men), but the words of kinsfolk are powerful for good or evil. There is a special word *lou* meaning 'to speak bad words about a man's body'; and a father, by saying his son shall be ill, can cause him to sicken. So, too, a man's relatives may curse him if he does not give them the bullock which is their due when he builds a cattle-shed soon after his marriage. A parent's blessing is held to be so efficacious that it may cure illness, the power for good being the will (*atiep*) of the loving father or mother. When a boy is to be blessed, he squats on the ground; and his father, standing by him, carries first his right thigh and then his left over his son's head. Then he spits on his scalp and blows into his ears and nose; next he spits on his own hands and rubs them over the boy's scalp, and, again spitting on them, smears spittle on the boy's chest and the nape of his neck. Finally, he picks up dust, and rubs some on the boy's chest and back, throwing away the remainder into the air. When a man is about to bless an ailing daughter, her mother brings a gourd of water, into which the man, his wife, and the girl's brothers and sisters and paternal aunts all spit, and her father sprinkles the water over the girl's body. Nothing further is done for eight days, but on the ninth day a male goat or sheep is tied up; when it urinates, the girl's breasts and back are anointed with the urine, while the relatives who spat into the bowl pray that she may be cured. Her brothers take the goat, throw it on the ground, cut its throat, and leave the body lying for people of other clans to eat. Any one can 'overlook' (Tain *kwan*) another who is not a very close blood relation, at any time when his victim is not looking him straight in the face. To *kwan* any one is always a voluntary action, and, though a thin or poor man may *kwan* a well-conditioned or rich man, this is not necessarily due to covetousness. A great man can make people ill without seeing them, by desiring it in his heart, and for sickness produced in this way there is no cure.

9. **Magic.**—Magic appears to play a comparatively small part in the spiritual life of the Dinka; probably this is to be attributed to the dominating influence of the cult of the *jok*, which constitutes the working belief of the people. In spite of this, auxiliary magical processes may be used in order to increase the efficacy of a sacrifice. Thus, it is not uncommon for a goat to be killed as a direct appeal to the *jok* before hippopotamus-hunting. The Tain Dinka of Malek village select a 'red' he-goat or sheep because the hippopotamus is 'red,' and take it to the Sudd in a canoe, where they cut its throat with a spear, because the animal they are hunting can be killed only with a spear. (The usual method of killing a sheep or goat is by a blow on the head.) Its blood is allowed to run into the river, while some is smeared on the blades of the harpoons. As soon as it is dead, it is thrust under the Sudd where the hippopotami are, its mouth being tied up so that it

may not do any damage with its teeth. The man with the harpoon prays to his *jok* as he approaches the animal, and the ceremony after its death is simply an offering of part of the flesh to the *jok*. Any one may provide the goat, but only three men—Apuot the *bain*, and two others—may cut its throat; if any other were to officiate, his action would be absolutely without effect.

DIOGENES.—See CYNICS.

DISCIPLES OF CHRIST.—A religious body located chiefly in the central and western portions of the United States. The originator of the movement was Thomas Campbell, a minister of the Seceder Presbyterian Church in the north of Ireland, who came to America in 1807, and was assigned to ministerial work in the Presbytery of Chartiers, in Western Pennsylvania. Keenly sensitive to the evil results of sectarian divisions, he used his efforts to unite the scattered groups of Presbyterians in such common work and worship as should allay in some measure the strife of rival factions. But so little were the churches of the period prepared for the practice of comity that he was censured by the Presbytery for his conduct, and, although upon appeal the Synod declined to affirm the judgment of the Presbytery, he found it desirable to sever his connexion with the Church of his fathers. But his earnest labours in behalf of unity led to the formation of a group called the 'Christian Association of Washington' (Pa.), and, soon after, he published a document called the 'Declaration and Address,' in which he pleaded with his brethren of all Christian bodies to abandon whatever religious doctrines and practices were unscriptural and divisive, and to seek the peace of the Church by the realization of the Lord's prayer (Jn $17^{11.21ff.}$) for the oneness of His people. He was afterwards joined by his son Alexander, who had been trained for the ministry in Ireland and at Glasgow.

In studying the problem of Christian unity these men determined that they would propose to their religious neighbours the elimination of human additions to the primitive and simple gospel. This seemed to them a sufficient platform for a united Church. Their purpose was the restoration of the early Christian society as the means of realizing Christian oneness. They included in their programme all the essential elements of the Apostolic faith, spirit, and service. They held strongly to the great evangelical beliefs of the historic Church. They sought to make the teachings of the NT authoritative in their procedure. In compliance with this ideal they decided that the practice of infant baptism and of affusion must be abandoned. The movement grew, and soon the first congregation was established at Brush Run, Pa. (4th May 1811).

The Reformers, as they called themselves, were active in the dissemination of their views. Such leaders as the Campbells, Barton W. Stone, and Walter Scott were effective advocates of the new message. The adoption of immersion in the interest, as they believed, of Christian unity brought them into sympathetic relations with the Baptists, and in 1823 Alexander Campbell began the publication of a monthly called *The Christian Baptist*. For a time it seemed probable that the union of the two bodies would be effected. The Reformers were actually received into the fellowship of the Redstone Baptist Association, and later into that of the Mahoning Association, official organizations of the Baptists in Western Pennsylvania and Ohio. But the union was never complete. Each of the groups suspected the other and at times made counter-charges of unsoundness of views. Separation took place, and gradually the Reformers, or Disciples, as they usually called themselves, went their way as a separate body. At Bethany, W. Va., in 1840 Campbell founded Bethany College, the first of many schools organized by the Disciples. The movement grew rapidly in the States of West Virginia, Ohio, Pennsylvania, and Kentucky. Campbell travelled widely, preaching and holding debates on such themes as related to the Primitive Church and the necessity of its restoration. The formative influences of his early training, the Lockian philosophy, the Covenant theology of Holland, the reformatory preaching of the Haldanes in Scotland and Ireland, and a profound sense of the scandal and disaster of divisions in the Church, were made evident in all his utterances. His power was widely felt, both among his own brethren and in other communions, and outside the Church. As a result, a large company of vigorous and aggressive preachers and teachers became identified with the enterprise, and its progress was rapid.

With the growth of churches the first interest in the idea of Christian unity gave way somewhat to the seemingly more definite and practical effort towards the restoration of early Christian usages. The weekly observance of the Lord's Supper, the immersion of adults as the only method of baptism, the organization of churches after the congregational order, with elders or bishops, and deacons, the rejection of all speculative discussion of the work of the Holy Spirit, and the emphasis upon the importance of the Scriptures in conversion were outstanding features of the new message. Close communion was never practised, but it was understood that only the immersed should be admitted to the churches.

In the development of so vigorous a body it was inevitable that controversy should have a pronounced part. Both with their religious neighbours and among themselves the Disciples have held earnest and prolonged controversy. Tendencies to literalism and legalism have not been wanting, but they have yielded slowly to the spirit of inquiry and progress. The creation of new educational foundations, the maintenance of an aggressive journalism, the organization of missionary and philanthropic agencies, and the encouragement of an effective evangelism in the churches have increased the numbers, intelligence, and consecration of the Disciples, until at the present time they are fifth among the great evangelical bodies of America; have a considerable constituency in England and Australia; have important missionary interests in China, India, Japan, Africa, the Philippines, Mexico, and the West Indies; and maintain efficient State and District organizations in nearly all sections of the United States and Canada.

The Disciples have desired from the first to be known only by NT names. They speak of their churches as 'Christian Churches,' or 'Churches of Christ.' These names they hold in common with all believers, and claim no exclusive title to them. Their worship has always been marked by simplicity, though there is an increasing effort to impart dignity to the services.

On the themes of advancing Christian thought, —the value and results of the historical method of Bible study, the contributions of modern scientific and philosophical labours to the religious life, the awakening of the social and civic conscience, the extension of missionary effort, and the adoption of higher educational standards—the Disciples have passed through the usual throes and differences of opinion incident to the development of most sections of the modern Church. But the progress has been

steady, and the future is promising. Particularly are the Disciples awakening to the realization of their historic task—the earnest effort to promote both by testimony and practical labours the unity of the people of God.

DISCIPLINE (Buddhist).

This subject may best be discussed under four different heads: (1) discipline of the laity by the clergy; (2) discipline of the novices by members of the Order; (3) discipline as carried out by the Order, in Chapter assembled, against individual members of it; and (4) self-discipline.

1. Discipline of the laity.—The Buddhist doctrine did not recognize either a deity who can punish or a soul to be punished, and denied to the members of the Order (the *bhikkhus*) any priestly powers by which penalties in the next life could be mitigated or increased. Any disciplinary proceedings against the laity, therefore, were necessarily of a simple character. There are words in Pāli for 'instruction,' 'discussion,' 'training,' and 'self-restraint'; but there is no word covering the same ground as 'discipline.' The ideas of confessional or father-confessor, of absolution, inquisition, and church-membership are wanting. The word 'Buddhist' was not invented till many centuries after the rise of what we call Buddhism. By approving wholly or in part the doctrines of the new movement, a layman did not join any new organization or sever himself from any other. When Sīha, the Licchavi general, an adherent of the Jains, became converted by the Buddha, he was expressly enjoined by the Buddha himself to continue his support of the Jain community (*Vinaya Texts*, ii. 115). The only action of a disciplinary kind adopted by the early Buddhists towards laymen is described in *Vinaya Texts*, iii. 118 ff. It is called 'the turning down of the bowl' (*pattassa nikkujjana*). In case a layman, in any one of five ways,[1] endeavours to do harm to the Order, or speaks in disparagement of the Buddha, the Doctrine, or the Order, then it is permitted to the *bhikkhus* 'to turn down the bowl' in respect of that layman—that is, to refuse to accept a gift of food from him. If in any of the same five ways a *bhikkhu* should endeavour to do harm to a layman, a Chapter should compel him to beg pardon of that layman (*ib.* ii. 355 f.). The layman could have the ban removed by a Chapter by confessing his error and asking for forgiveness (*ib.* iii. 124). No mention of this ceremony of turning down the bowl has been found except in the earliest period, and it is now quite obsolete. Of any formal discipline of laymen in knowledge of the faith we hear nothing; and there was no custom corresponding to the *Arcani Disciplina* (*q.v.*) of the early Catholics. The *bhikkhus* are described as willing to talk over with laymen in an informal way any points of doctrine they wished to discuss. A large number of cases of this informal teaching are given in the books.

2. Discipline of novices.—One of the main objects of the founders of the various Orders that existed in India in the Buddha's time was to provide, by the establishment of the Order, for the preservation and propagation of the founder's teaching. There were then no books and no publishers. The novices and the younger members of the Order learnt the statements of the doctrine (the *Suttas*) by heart, and the older members expounded and discussed them, and cross-questioned the novices on their knowledge. It was necessary for such an Order to have rules. These the novices learnt, and the elders discussed. Among the early Buddhist literature, thus handed down to us, there are manuals used for the discipline of the novices in the Doctrine, in the Poetry, in the psychological Ethics, and in the Canon Law. The majority of the Abhidhamma books are of this nature. The *Parivāra* ('Supplement') to the *Vinaya*, which occupies the fifth volume of Oldenberg's edition of the text, consists entirely of a number of questions on the Canon Law, and was evidently used in the teaching of novices. The *Khudda-* and *Mūla-sikkhā* ('Short and Advanced Manuals') are somewhat later examples of the same thing. These studies and the personal attendance on his teacher occupied most of the time of the novice. If a novice tried to prevent the elder *bhikkhus* from receiving alms, if he devised mischief against them, if he prevented their finding a lodging-place, if he abused them, or if he caused division among them, then his teacher might interdict him from entering certain parts of the common residence (explained as meaning the bedroom or the sitting-room he has frequented [*Vinaya*, i. 84]). In ten cases of grievous misconduct, a novice may be expelled by his teacher (*ib.* i. 85). No other disciplinary proceedings are mentioned.

3. Discipline in the Order.—The Buddhist Order was a democracy. There was no vow of obedience and no hierarchy. The administration of the business of the Order was carried out locally by a Chapter on which each member of the Order (each *bhikkhu*) resident in the locality had a seat. The senior member presided as *primus inter pares*, and decisions were made by vote of the majority of those present. Should any member of the Order have committed, in the opinion of any other member, any breach of one of the regulations, the latter could bring forward, at the next meeting of the Chapter, a resolution on the subject. If the resolution was carried, the offending member remained for a fixed period under suspension. The suspension could be removed by a similar resolution when the offender had acknowledged his offence. In four cases of grave moral delinquency—murder, theft, impurity, and a false claim to extraordinary spiritual pre-eminence—the penalty was expulsion from the Order. The lawbooks give numerons cases which throw light on the question whether some particular act does or does not amount to a breach of any one of the 227 main rules of the Order, or of any one of the explanatory by-laws subsidiary to those rules. But they afford no evidence as to how frequently recourse was actually had, in the early years of the movement, to such disciplinary proceedings by a Chapter. Meetings of the Chapter are still held in Siam, Burma, and Ceylon for business purposes, for the recitation of the Rules,

[1] The details of these five ways are given below in the section on 'Discipline of novices.'

for admission of new members, etc. Whether disciplinary proceedings are still used, and, if so, how frequently, is not known. In other countries the ancient rules have fallen altogether out of use, and we have no information as to any disciplinary proceedings that may have been substituted for the formal acts of the Chapter (see, further, art. CRIMES AND PUNISHMENTS [Buddhist]).

4. Self-discipline.—There were three codes of ethics in early Buddhism—one for the lay adherent, another for a member of the Order, and a third for those, whether laymen or mendicants, who had entered upon the Path to *arahat*-ship. People joined the Order for a variety of reasons—to earn a livelihood, for a life of literary peace, to escape the troubles of the world, from dislike of authority, or even (as Nāgasena says to King Milinda) out of fear of kings.[1] Some were converted men before they joined the Order; the majority were not. They were expected, in addition to their literary studies, to devote themselves to an elaborate system of self-discipline in ethics and psychology, leading up to what were regarded as the highest truths—those constituting the *samādhi*, the insight of the higher stages of the Path.[2] The existence of this system is the most characteristic feature of Buddhist discipline (see art. HĪNAYĀNA).

LITERATURE.—*The Vinaya Piṭakam*, ed. H. Oldenberg (5 vols., London, 1879–1883); H. Oldenberg and Rhys Davids, *Vinaya Texts* (Oxford, 1881–1885, being tr. of vols. i. and ii. of the last-named work); *Dīgha Nikāya*, ed. Rhys Davids and J. E. Carpenter (*PTS*, 1890–1910); Rhys Davids, *Dialogues of the Buddha* (Oxford, 1899–1910), also *Questions of King Milinda* (Oxford, 1890-1894); *Khudda-Sikkhā* and *Mūla-Sikkhā*, ed. E. Müller (*JPTS*, 1883).

T. W. RHYS DAVIDS.

DISCIPLINE (Christian).—**1. Definition and aim.**—Church discipline is that body of measures which have been employed in the Christian Church to secure its own purity and the spiritual well-being of its members by the punishment of offenders against its constitution and teachings. The authority for such procedure is based (1) upon the very nature of the Church as a select body with a code of its own; (2) upon express commands of Christ; (3) upon Apostolic precepts and examples afforded in the history of the Apostolic Church. The Church, as an institution endowed with the quality of holiness and entrusted with the deposit of revealed truth, is bound to keep itself free from corrupting elements which might taint its purity and thwart its activity in training its members and in bearing witness to the world. As it concerns the offender, discipline is intended (1) to reclaim him from error of doctrine or impurity of life, so that, if possible, his soul may be saved; or (2) to cut him off, as a withered branch, from the body of Christ and all participation in its benefits. In the development of the Canon Law, such punishments were termed either medicinal (*pœnæ medicinales*) or strictly penal (*pœnæ vindicativæ*). The former are corrective and reformatory; the latter, while, according to canonists, they do not wholly exclude this idea, are mainly concerned with the vindication of the majesty of the law and the removal of all danger to the Church from contagion.

After the Apostolic age and from the close of the 2nd cent., Church discipline found expression in the unformulated system of Penance. To this were added, from the 4th cent., the Canons of Councils, local and ecumenical; from the 7th the Penitential Books; and later the collections of Canon Law culminating in the Decretals of Gratian, about 1150. Beginning with Constantine's reign, severe civil penalties were executed upon dissenters from the Church's formulated standard of doctrine. The Arians, who refused obedience to the Nicene statement, were banished, and their books burnt. Although such penalties were inflicted by the civil ruler, they received the approbation of the Church. The legislation concerning the discipline and punishment of dissenters reached its culmination, so far as the Church was concerned, in the tribunals of the Papal and Spanish Inquisitions (1215, 1478). This body of legislation was extended to include witchcraft and all kinds of *maleficium*, especially after the bull of Innocent VIII., *Summis desiderantes* (1484).

The Reformers continued to insist upon ecclesiastical discipline, and, in their hands, it found its most strenuous application in the codes of Geneva and the disciplinary books of the Elizabethan Puritans of Scotland and the Westminster Assembly. As to the seat of authority for the exercise of Church discipline, the theory has been, and is, that the Church exercises discipline over her own members and within her own sphere. To use the expression current in the Middle Ages, she wields the spiritual sword (*gladium spirituale*), or, to quote a Protestant symbol (the Scottish *First Book of Discipline*, ch. ix.), she 'draws the sword which of God she hath received.' But, in fact, not only has the distinction between the Church and the State as agents to punish ecclesiastical offences (*delicta*) not always been clearly defined, but the Church has not restricted herself to her sphere, and, indeed, has expected the State to aid her in the maintenance of her discipline. From 325 onwards the Universal Church gradually came to approve civil penalties for ecclesiastical offences. The Latin Church, through the Inquisition, the culminating procedure in her disciplinary activity, not only pronounced suspects guilty of heresy, but imprisoned them, ordered their houses to be burnt and their goods confiscated, and turned them over to the civil authorities, knowing that their punishment would be death. In the Protestant Churches of Zürich and Geneva, among the Protestants of England and Scotland, and during the Colonial period in the United States, the same confusion prevailed, although in its application the legislation was much less destructive than during the Middle Ages. It has remained for more recent times to make the line separating the ecclesiastical and civil realms more distinct, even to the complete separation of Church and State, in some Protestant lands.

2. Discipline in the Apostolic Church.—Pure as is the operation of the Holy Spirit, and spotless as is the ideal Church, the bride of Christ, it was predicted by Christ that offences would arise (Mt 18^{7}). Such offences were manifested in the earliest days of the Church's history. The Apostles themselves remained conscious of weaknesses and faults. Peter denied Christ (Mt $26^{69ff.}$), and was condemned by Paul at Antioch (Gal $2^{11ff.}$). Paul says, 'I buffet my body' (1 Co 9^{27}), calls upon the Christians to whom he wrote 'to mortify their members' (Col 3^{5}), and in Ro 7 indicates that a constant war goes on in the Christian between the appetencies of the flesh and the will of the Spirit. 'In a great house there are not only vessels of gold and of silver, but also of wood and of earth; and some unto honour, and some unto dishonour' (2 Ti 2^{20}). Here the Apostle has in mind persons 'reprobate concerning the faith,' whom he compares to Jannes and Jambres (3^{8}).

The Church's right to exercise discipline was definitely conferred when Christ empowered His Apostles to bind and loose (Mt 18^{18}). He also indicated the measures to be resorted to when an offence became known. If a brother was found guilty of a fault, he was to be privately admonished by a single person; then, if necessary, by several in company; and finally, if reproof was still

[1] *Milinda*, i. 50.
[2] Rhys Davids, *Dialogues of the Buddha*, i. 190–192.

ineffectual, the offender was to be publicly rebuked before the congregation. In case he was still obdurate, he was to be treated 'as the Gentile and the publican' (vv.[15-17]).

After the Resurrection, the Apostles exercised the function of discipline, and warranted it by precepts. The duty of feeding the flock and ruling in the Church (Ac 20[28], He 13[7] etc.) implied this function. Special rules of practice were issued by the council of Jerusalem (Ac 15). The offences condemned were both errors of doctrine and faults of conduct against the pure laws of Christian living.

The first cases of discipline—the appalling deaths of Ananias and Sapphira (Ac 5)—are so extraordinary that no one but an extreme advocate of Church prerogative would find in them a precedent for the Church to follow, although they are referred to as examples of just punishment, not only in the Middle Ages, but by Calvin. It is true that, in the case of Sapphira, Peter announced her death; but the punishments must be looked upon as the unusual act of God, designed to make a lasting impression upon the Church. To another category belong the cases which occur in the writings of Paul and John. John (2 Jn [10f.]) took the position that heresy was a sufficient ground for refusing companionship with the offenders. Paul combined the two categories when he called upon the Thessalonian Christians to withdraw themselves 'from every brother that walketh disorderly, and not after the tradition which they received of us' (2 Th 3[6]). Heresy he pronounced a gangrene (2 Ti 2[17], cf. Tit 3[10]), and he admonished the Corinthians to exclude from their companionship brethren who were extortioners, fornicators, revilers, idolaters, drunkards, and covetous (1 Co 5[9-13]). He excommunicated the member of the Corinthian congregation who had committed incest with his mother-in-law (1 Co 5, 2 Co 7), and 'delivered unto Satan' Alexander and Hymenæus (1 Ti 1[20]). He also invoked the anathema against 'any man that loveth not the Lord,' and against the Judaizing teachers who might preach another gospel than that he preached (1 Co 16[22], Gal 1[8]). In the case of the Corinthian offender, Paul states that his purpose was that his 'spirit may be saved in the day of the Lord Jesus,' and, in the case of Alexander and Hymenæus, that they 'might be taught not to blaspheme.'

It is evident that it is possible, from these statements of the NT, for a Church hierarchy, if it be so disposed, to justify the resort to the most rigorous methods of disciplinary constraint, and to reduce Church government to a mere contrivance to exact implicit mechanical obedience to a system of ecclesiastical enactments, forgetting that the Church is a training school to exercise discipline in the spirit of love and for the education and correction of the weak and offending.

3. The ante-Nicene practice (A.D. 100–313, the date of Constantine's edict of toleration).—In this period a strict system of discipline was practised, but the punishments were prescribed and executed by the spiritual authorities, and had nothing to do with civil constraints. There was no precise code, and the practice differed in different parts of the Church, for example, as between N. Africa and Rome. The two marked features are the development of the system of penance and the issue of disciplinary canons by councils. The distinction which came to be made between venial and mortal sins also had an important bearing upon the exercise of discipline.

In his *de Pudic.* ch. 19 ('Ante-Nic. Fathers,' Amer. ed., iv. 97), Tertullian enumerates seven mortal offences for which, if committed after baptism, there can be no restoration in this world or hope in the world to come—murder, idolatry, theft, apostasy, blasphemy, fornication, adultery. For these Christ will not act as pleader (*horum ultra exorator non erit Christus*). Those who commit such offences cease to be sons of God. For other sins committed after baptism, certain penances or compensations were prescribed, such as fasting, prayer, and almsgiving. Origen (as quoted by Friedberg, p. 209) states that only for manifest sins (*peccata evidentia*) were offenders cast out from the Church—giving as the reason, lest the wheat be plucked up with the tares. Towards the end of the period, the penitential system came to recognize four classes of penitents—weepers, hearers, kneelers, and standers (*flentes, audientes, genuflexi, consistentes*). These were within the pale of the Church (*intra ecclesiam*) as opposed to the excommunicate. They were forbidden certain forms of pleasure, ornaments of dress, connubial intercourse, etc., and they were especially required to devote themselves to prayer, almsgiving, fasting, etc. The usual duration of this period of penance was three or four years, though it might be abbreviated at the will of the Church authorities.

The schisms which broke out in the Church, such as those of Novatian, Miletus, and the Donatists, were a revolt against a tendency to relax the rigours of discipline, and arose for the most part over the question of the restoration of the lapsed. The N. African Church, led by Tertullian, refused restoration to those who had denied the faith in times of persecution; Cyprian at first took the same ground, but later receded from it in view of the great number who had given way in the Decian-Valerian persecution, and granted to the penitent the communion in the hour of death. The Roman Church was lenient with this class of offenders.

The Synods which were held at the close of this period—Elvira, Arles, and Ancyra—passed severe disciplinary canons. The Spanish Synod of Elvira (see A. W. W. Dale, *The Syn. of Elvira*, Lond. 1882) in 81 canons punished with anathematization the denial of the communion, and lesser penalties. Murder, idolatry, and especially unchastity have a large place given to them. For example, a wife guilty of adultery, without precedent provocation given by the husband, is denied communion even in the hour of death. Those guilty of extravagance in dress may after three years be restored to the communion, and gamblers after one year. The worship of idols by a baptized adult is pronounced a *crimen capitale*, and the offender is excluded permanently from the communion.

4. From 313 to 1215 (from Constantine's edict of toleration to the establishment of the Inquisition). —With the alliance of the Church with the State, a new practice was developed in regard to the treatment of ecclesiastical offences. The State itself passed disciplinary regulations for certain of them, and executed punishments. Worldly penalties, such as confiscation of goods, banishment, mulcts of money, death, and later the loss of individual freedom, came to be approved by the Church as penalties for offences within the realm of religion (see Hinschius, iv. 803–814; Friedberg, 210; Hergenröther, 546 ff.). Carrying over to the new order the ideas which the office of Pontifex Maximus implied, Constantine claimed authority, as universal bishop, over the external affairs of the Church. He and his Imperial successors exercised the right not only of proceeding against heretics, but, as in the case of Theodosius, of designating who they were. The Theodosian code counted as a public crime every offence against religion, on the ground that such offences brought injury to all (*in omnium fertur injuria* [quoted by Friedberg, 209]). The following are the chief steps in the history of Church discipline in this period of 1000 years:

(1) As worldliness crept into the Church after Constantine's identification with it, offences of moral conduct were given less prominence, and offences were emphasized which were committed against the Church as a corporation and against its doctrinal code as formulated by the Councils, and held by the common opinion of the Church.

(2) Constantine punished departures from the Nicene statement by burning the books of the Arians and banishing Arius himself. His sons at one time punished Athanasius and his followers, at another favoured them.

(3) The Ecumenical Councils, beginning with the Nicene (325), passed, in addition to their doctrinal decrees, canons providing rules of administration and discipline. The Athanasian Creed pronounced anathema upon those refusing its precise definitions of the doctrine of the Trinity, and excluded them from the possibility of salvation.

(4) While the Emperors, from Gratian and Theodosius to Justinian, were proscribing paganism by penalties increasing to the penalty of death, Imperial rescripts were placing Christian heretics under the civil ban. Theodosius the Great, at the close of the 4th cent., pronounced those who held to the Nicene statement Catholic Christians, and all others heretics. In 15 different enactments he deprived the latter of all right to the exercise of religious usages, excluded them from civil office, and threatened them with fines, banishment, confiscation of goods, and—as in the case of the Manichæans, Audians, and Quartodecimans—with death.

(5) The code of Justinian not only regulated all

kinds of ecclesiastical affairs, but in certain cases gave even criminal jurisdiction to the bishops (see Pfannmüller, *Die kirchliche Gesetzgebung Justinians*, Berlin, 1902, p. 82 ff.).

(6) The penalty of death was executed for the first time for ecclesiastical offences at Trèves in 385, when the Spanish bishop Priscillian and six others, including a noble matron of Bordeaux, were put to death. All the bishops present except Theognistes approved the sentence. Ambrose and Martin of Tours disapproved of it, the former, however, being opposed to the death sentence altogether. Leo I. (440–461) definitely advocated the death penalty for heretics. Henceforth the only parties to oppose it were the dissenting sects, such as the Donatists.

(7) Notable cases of discipline are not wanting in the administration of high ecclesiastics. Chrysostom was deposed for rebuking the extravagance and vices of the Imperial court of Constantinople (404). Ambrose excluded Theodosius from the church of Milan till he had made expiation for the wholesale execution in Thessalonica (390). Synesius excommunicated the governor of Pentapolis for his merciless oppressions (409).

(8) The most important influence on the discipline of dissenters exercised by any churchman was that of Augustine. At first inclined to restrict discipline to spiritual measures, he changed front during the controversy with the Donatists. Quoting our Lord's words in the parable, 'Compel them to come in,' he expounded them to include physical measures. He did not go as far as distinctly to advocate the penalty of death, but his exposition became the chief authority for the Schoolmen, including Thomas Aquinas, in favour of the death penalty for heretics.

(9) During the 7th and 8th centuries, penitential codes came into use, prescribing penalties for all sorts of offences against religion and the Church, beginning with those of Columban († 615), and Theodore of Tarsus († 690). A forerunner of these writers was John Scholasticus († 578), whose *Syntagma* with its 68 canons was confirmed by the Trullan Synod of 692. An idea of the penances prescribed by Theodore of Tarsus may be formed from one example. A priest who drank to excess and vomiting had to do penance for 30 days, a layman for 15 days. False canonical codes were referred to by the Paris Synod (829).

(10) The Isidorian Decretals, dating from the middle of the 9th cent., authorized the Church to take cognizance in her discipline not only of specifically ecclesiastical offences (*delicta mere ecclesiastica*), but also of offences of a mixed character (*delicta mixta*). For certain Church dignitaries the decisions of the Church tribunal were final.

(11) Special legislation was enacted for clerical offences. Among the more notable acts was the so-called Canonical Rule (see Hatch, *Growth of Ch. Institutions*, London, 1887, ch. ix.). The ministry had become not only a profession, but a lucrative profession. The clergy hawked and hunted, were extravagant in their retinues, drank, and committed other excesses. One of Charlemagne's capitularies (802) called upon the clergy to live 'according to the canon.' Later a semi-cloistral mode of life was introduced among them, one reason given being that the clergy thereby 'might avoid the company of women,' as at the Roman Council of 853.

(12) The Canon Law was definitely incorporated in the collections of Regino († 915), Burchard of Worms († 1025), Anselm of Lucca († 1086), Cardinal Deusdedit (*c.* 1087), and Ivo of Chartres († 1116). These imperfect works gave way to the monumental production of the Camaldulensian monk, Gratian, who taught canon law in the convent of St. Felix, Bologna, in the middle of the 12th century. His work, whose original title was *Concordantia canonum discordantium*, became the manual in its department, as the *Sentences* of Peter the Lombard became the manual in the department of theology. It was greatly augmented with the supplements added by the Orders of Gregory IX., Boniface VIII., Clement V., and John XXII. Although full of forgeries and errors, as has been shown by Döllinger - Friedrich (*Das Papstthum*, Munich, 1892), it remained the undisputed code in Western Christendom till the Reformation, regulating life from the cradle to the grave. Its decrees have in part been superseded by the canons and decrees of the Council of Trent.

(13) As vicar of Christ and undisputed head of Latin Christendom, the Pope became, as the Middle Ages advanced, the supreme disciplinarian, and his decisions kept Christendom, especially England, in a constant ferment.

(14) The greater punishments which came into general use in the Church were the anathema and the interdict, to which is to be added suspension from the priesthood. Two forms of anathema, the minor and the major, are distinguished by Wetzer-Welte, quoting Gregory IX., but they differ only in the degrees of solemnity with which they are pronounced. The anathema excludes from the communion and all public services of the Church except preaching, and from all the public suffrages of the Church, but not necessarily from private intercessions. If the sentence still rests upon the offender at death, it excludes from burial in consecrated ground. Martin V. in his *Ad evitanda* (1418) made a distinction between *excommunicati tolerati* and *excommunicati vitandi*. From the latter all religious intercourse whatever is to be withheld, and, as far as feasible, all commercial dealing (see Hergenröther, 568 ff.). Perhaps no excommunications surpass in execration that pronounced by Clement VI. (1346) against Louis the Bavarian:

'Let him be damned in his going out and his coming in! The Lord strike him with madness and blindness and mental insanity! May the heavens empty upon him their thunderbolts, and the wrath of the Omnipotent burn itself into him in the present and the future world! May the universe fight against him, and the earth open to swallow him up alive!' (Mirbt, *Quellen d. Papstthums*[2], Tübingen, 1901, p. 153).

The interdict was extended to a community of persons or territory. There are different degrees of punishment involved in the sentence, but in general it involves the denial of the sacraments of the Eucharist, Ordination, and Extreme Unction, public services of the Church, and the rite of burial in sacred ground. Among the notable cases were the interdicts fulminated over Scotland (1180), England (1208), the sacred cities of Rome by Adrian IV. (1155), and Jerusalem (1229) on the occasion of the crusade of the excommunicated Emperor, Frederick II.

5. **From 1215 (the Fourth Lateran Council) to the Council of Trent.**—There are three important points which stand out in the further history of discipline before the Reformation. (1) The doctrine of Penance underwent a radical change (see K. Müller, *Der Umschwung in der Lehre von der Busse während d. 12ten Jahrh.*, Freib. 1892; Schaff, *Ch. Hist.*, vol. v. pt. i. p. 729 ff.). Confession to the priest and satisfaction by doing the penances prescribed by him were made necessary for absolution. The acts of satisfaction are penal acts which serve like medicines for spiritual wounds, and also as a compensation to God for offences. So Alexander of Hales and Thomas Aquinas taught. The priest is the judge of what the act of satisfaction shall be. Among the more notable cases of public penance were those of Henry II. after Becket's death, and Raymund of Toulouse. This

system of discipline under the direction of the priest became obligatory for every Christian in the world. The crusades offered a vast opportunity for the exercise of Church discipline and penance.

(2) The tribunal of the Inquisition, established by Innocent III. at the 12th Ecumenical Council (1215), was intended to meet the peril of heresy and to extirpate it. With Gregory the Great († 604) heresy ceased to be known in Western Europe for four centuries. At the end of the 11th cent. slight traces of it appear at Goslar, Mainz, Cologne, Strassburg, and other places. They as quickly disappeared, but suddenly in the 12th cent. heresy sprang up in different parts of Europe, from Milan to Antwerp, and from the Pyrenees to Bremen. In his Laws of 1238, Frederick II. gives a list of 19 different heretical sects. The chief of these were the Cathari and the Waldenses. In 1163 a Synod of Toulouse compared heretics to serpents concealing themselves in the grass. Innocent III.'s predecessor, Lucius III., at the Council of Verona (1184) joined with Frederick Barbarossa in a public demonstration in the Cathedral, that they would make it their common cause to extirpate heretical depravity. Princes were ordered to take an oath to support the Church in punishing offenders, upon pain of forfeiting their dignities. The Synod of Toulouse (1163) had called upon princes to imprison heretics and confiscate their goods. The Third Lateran (1179) extended the punishments to defenders of heretics. By the third canon of the Fourth Lateran (1215) all princes were again enjoined to swear to protect the orthodox faith, on pain of losing their lands; and to all taking part 'in the extermination of heretics' was offered the indulgence extended to the Crusaders in the Holy Land. All who in any way supported heretics were to be excommunicated and excluded from receiving their natural inheritance. This portentous organization was further perfected at the Council of Toulouse (1229), and by Innocent IV. in his bull *Ad exstirpanda* (1252), which prescribed torture as a means of extorting confession of crime. No heretic was to be punished till convicted by the ecclesiastical tribunal, but, once convicted, the secular arm was under obligation to punish the offender by destroying his domicile and refuge, even though it were underground, by confiscating his goods, and by putting him to death. Innocent III. declared that, as treason was punished, so much more should punishments be meted out to those who committed the greater crime of blasphemy against God and His Son. Secular princes were to draw the sword against them (see quotation in Schaff, *Ch. Hist.*, vol. v. pt. ii. p. 518, together with Hurter's exposition of Innocent's views). Innocent summoned Christendom to a crusade against the heretics in Southern France, promising 'those who fought for the soul and for God' the same rewards as he promised to those who ventured their lives to rescue the Holy Sepulchre.

In vain is the plea made that the Church did not execute heretics or immediately pronounce the decree of execution. It immured them for life, and it threatened with exclusion from the sacrament and from heaven princes and magistrates who refused to execute the death penalty upon them. The Catholic apologist, Vacandard, is compelled to say that at times the sacred tribunal actually passed sentence of death. It is strange, in view of the words of Popes and councils, that Catholic writers, like Ph. Hergenröther (*Kathol. Kirchenrecht*, 541), should assert not only that it is not within the Church's province to execute the death penalty, but that it cannot call upon the State to execute it. An inquisitor like Bernard Guy represented the temper of his time when he said in his famous manual that heresy could be exterminated only as heretics were burnt.

To this extreme form of Church discipline the Schoolmen gave full theological justification. Thomas Aquinas, resting upon the authority of Augustine, asserted that 'heretics were not only to be separated from the Church by excommunication, but from the world by death' (*Summa*, II. pt. 2. II [ed. Migne, iii. 109]). 'As falsifiers of coin are to be put to death, much more should they be put to death who are guilty of the more wicked act of corrupting the faith. The heretic the Church delivers over to the secular tribunal to be put out of the world.'

The Spanish Inquisition, formally sanctioned by Sixtus IV. (1478) and accepted by his successors in its essential features, is even more noted in history for its ingenious devices and severity in disciplining heretics than the papal tribunal established in 1215. Pastor and Funk both agree, as against Hefele, that it was primarily not a State institution, but the creation of the Pope (Schaff, *Ch. Hist.*, vol. v. pt. ii. p. 539 ff.).

(3) The third important chapter in the history of Church discipline in this period was the famous assertion of Boniface VIII., in the bull *Unam sanctam* (1302), that both swords are in the hands of the Pope, and that it is altogether necessary to salvation to be obedient to the Roman pontiff. This assertion, confirmed by Leo X. on the very eve of the Protestant Reformation, sufficiently justifies the Church in the use of any means whatsoever that it may select to carry on its work and maintain its authority. Down to the 14th cent., the theory had been that the Church's jurisdiction stops with those who are baptized by its ritual. But papal pamphleteers, after the death of Boniface VIII., like Augustinus Triumphus († 1328), extended it to the whole heathen world. A voice as if proclaiming a new era, Marsilius of Padua, in his *Defensor pacis* (1324), argued that the disciplinary prerogative of the Church was only suasive, not penal. But the Church did not listen to him, and the Council of Constance (1415) reaffirmed the doctrine that heretics should be burnt ('puniendi nsque ad ignem'), and carried out the affirmation in the sentences against Hus and Jerome of Prague and the bones of Wyclif. The papal crusades against the Cathari were repeated against the Hussites, and Savonarola was burnt with the approbation of Pope Alexander VI. One of the charges made by Leo X. against Luther was that he asserted that it was against the will of the Holy Spirit that heretics should be burnt.

The Council of Trent nowhere mentions the penalty of death for heretics, but neither it nor any Pope since has expressly rejected the severe disciplinary policy exercised by the Church for centuries. The disciplinary element in penance was re-affirmed by the Council of Trent, even to the use of indulgences.

6. **The Reformers and the Protestant Churches.**—Three things, made prominent by the Reformers, were adapted to reduce the value of Church discipline and to limit the application of a disciplinary code: (1) the principle emphasizing the immediate responsibility of the Christian to God; (2) the authority of Scripture as the supreme rule of life; (3) the insistence upon preaching as the chief element in the power of the keys—a view which passed into the Augsburg (Schaff, *Creeds*, iii. 59) and other Protestant Confessions. Instruction and persuasion through the sermon were destined, to a considerable extent, to take the place of punitive discipline. Another consideration adapted to limit the application of discipline was the abolition of the confessional, and the substitution of repentance of heart for penance with its system of outward satisfactions imposed by the priest. There was a wide divergence between the Lutheran and the Calvinistic Reformations in the prominence given to discipline, growing out of the attitude of Luther and Calvin respectively. Luther had no genius for administration, and felt little confidence in discipline. Calvin was a born administrator, and in theory advanced discipline to almost as high a place as it had held in the

mediæval Church, but with a wide difference in practice.

(1) *The Lutheran Church.*—Luther was inclined to be satisfied with preaching, Christian instruction, and the dispensation of the two sacraments as the means for preserving the purity of the Church and extending her influence. He had little to say about discipline as a system, and never set forth a clear theory of the relation of Church and State. He was violent enough in his judgments against the Anabaptists, Münzer, and the Protestant anarchists, and against the Swiss, but he never worked out a system of discipline. The *Augsburg Confession* (pt. II. art. vii.) condemns the 'violent excommunications' of pontiffs, and their attempt to take from Emperors their prerogatives and transfer them to themselves. It insists that the two powers are not to be confounded, and at the same time that the Church in her own sphere is sovereign. The exercise of her rightful power no more interferes with civil government than the art of singing does. The *Schmalkald Articles* (iii. 9) reject the major excommunication, but retain the minor, which is to be used against manifest sinners, excluding them from the Lord's Table till they give proof of amendment. This power of excommunication inheres in the body of the Church. Later in the 16th cent. it was left to the Lutheran consistories, the pastor having only the prerogative of announcing the sentence. In the 17th cent. there was a movement to establish or re-establish a system of discipline by J. V. Andreæ, who had been in Geneva, the younger Quistorp of Rostock, and others, by the appointment of a body of elders for each congregation. Spener also wrote of discipline as a possible means of reviving piety. These suggestions came to nothing. At the present time the State exercises so large an authority in appointing ministers and enforcing baptism that discipline is almost a lost art in the German Lutheran Churches.

(2) *The Reformed Churches.*—(*a*) Zwingli and Œcolampadius left the right of excommunication to the State. In Zürich the Reformation was carried out by the magistrates; and heretics and Anabaptists were executed. Zwingli, so far as we know, did not protest against this punishment. The *First Helvetic Confession* provides for excommunication and for reinstatement in case of repentance; but, without making a clear distinction between the two realms, puts the authority to pass sentence in the hands of those 'who are appointed thereto by the servants of the Word and the Christian magistracy.' The State is to take positive measures to root out blasphemy and punish blasphemers, and to promote the spread of the principles preached in the pulpit. The *Second Helvetic Confession* (xxx. [Schaff, *Creeds*, iii. 305 f.]) makes it the duty of the civil magistrate 'to defend the Church of God and the preaching of the truth, to cut out all impiety, superstition, and idolatry, to draw the sword against all malefics and blasphemers, and to coerce all heretics who are heretics indeed.'

(*b*) The practice of the large body of the Reformed Churches was determined by Calvin's treatment in his *Institutes* (bk. iv. ch. 12) and by the Genevan code, the *Ecclesiastical Ordinances*, which were largely the work of Calvin's hand. It must not be overlooked that in minor particulars the execution of the Genevan legislation differs from Calvin's theory as laid down in his *Institutes*. Calvin's carefully arranged form of Church government involved a rigid discipline. He proceeded on the principle that 'no house can be preserved in proper condition without discipline.' Otherwise Christians would live like rats in the straw. Discipline is the only remedy against a dreadful desolation in the Church. Its purpose is threefold—to keep the Church in a sound condition, to protect its members against taint, and to bring the offender, if possible, to repentance. Following closely on Mt $18^{15ff.}$, admonition precedes excommunication, which is the last resort of the ecclesiastical power. Calvin declared that, as sound teaching is the soul of the Church, so discipline is its sinews (*disciplina pro nervis est*). The elders, twelve in number, appointed from the Little Council, were expected to live in different parts of Geneva, in order that they might the better perform their functions as overseers. It was their duty to watch over the moral and religious fidelity of the people, and to make at least once a year a visitation of every household. With the pastors they constituted the consistory, which met once a week and sat upon complaints made against high and low. They fixed penalties for offenders, such as payments of money for non-attendance at Church. Greater offenders were turned over to the civil power for punishment. Watchmen were appointed to report persons who failed to go to Church. This system has been likened by Catholic historians (*e.g.* Funk, *Kirchengesch.*[4], 1902, p. 438) to the tribunal of the Inquisition. Calvin's theory of the relation of State and Church cannot be discussed here. It is evident, however, that, in abandoning the mediæval mistake whereby the Church arrogated to itself authority over the State, he went too far in the other direction to suit our modern ideas. He was right in declaring that ministers must confine themselves to the spiritual sword, which is the word of God (*Inst.* IV. ii. 4). The State he treated as a Christian institution established to defend the Church, and to punish religious as well as political and moral offences. Thus not only sedition and adultery were punished by death in Geneva, but also blasphemy, heresy, and idolatry, the justification for such punishments being derived from the Old and New Testaments. The most notable of the many condemnations was the burning of Servetus upon the two charges of blasphemy against the doctrine of the Trinity, and insulting reprobation of infant baptism. Calvin himself acted as prosecutor. The Reformer, however, seems to have had some idea of the co-ordinate relation of the two realms, and insisted, at the risk of his life, upon excommunication as the sole prerogative of the Church. In the famous case of the excommunicated Berthelier (1553), who had been reinstated by the civil authority in the church, Calvin declared that he would die rather than acknowledge the principle of State interference.

(*c*) The Protestant Church of France, adapting itself to its position in the State, adopted Calvin's discipline in a modified form, but also declared that the magistrates are appointed of God to suppress crimes against the first as well as against the second table of the Decalogue (*Gallican. Conf.* xxxix.).

(*d*) The Anglican *Thirty-Nine Articles* commended excommunication (xxxiii.), but are not clear in defining the tribunal before which a person should come before being received back into the communion of the Church, the words running 'received into the Church by a judge that hath authority thereunto.' By virtue of the supreme headship of the Church in England inhering in the sovereign, discipline for Church offences was exercised by the civil authority. This principle was not combated by the Puritan party in Elizabeth's reign, but only the application of it whereby they suffered for disobedience to the Act of Uniformity.

(*e*) In Scotland and among the Puritan churches

the rigorous discipline of Geneva found its most genial soil, so that Puritanism and Presbyterianism are synonymous in the popular mind not only with severity of Christian living, but with severity of censure upon those who depart in faith or ethical practice from the accepted standard. The Scottish symbols, and the Westminster standards which took their place after 1648, alike enunciate the close relation between Church and State whereby the State punishes a certain class of religious offences, and also lay great stress upon strict supervision over the lives of Church members and a rigorous system of censure. The *Book of Common Order* and the *First Book of Discipline*, as well as the *Form of Government and Directory of Worship* of the Westminster Assembly, state at length the rules of judicature and of trial. To these is to be added the *Order of Excommunication and of Public Repentance*, commanded to be printed by the Scottish Assembly in 1569 (see Dunlop, ii. 701–745). Knox, the faithful disciple of Calvin, laid down in the *Scottish Confession* of 1560 the principle of the relation of Church and State, when he declared that to civil rulers 'chiefly and most principally the conservation and purgation of religion appertains,' and that they are appointed for the maintenance of the true religion and for suppressing idolatry. This principle was fully embodied in the *Westminster Confession* (xxiii.), which declares it to be the duty of the civil magistrate to 'take order that unity and peace be preserved in the Church.' He 'hath power to call synods and to provide that whatsoever is transacted in them be according to the Word of God.' This principle was carried out in the relation which the Assembly sustained to Parliament. One of the main complaints of the Millenary Petition in 1603 concerned Church discipline. The petitioners begged 'that men be not excommunicated for trifles and twelve-penny matters' (see Gee and Hardy, *Documents*, London, 1896, p. 509 ff.).

To the subject of the Church's exercise of discipline by its own tribunal, the *Westminster Confession* devotes a whole chapter (xxx.), and prescribes three forms of punishment—admonition, suspension from the Lord's Supper for a time, and excommunication from the Church. The reasons for the exercise of discipline are given in a more quaint and attractive form by Knox in the *Book of Common Order* (ch. vii.), and in the *Order of Excommunication* (ch. iii.). In the latter it is stated 'that, as it would be a work both uncharitable and cruel to join together in one bed persons infected with pestilent and other contagious and infective sores, with tender children or such as were sound, so it is no less cruelty to suffer amongst the flock of Christ such obstinate rebels . . ., for a little leaven corrupteth the whole mass.'

Offences coming before the Church court for censure are enumerated in the Scottish *Book of Discipline* (ch. ix.), and include 'accursed papisterie,' which exposed those who were infected with it to excommunication. This is reasserted in the *Order of Excommunication* (Dunlop, 709). The Kirk-session, consisting of the minister and elders, meeting once a week, had as one of its functions to determine and judge causes and administer admonition to licentious livers, for 'by the gravity of the seniors, the light and unbridled life of the licentious must be corrected and bridled' (*First Bk. of Disc.* x.). The sentence of excommunication was to be announced by the minister in the public audience of the people in the words:

'We having place in the ministry . . . draw the sword granted by God to His Church, that is, to excommunicate from the society of Christ Jesus, from His body the Church, from participation of sacraments and prayer with the same, the said N.'

(*f*) In America, during the Colonial period, the discipline within the Churches of Puritan and Presbyterian lineage was strict, and throughout the colonies, even in New Amsterdam under Peter Stuyvesant, the magistrate joined in exercising oversight over strictly ecclesiastical affairs. The notable exception was Rhode Island, founded by Roger Williams, who before his banishment denied the right of the civil authority to punish offences against the first table, and who in his exile gave memorable expression to the principle of religious liberty. In the New England colonies, especially Massachusetts, the close alliance of Church and State involved not only such acts as the calling of synods by the legislature and the collecting of taxes for the support of the Established Church, but acts of Church discipline culminating in the banishments of Anne Hutchison (1638) and Roger Williams (1636), the public execution of four Quakers (1659–61) in Boston, and the execution of nineteen persons accused of witchcraft in 1692. With the adoption of the American Constitution, the Churches, including the American Presbyterian Assembly (1789), adopted modifications of their constitutions, making them conform to the principle of the complete separation of Church and State. The Assembly of that year altered in a fundamental way ch. xxx. of the *Westminster Confession*. For similar modifications by British Presbyterian Churches, see art. CONFESSIONS, in vol. iii. p. 878[a].

In recent times the tendency among Churches using the English tongue is to forego as far as possible the right of discipline, preferring to trust almost wholly to the effect of the public exposition of the truth from the pulpit and to the conscience of the church-member. There is also a tendency to avoid the exercise of discipline upon ministers of the gospel in the matter of doctrinal belief. The recent trials of Professor William Robertson Smith in Scotland (1877–81) and Professors Charles Briggs and Henry Preserved Smith in the United States (1892–94), and their exclusion for supposed heretical views, awakened wide-spread attention, and have raised the serious question how far liberty of opinion should be tolerated in a minister when it is accompanied by devotion to Christ and the interests of His Church.

DAVID S. SCHAFF.

DISCIPLINE (Jewish).—The State under the Mosaic system being a theocracy, every offence was necessarily ecclesiastical, and its punishment a disciplinary measure. Besides the compulsory sin-offering (Lv $4^{1ff.}$), the penalties imposed by the Pentateuch are fines, loss of property, flagellation, 'excision' (Gn 17^{14}, etc.), and death. But, among the offences of which Mosaism takes cognizance, some are ecclesiastical in the stricter sense. They are, chiefly, idolatry, sacrilege, the appropriation of holy things, and the ministration of a priest when in a state of Levitical impurity. A priest's

daughter, moreover, who gave herself to prostitution was regarded as 'profaning her father,' and was to be burnt to death (Lv 21^{9}). The unintentional trespasser in the matter of holy things had to make full restitution to the sanctuary, and to pay an additional fifth of the value (Lv $5^{14ff.}$). Death was the penalty for sacrilege (Nu 1^{51}, etc.); and the defiled priest had to wait until the evening, and then bathe, before resuming the duties of his office (Lv 22^{6}). Those who disobeyed imperilled their lives (*ib.*). A notable instance of sacrilege being thus punished is that of Nadab and Abihu (Lv $10^{1ff.}$). The Israelite who ate leavened bread at the Passover, or consulted wizards, was punished with 'excision' (Ex 12^{15}, Lv 20^{6}); the Sabbath-breaker was stoned (Nu $15^{32ff.}$); the worshipper of Molech was liable both to 'excision' and to the death penalty (Lv $20^{2f.}$).

A totally different kind of discipline was the self-imposed austerity of the Nazirite, who, in virtue of his vow, abstained from wine and strong drink, remained unshaven, and conformed to the laws of Levitical purity in all their rigour (Nu $6^{1ff.}$).

For the purpose of stamping out idolatry the theory of the ban was brought into use. A person, animal, or thing, set apart or devoted to God, was known as *ḥērem*, i.e. banned, or tabu, and could not be sold or redeemed (Lv $27^{28ff.}$). Idolatrous emblems and the cities of the seven Canaanite nations, with their inhabitants and contents, were *ḥērem*, and were to be destroyed (Dt 2^{34} 3^{6} 7^{5}, Jos 6^{17}). He who appropriated 'devoted things' was, so to speak, infected, and became *ḥērem* in his turn; he incurred the death penalty (Dt 7^{26}, Jos 7^{25}). A like doom overtook the idolatrous Israelite (Dt $13^{6ff.}$). Idolatrous Israelitish cities, with their spoil, were to be burnt, and the cities to remain an everlasting ruin (Dt $13^{12ff.}$).

By the time of Ezra disciplinary practice had become much less severe. Ezra invokes a general assembly of the Jews in order that they may purge themselves from the evil of intermarriage with their idolatrous neighbours; the property of those who refuse to attend is to be 'devoted,' and they themselves 'separated from the congregation' (Ezr $10^{7f.}$). There is no question here of a death penalty, and the use of the comparatively mild term 'separated' indicates a mitigation of disciplinary rigour. Ezra's action, however, seems to be a connecting link between the Pentateuchal procedure and the system of excommunication of the Talmudic régime. Under that system the term *ḥērem* changes its meaning, and now signifies the ban, not the thing banned. It is the technical term for excommunication, the most formidable weapon of the Jewish Church.

Excommunication, however, though the chief, was not the only disciplinary measure in use among the Jews. The voluntary asceticism of the Nazirite had its counterparts in post-Biblical times. Thus a man would take a vow, even registering it in a deed, to abstain, for a term or for life, from certain forms of self-indulgence. Gambling was a favourite subject of such a vow. The penalty for violation of the vow was often severe, extending even to bodily mutilation. Another self-imposed penance was fasting. A man would bind himself to fast on certain days of the week either for a definite period or for life. Further, the mediæval community or congregation would make enactments (*tᵉḳānôth*) against various offences, disobedience to which was punished by fines, exclusion from synagogal office, or refusal of the privilege of reading from the scroll of the Pentateuch during service, or of participation in some other religious rite. The imposition of a fine on the elder D'Israeli by the Spanish and Portuguese congregation in London was the immediate cause of his withdrawal from the synagogue. Disobedience to a *tᵉḳānā* might also be visited with imprisonment (the Jews often had their own prisons in the Middle Ages). An offender might be denied Jewish burial, or his body consigned to a special section of the cemetery set apart for notorious evil-doers. Sentence of death was also passed upon flagrant transgressors, more particularly upon informers. The execution of the sentence in such cases necessarily required the consent of the Government, by whose officials it was carried into effect. Another disciplinary expedient was public denunciation in the synagogue, recourse to which was sometimes had in the case of the most venial offences—for extravagance in dress, for example, on the part of women. Nevertheless excommunication continued to be the most effective disciplinary agent of the synagogue for 2000 years.

The ban of the Synagogue falls under three categories, known respectively as *nᵉzîfā*, *niddûi*, and *ḥērem*. The first lasted seven, the second thirty days. In Babylonia the periods were one day and seven days respectively. *Nᵉzîfā* was the penalty for slight offences, especially insult to the religious authorities. As regards *niddûi*, the ban was removed at the termination of the prescribed period if the offender made due submission, the formula being: 'Thou art absolved; thou art forgiven.' If he was recalcitrant, the punishment was renewed for a second and a third period. If he was still contumacious, excommunication in the third degree (*ḥērem*) was pronounced, which continued for an indefinite period, but might be revoked at the will of the authorities. Before sentence was pronounced, the culprit was thrice publicly exhorted to submission and repentance in the synagogue, on Monday and on the following Thursday and Monday, those being the days when the Law was read and the congregation was numerous. When this exhortation proved unavailing, the ban was pronounced in the offender's presence with the words: 'N.N. is excommunicated'; or, in his absence, with the words: 'Let N.N. be excommunicated' (cf. the expression 'anathema maranatha' in 1 Co 16^{22}, the second word of which is perhaps a corrupt reading for *mâhrām 'attā*, 'thou art excommunicated'). Those on whom *nᵉzîfā* was pronounced were compulsorily confined to their houses, and forbidden to engage in business or pleasure. Those under *niddûi* were forbidden all social intercourse save with their wives and children. They could not make up the quorum for public worship (*minyān*), but they might attend the synagogue for prayer and listen to religious discourses. They had to wear mourning, and were forbidden to bathe, to cut their hair, or to wear shoes. It is said that there was a special entrance into the Temple reserved for excommunicated persons, and men greeted them as mourners. If *ḥērem* were pronounced, the offender might not teach; nor might he be supplied with food beyond what was required for bare sustenance. His wife might be excluded from public worship and his children from school. If his offence was heresy, and he died impenitent, no funeral rites might be performed for him, and a stone was placed on his coffin.

The offences punishable by *niddûi* are drawn from every department of the religious and ethical domain. Maimonides (*Hilkoth Talmud Torah*, 6.14) enumerates twenty-four examples drawn from the Talmud; but his list is obviously not exhaustive. A few typical examples may be given: desecrating the second day of the festival (though it is a purely Rabbinical institution); unnecessary use of the Divine Name; ill-treatment of children by the parent, so that they are made to break the command 'Thou shalt honour thy father and thy mother';

the neglect by a slaughterer of cattle (*shôḥēṭ*) to show his knife to his Rabbi so that it may be declared fit for its purpose on ritual and humanitarian grounds; business partnership between a divorced couple; selling to a Gentile land immediately adjoining the property of another Jew without indemnifying the latter for consequent injury.

Probably owing to the example of the Church, excommunication among the Jews became more drastic and more far-reaching in the Middle Ages. The catalogue of offences visited with the penalty was enlarged, the disabilities it imposed increased in number, and the right of pronouncing it extended from the Rabbinical authority to the congregation (*ḳāhāl*). Synods met at various times to formulate new ecclesiastical rules, all of which were enforced by the threat of excommunication. Thus the famous Synod of Worms, convoked in the 11th cent. by R. Gershon of Mayence, declared polygamy forbidden, and placed under the ban those who disobeyed this decision. On the other hand, the offences denounced by the congregation were often trivial, and resort to excommunication in their case was less justifiable. Thus the penalty became a terrible engine of oppression in the hands of ill-instructed men, who were free to give effect to their own ideas of right and wrong, unrestrained by the moderating influence of trained and educated minds. The decrees of excommunication pronounced by the congregation operated within the entire district over which it exercised jurisdiction, and, until formally repealed, through all generations. They followed the offenders even after they had severed themselves from the congregation and had removed to another district.

In some of its features the Jewish ritual of excommunication in the mediæval period bore a close likeness to that adopted by the Church. The excommunicated person, if his case was a bad one, was literally banned 'with bell, book, and candle.' Led into the synagogue, he was placed beside the reader, who stood at the ark, the most sacred part of the building, with a scroll of the Pentateuch in his arms. Inflated bladders were placed on a bier, candles were lighted, and sackcloth and ashes strewn at the offender's feet. Then the horn (*shōphār*) was sounded, the candles were extinguished, and the bladders burst—all to strike terror into the culprit's heart. Finally came the pronouncement of the excommunication: 'In the name of God, of the tribunal of Heaven and of earth, we solemnly ban and excommunicate the sinner N.N. May all the curses of the Law rest upon his head, and this excommunication cling to the 248 members of his body!' Whereupon all present, including the culprit, answered 'Amen.'

The history of excommunication in the Jewish Church is chiefly a catalogue of more or less distinguished persons banned for heresy, or some cognate offence against authority. Breaches of the religious law were frequently visited with the penalty; but we hear less of them in this connexion than of contumacy and unorthodox teaching. That excommunication was employed to fight Christianity at its inception is to be gathered from Lk 6^{22} and 9^{22}, and from other passages in the New Testament. The first undoubted instance of the imposition of the ban given in the Talmud, though we read of possibly earlier threats of it, is that of the sage Akabya ben Mahalalel (a contemporary of Jesus [?]), whose sin consisted in persisting in a view of the ritual law opposed to that of the majority of the Sanhedrin. At this period the President of the Sanhedrin was invested with the power of excommunication, and a famous President at the beginning of the 2nd cent. was Gamaliel II., a man of sterling but imperious character. A notable victim of his overbearing temper was his own brother-in-law Eliezer ben Hyrcanus, a Rabbi of great learning and influence, upon whom Gamaliel imposed lifelong excommunication for an offence similar to that of Akabya. Gamaliel calls Heaven to witness that his severity has for its motive not a lust of power, but zeal for the Divine glory; and there is no question that his protest is sincere. But it is of such stuff that Torquemadas are made, and from such zeal that the evils they produce are wrought. Certainly this truth did not escape the attention of the Talmudic doctors; and when, in the same century, Judah the Holy threatened to place R. Meir under the ban, a resolute spirit—Bar Ḳappara—himself a member of the Sanhedrin, strenuously protested. It would seem, indeed, that excommunication became increasingly rare in Palestine from this time forward, flagellation being substituted for it in the case of insubordinate Rabbis. In Babylonia, however, to which the centre of gravity of Jewish life was now being shifted, the old disciplinary system was maintained, at least in principle. How often it was put into practice it is impossible to say. Only three cases are recorded, so that its mere terrors possibly sufficed to keep the rebellious in order. There were certainly Rabbis who prided themselves upon never having pronounced sentence of excommunication upon a colleague; the very act of pronouncing it was punishable with the ban. It is even recorded that a Rabbi would first put himself under the ban before imposing it upon others, so that he might remember to release them when he set himself free. But this considerate temper was by no means general, and the consequences were sometimes grotesque. Two Rabbis would excommunicate each other, and the difficulty was to know which of the two sentences was the valid one. The absurdity of such proceedings and the evil consequences generally of excommunication moved Maimonides (12th cent.) to utter a warning note.

'The Rabbi,' he said, 'has the undoubted right to punish insults to his office by excommunication; but it does not consort with his dignity to exercise this right frequently. Better that he should let the insults of coarse men go unnoticed, as the wise Solomon has said, "Take not heed unto all words that are spoken; lest thou hear thy servant curse thee"' (*op. cit.* end).

Maimonides himself was the innocent cause of increased resort to the ban. Opposition to his theological teachings broke out into active violence after his death, and the anathema was pronounced against all and sundry who should read his *Guide* or the Introduction to his *Yad*. The Rabbis of the opposing school followed suit, and excommunicated those who denounced the Master. The quarrel not only grew fiercer as time went on, but widened in scope. The ban was now directed against preachers who interpreted the Scriptures allegorically, and against all persons under 25 who engaged in the study of Greek philosophy, or of any natural science except medicine.

In Amsterdam, in the 17th cent., Uriel Acosta, having made his submission to the Synagogue after excommunication for heresy, was placed under the ban a second time on repeating his offence. Again recanting, he was again absolved; but his conflict with the authorities had unbinged his mind, and, after an attempt upon the life of his denouncer, he died by his own hand. A more illustrious heretic, Spinoza, paid with excommunication for his philosophical speculations in the same century and in the same city. He made no attempt at recantation or submission; the decree which drove him out from the Jewish community secured additional effectiveness from his self-imposed banishment and alienation. Cf. artt. Acosta, Spinoza.

Nor was philosophy the only heresy. The mystical doctrine of the Ḳabbālā, which represented the other pole of Jewish thought, was equally anathema. Shabbathai Ṣebi, the pseudo-Messiah, also of the 17th cent., was put under the ban as much for his Ḳabbalistic teachings as for his Messianic pretensions. His followers long outlived him

—they still survive in Turkey; and the sentence pronounced against their founder was renewed for their punishment at intervals for a century and a half. Dabbling in the Ḳabbālā brought not merely impostors, but also great teachers, under the ban. Indeed, the more eminent the Rabbi, the more surely does he seem to have been marked out as a fit subject for excommunication; and, on the other hand, the more obscure the Rabbi, the more ready he was to excommunicate. 'The sword and shield of ignorance and deceit'—thus a Jewish writer characterized the ban. Even to show brotherly feeling for the Karaites was an offence visited with disciplinary measures, as the famous Nachman Krochmal of Lemberg was to learn, less than a century ago. Naturally, the sect of the *Ḥasidim*, who exalted mysticism above conformity with the Rabbinic Law, were banned as heretics. Heresy, moreover, meant anything that was new, however innocent or positively advantageous to the Jewish cause. Thus the Synagogue, or rather its representatives in certain places, declared some of its best friends anathema—a Dr. Frankl, for example, who fifty years ago desired to found in Jerusalem an asylum for children on modern lines, and, a little later, even Sir Moses Montefiore, who advocated the teaching of European languages in the schools of the Holy City. Nor has such disciplinary procedure been quite unknown in England in recent times.

A species of excommunication was launched by the orthodox Rabbinate in 1842 against the West London Synagogue, which had just been established on principles antagonistic to the Talmudic theory of the divinity of the Oral Law. The faithful were warned against using the Prayer Book of the new congregation, and against communion with them in 'any religious rite or sacred act.' Members of the congregation were denied Jewish burial. After protracted negotiations, the ban was removed seven years later.

At the present time excommunication is virtually extinct among Jews in civilized countries. More than a century ago the famous Paris Sanhedrin, convoked by Napoleon I., anticipated matters by virtually declaring the rite of excommunication obsolete. It is significant that a note to the chapter on the ban in the latest editions of the *Shulḥan Arukh*—the authoritative text-book of orthodox Judaism—declares that the prescriptions set forth in that chapter have no longer any validity (*Yorē Deah*, sect. 334). Even the most devoted adherent of the Rabbinic Law is forced to admit that these severe disciplinary measures are at once superfluous and contrary to the spirit of the age. Self-preservation is obtainable by milder and more rational means in these days of emancipation and equality. Moreover, the Jew imbued with the modern spirit recognizes, as fully as does his Gentile brother, that severity, when exercised by a religious body, defeats its own purpose by hardening the offender in his offence and confirming him in his heresy. It is a glaring self-contradiction, seeing that a Church, which necessarily claims to be the Divine representative, should have, as its first characteristic, the Divine qualities of mildness and leniency. Thus the ban has again and again served the cause of irreligion, instead of militating against it. Moses Mendelssohn (18th cent.), the protagonist of the modern Jewish temper, has well expressed this view:

'Excommunication and proscription,' he says in the introductory pages of his *Jerusalem*, 'are directly contrary to the spirit of Religion. What!—shut out a brother who would share in my edification and lift his heart with mine to God! If Religion permits itself no arbitrary punishments, least of all can it use this spiritual torment which, alas, only they can feel who are truly religious. . . . Every society, it is urged, has the right to exclude; why not a religious society? My answer is that this is just where a religious society forms an exception. Subject to a higher law, no society can exercise a right which is directly opposed to its fundamental aims. To excommunicate a dissenter, to expel him from the Church, is like forbidding a sick man the dispensary. It is to repulse the patient whose need of medicine is all the greater because he is not conscious of his need, but deems himself in good health.'

In fairness, however, to the Synagogue, a distinction must be drawn between the needs of modern times and those of the past. There were occasions when the duty of safeguarding the existence of the community, and even of the religion, seemed to justify resort to excommunication. It possessed terrors which every other disciplinary expedient lacked. It seemed to be the only means of enforcing respect for authority and obedience to its injunctions. It supplied an effective weapon for preserving morality, personal and public, and it often averted ill-will and persecution at the hands of the general population, by preventing internal disputes from obtaining the publicity of the secular courts. Under threat of excommunication, Jewish litigants would bring their quarrels for adjustment to the *Bêth Dîn* (the Ecclesiastical Court) or to the *Ḳāhāl* (the Congregation), instead of taking them for settlement to the magistrates. But these considerations do not excuse the action of certain Rabbis, of the mediæval period more particularly, who resorted to excommunication as an easy means of crushing their personal opponents. Nor, in the case of heresy, do they avail against the objection raised by I. H. Weiss (*Dor Dor*, v.), that excommunication, even when actuated by the purest motives, did more harm than good by rending Jewry in twain at a time when concord and union were its greatest need. Moreover, as he adds, instead of extirpating the evils at which it aimed, it often rooted them deeper. The heretic, who might have been won back by lenity and forbearance, was strengthened in his heresy, and still further estranged, by severe methods.

DISEASE AND MEDICINE (Introductory and Primitive).—Of the two methods, the 'direct' and the 'interpretative,' by which we can study the beliefs of different peoples as regards the methods of communication, diagnosis, and treatment of disease, each has its difficulties. To 'interpret' the beliefs of a people from observation of their practices is always a dangerous procedure. The same practices may exist among widely distant peoples; yet we can never safely conclude that they are the expression of precisely the same beliefs, or that apparently identical be-

liefs have the same meaning and have been reached by the same lines of development. Take as an example certain conceptions of the cause of toothache.

In the Banks Islands, says Codrington (*The Melanesians*, Oxford, 1891, p. 193), there was 'a young woman of my acquaintance' who 'had a reputation for power of healing toothache by a charm which had been taught her by an aged relative deceased. She would lay a certain leaf, rolled up with certain muttered words, upon the part inflamed; and, when in course of time the pain subsided, she would take out and unfold the leaf, and show within it the little white maggot that was the cause of the trouble.' We turn now to the Ainus of Japan. 'For toothache a nail is heated to white heat and held on the affected tooth for a few seconds. This is said to kill the insects which are supposed to be the origin of the malady' (J. Batchelor, *The Ainu and their Folklore*, London, 1901, p. 293). Lastly, in ancient Assyria and among the modern Arabs of Mesopotamia, toothache is attributed to a worm.

It would be tempting to suppose that the notion of worms or insects being the cause of toothache has had the same origin in Melanesia, Japan, and Asia Minor; but all modern anthropological research points to the danger of drawing such a conclusion from a single thread of evidence. We can hope to arrive at the relationship between individual beliefs only by carefully comparing the entire cultures among which they are found; we can hope to arrive at the ultimate meaning and origin of a belief only by observing and 'directly' questioning the peoples among whom it is found, and especially neighbouring and more primitive peoples who may reasonably be considered as connected, by race or by environment, with them. On the other hand, it is difficult, if not impossible, to obtain, by the 'direct' (or questioning) method, the beliefs of a people in relation to such a subject as disease. For its ideas are apt to be nebulous and in a state of flux; old *practices* often persist, but receive a changing explanation as in course of time the beliefs of the community develop; even old *beliefs* may be preserved and unreflectingly maintained, despite the fact that they are logically inconsistent with the newer beliefs which an advancing civilization or the adoption of a foreign culture brings with it.

In the face of these difficulties, we shall confine ourselves in this article mainly to the study of disease among definite primitive peoples. We shall examine specific instances instead of working with uncertain generalities. Such a study will show us how illness has been attributed first to personal (human or demonic) and later to Divine resentment, as the ideas of human magic, of interference by evil spirits, and of godhead have gradually developed. Comparing primitive and more advanced peoples with one another, we shall see how treatment becomes more complex as different diseases are allotted to different evil spirits, demons, or gods. Different medicine-men are invoked; definite remedies become attached to definitely recognized diseases. Many practices, employed even by the most primitive peoples, are continued, but are regarded in quite another light as civilization advances. They are found to have a good effect, although the original cause for their application is no longer believed in. Thus massage, or counter-irritation, and often steam are employed by many primitive peoples with the object of driving out the evil matter or spirit or the demon of the disease from the patient's body. The evil is kneaded, stamped, or pounded out of the body; or it is rubbed in a definite direction—usually from the part affected towards the feet, where it escapes; or cuts are made in the skin, causing some flow of blood. Again, the conviction felt by the patient that the medicine-man is able by his actions to control the evil spirits of disease is responsible, more than any other factor, for the success of primitive therapeutics. So, too, among the most advanced communities, despite their changed beliefs, massage, hydrotherapy, and, at all events until recently, venesection persist as useful practices. As regards suggestion, it is open to question how far the most modern treatment, or the most 'specific' drug, can restore the patient to health, unless he has been induced to believe in its efficacy. Among primitive peoples, knowing the name of the evil spirit, using archaic language, summoning medicine-men from another tribe, are frequently important factors in effecting a cure. Among ourselves, a physician is held of slight account who cannot give a *name* to his patient's illness; he still writes his remedies in a dead language; and his reputation is apt to be greater abroad than at home. Although the medicinal aspect of treatment has come more and more to the front, in no part of the world can the magical aspect be said to have altogether disappeared.

1. Australia.—Turning now to various primitive peoples in order to study their practices (and, so far as is possible, their beliefs) in regard to the causation and treatment of disease, let us first examine the native Australians, who have been studied with considerable care by Spencer and Gillen (*The Native Tribes of Central Australia*, London, 1899, *The Northern Tribes of Central Australia*, do. 1904), by W. E. Roth (*North Queensland Ethnography*, Bulletin 5, Brisbane, 1903), and by Howitt (*The Native Tribes of South-East Australia*, London, 1904).[1] Among these peoples disease is attributed to some evil magic prepared by one man who wishes to harm another. A widely spread method of causing disease is for the sorcerer to take an *irna*, a stick or bone less than a foot long, sharpened at one end, the other end being usually tipped with porcupine-grass resin (S.-G.[a] 534). Any native may act as a sorcerer. He goes away into the bush with his *irna*, which he places in the ground, muttering some such curse as 'May your heart be rent asunder!', 'May your head and throat be split open!' Then he goes back to his camp, returning later to fetch the *irna*, which he hides somewhere near his camp. He bides his time until he can get near enough one night to distinguish his victim without being himself observed.

'He then stoops down, and turning his back towards the camp takes the *irna* in both hands and jerks it repeatedly over his shoulder, muttering the same curses again' (S.-G.[b] 458).

This pointing of the *irna* causes disease, and even death, unless the evil magic which has proceeded from the point of the *irna* can be removed. Usually a string is attached to the wax end of the *irna*, and this the sorcerer often burns in the fire to ensure the death of his victim. There is general agreement, among Europeans resident in primitive communities, that natives are extraordinarily open to suggestion, so far at least as the transmission of disease is concerned. A man who believes that magic has been exercised upon him 'simply lies down, refuses food, and pines away' (S.-G.[a] 537). The writer was assured, during his stay in the Torres Straits, that it was sufficient if a man recognized as having magic power made a slight movement towards another who was aware that the former owed him a grudge. The victim would then go home, refuse food, and become seriously ill. This pointing with the bone extends, with variations, throughout Australia. In some cases a spear is used with a human bone attached to it (R. § 139f.); in others a human fibula is used (H. 358), often along with human fat (*ib.* 361), which the medicine-men are believed to be able to abstract from other victims and to use as a powerful aid (*ib.* 367). In place of the bone, stones may be employed (S.-G.[b] 467; H. 378); pieces of quartz, especially in the crystalline form, are believed to be capable of projecting magic towards the victim

[1] For brevity's sake, we shall refer to these books as S.-G.[a] S.-G.[b], R., and H. respectively.

(H. 357, 365; R. § 114). Certain stones may, from their mythical history, be exceedingly powerful (S.-G.[b] 472, 469). A dead man's hair made into a girdle or worn in a necklace, lengths of opossum string (R. § 131), a dead man's head-band (S.-G.[a] 538), a knout made of strands of vegetable fibre ([b] 469), a woman's head-band (*ib.* 465), are also powerful objects for evil magic. Ant-hills are similarly employed; a curse is muttered into an ant-hill, which is then secretly brought back to the camp, pounded, and scattered over the ground in the camp to which the victim belongs (*ib.* 466).

There is little specialization of function among most of the Australian tribes in the causation of disease; any man can magically affect another. It is more particularly in the treatment of disease that special 'medicine-men' play a part (S.-G.[b] 479). These may wear special emblems, and be compelled to submit to certain regulations in diet and training (*ib.* 485). The medicine-man may suck or knead the affected part (H. 380, 384). He may merely lay on his hands (*ib.* 382), or make passes (S.-G.[b] 484), or he may suck at or bind round the patient strings of human hair or opossum fur (R. §§ 155, 156). His object is commonly to produce from the patient's body the bone or the stone which the patient's enemy has employed against him (S.-G.[b] 480; H. 379, 384); he sometimes produces a bit of quartz or charcoal, or a marble, and often spits out blood somehow obtained from his own mouth after prolonged sucking. In some cases the patient is bled (H. 385), or is treated with herbs, etc. (*ib.* 384). Or it may be enough for him to place a woman's head-band upon his stomach, whereupon the evil magic passes into the band, which is thrown away into the bush (S.-G.[b] 474).

There are several minor features also described by observers of the Australians; but the above may be considered to be typical of this people generally, and will suffice to show broadly their attitude towards disease. It is clear that disease is commonly regarded in Australia as an evil sent by one man to another, which is transmitted through the magic influence of pointing some such object as a bone, a stone, or a piece of quartz. It enters the body in that form, and in the same form the evil must be withdrawn from the body.

2. Torres Straits.—Now let us turn to the Torres Straits, between Queensland and New Guinea. Here, too, the belief in the power possessed by individuals in causing disease is accepted. It is probable that in his heart each native knows that he cannot cause disease in another; nevertheless, he is always in terror lest some enemy may have the power of causing it in himself. In Murray Island, certain families were credited with influence over the growth of bananas, coco-nuts, or yams; others were supposed to direct the movements of sharks; many erected stone images in their gardens to protect their food. There arose a belief in disease as the sequel to robbery or some similar crime, and in the value of certain stones or marks as an indication and assurance that disease would follow if the objects protected by such signs of tabu were disturbed.

In Murray Island the writer obtained a description of a species of sorcery, called *maid*, which was formerly inflicted by any of the older men, in cases of hatred (*maid urkerlam*) or adultery (*maid koskerlam*). Finding his victim alone, the avenger takes up a chance stone, and, pronouncing over it some magic words (*zogo mer*) in a half-whisper, spits once or twice on it, and hurls it with great force to strike the back of his enemy. The latter falls to the ground, breathing heavily, and loses consciousness. The assailant and certain relatives who have accompanied him now close in on the prostrate body of the victim, and belabour it with their clubs. They then rub the body with a mixture of herbs and coco-nut oil, and give the victim coco-nut milk to drink. The assailant, while rubbing him, tells him to go up a coco-nut tree and to fall down from it, breaking his leg; or he orders him to be bitten by a centipede (*esi*), which will produce fatal blood-poisoning; or he may tell him to go to a certain point in the island, and then to return home and die. The avenging party now withdraw to a short distance, leaving the man's knife and some bananas and coco-nuts beside him. When he awakes and begins to wonder what has happened to him, one of the hiding party takes up a stone and hits a tree near the terrified man. This makes him start, forget his bruises, and rush home, where he lies thirsty and comatose for some days. Then (according to the order of his assailant) he will say to his wife: 'I think I shall go up that coco-nut tree.' He goes up, falls down, breaks his leg, and perhaps dies. As the informant said, 'He no go up himself. Medicine [*i.e.* the magic ceremony] make him go up.'

A third feature in the Murray Islander's attitude towards disease consists in his treatment of it. A special group of men, the *lukup zogo le*, are concerned in curing disease. The sick man is placed on the sand-beach; his eyes are closed; no one may see the approach of the *lukup zogo le*. As he comes near, previously anointed with coco-nut oil by his attendant, he halts, and, spitting or blowing on his hands, performs a series of movements with them, as if he were sweeping something from himself towards the patient. The doctor firmly fixes his gaze upon the patient throughout these actions. Then he makes some movements of the leg and further movements of the arms. Finally, he shouts the word 'Sirar' in a shrill voice and rushes off to the sea, accompanied by the sick man. Some few hours after bathing, the *lukup zogo le* visits the patient in his hut and rubs him down with a decoction of herbs, sea-weed, and coco-nut oil. This massage is repeated daily if necessary, until the patient recovers (*Camb. Exp. Torres Straits*, v. 320–326, vi. 222–240).

3. Melanesia.—These three characteristics—the belief that sickness is a result of disregarding a tabu, the use of suggestion and interference with memory in causing injury or disease, and the more elaborate ceremonial in treatment of sickness—indicate a more advanced state of culture than exists throughout Australia generally. We may trace this state among the neighbouring people of New Guinea, in the Bismarck Archipelago, in the Solomon Islands, in the Banks Islands, and in the New Hebrides; it is a Papuo-Melanesian attitude towards disease. Thus, according to Seligmann (*The Melanesians of British New Guinea*, Cambridge, 1910), 'one or more . . . men who were sorcerers would follow their intended victim to his garden. . . . There he would be speared and clubbed, and, when dead [*i.e.* unconscious], cut to pieces. One end of a length of rope is then looped round the dead man's hand or knee, while the opposite end is steeped in certain "medicine" (*gorto*).' The medicine passes along the rope and revives the victim. He is at first dazed, and does not know where he is or what has happened to him. He is told that he will die shortly, but he at once loses memory of this. He manages to crawl back to his village, where his friends realize what has occurred by his silly, feeble condition, although the victim can give no account of what has befallen him (*op. cit.* 170). At Savo, Guadalcanar, Malanta, and at Florida, in the Solomon Islands, the victim is met in solitude by his assailant, who 'seizes him, bites his neck, stuffs . . . [certain] magic leaves down his throat and knocks him on the head with an axe, but not so as to kill him.' The

charmed leaves make the victim forget the name of his assailant. He goes home, and dies two days later (Codrington, 206). In Lepers Island, New Hebrides, the assailant, after having overcome his victim, shoots a little charmed material at his head by means of a bow and arrow, whereupon he can remember nothing of the scene, but goes home to fall ill and die. His friends, seeing the wound, know what has happened to him (*ib.* 207).

In the central part of New Britain (Neu Pommern), Bismarck Archipelago, property is protected by tabu signs which, if disregarded, will cause headache, sores, etc., on the trespasser or the thief. If grasses are charmed and laid on the tree stems, madness will ensue. A human bone placed on the spot whence an object was stolen will cause the thief to waste (R. Parkinson, *Dreissig Jahre in der Südsee*, Stuttgart, 1907). In the Solomon Islands the disregard of tabu marks is similarly believed to result in disease.

Among the Eastern Papuo-Melanesians of New Guinea we find a further development of the view that disease is due to some emanation from the sorcerer. At Bartle Bay, for instance, disease can be caused 'by means of a "sending" projected from the body of the sorcerer or witch. . . . The "sending" is most commonly projected from the body of a woman, and after her death may pass to her daughter, or with her spirit or shade (*aru*) pass to the other world.' At Gelaria, in the same region of New Guinea, the 'sending' is called *labuni*. *Labuni* exist within women. They are said to wear petticoats, which, however, are shorter than those worn by the women of the district. They 'produce disease by means of a sliver of bone, or fragment of stone or coral, called *gidana*, which they insert into their victim's body. A fragment of human bone or a man's tooth is a specially potent *gidana*' (Seligmann, 640 f.). The *gidana* is thrown by the *labuni* at about sixty yards' distance; only the 'spiritual' part is said to enter the victim's body. The process of removing the spell can be performed only after the woman who sent the *labuni* has been appeased by presents. The treatment is usually undertaken by a man, and consists in rubbing the body until the *gidana* is extracted in the form of a material lump, which is sucked out through the closed hands of the masseur.

This notion of the discharge of an independent emanation or spirit from a living person, which itself lives as a petticoated individual, probably led to a further development in which disease is attributed to the influence of an evil spirit. Amongst the Roro-speaking peoples of New Guinea there is 'an ill-defined but real belief in demon-producing spiritual agencies controlled by a sorcerer' (Seligmann, 291). In the Gazelle Peninsula, New Britain, the most powerful of evil spirits is called *Kaia*; it dwells in high trees, dark caves, and other inaccessible places which are held sacred. Any one profaning one of these sacred places invites sickness or death. *Kaia* manifests itself in the form of a snake (P. A. Kleintitschen, *Die Küstenbewohner d. Gazellehalbinsel*, Münster, 1906, p. 337). So, too, in the New Hebrides, spirits are the chief objects of veneration; a sick man always attributes his illness to a spirit which he has offended by trespassing on some spot or profaning some object belonging to it, or which some enemy has invoked to bring illness (Codrington, 184).

In the Banks Islands, on the other hand, sickness is generally attributed to the resentment, not of evil spirits, but of ghosts of the dead. Also in Florida (Solomon Islands) it is a *tindalo*, i.e. a ghost of the dead,

'that causes illness; it is a matter of conjecture which of the known *tindalos* it may be. Sometimes a person has reason to think, or fancies, that he has offended his dead father, uncle, or brother. In that case no special intercessor is required; the patient himself or one of the family will sacrifice, and beg the *tindalo* to take the sickness away; it is a family affair.' But, if he is uncertain of the ghost, if, for instance, his child is sick, he will summon a doctor, a *mane kisu*, to decide. 'The doctor called in will . . . chew ginger and blow into the patient's ears and on that part of the skull which is soft in infants, will call on the name of the *tindalo*, and beg him to remove the sickness' (Codrington, 194 f.). If this proves unsuccessful, another *tindalo* is addressed, or another *mane kisu* is summoned. The latter may undertake to get his own *tindalo* to intercede with the *tindalo* that is causing the illness.

Thus we are able to trace in Oceania a development, along two directions, of ideas as to the causation of disease. In the one, disease is attributed to some interference on the part of the dead. Probably this belief, traces of which appear even in Queensland (R. § 114), is correlated with the growth of the cult of the dead, which is so complex in certain parts of Melanesia. Thus, according to Seligmann (*op. cit.* 12 f.), one of the distinguishing characteristics of the Western Papuo-Melanesians, ranging from Cape Possession to Orangerie Bay, is the close association of certain institutions with the shades of the dead, whereas the Eastern Papuo-Melanesians show no fear of the visitation of the deceased, and no fear of supernatural beings. They attribute disease, as we have already seen, to the discharge of a spirit from a living person, thus closely agreeing with the general Australian view.

The other line of development in Oceania consists in the attributing of disease to an offended spirit, which has to be propitiated by sacrifice. This conception finds a far higher development in Polynesia. In Samoa, for example, disease was considered due to 'the wrath of some particular deity.' The high priest of the village ascertained the cause, and ordered some sacrifice on the part of the patient, *e.g.* a canoe or a piece of land. Or a confession was obtained from every member of the patient's family as to the crimes each had committed or the curses he had uttered in a moment of anger against the patient or some other member of the family (G. Turner, *Samoa*, London, 1884, p. 140). In Tahiti, again, the sickness of chiefs was attributed to the anger of the gods. 'Whole fields of plantains and a hundred or more pigs' would be taken to the temples, where prayers were offered up (W. Ellis, *Polynesian Researches*, London, 1831, i. 349). In Polynesia generally, disease was supposed to be a visitation from the gods.

'When a person was taken ill, the priest or physician was sent for; as soon as he arrived, a young plantain-tree, procured by some members of the family, was handed to him, as an offering to the god; a present of cloth was also furnished, as his own fee. He began by calling upon the name of his god, beseeching him to abate his anger towards the sufferer, to say what would propitiate him, or what applications would afford relief' (*ib.* iii. 37). Indeed, the medicine administered (*e.g.* powder or infusion of vegetable matter, hot baths, etc.) was 'considered more as the vehicle or medium by which the god would act than as possessing any power itself to arrest the progress of the disease' (*ib.* 47).

In Hawaii the medicinal herbs employed were believed to have been obtained many generations ago, by a man named Koreamoku, direct 'from the gods, who also taught him the use of them' (*ib.* iv. 335).

Thus, starting from the rude Australian belief that disease was sent by one individual against his enemy, we have reached the high Polynesian conception of illness as the result of sin against the gods. Instead of employing a medicine-man to remove the stone or bone which had entered the victim, the latter relies for his recovery mainly on prayers and sacrifices offered to the offended god. Throughout Oceania the various practices we have described are combined with therapeutic measures, the most important of which, alike in the causation and in the treatment of disease, unquestionably is suggestion. Massage, with or without the external application of herbs, is a very common treatment
